209—CLASSIFYING, SEPARATING AND ASSORTING SOLIDS, subclass 72+, for miscellaneous devices for delivering articles in the same relative position from a commingled mass.

255. Apparatus under subclass 250, combined with means for applying a fluid to the grain.

(1) Note.—The term "means" as used above is considered to include any apparatus, including the hulling elements themselves, for inducing the flow of a fluid current or any instrumentalities for controlling or directing the passage of fluid to or from contact with the grain.

(2) Note.—This subclass and those indented hereunder provide the generic place for applying a fluid to the grain in combination with hulling regardless of the nature of the fluid or the purpose of its application. Similar organizations having fluid application in combination with other types of treatment are classified in other classes on the basis of the treatment. Fluid applying devices, per se, will be found in the generic classes 34, DRYING AND GAS OR VAPOR CONTACT WITH SOLIDS, or 134, CLEANING AND LIQUID CONTACT WITH SOLIDS, or in classes referred to in the notes to the main class definitions thereof.

Search this class, subclass—
221.7—for corresponding processes.
251—for hullers having automatically controlled fluid applying means.
253—for means to suspend grain in a fluid to project it against an independent surface.

Search Class—
34—DRYING AND GAS OR VAPOR CONTACT WITH SOLIDS, see (2) Note above.
134—CLEANING AND LIQUID CONTACT WITH SOLIDS, see (2) Note above.
241—SOLID MATERIAL COMMINUTION OR DISINTEGRATION, subclass 38+, for corresponding comminutor combinations.

256. Apparatus under subclass 255, provided with means to apply a liquid to the grain.

Search this class, subclass—
50—for abrading type peelers for vegetables other than grain including liquid applying means.
221.8+—for corresponding processes.

Search Class—
134—CLEANING AND LIQUID CONTACT WITH SOLIDS, appropriate subclasses, and the notes thereto, for devices for applying liquids to solids in general.
241—SOLID MATERIAL COMMINUTION OR DISINTEGRATION, subclass 46, for comminutors having a liquid submerged comminuting zone.

257. Apparatus under subclass 255, provided with (1) means to conduct gas previously applied to the grain back into contact therewith and/or (2) means to conduct grain which has passed through the hulling zone back into the said zone.

Search Class—
241—SOLID MATERIAL COMMINUTION OR DISINTEGRATION, subclass 48, for comminutor combinations involving gas recirculating means, and subclass 52+ for comminutors combined with material recirculation.

258. Apparatus under subclass 255, in which material suspended in a gaseous current is conveyed thereby to and through a perforate surface which surface is in contact with the grain during the hulling treatment.

(1) Note.—The perforate surface may or may not be disclosed as participating in the hulling operation.

Search this class, subclass—
272—for devices in which gas borne material is applied to a screen surface subsequent to treatment in the hulling zone.
275+—for devices in which grain is hulled while in contact with a perforate surface but involving no gas applying means.

Search Class—
241—SOLID MATERIAL COMMINUTION OR DISINTEGRATION, subclass 49+, for similar comminutor combinations.

259. Apparatus under subclass 258, in which the grain is treated in a plurality of distinct hulling zones.

Search this class, subclass—
266+, 271, 287+—for other plural hulling zone combinations not involving applying gas borne material to a perforate hulling enclosure.

260. Apparatus under subclass 259, in which gas borne material is applied to a perforate hulling enclosure in each of a plurality of hulling zones.

261. Apparatus under subclass 258, in which gas borne material is applied to a perforate hulling enclosure and provided, in addition, with means to apply gas to the grain at some other point in the apparatus.

262. Apparatus under subclass 261, including means to apply gas to the grain both prior and subsequent to the hulling treatment.

263. Apparatus under subclass 258, in which (1) a hulling element operates to move gas into contact with the grain or (2) a hulling element has a gas moving means attached directly thereto or (3) any combination of (1) and (2).

Search this class, subclass—
273—for identical devices but which do not involve applying gas borne material to a perforate hulling enclosure.

264. Apparatus under subclass 258 in which gas passes through a rotary perforated or sectional inner hulling member which is surrounded by an annular cooperating hulling surface.

(1) Note.—The gas may pass through the inner member in a radially outward direction to carry the material through an outer perforate surface or may pass radially inward of the rotary inner member to carry the material therethrough.

265. Apparatus under subclass 258 provided with a rotary gas moving means which is coaxial with a rotary hulling member.

Search this class, subclass—
263 and **273**—for unitary rotary hulling members and gas moving means.
274—for identical devices not involving a perforate hulling enclosure.

Search Class—
241—SOLID MATERIAL COMMINUTION OR DISINTEGRATION, subclasses 50 and 56, for similar comminutor combinations.

266. Apparatus under subclass 255 provided with means to apply gas to the grain between or within a plurality of hulling zones.

Search this class, subclass—
259+—for identical devices, but in which the gas borne material is applied to a perforate hulling enclosure.
271—for devices provided with means to apply gas subsequent to all of a plurality of hulling zones.

Search Class—
241—SOLID MATERIAL COMMINUTION OR DISINTEGRATION, subclasses 42 and 43+, for similar comminutor combinations.

267. Apparatus under subclass 266 with means to apply gas between or within plural hulling zones and provided, in addition, with means to apply gas at some other point in the apparatus.

Search this class, subclass—
261+, **268** and **270**—for other plural gas applying combinations.

Search Class—
241—SOLID MATERIAL COMMINUTION OR DISINTEGRATION, subclass 42, for similar comminutor combinations.

268. Apparatus under subclass 255 in which gas is applied to the grain at a point prior to its passage to the hulling zone.

(1) Note.—This subclass includes devices in which the gas is applied prior to hulling and, in addition, at one or more other points in the apparatus.

Search this class, subclass—
261+ and **267**—to complete the search. In the subclasses referred to, in addition to the other features there provided for, gas is applied at a plurality of points in the apparatus, one of which may be prior to hulling.
266+—to complete the search. These subclasses include devices in which gas is applied between plural hulling zones, i. e., prior to the second zone.

Search Class—
241—SOLID MATERIAL COMMINUTION OR DISINTEGRATION, subclass 62, for similar comminuting combinations.

269. Apparatus under subclass 255 in which gas is applied to the grain subsequent to the hulling operation or operations.

Search this class, subclass—
261+, **267** and **268**—to complete the search. In these subclasses the grain is subjected to gas treatment at a plurality of points in the apparatus, including a point subsequent to hulling.
266+—to complete the search. In subclass 266+, the grain is given further hulling treatment, i. e., the gas is applied between plural zones.

Search Class—
241—SOLID MATERIAL COMMINUTION OR DISINTEGRATION, subclass 60+, for identical comminutor combinations.

270. Apparatus under subclass 269 provided with means for applying gas to the grain at a plurality of spaced points in the apparatus, at least one of which is subsequent to the hulling operation.

Search this class, subclass—
261+, **267** and **268**—for other plural gas applying combinations.

Search Class—
241—SOLID MATERIAL COMMINUTION OR DISINTEGRATION, subclass 41+, for corresponding comminuator combinations.

271. Apparatus under subclass 269 in which the grain is treated in a plurality of hulling zones.

Search this class, subclass—
266+—for means for applying gas between or within plural zones, particularly 267 for devices having the characteristics of this subclass (271) but also provided with means to apply gas between or within plural zones.
287+—for plural hulling devices not involving gas applying.

Search Class—
241—SOLID MATERIAL COMMINUTION OR DISINTEGRATION, subclass 43+, and the notes thereto, for similar comminuting combinations.

272. Apparatus under subclass 269 in which there is provided a screen separator by which the grain is treated subsequent to the hulling operation.

Search this class, subclass—
258+—for hulling combinations with screens in which the gas carries the material against a screen hulling surface.
280+—for hullers combined with screens but having no gas applying means.

Search Class—
209—CLASSIFYING, SEPARATING, AND ASSORTING SOLIDS, subclass 21+, for separators per se embodying both screening and gas applying.
241—SOLID MATERIAL COMMINUTION OR DISINTEGRATION, subclass 49+, for similar comminutor combinations.

273. Apparatus under subclass 255 in which (1) a hulling element operates to move gas into contact with the grain and/or (2) a hulling element has a gas moving means attached directly thereto.

Search this class, subclass—
263—for identical combinations but in which the gas borne material is applied to a perforate hulling surface.

Search Class—
241—SOLID MATERIAL COMMINUTION OR DISINTEGRATION, subclass 55, for similar comminutor combinations.

274. Apparatus under subclass 255 provided with a rotary gas moving means which is coaxial with a rotary hulling member.

Search this class, subclass—
263 and **273**—for unitary rotary hulling members and gas moving means.
265—for identical devices in which gas borne material is applied to a perforate hulling surface.

Search Class—
241—SOLID MATERIAL COMMINUTION OR DISINTEGRATION, subclass 56, for similar comminutor combinations.

275. Apparatus under subclass 250 in which a surface contacted by the grain during the hulling operation is provided with openings through which passes at least part of the material removed from the grain.

(1) Note.—The perforate surface may or may not be disclosed as participating in the hulling treatment.

Search this class, subclass—
80, 89+, 93, 172+, 177+, 185 and **186+**—for other vegetable and meat cutters and comminutors having perforate material contacting members.
258+—for such devices combined with means to apply gas borne material to the perforate surface.
280+—for hulling devices provided with screens which are not contacted by the material during the hulling operation.

Search Class—
241—SOLID MATERIAL COMMINUTION OR DISINTEGRATION, subclasses 69+ and 83+, for similar comminutor combinations.

276. Apparatus under subclass 275 provided with a perforate hulling surface which moves during the hulling operation.

Search this class, subclass—
89+, 90, 177, 178—for other moving perforate vegetable and meat cutters and comminutors.
292+—for rotary non-perforate hulling members.

Search Class—
241—SOLID MATERIAL COMMINUTION OR DISINTEGRATION, subclasses 85, 87, 91+ and 94 for comminutors having moving perforate comminuting surfaces.

277. Apparatus under subclass 275 in which a hulling surface in the form of a drum is provided with perforate and non-perforate portions which extend axially of the drum.

Search this class, subclass—
278—for hullers having drum-type perforate surfaces provided with non-smooth surface characteristics (other than longitudinally extending non-perforate portions).
279—for drum-type hulling surfaces having perforations which extend around the entire circumference thereof.
300+—for drum type hullers in which the drum is non-perforate.

278. Apparatus under subclass 275 in which the perforate hulling surface is provided with non-smooth surface characteristics which enhance the hulling action.

Search this class, subclass—
254—for non-smooth hulling surfaces comprising means to orient the grain.
277—for drums having longitudinal non-perforate portions provided with non-smooth characteristics.
301 and **303**—for cooperating hulling surfaces having intermeshing non-smooth surface characteristics.

Search Class—
241—SOLID MATERIAL COMMINUTION OR DISINTEGRATION, subclass 88, for perforate comminutor surfaces having non-smooth characteristics and subclasses 242+ and 260+ for non-perforate surfaces having such characteristics.

279. Apparatus under subclass 275 in which the perforate surface is of cylindrical or conical drum shape and cooperates with an inner rotary hulling member.

Search this class, subclass—
276—for identical devices, but in which the perforate drum rotates.
277—for identical devices in which the drum is provided with longitudinal non-perforate portions.
300+—and the notes thereto for drum-type hullers having non-perforate walls.

280. Apparatus under subclass 250 provided with means to separate the grain or grain parts from each other or from other material according to their physical characteristics.

Search this class, subclass—
76—for other vegetable comminutors combined with separators.
255+—for such combinations involving the use of a fluid, particularly subclass 272 for screen combinations.
275+—for organizations including a screen hulling surface or enclosure.

Search Class—
209—CLASSIFYING, SEPARATING AND ASSORTING SOLIDS, for processes and apparatus for separating solid material into grades.
210—LIQUID SEPARATION OR PURIFICATION, for processes and apparatus for separating liquids from solids.
241—SOLID MATERIAL COMMINUTION OR DISINTEGRATION, subclass 68+, for comminutors combined with separators.

281. Apparatus under subclass 280 in which the separating means comprises (1) an annular screen which encompasses the hulling zone and/or (2) a screen which is integral with a hulling member (e. g., forms an extension thereof).

(1) Note.—In this subclass, the hulling zone must be one in which the grain does not contact the screen during the hulling operation, i. e., the separation is carried out prior to or subsequent to hulling. When the separation and the hulling are substantially coincident by a screen which is contacted by the material during hulling, proper classification is in subclass 275+, whether the screen acts as a hulling member or not.

Search this class, subclass—
275+—see (1) Note above.

Search Class—
241—SOLID MATERIAL COMMINUTION OR DISINTEGRATION, subclass 74, for comminutors in a similar combination.

282. Apparatus under subclass 250 provided with mechanism (1) for presenting grain to the hulling zone and/or removing it therefrom or (2) for controlling the flow to and/or from the hulling zone.

(1) Note.—The term "mechanism" is intended to denote means in addition to gravity for positively effecting the feed and/or discharge.
(2) Note.—The feeding and/or discharge must be an operation other than the mere hulling movement of the hulling members.

Search this class, subclass—
252—for means to feed loose abradant to the hulling zone.
253—for means to project grain into contact with a hulling surface.
256+—for feeding or discharging means involving the use of a fluid.
280+—for feeding or discharging means comprising a separator.

Search Class—
222—DISPENSING, appropriate subclasses, for feeders in general.
241—SOLID MATERIAL COMMINUTION OR DISINTEGRATION, appropriate feeding and discharging subclasses for similar devices in similar combinations.

283. Apparatus under subclass 282 provided with a feed or discharge means which is vibrated or operated intermittently by non-rigid means interconnected with the drive means of a moving hulling member.

Search Class—
222—DISPENSING, subclasses 196+, for vibrating dispensers.

284. Apparatus under subclass 282 in which a moving hulling member is provided with a feed or discharge means integral or coaxial therewith.

Search this class, subclass—
263, 265, 273, 274—for hulling members having attached or coaxial gas moving means.

Search Class—
241—SOLID MATERIAL COMMINUTION OR DISINTEGRATION, subclass 246+, for comminutors having a similar arrangement.

285. Apparatus under subclass 282 in which the hulling device is provided with a valve controlling the flow of grain from the hulling zone.

286. Apparatus under subclass 250 in which the hulling means is combined with apparatus for other purposes and not provided for above.

(1) Note.—The combined features are in addition to the necessary drive and mounting means for the huller (which are classified below with the particular huller involved) and additional hulling devices (subclass 287+).
(2) Note.—In this subclass, for example, are combinations with heating means for the material, indicators of condition or position, and corn shellers.
(3) Note.—All the preceding subclasses should be investigated for particular combinations within this definition but which are specifically provided for above.
(4) Note.—See the notes to subclass 250 and the main class definition for combinations of hullers with other apparatus classified in other classes.

287. Apparatus under subclass 250 in which grain is treated in a plurality of hulling zones.

(1) Note.—Where the hulling zones are so closely related that there is difficulty in determining whether or not a plurality of zones is involved, the line followed is that if there is a substantial cessation of the hulling action between separate zones, the patent is classified as a plural device herein.

Search this class, subclass—
77 to **80, 183**—for plural zone vegetable and meat cutters and comminutors.
257 and **286**—for means to recirculate grain to the same hulling zone.
259+, 266+, 271—to complete the search. These subclasses provide for plural hulling zones provided with gas applying means.

Search Class—
241—SOLID MATERIAL COMMINUTION OR DISINTEGRATION, subclasses 134+ and 152+, for plural comminutors.

288. Apparatus under subclass 287 in which each hulling zone is provided with a rotary hulling member, at least two of which members in separate zones are coaxial with each other or are unitary.

Search this class, subclass—
292+—for hulling devices having rotary hulling members.

Search Class—
241—SOLID MATERIAL COMMINUTION OR DISINTEGRATION, subclasses 144 and 162+, for plural comminutors having similar structure.

289. Apparatus under subclass 288 in which the grain passes circumferentially or tangentially of the rotary hulling member or members during hulling.

Search this class, subclass—
293—for other non-plural hullers in which the material has a similar flow path.

Search Class—
241—SOLID MATERIAL COMMINUTION OR DISINTEGRATION, subclass 240, for comminutors in which a plurality of independently mounted stationary members cooperate with a single rotary member.

290. Apparatus under subclass 288 in which the grain flows axially of a cylindrical or conical hulling drum which is positioned to form a plurality of hulling zones.

Search this class, subclass—
295 and **300+**—for drum-type hullers in which no partitions are provided.

291. Apparatus under subclass 250 in which at least one of the hulling members comprises an endless belt.

Search Class—
51—ABRADING, subclass 135+, and the notes thereto for endless belt type abraders.
241—SOLID MATERIAL COMMINUTION OR DISINTEGRATION, subclass 200, and the notes thereto for endless belt type comminutors.

292. Apparatus under subclass 250 in which the grain is hulled, moved, supported or otherwise handled during the hulling operation by a member or surface having simple rotary motion.

Search this class, subclass—
11, 61, 106+—for other rotary vegetable cutters and comminutors.
253—for rotary surfaces which project grain against an independent surface to effect the hulling.
265, 273—for rotary hulling members provided with coaxial rotary gas moving means.
288+—for coaxial rotary members operating in a plurality of hulling zones.

Search Class—
51—ABRADING, subclass 71+, and the notes thereto for rotary abrading machines.
241—SOLID MATERIAL COMMINUTION OR DISINTEGRATION, subclasses 220+ and 277+, for rotary comminutors.

293. Apparatus under subclass 292 in which the grain passes circumferentially or tangentially of the rotary surface or member during the hulling operation.
Search this class, subclass—
289—for plural devices of this character.
Search Class—
241—SOLID MATERIAL COMMINUTION OR DISINTEGRATION, subclass 221+, for comminutors of this type.

294. Apparatus under subclass 292 in which the rotary hulling member operates in conjunction with an independently mounted grain handling, supporting, or hulling member.
Search Class—
241—SOLID MATERIAL COMMINUTION OR DISINTEGRATION, subclass 220+, for rotary cooperating surface type comminutors.

295. Apparatus under subclass 294 provided with a rotary cylindrical or conical drum which cooperates with an independently mounted inner member to effect the hulling treatment.
Search this class, subclass—
276—for identical devices in which the drum is perforate.
290—for similar devices in which the drum is partitioned to form a plurality of hulling zones.
300+—for similar organizations in which the drum member is stationary.
Search Class—
241—SOLID MATERIAL COMMINUTION OR DISINTEGRATION, subclasses 187, and 251+, for similar comminutor combinations.
248—SUPPORTS, subclasses 130 and 131, for rotary receptacle supports.
259—AGITATING, subclass 82+, for rotating agitating receptacles having an independent stirrer.

296. Apparatus under subclass 294 provided with a plurality of rotary members which cooperate to perform the hulling treatment.
Search this class, subclass—
276—for such devices in which a rotary perforate surface cooperates with a rotary hulling member.
295—for such devices in which one of the rotary members is a conical or cylindrical drum.
Search Class—
241—SOLID MATERIAL COMMINUTION OR DISINTEGRATION, subclass 251+, and the notes thereto, for comminutors having plural cooperating rotary surfaces.

297. Apparatus under subclass 294 in which a grain hulling member is adjustable in position or is yieldably mounted.
Search this class, subclass—
299—and the notes thereto for hulling members having deformable surfaces rather than yieldable as a whole.
Search Class—
241—SOLID MATERIAL COMMINUTION OR DISINTEGRATION, subclasses 256 and 259, and the notes thereto for comminutors having similar characteristics.

298. Apparatus under subclass 297 in which the stationary grain hulling member is adjustable in position or yieldably mounted.
Search Class—
241—SOLID MATERIAL COMMINUTION OR DISINTEGRATION, subclasses 255 and 257, for comminutors having similar characteristics.

299. Apparatus under subclass 294 in which at least one of the grain hulling surfaces is resilient or is constructed in sections so that parts thereof are deformable relative to other parts of the surface by contact with the grain during normal operation of the device.
Search this class, subclass—
285—for biased discharge valves.
Search Class—
15—BRUSHING, SCRUBBING, AND GENERAL CLEANING, appropriate subclasses, for machines and implements embodying brushes, wipers, etc., having deformable surface characteristics.
241—SOLID MATERIAL COMMINUTION OR DISINTEGRATION, subclass 102, for comminutors having the characteristics of this subclass.

300. Apparatus under subclass 294, in which the nonrotary independent grain handling, supporting or treating means is a stationary cylindrical or conical drum which surrounds a rotary inner hulling member.
Search this class, subclass—
277 and **279**—for identical devices in which the drum is perforated.
290—for similar devices in which the drum has partitions.
295—for similar organizations in which the cylindrical or conical drum rotates.
Search Class—
241—SOLID MATERIAL COMMINUTION OR DISINTEGRATION, subclass 257+, and the notes thereto, for corresponding comminutors.

301. Apparatus under subclass 300 in which the drum and the rotary inner member are provided with surface projections which overlap each other.
Search this class, subclass—
303—for similar characteristics in other rotary hulling organizations.
Search Class—
241—SOLID MATERIAL COMMINUTION OR DISINTEGRATION, subclass 261, and the notes thereto, for comminutors having intermeshing surface characteristics.

302. Apparatus under subclass 300 in which the inner member rotates on a horizontal axis.
Search this class, subclass—
106 to **123**, **174** and **182+**—for other vegetable cutters and comminutors rotating on a horizontal axis.
279—for identical devices having a perforate drum.
Search Class—
241—SOLID MATERIAL COMMINUTION OR DISINTEGRATION, subclass 255+, and the notes thereto, for comminutors having a similar arrangement.

303. Apparatus under subclass 294, in which cooperating relatively rotatable hulling elements are each provided with projections which intermesh with (i. e., overlap) those of the other elements.
Search this class, subclass—
301—for such surface characteristics on stationary drums cooperating with inner rotary hulling members.
Search Class—
241—SOLID MATERIAL COMMINUTION OR DISINTEGRATION, subclass 261 and the notes thereto, for similar comminutors having the characteristics of this subclass.

304. Apparatus under subclass 250 provided with a hulling member having a reciprocating motion.
(1) Note.—"Reciprocation" is deemed to include any to and fro motion along the same path and thus includes oscillation.
Search this class, subclass—
58, 62, 63, 69, 140 to **161, 178**—for other vegetable cutters and comminutors having reciprocating elements.
Search Class—
241—SOLID MATERIAL COMMINUTION OR DISINTEGRATION, subclasses 262+ and 283, and the notes thereto, for comminutors having reciprocating elements.

305. Apparatus under subclass 250 comprising single hulling elements not provided for above.
(1) Note.—Supporting means for the element in combination therewith has been included in this subclass and those indented hereunder, except where such means locates the element relative to the frame of the machine or a cooperating hulling element.
(2) Note.—Where a plurality of cooperating hulling elements or the driving means for the single element are significantly included in the claims, the device is considered to be a hulling organization for one of the subclasses above.
Search this class, subclass—
254—for hulling elements embodying grain orienting means.
263, 273—for hulling elements having attached fluid-impelling means.
275+—for perforate hulling elements.
284—for hulling elements having attached grain feeding means.
301, 303—for rotary hulling element scourers having intermeshing surface characteristics.
Search Class—
51—ABRADING, subclasses 185+ and 204+, for abrading elements in general.
241—SOLID MATERIAL COMMINUTION OR DISINTEGRATION, subclass 291+, and the notes thereto for similar comminuting elements.

306. Hulling elements under subclass 305 in which the element is provided with a hulling surface, which lies in a radial plane substantially perpendicular to the axis of rotation.
Search this class, subclass—
303—for a plurality of such elements having intermeshing surface characteristics.

Search Class—
51—ABRADING, subclasses 195+ and 209+, for abrading tools in general having these characteristics.
241—SOLID MATERIAL COMMINUTION OR DISINTEGRATION, subclass 296+, for comminuting elements of similar structure.

307. Hulling elements under subclass 305 which present an annular, or partly annular, internal hulling face to the material.
Search this class, subclass—
279—and the notes thereto for such elements provided with perforations.
290—for such elements provided with partitions.
301—for such elements having surface characteristics which intermesh with those on a rotary hulling member.
Search Class—
51—ABRADING, subclass 164, for drum type abrading elements in general.
241—SOLID MATERIAL COMMINUTION OR DISINTEGRATION, subclass 299, for corresponding comminuting elements.

308. Hulling elements under subclass 305 provided with hulling surfaces formed in a plurality of sections or embodying separable surface elements.
Search Class—
241—SOLID MATERIAL COMMINUTION OR DISINTEGRATION, subclasses 294+ and 298 for comminuting elements having like characteristics.

152, Resilient Tires and Wheels (Division 45)

in the main class definition, (8) Note, in the second sentence cancel "and", second occurrence, and after "9" insert: *and class 254, subclass 50.1+.*

154, Laminated Fabric and Analogous Manufactures (Divisions 20, 55)

in subclass 9, under "(2) Search Class" add in numerical order:
81—TOOLS, subclass 15.2+ and the notes thereto, for tire repair tools.
254—PUSHING AND PULLING IMPLEMENTS, subclass 50.1+ for tire bead spreaders.

155, Chairs and Seats (Division 8)

in subclass 153, under "(3) Search Classes" in the reference to class 5, Beds, change "the latter subclass" to *subclasses 70 and 71.*

159, Concentrating Evaporators (Division 46)

in subclass 11, under "Search Classes" cancel the reference to class 83, Mills, and substitute:
18—PLASTICS, subclass 1, for apparatus for making flakes in which a film is spread on a surface, e. g., drum, and the film broken off as flakes.

164, Cutting and Punching Sheets and Bars (Division 57)

in subclass 10.6, under "Search Classes" cancel the reference to class 83, Mills, and add in numerical order:
18—PLASTICS, subclasses 2.4+ and 47.2 for comminuting and solidifying molten material.

167, Medicines, Poisons and Cosmetics (Divisions 43, 63)

establish the following subclass definition:
51.5. Compositions under subclass 50 which contain a sulfa compound, that is, a compound containing the grouping para-nitrogen-benzene-sulfoxy—X(X=C or N) e. g., sulfanilamide, sulfathiazole and sulfapyridine.
Search Class—
260—CHEMISTRY, CARBON COMPOUNDS, appropriate subclasses, for sulfa compounds per se, particularly subclasses 239.6, and 397.6+.

in subclass 58, number the existing note (*1*), and add the following:
(2) Note.—See subclass 51.5 for topical medicines containing a sulfa compound.

in subclass 65, add the following:
(3) Note.—See subclass 51.5 for medicinal compositions containing a sulfa compound.

in subclass 74, insert the following note:
(1.5) Note.—This and the indented subclasses do not contain vitamin extracts per se, for which see subclass 81.

establish the following subclass definitions:
74.5. Extracts under subclass 74 derived from urine.
Search Class—
260—CHEMISTRY, CARBON COMPOUNDS, subclasses 239.6 and 397, 397.3, 397.4 and 397.5 for cyclopentanohydrophenanthrene compounds per se, e. g., androsterone, estrone, estradiol and testosterone.

74.6. Extracts under subclass 74 derived from liver or kidney.
Search this class, subclass—
81—for vitamin extracts produced from fish livers.
Search Class—
260—CHEMISTRY, CARBON COMPOUNDS, subclass 412.1 for oil extraction from fish livers in general.

178, Telegraphy (Divisions 16, 65)

in subclass 5, under "Search Classes" add in numerical order:
250—RADIANT ENERGY, subclass 1.50+ for reflected or otherwise returned radio wave (radar) systems, note especially subclass 1.74 for such systems, which include means to produce an image at the receiving station of an object remote from the station, the object being scanned by the transmitted radio wave.

195, Chemistry, Fermentation (Division 63)

in subclass 101, in "(2) Note", cancel the reference to class 83, Mills, and add in numerical order:
99—FOODS AND BEVERAGES, subclass 80+.
146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, appropriate subclasses, particularly subclass 221.5+.

198, Conveyors, Power Driven (Division 4)

in subclass 129, insert the following:
(4) Note.—See class 146, VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclass 291, for endless belt type grain scourers.

in subclass 213, cancel notes (2) through (8) and substitute the following:
Search this class, subclass—
9, 104—for screws in combination with other forms of conveyors.
15—for screw conveyors used as locomotive stokers.
Search Class—
110—FURNACES, subclasses 44, 45, 110.
115—MARINE PROPULSION, subclass 34+, for screw propellers for boats.
134—CLEANING AND LIQUID CONTACT WITH SOLIDS, subclasses 65 and 132.
170—MOTORS, FLUID CURRENT, subclass 156+, for fluid-impeller screws.
210—LIQUID SEPARATION OR PURIFICATION, subclass 30, for screws in filters.
222—DISPENSING, appropriate subclasses, particularly subclasses 240, 241, 372+, 412+.
241—SOLID MATERIAL COMMINUTION OR DISINTEGRATION, subclasses 246+, 276, 284, for screw type comminutors.
259—AGITATING, appropriate subclasses, for screw type agitators.
302—CONVEYORS, FLUID CURRENT, subclass 50, for screw feeds for pneumatic conveyors.

209, Classifying, Separating, and Assorting Solids (Division 25)

in the main class definition, add the following:
(14) Note.—See class 146, VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclasses 222, 255+, 275+, 280+ and 76 for processes and apparatus of the type there provided for, combined with separating steps or means. See the main class definition of that class (146) for the line.

in subclass 11, under "(2) Search Classes", cancel the reference to class 83, Mills, and substitute:
99—FOODS AND BEVERAGES, appropriate subclasses.

in subclass 21, under "Search Class" add in numerical order:
146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclass 272, and the notes thereto.

in subclass 132, under "(3) Search Classes" add in numerical order:
146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclasses 221.7+, 227+, 255+ and 76 for processes and apparatus of the type there provided for combined with fluid suspension separators.

in subclass 148, cancel (2) Search Class, and the reference thereunder, and substitute:

Search Class—

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclasses 225, 9, and 253 for processes and apparatus of the type there provided for employing centrifugal force.

222—DISPENSING, subclass 410, and the notes thereto, for centrifugal force feeders, per se.

241—SOLID MATERIAL COMMINUTION OR DISINTEGRATION, subclasses 39+ and 275 for comminutors including centrifugal force feeders.

in subclass 173, under "Search Class", cancel the reference to class 83, Mills, and substitute:

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclasses 222, 256 and 76 for vegetable and meat cutters and comminutors and allied processes in gravity liquid separation.

241—SOLID MATERIAL COMMINUTION OR DISINTEGRATION, subclasses 38+, particularly subclass 46, for comminutors combined with such separators.

in subclass 233, under "Search Class", add in numerical order:

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclasses 258+, 272, 275+, for grain scourers embodying sifters.

in subclass 238, cancel "(2) Search Class", and the reference thereunder.

in subclass 283, under "(2) Search Classes", cancel the references to class 83, Mills, and class 146, Vegetable and Meat Cutters and Comminutors, and add in numerical order:

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclass 275+, and the notes thereto, and subclass 174.

in subclass 284, under "(2) Search Classes", cancel the reference to class 83, Mills, and add in numerical order:

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclass 282+.

in subclass 288, under "Search Classes", add in numerical order:

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclass 276.

241—SOLID MATERIAL COMMINUTION OR DISINTEGRATION, subclass 91+.

in subclass 296, under "Search Class", cancel the reference to class 83, Mills, and substitute:

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclass 276.

in subclass 299, under "Search Classes", cancel the reference to class 83, Mills, and add:

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclass 276.

in subclass 300, under "(3) Search Classes", cancel the reference to class 83, Mills, and substitute:

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclass 279.

in subclass 303, under "Search Class", cancel the reference to class 83, Mills, and substitute:

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclass 276.

in subclass 304, cancel "Search Class", and the reference thereunder.

in subclass 305, under "Search Class", cancel the reference to class 83, Mills, and substitute:

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclass 279.

in subclass 306, cancel "(2) Search Class", and the reference thereunder.

in subclass 307, under "(2) Search Classes", add in numerical order:

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclass 291.

220, Metallic Receptacles (Division 40)

in subclass 51, after "as" insert: *, or is carried by,*; and add the following:

(2) Note.—The inclusion of a handle to manipulate the punctured can does not prevent classification in this subclass.

222, Dispensing (Division 35)

in the main class definition, section 8, under "Search Class" add in numerical order:

265—FORCE MEASURING. See the reference to class 249, AUTOMATIC WEIGHERS, above.

and in section 24, add in numerical order:

265—FORCE MEASURING, section 8; the line with class 222 being stated in the main class definition of class 265.

in subclass 77, under "Search this class, subclass", add:

58—for automatic control by weight of the material in the supply container.

and under "Search Class" in the reference to class 265, Force Measuring, add: *See the main class definition of class 265 for the line.*

in subclass 80, under "Search Class", in the reference to class 220, Metallic Receptacles, after "as" insert: *, or is carried by,*.

241, Solid Material Comminution or Disintegration (Division 25)

in the main class definition, section 10, under "Search Class", cancel the reference to class 83, Mills, and class 146, Vegetable and Meat Cutters and Comminutors, and add in numerical order:

15—BRUSHING, SCRUBBING, AND GENERAL CLEANING, subclass 3.10+, for apparatus for cleaning grain, employing means of the type there provided for.

47—PLANT HUSBANDRY, subclass 58, for processes of treating seed in preparation for planting.

51—ABRADING, subclass 163+, for apparatus for removing husks from grain by tumbling.

91—COATING, appropriate subclasses, for apparatus for coating grain.

134—CLEANING AND LIQUID CONTACT WITH SOLIDS, appropriate subclasses, for apparatus for cleaning and/or applying liquid to grain not provided for elsewhere.

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, appropriate subclasses, particularly subclasses 221.5+ and 250+ for processes and apparatus dealing with the husking or peeling of grain, and see the notes to these subclasses for a more complete statement of the line with this class (241). Also see subclass 71.5 for grain slicers.

259—AGITATING, appropriate subclasses, for apparatus for merely mixing liquids or solids with grain by agitation.

in section 12, under "Search Class", in the reference to class 15, Brushing, Scrubbing and General Cleaning, cancel the first sentence and substitute:

15—BRUSHING, SCRUBBING, AND GENERAL CLEANING, section 10. For the cleaning, per se, of comminuting members, see the appropriate subclasses of that class, particularly subclass 256.5.

also add in numerical order:

47—PLANT HUSBANDRY, section 10.

in the reference to class 51, cancel "Sec. 4." and substitute: *sections 4, 10.*;

cancel the reference to class 83, Mills;

in the reference to class 91, Coating, cancel "Sec. 4." and substitute: *Sections 4, 10.*;

in the reference to class 134, Cleaning and Liquid Contact with Solids, cancel the first sentence and substitute:

134—CLEANING AND LIQUID CONTACT WITH SOLIDS, section 10. This is the generic class for cleaning and/or applying liquids to solids.

in the reference to class 259, Agitating, cancel "Sec. 3." and substitute: *Secs. 3, 10.*;

in subclass 5, under "Search Class", add in numerical order:

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, appropriate subclasses, particularly subclasses 225 and 253 for processes and apparatus employing kinetic energy for the purposes of that class.

in subclass 6, under "Search Class", cancel the reference to class 83, Mills, and in the reference to class 146, Vegetable and Meat Cutters and Comminutors, cancel "subclass 71.5," and substitute: *subclasses 221.5+, and 71.5.*;

in subclass 7, (1) Note, after "comminution," insert: *of the inner body of the grain.*;

and under "Search Class", cancel the references to classes 83, Mills, and 146, Vegetable and Meat Cutters and Comminutors, and add:

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, appropriate subclasses, for processes of removing grain husks, per se, particularly subclass 221.5+. Grain comminuting processes including hulling steps involving a chemical reaction in the grain or part thereof are classifiable in class 146.

in subclass 8, under "Search Class", cancel the references to classes 83 and 146 and add:

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclasses 221.7 and 227+, for corresponding grain processes but involving operations provided for in that class.

in subclass 14, under "Search Class", add in numerical order:

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclass 221.5+, for processes of hulling grain in which the hull is comminuted in the removal operation.

in subclass 15, under "Search Class", in the reference to class 146, Vegetable and Meat Cutters and Comminutors, after "subclasses" insert: *221.5+ and*;

in subclass 22, under "Search Class" add in numerical order:

51—ABRADING, subclass 282, for abrading processes involving the addition of a loose abrasive to the material.

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclass 221.6, for grain hulling processes involving the addition of a particulate solid.

in subclass 24, under "Search Class", add in numerical order:

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclass 222, for processes of the type there provided for including separation.

in subclass 33, under "Search Class", add in numerical order:

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclass 251, for automatic controls for grain hullers.

in subclass 38, under "Search Class", in the reference to class 146, Vegetable and Meat Cutters and Comminutors, add at the end: *See particularly subclasses 76 and 255+.*;

in subclass 39, under "Search Class", add in numerical order:

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclass 253, for corresponding grain hullers.

in subclass 42, add:

Search Class—

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclass 266+, for corresponding grain hulling combinations.

in subclass 43, add:

Search Class—

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclasses 259+, 266, 271, for corresponding grain hulling combinations.

in subclass 46, add:

Search Class—

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclass 256, for corresponding grain hulling combinations.

in subclass 48, add:

Search Class—

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclass 257, for corresponding grain hulling combinations.

in subclass 49, under "Search Class" add in numerical order:

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclasses 258+ and 272, for corresponding grain hulling combinations.

in subclass 51, add:

Search Class—

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclass 258+, for corresponding grain hulling combinations.

in subclass 52, add:

Search Class—

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclass 257, for corresponding grain hulling combinations.

in subclass 55, add:

Search Class—

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclasses 263 and 273, for corresponding grain hulling combinations.

in subclass 56, add:

Search Class—

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclasses 265 and 274, for corresponding grain hulling combinations.

in subclass 60, under "Search Class", add in numerical order:

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclass 269+, for corresponding grain hulling combinations.

in subclass 61, add:

Search Class—

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclass 257, for corresponding grain hulling combinations.

in subclass 62, add:

Search Class—

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclass 268, and the notes thereto, for corresponding grain hulling combinations.

in subclass 68, under "Search Class", add in numerical order:

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclass 280+, for corresponding grain hulling combinations.

in subclass 74, add:

Search Class—

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclass 281, for corresponding grain hulling combinations.

in subclass 83, under "Search Class", add in numerical order:

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclasses 89+, 93, 177 and 275+, for similar devices functioning for the purposes of that class.

in subclass 85, under "Search Class", add in numerical order:

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclass 276, for corresponding grain hulling combinations.

in subclass 86, add:

Search Class—

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclass 279, for similar grain hullers.

in subclass 88, add:

Search Class—

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclass 278, for similar grain hullers.

in subclass 90, under "Search Class", in the reference to class 146, after "186+," insert *279*,

in subclass 91, under "Search Class", in the reference to class 146, after "177" insert *276*,

in subclass 94, under "Search Class", in the reference to class 146, after "178," insert *276*,

in subclass 95, under "Search Class", in the reference to class 146, after "179," insert *275+*,

in subclass 102, add:

Search Class—

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclass 299, for grain hullers having similar characteristics.

in subclass 134, add:

Search Class—

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclass 287+, for plural grain hulling combinations.

in subclass 152, add:

Search Class—

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclass 287+, for plural grain hulling combinations.

in subclass 170, under "Search Class", add in numerical order:

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclass 252, for grain hullers employing loose abrading material.

in subclass 185, under "Search Class", cancel the reference to class 83, Mills, and in the reference to class 146, before "for" insert *294+,*; also add in numerical order:

18—PLASTICS, subclass 2.6, for apparatus for comminuting and solidifying a liquid utilizing a rotary projection means.

in subclass 187, add:

Search Class—

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclass 295, for similar grain hullers.

in subclass 189, add:

Search Class—

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclass 293, for similar grain hullers.

in subclass 191, add:

Search Class—

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclasses 305 and 308, for similar grain hulling elements.

in subclass 198, under "Search Class", cancel the reference to class 83, Mills;

in subclass 200, under "Search Class", add in numerical order:

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclass 291, for endless belt type grain hullers.

in subclass 201, under "Search Class", add in numerical order:

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclass 250, for compound movement grain hullers.

in subclass 221, under "Search Class", in the reference to class 146, Vegetable and Meat Cutters and Comminutors, cancel "subclass 11." and substitute: *subclasses 11, 117+, and 293.*

in subclass 244, under "Search Class", cancel the reference to class 83, Mills, and in the reference to class 146, before the period insert:

", particularly subclass 294+ for similar grain scourers and 108+ for comminutors."

in subclass 251, add:

Search Class—

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclass 295, for similar grain hullers.

in subclass 261, add:

Search Class—

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclasses 301 and 303, for grain scourers having similar characteristics.

in subclass 262, under "Search Class", add in numerical order:

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclass 304, for similar grain hullers.

in subclass 275, under "Search Class", in the reference to class 146, before the period, insert:

", and subclass 253 for similar grain hullers."

in subclass 276, under "Search Class", cancel the reference to class 83, Mills;

in subclass 277, under "Search Class", in the reference to class 146, after "177," insert: *292,*

in subclass 291, under "Search Class", add in numerical order:

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclass 305+, for grain hulling elements.

in subclass 294, add:,

Search Class—

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclass 308, for similar grain hulling elements.

in subclass 296, under "Search Class", cancel the reference to class 83, Mills, and in the reference to class 146, after "106+," insert: *and 306,*.

250, Radiant Energy (Divisions 10, 51, 54)

establish the following subclass definitions:

1.50. Subject matter under the class definition having any one or any combination of:

(1) Radiant energy means restricted to the use of radiant energy that is transmitted and then reflected from some object, the reflected energy being received at a receiving station.

(2) Systems which involve transmitting radiant energy from a first station to an object which includes a receiver-transmitting station where it is utilized to control the transmission of energy to a receiver station, usually located at the first transmitting station.

(3) Systems and devices not otherwise classified for reflecting radio waves or absorbing radio waves or otherwise designated to prevent the use of the systems of paragraphs (1) and (2) or to make the results of the use of the systems of paragraphs (1) and (2) ineffective or inaccurate. The means and systems of paragraphs (1) and (2) are for the purpose of detection of the object from the transmitter, and/or the speed of the object, and/or the direction of the object, and/or to produce an image of the object, and/or to identify the object, and/or to utilize the reflected or returned energy to control some apparatus, such as a motor, steering apparatus, igniting or exploding means, searchlight, gun training, etc., other than a mere indicating or measuring apparatus, in which the structure of such controlled devices is not so specifically claimed as to involve a search in the class containing such devices, and/or for similar purposes.

(1) Note.—The systems and apparatus in this and the indented subclass usually involve radiated electromagnetic wave energy. For the classes and subclasses which provide for somewhat similar systems using ultra-violet, infra-red, X-rays, or visible light, see the references to the classes and subclasses below.

(2) Note.—The purposes set forth in the definition of subclass 1.50 are defined to include:

"Determining the distance of an object" includes determining the distance of the object from the transmitter, or from the receiver, or from any other reference point.

"Detection of an object" includes merely determining that an object is present, or in determining any other characteristic of the object, such as one or more dimensions of the object, etc.

"Speed of the object" includes determining either its speed with reference to the transmitter or the receiver, or its speed with reference to any other reference point.

"Direction of the object" includes determining the direction of the object with respect to the transmitter, the receiver, or any other reference point or line.

"To produce an image of the object", the image need not be a facsimile of the object, but may only show one or a few characteristics of the shape of the object.

"To identify an object" includes systems of the returned wave type where the signal from the first station causes the transmitter at the receiver-transmitter to transmit a signal of different characteristics, such as of different code characteristics, so that the operator at the receiver station can identify the receiver-transmitting station by the signal transmitted by it.

"To control some apparatus" includes utilizing the reflected or returned wave to control the position or orientation of the transmitting or receiving antenna.

(3) Note.—The systems in this and the indented subclasses include "radar" systems.

Search this class, subclass—

2—for miscellaneous wireless transmission systems for controlling motors, steering mechanisms, igniting or exploding means, switches, signals, etc.

11—for wireless systems for sending or receiving signals in predetermined or desired directions, or "orienting", also aerials or antennae provided with reflectors, lenses or polarizers. The systems in subclass 11 include systems for determining the speed, direction and/or distance of another transmitting or receiving station.

15—for repeater stations for receiving signals from one station and automatically transmitting a signal which has the same characteristics to another station. Subclass 15 provides for such repeater stations where there is a time delay interposed between the received signal and the transmitted signal.

17—for radio transmitter stations other than repeater stations, which include means to control the operation of the station by means of a radio signal received from another station located at a distance from the transmitter station.

41.5—for image producers of the photo-cell light amplifying type, that is, photo-cells designed to receive an image of an object upon the photo-electric electrode and to produce an image upon a screen which is a part of the photo-cell.

42+—for miscellaneous methods and apparatus for the development, conversion, production, transmission and general utilization of invisible ray energy, other than radio waves and supersonic waves, including apparatus and methods for the production and utilization of X-rays, Röntgen rays, cathode rays, ultra-violet rays, infra-red rays, and the radiations or emanations of radioactive substances. Note especially subclass 71+ for fluorescent and phosphorescent applications and devices, including viewing devices, subclass 83+ for miscellaneous apparatus for the measurement and detection of invisible ray energy other than radio waves, and subclass 84+ for miscellaneous invisible ray generating devices and apparatus.

Search Class—

33—GEOMETRICAL INSTRUMENTS, for miscellaneous instruments and apparatus for determining the characteristics and mutual relation of points, lines, angles, surfaces and solids, considered as having no properties, but those arising from extensions and differences in situation, note especially subclass 46+ for such means in which a light ray is utilized to determine a straight line.

73—MEASURING AND TESTING, appropriate subclasses, for miscellaneous processes and apparatus for making a measurement of any kind or for making a test of any kind, see subclass 355 for devices for measuring the temperature of hot bodies by measuring the intensity of the heat radiated therefrom.

88—OPTICS, for apparatus for determining the characteristics of an object by means of visible light and devices in which the principle of operation depends upon diverting a light ray from a straight line or projecting an image in a straight line with the use of artificial light, see subclass 2.2+, for fiducial instruments including sextants, range finders and surveying instruments, and subclass 14+ for miscellaneous testing instruments. See subclass 1 for miscellaneous apparatus for determining the speed, distance or direction of an object which utilizes the light that is transmitted and then reflected from an object. See subclass 22.5 for optical pyrometers, that is, apparatus used for determining the temperature of bodies by measurement of the relative intensity of light radiation or by color or incandescence comparison. See subclass 23 for apparatus for measuring the intensity of light.

136—BATTERIES, subclass 4, for thermal batteries or thermal electric generators for detecting infra-red rays.

175—ELECTRICITY—GENERAL APPLICATIONS, subclass 182, for electrical ore detecting methods and apparatus. Some of the apparatus in subclass 182 are provided with means to establish an electromagnetic field or a radiant electromagnetic (radio) field in the area being investigated. Ore detectors which involve the use of reflected radio waves are in this or one of the indented subclasses in class 250. See subclass 183 for miscellaneous electrical testing apparatus and methods.

177—ELECTRIC SIGNALING, for apparatus and methods of detecting objects and/or determining their distance and/or direction which are provided with means to transmit and receive sonic or supersonic waves, the sonic or supersonic waves being either generated or received by electrical means. See subclass 352 for the miscellaneous apparatus and methods and subclass 386 for the apparatus and methods for use in a fluid (water). Note that class 181, ACOUSTICS, subclass 0.5, has similar apparatus.

178—TELEGRAPHY, subclass 5+, for facsimile (television) systems.

181—ACOUSTICS, for miscellaneous methods and apparatus which utilize sound waves, see especially subclass 0.5 for miscellaneous seismic wave systems which determine some characteristic of the earth and which involve a means for generating a sonic or supersonic sound, and subclass 26 for sound-locating devices. Note that class 177, ELECTRIC SIGNALING, subclasses 352 and 386, has systems similar to those in subclass 0.5 of this class (181).

219—ELECTRIC HEATING, subclass 34, for infra-red ray generating apparatus.

1.52. Subject matter under subclass 1.50 which has combined therewith a radiant energy transmission and/or reception system of a type different from the reflected or otherwise returned wave systems.

1.54. Subject matter under subclass 1.50 wherein the reflected or otherwise returned wave energy is used to control some apparatus, such as a motor, steering apparatus, igniting or exploding means, search light, gun training, etc., other than a mere indicating or measuring instrument.

(1) Note.—This subclass includes systems which utilize the reflected or returned wave to control the position or orientation of the transmitting or receiving antenna.

Search this class, subclass—

2—for miscellaneous wireless transmission systems for controlling apparatus located at a distance from the transmitter.

1.56. Subject matter under subclass 1.50 which includes means to determine the velocity or speed of the object, either with reference to the transmitter or the receiver, or its speed with reference to any other reference point.

1.58 Subject matter under subclass 1.56 which also has means to determine the distance of the object from the transmitter, the receiver, or from any other reference point, and/or to determine the direction of the object with respect to the transmitter, the receiver, or any other reference point or line.

1.60. Subject matter under subclass 1.50 which includes means to determine the distance of the object from the transmitter, the receiver, or from any other reference point, and to also determine the direction of the object with respect to the transmitter, the receiver, or any other reference point or line.

Search this class, subclass—

1.58—for systems under subclass 1.50 which include means to determine the distance, direction and the speed of an object.

1.62. Subject matter under subclass 1.60 in which the radiant energy is radio waves in the form of discrete pulses.

1.64. Subject matter under subclass 1.50 which includes means to determine the distance of the object from the transmitter, the receiver, or from any other reference point.

Search this class, subclass—

1.58—for systems under subclass 1.50 which include means to determine the distance and the speed of an object.

1.60+—for this subject matter where the system includes means to determine the direction and the distance of an object.

1.66. Subject matter under subclass 1.64 in which the radiant energy is radio waves in the form of discrete pulses.

1.68. Subject matter under subclass 1.64 in which the radiant energy is radio waves of continually varying frequency (frequency modulated).

1.70. Subject matter under subclass 1.64 in which means are provided for utilizing triangulation procedure to determine the distance.

Search this class, subclass—

11—for systems utilizing directive radio waves to determine distance by means of triangulation procedures.

1.72. Subject matter under subclass 1.50 which include means to determine the direction of the object with respect to the transmitter, the receiver, or any other reference point or line.

Search this class, subclass—

1.58—for systems under subclass 1.50 which include means to determine the direction and speed of an object.

1.60+—for this subject matter where the system includes means to determine the direction and the distance of an object.

1.74. Subject matter under subclass 1.50 which includes means to produce an image of the object at the receiving station.

(1) Note.—See the references to the classes and subclasses under the definition of subclass 1.50 for other classes and subclasses which utilize radiant energy to form an image of an object which is located at a distance from the observer.

1.76. Subject matter under subclass 1.50 not otherwise classified for reflecting radio waves or for absorbing radio waves, or otherwise designed to prevent the use of the systems of subclasses 1.50+, or to make the results of the use of such systems ineffective or inaccurate.

in subclass 2, cancel the note entitled, "(1) Search this class" and add:

Search this class, subclass—

1.54—for this subject matter where the system includes a reflected or otherwise returned radio wave (radar) system.

4, 5, 6+, and 8+—for teledynamic telephone or telegraph systems specific to the radio transmission of spoken or other sounds and code signals, respectively.

in subclass 11, add:

Search this class, subclass—

1.50+—for reflected or otherwise returned wave (radar) systems utilizing directive radio ways. Note indented subclass 1.70 for such systems for determining the distance of an object from a reference point by triangulation methods.

in subclass 15, add:

Search this class, subclass—

1.50—for systems and apparatus which include a receiver-transmitter station designed for control by a wave transmitted from a first transmission station and designed to transmit a signal which is different from the received signal, the system including means to receive the signal transmitted by the receiver transmitter station. Where the signal which is transmitted by the receiver-transmitter is of the same character as the received signal, even though a time-delay is interposed between the time of reception and the time of transmission, the patent is classified in this subclass (15).

252, Compositions (Divisions 3, 64)

in subclass 303, under "Search Class", cancel the reference to class 83, Mills, and add:

18—PLASTICS, subclasses 2.4+ and 47.2+ for comminuting a liquid or melted material and solidification of the particles.

254, Pushing and Pulling Implements (Division 61)

establish the following subclass definitions:

50.1. Apparatus under the class definition comprising means for engaging, and applying force to spread apart, the beads of resilient tire casings.

(1) Note.—The "means for engaging and applying force" referred to in the definition is to be construed as excluding devices which merely hold the tire casing in deformed position. See class 81, TOOLS, subclass 15.3, for such devices. Tire spread holders which are provided with means adapting the device to use also as a spreader are provided for in this or the indented subclasses.

Search Class—

18—PLASTICS, subclass 2, for apparatus including tire spreading means for removing or manipulating inflatable bags within the casing.

81—TOOLS, subclass 15.2+, for resilient tire repair tools in general, particularly subclass 15.3 (see (1) Note).

154—LAMINATED FABRIC AND ANALOGOUS MANUFACTURES, subclass 9+, for processes and apparatus for making and repairing resilient tire casings, which include means for spreading the casing.

157—WHEELWRIGHT-MACHINES, subclass 6, for tire spreaders used in applying tire casings to wheels, e. g. (1) devices which spread tire casings while the casing is on a wheel, (2) spreaders combined with means to apply a casing to, or remove it from, a wheel or (3) spreaders convertible to use as tire casing compressors used in applying the casing to a wheel.

50.2. Apparatus under subclass 50.1 in which (1) the spreader is provided with means to move it, or adapting it for movement, relative to the casing while the casing is in spread condition or (2) the spreader and casing are supported for rotary movement together.

Search Class—

157—WHEELWRIGHT-MACHINES, subclass 6, for devices for assembling or disassembling tires and wheels embodying tire engaging means adapted to move circumferentially of the tire.

50.3. Apparatus under subclass 50.1 in which the spreader operating means is actuated by fluid pressure.

Search this class, subclass—

93—and the notes thereto, for pushing and pulling devices in general operated by fluid pressure.

50.4. Apparatus under subclass 50.1 in which the spreader is provided with means which support the tire casing against the action of gravity.

Search this class, subclass—

50.2 and **50.3**—for devices having supports for the spread tire in addition to the characteristics provided for in those subclasses.

Search Class—

248—SUPPORTS, appropriate subclasses, for supports in general.

in subclass 93, add:

Search this class, subclass—

50.3—for tire spreaders employing fluid pressure means.

in subclass 131, under "(1) Search this class" after "44," insert: *50.2,*.

257, Heat Exchange (Divisions 30, 32)

in subclass 187, under "Search Classes" cancel the reference to class 83, Mills.

259, Agitating (Division 32)

in the main class definition, under "(6) Search Classes", cancel the reference to class 91, Coating, and substitute:

91—COATING, for coating and impregnating apparatus involving mixing and agitating the base and coating materials, and see the main class definition of class 91 for the line.

146—VEGETABLE AND MEAT CUTTERS AND COMMINUTORS, subclasses 49+ and 250+ for vegetable peeling or hulling apparatus in which material is agitated in contact with an abrading or like surface. Also see subclass 226 for processes of agitating vegetable and meat for the purposes of that class (146).

in subclass 9, cancel "Search Class", and the reference to class 83, Mills, thereunder;

in subclass 180, add:

Search Class—

34—DRYING AND GAS OR VAPOR CONTACT WITH SOLIDS, subclass 171, and the notes thereto for similar agitators in combination with drying or gas contact means.

193—CONVEYERS, CHUTES, SKIDS, GUIDES, AND WAYS, subclass 27, for non-agitating zigzag chutes.

260, Chemistry, Carbon Compounds (Divisions 6, 15, 31, 38, 43, 50, 59, 63)

in subclass 397, under "Search Class", change "subclass 74," to *subclasses 74 and 74.5,*.

262, Mining, Quarrying, and Ice Harvesting (Division 4)

in subclass 20, in (1) Note, cancel "mining" and substitute: *in this class.*

265, Force-Measuring (Division 36)

in the main class definition under "Search Class" add:

222—DISPENSING, subclass 77, for weighing-dispensing combinations involving means to weigh material already dispensed. Weighing combinations including weigh pans having claimed means to dispense material therefrom are classified in the appropriate subclasses of this class (265) unless (1) the pan is disclosed as continuously connected to a source of controlled supply in which case it is deemed to be a trap chamber combination for class 222 or (2) the discharge from the pan is automatically controlled by the weight of the material in the pan, which combination is provided for in class 222, subclass 58. For automatic control of filling or both filling and emptying the pan, see class 249.

226—FILLING AND CLOSING PORTABLE RECEPTACLES, appropriate subclasses, for combinations including means to fill portable receptacles combined with means to weigh the filling material, except such automatic weighing combinations as are provided for in class 249.

249—AUTOMATIC WEIGHERS, appropriate subclasses, for weighing combinations in which both filling and discharge or filling only of weigh pans is automatically controlled by the weight of the material in the pan. The weigh pan may be a portable receptacle.

266, Metallurgical Apparatus (Division 28)

in subclass 34, under "Search Classes" cancel the reference to class 83, Mills, and add:

18—PLASTICS, subclasses 2.4+ and 27.2+, for apparatus and processes for comminuting and solidifying slag or metal.

299, Fluid Sprinkling, Spraying and Diffusing (Division 46)

in subclass 140.1 in the note thereto, cancel the reference to class 83, Mills, and substitute: *class 18, Plastics, subclass 2.4+,*.

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

Dedicated Patents

The following plant patents, owned by The Wayside Gardens Company, a corporation of the State of Ohio having its principal place of business at Mentor, Ohio, have been dedicated to the public by an instrument recorded in the United States Patent Office on July 2, 1946, which reads in part as follows:

* * * The Wayside Gardens Company "does hereby assign, transfer and dedicate to the people of the United States of America, the entire right, title and interest in and to said inventions and discoveries, for the benefit of and the free use thereof by the people of the United States, and hereby authorizes the Commissioner of Patents to make such publication of this dedication and abandonment as may be deemed desirable by him."

Plant Pat. 288. ROSE. Patented Aug. 30, 1938.

Plant Pat. 298. ROSE. Patented Oct. 25, 1938.

Plant Pat. 299. ROSE. Patented Oct. 25, 1938.

Plant Pat. 385. ROSE. Patented May 7, 1940.

Plant Pat. 386. ROSE. Patented May 7, 1940.

Plant Pat. 329. PHLOX. Patented Apr. 25, 1939.

The rose plants hereinabove dedicated are characterized by vigorous growth, exceptional hardiness and resistance to mildew and other plant diseases. They may be grown without protection in many regions of the temperate zones and successfully with protection in colder climates where it has heretofore been impossible or exceedingly difficult to grow roses.

The rose of Patent 288 is a distinctive cerise with a pronounced light yellow center, spotted with stamens bearing tops of darker color in contrast. Each rose has 26 to 28 petals. The shrub has stems and stalks of sturdy character and grows to a height of about thirty inches with a spread of about four feet. An abundance of rich green leaves greatly accentuates the beauty of the flowers. These leaves are oval-shaped with inconspicuous ribs and veins.

The rose of Patent 298 is two-toned fresh pink with a slight briar scent and has 80 or more petals. The flowers are imbricated in camellia-like form and are borne singly and in clusters on stems 15 to 24 inches long. The shrub grows from three to three and one-half feet high with a spread of two to three feet. A free growth of foliage extends from base to top.

The rose of Patent 299 is cherry red with a distinctive reflection of a fiery orange glow which radiates from the flower in full bloom. Each rose has 30 to 36 petals. The shrub grows 24 to 30 inches high with a spread of 18 inches or more and blooms profusely, singly and in clusters, throughout the summer. The leaves, stalks and pedicels are all of a glaucous green color.

The rose of Patent 385 is unusually hardy having withstood a temperature of −30° F. for an appreciable period without damage. This plant, which climbs to a height of seven to ten feet with roses starting one and one-half to two feet from the base, is characterized principally by its prolific blooms of delicate coral pink, which are of superior beauty, shape and size. During the blooming period of four to five weeks, the roses which have 35 to 40 petals, are consistent in quantity and quality. The plant has an abundance of large shiny leaves of medium green with slight reddish shade. The pedicels support the flowers without bending.

The rose of Patent 386 is glossy white in color with a very pronounced briar scent and has between 25 and 35 shell-shaped petals. The plant, which climbs to a height of 15 feet or more, with flowers starting one and one-half to two feet from its base, is characterized principally by its exceptional prolificacy of blooms, which so completely cover the plant that it resembles a single large and compact bouquet of glossy white blossoms. During the blooming period, which is five to six weeks, the roses are consistent in quantity and quality.

The phlox of Patent 329 is white in color with an overcast or hue of blue merging into a distinct blue center having a purplish tone. It is hardy and vigorous with prolific growth. Although the plant is semi-dwarf, it grows to a height of 24 to 36 inches depending on the soil. The bloom heads are seven to eight inches in diameter and eight to nine inches high. The flowers, which are one and one-quarter to two inches in diameter, last for relatively long periods, and are not damaged materially by rain or sun.

The following patents owned by the Wingfoot Corporation, Akron, Ohio, have been dedicated to the public by an instrument recorded in the United States Patent Office July 2, 1946, which reads in part as follows:

"* * * The Wingfoot Corporation hereby grants * * * to all governments and government agencies, foreign or domestic, and to every member of the public throughout the world, including individuals, firms and corporations, an irrevocable, non-exclusive, royalty-free right throughout the territory covered by said Letters Patent, to practice, to make, use and/or sell the inventions described and claimed in and by the aforesaid Letters Patent without any liability under said Letters Patent to said Wingfoot Corporation or its successors, affiliates, or assigns, for the full term of the last to expire of the aforesaid patents and by reissues, renewals or extensions thereof; and Wingfoot Corporation further waives, relinquishes and surrenders any and all claims for infringement, past, present and future, which Wingfoot Corporation may have acquired" by virtue of an assignment dated June 30, 1945.

Pat. 1,746,357. METHOD OF AND APPARATUS FOR CURING MOLDED RUBBER ARTICLES. Patented Feb. 11, 1930. Group 30—11.

Pat. 1,757,053. METHOD OF AND APPARATUS FOR CURING RUBBER ARTICLES BY THE CIRCULATION OF HEATED GASES. Patented May 6, 1930. Group 30—11.

The two patents listed above provide a method and apparatus for accelerating the cure of molded rubber articles, which includes even heavy truck tires. A small amount of the steam which is applied externally of a closed mold is bled off to pre-heat the gas before delivery to the mold. This bleeding-off also stimulates circulation of the remaining steam. In Patent 1,757,053 the cure is further accelerated by continued circulation of the pre-heated gas. The circulation of the gas is stimulated without increasing the pressure by bleeding-off a small amount of the gas from the return conduit.

Pat. 1,808,428. PROCESS OF CURING TIRES AND THE LIKE. Patented June 2, 1931. Process includes the steps of bringing up the initial pressure in an air bag with carbon dioxide either alone or in combination with other inert gases and maintaining such pressure during curing action by a less expensive gas or gaseous mixture. Steam either with or without a small proportion of other inert gases is preferably the pressure maintaining medium. Group 30—11.

Reissue 22,188. METHOD OF REGULATING AND MAINTAINING HEAT TRANSFER. Patented Sept. 29, 1942. Orig. Pat. 1,808,429.

A method in which carbon dioxide is admitted into an air bag at a predetermined pressure and, after all air has been expelled, admitting steam at a higher temperature to bring the gas up to vulcanizing temperature and maintaining it at such temperature. The carbon dioxide may be replaced entirely by steam. The same principle can be applied to articles not requiring the use of an air bag. Group 30—1—11.

Pat. 1,875,479. METHOD AND APPARATUS FOR REMOVING WATER FROM AIR BAGS OR THE LIKE. Patented Sept. 6, 1932. Liquid is forced from bag without collapsing it by utilization of air pressure. The apparatus has a tubular chamber in which a bag with its stem in upright position is placed. A tube connected to a T-assembly with a valve on each arm is telescoped into the stem with its end above the liquid and air pressure built up in the bag. The air is then cut off and the tube lowered into the liquid until its end barely clears the bottom of bag. A valve is then opened to allow the air pressure to force the liquid from the bag. An arm vertically slidable on a post is used to raise and lower the T-assembly, being suitably connected thereto. Groups 30—11; 35—59.

Pat. 2,017,071. METHOD OF SECURING ADHESION OF RUBBER TO METAL. Patented Oct. 15, 1935. Provides a method for obtaining a high degree of adhesion between a relatively soft grade of rubber and ferrous metal without the use of special expedients, such as special rubber cement, or scoring, of the metal. The inventor claims it requires upwards of 400 lbs. per square inch to disrupt the bond and that such disruption will usually occur in the layer itself rather than the bond; also, that it will withstand severe flexing stresses. The method utilizes notably higher temperature than that customarily used. It is preferable to use sulphur somewhat in excess of that ordinarily used, and a mild applicator. High temperature is applied to the exposed surface of the metal to cause depolymerization of the rubber surface only in contact with the metal to a degree necessary to provide adhesion before vulcanization to any extent can occur. Application of heat is continued until vulcanization of the whole layer is substantially complete. Laminated layers may be built up by this method. Group 30—52.

Pat. 2,067,060. METHOD OF TREATING PIGMENTS. Patented Jan. 5, 1937. Provides a method of coating or impregnating carbon black or other pigments with wetting and/or softening agents in an atmosphere of carbon dioxide at elevated pressures and temperatures, such temperature being sufficiently high to volatilize the treating agents. The carbon dioxide acts as a carrying and dispersing vehicle. Upon release of the pressure the treating agents remain substantially uniformly dispersed throughout the carbon black while the carbon dioxide is given off. This treatment facilitates incorporation of the treated material into rubber. Paint pigments may be treated in the same manner with suitable wetting or emulsifying agent. Group 30—11.

Pat. 2,095,673. METHOD OF TREATING RUBBER. Patented Oct. 12, 1937. Group 30—1.

Pat. 2,148,572. METHOD OF TREATING RUBBER. Patented Feb. 28, 1939. Group 30—1.

These two patents provide a method for treating crude rubber in the presence of carbon dioxide at elevated pressures and temperatures to break down the rubber, and the incorporation of various treating agents thereinto without prolonged milling at heavy pressures. Pieces of crude rubber, with or without treating agents, are placed in an enclosed vessel and part of the air evacuated therefrom. The evacuated air is replaced by a regulated amount of carbon dioxide. The vessel is heated to a temperature of at least 330° F. and the pressure maintained preferably at 50 lbs. per square inch during the mixing operation.

Pat. 2,180,304. APPARATUS FOR MOLDING SPONGE RUBBER. Patented Nov. 14, 1939. Groups 30—52; 35—59.

Pat. 2,199,006. SPONGE RUBBER ARTICLE AND METHOD OF MAKING SAME. Patented Apr. 30, 1940. Groups 30—52; 35—59.

The two patents listed above cover a sponge rubber article, such as a cushion having tubular passages therein, and a molding apparatus and method for making the same. Apparatus consists of a mold having removable supports for holding a plurality of rows of pipes or rods in spaced relation. Alternate layers of rubber and rows of pipes are placed in the mold. Application of heat in a well known manner unites the layers around the pipes into a single mass leaving a multiplicity of parallel tubular passages, preferably open at their ends, after the supports and pipes have been removed. The surface layers may be of different density, or have other characteristics, in order to improve the appearance, as well as to facilitate the application of trade-marks, designs, etc.

The following patent owned by the Philco Corporation, Philadelphia, Pennsylvania, has been dedicated to the public by an instrument recorded in the United States Patent Office Aug. 9, 1946, which reads in part as follows: "• • • said Philco Corporation • • • does hereby assign, transfer, and dedicate to the People of the United States of America the entire right, title, and interest in and to the said Letters Patent for their free use thereof."

Pat. 2,207,692. CONTROLLABLE RADIO AERIAL. Patented July 9, 1940. Adapted to protrude through the roof of a vehicle the aerial can be lengthened or retracted at the will of the driver of the vehicle by grasping an exposed portion of the rod inside the vehicle. It is frictionally held when extended to various positions. The aerial is flexible and telescopes into a fibrous tube which permits curving of the lower end of the installation to allow its location to offer minimum obstruction. A combined frictional support, insulating and sealing assembly surrounds the aerial where it extends through the roof. A lighted arrow may be placed on the tip and the aerial rotated to indicate either a right or left hand turn. Modification shows aerial constructed so that when it is extended it will spread into Y formation. Groups 36—61; 38—31.

TRADE-MARKS

OFFICIAL GAZETTE, OCTOBER 15, 1946

[VOL. 591. No. 3]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1

RAW OR PARTLY PREPARED MATERIALS

Ser. No. 498,240. MONARCH LEATHER COMPANY, Chicago, Ill. Filed Mar. 14, 1946.

PYGMALION

FOR LEATHER.
Claims use since May 1, 1925.

CLASS 2

RECEPTACLES

Ser. No. 471,111. RALPH R. WILKINS, doing business as The Wilkins Company, Cortland, N. Y. Filed June 9, 1944.

K-LENS-M

The word "Lens" is disclaimed apart from the mark.
FOR DISPENSER CABINETS—NAMELY, CABINETS FOR DISPENSING LENS CLEANING FLUID AND/OR TISSUES FOR CLEANING EYEGLASSES, SAFETY GOGGLES, OR OTHER LENSES.
Claims use since Apr. 20, 1943.

Ser. No. 496,601. BETTER PACKAGES, INCORPORATED, Shelton, Conn. Filed Feb. 15, 1946.

BIG INCH

FOR TAPE DISPENSERS FOR SERVING ADHESIVE TAPE, SOLD EMPTY.
Claims use since Sept. 15, 1945.

CLASS 3

BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS

Ser. No. 505,056. HAWKINS & ORCUTT, Gloversville, N. Y. Filed July 3, 1946.

Geor-Jes

FOR HANDBAGS.
Claims use since August 1943.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 475,985. JOHN T. STANLEY CO., INC., New York, N. Y. Filed Nov. 1, 1944.

COSMOS

FOR LAUNDRY SOAP.
Claims use since September 1918.

Ser. No. 492,744. SOLVENT PRODUCTS, INC., New York, N. Y. Filed Dec. 5, 1945.

Vita-Lastic

FOR WASHING FLUID FOR WASHING GIRDLES, FOUNDATIONS, SURGICAL GARMENTS, AND SIMILAR ELASTIC GOODS.
Claims use since Sept. 27, 1945.

Ser. No. 493,209. P. HOLGER NELSON, Worcester, Mass. Filed Dec. 13, 1945.

KORNROCK

FOR ABRASIVE STONES.
Claims use since Oct. 26, 1945.

Ser. No. 495,968. HOOD CHEMICAL CO., INC., New York, N. Y. Filed Feb. 4, 1946.

INDRA

FOR HOUSEHOLD WASHING COMPOSITION.
Claims use since Jan. 4, 1946.

Ser. No. 495,970. HOOD CHEMICAL CO., INC., New York, N. Y. Filed Feb. 4, 1946.

SING

FOR HOUSEHOLD CLEANER.
Claims use since Jan. 4, 1946.

Ser. No. 497,249. DAVID E. KENNEDY, INC., Brooklyn, N. Y. Filed Feb. 26, 1946.

KEN-CLEANER

The word "Cleaner" is disclaimed apart from its association with the word "Ken."
FOR CLEANER FOR ASPHALT TILE, RUBBER TILE, CORK TILE, CORK COMPOSITION, AND LINOLEUM.
Claims use since Jan. 1, 1938.

CLASS 5
ADHESIVES

Ser. No. 505,978. NATIONAL STARCH PRODUCTS INC., New York, N. Y. Filed July 20, 1946.

STRIP-WRAP

FOR GLUE.
Claims use since February 1923.

CLASS 6
CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 471,233. ORMONT DRUG & CHEMICAL CO., INC., Long Island City, N. Y. Filed June 14, 1944.

ORZEMA

FOR COSMETIC, EMOLLIENT AND DERMATOLOGICAL PREPARATIONS FOR THE CARE OF THE SKIN AND FOR THE TREATMENT OF MINOR SKIN IRRITATIONS.
Claims use since May 6, 1942.

Ser. No. 482,103. SAMUEL HERMAN, doing business as Jefferson Manufacturing Company, Los Angeles, Calif. Filed Apr. 13, 1945.

SMILEX

FOR CHEMICAL BLEACHING PREPARATION ADAPTED FOR USE AS A LAUNDRY AID, STAIN REMOVER, CLEANSER, DEODORANT, AND GENERAL HOUSEHOLD USE.
Claims use since January 1933.

Ser. No. 483,361. WILLIAM BAACK, Lubbock, Tex. Filed May 15, 1945.

WILLIAM BAACK

The portrait is that of applicant.
FOR MEDICINAL PREPARATIONS FOR THE RELIEF OF KIDNEY DISORDER.
Claims use since Dec. 27, 1943.

Ser. No. 485,007. BUREN L. CORLEY, doing business as Chirodex Products, San Francisco, Calif. Filed June 25, 1945.

CHIRODEX

The representation of the individual is fanciful.
FOR HERBAL-VEGETABLE LAXATIVE IN BULK FORM, HERBAL-VEGETABLE LAXATIVE IN TABLET FORM, GARLIC, PARSLEY AND ONION TABLETS FOR USE AS AN INTESTINAL PURIFYING AGENT AND HYDROGEL, A MECHANICAL LAXATIVE.
Claims use since May 25, 1945.

Ser. No. 485,738. E. R. SQUIBB & SONS, New York, N. Y. Filed July 12, 1945.

DIAZPRIN

FOR ANTIBACTERIAL AND ANALGESIC PREPARATIONS.
Claims use since May 15, 1945.

Ser. No. 488,477. PROFESSIONAL PHARMACAL COMPANY, INC., San Antonio, Tex. Filed Sept. 14, 1945.

OTOCAINE

FOR EAR DROPS.
Claims use since December 1943.

Ser. No. 488,612. PITTSBURGH PLATE GLASS COMPANY, Pittsburgh, Pa. Filed Sept. 17, 1945.

PITTCHLOR

The drawing is lined for red and violet.
FOR HYPOCHLORITES OF ALKALI METALS AND ALKALI EARTH METALS.
Claims use since July 18, 1945.

Ser. No. 489,819. EDGAR A. MURRAY CO., Detroit, Mich. Filed Oct. 11, 1945.

Ant Doom

No claim is made to the word "Ant" apart from the remainder of the mark.
FOR INSECTICIDE OR INSECT EXTERMINATOR.
Claims use since 1898.

Ser. No. 489,998. VESTAL CHEMICAL LABORATORIES, INC., St. Louis, Mo. Filed Oct. 15, 1945.

AMERSE

FOR GERMICIDES.
Claims use since Sept. 15, 1945.

Ser. No. 491,649. MAN OF MANHATTAN, INC., New York, N. Y. Filed Nov. 15, 1945.

Applicant disclaims all rights to the word "Talc" apart from the mark.
FOR MEN'S TOILETRIES—NAMELY, TALCUM POWDER.
Claims use since Oct. 24, 1945.

Ser. No. 492,188. WILLIE JURU EVANS, doing business as Juru's Mira-Cu Herb Tonic Co., Dunedin, Fla. Filed Nov. 26, 1945.

Mira-Cu

FOR HERB TONIC FOR RELIEVING GAS PAINS, LOW BLOOD PRESSURE, CHANGE OF LIFE, KIDNEY AND BLADDER DISORDERS, LOST VITALITY, NUMBNESS OF LIMBS, FEMALE TROUBLE, AND KINDRED USES.
Claims use since Sept. 22, 1945.

Ser. No. 492,639. MARWIN DYESTUFF CORPORATION, Jersey City, N. J. Filed Dec. 4, 1945.

MARACEL

FOR DYESTUFF.
Claims use since Feb. 28, 1940.

Ser. No. 492,640. MARVIN DYESTUFF CORPORATION, Jersey City, N. J. Filed Dec. 4, 1945.

MARACHROME

FOR DYESTUFF.
Claims use since Feb. 28, 1940.

Ser. No. 492,641. MARWIN DYESTUFF CORPORATION, Jersey City, N. J. Filed Dec. 4, 1945.

MARACID

FOR DYESTUFF.
Claims use since Feb. 28, 1940.

Ser. No. 492,647. MARWIN DYESTUFF CORPORATION, Jersey City, N. J. Filed Dec. 4, 1945.

UNITONE

FOR DYESTUFF.
Claims use since Feb. 28, 1940.

Ser. No. 492,669. JEAN VERGLAS, Paris, France. Filed Dec. 4, 1945.

VISITEURS DU SOIR

FOR PERFUMES, TOILET WATERS, BEAUTY CLAYS, NAIL ENAMEL AND POLISH, LIP ROUGE, FACE ROUGE AND POWDERS, LOTIONS AND CREAMS, TOOTH PASTE AND POWDERS, TALCUM POWDERS, HAIR TONICS AND LOTIONS.

Ser. No. 498,084. JOHN F. ROLAND, doing business as Atomac Power Products, Longview, Tex. Filed Mar. 12, 1946.

ATOMAC POWER

No claim is made to the word "Power" apart from the mark.
FOR BRAKE FLUID.
Claims use since Jan. 29, 1946.

Ser. No. 498,243. MONSANTO CHEMICAL COMPANY, St. Louis, Mo. Filed Mar. 14, 1946.

PERCAL

FOR BLEACHING AGENT FOR FLOUR.
Claims use since Jan. 29, 1946.

Ser. No. 498,244. MONSANTO CHEMICAL COMPANY, St. Louis, Mo. Filed Mar. 14, 1946.

QUINOSIN

FOR CHEMICAL PRODUCTS FOR USE IN COMBATING FUNGI IN THE AGRICULTURAL FIELD.
Claims use since Feb. 11, 1946.

Ser. No. 498,317. SHARP & DOHME, INCORPORATED, Philadelphia, Pa. Filed Mar. 15, 1946.

CYCAINE

FOR ANESTHETIC PREPARATION.
Claims use since Feb. 18, 1946.

Ser. No. 498,318. SHARP & DOHME, INCORPORATED, Philadelphia, Pa. Filed Mar. 15, 1946.

CYCLAINE

FOR ANESTHETIC PREPARATION.
Claims use since Feb. 18, 1946.

Ser. No. 499,337. HARRY W. MAGER, doing business as Patricia Cosmetics, Chicago, Ill. Filed Mar. 30, 1946.

TICO-TICO by Patricia

FOR PERFUME.
Claims use since Dec. 1, 1945.

Ser. No. 499,825. COLONIAL DAMES COMPANY, LTD., Los Angeles, Calif. Filed Apr. 8, 1946.

Bachelor Button

FOR COLOGNE.
Claims use since Nov. 3, 1941.

CLASS 7

CORDAGE

Ser. No. 473,526. BETHLEHEM STEEL COMPANY, Bethlehem, Pa. Filed Aug. 23, 1944. Under section 5b of the act of 1905 as amended in 1920.

No claim is made to the exclusive use of the words "Wire Rope" apart from the rest of the features shown. The cross hatching on the drawing is for shading only.
FOR WIRE ROPE.
Claims use since July 8, 1944.

Ser. No. 490,921. BEMIS BRO. BAG COMPANY, St. Louis, Mo. Filed Nov. 2, 1945.

Mainstay

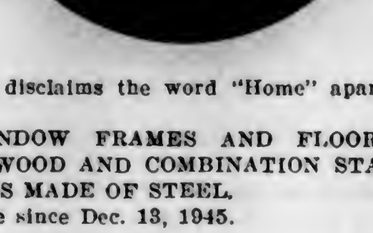
FOR TWINE.
Claims use since Aug. 2, 1922.

CLASS 12

CONSTRUCTION MATERIALS

Ser. No. 463,908. MUNN AND STEELE, INCORPORATED, Newark, N. J. Filed Oct. 5, 1943.

Masco



FOR HEAT RESISTING PLASTER FOR WALLS CONSISTING OF A MIXTURE OF GYPSUM PLASTER AND THERMALLY EXPANDED MICA; WATER-REPELLANT MATERIAL FOR WALLS CONSISTING OF A MIXTURE OF GYPSUM PLASTER, THERMALLY EXPANDED MICA, PORTLAND CEMENT, AND HYDRATED LIME; MATERIALS FOR CONSTRUCTING FIRE CHAMBERS FOR OIL BURNING BOILERS CONSISTING OF TIE BANDS, BONDING CEMENT, THERMALLY EXPANDED MICA BACK-FILLING MATERIAL, AND PREFORMED SHAPES MADE OF VARYING MIXTURES OF THERMALLY EXPANDED MICA, REFRACTORY CLAYS, KYANITE, PORTLAND OR HIGH ALUMINA CEMENTS, SILICATE OF SODA, GROG AND WATER; AND FIRE PROOF PRE-CAST CONCRETE PLANKS.
Claims use since March 1939.

Ser. No. 469,721. BOTFIELD REFRACTORIES COMPANY, Philadelphia, Pa. Filed Apr. 27, 1944.

ADA-STIC

No claim is made to the word "Stic" apart from the mark. The drawing is lined for red, no claim, however, is made to color.
FOR HEAT INSULATING CEMENT.
Claims use since Apr. 4, 1935.

Ser. No. 496,351. TALON REGLET CO., Bremerton, Wash. Filed Feb. 9, 1946.

Applicant disclaims the representation of a reglet apart from the mark.
FOR INTERLOCKING REGLETS AND COUNTER FLASHING ASSEMBLIES FOR ROOFS, AND THE LIKE.
Claims use since Jan. 18, 1946.

Ser. No. 497,009. JOHN V. AVENT CO., Los Angeles, Calif. Filed Feb. 21, 1946.

Modernaire HOMES

No claim is made to the word "Homes" apart from the mark.
FOR PREFABRICATED BUILDINGS SOLD AS A UNIT.
Claims use since July 26, 1945.

Ser. No. 498,697. THE HOMEOLA CORPORATION, Chicago, Ill. Filed Mar. 21, 1946.

Applicant disclaims the word "Home" apart from the mark.
FOR WINDOW FRAMES AND FLOOR PANELS MADE OF WOOD AND COMBINATION STAIR STEPS AND RISERS MADE OF STEEL.
Claims use since Dec. 13, 1945.

Ser. No. 502,335. SAN ANTONIO PORTLAND CEMENT CO., San Antonio, Tex. Filed May 17, 1946.

The words "San Antonio Portland Cement Co." are disclaimed apart from the mark.
FOR PORTLAND CEMENT.
Claims use since June 1, 1910.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 488,906. KAYNAR MANUFACTURING COMPANY, Los Angeles, Calif. Filed Sept. 24, 1945.

CLiCK

FOR NUT AND BOLT RETAINERS.
Claims use since Aug. 7, 1943.

Ser. No. 497,583. UNITED AIRCRAFT PRODUCTS, INC., Dayton, Ohio. Filed Mar. 2, 1946.

muffineer

FOR METAL BAKING PANS.
Claims use since Oct. 31, 1945.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Ser. No. 490,051. AMPCO METAL, INC., Milwaukee, Wis. Filed Oct. 17, 1945.

Phos-Trode

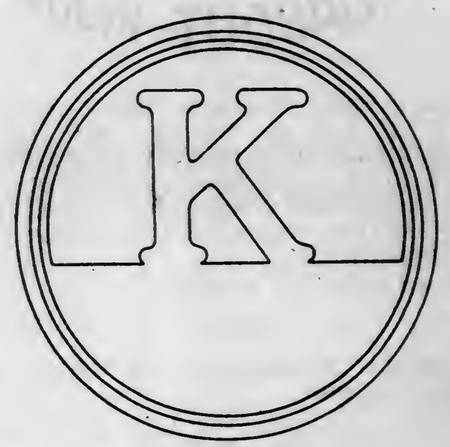
No claim is made to the representation of the welding rods apart from the mark.
FOR METALLIC WELDING RODS AND ARC WELDING ELECTRODES.
Claims use since Sept. 25, 1945.

CLASS 19

VEHICLES

Ser. No. 449,654. SOCIETE GENERALE FRANCAISE DE CONSTRUCTION AUTOMOBILE (SOCIETE ANONYME), Paris, France. Filed Dec. 20, 1941.

"G.F.A."



FOR AUTOMOBILES, MOTORCYCLES, AND MOTOR TRICYCLES.
Claims use since May 1941.

Ser. No. 482,974. BORG-WARNER CORPORATION, Chicago, Ill. Filed May 4, 1945.

BEACH-BUSTER

Applicant disclaims any exclusive right in and to the word "Beach" apart from the mark.
FOR VEHICLES—NAMELY AMPHIBIOUS VEHICLES, AND PARTS THEREOF.
Claims use since Apr. 5, 1945.

Ser. No. 485,287. WALTER KIDDE & COMPANY, INC., New York, N. Y., and Belleville, N. J Filed June 30, 1945.

FOR MOBILE UNITS FOR FIRE EXTINGUISHING EQUIPMENT—NAMELY, AUTOMOTIVE CHASSIS FOR MOUNTING THEREON OF MODERN FIRE FIGHTING APPARATUS, AND TRAILERS FOR CARRYING FIRE FIGHTING APPARATUS AND ADAPTED TO BE ATTACHED TO AUTOMOTIVE VEHICLES.
Claims use since Oct. 15, 1942.

Ser. No. 485,801. VIRGINIA-LINCOLN CORPORATION, Marion, Va. Filed July 13, 1945.

VIRGINIA-LINCOLN CORP.
MARION, VIRGINIA
Valin

The words "Virginia-Lincoln Corp. Marion, Virginia" are disclaimed apart from the mark. The drawing is lined for red.

FOR AIRCRAFT STRUCTURAL PARTS COMPRISED OF THERMOPLASTIC AND ORGANIC CLOTH SOMETIMES COMBINED WITH CELLULAR ORGANIC MATERIAL, AS RIBS, FUSELAGES, NOSES, NOSE RING COWLS, BULKHEADS, LUGS, LONGERONS, FUEL TANKS, ANTENNA ENCLOSURES, VANED SCREENS, NACELLES AND TOWING TARGETS.

Claims use since May 10, 1945.

Ser. No. 489,068. GRIP NUT COMPANY, Chicago, Ill. Filed Sept. 27, 1945.

GRIPCO

FOR BRAKE BEAM SAFETY SUPPORTS FOR RAILWAY CARS.

Claims use since June 4, 1941.

Ser. No. 491,822. FRANTZ INDUSTRIES, doing business as Aero-Pel, Los Angeles, Calif. Filed Nov. 19, 1945.

GADABOUT MODEL

No claim is made to the word "Model" apart from the mark.

FOR ELECTRIC OR GASOLINE PASSENGER CARRYING VEHICLE, DESIGNED FOR USE FOR PERSONALIZED TRANSPORTATION, LIGHT DELIVERY OR PICK-UP SERVICE, AND AS A MOTORIZED INVALID CHAIR OR VEHICLE.

Claims use since Apr. 3, 1945.

Ser. No. 495,731. E. SELMAN GRAVES, Marblehead, Mass. Filed Jan. 31, 1946.

WATERBUG

FOR SMALL BOATS FOR ROWING, SAILING, OR MOTOR-PROPELLED USE

Claims use since Sept. 15, 1945.

Ser. No. 497,323. PATRICK MURPHY, INC., City Island, N. Y. Filed Feb. 27, 1946.

PAM— line

No claim is made to the exclusive use of the word "Line" apart from the mark.

FOR SMALL BOATS SUITABLE FOR ROWING, SAILING, AND MOTOR-PROPELLED USE.

Claims use since Feb. 1, 1946.

Ser. No. 499,075. PRECISION WELDING AND ENGINEERING COMPANY, Cleveland, Ohio. Filed Mar. 27, 1946.

PORTO-ROL

No claim is made to the word "Rol" apart from the mark.

FOR HAND TRUCKS.

Claims use since Feb. 7, 1946.

Ser. No. 499,526. ADRIAN J. SMITH, doing business as Rollaway Equipment Company, Los Angeles, Calif. Filed Mar. 26, 1946.

ROLLAWAY

FOR STORE SERVICE TRUCKS.

Claims use since June 23, 1945.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 480,281. ELECTROLUX CORPORATION, New York, N. Y. Filed Feb. 27, 1945.

Electro-lux

FOR ELECTRIC MOTORS, ELECTRIC CONVERTERS, ELECTRIC CONTROLLERS THEREFOR, AND PARTS THEREOF.

Claims use since 1924.

Ser. No. 486,537. LINK-BELT COMPANY, Chicago, Ill. Filed July 31, 1945.

LINK-BELT
Electrofluid

The use of the terms "Electrofluid" and "The Symbol of Quality" are disclaimed apart from the mark.

FOR COMBINED ELECTRIC MOTOR AND HYDRAULIC COUPLING DRIVES FOR MECHANICAL DEVICES.

Claims use since June 21, 1945.

Ser. No. 491,119. THE RADIO CRAFTSMEN, INC., Chicago, Ill. Filed Nov. 5, 1945.

kitchenaire

FOR RADIO RECEIVING SETS.

Claims use since Sept. 24, 1945.

Ser. No. 496,325. NATIONAL ELECTRONICS CORPORATION, Cleveland, Ohio. Filed Feb. 9, 1946.

DYNECTRON

FOR ELECTRICAL APPARATUS—NAMELY, ROTARY CONVERTERS, INVERTERS, MOTORS, GENERATORS, ALTERNATORS, PHASE SPLITTERS, SWITCHES FOR CONTROLLING CURRENT GENERATORS, CENTRIFUGAL SWITCHES AND ELECTRICAL DISTRIBUTORS.

Claims use since Jan. 22, 1946.

Ser. No. 498,085. JOHN F. ROLAND, doing business as Atomac Power Products, Longview, Tex. Filed Mar. 12, 1946.

ATOMAC POWER

No claim is made to the word "Power" apart from the mark.

FOR AUTOMOTIVE VOLTAGE REGULATORS.

Claims use since Jan. 29, 1946.

Ser. No. 498,722. SIMPLEX WIRE & CABLE COMPANY, Cambridge, Mass. Filed Mar. 21, 1946.

ANHYDROPRENE

FOR INSULATED ELECTRICAL CONDUCTING WIRE AND CABLE.

Claims use since December 1945.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Ser. No. 497,155. THE AMERICAN DISPLAY COMPANY, Dayton, Ohio. Filed Feb. 25, 1946.

Worry-Wart

FOR FISH BAITS AND FISH LURES.

Claims use since Feb. 5, 1945.

Ser. No. 503,723. GEISLER GANZ CORP., New York, N. Y. Filed June 12, 1946.

GEEGEE BOARD

No claim is made to the word "Board" apart from the mark.

FOR OUTDOOR, WINDPROOF CARD HOLDERS.

Claims use since Jan. 11, 1946.

Ser. No. 503,761. FREDERICK JOHN SCHARKOPF, Valley Stream, Long Island, N. Y. Filed June 12, 1946.

KIDACANAL

FOR HAND DRIVEN CIRCULATING WATER STREAM AND TOY BOAT.

Claims use since Apr. 12, 1946.

Ser. No. 504,348. GEORGE M. GALLOWAY, doing business as Grand Lake Fishing Tackle, Celina, Ohio. Filed June 21, 1946.

LAZY DAN

FOR ARTIFICIAL FISH BAITS.

Claims use since March 1945.

Ser. No. 504,437. GEORGE M. GALLOWAY, doing business as Grand Lake Fishing Tackle, Celina, Ohio. Filed June 22, 1946.

LAZY DAN No. 2

No claim is made to the notation "No. 2" apart from the mark.
FOR ARTIFICIAL FISH BAITS.
Claims use since August 1945.

Ser. No. 506,036. FEB KNODE INC., South Bend, Ind. Filed July 22, 1946.

fashioned by "Feb"

The words "Fashioned By" are disclaimed apart from the mark.
FOR DOLLS.
Claims use since Mar. 5, 1946.

Ser. No. 507,111. DILLARD D. DAUGHHETEE, doing business as Gee Wiz Bait Co., Richland Center, Wis. Filed Aug. 9, 1946.

GEE WIZ

FOR FISH LURES.
Claims use since 1931.

Ser. No. 507,452. AMUSEMATIC CORPORATION, Chicago, Ill. Filed Aug. 15, 1946.

JACK RABBIT

FOR COIN CONTROLLED AMUSEMENT APPARATUS.
Claims use since June 15, 1946.

Ser. No. 507,474. KRUSE AND CONNOR, Chicago, Ill. Filed Aug. 15, 1946.

THE BIG ROCK

FOR COIN CONTROLLED AMUSEMENT GAME APPARATUS.
Claims use since June 15, 1946.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 487,298. BASCA MANUFACTURING CO. INC., Indianapolis, Ind., assignor to "Goerlich's", Toledo, Ohio, a partnership. Filed Aug. 20, 1945.

MOTORTONE

FOR MUFFLERS FOR INTERNAL COMBUSTION ENGINES.
Claims use since Aug. 10, 1945.

Ser. No. 487,735. MURRAY & TREGURTHA, INC., Quincy, Mass. Filed Aug. 29, 1945.

HARBORMASTER

FOR COMBINED POWER UNIT AND PROPELLER OPERATING MECHANISM FOR BOATS, BARGES, AND THE LIKE.
Claims use since May 9, 1945.

Ser. No. 491,137. SPECIALTY PRODUCTS COMPANY, Kansas City, Mo. Filed Nov. 5, 1945.

QUICK-E-DO KITCHEN TOOLS

The words "Kitchen Tools" and the pictorial illustration of a combination spoon and spatula are disclaimed apart from the mark.
FOR KITCHEN HARDWARE COMPRISING SPOONS, FORKS, LADLES, SPATULAS, PANCAKE TURNERS, AND VEGETABLE CUTTERS
Claims use since Oct. 1, 1945.

Ser. No. 491,933. THE SHERWIN-WILLIAMS COMPANY, Cleveland, Ohio. Filed Nov. 20, 1945.

DIMENSO

FOR GENERAL PURPOSE SPRAY GUN APPARATUS AND RELATED EQUIPMENT SUCH AS HOSES, VALVES, GAUGES, AND PRESSURE TANKS.
Claims use since Feb. 27, 1945.

Ser. No. 492,208. MARS MANUFACTURING COMPANY, Chicago, Ill. Filed Nov. 26, 1945.

MARS HANDY

Applicant disclaims the word "Handy," except as used with the other features of the mark.
FOR HAND SUCTION-BULB TOOL FOR USE AS A BASTER, SKIMMER, AND FAT REMOVER IN COOKING, FOR WATERING PLANTS, AND SIMILAR USES.
Claims use since June 30, 1940.

Ser. No. 492,367. ELLESS MASKINFABRIK AKTIEBOLAG, Gothenburg, Sweden. Filed Nov. 29, 1945.

ELLESS

FOR SHEET FEEDING APPARATUS FOR PRINTING PRESSES.
Claims use since Dec. 7, 1925.

Ser. No. 494,276. MID-CONTINENT SUPPLY COMPANY, Fort Worth, Tex. Filed Jan. 4, 1946.

MUDERATOR

FOR MECHANICAL APPARATUS FOR MIXING CHEMICALS WITH DRILLING MUD.
Claims use since Sept. 29, 1945.

Ser. No. 494,896. FIRTH STERLING STEEL COMPANY, McKeesport, Pa. Filed Jan. 17, 1946.

SUPER HI-MO

FOR HIGH SPEED STEEL TOOL BITS FOR TURNING, FACING, BORING, AND LIKE OPERATIONS.
Claims use since Feb. 28, 1945.

Ser. No. 496,872. SUMO PUMPS LIMITED, West Smetswick, England. Filed Feb. 18, 1946.

SUMO

FOR ELECTRICAL CENTRIFUGAL PUMPS.
Claims use since Oct. 3, 1939.

Ser. No. 498,086. JOHN F. ROLAND, doing business as Atomac Power Products, Longview, Tex. Filed Mar. 12, 1946.

ATOMAC POWER

No claim is made to the word "Power" apart from the mark.
FOR AUTOMOTIVE FUEL PUMPS, AND MACHINERY BEARINGS.
Claims use since Jan. 29, 1946.

Ser. No. 498,454. QUIMBY PUMP COMPANY, INCORPORATED, Newark, N. J. Filed Mar. 18, 1946.

ROTEX

FOR GEAR PUMPS COMPRISING A PAIR OF MESHING TOOTHED ROTORS JOURNALED IN A CLOSED HOUSING, PARTICULARLY FOR HANDLING VISCOUS LIQUIDS.
Claims use since Nov. 14, 1933.

Ser. No. 498,803. SEARS, ROEBUCK AND CO., Chicago, Ill. Filed Mar. 22, 1946.

CRAFTSMAN

FOR CLEAVERS, ROOFING KNIVES, POCKET KNIVES, CARVING SETS COMPRISING A CARVING KNIFE, CARVING FORK AND SHARPENING STEEL, PUTTY KNIVES, BUTCHER KNIVES, PARING KNIVES, SHEARS, BREAD KNIVES, WALL SCRAPERS, AUGER BITS, AXES, BACKSAWS, BREAST DRILLS, CHISELS, FILES, HACK SAWS, HAND SAWS, HAMMERS, HAND HAMMERS, HATCHETS, PLANES, PLIERS, TAP AND DIE SETS, BALL BEARING SETS, SCYTHES, ADZES, COPING SAWS, PIPE WRENCHES, PIPE CUTTERS (MANUALLY OPERATED), PUNCHES, PAINT SPRAYERS, GASOLINE MOTOR DRIVEN LAWN MOWERS, NON-POWER LAWN MOWERS, LAWN TRIMMERS, HAND LAWN CLIPPERS, ADJUSTABLE END WRENCHES, ADJUSTABLE SOCKET WRENCHES, BIT BRACES, CIRCULAR SAWS, COLD CHISELS, HAND WRENCHES, HACK SAW BLADES, HACK SAW FRAMES, HAND DRILLS, PUSH DRILLS, SCREWDRIVERS, TINNERS' SNIPS, TOOL GRINDERS (HAND, AND ADAPTED FOR POWER OPERATION), TROWELS, TWIST DRILLS, VISES, WOOD CHISELS, BENCH SAWS, JIG SAWS, LATHES, PLANERS AND SPINDLE SHAPERS.
Claims use since Oct. 28, 1927, on auger bits, axes, backsaws, breast drills, chisels, files, hack saws, hand saws, hammers and hand hammers, hatchets, planes, pliers, tap and die sets, adjustable end wrenches, adjustable socket wrenches, bit braces, circular saws, cold chisels, hand wrenches, hack saw blades, hack saw frames, hand drills, push drills, screwdrivers, tinners' snips, tool grinders, trowels, twist drills, vises, wood chisels, bench saws, jig saws, lathes, planers, and spindle shapers; since January 1934 on lawn mowers, non-power lawn mowers and lawn trimmers; since January 1936 on adzes: since January 1937 on pipe wrenches, pipe cutters and punches; since September 1940 on ball bearing sets; since January 1941 on coping saws, paint sprayers and hand lawn clippers; since July 1941 on pocket knives; since January 1942 on scythes and shears; since July 1942 on cleavers, roofing knives, carving sets, putty knives, butcher knives, paring knives, bread knives, and wall scrapers.

Ser. No. 499,420. THE LATHE CHUCK & TOOL COMPANY, Mishawaka, Ind. Filed Apr. 1, 1946.

ACE

FOR SPRING COLLETS.
Claims use since Feb. 20, 1946.

Ser. No. 499,485. M. E. CUNNINGHAM COMPANY, Pittsburgh, Pa. Filed Apr. 2, 1946.

UTILITY

FOR DIE HOLDERS FOR METAL EMBOSSING AND COUNTERSINKING DIES.
Claims use since Oct. 15, 1945.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Ser. No. 469,565. INDEPENDENT EXPLORATION COMPANY, Houston, Tex. Filed Apr. 22, 1944.

GEOTRONIC

FOR ELECTRONIC GEOPHYSICAL PROSPECTING INSTRUMENTS.
Claims use since Feb. 18, 1944.

Ser. No. 495,262. WESTON ELECTRICAL INSTRUMENT CORPORATION, Newark, N. J. Filed Jan. 23, 1946.

CORMAG

FOR ELECTRICAL MEASURING AND CONTROL APPARATUS—NAMELY, GALVANOMETERS, AMMETERS, VOLTMETERS AND INSTRUMENT TYPE RELAYS OF THE PERMANENT MAGNET, MOVABLE COIL TYPE WHEREIN THE PERMANENT MAGNET IS DISPOSED WITHIN THE MOVABLE COIL.
Claims use since Sept. 25, 1945.

Ser. No. 495,723. THE CHAS. FISCHER SPRING COMPANY, Brooklyn, N. Y. Filed Jan. 31, 1946.

OPTONIC

FOR SUN GLASSES.
Claims use since Jan. 10, 1946.

Ser. No. 496,019. FARRAND OPTICAL CO., INC., New York, N. Y. Filed Feb. 5, 1946.

TELEPHOTOSCOPE

FOR OPTICAL APPARATUS, SPECIFICALLY A LENS ATTACHMENT FOR A CAMERA.
Claims use since Oct. 25, 1945.

Ser. No. 496,133. EASTMAN KODAK COMPANY, Flemington, N. J., and Rochester, N. Y. Filed Feb. 7, 1946.

RESISTO

FOR PHOTOGRAPHIC PAPER.
Claims use since Jan. 11, 1946.

Ser. No. 498,211. DONALDSON MANUFACTURING CORP., Peru, Ind. Filed Mar. 14, 1946.

NORTH STAR

FOR MAGNETIC COMPASSES.
Claims use since Feb. 26, 1946.

CLASS 27

HOROLOGICAL INSTRUMENTS

Ser. No. 486,375. LES FILS DE ETIENNE HOFMANN S. A. R. L., Bienne, Switzerland. Filed July 27, 1945.

E  H

The representation of the spring shown on the drawing is disclaimed apart from the mark.
FOR SPRINGS FOR WATCHES.
Claims use since 1927.

Ser. No. 489,174. ROBERT ENGEL, New York, N. Y. Filed Sept. 29, 1945.

MILDIA

FOR IMPORTED SWISS WATCHES AND PARTS THEREOF.
Claims use since Aug. 1, 1939.

Ser. No. 489,719. DIDISHEIM, GOLDSCHMIDT FILS ET CIE, FABRIQUE JUVENIA, La Chaux-de-Fonds, Switzerland, assignor to Juvenia Watch Agency, Inc., New York, N. Y., a corporation of New York. Filed Oct. 10, 1945.

JUVENIA
ARITHMO

FOR WATCHES, WATCH PARTS, CLOCKS, CLOCK PARTS, CASES FOR WATCHES, AND CASES FOR CLOCKS.
Claims use since Feb. 8, 1944.

Ser. No. 489,720. DIDISHEIM, GOLDSCHMIDT FILS ET CIE, FABRIQUE JUVENIA, La Chaux-de-Fonds, Switzerland, assignor to Juvenia Watch Agency, Inc., New York, N. Y., a corporation of New York. Filed Oct. 10, 1945.

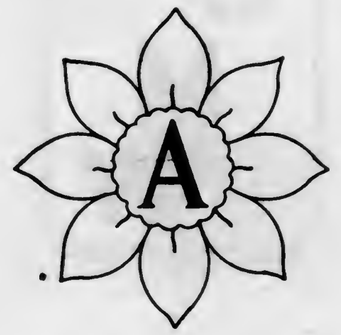
JUVENIA
MATHEMATIC

FOR WATCHES, WATCH PARTS, CLOCKS, CLOCK PARTS, CASES FOR WATCHES, AND CASES FOR CLOCKS.
Claims use since July 18, 1945.

CLASS 28

JEWELRY AND PRECIOUS-METAL WARE

Ser. No. 476,391. ISIDORE JAFFE, New York, N. Y. Filed Nov. 13, 1944.



The picture is merely fanciful.
FOR SIMULATED PEARLS, NECKLACES AND COSTUME JEWELRY FOR PERSONAL WEAR.
Claims use since April 1944.

Ser. No. 479,101. ZELL BROS., Portland, Oreg. Filed Jan. 27, 1945.

BLOSSOM TIME

FOR WEDDING AND DIAMOND RINGS.
Claims use since Sept. 3, 1939.

Ser. No. 495,936. LUDWIG J. WEBER, New Kensington, Pa. Filed Jan. 31, 1946.

ALU-MINN

FOR COSTUME JEWELRY.
Claims use since Nov. 19, 1945.

Ser. No. 497,476. THE GREEN COMPANY, INC., Kansas City, Mo. Filed Mar. 1, 1946.

FOR JEWELRY FOR PERSONAL WEAR (NOT INCLUDING WATCHES).
Claims use since Jan. 1, 1935.

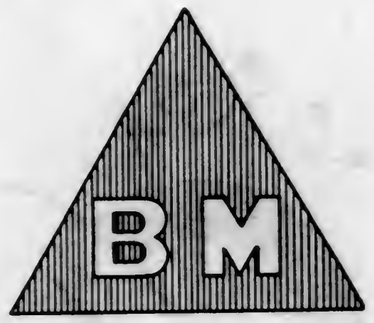
Ser. No. 498,662. UNITED DISTRIBUTORS, Chicago, Ill. Filed Mar. 20, 1946.

Personality

FOR BRACELETS AND FINGER RINGS.
Claims use since December 1945.

Ser. No. 499,279. RICHARD P. RASEMAN & ELIZABETH B. RASEMAN, Ann Arbor, Mich. Filed Mar. 29, 1946.

ner



FOR COSTUME JEWELRY.

220,198. **R C.** CHAINS. Registered Nov. 2, 1926. LINK-BELT COMPANY, Chicago, Ill., a corporation of Illinois. Renewed Nov. 2, 1946. Class 13.

220,199. **H.** CHAINS. Registered Nov. 2, 1926. LINK-BELT COMPANY, Chicago, Ill., a corporation of Illinois. Renewed Nov. 2, 1946. Class 13.

220,207. **M R.** CHAINS. Registered Nov. 2, 1926. LINK-BELT COMPANY, Chicago, Ill., a corporation of Illinois. Renewed Nov. 2, 1946. Class 13.

220,276. **WISCONSIN LAND O'LAKES.** BOND PAPER. Registered Nov. 9, 1926. GILBERT PAPER COMPANY, Menasha, Wis., a corporation of Wisconsin. Renewed Nov. 9, 1946. Class 37.

220,287. **"F. B. C." ETC. AND DRAWING.** SHOE DRESSINGS AND POLISHES. Registered Nov. 9, 1926. AMALGAMATED LEATHER COMPANIES, INC., Wilmington, Del., Philadelphia, Pa., New York, N. Y., Boston, Mass., Rochester, N. Y., Chicago, Ill., and St. Louis, Mo. Renewed Nov. 9, 1946, to Amalgamated Leather Companies, Inc., Wilmington, Del., a corporation of Delaware. Class 4.

220,308. **RITE-DRESS.** HAIR TONIC. Registered Nov. 9, 1926. THE BUERGER BROTHERS SUPPLY COMPANY, Denver, Colo., a corporation of Colorado. Renewed Nov. 9, 1946. Class 6.

220,311. **THE DEBONAIR.** MEN'S SUITS AND OVERCOATS. Registered Nov. 9, 1926. THE J. L. HUDSON COMPANY, Detroit, Mich., a corporation of Michigan. Renewed Nov. 9, 1946. Class 39.

220,344. **556.** WRITING PENS. Registered Nov. 9, 1926. THE ESTERBROOK STEEL PEN MANUFACTURING COMPANY. Renewed Nov. 9, 1946, to The Esterbrook Pen Company, Camden, N. J., a corporation of New Jersey. Class 37.

220,374. **WIZARD BELT STICK.** COMPOUND WHICH PREVENTS THE SLIPPING OF MACHINERY BELTS. Registered Nov. 9, 1926. RICHMOND BELT DRESSING MFG. CO., INC., Richmond, Va., a corporation of Virginia. Renewed Nov. 9, 1946. Class 4.

220,385. **MINNESOTA LANK OF LAKES.** BOND PAPER. Registered Nov. 9, 1926. PAPER SUPPLY COMPANY, INC., Minneapolis, Minn., a corporation of Minnesota. Renewed Nov. 9, 1946. Class 37.

220,425. **"MEYER GREENTREE" AND DRAWING.** CERTAIN ARTICLES OF CLOTHING FOR MEN, BOYS, AND CHILDREN. Registered Nov. 9, 1926. MEYER GREENTREE, Richmond, Va., a firm. Renewed Nov. 9, 1946. Class 39.

220,427. **GRAFILD.** TRANSMISSION, BRAKE, AND FRICTION LININGS FORMED OF TEXTILE YARN AND MOLDED PRODUCTS AND UTILIZED FOR TRANSMITTING A YIELDABLE TORQUE BETWEEN OR RESISTING RELATIVE MOVEMENT OF PARTS OF MECHANISM. Registered Nov. 9, 1926. WORLD BESTOS CORPORATION, Paterson, N. J., a corporation of Delaware. Renewed Nov. 9, 1946. Class 35.

220,476. **PORTRAIT OF T. H. BAREKMAN.** MEDICATED HEALING SALVE. Registered Nov. 9, 1926. THOMAS H. BAREKMAN, Paris, Ill. Renewed Nov. 9, 1946. Class 6.

220,479. **MADORA.** HOSIERY. Registered Nov. 9, 1926. SYNDICATE TRADING CO. Renewed Nov. 9, 1946, to Syndicate-Alliance Trading Co., Inc., New York, N. Y., a corporation of New York. Class 39.

220,679. **GRIP SAC.** TWINE, CORDAGE, AND THREAD FOR CLOSING BAGS. Registered Nov. 16, 1926. CHASE BAG CO., New York, N. Y., a corporation of Delaware. Renewed Nov. 16, 1946. Class 7.

220,695. **STANLEY.** MOTION PICTURES. Registered Nov. 16, 1926. STANLEY COMPANY OF AMERICA, Philadelphia, Pa., a corporation of Delaware. Renewed Nov. 16, 1946. Class 26.

220,698. **ORIZA-L-LEGRAND.** SOAPS. Registered Nov. 16, 1926. ORIZA L. LEGRAND, INC., Wilmington, Del., and New York, N. Y. Renewed Nov. 16, 1946, to Oriza, Ltd., New York, N. Y., a corporation of New York. Class 4.

220,706. **REPRESENTATION OF A DUCK.** MACHINE BELTING. Registered Nov. 16, 1926. CHAS. A. SCHIEREN COMPANY, New York, N. Y., a corporation of New York. Renewed Nov. 16, 1946. Class 35.

220,738. **TEGO SALT.** FLUXING MATERIAL FOR GALVANIZING AND TINNING. Registered Nov. 16, 1926. TH. GOLDSCHMIDT CORPORATION. Renewed Nov. 16, 1946, to Goldschmidt Chemical Corporation, New York, N. Y., a corporation of Delaware. Class 6.

220,754. **ULTRAX.** VULCANIZATION ACCELERATORS. Registered Nov. 16, 1926. THE WOLFF-ALPORT CHEMICAL CORPORATION, Brooklyn, N. Y., a corporation of New York. Renewed Nov. 16, 1946. Class 6.

220,755. **"BART'S CREAM BREAD" AND DESIGN.** BREAD. Registered Nov. 16, 1926. C. W. BART, doing business as Bart's Bakery, Savannah, Ga. Renewed Nov. 16, 1946. Class 46.

220,779. **"NAVY".** HEMP TARRED GOODS—NAMELY, MARLINE, YACHT MARLINE, HOUSELINE, SPUN YARN, RATLINE, ROUNDING, HAMBROLINE, AND SEIZING MADE FROM HEMP FIBER IMPREGNATED WITH PINE TAR. Registered Nov. 16, 1926. HANOVER CORDAGE COMPANY, Hanover, Pa., a corporation of Pennsylvania. Renewed Nov. 16, 1946. Class 7.

220,781. **ARMOR.** JUTE TARRED GOODS—NAMELY, MARLINE, HOUSELINE, SPUN YARN, AND RATLINE MADE FROM JUTE FIBER IMPREGNATED WITH PINE TAR. Registered Nov. 16, 1926. HANOVER CORDAGE COMPANY, Hanover, Pa., a corporation of Pennsylvania. Renewed Nov. 16, 1946. Class 7.

220,783. **TUFFITE.** NONMETALLIC PISTON RINGS FOR PUMPS, ENGINES, AND OTHER MACHINERY IN WHICH SUCH RINGS MAY BE EMPLOYED. Registered Nov. 16, 1926. STEWART R. BROWNE MANUFACTURING CO. INC., New York, N. Y., a corporation of New York. Renewed Nov. 16, 1946. Class 35.

220,795. **GOLDEN KEY.** SOAPS AND CLEANERS—VIZ., BORAX SOAP, WHITE NAPTHA SOAP, WHITE FLOATING SOAP, YELLOW LAUNDRY SOAP, SOAP FLAKES, WASHING POWDER, AND LAUNDRY TABLETS. Registered Nov. 16, 1926. THE GREAT AMERICAN TEA COMPANY, Brooklyn, N. Y. Renewed Nov. 16, 1946, to The Great American Tea Company, New York, N. Y., a corporation of New York. Class 4.

220,889. **DIVING GIRL.** CANNED SALMON. Registered Nov. 16, 1926. GUS. STRAND, doing business as Strand Fisheries and as Strand Pioneer Fisheries, Aberdeen, Wash. Renewed Nov. 16, 1946. Class 46.

220,912. **SUITEX.** COTTON PIECE GOODS. Registered Nov. 16, 1926. J. L. STIFEL & SONS. Renewed Nov. 16, 1946, to J. L. Stifel & Sons, Inc., Wheeling, W. Va., a corporation of West Virginia. Class 42.

220,913. **CELANOL.** KNITTED, NETTED AND TEXTILE FABRICS MADE WHOLLY OR PRINCIPALLY OF CELLULOSE DERIVATIVES IN ADMIXTURE WITH COTTON, WOOL, SILK, OR ANY OTHER FIBER. Registered Nov. 16, 1926. THE AMERICAN CELLULOSE & CHEMICAL MANUFACTURING COMPANY LTD. Renewed Nov. 16, 1946, to Celanese Corporation of America, New York, N. Y., a corporation of Delaware. Class 42.

220,914. **RUE DE LA PAIX.** PILE-FABRIC PIECE GOODS. Registered Nov. 16, 1926. J. B. MARTIN COMPANY, Norwich, Conn., a corporation of Delaware. Renewed Nov. 16, 1946. Class 42.

220,915. **GIOCONDA.** PILE-FABRIC PIECE GOODS. Registered Nov. 16, 1926. J. B. MARTIN COMPANY, Norwich, Conn., a corporation of Delaware. Renewed Nov. 16, 1946. Class 42.

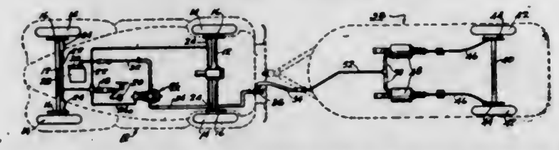
220,916. **APHRODITE.** PILE-FABRIC PIECE GOODS. Registered Nov. 16, 1926. J. B. MARTIN COMPANY, Norwich, Conn., a corporation of Delaware. Renewed Nov. 16, 1946. Class 42.

220,924. **CARMEN.** PILE-FABRIC PIECE GOODS. Registered Nov. 16, 1926. J. B. MARTIN COMPANY, Norwich, Conn., a corporation of Delaware. Renewed Nov. 16, 1946. Class 42.

222,344. **"ERUSTICATOR" ETC. AND DRAWING.** CHEMICAL PREPARATIONS FOR REMOVING RUST STAINS AND OTHER STAINS FROM FABRICS AND OTHER SUBSTANCES. Registered Dec. 28, 1926. STERLING PRODUCTS COMPANY, Easton, Pa. Renewed Dec. 28, 1946, to The Pennsylvania Salt Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania. Class 6.

REISSUES

OCTOBER 15, 1946



22,802

BRAKING SYSTEM

Henry Baade, Ypsilanti, Mich., assignor to Bendix Products Corporation, South Bend, Ind., a corporation of Indiana

Original No. 2,215,602, dated September 24, 1940, Serial No. 187,905, January 31, 1938. Application for reissue July 25, 1941, Serial No. 404,057

17 Claims. (Cl. 188—3)

14. A combination braking system comprising pressure operated brakes, hydraulic means for creating brake applying pressure, differential air pressure means for creating brake applying pressure, a source of differential air pressure, a connection between said source and said differential air pressure means, a valve in said connections adapted to control the opening and closing of said connection, and means responsive to the pressure in the hydraulic means for actuating said valve.

22,803

FLAME CULTIVATION OF PLANTS

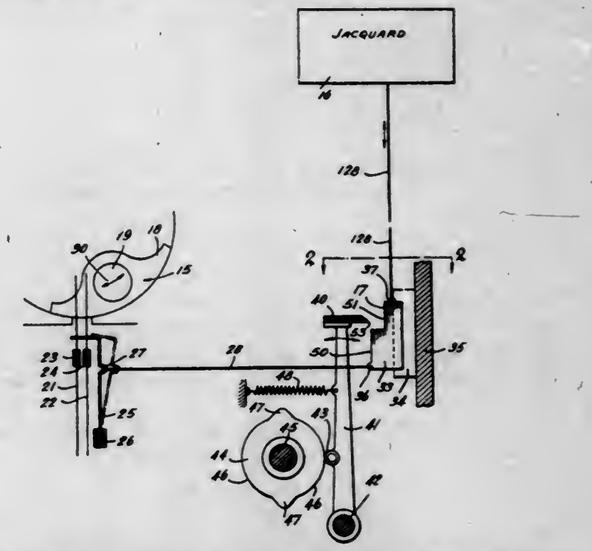
Price C. McLemore, Waugh, Ala.

Original No. 2,369,154, dated February 13, 1945, Serial No. 442,206, May 8, 1942. Application for reissue February 11, 1946, Serial No. 646,729

47 Claims. (Cl. 47—1)

46. Means attachable to a vehicle adapted to travel along plant rows for cultivating the same by the flame method comprising an attachment for connection to the vehicle, an arm swingingly connected at the upper end on said attachment, a ground engaging element at the lower end of said swinging arm, and a burner carried by said arm crosswise thereof near said lower end.

22,804



JACQUARD COMPENSATING MEANS

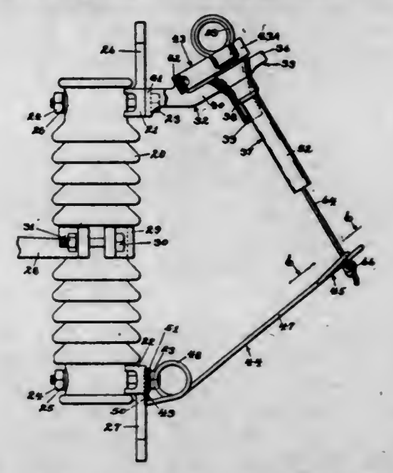
Jonas Robinson, Clarke Summit, Pa.

Original No. 2,386,574, dated October 9, 1945, Serial No. 448,527, June 26, 1942. Application for reissue December 29, 1945, Serial No. 638,499

10 Claims. (Cl. 87—14)

1. In combination with a textile machine of the type having a plurality of thread-actuating elements and a Jacquard having pulling elements for operating said thread-actuating elements, and elongated connecting elements having ends attached to said pulling elements; a device for compensating for the expansion and contraction of said connecting elements, said device comprising other connecting elements connected to said thread-actuating elements and means connecting the first-mentioned connecting elements with the second-mentioned connecting elements and substituting a pulling force transmitted by a pulling element to a first-mentioned connecting element

by a smaller pulling force transmitted by a second-mentioned connecting element to a thread-actuating element, and by another force which is not transmitted to the second-mentioned connecting element and which may compensate for an extension or contraction of the first-mentioned connecting elements.



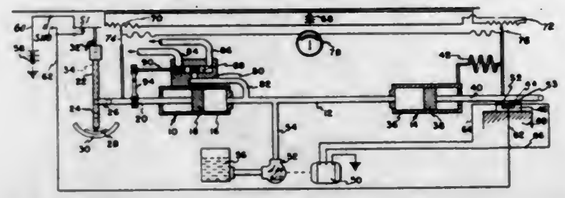
22,805

FUSE DEVICE

William O. Schultz, South Milwaukee, and Alwin G. Steinmayer, Shorewood, Wis., assignors to Line Material Company, Milwaukee, Wis., a corporation of Delaware

Original No. 2,295,015, dated September 8, 1942, Serial No. 386,779, April 4, 1941. Application for reissue January 11, 1946, Serial No. 642,458

14 Claims. (Cl. 200—114)



10. A fuse device comprising an insulator support, spaced conductor arms carried by said support, one of which is resilient and normally biased away from the other, a sleeve-like fuse

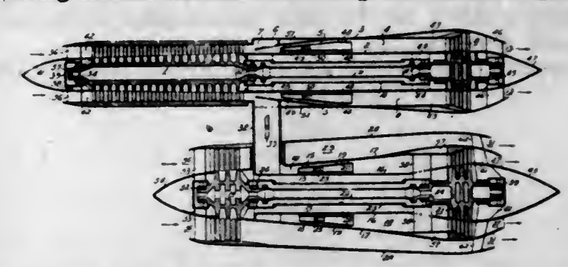
cartridge open at one end and provided with a terminal means at the other end, said means being adapted to removably support said cartridge solely on said other arm, a fuse link carried by said cartridge, one end of which extends from said open end of said cartridge and is attached in direct mechanical and electrical engagement with said resilient arm, whereby said link is biased in said cartridge and electrically connects said arms, said fuse cartridge sleeve having said other end formed into an extension connected to the sleeve and engageable by a stick or the like for pulling the cartridge, link, and resilient arm toward said other arm whereby the closed end of the cartridge sleeve may be retainingly and directly engaged with said other arm and said resilient arm thus placed under link biasing tension.

PATENTS

GRANTED OCTOBER 15, 1946

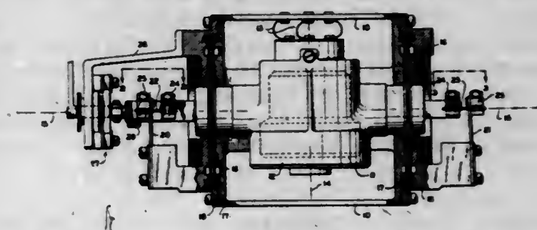
2,409,175
HYDRAULIC SYSTEM
Arben H. Adams and Theodore S. Tucker, North Hollywood, Calif., assignors, by mesne assignments, to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application October 19, 1942, Serial No. 462,614
12 Claims. (Cl. 60—54.5)

4. In a fluid actuating system including driving means, driven means, a fluid connection between the same; an indexing valve connected to said system and actuated by said driving means to connect said system to pressure at one extreme of movement of said driving means and connect said system to exhaust at the other extreme of movement of said driving means.



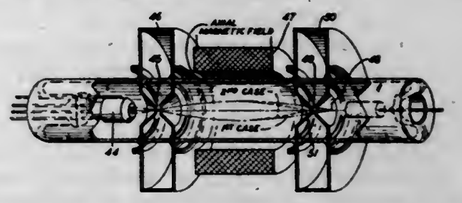
2,409,176
GAS TURBINE SYSTEM
Robert C. Allen, Wauwatosa, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware
Application April 10, 1942, Serial No. 438,367
5 Claims. (Cl. 60—35.6)

2. A jet propulsion unit comprising fluid compressing means having a forwardly facing inlet, a gas turbine axially spaced from and drivingly connected with the discharge end of said fluid compressing means, means forming an axially extending combustion chamber interposed between and connecting the discharge end of said compressing means with the inlet to said turbine, propelling jet forming nozzle means, and means severally connecting the exhaust of said turbine and said combustion chamber with said nozzle means.



2,409,177
JET PROPULSION APPARATUS
Robert C. Allen and John T. Rettaliata, Wauwatosa, Wis., assignors to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware
Application April 1, 1942, Serial No. 437,162
9 Claims. (Cl. 60—35.6)

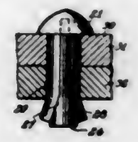
1. A jet propulsion unit comprising a high pressure compressing means, a gas turbine drivingly connected with said high pressure compressing means, a low pressure compressing means, another gas turbine drivingly connected with said low pressure compressing means, means including combustion chambers connecting the discharge of said high pressure compressing means with the inlets of said turbines, and jet forming nozzle means receiving the exhaust gases



from said turbines and the air discharged from said low pressure compressing means.

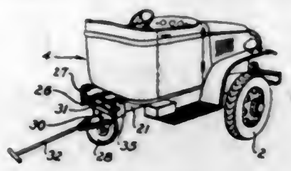
2,409,178
MOUNTING MEANS FOR GYROSCOPES
Byron L. Allison, Williston Park, N. Y., and Lan J. Wong, Hoboken, N. J., assignors to Sperry Gyroscope Company, Inc., a corporation of New York
Application June 30, 1943, Serial No. 492,866
8 Claims. (Cl. 248—26)

1. Means for mounting the rotor frame of a gyroscopic instrument in the casing thereof comprising a cantilever spring having one end thereof fixed to the casing, and a pair of axis-defining torsion wires fixed to opposite sides of the frame, one of which is connected to the free end of the cantilever spring and the other of which is fixed to the casing.



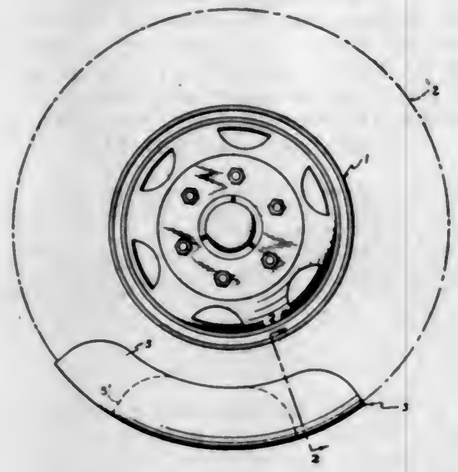
2,409,179
ELECTRON BEAM RELAY
Alva Eugene Anderson, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application December 5, 1941, Serial No. 421,736
2 Claims. (Cl. 315—5)

1. Means for producing and maintaining a beam of moving electrically charged particles, an internally resonant hollow conductive body having an aperture in the path of said beam, means for bringing said beam to a substantial focus at a point near said aperture and means to vary the position of said focal point with reference to said aperture while maintaining the beam current substantially steady, said aperture being sufficiently large compared with the trans-



verse dimensions of the beam to freely pass substantially the whole beam throughout the normal range of variation of the position of said focal point.

2,409,180
FASTENING DEVICE
Charles E. Annett, 2d, and Malcolm Armstrong, Short Hills, N. J.; said Armstrong assignor to said Annett
Application March 21, 1944, Serial No. 527,390
11 Claims. (Cl. 85—38)

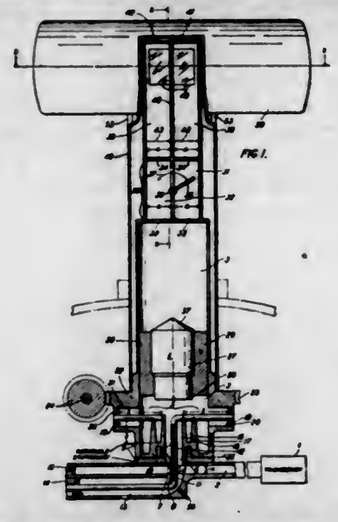


1. A fastening device, comprising a cylindrical shank rivet element having a diametral kerf of predetermined depth extending inwardly from one end, and a flat drive-pin element adapted to fit the kerf and provided at one end with a relatively thin flange affording a flat contact shoulder extending laterally from an edge thereof beyond the periphery of the shank and at the opposite end terminating in enlarged portions receding to the respective faces of the pin element, the distance from the junction of a said receding portion with the corresponding face to the shoulder of the flange being substantially less than the depth of the kerf of the rivet element, whereby when the two elements are telescoped the outer ends of the rivet element will be deflected through contact with the respective receding portions of the pin element.

2,409,181
AIRBORNE CARGO TRUCK
Ronald D. Bagley, Indiana, Pa., and Joseph E. Berman, Suffolk, Va.
Application September 19, 1944, Serial No. 554,828
1 Claim. (Cl. 180—12)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

A self-powered cargo vehicle having front and rear wheeled parts and being adapted to be disassembled into sections small enough and mobile enough to be stowed without hoist machinery through conventional cargo loading doors of airplane cargo carriers; comprising a chassis having a main longitudinal frame formed in longitudinally discrete parts separable to divide the vehicle into a wheeled rear pay load unit and a steering wheeled forward locomotive and control unit including a power plant permanently operatively connected to the wheels thereof, separable means interconnecting the two said units in rigid mutual relation, and a dolly at, and in supporting relation to, the rear end of said frame part of the locomotive and control unit, said dolly including a manually dirigible wheel and a hand tongue for turning the wheel around a vertical axis, means being included to fix the dolly releasably to the said frame part of the locomotive unit.

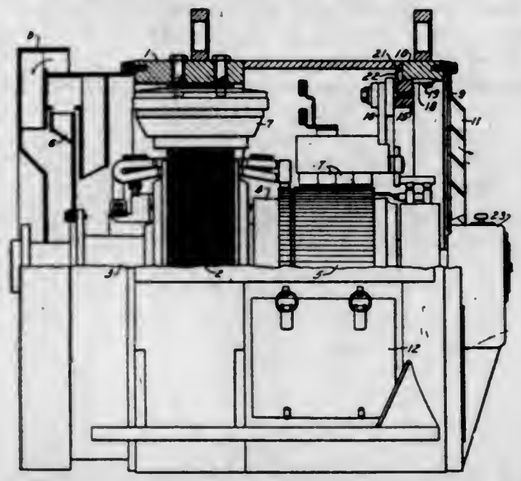
2,409,182
TIRE SHOE
George Arthur Barker, Rochester, N. Y.
Application July 12, 1943, Serial No. 494,321
2 Claims. (Cl. 152—151)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In combination, a pneumatic tire adapted to support a predetermined normal load and when stationary upon the ground adapted to be temporarily deformed by a series of downwardly directed impacts by said load, said downward impacts by said load being transmitted to the ground through a sector of the tire engaging the ground and said temporary deformation consisting of the tire being compressed substantially in a radial direction to vary progressively the length of contact between the periphery of the sector engaging the ground and the ground itself and to bulge laterally the tire side walls joining said sector, an anti-bounce shoe engaging the same circumferentially and continuously thereof a distance substantially equal to the maximum length of the peripheral ground contact during said impacts, said shoe comprising a bottom wall having a smooth ground-contacting surface and straight side walls connected thereto, said bottom wall being concentric with the periphery of, and said side walls being spaced apart a distance substantially equal to the widest part of, said tire when under said normal load and not temporarily deformed by said impacts, said widest part being measured along a line taken transversely through the tire and parallel to the axis of rotation thereof, whereby said shoe is secured to said tire solely by friction to restrain said tire during said impacts from being temporarily deformed and thereby substantially reduce radial compression and thus bounce of the tire during the impacts.

2,409,183
MICROWAVE ANTENNA
Alfred C. Beck, Red Bank, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application August 19, 1942, Serial No. 455,322
12 Claims. (Cl. 250—11)

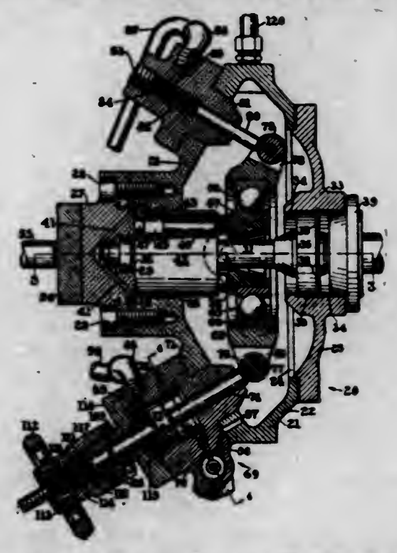
1. An antenna system comprising a pair of wave guides each having a separate aperture for emitting and collecting radiant energy, a concave reflector facing the separate apertures and having a focus positioned between said apertures.



2. An antenna lobe switching system comprising a concave reflector having a finite focus, a pair of antenna elements equally spaced from said

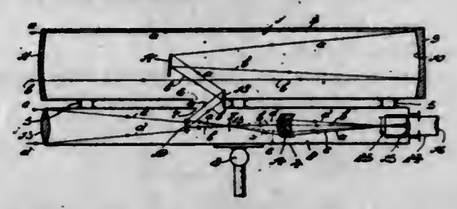
focus, each of said elements comprising a wave guide having an aperture facing said reflector,

and means for alternately connecting a transceiver to said guides.



2,409,184
GENERATOR CONSTRUCTION
Anthony J. Berneski, Latrobe, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application March 3, 1945, Serial No. 580,879
1 Claim. (Cl. 171—324)

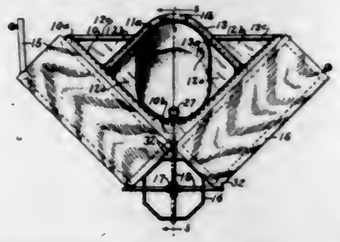
A commutator-type dynamo-electric machine having a frame having a front frame-ring and a removable front endbell, and a rotor-member having a commutator, said frame having a rocker-ring fitting within the inner periphery of said front frame-ring, a brush assembly carried by said rocker-ring, a plurality of removable segments removably secured to the inner periphery of said front frame-ring in position to provide abutments for said rocker-ring, and clamps engaging the opposite face of said rocker-ring and tightenable to clamp said rocker-ring against said abutment-segments.



2,409,185
HYDRAULIC APPARATUS
Victor V. Blasutta, Columbus, Ohio, assignor to The Denison Engineering Company, Columbus, Ohio, a corporation of Ohio
Application June 19, 1943, Serial No. 491,474
11 Claims. (Cl. 121—62)

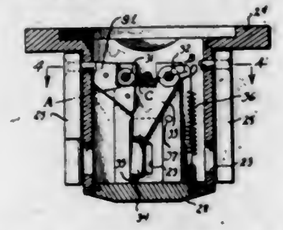
3. A motor actuated by fluid pressure comprising a casing having inlet and outlet ports; a cylinder barrel supported for rotation in said casing with the cylinders thereof alternately communicating with said inlet and outlet ports; piston means disposed for movement in said cylinders; thrust means engaging said pistons; means in said casing supporting said thrust means for movement to vary the angular relation thereof to said pistons; and means for automatically controlling the angularity of said thrust means in response to pressure variations in said inlet port, said control means having a body with a cylinder

therein; control piston means dividing said cylinder into a pair of chambers having limited communication with one another; means transmitting movement from said piston means to said thrust means; means connecting one of said chambers with the port having the variable pressures; passage means connecting the other chamber with a low pressure line; and means responsive to the pressures in said inlet port to control fluid flow through said last mentioned passage means.



2,409,186
TELESCOPE SYSTEM
Albert Bouwers, Eindhoven, Netherlands; vested in the Alien Property Custodian
Application December 24, 1942, Serial No. 470,090
In the Netherlands February 13, 1941
6 Claims. (Cl. 88—32)

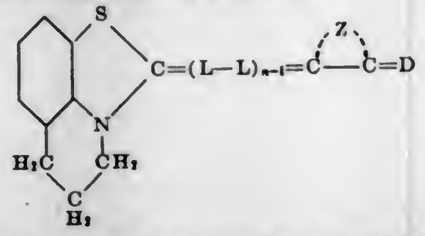
1. A spyglass system comprising a greatly magnifying telescope and a finder, each including a casing and an optical system arranged therein, said casings being secured together with their axes parallel and provided with apertures in alignment with each other, said telescope including a spherical mirror and a correction element therefor spaced from said mirror, a mirror system including a fixed mirror arranged in the telescope in spaced relationship to the wall of the casing and near the aperture therein, a fixed mirror at said aperture, and a movable mirror adapted to be moved into and out of the optical axis of the finder and to be so positioned therein as to cover only part of the field of view and to cooperate with the fixed mirrors of the mirror system in focusing the image from the telescope



into the focal field of the finder to be viewed by the single ocular of the finder, whereby the finder image and the telescope image may be viewed simultaneously and separately.

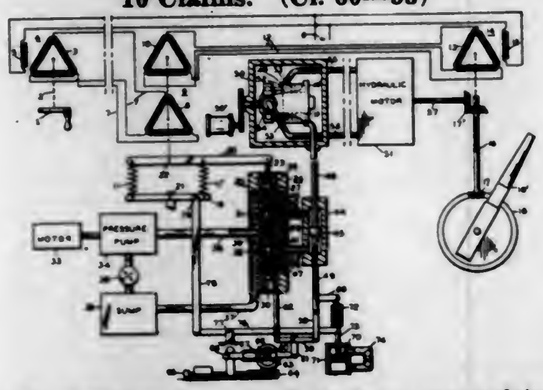
2,409,187
SHAMPOO CABINET COMBINATION
John Henry Bower, Burlingame, Calif.
Application July 26, 1943, Serial No. 496,226
2 Claims. (Cl. 4—159)

1. In a compartmental shampoo-unit, the combination of two supporting shelves, a high rear wall that comprises two complemental rearwardly converging wall-sections whose lower portions are united respectively with said supporting shelves, a shampoo-basin between said shelves and having its top portions united with said shelves while its front portion is forwardly tapering and upwardly inclined and terminates in an upwardly concaved relatively narrow neck-support at a considerable distance in front of said shelves, and two relatively low rearwardly diverging walls having their front ends united with opposite sides of said concave relatively narrow neck-support while their rear ends are united respectively with said rearwardly converging wall-sections of the rear wall and while their intermediate portions are across and united with the respective shelves and divide the latter into compartments for separately holding and supporting various materials and implements in convenient positions for ready use of a shampoo-operator when shampooing the head of a person whose neck is in said neck-support.



2,409,188
ERECTION CONTROLLING DEVICE FOR GYROSCOPES
Frederick D. Braddon, Babylon, and Spencer Kellogg, 2d, Rye, N. Y., assignors to Sperry Gyroscope Company, Inc., Brooklyn, N. Y., a corporation of New York
Application August 7, 1941, Serial No. 405,740
16 Claims. (Cl. 74—5)

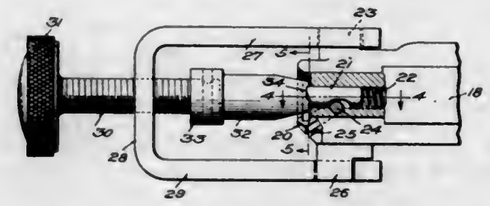
1. In a gyro-vertical having a rotor bearing case, means for universally supporting said case on horizontal axes, air jet means for erecting said case and gravitationally responsive means for controlling the erecting effort of the same, a second gravitationally responsive means, a spring balancing said last-named means in a normal inoperative position against the force of gravity, and adapted to be moved by an increase in the total force thereon to block temporarily said air jet erecting means.



2,409,189
MEROCYANINE DYES
Leslie G. S. Brooker, Rochester, N. Y., and Homer W. J. Cressman, Glenside, Pa., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Original application September 1, 1942, Serial No. 456,927. Divided and this application April 27, 1945, Serial No. 590,716
7 Claims. (Cl. 260—240)

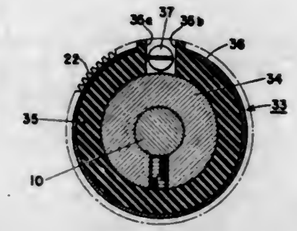
1. The merocyanine dyes which are represented by the following general formula:

wherein D represents a member selected from the group consisting of oxygen and sulfur, L represents a methine group, *n* represents a positive integer of from 2 to 3 and Z represents the non-metallic atoms necessary to complete a heterocyclic nucleus containing from 5 to 6 atoms in the ring.



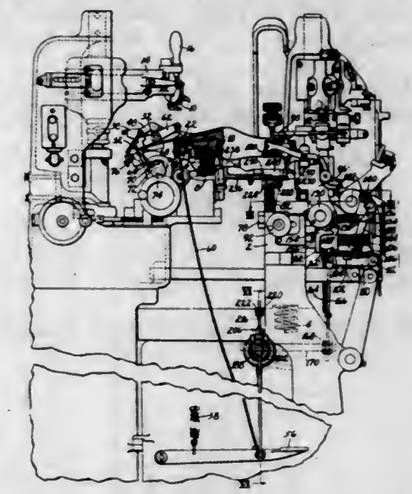
2,409,190
REMOTE CONTROL SYSTEM
Gordon S. Brown, Wellesley Hills, Mass., and Jay W. Forrester, Anselmo, Nebr., assignors, by mesne assignments, to Sperry Gyroscope Company, Inc., North Hempstead, N. Y., a corporation of New York
Application September 20, 1941, Serial No. 411,670
10 Claims. (Cl. 60—53)

1. A positional control system comprising a controlling object, a controlled object, a variable speed drive for actuating the controlled object, error-measuring means responsive to differences in position between controlled and controlling objects for generating an error signal as a function of said disagreement, an amplifier having its output in control of the variable speed drive and having its input connected to the error-measuring means, and a regenerative feedback connection from the amplifier output to the amplifier input, said feedback connection including means for delaying transmission to the input of the effect of changes in the output.



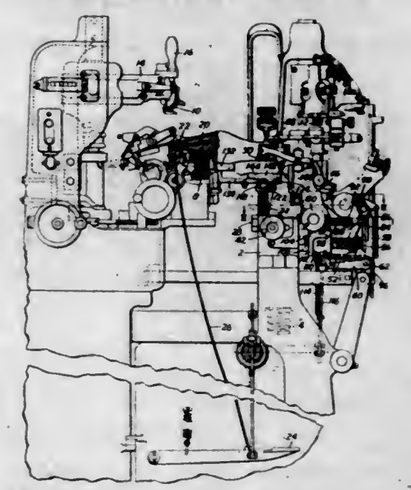
2,409,191
FIREARM BOLT TOOL
Joseph M. Brown, Philadelphia, Pa.
Application August 12, 1944, Serial No. 549,248
3 Claims. (Cl. 29—259)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a tool for aiding disassembly and reassembly of a firearms bolt which has opposing side lugs plus an ejector protruded from one end by an internal spring plus an extractor including a shaft transversely extended through said bolt to limit said ejector's protrusion by blocking the full force of said spring, the combination of a frame having a pair of side members one of which has an opening bounded by member material on all four sides whereby initially to engage one of said bolt lugs when same is inserted endwise thereinto and the other of which has a corresponding opening bounded by member material on three sides only whereby engagedly to receive the other of said bolt lugs when same is subsequently slid sidewise thereinto, an end web member securing said two side members to



each other in fixed spaced apart relation whereby those members snugly accommodate said firearms bolt therebetween when said bolt lugs are engaged in the side member openings as aforesaid and having a web opening aligned substantially with the axis of said bolt's extractor when the bolt lugs are thus engaged, a screw-down shaft threaded into said web opening and having a hand grip through which rotation may be imparted thereto, and means on the inner end of said screw-down shaft engageable with said bolt's ejector whereby advance turning of the shaft pushes the ejector into the bolt against said spring and by thus removing all spring force from said extractor shaft frees same for removal from or reinsertion into the bolt.

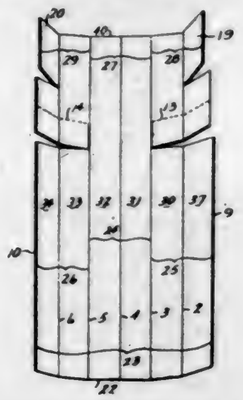
2,409,192
TUNING DEVICE CLUTCH
Arthur A. Collins, Cedar Rapids, Iowa, assignor to Collins Radio Company, a corporation of Iowa
Application April 21, 1943, Serial No. 483,899
2 Claims. (Cl. 64—30)



1. In a torque-limiting clutch, a shaft, a metal drum on said shaft, a non-metallic friction shoe substantially encircling said drum, the ends of said shoe terminating in projecting portions adjacent each other but spaced apart, an arcuate metal spring encircling said shoe and abutting with the projecting portions of said shoe for contracting said shoe about the drum and driving means rotatable about an axis concentric with that of the drum, said last mentioned means having a portion intermediate the ends of said shoe and a loose fit therebetween, said portion being adapted to abut against either of said ends for driving association therewith, whereby the driving force opposes the contraction of said shoe.

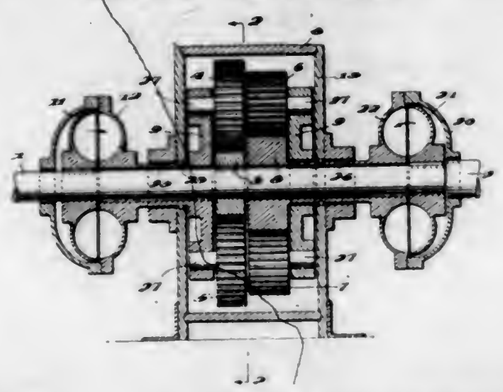
2,409,193
LASTING MACHINE
Theodore P. Courchene, Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application January 27, 1945, Serial No. 574,855
7 Claims. (Cl. 12—12)

1. In a lasting machine, a device for gripping the marginal portion of the toe end of an upper on a last, an operating member movable by the operator to close said device on the upper, another device for clamping the heel-end portion of the upper against the last, spring means for moving said clamping device lengthwise of the last into position thus to clamp the upper, means for holding the clamping device initially retracted from its clamping position, and mechanism for releasing the clamping device to the action of said spring means by movement of said operating member.



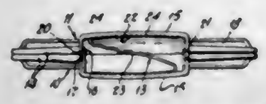
2,409,194
LASTING MACHINE
Theodore P. Courchene, Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Original application January 27, 1945, Serial No. 574,855. Divided and this application July 30, 1945, Serial No. 607,813
8 Claims. (Cl. 12—14)

1. In a lasting machine, the combination with toe-lasting means, of an abutment for engaging the heel end of an upper on a last to position the last lengthwise relatively to said toe-lasting means, a toe rest for supporting the last at the top of the forepart, and a heel-end support for the last, said heel-end support having means for



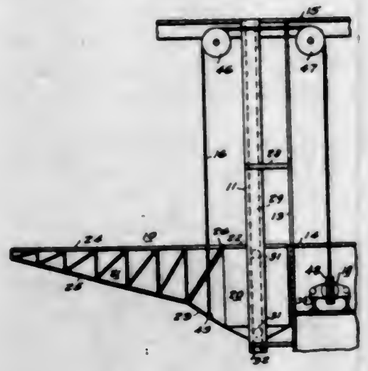
preventing lengthwise displacement of the last away from said abutment solely by engagement with the exterior of the last or of the upper thereon.

2,409,195
SURGICAL SPLINT
Walter J. Crawford, New Orleans, La.
Application June 22, 1943, Serial No. 491,774
5 Claims. (Cl. 128—87)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In a surgical splint of the class described, a single sheet of pliant material scored to define a base panel section, main side panel sections, each of the latter extending from one of opposite sides of the base panel section, an end panel section extending from one end of the base panel section, and auxiliary side panel sections, each of the latter extending from one of opposite sides of the end panel section, said auxiliary side panel sections each being scored to define a flap section at one corner of the sheet of material and adapted to have hinged relation to its respective auxiliary side panel section about an axis extending longitudinally of said sheet.

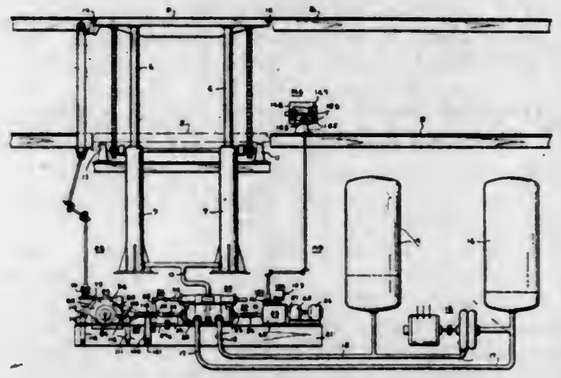
2,409,196
AUTOMATIC TURBOPLANETARY TRANSMISSION
Thomas P. Cunningham, Kearny, N. J.
Application March 24, 1943, Serial No. 480,390
8 Claims. (Cl. 74—189.5)



1. A traction booster for power transmissions including an engine shaft, a propeller shaft in alignment with the said engine shaft, a main power turbine and a booster turbine, the impellers of both of said turbines being keyed to the said engine shaft, and a planetary gear set including a pinion keyed to the said engine shaft; each of the said turbines including an impeller and a rotor and each turbine having a housing affixed to the rotor and enclosing the impeller; the planetary gearset including a carrier having gears axled therein, and a tail gear, the said axled gears meshing with the said pinion and with the said tail gear, the said tail gear affixed to the rotor of the said main power turbine and the said carrier being affixed to the rotor of the said booster turbine.

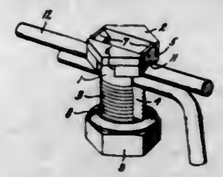
2,409,197
HAIR WAVE CLIP
Raymond C. David, Leominster, Mass., assignor to Delamere Company, Inc., New York, N. Y., a corporation of Delaware
Application June 5, 1945, Serial No. 597,624
3 Claims. (Cl. 132—46)

2. A hair wave clip comprising a pair of jaws each having a handle formed with a longitudinal groove in its inner face, the two handles having overlapped ears, a stud on each ear of one handle fitting into an opening in each ear of the other handle to connect the two jaws pivotally together, and a spring having two substantially parallel legs and a connecting portion disposed between the handles in a plane substantially parallel to the pivotal axis of the jaws, the parallel legs being freely held in the grooves of the handles.



2,409,198
ELEVATOR CONTROL SYSTEM
James Dunlop, Ridgewood, N. J., assignor, by mesne assignments, to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application December 28, 1943, Serial No. 515,992
39 Claims. (Cl. 121—41)

1. In a control system for a hydraulic engine having a cylinder and a plunger, valve means for the cylinder, a motive means operating independently of the engine, a nut operated by movement of the plunger, means including a screw meshing with the nut and responsive to the operation of the nut and operation of the motive means for controlling opening of the valve means, and mechanism operated by the plunger as it approaches stroke ends for moving the valve means in a closing direction independently of said responsive action of the screw to control such valve means.



12. In a control system for hydraulically-operated apparatus having a movable component including a piston element arranged in a cylinder, valve means including a valve member movable in opening and closing directions to provide a flow area controlling the flow of motive liquid into and out of the cylinder; reversible motor means; follow-up means operated by the movable component; means responsive to movement of the motor means to move the valve member to increase the flow area of the valve means and responsive to movement of the follow-up means to move the valve member to decrease the flow area of the valve means so that, upon initiation of operation of the motor means, the flow area is increased to accelerate the movable component until, due to action of the motor means and of the follow-up means, the flow area is sufficient for movement of the movable component at a speed dependent upon that of the motor means; and means for stopping the movable component in predetermined positions and including cams operated by the movable component for moving the valve member independently of the motor means and of the follow-up means to decrease the flow area of the valve means so as to decelerate the movable component as each position is approached.

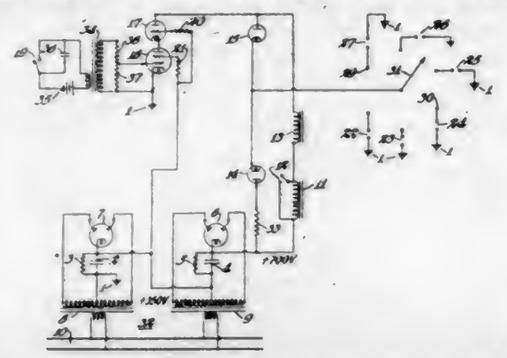
2,409,199
ELEVATOR CONTROL SYSTEM
James Dunlop, Ridgewood, N. J., assignor, by mesne assignments, to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application January 24, 1945, Serial No. 574,401
8 Claims. (Cl. 121—41)

1. In a hydraulically-operated elevator having a movable component including a platform movable between upper and lower stop positions and operatively connected to plunger means arranged in cylinder means, reversible pilot motor means, a drive shaft rotatable by the movable component, a valve control shaft, means for transmitting motion from the pilot motor means to the valve control shaft and constructed and arranged to provide for axial movement of the latter, a driven member, a cam shaft, gearing connecting the drive shaft and the driven member and connecting the drive shaft and the cam shaft, screw-and-nut gearing connecting the driven member and the valve control shaft and including screw and nut elements having meshing threads of such steep pitch that the valve control shaft may be forcibly moved axially independently of rotary motion imparted thereto by the pilot motor means and of rotary motion imparted to the driven member from the drive shaft, valve means for controlling the flow of motive liquid into the cylinder means for upward travel of the platform and out of the cylinder for downward travel thereof and movable in response to axial movement of the valve control shaft such that rotation of the latter by the motor means causes the valve means to move in an opening direction and rotation of the driven member causes the valve means to move in a closing direction to provide a flow area sufficient for movement of the platform at a speed dependent upon that of the pilot motor means, follower mechanism movable with the valve control shaft as the latter moves axially and including follower elements, and a pair of directional cams carried by the cam shaft and cooperating with the follower elements to operate the follower means for movement of the valve control shaft axially to move the valve means in a closing direction for decelerating the movable component as the platform approaches stop positions.

2,409,200
ELECTRICAL CONNECTOR
Lewis W. Evans, Pittsfield, Mass., assignor to General Electric Company, a corporation of New York
Application July 23, 1945, Serial No. 606,687
11 Claims. (Cl. 24—125)

2. In an electrical connection, a member having a head portion at one end and a threaded portion at the other end, a slot extending longitudinally from the head end of said member so that at least a portion of the threaded end of said member is solid while the head is slotted, a nut for said threaded end, a slotted washer member arranged to cooperate with said slotted head portion to form a complete head but rotatable relative to said head portion so that electrical conductors may be positioned in said slot and clamped between said nut and said complete head without removing said nut from said threaded end, and means for preventing said nut from inadvertently being disengaged from said threaded portion.

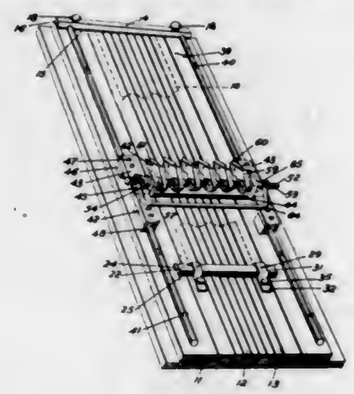
2,409,201
SMOKE-PRODUCING MIXTURE
Leo Finkelstein, Aberdeen, Md., and Hervey B. Elkins, United States Army
No Drawing. Application November 25, 1943, Serial No. 511,680
5 Claims. (Cl. 252—305)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A smoke-producing mixture comprising a major proportion by weight of a reactive metal chloride, an oxide of a metal higher in the electromotive series than the metal constituent of the chloride and a finely divided metal higher in the electromotive series than the metal constituent of the oxide, said oxide and said chloride being principal reactants.

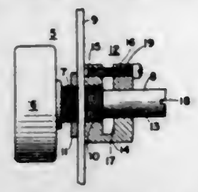
2. A smoke-producing mixture comprising a major proportion by weight of reactive iron chloride, grained aluminum and zinc oxide.

2,409,202
ELECTRONIC IGNITION SYSTEM
Oliver T. Francis, Renville, Minn.
Application December 27, 1943, Serial No. 515,654
5 Claims. (Cl. 315—211)



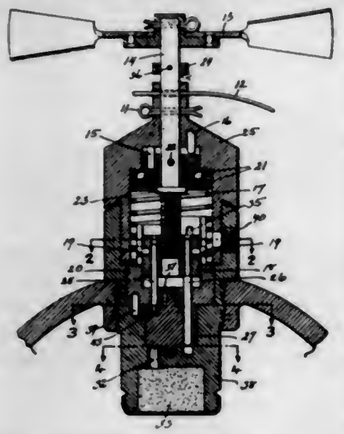
1. In an ignition system, a first circuit comprising the series connection of a generator of a high

voltage positive pulse, the anode and cathode of a spark gap, a second circuit comprising the series connection of an electrical energy storing source of current, the anode and cathode of a gas dis-



charge device, and said anode and cathode of said spark gap, and means for applying said positive pulse to said anode of said spark gap to render said gap conductive and cause current to flow in said second circuit.

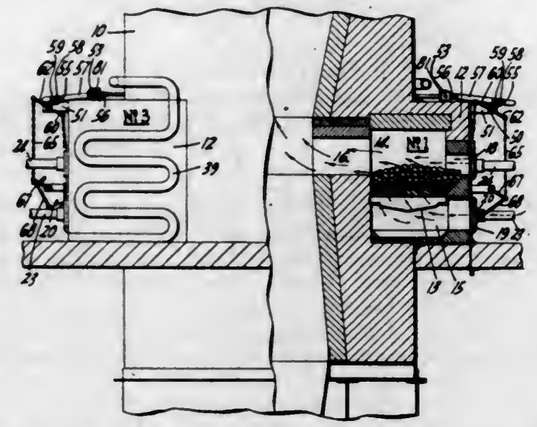
2,409,203
SHEET SLITTING DEVICE
James A. Gale, New York, N. Y.
Application April 26, 1945, Serial No. 590,445
3 Claims. (Cl. 164—73)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A sheet slitting device comprising a bedplate having a flat working surface adapted to have a sheet of material to be slit imposed thereon, said working surface defining a plurality of parallel slots, a pair of spaced clamping bars arranged transversely of said slots, said bars having friction surfaces opposed to said working surface, resilient means for urging said bars away from said working surface whereby opposite edges of a sheet of material may be inserted between said working surface and said friction surfaces, means for clamping said bars against said working surface to secure the sheet thereon, guide rails on said bedplate parallel to said slots, a carriage mounted on said rails for reciprocation in a line parallel to said slots, a shaft rotatably mounted on said carriage and disposed transversely of said slots, spaced fingers rigidly secured to said shaft, cutting tools secured to said fingers, and means for adjusting said fingers on said shaft whereby said tools may be aligned with said slots, said shaft being arranged for rotation into cutting position whereby said tools are depressed in unison into said slots with the cutting edges thereof disposed to slit the sheet of material and being further arranged for rotation in unison into inoperative position whereby said tools are withdrawn from said slots.

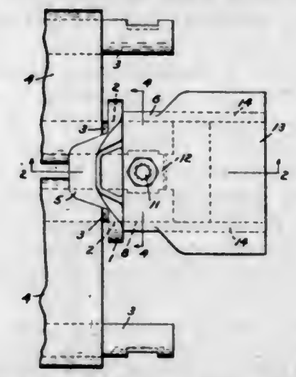
2,409,204
SHAFT LOCKING DEVICE
James E. Gall, Washington, D. C.
Application August 18, 1945, Serial No. 611,427
1 Claim. (Cl. 188—74)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

In combination, a rotatable shaft, a housing for said shaft, and a shaft locking device comprising an axially apertured block having a slot formed therein extending from one side thereof at substantially right angles to the aperture to a point intermediate the opposite side thereof and the edge of the aperture, thus substantially dividing said block into two end portions joined by an intermediate side portion, means for securing one of said end portions to said shaft housing, and means associated with said block for pivoting said other portion toward said first portion about an axis substantially corresponding to the base of said slot to cause said pivoted portion to engage said shaft.



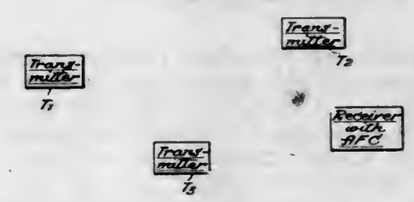
2,409,205
BOMB FUSE
Raymond L. Graumann, Alexandria, Va.
Application March 2, 1932, Serial No. 596,364
7 Claims. (Cl. 102—81.2)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A bomb fuse comprising a fuse body having a cavity therein, a detonator holder, an arming nut, an arming nut guide, a fuse body housing, a shaft penetrating said fuse having screw threads on the inner end, said screw threads being engaged by said arming nut, said arming nut guide preventing rotation of said arming nut until after a predetermined number of revolutions of said shaft, a propeller and hub attached to said shaft, a first spring located in said fuse body, means associated with said shaft whereby said shaft and propeller are prevented from rotating until the longitudinal force exerted by the air on said propeller and hub is sufficient to overcome said first spring, a firing pin, a detonator, a lead to an explosive charge, the latter three elements being out of line when the fuse is unarmed and being in line when the fuse is armed, a second spring associated with said detonator holder, means associated with said arming nut to move said detonator holder to the armed position, said



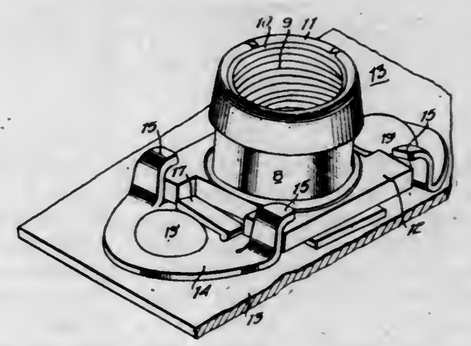
means and second spring operating to return said detonator from the armed to the unarmed position when the longitudinal force exerted by the air on said propeller and hub ceases to be sufficient to overcome said first spring.

2,409,206
METHOD AND APPARATUS FOR CALCINING MATERIALS
William E. Hessman, Luckey, Ohio, assignor to National Gypsum Company, Buffalo, N. Y.
Application April 9, 1941, Serial No. 387,625
21 Claims. (Cl. 263—53)



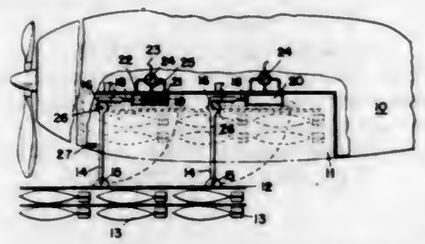
10. Calcining apparatus comprising a charge receiving chamber, a plurality of furnaces associated therewith each having a grate with a combustion chamber thereabove and an ash pit therebelow, a conduit between each furnace combustion chamber and said charge receiving chamber whereby the gaseous products of combustion from said furnaces are discharged into said charge chamber, each furnace having draft means associated with its ash pit and other draft means associated directly with its combustion chamber, means associated with each furnace for alternately rendering the ash pit draft means operative and inoperative in substantially continuously recurring succession and for simultaneously rendering the combustion chamber draft means operative when the ash pit draft means is inoperative, and vice versa, and means synchronizing the draft means of the several furnaces whereby they operate successively in a continuously recurring cycle.

2,409,207
EXTENDED END CONNECTION
Theodore J. Hollenkamp, Detroit, Mich.
Application October 17, 1944, Serial No. 559,109
9 Claims. (Cl. 305—10)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



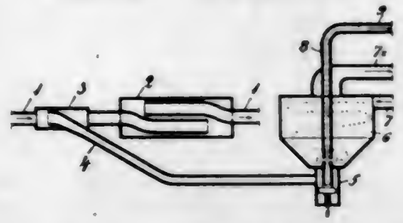
1. An extended end connector for track blocks comprising a body plate, means on a surface of said plate for connecting a pair of successive track blocks, and a flotation plate extended outwardly from said connecting means perpendicularly to said body plate and having a ground-facing surface for assisting in the flotation of the vehicle in soft earth.

2,409,208
SIGNALING SYSTEM
Paul F. G. Holst and Loren R. Kirkwood, Oaklyn, N. J., assignors to Radio Corporation of America, a corporation of Delaware
Application December 24, 1941, Serial No. 424,298
4 Claims. (Cl. 250—6)



1. A signaling system consisting of a plurality of spaced transmitters each radiating a carrier wave, the several carrier waves being separated from each other by small frequency spacings as compared to the carrier wave frequencies, and at least one heterodyne receiver with a tuning range covering substantially only a band of frequencies sufficient to receive all of the transmitted waves and with an intermediate frequency more than twice the greatest frequency separation between the plurality of transmitted carrier waves.

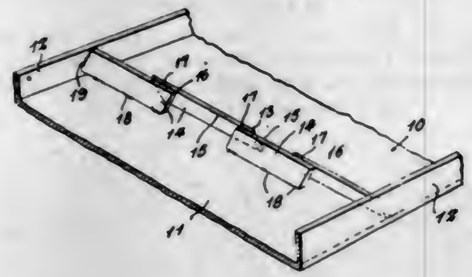
2,409,209
REMOVABLE BASKET NUT
John E. Johnson, Morristown, N. J., assignor to Elastic Stop Nut Corporation of America, Union, N. J., a corporation of New Jersey
Application July 25, 1944, Serial No. 546,446
5 Claims. (Cl. 85—32)



1. In a fastening device, a nut basket and a nut removably secured thereto, said nut including a threaded portion and a flange portion extending laterally therefrom, said nut basket having a base portion, a plurality of bent-over lugs extending upwardly from said base portion and overlying said flange portion to restrain lateral movement in two opposite directions and rotary and axial movement of the nut, and a plurality of projections extending upwardly from said base portion and engaging edges of said flange portion for restraining movement of the nut in two opposite lateral directions at right angles to the first mentioned directions, at least one of said projections being resiliently displaceable to permit insertion and removal of said nut into and from said basket.

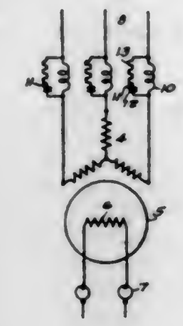
2,409,210
ROCKET LAUNCHING DEVICE
Carl H. Jolly, United States Navy
Application June 13, 1945, Serial No. 599,293
2 Claims. (Cl. 89—1.7)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A device of the class described comprising an open bay in the bottom portion of the body of an airplane, a carriage normally positioned in said bay, one or more rockets releasably mounted on the underside of said carriage, a strut member pivotally mounted at one end on said carriage and at the other end in the upper portion within said bay, said strut member being of such length to position the carriage beyond the propeller arch in line of travel parallel to the airplane thrust line, a pinion gear rigidly attached to said strut member, a gear rack engaging said pinion gear, and hydraulic means for operating said pinion and rack mechanism to swing said carriage to its extended position.



2,409,211
DEVICE FOR REMOVING PARTICLE DEPOSITS FROM GAS PURIFYING APPARATUS ASSOCIATED WITH GAS GENERATORS
Karl Torsten Källe, Saffle, Sweden
Application May 26, 1941, Serial No. 395,240
In Sweden February 17, 1941
8 Claims. (Cl. 183—38)

1. The combination with a gas purifying apparatus having an inlet and an outlet, a conduit extending into said apparatus and having inlet means to receive solid particles from said apparatus, a jet movable relatively to said conduit and cooperating with said means to control the introduction of solid particles from said apparatus into said conduit, a pipe adapted to lead exhaust gases from an engine to said jet for discharge therefrom into said conduit to induce the flow of solid particles therethrough, and means responsive to increase or decrease in pressure in said pipe for moving the jet relatively to the conduit to increase or decrease, respectively, the flow of solid particles introduced into said conduit.



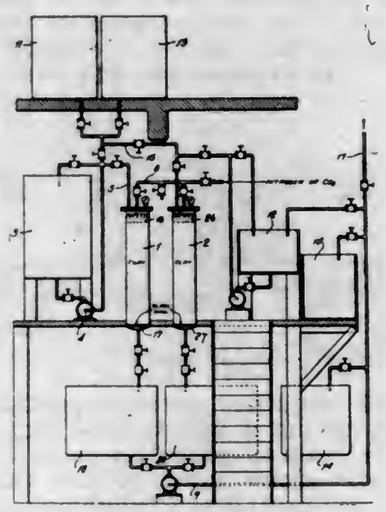
2,409,212
STRUCTURAL MEMBER
Frederick Kautz, Philadelphia, Pa.
Application August 21, 1944, Serial No. 550,427
19 Claims. (Cl. 189—34)

1. A structure comprising an extended body member and a reinforcement therefor secured to said member at contacting portions and having sections of elongated shape extended from each other in longitudinal alignment, said sections being disposed in alternate order substantially at opposite sides of a common longitudinal plane, longitudinal edge portions of said sections contiguous to said member being spaced from said

plane, said sections being inclined so that other longitudinal edge portions thereof lie substantially in said plane, said reinforcement having a portion disposed over both sides of said plane in which said sections are extended over each other and united, and the terminal sections of said reinforcement being sustained by support members.

2,409,213
DAMPING FOR ELECTRICAL MACHINES
Lee A. Kilgore, Wilkinsburg, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 14, 1944, Serial No. 531,039
3 Claims. (Cl. 172—274)

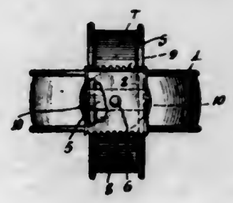
1. An alternating-current dynamo-electric machine inherently subject to negative damping tending to cause self-excited oscillations through a narrow frequency-range above and below an average operating-frequency of a winding of the machine, in combination with electrical damping-means comprising a damped tuned circuit, and terminal connections for serially connecting said tuned circuit to said winding, said tuned circuit comprising a plurality of parallel-connected reactance-branches, one of said branches having an inductive reactance, another of said branches having a capacitive reactance, said inductive and capacitive reactances being tuned to a frequency equal to said average operating-frequency, plus said narrow frequency-range above said average operating-frequency, plus a small additional increment of frequency, and at least one of said branches including resistance in an amount suitable for materially altering the slope of the damping-torque curve of the machine so as to produce positive damping within said narrow frequency-range above and below said average operating-frequency.



2,409,214
INTAGLIO INK
Ernest D. Lee, West Englewood, N. J., assignor to Interchemical Corporation, New York, N. Y., a corporation of Ohio
No Drawing. Application December 27, 1943, Serial No. 515,801
3 Claims. (Cl. 106—30)

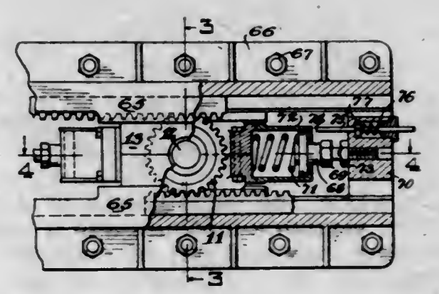
1. An intaglio printing ink comprising coloring matter dispersed in a vehicle which comprises a solution of Utah type coal resin in an aliphatic hydrocarbon solvent having a volatility in the range between that of benzene and that of toluene.

2,409,215
PRINTING INK
Ernest D. Lee, West Englewood, N. J., assignor to Interchemical Corporation, New York, N. Y., a corporation of Ohio
No Drawing. Application December 27, 1943, Serial No. 515,802
2 Claims. (Cl. 106—30)



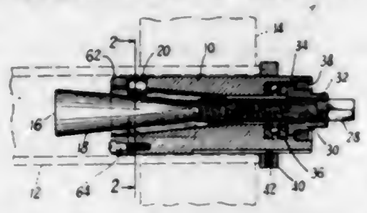
1. A heat drying printing ink comprising pigment dispersed in a vehicle which comprises a solution of coal resin free from coal in a petroleum hydrocarbon solvent which is substantially non-volatile at 20° C. and which volatilizes very readily when heated to temperatures of the order of 150° C., said coal resin comprising the portion soluble in hexane and lower saturated hydrocarbons of the resin concentrate consisting of resin admixed with coal and obtained from a resin-bearing coal of the Utah type.

2,409,216
METHOD OF REFINING RESIN
Ernest D. Lee, West Englewood, N. J., assignor to Interchemical Corporation, New York, N. Y., a corporation of Ohio
Application December 27, 1943, Serial No. 515,803
4 Claims. (Cl. 260—107)



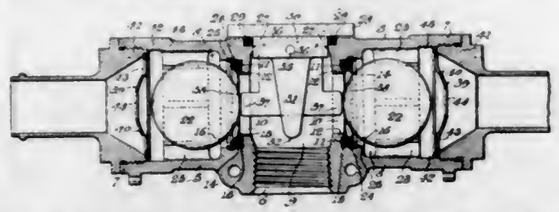
1. In the method of recovering the resin from a resin-bearing coal of the Utah type wherein the resin is separated from the bulk of the coal to produce a resin concentrate consisting of resin admixed with coal, the steps which comprise heating the resin concentrate to a temperature above about 165° C. but below the point at which substantial depolymerization of the resin takes place to render the resin content thereof freely soluble in hydrocarbon solvents and to produce freely filterable hydrocarbon solutions of the resin, dissolving the resin content of the heat-treated resin concentrate in a hydrocarbon solvent, and separating the insoluble coal from the resulting resin solution by filtration.

2,409,217
ADHESIVE TAPE DISPENSER
Maurice E. Lessin, New York, N. Y., assignor to Minnesota Mining & Manufacturing Company, St. Paul, Minn., a corporation of Delaware
Application March 31, 1945, Serial No. 585,828
2 Claims. (Cl. 206—58)



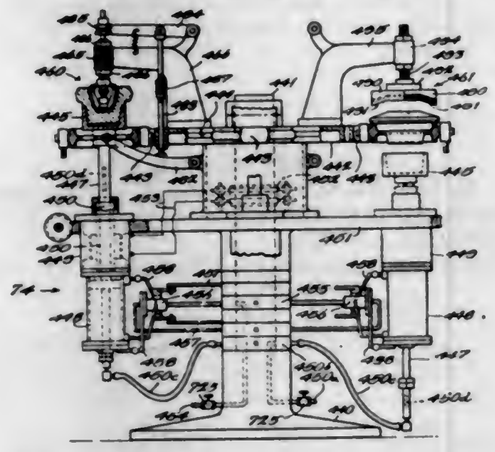
1. An adhesive tape dispenser comprising a spool for holding a supply roll of tape, a hollow cylinder into which the spool fits concentrically, bearing means for pivotally mounting the spool for rotation within the cylinder about an axis that is coincident with a common diameter of the spool and the cylinder, and a severing edge on the cylinder positioned to permit tape to be drawn thereagainst to sever the latter after its withdrawal from the spool when the spool and the cylinder are positioned with their radial cross sectional planes approximately at right angles to each other.

2,409,218
STRAIN RELIEVING AND DEPHASING STOP MEANS FOR FREE PISTON ENGINES
Frank M. Lewis, Weston, Mass., assignor to General Machinery Corporation, Hamilton, Ohio, a corporation of Delaware
Application December 26, 1944, Serial No. 569,871
22 Claims. (Cl. 123—46)



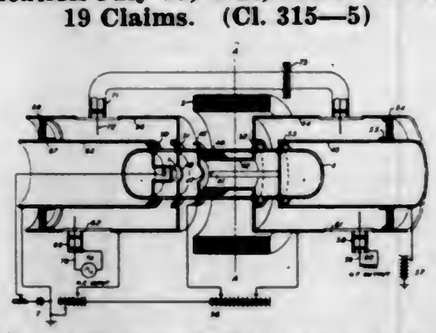
1. In an internal combustion free piston engine having a piston synchronizing means including a rack-bar projecting inwardly from and movable with each of the opposing free pistons, and pinion means connecting and rotatable by opposing movements of the rack-bars, a carriage forming a mount for the pinion means and mounted for reciprocatory movements lengthwise of the rack-bar movements, and means normally holding said carriage in a predetermined neutral position and yieldable to relieve load shocks and piston dephasing strains on the pinion means.

2,409,219
TUBE EXPANDING
Carl A. Maxwell, Akron, Ohio, assignor to The Babcock & Wilcox Company, Rockleigh, N. J., a corporation of New Jersey
Original application May 15, 1941, Serial No. 393,505, now Patent No. 2,375,235, dated May 8, 1945. Divided and this application January 25, 1944, Serial No. 519,591
2 Claims. (Cl. 29—157.5)



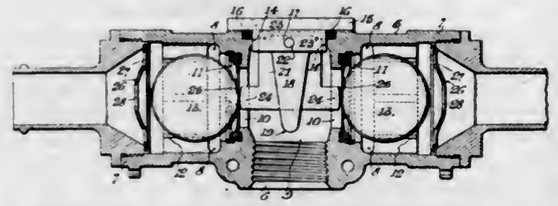
1. A method of retractively expanding tubes into tube seats in a wall of a pressure part; said method including an initial tube expanding operation limited to and continuously advancing over a narrow circumferential zone the width of which is but a fraction of the length of the tube seat, said initial tube expanding operation being effected at a position adjacent the end of the tube seat remote from the nearest tube end, stabilizing and advancing the expanding operation by guiding reactions against internal surfaces of the tube over an area and a circular zone of an axial extent much greater than the narrow zone of the initial expanding; subsequently repeating said expanding in a continuing expanding operation in contiguous zones successively nearer the adjacent end of the tube; said initial expanding operation involving the maximum tube expanding force of the method; maintaining said maximum force beyond the initial expanding operation; and constantly limiting the application of the expanding force to a minor circumferential segment.

2,409,220
SUMP SELECTOR VALVE
Joseph F. Melichar and Wilton Margrave, Cleveland, Ohio, assignors to The Parker Appliance Company, Cleveland, Ohio, a corporation of Ohio
Application May 13, 1943, Serial No. 486,862
11 Claims. (Cl. 251—121)



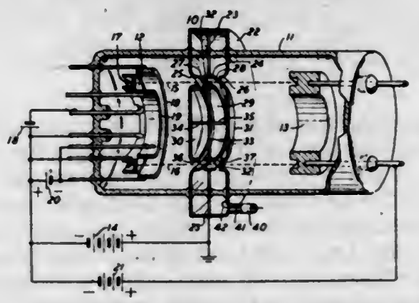
1. In a valve, the combination of a ring seat of resilient yieldable material and a valve member movable into and out of engagement with said ring seat for controlling passage of fluid therethrough, said seat including a first engageable thin bendable annular lip engageable by the valve member when moved against the ring seat and effective to provide an efficient line contact seal at light pressure contacts of the valve member with the seat ring, and a spaced second engageable annular yieldable bumper seat portion engageable by the valve member after a bending of the lip by valve member engagement and effective to provide an efficient seal at heavier pressure contacts of the valve member with the seat ring and to limit the amount of displacement by bending of the first engaged lip by said valve member.

2,409,221
PUDDLING MACHINE
William J. Miller, Swissvale, Pa., assignor to Miller Pottery Engineering Company, Swissvale, Pittsburgh, Pa., a corporation of Pennsylvania
Original application January 8, 1943, Serial No. 471,704. Divided and this application September 16, 1944, Serial No. 554,509
22 Claims. (Cl. 25—22)



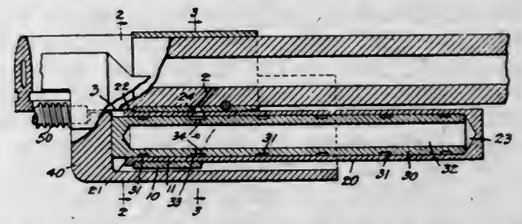
1. Dinnerware puddling machinery comprising, in combination, supporting means for carrying pottery molds in a closed path, a puddling implement for puddling clay thereon, an implement support, means for moving the implement support in a closed path to bring the implement into register with successive molds on the mold support, means for moving the puddling implement and molds toward one another to engage the clay during the interval of registration and means for moving one relative to the other to puddle the clay.

2,409,222
ELECTRON DISCHARGE DEVICE
Jack A. Morton, Upper Montclair, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application July 19, 1941, Serial No. 403,119
19 Claims. (Cl. 315—5)



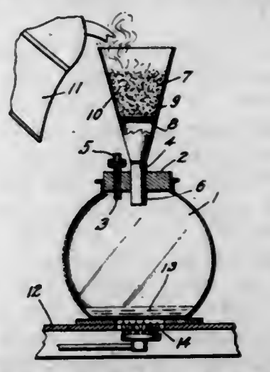
1. A high frequency system comprising an electron tube having a longitudinal axis along the general direction of which an electron stream is directed and along which within the tube are located in substantial axial alignment and axially spaced one from another, a cathode, at least one electron control electrode, and a system of high frequency output electrodes which are portions of an electrically resonant chamber and are arranged to impress a high frequency electric field upon a space symmetrically surrounding a portion of said axis, means including the said system of high frequency output electrodes for producing a high frequency electric field in the said space symmetrically surrounding the axis, means for maintaining a static magnetic field in at least a portion of the space occupied by the said high frequency electric field such that the lines of force of the static magnetic field are substantially parallel to the said axis and perpendicular to the electric lines of force of the high frequency field, means for projecting a stream of electrons into the space occupied jointly by the two said fields with a component of direction perpendicular to the lines of force of the static magnetic field, and means including the electron control electrode for varying the charge density of the electron stream before its entrance into the space occupied by the combined said fields.

2,409,223
SUMP SELECTOR VALVE
Arthur L. Parker, deceased, late of Shaker Heights, Ohio, by Helen M. Parker, executrix, Shaker Heights, Ohio, assignor to The Parker Appliance Company, Cleveland, Ohio, a corporation of Ohio
Continuation of application Serial No. 486,862, May 13, 1943. This application June 5, 1946, Serial No. 674,424
3 Claims. (Cl. 277—20)



1. An elongated valve casing having inlet openings at its ends and an outlet opening intermediately of its ends, a central flow chamber leading to said outlet opening and a valve chamber in each end for receiving fluid through the respective inlet openings, a ring seat between each valve chamber and the central flow chamber, a freely rolling ball in each valve chamber adapted to roll by gravity toward and from the respective seat, a wall traversing the flow chamber centrally between said ring seats, a spacer member swingably mounted in the central flow chamber and having ball engaging portions disposed for engaging between the balls so as to permit seating of one ball at a time and never both balls, and a baffle disposed centrally at each inlet opening in position for deflecting incoming fluid around the respective ball.

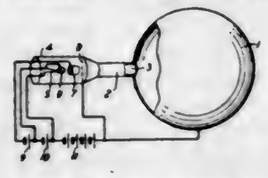
2,409,224
OSCILLATOR
Arthur L. Samuel, Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application October 23, 1941, Serial No. 416,176
6 Claims. (Cl. 315—5)



1. An oscillating system comprising a source of a stream of electrically charged particles, a resonating chamber for electromagnetic waves, means to effect an energy interaction between the particles of said stream and an electromagnetic field in said resonating chamber, means within said resonating chamber to define for said stream a substantially field-free drift space, said drift space being of such a length that the said particles normally traverse it in a transit time of a value substantially an integral number of cycles of the resonant frequency of the chamber plus one quarter cycle, and means to predetermine a mode of oscillation of said resonating chamber characterized by equal potentials at the two ends of said drift space throughout the entire cycle of said resonating chamber.

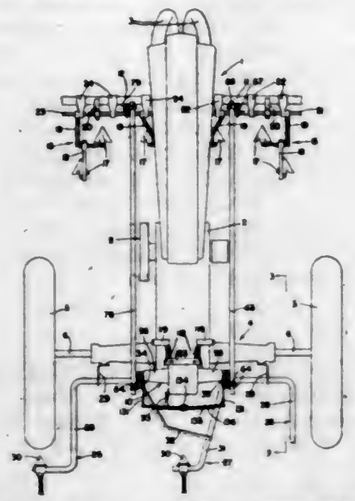
2,409,225
GAS SYSTEM FOR FIREARMS
Wilbur A. Schaich, Springfield, Mass.
Application September 5, 1944, Serial No. 552,784
1 Claim. (Cl. 42—3)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

In an automatic firearm having a barrel with a gas port therein and a reciprocating breech operating member, the improvement comprising a gas cylinder secured to the barrel in the vicinity of the barrel gas port, said gas cylinder defining a rearwardly opening, cylindrical chamber disposed parallel to the path of movement of said breech operating member, a cylindrical piston slidably and rotatably mounted within said cylinder chamber, said piston having a forwardly opening hollow portion, the rear end of said piston arranged to abut the breech operating member to impart rearward movement thereto, said cylinder having a gas passage therein communicating between the barrel gas port and the interior of said cylinder chamber, said piston having a reduced diameter annular groove on its periphery located in substantial alignment with said gas passage when said piston is in its forward position, said piston having at least one generally radial hole in said reduced diameter annular groove, communicating with the said hollow portion of said piston.



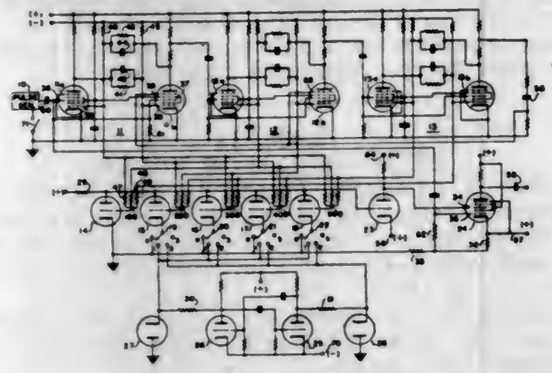
2,409,226
DEVICE FOR VACUUM FILTRATION
Peter Schlumbohm, New York, N. Y.
Application April 24, 1943, Serial No. 485,264
7 Claims. (Cl. 210—162)

1. A vacuum filtering device comprising a flask for filtrate, a filtering element, communicating



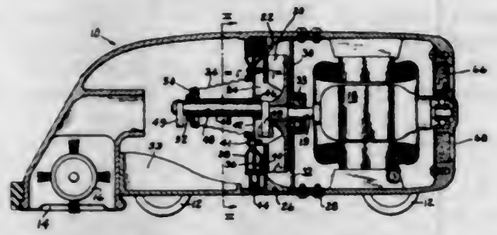
means leading from said filtering element to said filtrate flask, means for communicating said filtrate flask directly to the atmosphere, and means responsive to the pressure within said filtrate flask for closing said second communicating means.

2,409,227
ULTRA HIGH FREQUENCY ELECTRONIC DEVICE
William Shockley, Gillette, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application July 11, 1941, Serial No. 401,913
10 Claims. (Cl. 250—36)



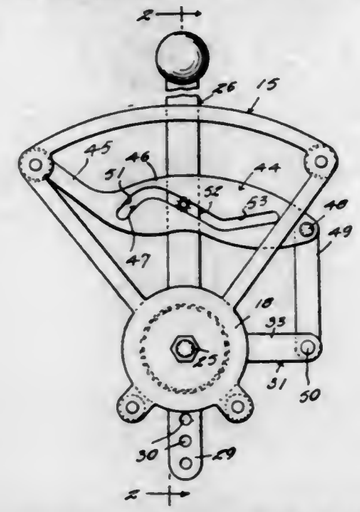
1. In combination, a resonant chamber having a conductive wall with a relatively small aperture therethrough, means for projecting a beam of electrons into the interior of the chamber through said aperture, means for initiating an electromagnetic field in rotation about an axis lying in the line of projection of said electron beam, and means for bringing the speed of the electrons at the point of entry into said chamber to a value at which said electromagnetic field is sustained by energy contributed to the field by the motion of electrons in said beam.

2,409,228
POWER LIFT
Walter H. Silver, Moline, Ill., assignor to Deere & Company, Moline, Ill., a corporation of Illinois
Application April 8, 1944, Serial No. 530,213
16 Claims. (Cl. 97—50)



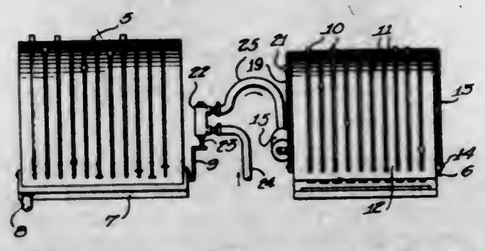
1. A cultivator comprising supporting means, separately movable right and left hand cultivator rigs carried by said supporting means, a center cultivator rig movably connected with the rear portion of said supporting means, a pair of separately movable parts carried by said supporting means and connected, respectively, with said right and left hand cultivator rigs, lifting mechanism connected with said parts for actuating the latter to raise said right and left hand cultivator rigs optionally simultaneously or separately, and mechanism connecting both of said parts with said rear cultivator rig whereby the latter is raised only when both of said right and left hand cultivator rigs are raised.

2,409,229
SELECTOR CIRCUIT
Carl Harrison Smith, Jr., Arlington, Va., and Milton L. Kuder, Washington, D. C.
Application June 13, 1945, Serial No. 599,287
7 Claims. (Cl. 177—380)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



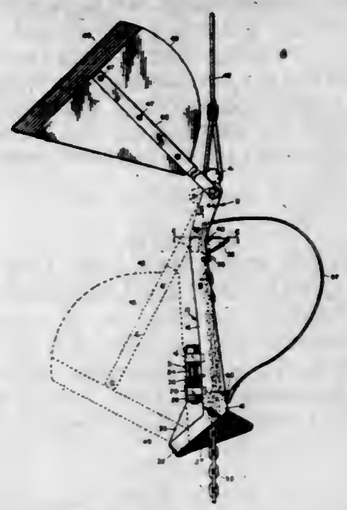
1. A means for producing a group of pulses wherein the number and relative time occurrence of the pulse signals in said group are selectively determined, comprising a means generating a time base which is comprised of a finite number of voltage pulses, each of which is predeterminately spaced in time, a plurality of vacuum tubes, means associating each of said tubes with said first named means in such a manner as to be successively rendered conducting thereby, separate means associated with each of said tubes and arranged to render any one or number of said tubes unresponsive to the action of said first named means, a coincidence tube, means connecting the output from said first named means to said coincidence tube, and means connecting said coincidence tube in common with said plurality of tubes in such a manner that the pulse output from said first named means will appear at the output of said coincidence tube only during the time when one of said plurality of tubes is conducting.

2,409,230
SUCTION CLEANING APPARATUS
Charles H. Taylor, Springfield, Mass., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application May 3, 1944, Serial No. 533,866
5 Claims. (Cl. 183—37)



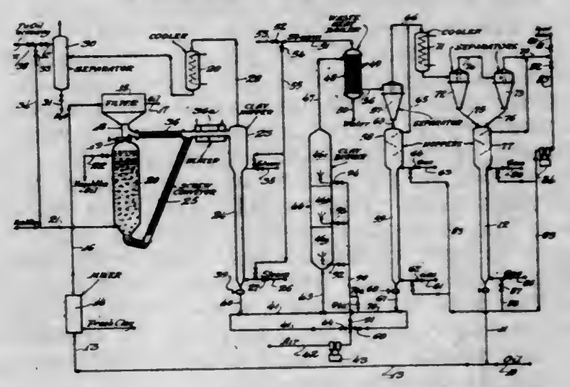
1. A suction cleaner comprising a casing, a fan motor unit disposed in said casing for moving air therethrough, a tubular filter movably mounted in the path of flow of air through said casing, means supporting said filter and driven by the shaft of said fan motor unit for imparting to said filter a gyratory movement about the axis of said shaft, said last-mentioned means including a gyratory element eccentrically connected to and driven by the shaft of the fan motor unit and on which said filter is movably mounted, and means for preventing rotation of said filter.

2,409,231
THROTTLE CONTROL
Philip M. Waite, Corry, Pa.
Application September 28, 1943, Serial No. 504,184
10 Claims. (Cl. 74—471)



1. A control device comprising a frame, a stationary pivot carried by said frame, a main lever rockable on said pivot, a secondary lever also rockable on said pivot, said secondary lever including a pair of angularly related arms, an elongated cam plate pivotally carried at one end thereof by said frame and provided with a cam track, a link pivotally connecting the opposite end of said cam plate to one arm of said secondary lever, and means carried by said main lever engaging in said cam track whereby rocking of said main lever will also rock said secondary lever in the same direction as the main lever in either direction of the movement of said main lever.

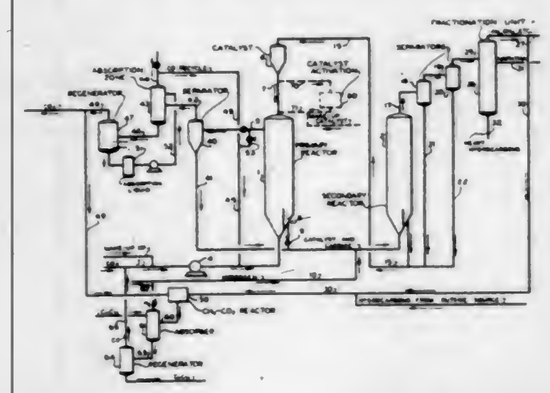
2,409,232
AUTOMATIC MARK CLEARING DEVICE
Edwin Francis Wesely, Chevy Chase, Md.
Application December 6, 1943, Serial No. 513,115
2 Claims. (Cl. 101—95)



1. A listing and marking machine particularly for laundries comprising a listing device adapted to print a list of laundry items and having an operating handle to actuate means to print the items which have been set up in the device, a numbering device adapted to print identifying numbers on the laundry listed in the listing device and having a member which when operated will clear the number set up in the numbering device, a fluid pressure system connected to both devices including a valve operated by the operating handle of the listing device and a piston and cylinder secured to the numbering device with the piston connected to the clearing member thereof, and means operative when the operating handle is actuated to actuate the valve and thereby cause the fluid pressure to move the piston and thereby operate the clearing member to clear the numbering device when the listing device prints the list of items.

2,409,233
SWEEP WIRE PASSING DEVICE
Kenneth H. Wilcoxon, Cabin John, Md.
Application June 1, 1943, Serial No. 489,269
7 Claims. (Cl. 102—15)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

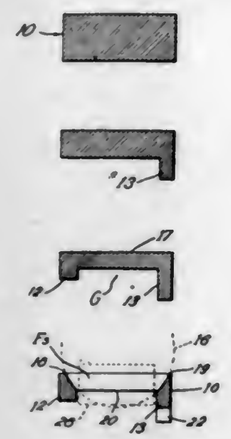
3. In equipment of the character described, a mooring cable including a mine cable and an anchor cable, a device including parts connected one to the mine cable and another to the anchor cable, means separably connecting said parts together in spaced zones to permit the passage of a sweep cable therebetween without interrupting the continuity of the mooring cable, said means including a latch releasably securing said parts together at one of said zones, a cam disposed in the path of travel of the sweep cable for releasing the latch, and a spring urging the latch toward its closed position.



2,409,234
REVIVIFYING ADSORPTIVE MATERIAL
Maurice H. Arveson, Flossmoor, Ill., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana
Application December 31, 1940, Serial No. 372,515
3 Claims. (Cl. 252—281)

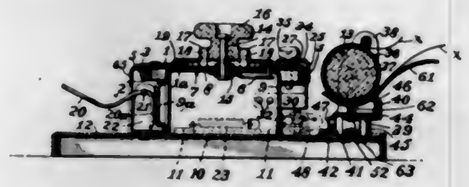
1. The process for the revivification of solid contacting material contaminated with adsorbed hydrocarbon matter from the decolorization of oils which comprises dispersing said solid contacting material in a stream of air, introducing said stream of air and solid contacting material into an up-flow burning zone, continuously settling out a portion of the solid contacting material from the stream continuously passing through the burning zone whereby the solid contacting material within the burning zone is maintained in a turbulent mass having a density of between

about 5 and about 30 pounds per cubic foot, maintaining uniform temperature throughout said burning zone sufficient to remove substantially all of the adsorbed hydrocarbon matter from said solid contacting material, introducing at vertically spaced points additional quantities of gases into the turbulent mass maintained within the burning zone continuously withdrawing revivified solid contacting material overhead from said burning zone, cooling the withdrawn stream of gases and revivified contacting material, recovering the revivified contacting material from the said gases, and accumulating the recovered solid contacting material in an aerated dense phase.



2,409,235
CONTINUOUS PROCESS FOR EFFECTING CATALYTIC REACTIONS
Harold V. Atwell, Beacon, N. Y., assignor, by mesne assignments, to The Texas Company, New York, N. Y., a corporation of Delaware
Application December 18, 1943, Serial No. 514,768
14 Claims. (Cl. 260—676)

1. A continuous cyclic process for catalytically forming normally liquid compounds from carbon and hydrogen by the action of a solid hydrogenating catalyst containing a carbide-forming metal which comprises passing a stream of said catalyst in finely divided form through a primary reaction in the substantial absence of added free hydrogen, subjecting said stream therein to contact with a volatile carbon compound under elevated temperature conditions such that metallic carbide is formed on said catalyst in substantial amount, passing said catalyst stream containing resulting metal carbide and while still at elevated temperature from the primary reaction zone to a secondary reaction zone, subjecting it in said secondary zone to contact with hydrogen under conditions such that metal carbide is decomposed, the liberated carbon reacting with hydrogen to form carbonaceous compounds mainly of higher molecular weight than methane, discharging said compounds, withdrawing catalyst of decreased carbide content from the secondary zone and passing it to said primary zone for increasing its carbide content.

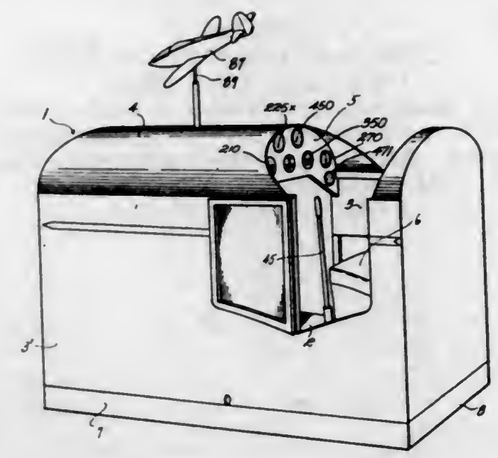


2,409,236
METHOD OF MAKING ROLLER CAGES
Oscar H. Banker, Evanston, Ill.
Continuation of application Serial No. 424,438, December 26, 1941, which is a division of application Serial No. 297,439, October 2, 1939. This application April 5, 1944, Serial No. 529,567
6 Claims. (Cl. 29—148.4)

1. The method of making a roller cage from a cylindrical ring, comprising the step of cutting within one cylindrical face and radial zone of said ring a groove having spaced-apart opposed faces disposed perpendicularly to the ring axis and for engaging the ends of a roller, and the further step of cutting in the opposite cylindrical

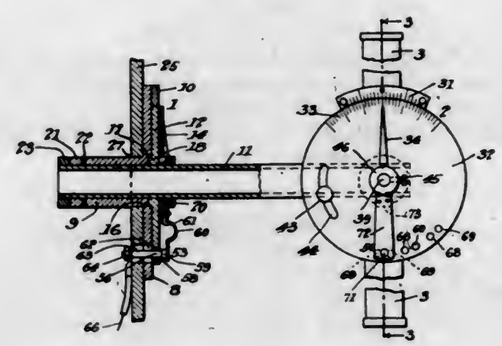
face and an adjacent radial zone of the ring a groove intersecting the first groove and having spaced-apart opposed faces directed axially of the ring and for engaging substantially diametrically opposite sections upon the cylindrical surface of said roller.

2,409,237
TOY TYPEWRITER
Joseph Le Roy Banks, Baltimore, Md., assignor to Joseph L. Schilling, John C. Doig, and Irving G. Rubin, doing business as J. L. Schilling Co.
Substituted for abandoned application Serial No. 34,085, July 31, 1935. This application May 2, 1945, Serial No. 591,443
9 Claims. (Cl. 197—47)



9. A typewriter comprising a type wheel, a carrier therefor composed of sheet metal having a top to which the type wheel is journaled, said carrier being of substantially rectangular form in horizontal cross section and provided at its front wall with a pressed out abutment or cam portion, and a finger lever pivotally supported and having a tail portion extending downwardly along said abutment.

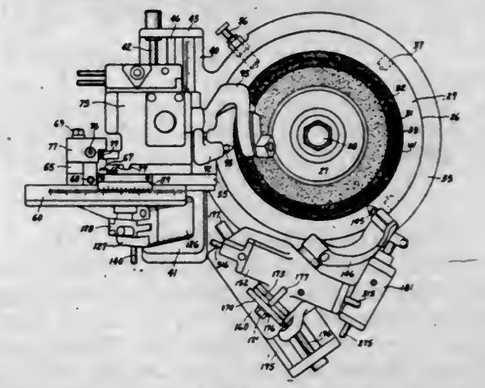
2,409,238
AIRPLANE FLIGHT TRAINER
Theodore C. Barber, Seattle, Wash.
Application February 19, 1943, Serial No. 476,403
11 Claims. (Cl. 35—12)



1. A stationary airplane flight trainer comprising conventional type hand and foot controls, and a movable ball bank indicator element simulating parts of an airplane; separate operating connections between the ball bank indicator element and the foot and hand controls whereby the indicator element will be moved to various positions indicating unstable flight by functional

movements of either the foot controls or the hand control, said connections being interconnected in a manner whereby the moving influence on the

indicator element, as produced individually by either one of the controls, may be nullified by movement of the other.



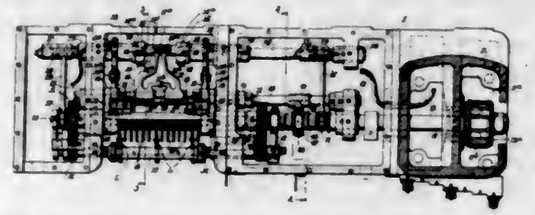
2,409,239
BOMB SIGHT AND BOMB-RELEASING DEVICE
Arthur E. Barili, Los Angeles, Calif.
Application May 22, 1942, Serial No. 444,047
6 Claims. (Cl. 89—1.5)

1. A bomb sight as disclosed, comprising a sight, a ground track indicator actuated by said sight for indicating the position of the plane with relation to its ground track leading to a target, a bomb-trajectory indicator actuated by said sight for indicating the position of the plane with relation to its bomb releasing position, a bomb-releasing circuit including two switches, and means actuated by said indicators, respectively, for closing said switches when both of said indicators indicate zero.

6. A bomb sight as disclosed comprising a sight, a ground-track indicator actuated by said sight for indicating the position of the plane with relation to its ground track leading to a target, a bomb-trajectory indicator actuated by said sight for indicating the position of the plane with relation to its bomb-releasing position, bomb-holding means, an electrical releasing circuit for said bomb-holding means including two electric eyes, and means for interrupting the light beams of both of said electric eyes for closing said bomb-releasing circuit, when the plane reaches its bombing position and both said ground-track indicator and said bomb-trajectory indicate zero.

2,409,240
DRESSING MECHANISM
Paul F. Barker, Herbert G. Hartman, Clarence T. Galloway, and Bernard M. Kunes, Rochester, N. Y., assignors to Gleason Works, Rochester, N. Y., a corporation of New York
Application July 28, 1943, Serial No. 496,452
30 Claims. (Cl. 125—11)

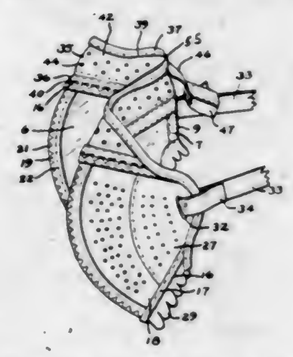
2. The method of dressing a rotary annular grinding wheel which comprises rotating the wheel on its axis while imparting reciprocating movements to an inside and an outside-dressing tool, the forward movement of each tool being at a relatively fast rate and the return movement of each tool being at a relatively slow rate, and holding both tools in engagement with the respective sides of the wheel during their forward strokes and the inside-dressing tool during its return stroke, but withdrawing the outside-dressing tool from operative position during its return stroke, so that the outside surface of the tool is dressed only at a fast rate while the inside surface is dressed successively at fast and slow rates.



2,409,241
METHOD OF PRODUCING SUBSTANTIALLY PURE d-TUBOCURARINE CHLORIDE
Joseph T. Bashour, New York, N. Y., assignor to E. R. Squibb & Sons, New York, N. Y., a corporation of New York
No Drawing. Application May 17, 1944, Serial No. 536,031
11 Claims. (Cl. 260—236)

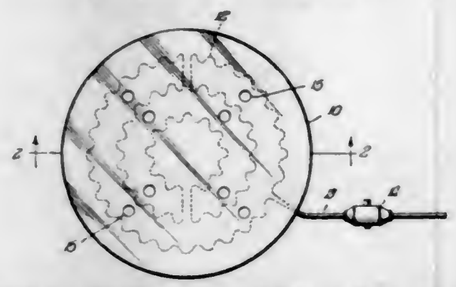
8. The method of producing substantially-pure d-tubocurarine chloride which essentially comprises treating with picric acid the quaternary-base fraction of a crude curare of the curarine type, hydrolyzing the resulting picrate in an emulsion of hydrochloric acid and a water-immiscible organic solvent for picric acid, separating the precipitated d-tubocurarine chloride from the aqueous phase, treating the mother liquor with an acid-adsorbing resin, drying the treated mother liquor, and crystallizing the residue with a minimum quantity of hydrochloric acid.

2,409,242
WORK FEEDING MECHANISM FOR SEWING MACHINES
Rudolph Becker, North Plainfield, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey
Application May 22, 1945, Serial No. 595,099
15 Claims. (Cl. 112—215)



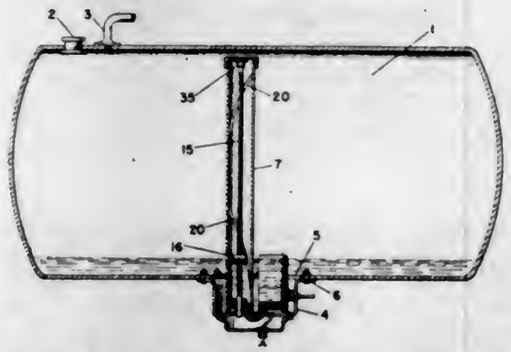
1. A work-feeding mechanism for sewing machines comprising a feed-frame, a feed-dog carried by said feed-frame, a rotary shaft, two feed-drive elements carried by said shaft, two laterally spaced and coaxially journaled feed-rockers, a

driving connection between each of said feed-drive elements and a respective one of said feed-rockers, and a driving connection between each



of said feed-rockers and said feed-frame for imparting work-advancing movements to said feed-dog.

2,409,243
COLLAPSIBLE TYPE EYESHIELD
Daniel P. Bernheim, Southbridge, and Myer M. Glasberg, Revere, Mass., assignors to American Optical Company, Southbridge, Mass., a voluntary association of Massachusetts
Application August 3, 1942, Serial No. 453,352
3 Claims. (Cl. 2—14)

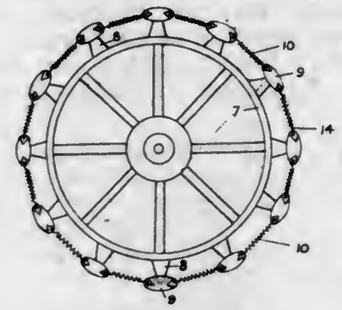


1. An eye protection device of the character described comprising a main shield portion of transparent plastic material embodying two sections hingedly connected with each other and so shaped as to form a nasal recess in the lower edge thereof and having opposed side edges curving outwardly, said main shield portion constituting the entire front area portion of the eye protection device, edge binding means of flexible means secured throughout the entire contour edge of said main shield portion by threadlike stitchings, side shield portions formed with forwardly curving edges of a shape similar to the shape of the side edges of the main shield portion, said side shield portions each having a flexible binding throughout the contour edge thereof with the portion of the binding throughout the forwardly curving edges being hingedly connected to the binding of said side curved edges of the main shield portion, a top shield member of flexible material having a flexible binding throughout its contour edge with the forward portions thereof secured to the binding on the upper edge of the main shield portion and continuing outwardly and secured to the binding throughout the major portion of the upper edge of the side shield portions, said top shield member having a rear edge portion throughout the length thereof shaped substantially to a controlled face engaging edge shape, the opposed ends of the hinged edge portion of the top shield member tapering toward and blending with the rear contour edge adjacent the ends thereof, said top shield member thereby forming closure means extending between the top edges of the main and side shield portions and the face engaging edge thereof, and a strap-like member suspended from the top shield member having a cushion-like member carried by its free end adapted to lie between the connection hinge of the sections of the main shield portion and the bridge of the nose so as to space the main shield portion from the face.

2,409,244
GLASS ELECTRIC HOT PLATE
John Bilan, Flint, Mich.
Original application November 5, 1943, Serial No. 509,063, now Patent No. 2,391,382, December 25, 1945. Divided and this application December 7, 1944, Serial No. 567,009
1 Claim. (Cl. 219—37)

A burner comprising a glass plate, an electric wire coil of high resistance imbedded therein, said wire coil including a plurality of strands concentrically arranged, and a plurality of annular ridges concentrically arranged and extending from one face of said plate, said plate being provided with a plurality of spaced openings transversely of the body of said plate, said openings being positioned within the several concentric areas in said plate defined by said strands.

2,409,245
FUEL SYSTEM
John B. Black, Middle River, Md., assignor to The Glenn L. Martin Company, Middle River, Md., a corporation of Maryland
Application August 12, 1944, Serial No. 549,270
8 Claims. (Cl. 222—66)



2. A plurality of liquid storage tanks each having a sump formed therein, a pump for each of said tanks mounted in said sump having the inlet thereof in the sump, below the bottom of said tanks, means in said sump responsive to the level of the liquid in a tank to stop the pump when the liquid level falls into said sump, and means actuated upon the stoppage of said pump to energize the pump of the next full tank.

2,409,246
TRACTOR WHEEL ATTACHMENT
Charles Alfred Breeze, Aberdeen, Scotland
Application December 10, 1943, Serial No. 513,681
In Great Britain December 12, 1942
11 Claims. (Cl. 301—39)

1. An attachment for encircling circumferentially spaced projections on the rim of a tractor

wheel, comprising a plurality of shoes, each shorter in length than the distance between said projections so as to detachably fit over one of said

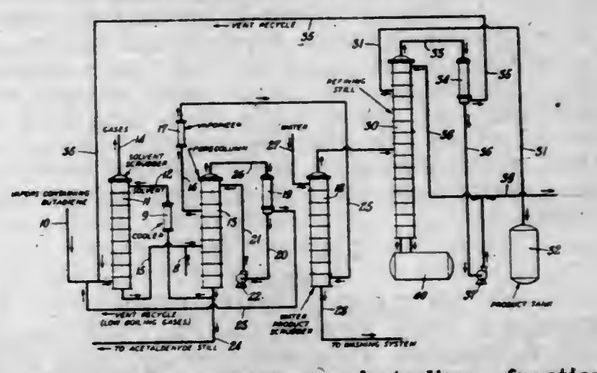
projections on the tractor wheel rim and provide a bearing surface, and elastically extensible and contractible means flexibly connecting said shoes together in band formation.

2,409,247
POLYMERIZATION PROCESS
John W. Brooks, Wenonah, and Arlie A. O'Kelly, Woodbury, N. J., and Robert H. Work, Philadelphia, Pa., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
No Drawing. Application December 30, 1943, Serial No. 516,243
7 Claims. (Cl. 260—683.15)

1. The process of polymerizing olefinic hydrocarbons, which comprises establishing a reaction zone; reacting outside said reaction zone, anhydrous hydrofluoric acid with phosphorus pentoxide, to yield a reaction mixture; and contacting olefinic hydrocarbons with said reaction mixture, in said reaction zone under polymerizing conditions including temperatures varying between about 0° and about 60° C.

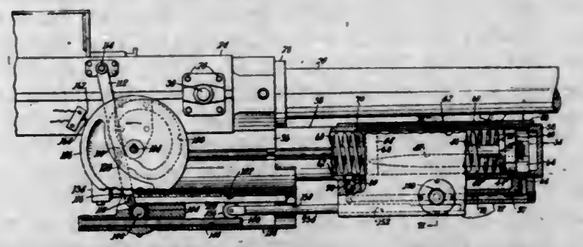
2,409,248
POLYMERIZATION
John W. Brooks, Wenonah, and Arlie A. O'Kelly, Woodbury, N. J., and Robert H. Work, Philadelphia, Pa., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
No Drawing. Application June 14, 1944, Serial No. 540,316
12 Claims. (Cl. 260—683.15)

7. The process of polymerizing olefinic hydrocarbons, which comprises contacting said olefinic hydrocarbons with polymerization catalytic material selected from the group consisting of monofluophosphoric acid and difluophosphoric acid, in a reaction zone, at temperatures varying between about 32° F. and about 140° F., and at a pressure sufficient to maintain the olefinic hydrocarbons in liquid phase, said catalytic material being prepared outside said reaction zone.



2,409,249
INSULATING COVERING AND METHOD OF MAKING THE SAME
George B. Brown, Martinsville, N. J., assignor to Johns-Manville Corporation, New York, N. Y., a corporation of New York
Application May 22, 1941, Serial No. 394,592
16 Claims. (Cl. 154—28)

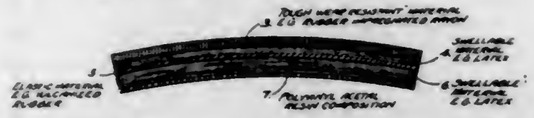
1. An insulating covering comprising a plurality of plies of corrugated paper, with each ply including corrugations of different widths, the corrugations of each ply extending in substantially the same direction and oblique to the longi-



tudinal dimension of the covering but in predominantly non-nesting relationship with the corrugations of adjacent plies.

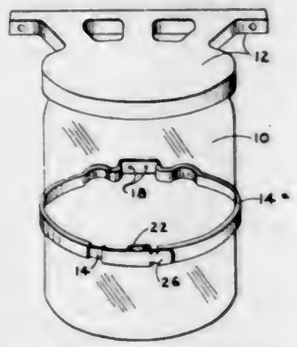
2,409,250
SEPARATION OF BUTADIENE
Edward J. Cannon, Dunbar, and Herbert A. Stuewe, South Charleston, W. Va., assignors to Carbide and Carbon Chemicals Corporation, a corporation of New York
Application November 7, 1944, Serial No. 562,344
6 Claims. (Cl. 260—681.5)

1. Process for isolating a butadiene fraction from a gas mixture containing butadiene and hydrocarbons of greater volatility than butadiene, which comprises scrubbing such mixture with a solvent to obtain a solution containing butadiene and some of the more volatile hydrocarbons, and a scrubbed gas substantially free of butadiene, distilling the solution and removing a butadiene fraction at a point below the head of the column and above the feed point, condensing part of the vapors from the top of the column and returning the condensate as reflux to the column, and returning the uncondensed vapors to the scrubbing operation.



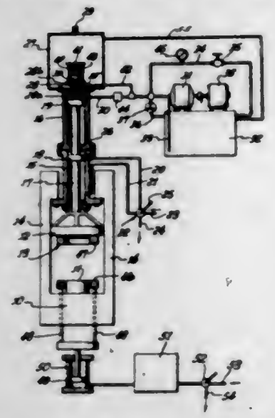
2,409,251
AUTOMATIC FIREARM
Joseph C. Cantley, Beverly, and Arthur F. Pym, deceased, late of Topsfield, Mass., by George H. Heys, administrator, Swampscott, Mass., assignors to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application May 14, 1945, Serial No. 593,640
8 Claims. (Cl. 89—3)

1. In an automatic gun, a unit for resisting recoil and counter-recoil movement of parts of the gun, means for varying the amount of resistance



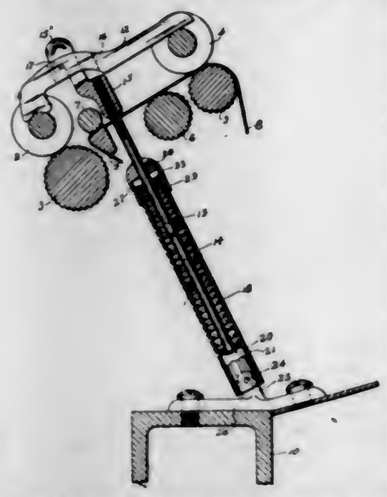
offered by said unit, a movable control member having a substantially uniform velocity-curve, a member movable in response to recoil and counter-recoil movement of one or more of said parts of the gun, and mechanism operative in response to differences in speed between said members for controlling said means.

2,409,252
CONTAINER
Thomas S. Carswell, Longmeadow, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
Application November 7, 1941, Serial No. 418,231
2 Claims. (Cl. 154—43.5)



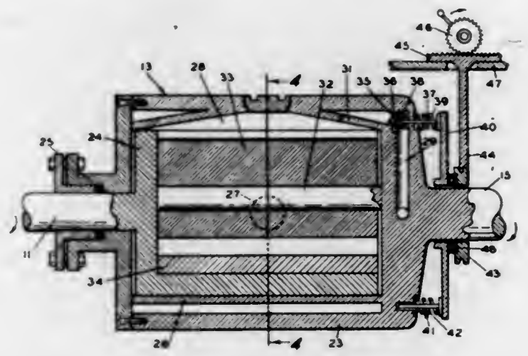
1. In a gasoline container characterized by the ability to self-seal when in contact with gasoline after the passage of a bullet therethrough, a wall having a layer of rubber-impregnated rayon, a layer of latex, a layer of vulcanized rubber, another layer of latex and an inner layer comprising a plasticized sheet of polyvinyl formal resin containing by weight from about 5 to 15% hydroxyl groups calculated as polyvinyl alcohol and from about 0 to 15% acetate groups calculated as polyvinyl acetate and the rest substantially acetal.

2,409,253
CLAMPING STRUCTURE
Stephen J. Chris, Pacific Palisades, Calif., assignor to Douglas Aircraft Company, Inc., Santa Monica, Calif.
Application February 28, 1944, Serial No. 524,325
3 Claims. (Cl. 248—316)



1. A securing device, comprising: a flexible band of inextensible material bent substantially to a hoop shape; means carried by the opposite ends of said band cooperative with each other for drawing and securing the same together to impart a hoop compression to an article circumscribed by the band, the medial portion of the band being formed with a plurality of oppositely directed U-shaped portions, the bow of at least one of said portions being substantially flat and adapted to be clamped in facewise engagement against a flat supporting surface, the band between said U-shaped portions and the ends thereof being smoothly curved and free of any transverse deformation, the material of said band being sufficiently flexible to permit said U-shaped portions to be elongated when the ends of the bands are drawn together whereby the effective diameter of said device can be increased so that articles of varying diameters can be circumscribed and securely clamped by the device.

2,409,254
APPARATUS FOR DIE-FORMING SHEET MATERIAL
John E. Conzelman, Jr., San Diego, Calif., assignor to Solar Aircraft Company, San Diego, Calif., a corporation of California
Application June 2, 1944, Serial No. 538,431
2 Claims. (Cl. 113—45)



1. Apparatus of the type described comprising: a bed member for supporting a first die; a platen for supporting a second complementary die; pressure liquid actuating means for moving said platen toward said bed through a stroke sufficient to fully form a workpiece between said dies, said means including a pump of high pressure but low volume characteristics; and compressed air actuating means for reciprocating said platen with relatively small force and relatively great speed toward and away from said bed through a stroke sufficient to fully form a workpiece between said dies; said pressure liquid actuating means including a piston and cylinder, and means for venting said cylinder during actuation of said platen by said compressed air means.

2,409,255
WEIGHTING APPARATUS FOR TEXTILE DRAFTING MECHANISMS
Louis M. Cotchett, Hingham, Mass., assignor to Saco-Lowell Shops, Boston, Mass., a corporation of Maine
Application January 18, 1945, Serial No. 573,359
4 Claims. (Cl. 19—135)

1. A weighting apparatus for one or more of the top rolls of a textile drawing mechanism, comprising a saddle having a vertical slot therein, a pin extending transversely across said slot, a spring loaded stirrup rod, and a connector releasably hooked over said pin, said rod being screw-threaded into said connector with its upper end slotted to take a screw-driver, and said end being accessible through said slot, the rotation of said rod serving to adjust the pressure applied to said saddle.

2,409,256
HYDRAULIC COUPLING
Wilbur J. Crites, deceased, late of Bartlesville, Okla., by First National Bank in Bartlesville, executor, Bartlesville, Okla., said Crites assignor to Phillips Petroleum Company, a corporation of Delaware
Original application March 6, 1942, Serial No. 433,676. Divided and this application February 1, 1944, Serial No. 520,898
1 Claim. (Cl. 192—58)

A fluid coupling for transmitting energy from a rotatable driving shaft to a rotatable driven shaft comprising a housing adapted to be connected to one of the above mentioned shafts; a positive displacement pump including a pump chamber formed within the housing, a pump rotor rotatably disposed in the chamber and adapted to be connected to the other above mentioned shaft, a fluid inlet and a fluid outlet communicating with the chamber; a conduit establishing communication between the inlet and the outlet; and valve means for controlling the flow of fluid through the conduit, comprising a valve seat in the conduit, a valve stem, a valve head slidable on the stem to seat on the valve seat, yieldable resilient means urging the stem away from the seat, an annular plate secured to the stem and disposed around the adjacent one of the shafts, and means slidable and rotatable relative to the last mentioned shaft to adjust the stem toward the seat by overcoming the force of the yieldable means.

2,409,257
ACID FADING INHIBITION
Cyril M. Croft and Thomas S. Waller, Cumberland, Md., assignors to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application January 9, 1943, Serial No. 471,880
7 Claims. (Cl. 8—61)

1. Process for improving the fastness of colorations on dyed organic derivative of cellulose textile materials to acid fading, which comprises impregnating said colored organic derivative of cellulose textile material with an aqueous solution of triethanolamine containing an alcohol having at least a solvent or swelling action on said organic derivative of cellulose material without effecting any substantial change in the serimetric characteristics of said textile material.

2,409,258
ASPHALT ADHESIVE
Lewis Davis, Worcester, and Armand J. Gauthier, Brookfield, Mass., assignors to McLaurin-Jones Co., Brookfield, Mass., a corporation of Massachusetts
No Drawing. Application August 24, 1942, Serial No. 455,936
3 Claims. (Cl. 106—277)

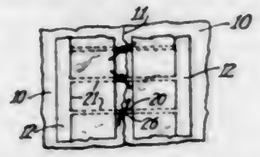
1. An adhesive consisting essentially of a mixture of the following constituents:

	Parts
Asphalt emulsion	20
Burgundy pitch	3 to 6

in which the asphalt emulsion has a solid content of approximately 50% and said solids having a softening point of between 140° F. and 180° F. and the Burgundy pitch is dispersed in several times its own weight of water.

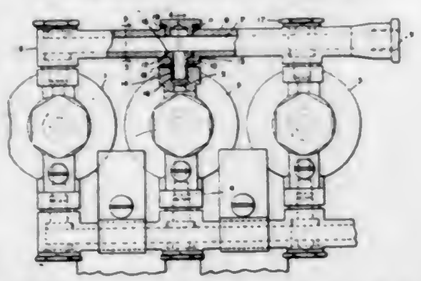
2,409,259
PREPARATION OF CONJUGATED DIENES
Thomas F. Doumani, Wilmington, and Roland Deery, Long Beach, Calif., now by judicial change of name to Roland Frank Deering, assignors to Union Oil Company of California, Los Angeles, Calif., a corporation of California
No Drawing. Application July 13, 1942, Serial No. 450,798
5 Claims. (Cl. 260—666)

1. A thermal process for producing conjugated dienes boiling below about 43° C., in which petroleum hydrocarbon fractions are cracked at temperatures of about 650° C., to 1100° C. and partial pressures of at least atmospheric, whereby both the desired dienes and their dimers are produced; the product is separated into two fractions, the first one boiling below about 65° C. and the second one boiling above about 65° C.; and the second fraction is subjected to a temperature of 600° C. to 1000° C. at subatmospheric pressures with a contact time of about 0.01 to 5 seconds, thereafter quenching the reaction by cooling the reaction product to a temperature below about 300° C. within about 0.5 second.



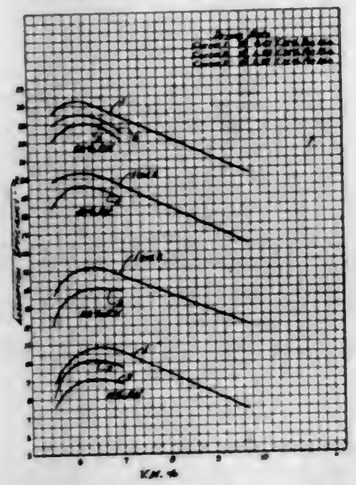
2,409,260
BUTANE ISOMERIZATION
Edmond L. d'Ouville and Bernard L. Evering, Chicago, Ill., assignors to Standard Oil Company, Chicago, Ill., a corporation of Indiana
Application June 24, 1943, Serial No. 492,040
13 Claims. (Cl. 260—683.5)

1. The method of producing isobutane which method comprises reacting a saturated hydrocarbon with aluminum chloride in the presence of hydrogen chloride under conditions for producing a liquid aluminum chloride hydrocarbon com-



plex having a hydrocarbon content within the range of 16% to 40% by weight based on total complex, continuously contacting a charging stock consisting chiefly of normal butane and substantially free from olefins with said complex in the presence of a hydrogen halide activator under conversion conditions of temperature, pressure and space velocity for effecting isomerization, continuously separating hydrocarbon products from said complex at substantially conversion temperature and under a pressure sufficient to maintain at least a part of said product in a liquid phase, and adding make-up aluminum chloride to said complex employed in the contacting step at such a rate as to maintain the hydrocarbon content of the complex within the range of 16% to 40% by weight.

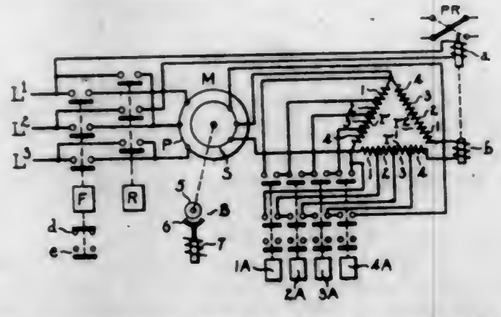
2,409,261
WOUND CLOSING DEVICE
Raymond Dow, Flushing, N. Y.
Application February 15, 1944, Serial No. 522,427
3 Claims. (Cl. 128—335)



1. In a wound closing device, in combination, an adhesive strip member adapted to be cut into individual portions each for adhesion to the skin in flanking relation to a wound, a continuous filament extending lengthwise of the strip and being arranged at spaced points to present laterally offset double strand extensions presenting elongated portions beyond the edge of said strip for direct coupling to a like strand on a companion strip, each of said extensions being an integral subdivision of the filament, means associated with said strip for holding the portions of the filament between said extension elongations to the strip to provide for an even lateral pull at all points along the length of the strip to close the wound when the strips are drawn toward each other to close the wound and permit intertwisting of said extensions to hold the wound closed.

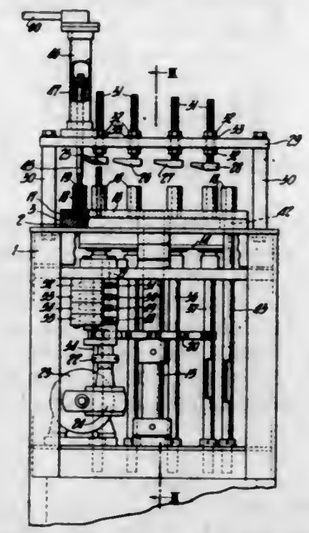
2,409,262
MANIFOLD ASSEMBLY
Andrew J. Eldred, Grosse Pointe Farms, Mich., assignor to Autopulse Corporation, Detroit, Mich., a corporation of Michigan
Application October 18, 1943, Serial No. 506,785
3 Claims. (Cl. 285—210)

1. A manifold assembly for attachment to a plurality of pump elements each of which has a port which comprises a hollow body having a longitudinal passage and transverse holes positioned for axial alignment with the ports, securing bolts extending through the holes and having threaded shanks outwardly of said body for threaded engagement with the walls of the ports, said bolts being located at the same side of the longitudinal passage as the holes and being hollow to place the ports in communication with the longitudinal passage, said hollow body also having other transverse holes for the insertion therethrough of said securing bolts, and cap screws for closing the last mentioned holes.



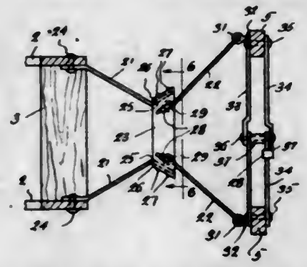
2,409,263
DESICCANT
Frederick J. Ewing, Pasadena, and Roger A. Lovett, East Los Angeles, Calif., assignors to Filtrol Corporation, Los Angeles, Calif., a corporation of Delaware
Application April 13, 1943, Serial No. 482,926
3 Claims. (Cl. 252—269)

1. A desiccant consisting essentially of a native montmorillonite acid activatable sub-bentonite clay having a V. M. of about 5.5 to 7%.



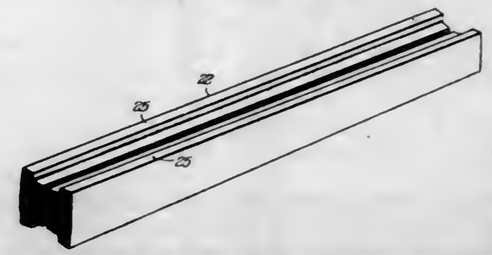
2. The method of producing a desiccant from native montmorillonite acid activatable subbentonite clay which comprises reducing the V. M. of said clay to a V. M. of about 5.5 to 7% by heating to a temperature insufficient to modify the crystal structure of said clay, the reduction of V. M. being effected at an average rate no greater than about 1% V. M. per minute.

2,409,264
MOTOR CONTROLLER
Cyril P. Feldhausen, Wauwatosa, Wis., assignor to Cutler-Hammer, Inc., Milwaukee, Wis., a corporation of Delaware
Application August 17, 1944, Serial No. 549,855
16 Claims. (Cl. 172—179)



1. In a controller for an electric motor, in combination, resistors for the motor circuit, electroresponsive switches for short-circuiting said resistors, control means to utilize said switches for speed control of the motor, and means for establishing starting connections for the motor and comprising means which always preparatory to motor starting renders ineffective said speed control means and independently thereof energizes certain of said switches for increased motor torque in starting.

2,409,265
CLASSIFIER
George Donald Fenton, Worcester, Mass., assignor to The American Steel and Wire Company of New Jersey, a corporation of New Jersey
Application May 4, 1944, Serial No. 534,144
6 Claims. (Cl. 209—82)

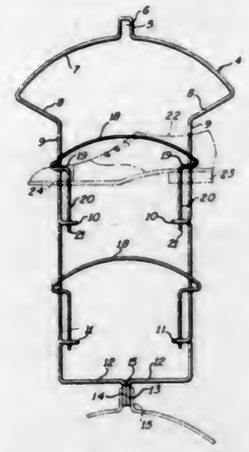


1. A coil spring classifier including a substantially horizontal, smooth, flat metal surface having a series of flush metal trap doors, a plurality of upstanding spring embracements mounted to repetitiously travel over said surface in line with said series to slide thereover the springs upright when loaded therewith in advance of the series, means for causing said embracements to intermittently travel with stops while in registration with said trap doors, a top-spring-end contactor over each trap door above the embracement tops at differing heights, and means for momentarily controlling any of said trap doors and in response to whether the contactor thereover is contacted by a top-spring-end, the classifier including a top-spring-end depressor registered above an embracement-stopping position in advance of said series and means for operating said depressor during said stops.

2,409,266
LADDER
Victor M. Fowler, Spokane, Wash.
Application January 9, 1945, Serial No. 572,039
1 Claim. (Cl. 228—33)

A spreader for a step ladder equipped with legs mounted for swinging movement to retracted and extended positions, said spreader comprising front and rear bars and a transverse bridge, said bridge having depending flanges at its opposite ends diverging rearwardly, said front bars converging rearwardly and having rear end portions bent to provide rearwardly diverging portions secured flat against inner side faces of said flanges, forward end portions of said front arms being bent to extend parallel to each other and adapted to be pivoted to a ladder, eye bolts depending from said bridge, said rear bars having eyes at their front ends loosely engaged through eyes of the eye bolts, rear ends of said rear bars being also formed with eyes and eye bolts loosely engaged through the eyes at rear ends of the rear bars for loosely connecting the rear bars with legs of the ladder.

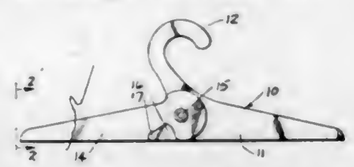
2,409,267
BEARING STAVE AND METHOD OF MAKING SAME
Thomas L. Gatke, Oak Park, Ill.
Application January 18, 1943, Serial No. 472,747
7 Claims. (Cl. 18—47.5)



1. The method of making molded composition bearing staves of the type having unsealed bearing faces in which layers of treated fabric are arranged in edgewise relation to the bearing face, which consists in molding two of the staves in a single strip-like blank in a press, with the pressure applied to the blank in a direction perpendicular to the layers, and with the greatest pressure localized in the portions of the blank which ultimately become the bearing faces of the staves whereby to increase the density of the composition in those portions and cause the layers to fan out away from such portions, and thereafter cutting the blank longitudinally between its side edges whereby to produce two staves from the one blank having molded and consequently sealed side edges and backs.

3. The method of making molded composition bearing staves of the type having unsealed bearing faces in which layers of treated fabric are arranged in edgewise relation to the bearing face, which consists in first molding under pressure a laminated fabric composition strip of generally rectangular cross section, which strip is approximately twice as wide as one of the staves is thick and has side edges which are of the same arcuate curvature as the backs of the staves, and which strip is provided on its upper and lower surfaces with relatively wide and shallow grooves spaced from the side edges by ledges which are normal to the curvature of the side edges, and thereafter cutting the strip longitudinally midway between its curved side edges, whereby to produce from the one strip two unbored but otherwise finished edge grain bearing staves having arcuately molded backs and radially molded sides, which backs and sides are sealed as distinguished from unsealed surfaces.

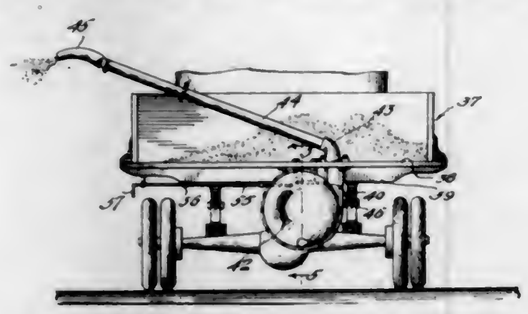
2,409,268
SHOE RACK
Stephen Gerlich, Chicago, Ill.
Application October 5, 1945, Serial No. 620,415
5 Claims. (Cl. 211—35)



3. A shoe rack comprising, a main support element provided with a head portion having a fas-

tening and locating U shaped portion and two leg portions provided with integrally formed transverse pivotal loop portions oppositely disposed and terminating in an interconnecting portion adapted to locate and retain the fastening and locating U shaped portion of a second shoe rack in depending co-extensive relationship, the said interconnecting portions being of four sided formation and provided with a depressed seating

portion at the upper and inner corner thereof, and at least one auxiliary support element articulately secured to the said main support element having limited articulate movement within an ambit of substantially 45° and arranged to confine a shoe in the apices of the assemblage, the said auxiliary support element including a head portion, side leg portions emanating from the said head portion, and eye portions secured to the said transverse loop portions.

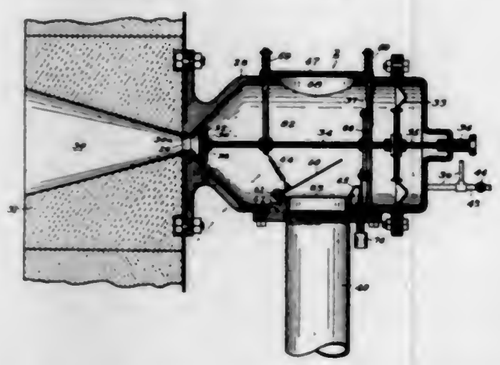


2,409,269
COLLAPSIBLE GARMENT HANGER
William Gersohn, Yonkers, N. Y.
Application March 12, 1945, Serial No. 582,223
9 Claims. (Cl. 223—89)

9. In a garment hanger having a stationary section, a shoulder piece pivotally connected with said stationary section to swing upwards and downwards, and interengaged limiting elements on said stationary section and on said shoulder piece supporting said shoulder piece in a horizontal position and resiliently urged to separate when said shoulder piece is moved upwards, whereupon said shoulder piece is free to be collapsed downwards.

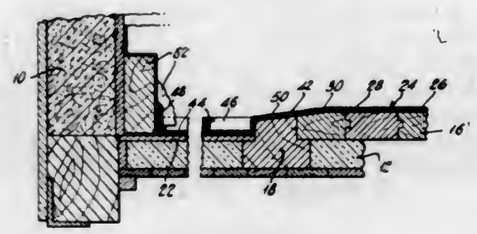
2,409,270
HANDLING GRANULAR MATERIALS
Milton O. Giessner, Salina, Kans.
Application May 31, 1945, Serial No. 596,888
2 Claims. (Cl. 214—83)

1. The combination with a self-propelled vehicle adapted to haul granular material comprising a wheel supported chassis, an engine carried by said chassis, a power takeoff carried by the engine, and a body mounted on said chassis for containing granular material during its transportation, said body having a discharge opening in its bottom to the rear of the drive axle of the vehicle, of means carried by said vehicle body for discharging the granular material therefrom comprising a blower, a chute supported by the vehicle body in alignment with the discharge opening for directing granular material from the body into the blower, a fan in the blower mounted for rotation about an axis which lies parallel with the longitudinal axis of the vehicle below the vehicle



body, means connecting the fan with the power takeoff, an elevator swivelly connected to the discharge end of the blower for delivering the granular material to a predetermined point above the level of the vehicle body, and a slide valve disposed at the intake end of the chute for varying the width of the chute opening and the volume of granular material admitted to the blower.

2,409,271
PROCESS FOR CLEANING ALUMINUM
Natacha Goldowski, Chicago, Ill., assignor to Welding Research, Inc., Chicago, Ill., a corporation of Illinois
No Drawing. Application March 22, 1943, Serial No. 480,087
2 Claims. (Cl. 148—6)



1. A method of cleaning aluminum to prepare the same for welding, which consists in preparing an aqueous solution essentially consisting of approximately twenty per cent sodium sulphate and approximately ten per cent nitric acid, immersing the aluminum in said aqueous solution whereby sodium bisulphate is generated in the presence of nitric acid to effect the desired chemical action on the aluminum for cleaning the same, and then removing said cleaned aluminum from the solution.

2,409,272
INDUSTRIAL FURNACE AND FIRING APPARATUS
James M. Guthrie, Allison Park, Pa., assignor to Frederick S. Bloom, Pittsburgh, Pa.
Application December 2, 1942, Serial No. 467,586
4 Claims. (Cl. 158—7)

1. A pre-mix firing system for a furnace installation including a combustion chamber, a burner, and means for supplying a mixture of air and fuel to said burner, the body of said burner having an inlet for said mixture and an outlet for the passage of the mixture into said combustion chamber, a valve arranged in the burner body to regulate the effective area of said outlet, a pneumatic device, a member connecting said pneumatic device to said valve and being movable to adjust the position of said valve in response to variations in the differential of two pressures acting in opposition on said member, one pressure being the pressure of said mixture, with the effect that the velocity of the mixture streaming into said combustion chamber is normally held at backfire-preventing value, said outlet being disposed adjacent to one end of the burner body and said inlet being disposed between said outlet and said pneumatic device, and a backfire trap disposed across the mouth of said inlet in the line of flow between the inlet and the outlet, said backfire trap being movable into closed position on said inlet under the effect of gaseous pressure acting in reverse direction to the normal line of mixture flow between said inlet and said outlet, said outlet valve being arranged and preconditioned to operate under the effect of said pneumatic device to close said outlet against backfire when the mixture pressure in said burner body drops to critical value, and said trap being arranged and preconditioned to move into inlet-closing position in the event that said valve fails to move into backfire-preventing position in said outlet.

2,409,273
REFRIGERATOR CAR DRIP PAN
Clarence R. Hamilton, Roseville, and James King, Glendale, Calif., and James D. Baker, Winnetka, Ill., assignors to Johns-Manville Corporation, New York, N. Y., a corporation of New York
Application September 4, 1943, Serial No. 501,264
10 Claims. (Cl. 105—422)

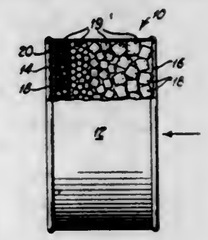
1. A refrigerator car construction comprising a floor covering, a drip pan at an end of said car, said pan and floor covering being formed of laminated, bitumen-impregnated sheets and a lapped joint between said pan and covering and comprising integral portions thereof.

2,409,274
POLYFLUORO ORGANIC ETHERS AND THEIR PREPARATION
William E. Hanford, Easton, Pa., and George W. Rigby, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application April 23, 1943, Serial No. 484,301
16 Claims. (Cl. 260—614)

14. A polyfluoroethyl ether containing at least three fluorine atoms attached to the ethyl group, of which at least one fluorine atom is attached to the alpha carbon atom.

2,409,275
CHEMICAL COMPOUNDS AND METHOD OF PRODUCING SAME
Benjamin R. Harris, Chicago, Ill.
No Drawing. Application May 19, 1944, Serial No. 536,432
16 Claims. (Cl. 260—404.5)

5. From water-soluble to water-dispersible aliphatic carboxylic acid esters of aliphatic hydroxy-polycarboxylic acids, the aliphatic carboxylic acid radical of which contains less than 6 carbon atoms, at least one carboxyl group of said hydroxy-polycarboxylic acid being amide-linked to a carboxylic acid amide of a polyamine containing at least one free primary amino group, said amide-linkage occurring through said primary amino group of said carboxylic acid amide of a polyamine.

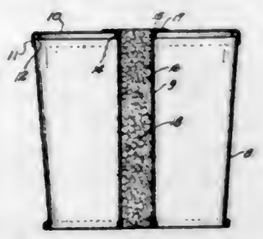


2,409,276
COMPOSITIONS COMPRISING BLOWN TERPENIC PRODUCTS AND VINYL POLYMERS AND METHOD OF MAKING
Mortimer T. Harvey, East Orange, N. J., assignors to Harvel Research Corporation, a corporation of New Jersey
No Drawing. Application August 1, 1941, Serial No. 405,073
11 Claims. (Cl. 260—36)

1. The method which comprises heating together from about one part to about ten parts by weight of a blown terpenic product with one part of a polyvinyl ester to form a gel when cold.

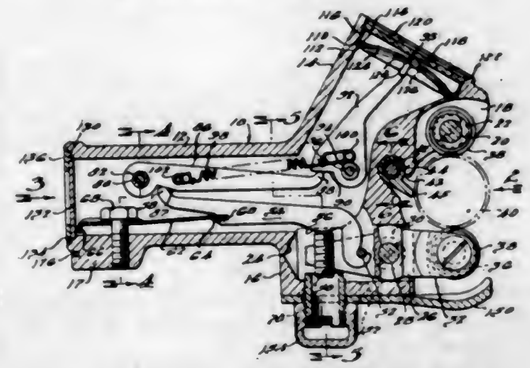
2,409,277
PLASTICIZED POLYCHLOROPRENE
Mortimer T. Harvey, South Orange, N. J., assignor to The Harvel Corporation, a corporation of New Jersey
No Drawing. Application June 27, 1944, Serial No. 542,438
6 Claims. (Cl. 260—36)

1. A composition of matter comprising polymerized 2-chlor butadiene and a plasticizer therefor said plasticizer selected from the group consisting of hydrocarbon ethers of anacardic material and the heat thickened products of said ethers, said anacardic material selected from the group consisting of cashew nut shell liquid and distillates of cashew nut shell liquid, the boiling points of said distillates at 10 mm. of mercury pressure being approximately 225° C.



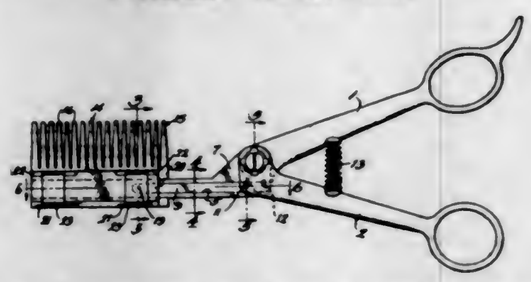
2,409,278
FILTER
Lee Minor Hedges, Somerville, N. J., assignor to Johns-Manville Corporation, New York, N. Y., a corporation of New York
Application October 1, 1943, Serial No. 504,558
3 Claims. (Cl. 183—45)

1. In a filter unit for the removal of particulate matter from gases, a confined body comprising resilient nodules of mineral wool fibers main-



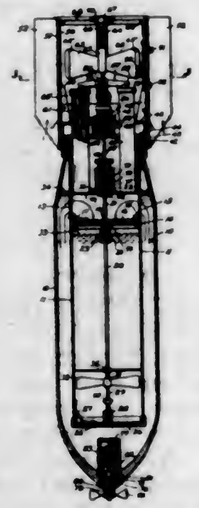
tained in inter-felted relationship by a hardened binder, the nodules being arranged generally in the form of layers and defining voids therebetween, and the nodules of successive layers varying in size from larger nodules in a layer adjacent the entry face of the unit, to smaller nodules in a layer adjacent the air exit face of the unit.

2,409,279
REFRIGERATION APPARATUS
Abe Hiller, Milwaukee, Wis., assignor of one-third to Jack G. Lichtig and one-third to Max Hiller, both of Milwaukee, Wis.
Refiled for abandoned application Serial No. 143,014, May 17, 1937. This application February 5, 1945, Serial No. 576,206
4 Claims. (Cl. 62—1)



3. A refrigerating package assembly comprising a plurality of stacked containers each enclosing a commodity, a tubular core open at each end extending through each container, said cores of the several containers being in alignment with one another, a tubular member inserted in the aligned cores of said containers and readily removable therefrom, said tubular member being adapted to receive a refrigerant.

2,409,280
COMPARATOR
Ernest F. Hohwart, Detroit, Mich., assignor to N. A. Woodworth Company, Ferndale, Mich., a corporation of Michigan
Application May 28, 1943, Serial No. 488,845
11 Claims. (Cl. 33—199)

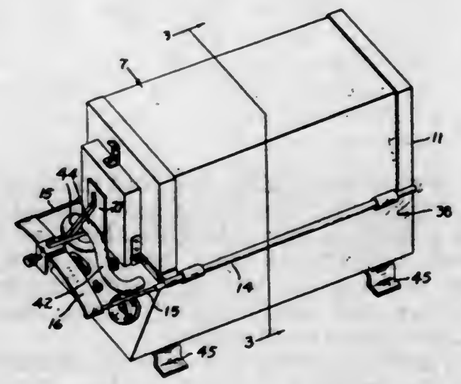


4. In a device of the type described, in combination, a hollow housing, a gage member rotatably mounted on said housing exteriorly thereof, a lever pivotally mounted between its ends on said housing with one end thereof positioned interiorly of said housing and the opposite end thereof exteriorly of said housing, a gage member rotatably supported by said outer end of said lever about an axis parallel to the axis of rotation of the first mentioned gage member, a face plate disposed over an opening in said housing, indicia operatively associated with said face plate, a pointer member pivotally mounted within said housing and having a pointer end arranged for sweeping movement relative to said face plate, motion multiplying means interconnecting the first mentioned lever with said pointer member, means constantly urging said lever in a pivotal direction to diminish the distance between said gage members, a stop screw threaded through said housing into engaging relation with respect to said lever for limiting movement of said lever in the last-mentioned direction, lock means for said screw, and a guard member secured to said housing by said lock means and extending therefrom into protective relation to the outer end of said lever and said gage member carried thereby.

2,409,281
TONSORIAL DEVICE
Neil Holsclaw, Los Angeles, Calif., assignor of one-half to Fred E. Sudlow, Rock Island, Ill.
Application February 8, 1945, Serial No. 576,795
8 Claims. (Cl. 30—213)

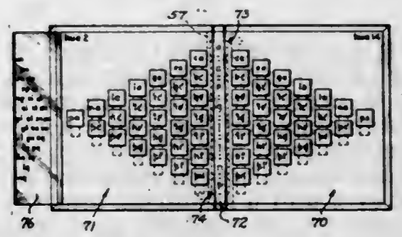
8. In a device of the class described comprising a pair of cooperating cutter members each having forwardly projecting elongated spaced teeth, means for reciprocating each of the cutter members simultaneously in opposite directions, three edges of each tooth of each of said cutter members being tapered toward the free end thereof, the inner face of each tooth lying in a flat plane to form a shearing face, and the opposed teeth being slightly spaced at their tips.

2,409,282
DUAL-PURPOSE AERIAL BOMB
Nevil Monroe Hopkins, New York, N. Y.; Raymonde B. Hopkins, executor of said Nevil Monroe Hopkins, deceased, assignor, by mesne assignments, to Raymonde Briggs Hopkins, Samuel Lloyd, and Murray T. Quigg, as trustees
Application June 18, 1942, Serial No. 447,570
7 Claims. (Cl. 102—2)



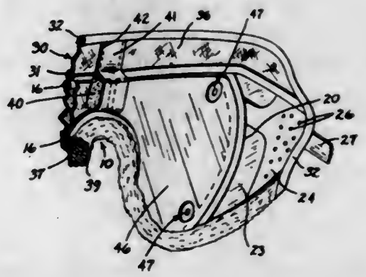
1. An explosive device, comprising a casing and a liquid therein, a closed chamber containing a second liquid and disposed within the liquid in said casing, the two liquids when admixed forming a highly sensitive explosive mixture, chamber-opening means provided with an impeller having threaded engagement therewith of such character as initially to establish relative movement between the chamber-opening means and said impeller as well as longitudinal movement of said impeller upon said chamber-opening means, said impeller establishing a forced admixing circuit of the two liquids after opening of said chamber, said chamber-opening means provided with a stop device for limiting the longitudinal movement of the impeller and stopping the relative movement between the impeller and the chamber-opening means, and means comprising mechanism for delaying the time of opening of said chamber.

2,409,283
COUPLING FOR PLASTIC TUBES
James L. Hudson, Detroit, Mich.
Application April 21, 1943, Serial No. 483,862
3 Claims. (Cl. 285—115)



1. A coupling comprising a tube element of plastic material, an element such as a terminal piece or fitting of plastic material, one of the elements being constructed to telescopingly receive the other, a connection between the interfacing telescoping surfaces comprising a cement of plastic material unitable with the plastic material of both elements, a sleeve positioned within one of the elements and having a part with its external wall spaced from the inner wall of the other element to provide a space for confining excess cement.

2,409,284
MEANS FOR GLASS HARDENING
George W. Jackson, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a voluntary association of Massachusetts
Application May 10, 1943, Serial No. 486,467
8 Claims. (Cl. 49—45)

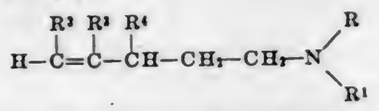


8. In a device of the character described, a furnace having a heating chamber with an entrance opening therein, bar members adjustably mounted on the outer sidewalls of said furnace and a work supporting member carried by the bar members having means thereon for supporting work to be treated for movement into and out of the heating chamber through the entrance opening and means adjacent the entrance opening for spraying gases upon the work when moved to a given position outwardly of the heating chamber.

2,409,285
COLOR CHART SYSTEM
Egbert Jacobson, Chicago, Ill., assignor to Container Corporation of America, Chicago, Ill., a corporation of Delaware
Application July 9, 1943, Serial No. 494,082
8 Claims. (Cl. 35—26)

1. In a hinged, two-panel folder having a group of color indicia disposed thereon constituting two complementary color sub-groups of an axial cross-section extending to opposite sides of an Ostwald color solid, one sub-group of indicia being disposed on each panel of the folder, a separate panel carrying a third sub-group of indicia varying from white to black and constituting the axis of the Ostwald color solid, and means for separably connecting the last mentioned panel along the hinge of the folder, whereby positioning of the axis sub-group completes the cross-section of the Ostwald color solid.

2,409,286
EYE PROTECTIVE MEANS
William J. Joyce, Sturbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a voluntary association of Massachusetts
Application September 7, 1943, Serial No. 501,453
4 Claims. (Cl. 2—14)



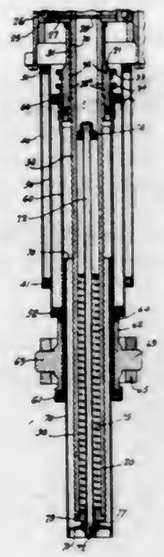
1. In a device of the character described the combination of a main shield means, side shield members secured to the opposed sides of said main shield means, a spacer pad of resilient material supported intermediate the main shield means, the opposed sides of said pad being spaced from the inner surface of said main shield means to provide attachment recesses, auxiliary shield means comprising two sections which when supported in position of use are shaped substantially to the shape of the main shield means, each of said auxiliary shield means having an inner end portion shaped to extend within one of said attachment recesses and detachable means for securing said auxiliary shield means in superimposed relation with the main shield means.

2,409,287
UNSATURATED AMINES AND PROCESS FOR MAKING SAME

Morris S. Kharasch and Charles F. Fuchs, Chicago, Ill., assignors to Eli Lilly and Company, Indianapolis, Ind., a corporation of Indiana

No Drawing. Application January 4, 1943, Serial No. 471,294
14 Claims. (Cl. 260—583)

2. The new compounds having the following general formula:



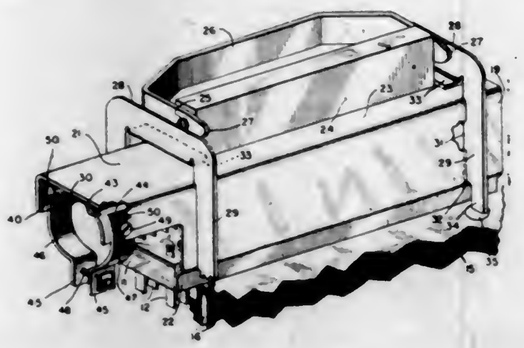
in which R and R^1 represent radicals of the class consisting of (*a*) alkyl radicals which together have not to exceed 8 carbon atoms when they are not interconnected but which when they are interconnected form with the nitrogen to which they are attached a heterocyclic ring of the class consisting of 5 and 6 members, and (*b*) alicyclic radicals, and R^2, R^3, and R^4 each represents a member of the class consisting of hydrogen and alkyl radicals of not to exceed 3 carbon atoms.

10. 5-diethylaminopentene-1.

2,409,288
ACTUATOR SEAL

Robert W. Leland, Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware

Application February 24, 1945, Serial No. 579,521
10 Claims. (Cl. 74—424.8)

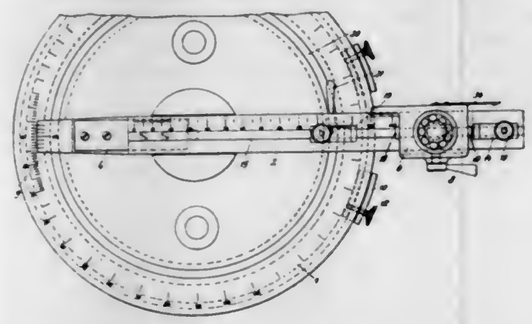


1. In a device for moving a load, the combination with a rotatable screw shaft and a nut; of a member attached to the nut to render it non-rotatable but capable of longitudinal movement on the screw in response to rotation thereof; an extensible and collapsible shield surrounding the screw and nut, comprising telescopically engaging tubular members, one of which is attached to the nut and has the load supported thereon; and means interposed between the screw shaft and one of said tubular members, said means being energized by the movement of the nut during its final range of movement toward the one end of the screw shaft for moving said one tubular member with the nut as it moves from said one end of the screw shaft toward the opposite end.

2,409,289
PLUG SEPARATOR

Carl A. Levin and Otto A. Lorenz, Chicago, Ill., assignors to Teletype Corporation, Chicago, Ill., a corporation of Delaware

Application September 20, 1943, Serial No. 503,020
4 Claims. (Cl. 173—328)



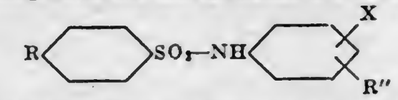
1. A separator for multiple-prong connection plugs comprising, a pair of yokes straddling one element of a connection coupling and supported for movement toward and away from abutment with the other element of said coupling, and a member having opposite camming portions effective upon said pair of yokes and pivotally carried by said one of said pair of elements, said camming portions being concurrently effective to move said yokes for thereby maintaining parallelism during separation of said one of said connection elements from the other of said pair of elements.

2,409,290
TOOL GUIDING DEVICE

Rudolf Wilhelm Lipp, Berlin-Pankow, Germany; vested in the Alien Property Custodian

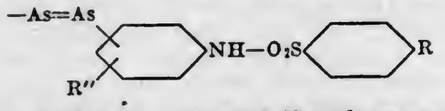
Application March 10, 1941, Serial No. 382,644
In Germany March 2, 1940
12 Claims. (Cl. 33—26)

1. A device for guiding the tool in copying machines, engraving machines and the like, comprising a base, a bar rotatable about an axis on said base, adjustable stops on said base, and a slide for guiding the tool and radially adjustable on said bar, said bar being adjustable centrically of said axis between said stops.



12. A device according to claim 1, characterized in that the bar is secured on a plate which is rotatably inserted in the base and that the bar is of such a length that the slide can be used on both sides of the center of the device, a rack connected to the slide cooperating with a toothed wheel stationarily disposed in the center of the device, the oscillatable rack bearing against an abutment adjustable and displaceable in the center of the device.

2,409,291
CHEMOTHERAPEUTIC SULFANILAMIDE DERIVATIVES

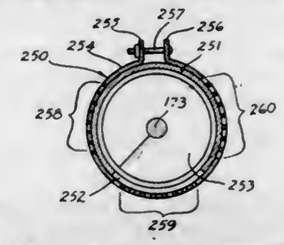


William A. Lott, Maplewood, and Raymond Van Winkle, Highland Park, N. J., assignors to E. R. Squibb & Sons, New York, N. Y., a corporation of New York

No Drawing. Application May 19, 1942, Serial No. 443,622
6 Claims. (Cl. 260—440)

1. A compound of the general formula

wherein X represents a member of the class consisting of —As=O, —As (halogen)$_2$, and

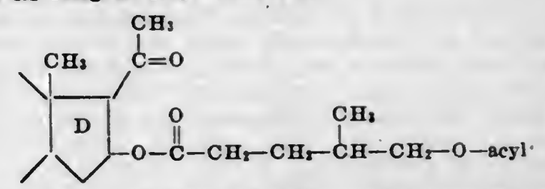


R represents a member of the class consisting of nitro- amino, (lower alkyl)-amino, and acylamino, and R'' represents a member of the class consisting of hydrogen and hydroxy.

2,409,292
STATIONARY CONCAVE SCREEN

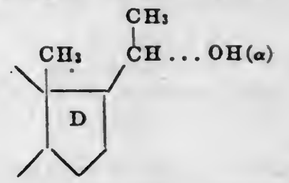
Wallace F. MacGregor, deceased, late of Racine, Wis., by Richard D. Miller, special administrator, Racine, Wis., assignor to J. I. Case Company, Racine, Wis., a corporation

Original application February 12, 1940, Serial No. 318,504. Divided and this application July 22, 1944, Serial No. 546,078
3 Claims. (Cl. 209—283)



3. In a weed screen, the combination of a tubular housing extending in a substantially horizontal direction, a conveyor auger in the housing and disposed to propel grain containing undesirable particles through said housing by virtue of rotation of said conveyor auger, said housing providing an opening in the bottom wall thereof, a sleeve disposed about said housing so as to cover said opening, said sleeve providing a plurality of sets of screening perforations of different sizes registerable with said opening as desired by shifting of said sleeve on said housing, means for securing the sleeve in place on the housing, said sleeve being freely shiftable on the housing except when the securing means is operative, and a receptacle disposed beneath said opening for receiving particles screened from the grain through said perforations.

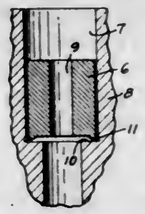
2,409,293
HORMONE INTERMEDIATES AND PREPARATION OF SAME



Russell Earl Marker, Mexico City, Mexico, assignor to Parke, Davis & Company, Detroit, Mich., a corporation of Michigan

No Drawing. Original application June 30, 1941, Serial No. 400,559. Divided and this application May 24, 1944, Serial No. 537,201
5 Claims. (Cl. 260—397.4)

1. Process for preparing hydroxy-pregnane derivatives which comprise subjecting a steroid having in ring D the structure

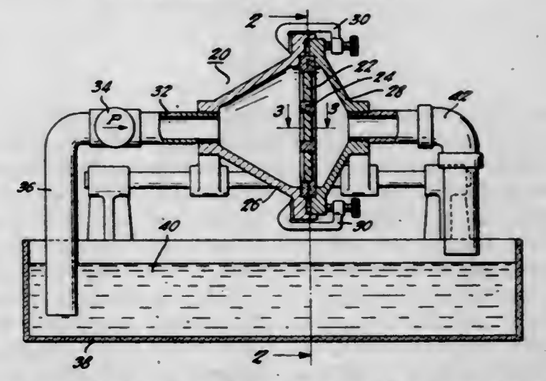


to the action of an alkali metal in combination with an alcohol reactive with said alkali metal to form nascent hydrogen, thereby producing a steroid having in ring D the structure

2,409,294
PASSAGE PLUG

Charles L. Martin, Overland, Mo., assignor to Carter Carburetor Corporation, St. Louis, Mo., a corporation of Delaware

Application November 15, 1943, Serial No. 510,438
6 Claims. (Cl. 138—44)

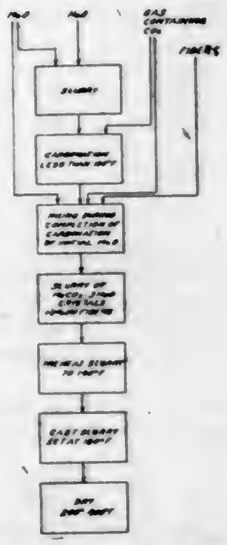


1. A passage plug comprising a rigid body part for closely fitting an orifice and an axially projecting element for embedding in the orifice wall upon the application of axial pressure to the plug when lodged in an orifice, said element being distortable on application to an orifice to firmly maintain the assembly therewith.

2,409,295
POROUS METAL ARTICLE

John T. Marvin and Roland P. Koehring, Dayton, Ohio, assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware

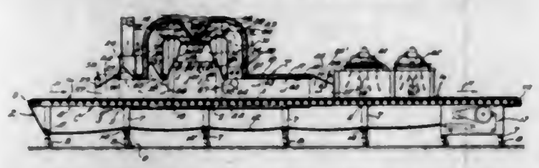
Application December 8, 1941, Serial No. 422,138
3 Claims. (Cl. 117—99)



1. A method of coating the entire porous surface of a porous metal article having pores passing completely through the article with a metal lower in the electrochemical series than the metal of the article and wherein the coating is metallurgically bonded to the surface of the article, the steps comprising; continuously circulating solely

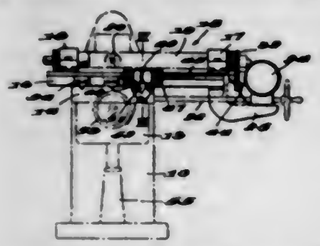
by mechanical pressure a liquid carrying the coating metal through the pores of a porous metal article for a time sufficient to cause the desired deposition of the metal in said liquid on the surface of the pores of said article, and finally heating the article at a temperature below the melting point of the coating metal for a time sufficient to cause at least partial metallurgical diffusion of the coating metal into the metal of the article whereby the surface characteristics of the porous metal article are those of the metal deposited on the surfaces of the walls of the pores without destroying the porosity of the article.

2,409,296
LUBRICANTS
Rush F. McCleary, Beacon, N. Y., assignor to The Texas Company, New York, N. Y., a corporation of Delaware
No Drawing. Application April 12, 1944, Serial No. 530,731
4 Claims. (Cl. 252—46.3)



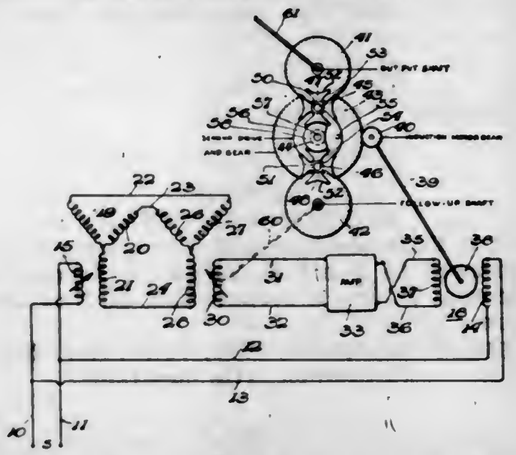
1. A lubricant comprising a hydrocarbon oil and a small quantity, less than 5% by weight, of an oil-soluble sulfurized derivative of partially hydrogenated cardanol.

2,409,297
PROCESS FOR PRODUCING MOLDED BASIC MAGNESIUM CARBONATE
Alan R. McGarvey, Manheim Township, Lancaster County, Pa., assignor to Armstrong Cork Company, Lancaster, Pa., a corporation of Pennsylvania
Application May 1, 1942, Serial No. 441,380
12 Claims. (Cl. 106—121)



3. In the method of making molded basic magnesium carbonate compositions, the steps of preparing a slurry of a magnesium compound selected from the group consisting of magnesium oxide and magnesium hydroxide in water, the initial concentration of the slurry being such that there are from approximately 9 to approximately 14 parts by weight of water for each part by weight of said magnesium compound based on its MgO content, introducing therein carbon dioxide gas while maintaining the said slurry at low temperatures below 100° F. until substantially all of said magnesium compound is converted to self-setting crystals generally represented as normal magnesium carbonate, thereafter forming said slurry of self-setting crystals in water so produced into the desired shape, and heating the slurry to cause it to set.

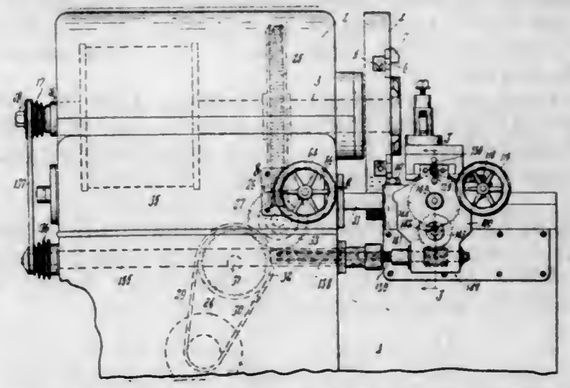
2,409,298
DRIER FOR DECORATED WARE
Donald G. Merrill, West Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a corporation of Delaware
Application March 10, 1945, Serial No. 582,087
8 Claims. (Cl. 34—66)



8. An apparatus of the character described comprising a tunnel open at its ends, a conveyor having a substantially horizontal portion extending through the tunnel and on which decorated glass articles or the like may be placed so as to be carried through the tunnel when the conveyor is driven, means for driving the conveyor, a hood on said tunnel having a chamber therein in open communication at its bottom with the interior of the tunnel throughout substantially the full width of the latter and for only part of the length thereof, means within said chamber to divide it transversely for part of its height into a rear substantially vertical uptake passage nearest to the exit end of the tunnel, a downtake passage directly in front of the rear uptake passage, a front uptake passage in front of said downtake passage, and a mixing space above and in communication with the upper ends of said uptake and downtake passages, a fan in the upper part of said downtake passage for drawing gases upwardly from the tunnel through said uptake passages into said mixing space and thence to the downtake passage and for blowing gases downwardly through the latter back into the tunnel, heating means in one of said uptake passages, and a dampered stack communicating with said tunnel in advance of said chamber.

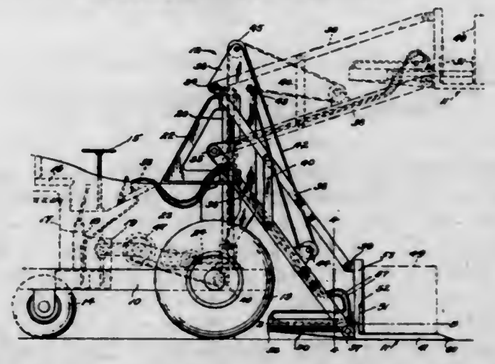
2,409,299
GROOVE-FORMING ATTACHMENT FOR MACHINE TOOLS
Joseph Messana, Jr., Columbus, Ohio, assignor to The Jaeger Machine Company, Columbus, Ohio, a corporation of Ohio
Application May 16, 1944, Serial No. 535,860
3 Claims. (Cl. 90—11.50)

1. A groove-forming attachment for milling machines of the type embodying a frame, a vertically adjustable knee and a rotary end-cutting tool, said attachment comprising a saddle section movably supported on said knee for longitudinal adjustment in a direction parallel to the principal axis of the cutting tool, a table mounted on said saddle section for bodily movement in unison therewith toward and away from said tool and for sliding movement relative to said saddle section in directions substantially at right angles to the axis of said cutting tool, spaced bearings provided on said table for the rotatable reception of a cylindrical work piece in which end grooves are adapted to be cut, said end grooves being substantially elliptical in outline when the work piece is viewed in elevation and being employed to unite the ends of relatively intersecting helical grooves produced in said work piece, motion-transmitting gearing on said table for imparting rotation to said work piece about its longitudinal axis, a forming member rotatably mounted on said table, said forming member having a groove formed therein corresponding in configuration to the end grooves to be cut in said work piece, means driven by said gearing for rotating said forming member in synchronism with the rotation of the work piece, and a fixed arm mounted on said saddle section and engageable with the groove in said forming member, whereby rotation of said forming member serves to impart regulated longitudinal movement to said table and the work piece thereon during rotation of said work piece and while same is in engagement with said cutting tool.



2,409,300
STEP-BY-STEP FOLLOW-UP AND ANTIHUNT MECHANISM
George S. Miles, Maywood, N. J., assignor to Bendix Aviation Corporation, Teterboro, N. J., a corporation of Delaware
Application December 31, 1943, Serial No. 516,436
12 Claims. (Cl. 172—239)

1. In a self-synchronous remote control system including a servo motor driven thereby, a follow-up connection comprising a pair of alternately actuated gears, an intermediate constantly driven gear in mesh with each of said alternately actuated gears, means carried by one of said gears adapted to provide for said alternate actuation, and a pair of take off shafts from each of said alternately actuated gears, one of said shafts being connected to the rotor of a self-synchronous receiver in said control system and the other of said shafts being connected to an object to be controlled by the system, whereby said shaft connected to the object to be controlled is locked when said motor is deenergized to prevent oscillations of the said shaft and the object connected thereto from the newly attained position.

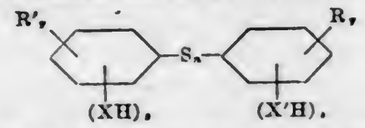


2,409,301
CAM CUTTING MACHINE
Carroll E. Miller and Daniel H. Parker, Windsor, Vt., assignors to Cone Automatic Machine Company Inc., Windsor, Vt., a corporation of Vermont
Application November 11, 1942, Serial No. 465,226
6 Claims. (Cl. 82—19)

1. A cam cutting machine comprising a bed, a work spindle journaled in said bed, a cam blank holding chuck secured to said spindle, a carriage movable on said bed substantially parallel to the axis of said spindle, a cross slide movable on said carriage, a cam cutting tool carried by said cross slide, a master cam coupled for rotation with said spindle, a lever, a cam follower in operative relation to said master cam and operatively connected to said lever, said lever

having a guide portion extending outwardly from its fulcrum, a member adjustable along said guide portion, an arm connected to said carriage and provided with a transversely extending head, a threaded shaft journaled in said head, a nut on said shaft carrying said member, and means for rotating said shaft to adjust said member relative to the fulcrum of said lever.

2,409,302
MACHINE FOR LIFTING AND STACKING RECEPTACLES
Arnold S. Millikin, Columbus, Ohio, assignor to The Jaeger Machine Company, Columbus, Ohio, a corporation of Ohio
Application October 14, 1944, Serial No. 558,650
2 Claims. (Cl. 214—132)



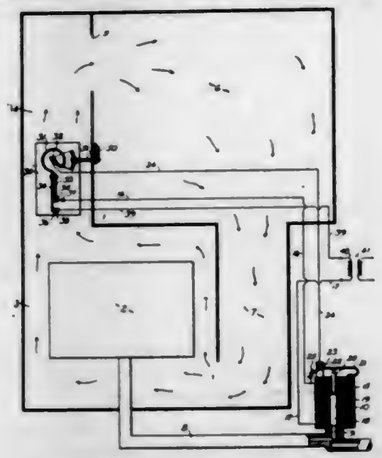
1. A loading machine comprising a frame having steering and driving wheels at the opposite ends thereof, an operating engine supported by said frame and disposed over said steering wheels, means driven by said engine for imparting power to said driving wheels, a vertical mast structure supported by said frame at one end thereof and disposed over said driving wheels, reversible power-transmitting means driven by said engine for turning said mast structure about its vertical axis, spaced upper and lower pairs of boom arms having their inner ends pivotally connected in vertically aligned order with said mast structure, a load carrier having a substantially vertical rear wall and a horizontal bottom wall, vertically aligned means pivotally uniting the outer ends of said boom arms with the rear wall of said carrier, a drum driven by said engine and rotatably mounted on said frame between said mast structure and said engine, a cable connected at one end with said mast structure and trained around guides carried by said boom arms and said mast

structure to said drum, whereby to raise and lower said boom arms and carrier, and a slidable ejector ram mounted on the rear wall of said carrier.

2,409,303
LUBRICATING OIL
John R. Morris, Lawrenceville, Ill., and Rush F. McCleary, Beacon, N. Y., assignors to The Texas Company, New York, N. Y., a corporation of Delaware
No Drawing. Original application April 26, 1941, Serial No. 390,540, now Patent No. 2,374,559, dated April 24, 1945. Divided and this application May 12, 1944, Serial No. 535,362
6 Claims. (Cl. 252—42.7)

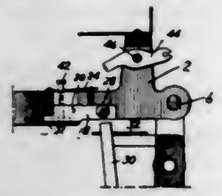
1. A lubricating composition comprising a mineral lubricating oil having incorporated therein 0.1–5.0% by weight of an oil-soluble metal derivative of a compound of the formula

in which R and R' are radicals selected from the group consisting of alkyl, aralkyl, cycloalkyl and naphthenyl, the alkyl portion of which contains at least 5 carbon atoms, X and X' are elements from the group consisting of oxygen and sulfur, *n*, *y*, *z* are integers of at least 1, and in which the aromatic nuclei are selected from the group consisting of phenyl, naphthyl, anthracyl and other condensed nuclei, and 0.5–5.0% by weight of a sulfurized terpene hydrocarbon.



2,409,304
COMPRESSIBLE CORE FOR COOLING PIPES
Joseph I. Morrison, Lincolnwood, Ill.
Application April 1, 1943, Serial No. 481,451
2 Claims. (Cl. 138—28)

1. A cooling pipe of uniform cross section having a flexible compressible laterally bendable core of uniform cross section therein extending longitudinally of the pipe and spaced from the walls thereof to provide a liquid flow passage between the inner wall of the pipe and the outer wall of the core extending from end to end of the pipe, and means for positioning and centering the core inside the pipe comprising a helical wire surrounding the core and engaging the inside walls of the pipe, the cross-sectional area of the wires in a plane through the axis of the pipe being materially less than the cross-sectional area of the fluid passages between said helical wires in said plane.

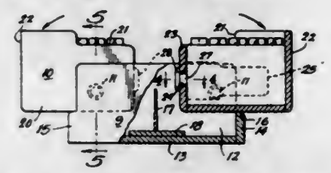


2,409,305
HEAT CONTROL
Wellington W. Muir, Lockport, N. Y.
Application May 22, 1943, Serial No. 488,082
2 Claims. (Cl. 236—10)

1. In a hot air heating system including a space to be heated, a source of heat, a duct for supplying heated air from such source to said space, the discharge end of such duct terminating alongside a wall of said space, and a return conduit for conveying air from said space to such source, the combination of single thermostatic means for controlling the temperature of the air being conveyed to said space, said means disposed within said duct adjacent the discharge end thereof and separated from said space by the thickness of such such wall, a valved fuel supply pipe to such heat source, said thermostatic means controlling the admission of the fuel through the valve of said pipe, and means for adjusting the setting of said thermostatic means, said adjusting means comprising a member of a length only to extend

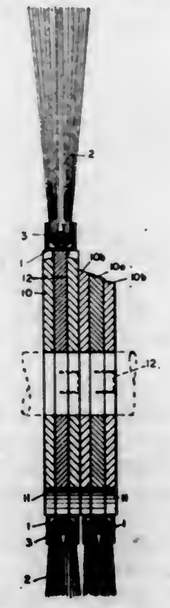
through such wall to said thermostatic means, one end of said member being directly and operatively connected to an element of the thermostatic means, and the opposite end of said member being disposed in said space and having means for manual operation thereof, whereby the temperature in said space may be regulated to within a differential of one degree F.

2,409,306
KNITTING MACHINE
Albert E. Page and Frank R. Page, Laconia, N. H., assignors to Scott & Williams, Incorporated, Laconia, N. H., a corporation of New Hampshire
Application April 1, 1944, Serial No. 529,103
23 Claims. (Cl. 66—125)



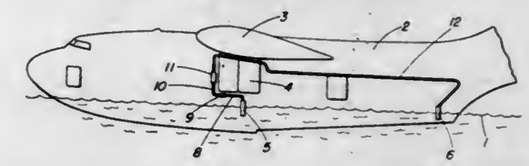
18. A knitting machine having a movable throat plate across which yarns are fed to the needles of the knitting machine, and means for moving said throat plate in the direction of the length of a needle in timed relationship to the knitting operations to avoid interference with the feeding of a yarn sufficiently low to pass into the hooks of needles.

2,409,307
PROJECTILE
Earl S. Patch, Dayton, Ohio, and Wiley T. Moore, Washington, D. C., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application July 1, 1942, Serial No. 449,280
5 Claims. (Cl. 102—92.5)



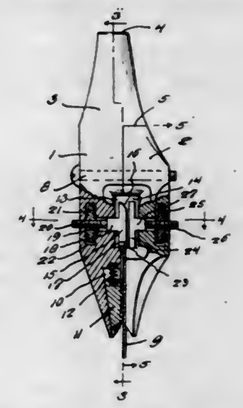
1. A projectile, made from sintered briquetted iron powder which is coated over with and has the pores substantially filled with a metal softer than and heavier than iron and impregnated therein, whereby the said projectile has a relatively soft surface thereover and an apparent density greater than a sintered iron briquette.

2,409,308
FILING CABINET
John Warren Paxton, Bloomington, Ill., assignor of one-third to George Noble Paxton, Bloomington, and one-third to Irving Richard Cornish, Elmhurst, Ill.; Arlie L. Paxton and The National Bank of Bloomington, Bloomington, Ill., executors of said George Noble Paxton, deceased
Application August 16, 1943, Serial No. 498,747
3 Claims. (Cl. 45—2)



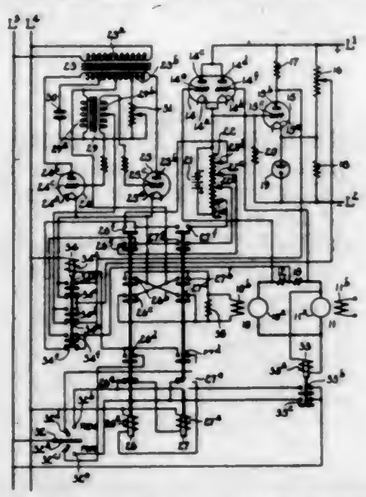
2. A filing cabinet of the class described, comprising a supporting base and a container, said base being formed with a bottom, lateral side rail, and ends extending above said side rail, said container being formed with a bottom, two sides, and a pair of ends, said container being swingably mounted on said base ends on a pair of horizontally aligned pivots, said pivots being located on said container ends intermediate said sides and between said container bottom and a middle plane parallel to said container bottom, said pivots being located on said base ends inwardly of the adjacent vertical edges thereof and above the adjacent lateral side rail, whereby said container is held in its open position by the bottom resting on the adjacent side rail, and vertical means on said base disposed parallel to the axis of said pivots and providing a content-retaining wall for said container when in its closed position.

2,409,309
ROTARY BRUSH
Ruben O. Peterson, University Heights, Ohio, assignor to The Osborn Manufacturing Company, Cleveland, Ohio, a corporation of Ohio
Application May 6, 1943, Serial No. 485,867
16 Claims. (Cl. 15—181)



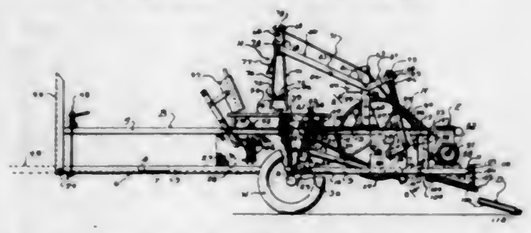
3. In a rotary brush, the combination of a plurality of brush sections each comprising an annular channelform back and brush material retained therein, the sides of each such back being formed into alternate depressed areas and intermediate lands, such depressed areas extending transversely the entire width of the side, and a support whereon such sections are mounted, said support being formed to provide transverse ducts that communicate with such depressed areas in said backs.

2,409,310
WEIGHT AND BALANCE INDICATOR
Paul A. Piper, Towson, Md., assignor to The Glenn L. Martin Company, Middle River, Md., a corporation of Maryland
Application October 26, 1945, Serial No. 624,721
4 Claims. (Cl. 73—65)



1. An apparatus for determining the center of gravity and gross weight of a seaplane afloat comprising means for measuring water pressure on the seaplane hull under the wing near the plane of the areodynamic center of gravity, means for measuring water pressure on the seaplane hull at a point remote from said first mentioned point, means connected to said first pressure measuring means to give an indication of gross weight of said seaplane, and means connected to said first and second pressure measuring means responsive to the differential in pressures measured thereby to give an indication of the center of gravity of the seaplane, said center of gravity indicating means including means to correct the indicated center of gravity with changes in gross weight of said seaplane.

2,409,311
SAW SET
Edgar Platter, Albuquerque, N. Mex.
Application March 30, 1945, Serial No. 585,595
3 Claims. (Cl. 76—72)



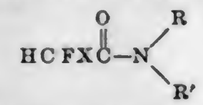
2. In a saw set, a body comprising spaced inner faces to receive a saw blade therebetween and a saw tooth receiving chamber at the inner ends of said faces, a tooth engaging jaw embodying an elongated head mounted for lateral movement within said chamber, an anvil mounted for lateral movement within said chamber and cooperating with said jaw, means for adjustably moving said jaw toward and from said anvil, and means for adjustably moving said anvil toward and from said jaw.

2,409,312
CURRENT REGULATOR
James B. Reeves, Whitefish Bay, Wis., assignor to Cutler-Hammer, Inc., Milwaukee, Wis., a corporation of Delaware
Application February 5, 1945, Serial No. 576,335
6 Claims. (Cl. 172—239)

1. In combination, a generator, having an armature and a field winding, a pair of electron tubes, each having a control electrode, manual means for establishing connection of said tubes to said field winding for supplying energizing current to the latter, adjustable means including electronic means for impressing a voltage on said control electrodes for regulating the current supplied by said tubes, a motor having an armature connected in circuit with said generator armature, means responsive to the speed of said motor armature for controlling maintenance of said connection of said electron tubes to said field winding independent of said manual means, and means to render said electronic means responsive to the current circulating between said armatures to control and limit such current and including means for predetermining the limit.

2,409,313
VEHICLE DRAW BAR
Martin A. Richardson, Racine, Wis., assignor to J. I. Case Company, Racine, Wis., a corporation
Application October 2, 1940, Serial No. 359,310
2 Claims. (Cl. 280—33.4)

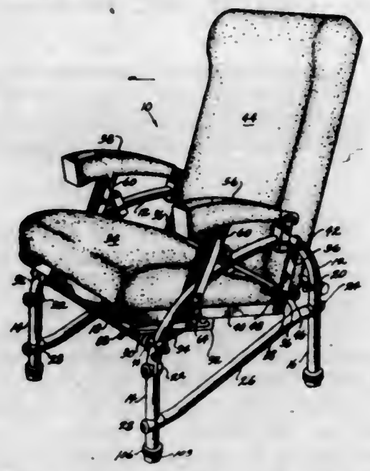
1. In a vehicle, a frame including a cross member, an axle arranged in supporting relation to the frame, and to the rear of the center of gravity thereof, a movable draft and supporting element pivoted to said cross member, a second cross member on the frame and spaced from the pivotal connection of said supporting element with the first cross member, spaced plates extending generally upwardly from said element so as to move adjacent said second cross member when said element is pivoted about said first cross member, a bracket projecting from said second cross member between said spaced plates, said bracket providing an opening and said plates providing a series of pairs of openings alignable with the opening in said bracket by pivotal movement of said element, and a pin traversing the opening in said bracket and one of the pairs of openings in said plates for securing said element in a selected position.



2,409,314
BAG WITH INSOLUBLE AUTOMATIC FOLD CLOSING
Adolf Rambold, Dresden, Germany; vested in the Alien Property Custodian
Application May 3, 1940, Serial No. 333,243
In Germany May 30, 1939
2 Claims. (Cl. 229—53)

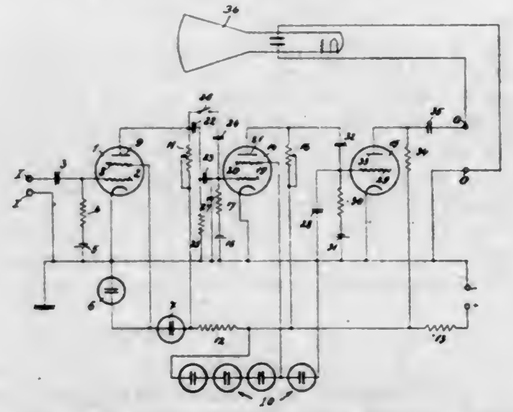
1. An open bag of polygonal cross section formed from a rectangular blank of paper-like material having a smooth continuous bottom and at least two smooth continuous sides as well as two opposite continuous sides with side edges folded over and over, whereby the original edges of the material are covered by the edge of the fold and folded projecting tabs are formed, the bag being turned inside out to dispose the said folds and the tabs on the inside of the bag whereby the folds and tabs are prevented from unfolding, the folds and tabs being devoid of other securing means.

2,409,315
FLUOROACETAMIDES AND THEIR PREPARATION
George W. Rigby and Herman E. Schroeder, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application April 23, 1943, Serial No. 484,302
22 Claims. (Cl. 260—561)



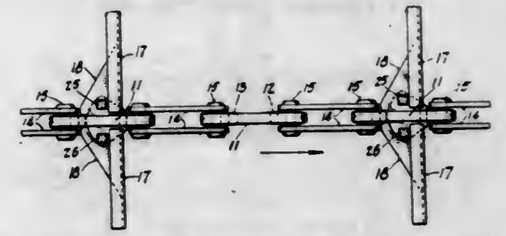
8. A fluoroacetamide of the general formula

where X is a halogen atom, R is selected from the group consisting of hydrogen, alkyl and aryl groups, and R' is an alkyl group.



2,409,316
REMOVABLE AND COLLAPSIBLE SEATING FIXTURE
Allan B. Rogers, Sr., Santa Monica, Calif., assignor to Douglas Aircraft Company, Inc., Santa Monica, Calif.
Application October 12, 1942, Serial No. 461,807
8 Claims. (Cl. 155—116)

1. An adjustable folding chair comprising a frame having a front cross member; rollers on said cross member; a seat slidably mounted on said rollers; a link; means for pivotally connecting the opposite ends of said link to the rear portion of said seat and said frame respectively whereby said seat may be slidably moved relative to said cross member; a back rest; means for pivotally connecting said back rest intermediate the ends thereof to said frame; and means for pivotally interconnecting said link and the lower portion of said back rest whereby said back rest will be angularly adjusted about the pivotal connection between the same and said frame as the seat is adjusted.

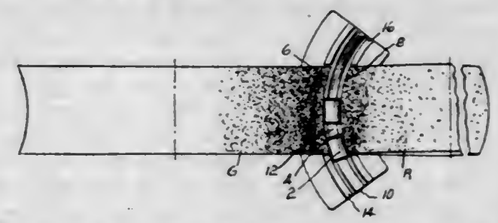


2. In an adjustable folding chair: a frame comprising a front cross member; rollers on said cross member; a seat slidable on said rollers so that said seat can be moved in a fore and aft direction with respect to said cross member; a link; means for pivotally connecting the opposite ends of said link to the rear portion of said seat and said frame respectively; a back rest pivoted on said frame for movement to and from a position overlying said seat in substantial parallelism therewith; and means having connecting means thereon for pivotally interconnecting said seat and back rest, said connecting means being manually releasable to permit said back rest to be pivotally moved to a position overlying said seat.

2,409,317
APPARATUS FOR THE RECORDING OF SLOW PROCESSES
Laszlo Rósa, Budapest VIII, and Imre Zakariás, Budapest VII, Hungary; vested in the Alien Property Custodian
Application February 21, 1940, Serial No. 320,074
In Hungary February 11, 1939
4 Claims. (Cl. 128—2.06)

1. Apparatus for the pick-up and recording of slow processes of motion taking place in organs of the human or animal body, especially of the function of the heart, the said apparatus consisting of a recording device, of an amplifier, of a common power source for the feeding of the amplifier tubes, and of stabilizing means for the anode and grid direct voltages of at least the first (input) amplifier tube, said stabilizing means consisting of at least two consecutive filtering stages having high time constants, each of the said filtering stages consisting of a voltage stabilizing tube device, the current dissipation and preferably also the dimensions of the voltage stabilizing tube device of the first stage being greater than the current dissipation and dimensions of the voltage stabilizing tube device of the second filtering stage.

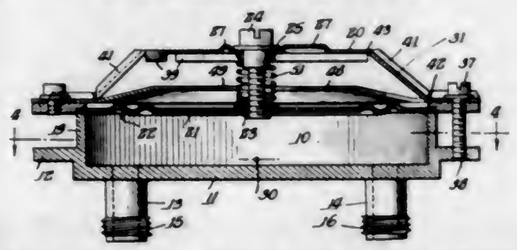
2,409,318
CONVEYER FLIGHT
Benjamin E. Sivyer, Whitefish Bay, Wis., assignor to Chain Belt Company, Milwaukee, Wis., a corporation of Wisconsin
Application December 26, 1944, Serial No. 569,822
7 Claims. (Cl. 198—176)



1. A conveyer flight half having a material engaging face and a projection extending therefrom for insertion through a chain link, said projection having at least two opposite abutting surfaces disposed to engage opposite sides of the link when the projection is inserted in the link, whereby said opposite abutting surfaces may be positioned against the link, so that force exerted against the face of the flight half will retain the flight half on the link.

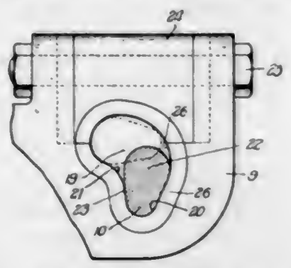
2,409,319
PRODUCTION OF FABRICS FROM ALGINIC MATERIALS
John Bamber Speakman, Far Headingley, Leeds, and Norman Henry Chamberlain, Headingley, Leeds, England, assignors to Cefoil Limited, Maidenhead, England
No Drawing. Application December 20, 1943, Serial No. 515,029. In Great Britain Oct. 1, 1942
6 Claims. (Cl. 8—115.5)

1. A process for the production of alkali-resistant fabrics from alginic materials, comprising the steps of first producing alginate rayon of alkali soluble type, then manufacturing fabric therefrom and thereafter converting the alkali soluble alginate of the fabric to alkali-resistant alginic material.



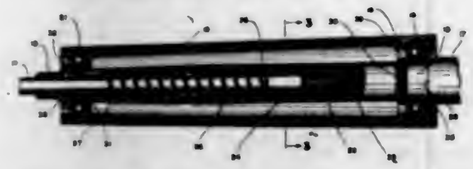
2,409,320
GRINDING OF ROLLERS
Attilio R. Spicacci, Bristol, Conn., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application March 30, 1944, Serial No. 528,713
16 Claims. (Cl. 51—103)

5. In apparatus for grinding rolls having their middle portions of longitudinally concave profile and their end portions convexly curved, a grinding wheel and an opposed regulating wheel, one



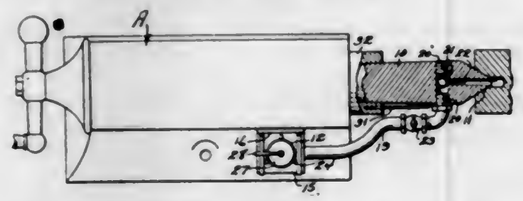
of the wheels having a convex profile to conform to the concave profile of the rolls and the other wheel having a concave profile to conform to the convex end portions of the rolls, and a work support close up to the grinding wheel and having its work supporting surface formed as a surface of revolution having substantially the same profile as the grinding wheel.

2,409,321
CAVITY TUNING DEVICE
Ingo L. Stephan, Delanco, N. J., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application December 16, 1943, Serial No. 514,516
12 Claims. (Cl. 178—44)



1. In combination with an ultra-high frequency tuning cavity having a movable diaphragm, means for compensating for temperature variations so as to maintain the resonent frequency of said cavity substantially constant, comprising a temperature-responsive expansible and contractible member mounted on the cavity structure externally thereof, and a connecting element between said member and the movable diaphragm, whereby the latter is moved in response to expansion or contraction of said member.

2,409,322
COUPLER OPERATING MECHANISM
James S. Swann, Homewood, Ill., assignor to Standard Railway Equipment Manufacturing Company, Chicago, Ill., a corporation of Delaware
Application September 2, 1944, Serial No. 552,471
15 Claims. (Cl. 213—171)

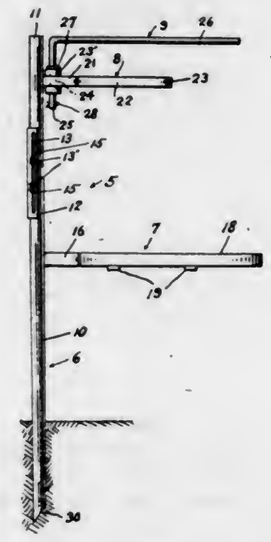


1. An operating mechanism for a railway car coupler comprising a bracket having an opening, the lower portion of said opening being restricted, and a rotatable operating rod, supported in said opening, said rod having a portion the cross section of which is such as to have a non-rotative relation thereto when positioned in said lower portion, one side of said restricted lower portion being shorter than the other and merging into a bearing surface for the operating rod, and the other side of said lower portion being longer and of such contour in relation to said shorter side and bearing surface as to provide a guiding surface to cause said portion of said operating rod to roll and slide upon said said bearing surface out of said lower portion when manually rotated.

2,409,323
AIRCRAFT POWER PLANT ARRANGEMENT
Carel T. Torresen, Santa Monica, Calif., assignor to North American Aviation, Inc., Inglewood, Calif., a corporation of Delaware
Application December 12, 1940, Serial No. 369,787
4 Claims. (Cl. 64—1)

1. A drive shaft assembly for a propeller comprising a propeller-carrying shaft having an externally splined portion, a second hollow shaft co-axially disposed about said first shaft and having internal splines therein engaging the said splined portion on said propeller-carrying shaft, the said first shaft being supported for relative axial movement within said second shaft, an elongated tubular member supported by adjacent structure co-axially disposed with respect to said co-axial shafts, bearing means supported internally of said elongated member adjacent each of its ends adapted for the journalling of said second shaft therewithin, opposed shouldered portions carried by each said shaft and resilient means interposed between said shouldered portions opposing relative axial movements thereof for the resilient transmission of propeller thrust from said first to said second shaft and the relief of said tubular member of said propeller thrust.

2,409,324
AUTOMATIC LUBRICATOR FOR TAILSTOCK CENTERS
John Turenchalk and Harry Turenchalk, Yonkers, N. Y.
Application July 21, 1944, Serial No. 545,956
5 Claims. (Cl. 184—46)



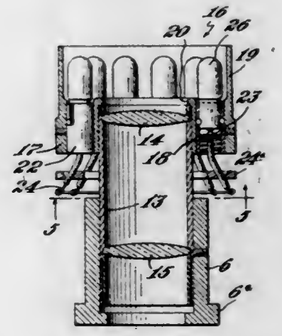
1. In a lubricator of the class described, a collapsible container having the form of a vertically disposed bellows, with flat top and bottom end walls, the top wall having a centrally disposed inwardly nippled inlet for a supply of the lubricant, the bottom wall having a centrally disposed, downwardly extending, nippled outlet, a closure plug for the inlet, a flexible duct leading from the outlet, and a cutoff valve for controlling the lubricant discharge from the flexible duct.

2,409,325
INHIBITING TREATMENT
George C. Ward and Burnard T. Pull, Cumberland, Md., assignors to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application January 14, 1943, Serial No. 472,410
24 Claims. (Cl. 8—61)

5. Process for improving the fastness of colorations on dyed organic derivative of cellulose textile materials to acid fading, which comprises treating said dyed organic derivative of cellulose textile material with an aqueous solution of a cation-active agent and then treating said material with an aqueous-alcoholic solution of a member of the group consisting of primary, secondary and tertiary aliphatic hydroxy mono-amines having at least 3 carbon atoms in at least one of the alkyl chains linked to the N-atom of the aliphatic hydroxy mono-amine.

2,409,326
GARBAGE CAN HOLDER
Stephen Wargo, Streator, Ill.
Application November 5, 1945, Serial No. 626,666
2 Claims. (Cl. 248—146)

1. In a garbage can support comprising a standard of angle iron configuration, a platform having its inner end portion of a shape similar to that of the standard and those portions extending therefrom of arcuate configuration with their free ends terminating in spaced relation to one another, means rigidly securing the platform to the standard with its angular portion seated in the angular portion of the standard and at right angles thereto, a substantially semi-circular yoke having its inner portion of a shape similar to that of the standard and those portions extending therefrom of arcuate configuration with their free ends bent outwardly on a line passing approximately through the center of a circle upon which the outer portions of the yoke are drawn, a sleeve secured within the angular portion of the yoke and having its bore disposed in a perpendicular plane, a garbage can cover locking arm, and means securing the arm to the sleeve for swinging movement on a horizontal plane over the cover of a garbage can seated on the base.

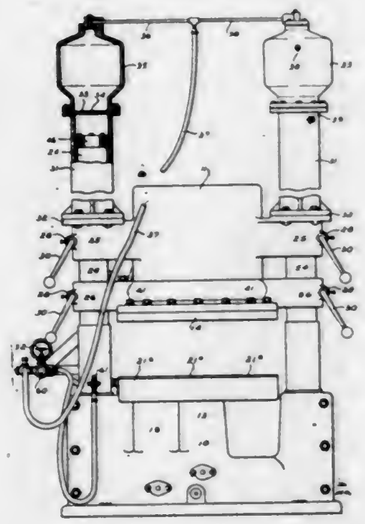


2,409,327
OXYGEN DEMAND REGULATOR
Leonard A. Wiggins, Cuyahoga Falls, Ohio
Application March 2, 1943, Serial No. 477,775
4 Claims. (Cl. 137—153)

1. In a regulator of the character described having at least an inlet chamber and an outlet chamber and a valve between said chambers, a diaphragm chamber, a diaphragm mounted in said chamber and operable by atmospheric pressure to open said valve, and means to insure the provision of such pressure comprising a perforated member arranged between said diaphragm and a wall of said diaphragm chamber, a different wall of said diaphragm chamber being provided with a plurality of openings leading to

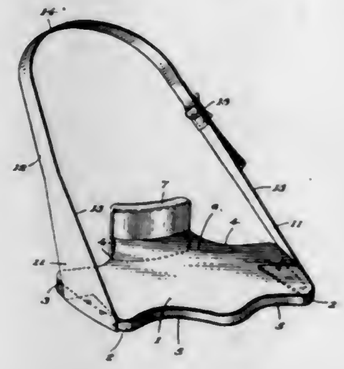
the atmosphere adjacent said perforated member.

2,409,328
ILLUMINATING UNIT FOR OPTICAL PROJECTORS
Raymond S. Wilder, Waltham, Mass.
Application October 26, 1944, Serial No. 560,387
2 Claims. (Cl. 88—24)



1. A micro-projector of the kind wherein the image of an object supported upon a work table is projected onto a screen by an objective lens mounted in a tubular support, characterized in having an illuminating unit mounted on the lens support and comprising an annular housing having an inner cylindrical wall defining an aperture designed to receive the upper end of the axial cylindrical walls united by a radial web and spaced apart a distance only sufficient to accommodate the lamps employed, the inner wall defining a stop shoulder engageable with the end of the tubular support to limit axial movement of the housing, the housing also having a radially extending web portion provided with a series of spaced lamp sockets whose axes are parallel to that of the housing, the sockets being disposed symmetrically with respect to the optical axis of the lens and being so spaced laterally from said axis that lamps disposed in the sockets are out of the field of vision of the lens, the housing also having an outer cylindrical wall of a depth greater than the heights of the filaments of lamps disposed in the sockets, said outer wall being of an internal diameter such as to afford approximately just sufficient space for the lamps arranged in the sockets and having an inner reflecting surface.

2,409,329
ORGANIC THIOCYANO COMPOUNDS
Paul H. Williams, Berkeley, Calif., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application February 28, 1944, Serial No. 524,309
9 Claims. (Cl. 260—454)



4. An ester of a polyalkyl cyclohexanol and a thiocyano-substituted aliphatic carboxylic acid, which ester contains no more than three alkyl radicals directly linked to nuclear carbon atoms of the cyclohexyl radical, and wherein all of the alkyl radicals are directly linked to nuclear carbon atoms by means of primary carbon atoms, only one of the alkyl radicals being directly linked to the nuclear carbon atom in the 5 position relative to the acid radical, and the other alkyl radicals being directly linked to the nuclear carbon atom in the 3 position relative to the acid radical.

2,409,330
CORE MAKING MACHINE
David Howard Wood, Barnt Green, and Herbert James Roe, Knowle, England
Application April 12, 1945, Serial No. 587,988
In Great Britain November 20, 1943
2 Claims. (Cl. 22—10)

1. Core making or blowing machine having a container for sand, means including a table for supporting a core box below the container, an apertured pressure and sand delivery plate at the base of the container, means for supplying air under pressure to the container for forcing sand through said apertured plate into the core box, a pair of pillars disposed one at each end of the table, means for guiding the container on the pillars and means for clamping it thereon, a pair of cylinders secured to the container and capable of sliding on the pillars each of which pillars is adapted to act as a fixed piston in one of said cylinders, combined pneumatic and hydraulic means whereby fluid pressure may be admitted to the cylinders above the piston faces of the pillars for raising said container thereon, and means fixedly mounted in each cylinder above the pillars to form a restricted passageway for the passage of fluid from the upper part to the lower part of the cylinder, which means act as dashpots to give a smooth and slow action during ascent and descent of the cylinders and the container.

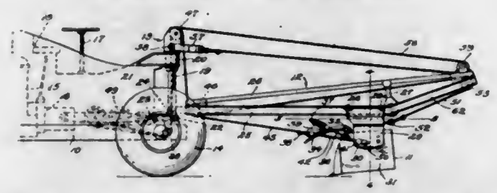
2,409,331
BABY CARRIER
Frederick D. Wood, Jacksonville, Fla.
Application October 9, 1944, Serial No. 557,828
2 Claims. (Cl. 224—6)

1. An infant supporting device, comprising an elongated seat, the ends of which are curved toward each other, spaced leg depressions at each side of the seat, an adjustable shoulder strap attached to the seat at its ends, and a curved block secured at its transverse medial line at one side of the seat to support the same from the body of the carrier.

2,409,332
RESINOUS COMPOSITION AND METHOD FOR PRODUCING THE SAME
Howard C. Woodruff, Philadelphia, Pa.
No Drawing. Application May 29, 1942, Serial No. 444,999½
3 Claims. (Cl. 260—104)

2. A new composition of matter, a terpenic resinous acid ester of pentaerythritol-glycerine ether-alcohol.

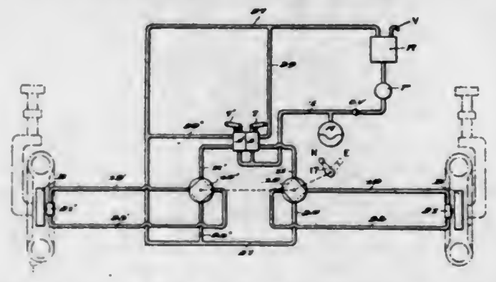
2,409,333
LUBRICANT AND METHOD OF PREPARING SAME
Donald L. Wright, Westfield, and Charles W. Bohmer, Jr., Elizabeth, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application September 16, 1943, Serial No. 502,640
4 Claims. (Cl. 252—59)



1. A chemically resistant lubricant having approximately the following composition in percent by weight:

	Percent
Mineral white oil	50–85
Petrolatum (light oil-free)	10–50
Paraffin wax	0–10

and an amount of a viscosity-increasing linear polymer of an oxygen-containing aliphatic compound, said amount being selected according to the average molecular weight of said polymer, indicated by the following table:

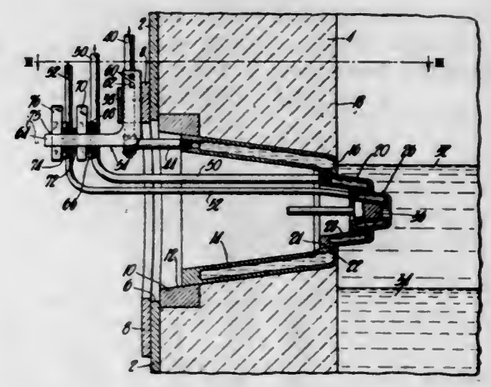


Average mol. wt. of polymer	Percent by weight
5,000	10–50
12,000	8–20
30,000	7–15
80,000	5–10
150,000	0.3–2

2,409,334
TRENCH EXCAVATING MACHINE
William G. Van Voorhis, Columbus, Ohio, assignor to The Jaeger Machine Company, Columbus, Ohio, a corporation of Ohio
Application November 13, 1944, Serial No. 563,125
4 Claims. (Cl. 214—102)

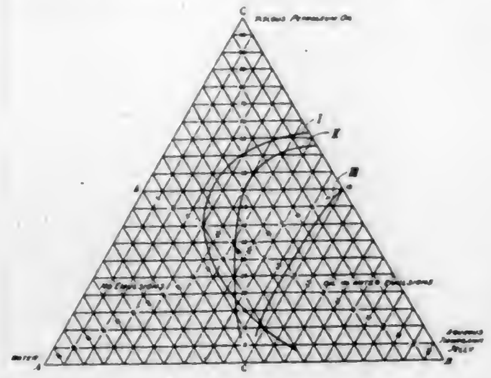
1. In a material excavating and loading machine, a portable base vehicle, a mast mounted on said base vehicle and turnable about its longitudinal axis, a pivot at one end to said mast beam for raising and lowering movement in vertical planes and swinging movement in horizontal planes, a scoop suspended from said boom and movable longitudinally thereof toward and away from said base vehicle, said scoop being openable at the front end thereof to provide for the admittance of excavated materials therein and the discharge of such materials therefrom, a door hinged to said scoop and normally closing the front end thereof, bolts pivoted to the sides of said scoop, turnable bearing elements carried by said door for the slidable reception of said bolts, coil springs confined between the outer ends of said bolts and said turnable bearing elements, said springs normally serving to maintain said door in its position of scoop closure, yoke means connected with said door and said scoop for limiting the opening movement of said door, and a pair of drum-actuated cables carried by said base vehicle, one of said cables being connected with said door and the other of said cables with said scoop, whereby to effect automatic actuation of said door and the movement of said scoop longitudinally of said boom toward and away from said base vehicle.

2,409,335
HYDRAULIC BRAKE SYSTEM
Yurgen Z. von Stackelberg, Baltimore, Md., assignor to The Glenn L. Martin Company, Middle River, Md., a corporation of Maryland
Application November 22, 1944, Serial No. 564,594
11 Claims. (Cl. 188—152)



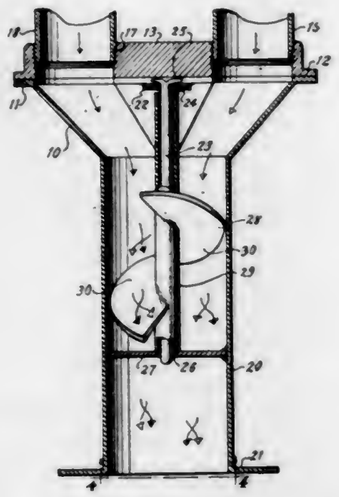
1. A hydraulic brake system comprising a reservoir, a pump to deliver fluid under pressure from the reservoir to a fluid line, and a brake, a pressure control valve in said fluid line controlling the flow of fluid to said brake, said fluid line extending from said pressure control valve to said brake including a flow control valve connected to receive fluid under pressure from the outlet of said pressure control valve and a shuttle valve on said brake, a pair of fluid lines extending from said flow control valve to the inlet ports of said shuttle valves, one of said lines constituting the normal pressure line and the other an emergency pressure line, said flow control valve adapted to direct fluid through either the normal or emergency pressure line, the other line affording a vent for said shuttle valve through said flow control valve.

2,409,336
CHEMICAL-RESISTANT COATING MATERIAL
David W. Young, Roselle, N. J., assignor, by mesne assignments, to Jasco, Incorporated, a corporation of Louisiana
No Drawing. Application September 20, 1941, Serial No. 411,651
3 Claims. (Cl. 260—32)



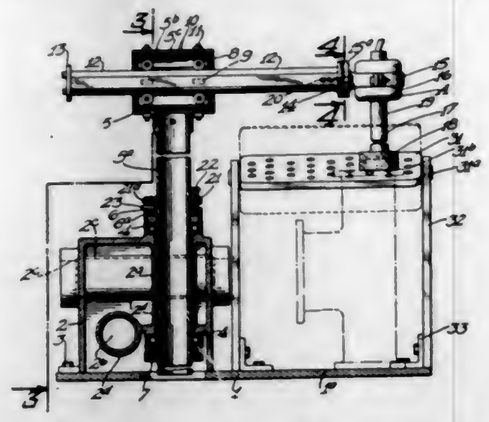
1. A chemical-resistant and non-tacky film-forming paint composition comprising in 100 parts by weight of the composition about 12 to 15 parts by weight of polybutenes having molecular weights between 60,000 and 300,000 as determined by the Staudinger viscosity method, about 55 to 70 parts by weight of a volatile hydrocarbon liquid, and 4 to 8 parts by weight of an alkanol having 1 to 3 carbon atoms per molecule dissolved in said volatile hydrocarbon liquid with the polybutenes, remaining parts of the composition being a suspended solid filler with a small amount of a wetting agent.

2,409,337
CINDER NOTCH COOLER CLAMP
Joseph Yuhas, North Braddock, Pa.
Application January 3, 1946, Serial No. 638,763
6 Claims. (Cl. 266—41)



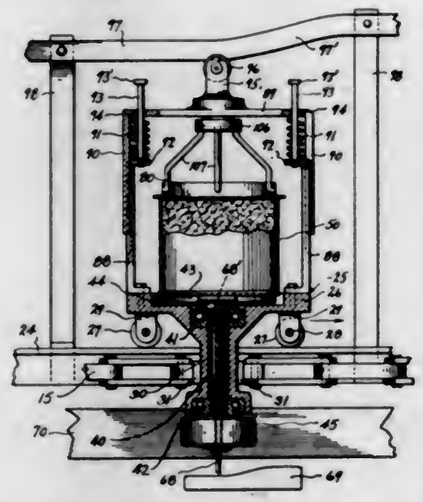
1. In the combination of a blast furnace having a wall comprising a shell and a lining, a cinder notch therethrough, an outer cooler for the cinder notch projecting through the furnace wall, a monkey cooler within the outer cooler and a monkey within the monkey cooler, said coolers engaging one another in the order named along generally conical seats decreasing in diameter in a direction toward the interior of the furnace, said monkey and monkey cooler being water-cooled, the latter two having inlet and outlet cooling water carrying pipes having portions of appreciable length projecting rearwardly therefrom in a direction generally parallel to the axes of the coolers, the improved holding means for the monkey and monkey cooler which comprises clamping means engaging the inlet and outlet cooling water pipes of the monkey and monkey cooler at points outwardly of the furnace shell, a clamp holding member having a generally straight arm parallel to the axes of the coolers attached adjacent one end to the clamping means, and means at the other end of said arm of the clamp holding member attaching it to the furnace shell at a location lying at least substantially in a plane containing the axes of the coolers.

2,409,338
EMULSION
William H. Alton, Westport, and Francis E. Hutchins, Norwalk, Conn., assignors to R. T. Vanderbilt Company, Inc., New York, N. Y., a corporation of New York
Application May 28, 1943, Serial No. 488,916
2 Claims. (Cl. 167—63)



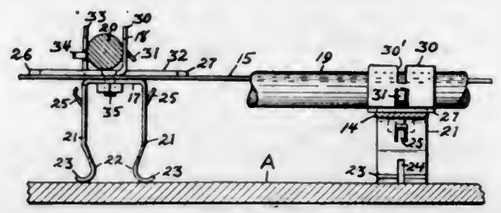
1. An oil-in-water emulsion suitable for use in cosmetic and pharmaceutical preparations comprising about 1%–65% of a viscous petroleum oil, about 34%–98% of water and about 0.75%–10% of the solids of an inorganic jelly produced as the aqueous effluent by centrifuging an aqueous suspension of a swellable clay containing 5%–10% by weight of solids at 800–1500 g.

2,409,339
INTERMIXING DEVICE
J. D. Ballard, Fort Worth, Tex.
Application February 3, 1945, Serial No. 575,999
2 Claims. (Cl. 259—9)



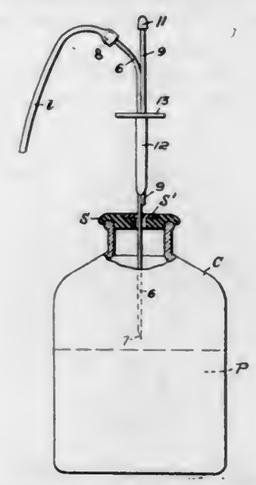
1. A device for producing a single variegated frozen commodity from at least two moving different frozen commodities from separate sources of supply including, a single conduit having a plurality of spaced inlets at one end thereof and for conducting the said differentiated frozen commodities in a moving differentiated frozen mass, said conduit having an outlet at its opposite end, and rotatable means having an axis coincident with the longitudinal axis of the conduit between said inlets and outlet actuated solely by the movement of the frozen mass for intertwining said differentiated commodities without intermixing the same, said rotatable means extending to either side of said coincident axes.

2,409,340
PORTABLE SURFACE GRINDER
Francis M. Bohler, Long Beach, Calif.
Application March 1, 1944, Serial No. 524,519
7 Claims. (Cl. 51—126)



2. In a portable surface grinder, a base, a head rotatably mounted thereon with the head extending from the base, said head being mounted in such a manner as to rotate freely with respect to the base, a grinder carried by the head, means for adjusting the head toward and from the base, said means comprising a shim and an adjusting screw on the head for separating the head with respect to the base to receive the shim, said shim being removable for allowing the head to be moved towards the base, the thickness of the shim positively determining the limits of grinding operations.

2,409,341
CENTRIFUGAL EXTRACTOR
Edward M. Borg, Seattle, Wash.
Application June 8, 1943, Serial No. 490,022
10 Claims. (Cl. 226—22)



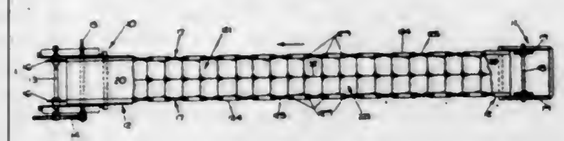
7. In a machine for centrifugal extraction of liquid content from a product, a can conveyor, means for moving the conveyor along a path of travel, an endless belt having a part thereof operating parallel with said path and in a direction opposite the travel of the carrier, a spindle in the carrier, a can mounting pad on the spindle, means for holding an open product-filled can on the pad and for pressing against its solid content during an extracting operation, a drive wheel on the spindle adapted to engage the belt to rotate the spindle and can for centrifugal extraction of liquid content from the product.

2,409,342
ROD SUPPORT FOR REINFORCED CONCRETE STRUCTURES
Joseph J. Cassidy, Fort Wayne, Ind.
Application May 15, 1944, Serial No. 535,606
6 Claims. (Cl. 72—122)

6. A reinforcing rod support consisting of stools having members adapted to be secured to the floor or wall of a form, a spacer consisting of a perforated strip supported on said stools, clasps disposed on said spacer opposite said stools respectively, adapted to receive reinforcing rods, said clasps having upturned arms with notched ends and provided with outwardly extending prongs, means connecting said clasps and corresponding stools through selected perforations in said strip, and a wire entwined through the notches in each clasp around the prongs thereon and over the reinforcing rods positioned therein.

2,409,343
FLUID INLET-OUTLET DEVICE, PARTICULARLY FOR CLINICAL PURPOSES
Raymond M. Curtis, Baltimore, Md., assignor to Macalaster Bicknell Company, Cambridge, Mass., a corporation of Massachusetts
Application April 5, 1943, Serial No. 481,828
1 Claim. (Cl. 128—214)

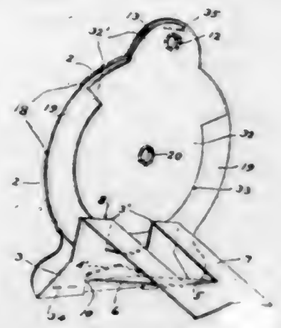
A dual clinical needle of non-corrosive metal such as stainless steel, for piercing self-sealing insertion through a puncturable closure of a container, said needle comprising a pair of generally parallel tubes of unequal length having their channels closely contiguous and each of uniform diameter throughout, said tubes constructed and arranged for use interchangeably one as a vent and the other as an inlet or as an outlet respectively to admit fluid to an upright closed container or to withdraw fluid from such container in an inverted position, particularly in the transfer of blood and blood plasma, said tubes being open at both ends, tubing attaching formations at one end of each tube, said ends being disposed at a divergent angle to each other and terminating at adjacent transverse planes at the outer end of the needle as a whole, the opposite or inserting end of the longer tube having a bevelled and sharpened open point for piercing insertion of the needle in sealing relation through puncturable closure element of a container and the proximate inserting end of the shorter tube being shaped and disposed for entry through the closure element following penetration thereof by the longer tube and being set back from the pointed end of said longer tube to an extent permitting the shorter tube to be positioned wholly outside a container while the longer tube has its pointed end projected into such container through and substantially beyond the closure element thereof for sealed inflow of fluid to the container, means interattaching the tubes along their contiguous portions from the inserting end of the shorter to their point of divergence adjacent their tubing attaching ends, and a laterally projecting disk-like flange surrounding and secured to an interattached portion of the tubes spaced closer to said point of divergence than to the inserting end of the shorter tube, both tubes being of such relatively small cross-sectional diameter and having their axes so contiguously disposed along their interattached portions that their interaxial distance is less or not appreciably greater than one-half their combined outer diameters, the longer tube having an external longitudinal seating recess corresponding in length to that of the shorter tube and the latter being in substantial part received and secured in said recess, and whereby their interattached portions are adapted for penetrative passage as a unit through the puncturable container closure element.



2,409,344
PLASTICIZING CHLOROPRENE POLYMERS
Arnold R. Davis, Riverside, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application January 7, 1943, Serial No. 471,605
12 Claims. (Cl. 260—36)

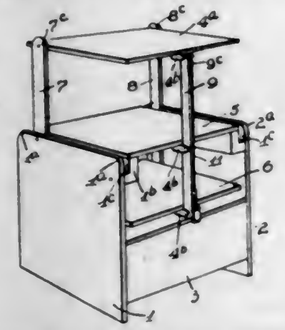
1. A process of softening a rubber-like chloroprene polymer which comprises mixing the polymer with a minor proportion of its weight of a salt of a dialkyldithiophosphoric acid and a salt-forming organic base selected from the group consisting of the aliphatic secondary amines, the mononuclear aromatic primary amines, the cycloaliphatic amines, piperidine, guanidine, the mono- and di- mononuclear aryl guanidines, biguanide, the mono- mononuclear aryl biguanides, guanylthiourea and isothiourea.

2,409,345
PROCESS FOR THE PREPARATION OF NICOTINIC ACID
Russell Tattershall Dean, Stamford, Conn., and Victor L. King, Bound Brook, N. J., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application March 31, 1942, Serial No. 437,017
3 Claims. (Cl. 260—295.5)



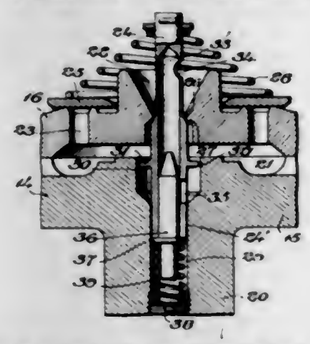
1. In the manufacture of nicotinic acid by oxidizing nicotine nitrate with nitric acid to nicotinic acid nitrate and converting the latter to nicotinic acid; the improvement which comprises adding an aqueous solution of nicotine nitrate to from about 9 to 16 parts of strong nitric acid per mol part of nicotine nitrate, said nitric acid being free from other oxidizing compounds, and heating the mixture at from about 90° to 110° C. without adding any further additional oxidizing compounds while blowing a slow stream of air across the surface of the mixture being heated.

2,409,346
MATERIAL HANDLING MECHANISM
Wilbur R. Dickson, Columbus, Ohio, assignor, by mesne assignments, to The Jeffrey Manufacturing Company, a corporation of Ohio
Application February 23, 1945, Serial No. 579,328
13 Claims. (Cl. 198—168)



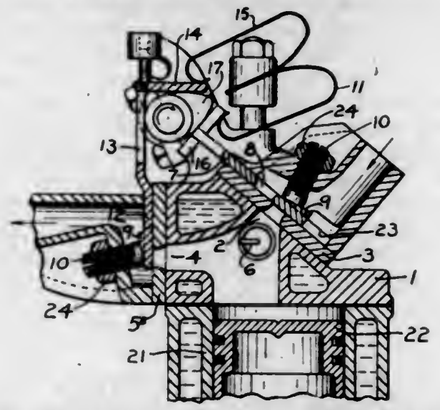
1. A conveyor including a trough having a bottom, a pair of laterally spaced endless conveyor chains movable over said bottom, and roll and rail means for supporting said chains for rectilinear movement, said chains including links having interior side bar plates of a height considerably greater than their exterior side bar plates to provide the material retaining side walls of said conveyor and co-operating with said bottom to form the material holding and conveying trough thereof, flights extending between said side walls, said roll and rail means co-operating to support the bottoms of said side walls off but close to said bottom.

2,409,347
DIAL CALENDAR
Norman L. Dootson, San Francisco, Calif.
Application April 20, 1942, Serial No. 439,659
5 Claims. (Cl. 40—113)



1. In a dial calendar of the character described, an outer face card provided with one only continuous substantially three-quadrant circular arcuate row of numerals spaced inwardly from the margin of the card denoting the days of the month, a disk pivotally mounted at the underside of the face card bearing two only concentrically spaced circular rows of names of the days of the week in repetition, said spaced circular rows of names of the days being of diameters to come respectively just within and without said arcuate row of numerals, arcuate cut-out openings provided in said face card within and without said arcuate row of numerals, one of said cut-out openings being a substantially semi-circular slot aligned over the inner of said spaced circular rows of names of the days and extending for more than half the circumference of said arcuate row of numerals, and the other cut-out openings comprising two open marginal notches extending arcuately from points substantially radially aligned with the ends of said semi-circular slot but aligned over the outer of said spaced circular rows of names of the days, so that said arcuate row of numerals extends unbroken between them.

2,409,348
CONVERTIBLE APPLIANCE STAND AND SERVICE TABLE
William I. Evans, Los Angeles, Calif.
Application August 21, 1944, Serial No. 550,363
4 Claims. (Cl. 211—2)

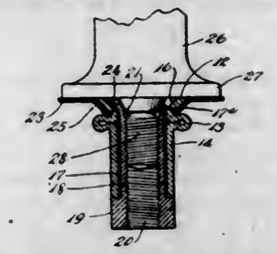


2. In a convertible appliance stand and service table of the class described, the combination of two vertically disposed side members, an intermediate table member rigidly secured thereto at their upper edges and spaced from the inner sides thereof, a pair of table connecting members interposed between said intermediate table member and said side members at one side thereof and pivotally mounted thereon intermediate their ends, a pair of shelf members each pivotally connected near one side edge of each shelf member near opposite ends of said connecting members, a single shift control bar pivotally connected to said shelf members at their middle opposite edge from said connecting members, and latch means mounted on said control bar for holding said shelf members in certain relation to each other.

2,409,349
HYDRAULIC SHOCK ABSORBER
Nevin S. Focht, Syracuse, N. Y.
Application October 22, 1945, Serial No. 623,762
6 Claims. (Cl. 188—88)

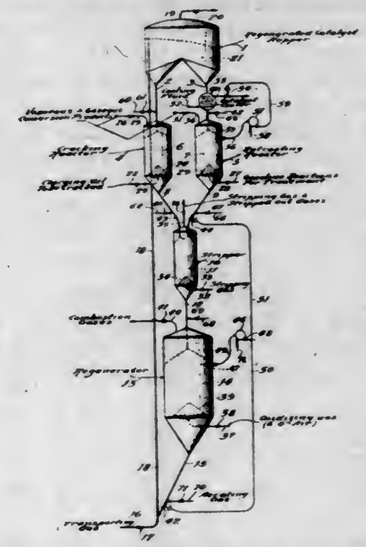
1. In a hydraulic shock absorber, a cylinder, a piston reciprocable therein, a liquid reservoir, a head closing one end of said cylinder and having therein a port affording communication between said end of said cylinder and said reservoir, a metering pin extending through said port and inwardly movable to close and outwardly movable to open the same, yieldable means tending constantly to urge said pin inwardly to a port-closing position, the inner end of said pin being exposed within the said end of said cylinder for subjection to liquid pressure to urge said pin outwardly and thus open said port, said pin having a bore extending longitudinally thereof, said bore opening through the outer end of said pin and being in constant communication with said end of said cylinder, said head having a well and said pin having a piston portion disposed in said well to provide a dash-pot to resist outward movement of said pin, said pin having a side opening affording communication between said bore and said well outwardly of said piston portion, a plunger pin slidable in said bore, and yieldable means tending constantly to urge said plunger pin inwardly to a position closing the side opening in said metering pin, said plunger pin being movable outwardly by pressure of liquid against its inner end to open said side opening and thus admit liquid to said well to urge said metering pin inwardly.

2,409,350
INTERNAL-COMBUSTION ENGINE
Mark L. Forrest, Leavenworth, Wash.
Application March 26, 1945, Serial No. 584,936
9 Claims. (Cl. 123—188)



1. In an internal combustion engine having a valve port affording communication with the combustion chamber, a valve, means guiding said valve for movement in a plane transverse to the port to open or to close the same, and cooperating with the valve to afford a seat for that face of the valve which is nearest the combustion chamber, a single incline upon and facing outwardly from the valve, and a single means fixedly disposed to engage said incline as the valve reaches closed position, and arranged relatively to the incline to hold the valve securely seated when so engaged, but disengageable from the incline by opening movement of the valve.

2,409,351
STITCH PICKER
Ishmael H. Gearhart, Salem, Va.
Application January 24, 1946, Serial No. 643,143
3 Claims. (Cl. 12—17)



1. A device of the kind described, comprising a rotary arbor, and a circular member fixed to the arbor and having a work engaging periphery provided with grouped series of spaced protuberances, each of one group being of substantially half-circular outwardly arched formation, the protuberance of one group being disposed radially of the axis of the arbor and the others of said group being reversely angled thereto.

2,409,352
RIVET
Ray H. Gill, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application January 29, 1943, Serial No. 473,939
10 Claims. (Cl. 85—40)

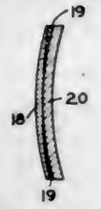
1. A tubular rivet structure comprising a cylindrical body portion having a bore of substantially uniform diameter extending therethrough and terminating in a counterbore, said cylindrical body portion including a flanged end and an expansible portion adjacent said flanged end, a tubular body portion having a portion of reduced diameter disposed within said bore of said cylindrical body portion at the end opposite said flanged end and having a flange portion of substantially the same outer diameter as said cylindrical body portion for applying axial force to said cylindrical body portion for expanding said expansible portion, said tubular body portion having a threaded bore for engaging with a threaded member inserted in said rivet from said flanged end, and fastening means for securing together said cylindrical body portion and said tubular body portion.

2,409,353
CONVERSION OF HYDROCARBONS
Chester J. Giuliani and Charles H. Angell, Chicago, Ill., assignors to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application July 24, 1944, Serial No. 546,264
3 Claims. (Cl. 196—52)

1. The process of catalytically cracking hydrocarbon oil heavier than gasoline and simultaneously treating gasoline fractions with cracking catalyst to improve their quality, which comprises continuously supplying separate streams of active cracking catalyst particles to separate confined reaction zones, contacting the catalyst in one of said zones with said oil to be cracked and therein effecting the cracking reaction, contacting the

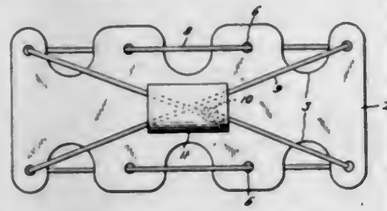
catalyst in the other of said zones with said gasoline fractions and therein effecting their conversion to a product of improved quality at a temperature lower than that employed in said cracking operation, removing a stream of resultant contaminated catalyst particles from each of said reaction zones, supplying both streams to a common regenerating zone, therein regenerating the catalyst by an exothermic reaction, returning resultant regenerated catalyst, containing heat stored therein in the regenerating step, in part to the cracking reactor at a temperature relatively close to that desired for conducting said cracking reaction, and in part to the other reactor at a lower temperature relatively close to that desired for said treatment of gasoline fractions, and controlling the rate at which catalyst is passed through the last-named reactor in response and in direct relation to temperature variations in the regenerating step to maintain a substantially constant temperature in the regenerating zone, and supplying, in the catalyst entering the cracking reactor, substantially all of the heat of endothermic reaction required in the latter zone.

2,409,354
GAS MASK CARRIER POCKET ATTACHMENT FOR FIREMEN'S COATS
Alfred M. Grunwell, Washington, D. C.
Application February 10, 1945, Serial No. 577,319
7 Claims. (Cl. 128—144)



1. In combination with a coat; a carrier pocket for a respiratory apparatus forming a part of the coat, the respiratory apparatus including an air purifying canister and a flexible hose for delivering purified air to a gas mask from the canister, said pocket serving as a support for the canister when the respiratory apparatus is in use, and adapted to entirely contain the aforesaid parts of the respiratory apparatus when the latter is not in use.

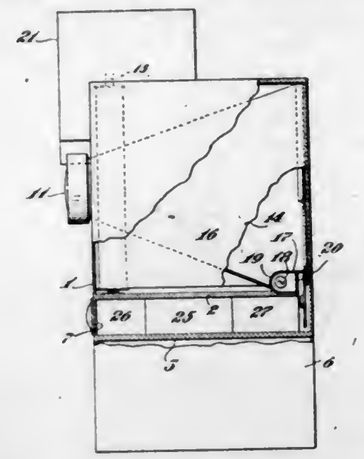
2,409,355
AIRPLANE TIRE
Alfred A. Human, Sacramento, Calif.
Application May 28, 1943, Serial No. 488,927
3 Claims. (Cl. 244—103)



1. In an airplane wheel, an airplane tire having a plurality of foldable air pockets on the side thereof, adapted to rotate the wheel when the same is exposed to an air stream, means adapted to collapse said pockets and thereby to prevent rotation of said wheel and means for operating the first mentioned means.

2,409,356
GOGGLE
Charles F. Hutchings, Perinton, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a corporation of New York
Application April 15, 1944, Serial No. 531,175
2 Claims. (Cl. 88—54)

1. In a goggle or the like having a frame carrying lenses, the combination of a semi-transparent metallic layer deposited on the front surface of each lens, the layer increasing in thickness from a minimum at the central portion of the lens to a maximum at the edge of the lens, said layer being substantially neutral to transmitted light and a layer of colored transparent material covering said semi-transparent layer, said layer of colored material substantially reducing the amount of light which is reflected by the outer surface of said semi-transparent layer.



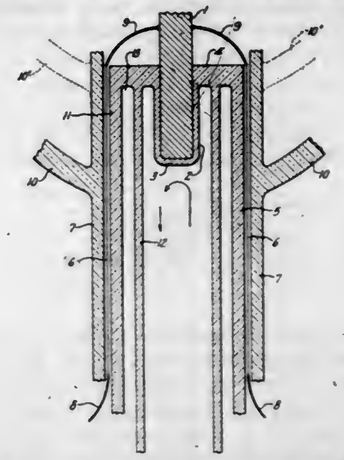
2,409,357
HOLDER FOR BOTTLES
Horace Greely Jackson, Woodstown, N. J.
Application August 5, 1943, Serial No. 497,495
1 Claim. (Cl. 224—45)

A holder for use in carrying bottles of the type having a bead around the neck thereof comprising an elongated panel provided in one side edge thereof with round bottomed notches for fitting around the necks of the bottles under the beads, said notches having flaring mouths to facilitate entering the necks in said notches, and an endless cord slidably extended through the panel along said side and across the mouths of the notches for tightening against the necks under pull on said cord, the cord embodying crossed hand grip loops for use in carrying the panel and bottles, said panel having a row of apertures therein extending along said side with the apertures alternating with the notches and through which said cord is slidably extended across said mouths, said crossed loops being operative under pull thereon to tighten the cord across the mouths of all of said notches.

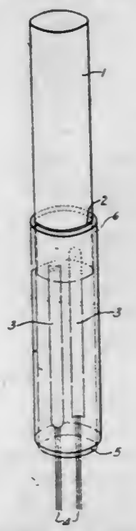
2,409,358
AUTOMATIC RECORDING APPARATUS
Jacob J. Kaplan, Boston, Mass.
Application September 12, 1942, Serial No. 458,116
15 Claims. (Cl. 88—16)

1. Recording apparatus comprising a camera having a shutter for controlling the period of exposure, actuating means including a solenoid for opening and closing said shutter, the shutter being closed so long as the solenoid remains deenergized and being open so long as the solenoid is energized, timing mechanism including relatively movable contacts electrically connected with said solenoid for controlling the operation of said shutter, photoelectric means controlling the relative position of said contacts so as to vary the period of energization of said solenoid and thereby

vary the duration of exposure in accordance with the intensity of incident light, power supply lines connected with said solenoid and contacts, a control switch for said power supply lines, and a clock mechanism for operating said switch at predetermined times during a specified period.



2,409,359
THERMORESPONSIVE CABLE
Richard D. Kaul, Fairfield, Conn., assignor to The Sealand Corporation, Southport, Conn., a corporation of Connecticut
Application August 17, 1943, Serial No. 499,000
5 Claims. (Cl. 200—143)

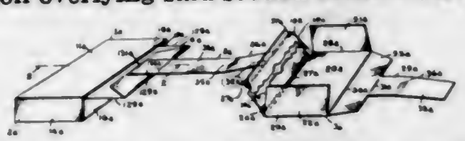


1. A thermo-responsive cable comprising inner and outer tubular conductors, insulating material between said conductors and a core of fusible conducting material within the inner conductor, the said inner conductor having longitudinally spaced apertures but having an otherwise continuous wall.

2,409,360
SEAL STRUCTURE FOR ELECTRIC LAMPS AND SIMILAR DEVICES
Eric Kettlewell, Kingsbury, London, England, assignor to General Electric Company, a corporation of New York
Application March 30, 1944, Serial No. 528,660
In Great Britain April 3, 1942
7 Claims. (Cl. 176—126)

1. The combination with a vitreous refractory envelope wall having an outward projecting vitreous portion affording an internal pocket, and a discharge electrode fitted into said pocket, of an external fluid conduit wall attached to said envelope wall around its said outward projecting portion, and means for circulating cooling fluid in the conduit in contact with said outward projecting wall portion to the inside of which said electrode is attached, thus cooling said electrode.

2,409,361
SEAL FOR ELECTRIC LAMPS AND SIMILAR DEVICES
Eric Kettlewell, Kingsbury, London, England, assignor to General Electric Company, a corporation of New York
Application March 30, 1944, Serial No. 528,660
In Great Britain April 3, 1942
2 Claims. (Cl. 49—92.5)

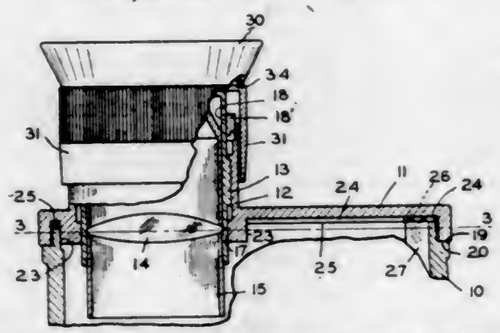


1. In a seal of the class described, the combination of a metallic rod-like electrode and a core member of vitreous material of substantially the same diameter aligned in abutting end-to-end relation, a metallic foil conductor including a portion wrapped around the end of said electrode adjacent said core member and another portion extending therefrom longitudinally of said core member, and a sleeve of vitreous material fused around said core member and the portion of said electrode which is wrapped with foil, said foil conductor being embedded in the fused seal.

2,409,362
PACKAGE
Max Kleinmann, New York, N. Y., assignor to American Safety Razor Corporation, Brooklyn, N. Y., a corporation of Virginia
Application January 1, 1942, Serial No. 425,295
2 Claims. (Cl. 206—46)

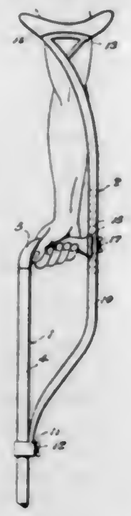
1. A package adapted to be opened and closed for use with a substantially thin flat article, said

package comprising a base panel member, a second panel member hingedly attached along one side to said base member and movable to and from a position overlying said base member, a third thin flat handle member hingedly attached to the opposite side of the second member and adapted to be pulled for opening the package, said third member being movable to and from a position overlying said second member, a fourth



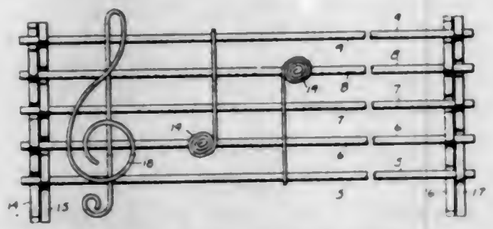
thin flat handle member hingedly attached to said base member at the opposite side from that of said second member, said article being disposed between said base and second members when the package is closed and means for detachably attaching said article to the inner face of said second member for movement therewith whereby when the said third member is pulled to open the package it will cause said article to be clear of said base member to facilitate its removal.

2,409,363
GRINDING AND POLISHING TOOL
Anton Kratky, New York, N. Y.
Application January 14, 1944, Serial No. 518,482
3 Claims. (Cl. 51—209)



1. A grinding and polishing body formed of bands of different breadth the bands being alternately wider and narrower, in such a manner that next to a wide band there is always a narrower band the abrasive grains being pressed into the gaps formed between the bands of the greater breadth.

2,409,364
OPTICAL INSTRUMENT
Henry F. Kurtz, Rochester, and Robert G. Morrison, Greece, N. Y., assignors to Bausch & Lomb Optical Company, Rochester, N. Y., a corporation of New York
Application October 13, 1943, Serial No. 506,076
8 Claims. (Cl. 88—34)

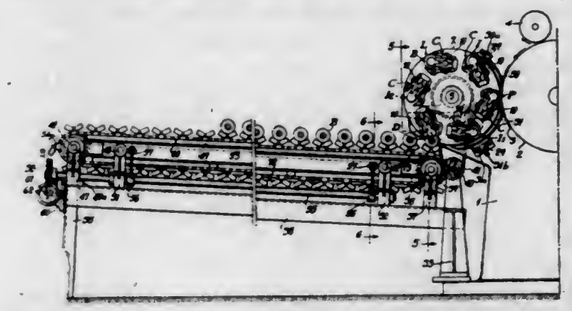


1. In a device of the type described, a body; a uniplanar surface thereon defining a reference plane; a cap for closing one end of said body; a tubular member formed integral with the cap; means carried by said tubular member, a surface on the body, said means and surface cooperating for positioning the axis of said tubular member in a predetermined position relative to said reference plane when the cap is mounted to said body; an ocular tube telescopically received by said tubular member for movement axially thereof; means for holding the axis of said ocular tube coincident with the axis of said tubular member; means for sealing the telescopic connection between the relatively movable tubular member and ocular tube; means carried by said cap and cooperative with said uniplanar surface for locating said tubular member a predetermined distance from said reference plane; and means for sealing the jointure between said cap and body.

2,409,365
CRUTCH
Thomas Lamb, New York, N. Y.
Application June 23, 1945, Serial No. 601,220
9 Claims. (Cl. 135—49)

1. A crutch comprising, in combination, a cane unit including a shaft and a handle at the upper end of said shaft, a demountable crutch unit, means for securing the lower end of said crutch unit to said shaft, and means for securing an intermediate portion of said crutch unit to the free end of said handle.

2,409,366
FRAME STRUCTURE
Felix E. Lang, Sayreville, N. J.
Application September 15, 1945, Serial No. 616,489
1 Claim. (Cl. 211—123)

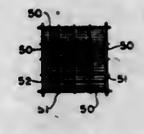


In a music frame comprising a plurality of horizontally disposed glass rods spaced from one another and arranged in parallelism the combination of two supporting standards for gripping and maintaining said rods spaced from one another and in parallelism, each standard comprising two semi-rigid members each of which is transversely interwoven with the said rods and with the members of each of said pairs oppositely interwoven with the said rods and the lower extremities of each of said members extending out of the general plane of the frame and forming leg elements.

2,409,367
PROTECTIVE CLOTHING
Charles W. Leguillon and Carroll P. Krupp, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application September 22, 1942, Serial No. 459,266
10 Claims. (Cl. 2—82)

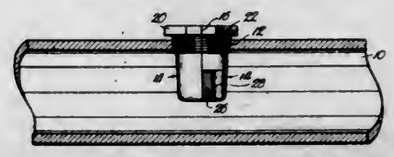
4. A flotation suit including a headpiece open at the face thereof and a torso portion of substantially water-tight flexible material and having an opening defined by said headpiece and said torso portion for admitting the wearer's body, the headpiece comprising a neck covering open at the front providing continuity of open front in said torso portion, neck covering and headpiece and having fullness at the back for freedom of movement of the wearer's head, said suit at the opening comprising a margin across and terminating at the forward margins of the open front of said neck covering, said margin comprising a multiplicity of substantially flat elements of a substantially water-tight material relatively soft and flexible as compared to the material of the torso portion and adapted to lie in overlapping relationship and in extensive contact, one with another, the edges of said elements being collectively positionable against one another in edge-on relation to the wearer's neck beneath the lower jaw to present a substantially continuous sealing surface across the edges of the elements at the neck of the wearer, and means in association with said elements for thus positioning said margin in the overlapping and contacting relationship of said elements.

2,409,368
COMBINED PRINTING PRESS AND CONVEYER MEANS
Morris Lipton, Rutherford, N. J., assignor to Sun Chemical Corporation, a corporation of Delaware
Application November 29, 1941, Serial No. 420,948
10 Claims. (Cl. 101—35)



1. A chuck for supporting a bottle in a printing position, said chuck comprising a supporting member, pairs of side-by-side collars secured to said supporting member, arms secured to the respective collars and cooperating to form a pocket for said bottle, and means operable at will whereby said collars may be adjusted circumferentially of said supporting member.

2,409,369
EAR ORNAMENT
Anthony R. Lo Curto, Brooklyn, N. Y.
Application December 8, 1944, Serial No. 567,140
2 Claims. (Cl. 63—14)



1. An ear ornament consisting of a carrier formed by two curved slender members of resilient material connected for relative movement to change the distance from end to end of the connected structure, one of said members being uppermost and the second lowermost in use, and the latter having its outer end area turned outwardly from its major plane, and an ornament secured to said last named area.

2,409,370
FABRIC
Frank G. Manson, Chicago, Ill., and James J. Maskey, Ferndale, Mich.
Original application June 7, 1943, Serial No. 489,959. Divided and this application April 25, 1945, Serial No. 590,272
4 Claims. (Cl. 139—420)

1. A light-weight fabric from which parachute canopies may be made, consisting of a warp and fill of light-weight thread having therein a network of heavy thread to provide strength to the fabric and forming a primary "rip-stop" and a further network sub-dividing the primary "rip-stop," said further network being made of medium heavy threads to provide additional strength to the fabric and forming a secondary "rip-stop."

2,409,371
MULTIPART DISTRIBUTION NOZZLE
Leon T. Mart, Mission Township, Johnson County, Kans., assignor to The Marley Company, Inc., Kansas City, Kans., a corporation of Kansas
Application November 8, 1943, Serial No. 509,384
1 Claim. (Cl. 299—114)

A spray nozzle of the character described comprising a pair of cupped sections of substantially the same contour having their edges in abutting relation to form a hollow body; a notch formed in the side wall of each section adjacent to one end thereof to provide inlet ports, said notches being diametrically opposed when the sections are together to create the hollow body; opposed notches formed in the opposite ends of the sections to establish an outlet orifice on the axis of the body; a polygonal head on the edge of the sections having the outlet orifice therein to present wrench flats; screw-threads on the ex-

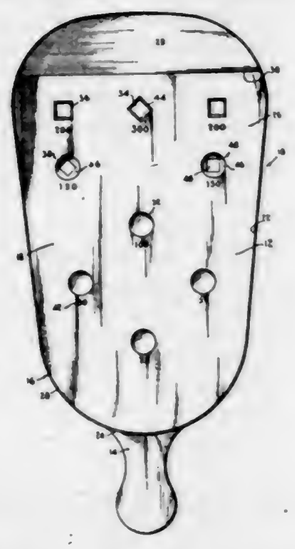
terior of the sections below the said polygonal head; and an inwardly curled lip on each section along that edge thereof forming the first mentioned notches, said lips being eccentric to the axis of the body and directed toward each other to impart a whirling motion to the water passing through the hollow body, said sections having cooperating detents formed on the abutting edges to hold the threads of the two sections in operative relation.

2,409,372

REMOVAL OF ORGANIC FLUORINE

Maryan P. Matuszak, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware

No Drawing. Application January 3, 1944, Serial No. 516,852
10 Claims. (Cl. 196—41)



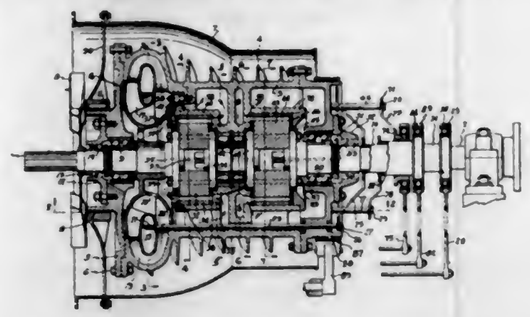
1. The process of removing organic fluorine from hydrocarbon materials containing the same which comprises treating such hydrocarbon materials with a solid contact material comprising a metal oxide catalytically active for hydrogenation and dehydrogenation reactions and containing silica as an impurity, said treating being conducted in the presence of added ammonia under conditions producing a hydrocarbon effluent of substantially reduced fluorine content and substantially free from silicon compounds.

2,409,373

GAME BOARD DEVICE

Oscar Mautner, Crestwood, and Mark K. Lebworth, New York, N. Y.

Application June 19, 1944, Serial No. 540,962
5 Claims. (Cl. 273—113)



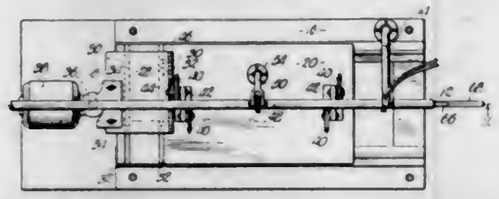
1. In a gameboard device, a gameboard including a substantially flat playing surface, a playing piece for disposition upon the playing surface, the surface having a plurality of indentations formed therein, means for manipulating the gameboard to cause the piece to move over the playing surface, and means for retaining the piece against movement off the surface, the piece including portions each of a distinctly different contour from that of another portion, and certain of the indentations having a form distinctly different from the form of others of the indentations, each contour of a portion of the piece being complementary to at least one of the forms of the indentations.

2,409,374

FLUID TRANSMISSION MECHANISM

Daniel F. McGill, Portland, Oreg., assignor to Donald W. Green, Portland, Oreg., as trustee

Application April 25, 1941, Serial No. 390,294
12 Claims. (Cl. 60—53)



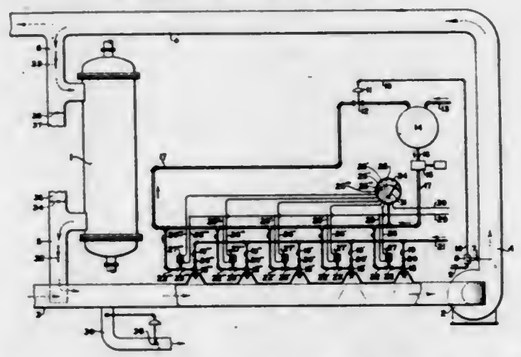
4. In a fluid transmission mechanism: a driving shaft and a driven shaft; a kinetic drive comprising a centrifugal impeller operatively connected to the drive shaft and a turbine runner; a pressure drive comprising a delivery pump operatively connected to the drive shaft and a receiving pump or motor operatively connected to the driven shaft; said drives including a common rotating member containing fluid passageways to provide a simultaneous operation of said drives, said turbine runner being operatively connected to said common rotating member.

2,409,375

APPARATUS FOR CONTOURING THE ENDS OF TUBULAR STOCK

John S. McGuire, Kansas City, Kans., assignor to C. Earl Hovey, Kansas City, Mo., as trustee

Application May 7, 1942, Serial No. 442,048
1 Claim. (Cl. 33—21)



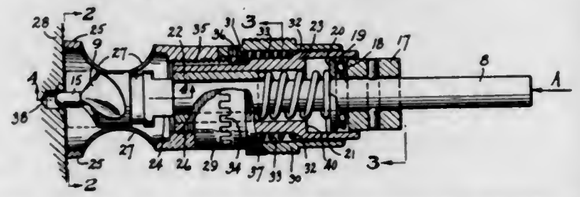
A machine for contouring the ends of tubular articles comprising a support; a cutting or marking tool fixed to the support; a platform mounted on the support for longitudinal rectilinear reciprocating movement; rotatable discs on the platform for supporting the tube being contoured adjacent to the cutting or marking tool, said discs having their axes of rotation parallel to the path of travel of said platform, said tube being in frictional engagement with said supporting discs for rotation therewith as one of said discs is rotated; a table carried by the platform and adapted to move transversely with respect to the support, the said platform, and the said tube; a pinion on at least one of said discs; a rack on said table parallel to the path of travel of the table in operative engagement with said pinion; a planar template removably secured to the table having a working edge contoured to present both longitudinal and transverse components; and stationary driving means engageable with the working face of the template for moving the platform through its paths of travel when the longitudinal components of the working face are engaged and for shifting the table when the transverse components of the work face of the template are engaged by the driving means, whereby the tube is rotated as the table is shifted and the tube is bodily moved with respect to the cutting or marking tool as the platform travels through its path of movement.

2,409,376

METHOD AND MEANS FOR CONTROLLING THE COOLING OF CONVECTIVE FLUID STREAMS

Lev A. Mekler, Washington, D. C., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware

Application June 8, 1942, Serial No. 446,306
5 Claims. (Cl. 23—1)



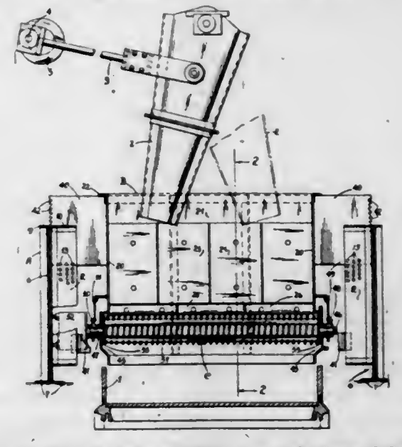
1. A method for dissipating excess heat from a zone in which heat is generated, which comprises passing in indirect heat exchange relation with said zone a convective fluid at a temperature above the boiling point of water but below the temperature prevailing in said zone, thereby increasing the temperature of said fluid, removing the latter from heat exchange relation with said zone and cooling the same by injection of water thereinto at a regulated rate and evaporation of the thus injected water, subsequently returning resultant cooled fluid, including steam evolved from the injected water, into heat exchange relation in said zone, and controlling said rate by varying the upstream pressure of said water in response to variations in the tempertaure of said fluid at a point in its circulation between said cooling and said return into heat exchange relation with said zone and varying the number of points of water injection as said pressure varies.

2,409,377

MICROMETER STOP COUNTERSINK

Wade E. Miller, Los Angeles, Calif., assignor to Aircraft Tools, Inc., Los Angeles, Calif., a corporation of California

Application January 31, 1944, Serial No. 520,569
3 Claims. (Cl. 77—55)



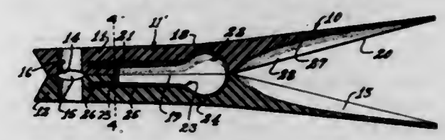
3. In a stop countersink, a threaded body element having an axial groove transecting the threads thereof and a reduced portion, a stop member adjustable on and relative to said body element and arranged to engage work, a manually operable sleeve surrounding said body element and the reduced portion thereof and longitudinally slidable on said body member, said sleeve provided with means to engage said axial groove to hold the same against turning movement, said stop member and sleeve having interengaging teeth, and a spring surrounding the reduced portion of said body member and seated in said sleeve to maintain the teeth of said sleeve and stop member engaged, said sleeve being manually operable against the tension of said spring to disengaging position with respect to said stop member, whereby said stop member may be adjusted on said body member.

2,409,378

FEEDING METHOD AND APPARATUS

Milton F. Morgan, Shaker Heights, Ohio

Application March 21, 1945, Serial No. 583,977
10 Claims. (Cl. 266—21)

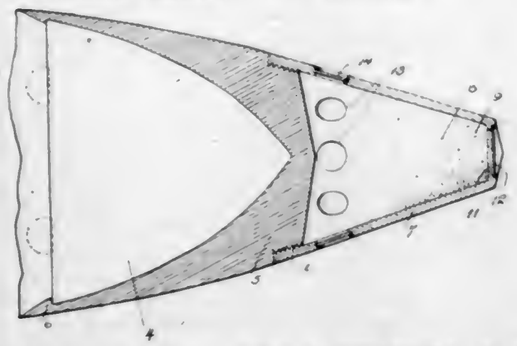


1. The method of feeding a sinterable mixture to a sintering machine pallet which comprises the steps of discharging a stream of such material downwardly toward and back and forth above the pallet, deflecting the falling material angularly toward the side of a vertical abutment, and mixing and fluffing the material below the abutment and just above the pallet.

2,409,379

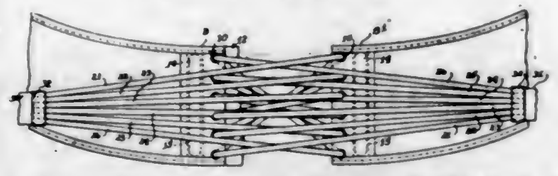
CLOTHESPIN

Earl M. Mosaly, Eagle Rock, Calif.



Application November 4, 1944, Serial No. 561,945
1 Claim. (Cl. 24—137)

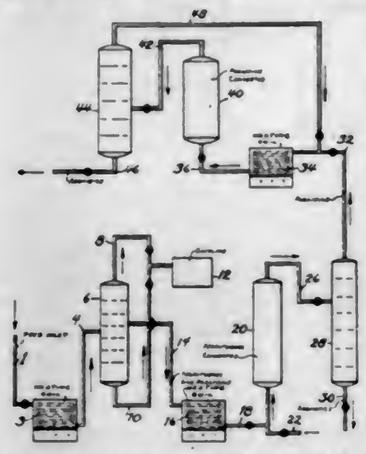
A clothes pin comprising a pair of arms, said arms being identical, each arm including a body having a gripping portion and an operating portion, each arm gripping portion having an elongated recess extending along the inner face thereof, each recess terminating near the free end of the associated gripping portion, each body adjacent to the free end of the gripping portion including a portion overhanging one end of the recess to provide a shoulder, the end of each recess remote from the shoulder having a substantially semicylindrical groove therein, the grooves being complemental and a spring including a pair of legs joined by a substantially cylindrical intermediate portion, the cylindrical shaped intermediate portion of the spring being seated in the grooves of said arms, the entire outer periphery of the spring cylindrical portion contacting the walls of the grooves, the legs of the spring extending along the gripping portion and being arranged in said recesses, the length of the spring legs being substantially equal to the length of the recesses, the resiliency of the spring being such that the legs of said springs are normally



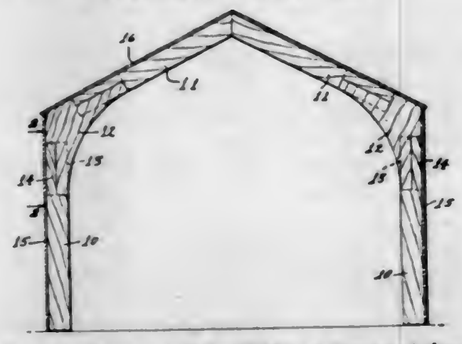
urged towards each other, the free ends of said spring legs being disposed beneath the shoulders, said arms in the gripping portions having opposed notches therein, the notches being aligned to receive a clothes line and said arms having holes therethrough aligned with the notches.

2,409,380
SPOTTING PROJECTILES
Harry J. Nichols, Washington, D. C., assignor to the United States of America, as represented by the Secretary of the Navy
Application March 21, 1925, Serial No. 17,427
Renewed November 9, 1925
24 Claims. (Cl. 102—60)

1. In combination with a projectile, a windshield at the forward end thereof provided with a normally closed aperture on the front of said windshield and a plurality of vents towards the rear thereof, said windshield containing a coloring charge adapted to be ejected on impact with the water.



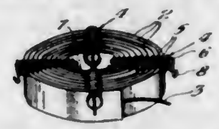
2,409,381
GARMENT LACING
Benjamin F. Pease, Jr., Grafton, Mass.
Application February 19, 1945, Serial No. 578,692
4 Claims. (Cl. 2—39)



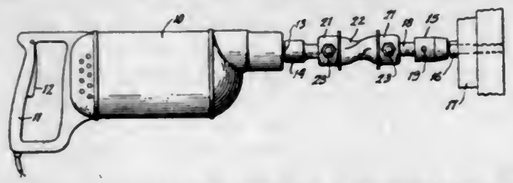
1. In a garment having separable parts, a lacing unit having a plurality of separate lacing elements each having a first portion passing through and engaging an eyelet in the free end of one separable part and at one side of a horizontal center line of said garment and each having a second portion passing through and engaging a second eyelet in the free end of the other separable part and at the other side of said horizontal center line and equally spaced therefrom and each having a section extending diagonally between and connecting said first and second portions, and pull straps to which the ends of all of said lacing elements are secured, whereby the angular relationship of said separable parts may be changed while substantially uniform tension of all of said lacing elements is maintained.

2,409,382
AVIATION GASOLINE PRODUCTION
Edward B. Peck, Elizabeth, N. J., assignor, by mesne assignments, to Standard Catalytic Company, a corporation of Delaware
Application March 11, 1942, Serial No. 434,206
1 Claim. (Cl. 196—49)

The method of treating a hydrocarbon oil cracked stock containing olefins, naphthenes and paraffins and boiling substantially within the gasoline range, to produce separately aromatic compounds and a gasoline of substantially higher knock rating than said cracked stock, which comprises vaporizing said cracked stock, passing the vapors through a fractionating zone, removing a light fraction, an intermediate hexane to octane fraction, and a heavy fraction, said light fraction and said heavy fraction containing compounds having relatively high anti-knock value as compared with said intermediate fraction, combining said light fraction and said heavy fraction to form gasoline, passing said intermediate fraction through a heating coil and thence into a hydrogenation zone in which naphthenes are converted into aromatic compounds and olefins are saturated, thereby forming a product consisting principally of aromatic compounds and paraffins of 6 to 8 carbon atoms per molecule, separating the aromatic compounds and the 6 to 8 carbon atom paraffins, passing the 6 to 8 carbon atom paraffins through a heating coil and thence into a zone where they are converted into a product composed mainly of aromatics, and combining the aromatics produced by the two conversion stages hereinbefore recited.



2,409,383
FRAME STRUCTURE
Axel V. Pedersen, Los Angeles, Calif.
Application August 29, 1944, Serial No. 551,642
4 Claims. (Cl. 20—92)

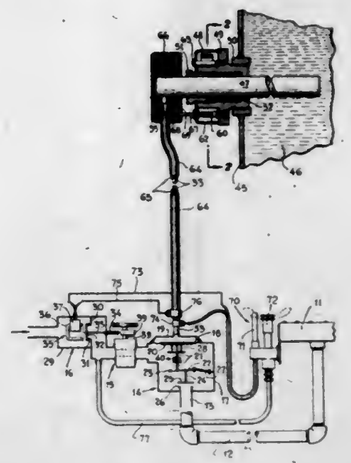


1. A frame for small buildings comprising studs, rafters, and gusset members connecting the studs to the rafters, said studs and rafters having oppositely beveled scarfs in interfitting relationship with complementary scarfs on the gusset members and which are glued thereto, the scarfs on the gusset members being disposed in planes which are at acute angles with the planes of the gusset members and the plane of each scarf intersecting the plane of its respective gusset member along a line which is substantially perpendicular to the length of the studs and rafters respectively.

2,409,384
MEANS FOR PREPARING ALUMINUM ALLOYS FOR HEAT TREATMENT
Victor Eleaph Peterson, Niles, Mich., assignor to The Kawneer Company, Niles, Mich., a corporation of Michigan
Application March 1, 1943, Serial No. 477,502
4 Claims. (Cl. 263—2)

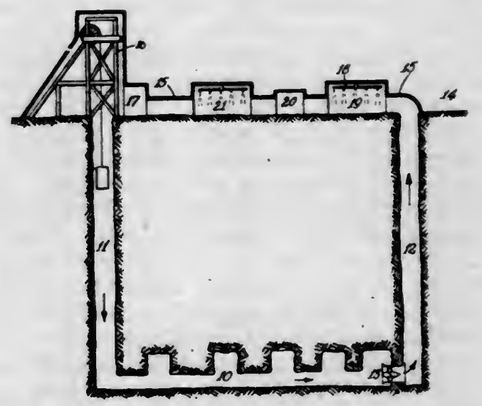
2. Means for preparing a coil of aluminum alloy for heat treatment, comprising a plurality of spring coils having spaced loops with successive loops of the springs adapted to be positioned intermediate adjacent individual coils of the metal to thereby retain these individual coils in spaced relation during heat treatment.

2,409,385
COUPLING
Lloyd H. Pletcher, Buchanan, Mich., assignor of forty per cent to Clarence B. Pletcher, Buchanan, Mich.
Application March 26, 1943, Serial No. 480,622
1 Claim. (Cl. 81—52.4)



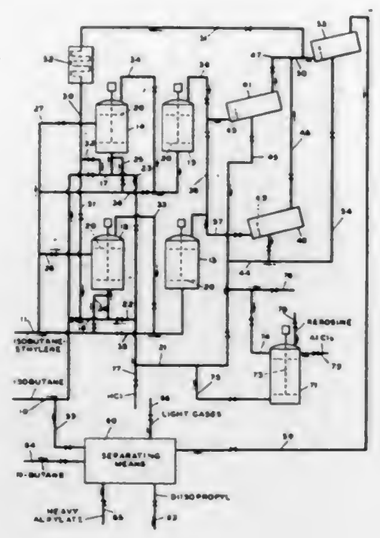
A power operated hand tool comprising a motor having a driving shaft, an elongated resilient tube fixedly secured at one end to the shaft and extending outward therefrom, and wrench means fixedly secured to the other end of the tube and adapted to be pressed longitudinally of the tube into engagement with a work piece, the tube being adapted to twist under a predetermined torque and to shorten its length thereby to move the wrench means toward the motor and away from the work piece.

2,409,386
METHOD FOR PRODUCING NITROGEN FROM INTERNAL-COMBUSTION ENGINE EXHAUST GASES
Eric L. Pridonoff, Alhambra, and Arthur J. Schneider, Pasadena, Calif., assignors to Aerojet Engineering Corporation, Azusa, Calif., a corporation of Delaware
Application June 30, 1944, Serial No. 543,042
2 Claims. (Cl. 23—220)



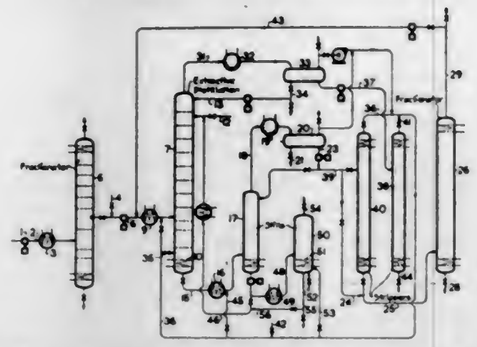
2. In the production of nitrogen gas at pressures in excess of 500 pounds per square inch from the exhaust gases of an internal combustion engine containing a large proportion of nitrogen together with oxides of nitrogen and water vapor and involving the cooling of the gas to condense water vapor, the removal of the water thus condensed, the treatment of the residual gas with activated carbon to remove oxides of nitrogen, and the compression of the gas thus purified in a multiplicity of stages with cooling between stages, the improvement which comprises treating the gas in compressed state after the last cooling stage and immediately prior to the final compression stage with silica gel until its water content is less than .01%, whereby the corrosive effect of residual oxides of nitrogen in the gas is inhibited.

2,409,387
CONTROL DEVICE
William A. Ray, Los Angeles, Calif., assignor to General Controls Co., a corporation
Application February 15, 1943, Serial No. 475,859
3 Claims. (Cl. 200—138)



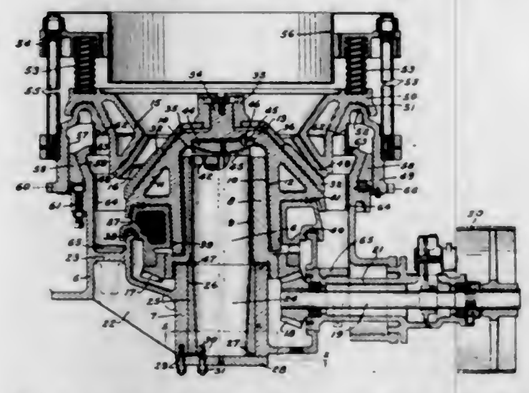
1. In combination: a first temperature-responsive control device comprising a thermal bulb having a metallic capillary tube extending therefrom for connection to relatively remote fluid pressure operated means to be controlled by the device, a second temperature-responsive device adapted to control an electric circuit and mounted on said thermal bulb in good heat-transfer relation thereto so that both of said devices are substantially equally thermally affected, and a pair of electrical conductors for connecting said second device in said circuit, one of said electrical conductors being formed in part by said capillary tube and the other comprising an element insulatingly supported by the tube.

2,409,388
CONDITIONING THE ATMOSPHERE IN SUBTERRANEAN EXCAVATIONS
John Price Rees, Johannesburg, Transvaal, Union of South Africa
Application August 18, 1942, Serial No. 455,268
In the Union of South Africa July 4, 1942
6 Claims. (Cl. 98—50)



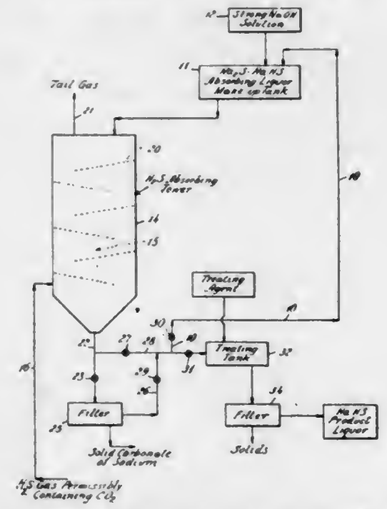
1. A closed circuit mine ventilating system including mine workings, downcast and upcast shafts connected with said workings, means distant from the workings for discharging heat from gas in the circuit, and means for injecting into the circuit a respirable inert gas which comprises helium in a proportion of at least about 40% by volume.

2,409,389
ALKYLATION PROCESS
Clarence R. Ringham, Oklahoma City, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
Application September 28, 1944, Serial No. 556,208
3 Claims. (Cl. 260—683.4)



1. An improved process for reacting ethylene and isobutane to form diisopropyl, which comprises conducting said reaction in two sets of reactors having two reactors in each set, passing a portion of an isobutane feed to the bottom of the first reactor of each set, passing a portion of an isobutane-ethylene feed to the bottom of each of said reactors and also to an intermediate point of the first reactor of each set, passing from a common catalyst source a portion of a liquid aluminum chloride-hydrocarbon complex catalyst to the bottom of the first reactor of each set in an amount not greater than that which will permit said catalyst to be the dispersed phase in the resulting admixture, maintaining an alkylation temperature in each said reactor, passing an intimate hydrocarbon-catalyst admixture from the top of the first reactor of each set to the bottom of the second reactor of the respective set, flowing the contents of each reactor from bottom to top and effecting a vigorous stirring of the contents of each said reactor to establish an intimate admixing of the contents thereof, passing the effluents of each second reactor to a corresponding primary settling zone to separate a liquid hydrocarbon material containing a minor amount of entrained catalyst from the bulk of the admixed catalyst, combining the hydrocarbon effluents of each primary settling zone and combining the catalyst effluents of each primary settling zone, passing at least a portion of said combined hydrocarbon effluents to a secondary settling zone wherein substantially all of the remaining entrained catalyst is separated from the effluents, removing from said secondary settling zone a hydrocarbon material and recovering therefrom a diisopropyl fraction as a product of the process, removing also from said secondary settling zone liquid catalyst, and combining said liquid catalyst with the aforesaid combined catalyst effluents to form a uniform catalytic material as the aforesaid common catalyst source.

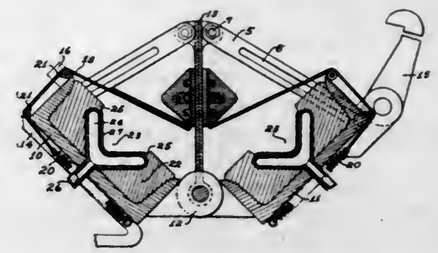
2,409,390
PROCESS FOR SIMULTANEOUSLY ISOMERIZING AND SEPARATING CYCLOPARAFFINS FROM ACYCLIC PARAFFINS BY MEANS OF AN ALUMINUM HALIDE-HYDROCARBON COMPLEX
William E. Ross, Berkeley, and Philip Pezzaglia, Oakland, Calif., assignors to Shell Development Company, San Francisco, Calif.
Application December 4, 1944, Serial No. 566,538
10 Claims. (Cl. 260—666)



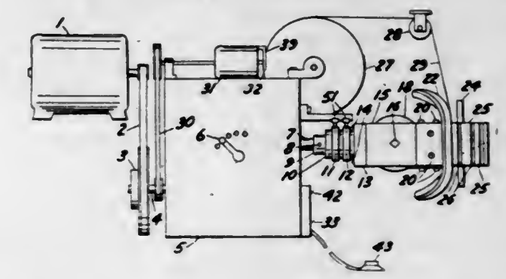
10. The process for the separation of cycloparaffins from a hydrocarbon mixture comprising an isomerizable cycloparaffin having at least six carbon atoms to the molecule and containing at least five carbon atoms in the ring in admixture with open chain paraffins having substantially the same boiling range while simultaneously isomerizing said cycloparaffin, which comprises subjecting said hydrocarbon mixture to extractive distillation in the presence of a hydrogen halide and a preformed metal halide-containing complex interaction product obtained by the interaction of a metal halide of the Friedel-Crafts type and an organic compound, thereby isomerizing said cycloparaffin to a cycloparaffin of different molecular structure having the same number of carbon atoms to the molecule and containing at least five carbon atoms in the ring while simultaneously forming a vapor fraction comprising paraffins and a liquid fraction comprising said metal halide-containing complex in admixture with said isomerized cycloparaffin, and separating cycloparaffins comprising said isomerized cycloparaffin from said liquid fraction.

2,409,391
SUPPPORT AND ACTUATING STRUCTURE FOR GYRATORY CRUSHER HEADS
Harvey H. Rumpel, Milwaukee, Wis., assignor to Smith Engineering Works, Milwaukee, Wis., a corporation of Wisconsin
Application May 31, 1943, Serial No. 489,108
4 Claims. (Cl. 241—208)

1. In a crusher, a frame having an upright bore, an upstanding column having a lower tapered portion extending into said bore, a split sleeve interposed between said tapered column portion and said bore, a member secured to said frame and spanning the lower end of said bore, a series of removable shims interposed between said member and the bottom of said sleeve for varying the elevation of the latter, means coacting with said member for pulling said column into said sleeve to clamp the column to said frame, an eccentric rotatable about said column, a crushing head coacting with said eccentric and having the major portion of its weight carried by the top of said column independently of the eccentric, and means for rotating said eccentric to gyrate said head relative to said column.



2,409,392
MANUFACTURE OF SODIUM SULFIDES
Arthur W. Saddington, Syracuse, N. Y., assignor to The Solvay Process Company, New York, N. Y., a corporation of New York
Application October 9, 1943, Serial No. 505,596
10 Claims. (Cl. 23—134)

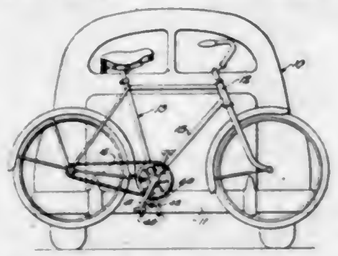


4. The method of producing purified sodium hydrosulfide which comprises forming an Na_2S-NaHS liquor containing metallic impurities of the type present in commercial sodium hydroxide, contacting said liquor with an H_2S gas containing CO_2 as an impurity under temperature conditions high enough to maintain sodium sulfide in liquid phase, continuing contact of the liquor and H_2S gas for an interval sufficient to effect conversion of at least a major portion of the Na_2S content of said liquor to NaHS thereby forming an NaHS liquor containing an amount of available carbonate of sodium equivalent to substantially more than 0.06% by weight of CO_3 radical, reducing the available carbonate of sodium content of said NaHS liquor to an amount equivalent to not more than 0.06% by weight of CO_3 radical, controlling the composition of the resulting NaHS liquor so that such liquor contains not more than 5% by weight of sodium sulfide, thereby effecting coagulation and precipitation of metallic impurities, and separating said metallic impurities from such liquor.

2,409,393
FLUID PRESS
Leslie Laszlo Schaffer, Vancouver, British Columbia, Canada
Application July 29, 1943, Serial No. 496,635
3 Claims. (Cl. 144—281)

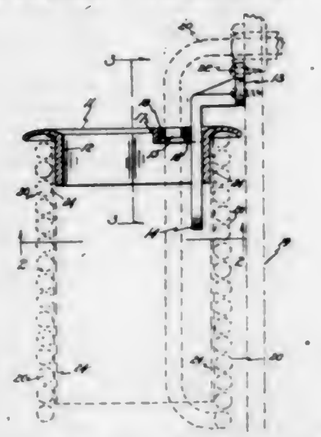
1. A fluid press for molding laminated articles, comprising two casings hingedly connected at their adjacent upper corners, a base hingedly mounted between the casings, a mold of the shape of the finished article mounted on each side of the base, a cavity in each casing adapted to receive the mold on the base opposite its casing, a layer of flexible material positioned on opposite sides of the base, each layer being connected at one of its ends to the base of each mold and extending over the entrance to the cavity, resilient means connected to the opposite end of each layer to keep it taut, each of said layers being adapted to receive between itself and the adjacent mold a plurality of superposed laminations of bendable material with glue therebetween and yieldably to press and hold against disalignment said laminations around the molding surfaces of the molds as the molds are moved into the cavities when the casings are brought together with the base therebetween, means within each cavity capable of moving outwardly therefrom, means for firmly holding the casings together, and means for moving the movable means of the cavities outwardly therefrom to press the articles against the molds.

2,409,394
ARMATURE WINDER
Paul A. Schnebelen, Toledo, Ohio
Application December 18, 1944, Serial No. 568,758
4 Claims. (Cl. 242—13)



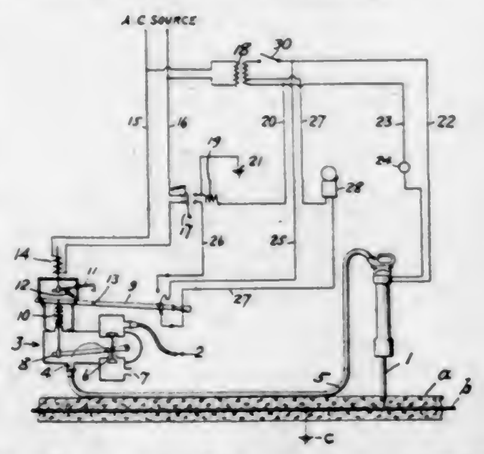
1. A coil winder comprising a non-magnetic support, a pair of arc-faced magnet opposite poles extending from the support and forming a seat complementary to a longitudinally slotted armature adapted to be magnetically locked therewith as an article of work, and non-magnetic guide wings mounted on the poles for directing wire to be wound directly to exposed slots adjacent the seat.

2,409,395
BICYCLE CARRIER
Frank W. Schwinn, Chicago, Ill.
Original application November 19, 1943, Serial No. 510,875. Divided and this application March 7, 1945, Serial No. 581,393
9 Claims. (Cl. 224—29)



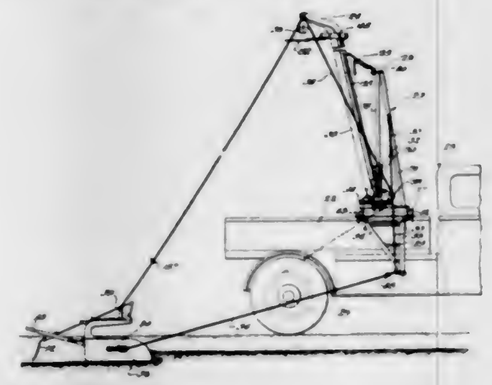
1. In a bicycle carrier the combination of a supporting bracket formed with a clamp socket, said bracket being adapted to be secured to the bumper of an automobile, and a bicycle having its frame provided with a downwardly extending stud adapted to be received in said clamp socket,

said stud being permanently rigidly attached to said frame and a part thereof and holding the



bicycle in upright position when said stud is clamped in said socket.

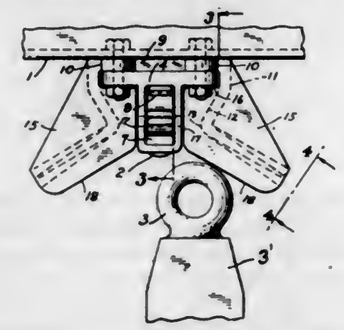
2,409,396
PROTECTIVE COLLAR UNIT FOR REFRIGERATING COILS
George Seiler, Chicago, Ill.
Application April 26, 1945, Serial No. 590,458
6 Claims. (Cl. 62—147)



2. A protective metal collar having an integral inwardly extending projection provided with two spaced apart apertures therein, one of said apertures being adapted to receive the lower end portion of a mounting bracket, and the other of said apertures being adapted to receive and hold in proper position a coil pipe terminal connecting with the liquid dispensing faucet.

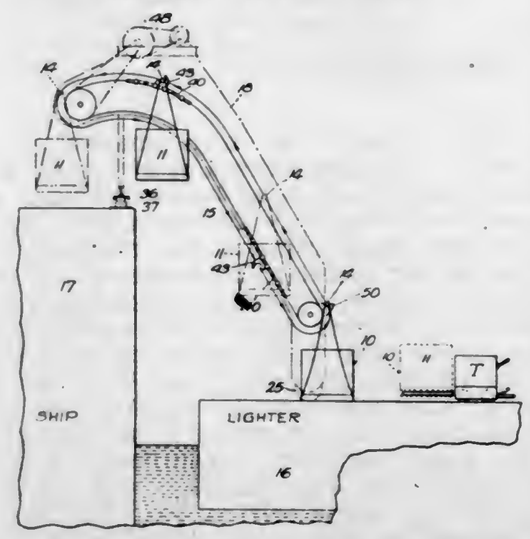
2,409,397
SAFETY CUTOFF FOR POWER-OPERATED HAND TOOLS
Edward F. Sheehan and George V. Hunt, Philadelphia, Pa.
Application October 13, 1943, Serial No. 506,080
3 Claims. (Cl. 121—35)

1. A safety cut-off apparatus comprising in combination a power driven hand tool, power cut-off means having yieldable means normally urging said cut-off means to the cut-off position to stop the tool, a source of electric current, a first electric circuit connected to said source and including an electro-mechanical detent constructed and arranged to restrain said yieldable means from moving said cut-off means to the cut-off position when said detent is energized by said electric current and to release said yieldable means permitting said cut-off means to assume the cut-off position when the electric current to said detent is interrupted, a normally closed relay having its contacts in said first circuit in series with said detent, a second electric circuit connected to said source and including the operating coil of said relay, and means in said second circuit for energizing said relay operating coil responsive to the conditions under which it is desired to stop the tool, whereby the tool will be stopped upon operation of the means for energizing said relay operating coil and also upon the occurrence of any other interruption of the current supply to said first circuit.



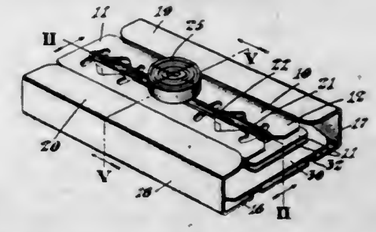
2,409,398
TRUCK LOADER
Robert C. Shoemaker, Portland, Oreg., assignor to Hyster Company, Portland, Oreg., a corporation of Oregon
Application February 16, 1945, Serial No. 578,256
19 Claims. (Cl. 214—81)

1. Truck loading apparatus adapted to be secured to the body of a truck and comprising, in combination, a supporting structure adapted to be mounted upon the truck body and including a boom extending upwardly and outwardly at one side of the truck body, said boom being supported for swinging movement from a normal position in which it extends laterally beyond the side of the truck to a position in which it overhangs the truck body with the top of the boom substantially spaced thereabove, a drag bar extending laterally from the boom side of the truck and supported by the support structure, a scoop device, a drag line having one end secured to the outer end of the drag bar and extending rearwardly of the truck with its other end connected to the scoop device, a series of pulleys carried by the boom and supporting structure, a winding drum carried by a rear wheel of the truck on the opposite side of the truck from the boom, a hoisting cable secured at one end to the scoop device and extending upwardly therefrom to a pulley on the boom and thence downwardly and across the truck body through other of said pulleys to the winding drum, the other end of said hoisting cable being secured to the winding drum, and means adapted to drive said drum from the wheel when the truck moves in one direction to wind the hoisting cable on the drum for raising the scoop device,



the last mentioned means being adapted to release the drum during movement of the truck in the opposite direction so that the scoop device may be dragged by the drag line and drag bar.

2,409,399
TRAILER HITCH DEVICE
Alfred F. Solon, Oakland, Calif.
Application March 12, 1945, Serial No. 582,387
4 Claims. (Cl. 280—33.15)



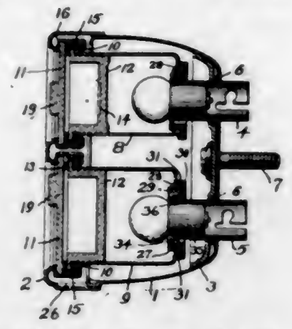
1. In a trailer hitch of the character described having an attaching plate with a hook projecting from one side, means for guiding the eye of a trailer drawbar to said hook comprising a rigid body secured to said plate and provided with a pair of upright walls spaced on opposite sides of said hook while preserving an open slot above the hook and diverging outwardly therefrom, and horizontally extending flanges at the upper edges of said walls overhanging the same to limit upward movement of the drawbar eye when the diverging walls are moved toward the eye so as to guide the eye to position for falling over the hook, said upright walls being arranged in a manner to urge the eye upward against the overhanging flange when the walls are forced against the eye.

2,409,400
TRANSFER DEVICE
Andrew G. Telford, Aurora, Ill.
Application February 16, 1945, Serial No. 578,211
5 Claims. (Cl. 198—123)

1. In a transfer device of the class described, a frame comprising laterally spaced side members connected together adjacent to their upper lengthwise edge portions only and forming a lengthwise passageway having an open bottom between the lower lengthwise edge portions of said members, a wheeled support for each of said members at one end portion of the frame, laterally spaced legs adjacent to the opposite ends of the members, a universal bearing for supporting said legs, a flexible endless conveyor element movable along each member, and hooks formed on said elements adapted to engage the opposite ends of a bar supporting a load in the passageway.

2,409,401
BLADE MAGAZINE
Nicholas Testi, Boston, Mass., assignor to Gillette Safety Razor Company, Boston, Mass., a corporation of Delaware
Application April 19, 1944, Serial No. 531,727
13 Claims. (Cl. 206—16)

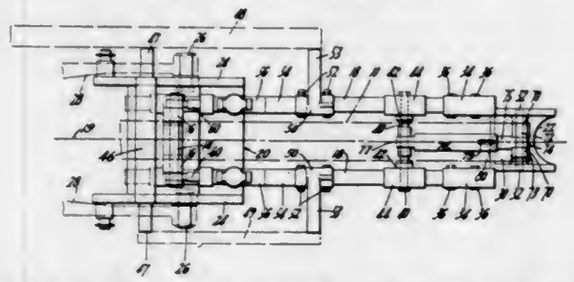
1. A blade magazine having walls forming an elongated enclosure, a stack of slotted open-end blades within the enclosure, the slots having a local enlargement therein, a rib in the enclosure engaged at opposite ends with one end only of alternate blades of the stack, each blade having its slot enlargement overlapping the surface of the next lower blade in the stack, and a feed slide having a portion shaped to enter and fill the slot enlargement of the uppermost blade.



2,409,402
METHOD OF RECLAIMING
Harry H. Thompson and Derwin V. Moore, Akron, Ohio, assignors to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware
No Drawing. Application August 29, 1942, Serial No. 456,711
2 Claims. (Cl. 134—31)

1. A method of separating metal from soft vulcanized rubber vulcanized thereto which comprises weakening the rubber-to-metal bond by exposing the metal-rubber object to a gaseous mixture of steam and the vapor of a rubber softening oil at a temperature of about 300–425° F. for at least about 16 hours, and thereafter separating the rubber from the metal.

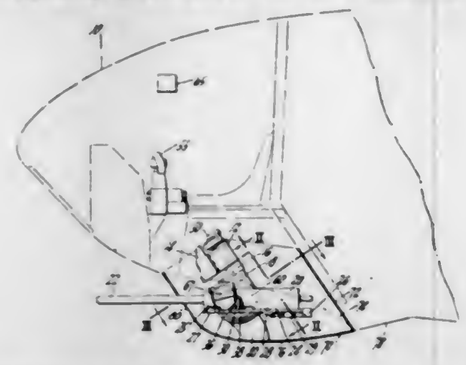
2,409,403
VEHICLE SIGNAL
Wagn Trautner, Hamilton, Ohio, assignor to The K-D Lamp Company, Cincinnati, Ohio, a corporation of Ohio
Application May 11, 1943, Serial No. 486,537
2 Claims. (Cl. 240—41)



1. In an illuminating device, a can, a lens having a sealed relationship with one end of the can, the other end of the can being closed except for a perforation in said end, said perforation being of a size to accept the bulb of an incandescent lamp, an incandescent lamp having a bulb and base, and a fixture on said base and sealed thereto, said fixture having a portion for co-acting with said can to effect a sealed connection when said fixture and lamp are in place on said can with the bulb within said can, and the parts held together by pressure exerted respectively on the can and the fixture, the edges of said can end being in-

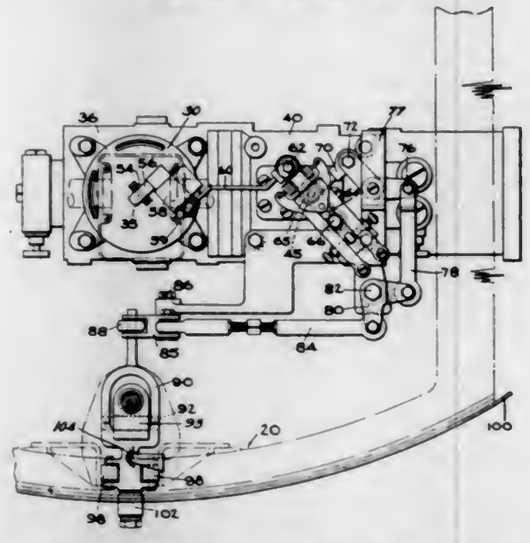
turned about said perforation to form a substantially cylindrical recess, said fixture having a cylindrical portion fitting in said recess, and an outlying peripheral flange substantially paralleling the can end, the walls of said cylindrical recess having a groove, and the cylindrical part of said fixture having a mating ridge, the walls of

the said cylindrical portion of the fixture being inturned at one end to provide a recess for the acceptance of the base of said lamp, and then slightly outturned to provide about said base a groove for sealing substance and an abutment whereby pressure may be exerted on said fixture by a socket in which said base is placed.



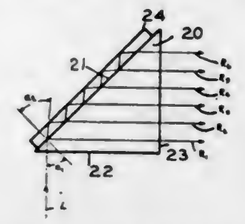
2,409,404
SHOCK ABSORBING GUN MOUNT
John C. Trotter, Williamsville, N. Y., assignor to Bell Aircraft Corporation, Buffalo, N. Y.
Application February 9, 1942, Serial No. 429,986
6 Claims. (Cl. 89—42)

4. A machine gun mount including, a pair of spaced rails interconnected at their corresponding opposite end portions by rigid bracket devices thereby forming a rail-bracket structure, slide bearing means slidably mounted upon said rails and engaged by connector devices extending from the gun to be mounted thereon whereby the gun will be reciprocable relative to said rail-bracket structure, a pair of recoil shock absorbing and counter recoil control devices mounted upon said rails near one end of said rail-bracket structure and arranged to be operatively associated with the mounted gun at opposite sides thereof to have their recoil reaction axes disposed in parallel relation, and a recoil motion control and counter recoil force device operatively connected to the gun and mounted upon the bracket device connecting said rails adjacent the opposite end of said rail-bracket structure and having its axis at least in one view between the reaction axes of said first mentioned control devices.



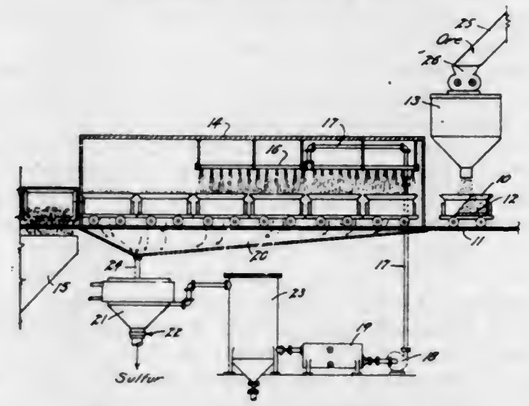
2,409,405
AIRCRAFT GUN MOUNT
John C. Trotter, Williamsville, N. Y., assignor to Bell Aircraft Corporation, Buffalo, N. Y.
Application March 20, 1943, Serial No. 479,899
3 Claims. (Cl. 89—37.5)

1. In combination, an aircraft including a streamlined body having a convergent end and a thrust axis, bearing means supported by said aircraft and inclined away from said end and outwardly with respect to said axis, a gun mount, a post rotatably journalled on said bearing means



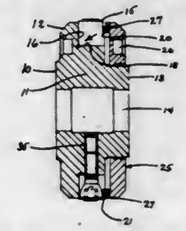
and suspending said gun mount, and an enclosure for said gun mount rotatable therewith about a common axis, said enclosure being faired into and with respect to said body.

2,409,406
SAFETY CONTROL MECHANISM FOR POWER-OPERATED ORDNANCE
John C. Trotter, Burlington, Vt., assignor to Bell Aircraft Corporation, Buffalo, N. Y.
Application June 28, 1944, Serial No. 542,498
7 Claims. (Cl. 89—41)



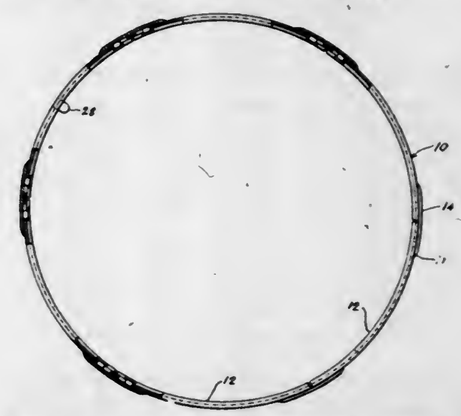
1. The combination with manual control means for regulating the aim of a gun, and a motor regulator actuated by said means, of an automatic safety device for controlling the aim of the gun irrespective of the manual control means during predetermined intervals of travel of the gun, said safety device comprising a double ended control lever having its pivotal fulcrum point substantially intermediate its ends during manual control, one end of said lever being operatively connected to said manual control means and its other end connected to an arm carried by the motor regulator, a cam track, a pivoted arm having one end engaging said track and its other end operatively connected to the central pivotal fulcrum point of said control lever, whereby to change the pivotal fulcrum point of said control lever during operation of said safety device and to cause it to be rotated about the end thereof which is operatively connected to the manual control means, thus causing the arm of said regulator to be rotated independently of the manual control.

2,409,407
REFLECTING ELEMENT FOR POLARIZED LIGHT
Arthur F. Turner, Brighton, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a corporation of New York
Application February 22, 1943, Serial No. 476,675
4 Claims. (Cl. 88—65)



1. A transparent body having a plurality of totally reflecting surfaces from which light entering the body is successively reflected, each of said surfaces being characterized by introducing a shift in the phase of the components of polarized light which is passing through the body and which is reflected by said surfaces; and means on one of said surfaces for selectively modifying the phase shift between the components normally introduced in polarized light by reflection at that surface whereby to selectively alter the sum of the phase shifts occurring at all of the surfaces, said means comprising a nonmetallic interference film, said film being transparent and substantially isotropic and having an index of refraction different from that of said body and a substantially uniform geometrical thickness which is of the order of magnitude of a wavelength of light, the refractive index and thickness of the film being chosen to produce the selected phase displacement of the polarized light reflected by said surfaces.

2,409,408
METHOD OF DISSOLVING SULFUR FROM ORES
George W. Tweeddale, Glendale, Calif.
Application March 16, 1944, Serial No. 526,767
1 Claim. (Cl. 23—312)

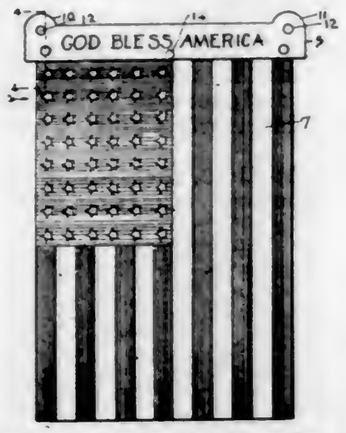


A method for recovering sulfur from free sulfur bearing ores comprising: crushing said ore; placing said crushed ore in wheeled cars having screened bottoms; forcing each succeeding car beneath a spray of hot kerosene so that it will force the proceeding car from beneath said spray; collecting the solution flowing from the screened bottoms of said cars; chilling the collected solution to precipitate the sulfur therefrom; drawing off the supernatant fluid; heating said latter fluid to approximately 140° C.; returning the heated fluid to said spray; dumping the ore from each successive car after it leaves said spray; thence returning the dumped cars to a position to receive additional crushed ore.

2,409,409
ROLL TYPE DIE HOLDER
Edward Wild and H. Calvin Bitter, West Hartford, Conn., assignors to The Parker Stamp Works, Inc., Hartford, Conn., a corporation of Connecticut
Application April 10, 1945, Serial No. 587,560
3 Claims. (Cl. 101—377)

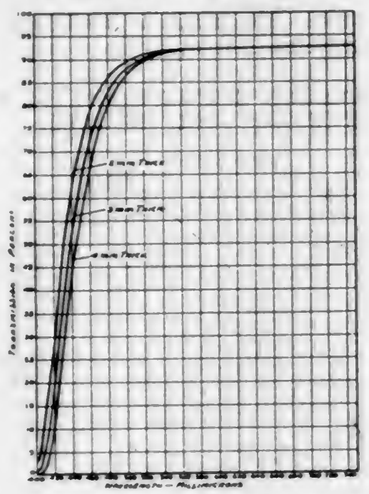
1. In a roll type die holder, a roll comprising two generally circular members forming a circumferential channel for type die blocks, said members being threadably joined together for axial movement relative to one another, one of said members having an internal truncated conical cam surface, type die blocks in said channel having shoulders opposed to said cam surface, and a contractable ring between said shoulders and said cam surface.

2,409,410
BEAD LOCK RING AND ASSEMBLY
Charles E. Zarth, Akron, Ohio, assignor to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware
Application July 3, 1942, Serial No. 449,601
5 Claims. (Cl. 152—400)



3. A bead lock ring for use with open-beaded, straight-sided pneumatic tires including a plurality of arcuate segments of channel-shaped cross section, arcuate plates bridging between the ends of the segments, rivets secured to the arcuate plates and extending through slotted openings in the ends of the segments to provide pivotal lost motion connections between segments, and heads on the rivets received within the channel shape of the segments.

2,409,411
FULL DISPLAY FLAG HOLDER
Arthur O. Zedler, Yonkers, N. Y.
Application August 2, 1944, Serial No. 547,716
1 Claim. (Cl. 116—173)

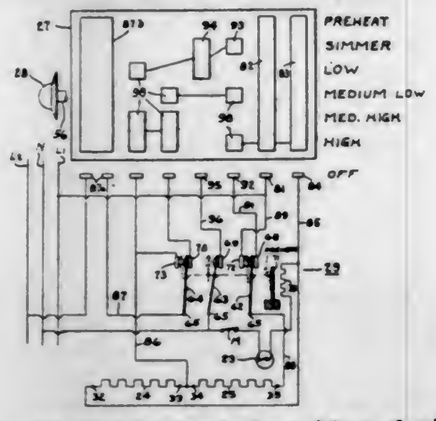


A flag holder comprising a bar formed with a longitudinal slot, a U-shaped metal strip fitted

in the slot and having outwardly directed flanges disposed against the edge of the bar, a flag having one edge thereof disposed in the U-shaped metal strip, and screws extending through the bar and through the metal strip and flag to hold

the flag and metal strip in the slot, the flanges of the metal strip extending outwardly of the sides of the bar, and the bar having means on the ends thereof to hang the same horizontally or vertically.

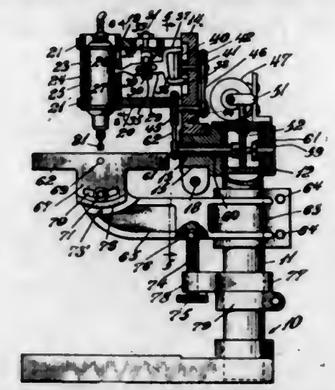
2,409,412
ULTRAVIOLET ABSORBING GLASS
William H. Armistead, Jr., Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a corporation of New York
Application October 13, 1944, Serial No. 558,549
6 Claims. (Cl. 106—54)



1. A yellow ultraviolet absorbing glass which consists essentially of silica, boric oxide, alkali metal oxide, not less than about 10% Al_2O_3, from .02% to .5% Fe_2O_3, and which contains by analysis at least .4% of a halide having an atomic weight between 35 and 127, the ratio of alumina to alkali metal oxide being greater than one.

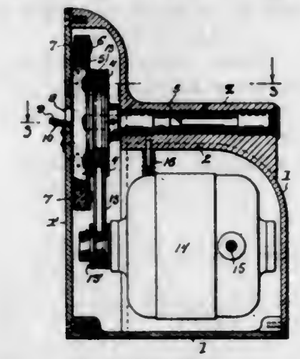
2,409,413
STABILIZED CUPROUS OXIDE
Harold J. Becker, Rahway, N. J., assignor to Merck & Co., Inc., Rahway, N. J., a corporation of New Jersey
No Drawing. Application June 17, 1942, Serial No. 447,479
2 Claims. (Cl. 23—147)

1. A substantially oxidation-resistant cuprous oxide powder comprising a cuprous oxide powder individual particles of which have a surface coating of dextrin.



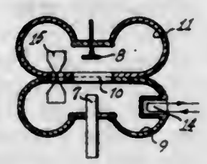
2,409,414
HEATING APPARATUS
Edward Bletz, Lexington, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application July 8, 1942, Serial No. 450,135
1 Claim. (Cl. 219—20)

In an electrically-heated cooking device, the combination of a plurality of electrical heater elements for heating a vessel adapted to contain food, supply conductors for supplying electrical energy to said heater elements, a selector switch movable to an "off" position and to a plurality of operating positions, a transfer switch movable to a normal position and to a preheat position, said selector switch and said transfer switch being connected in series with each other and with at least one of said heater elements in a plurality of operating positions of said selector switch, said switches being so constructed and arranged and connected to said supply conductors and said heater elements in such manner that, whenever said selector switch is in any one of a plurality of operating positions and said transfer switch is in said preheat position each of said heater elements is connected across the supply conductors of maximum voltage, and that, whenever said transfer switch is in its normal position said selector switch is effective in its different operating positions to effect various circuit connections between said supply conductors and said heater elements to provide various rates of heat delivery to the cooking appliance including one position in which each of said heater elements is connected across the supply conductors of maximum voltage, said selector switch being adapted to cause all the heater elements to be substantially deenergized when in the "off" position, and means for actuating said transfer switch to its normal position in response to increase in temperature of said vessel above a predetermined value, said means comprising a heating element, a thermostatic member subjected to heat from said heating element and adapted to actuate said transfer switch to its preheat position when said heating element is energized and to its normal position when said heating element is not energized, and a thermostatic switch adapted to effect deenergization of said heating element in response to increase in temperature of said vessel above said predetermined value.



2,409,415
UNIVERSAL BENCH GRINDER
Anders Bernhard Blomquist, Cranston, R. I.
Application June 20, 1945, Serial No. 600,521
6 Claims. (Cl. 51—34)

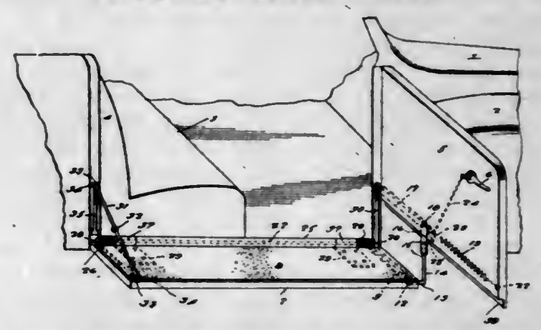
1. A machine tool having a grinding head mounted for movement through an arc greater than 180°, a motor slidably mounted in said head, means for attaching an abrasive wheel to the



spindle of said motor, a rockably mounted lever engaging said motor, and a cam engaging said lever for reciprocating said motor.

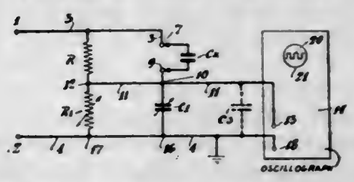
2,409,416
BLADE GRINDER
Fred E. Broberg, Racine, Wis.
Application May 9, 1945, Serial No. 592,878
1 Claim. (Cl. 51—128)

A blade sharpener tool comprising a housing, a motor driven abrasive wheel mounted therein, the same including an abrasive ring, a face-plate carried by the housing, having a horizontally disposed slot therein extending outwardly from a point near the center of the wheel, an angularly positioned blade rest adjacent the lower edge of the slot, a bracket carried by the face-plate near the center of the wheel, a pivot connecting the bracket and blade rest, a down turned lip extending from the blade rest, a guide tooth carried by the lip adapted to guide a blade being sharpened, and means connecting the down turned lip, and housing for adjusting the aforesaid blade rest relative to the abrasive ring.



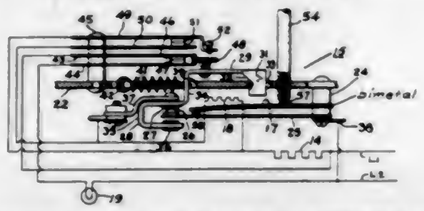
2,409,417
ELECTRON DISCHARGE DEVICE
Cabot Seaton Bull, Hillingdon, England, assignor to Electric and Musical Industries Limited
Application May 29, 1944, Serial No. 537,854
In Great Britain June 21, 1941
5 Claims. (Cl. 315—6)

1. An electron discharge device having a cathode for supplying a beam of electrons and a collector for receiving said electrons, and a pair of



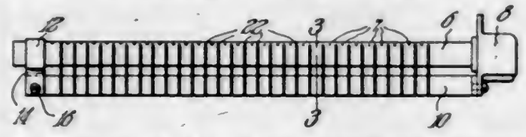
cavity resonators surrounding the electron path between the cathode and the collector and through which the beam of electrons successively passes, and a reversed coupling loop extending between said resonators whereby noise currents set up by passage of the electron beam through the first resonator are reduced or substantially neutralized by the noise current set up by the passage of the electron beam through the second resonator.

2,409,418
VEHICLE STEP
Asa B. Carmichael, Tujunga, Calif.
Application December 4, 1945, Serial No. 632,742
3 Claims. (Cl. 280—166)



1. In a device of the character described, the combination with a vehicle door and a vehicle frame, of a step, means hingedly securing said step to said frame, a translatable bracket for supporting said step, means in said frame for containing said bracket, means responsive to opening of said door for opening said step and removing said bracket from said means for containing, said third named means being responsive to closure of said door for effecting retraction of said step, and for effecting withdrawal of said bracket into said means for containing.

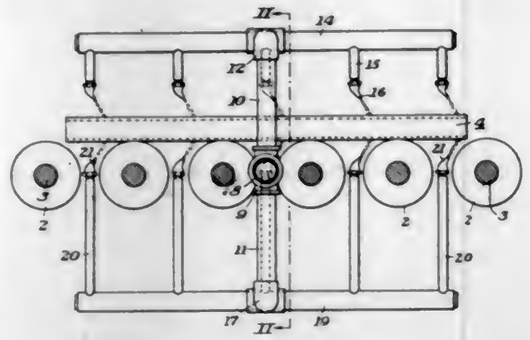
2,409,419
DEVICE FOR MEASURING IMPEDANCES
Peter S. Christaldi, Upper Montclair, N. J., assignor to Allen B. Du Mont Laboratories, Inc., Passaic, N. J., a corporation of Delaware
Application June 8, 1943, Serial No. 490,032
6 Claims. (Cl. 175—183)



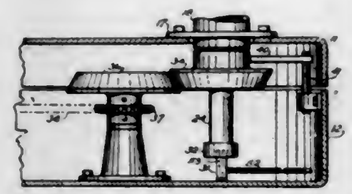
1. In a device of the character described means for measuring impedances which comprises a three terminal network made up of a parallel connected pair of known impedances, one of which is resistive and the other is reactive, connected in series with a third known impedance which is of the same type as one of said known impedances, at least one of said impedances being adjustable, said third impedance being connected to terminals at opposite ends of this third impedance which are adapted to be connected to the ends of an impedance to be measured, input terminals for a signal of complex wave form connected to opposite ends of said series connected three terminal network, output terminals connected to opposite ends of said parallel connected pair of impedances and a wave form indicating device to which said output terminals are connected.

2,409,420
HEATING APPLIANCE
Earl K. Clark, Mansfield, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application March 26, 1942, Serial No. 436,299
8 Claims. (Cl. 219—25)

7. A thermostat comprising a temperature-responsive element, a first switch opened by said temperature-responsive element in response to increase above a predetermined temperature and closed thereby upon decrease below substantially the same temperature, auxiliary heating means arranged so that the heating effect thereof is imposed on said temperature-responsive element, and a second switch controlling energization of said auxiliary heating means, said temperature-responsive element actuating said second switch to deenergize said auxiliary heating means in response to increase above a second predetermined temperature and to energize said auxiliary heating means in response to decrease below substantially the same temperature, said second predetermined temperature being sufficiently below the first-mentioned predetermined temperature so that said second predetermined temperature is not reached during normal operation of the thermostat.



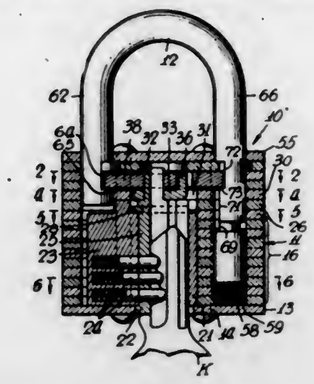
2,409,421
REINFORCED GAS BURNER
Homer D. Dufault, Easthampton, Mass., assignor to Heatbath Corporation, Indian Orchard, Mass., a corporation of Massachusetts
Application June 30, 1944, Serial No. 542,953
2 Claims. (Cl. 158—116)



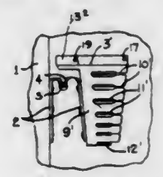
1. A burner of the class described comprising in combination, a support member and a tube member extending therefrom closed at its outer end and provided with ports along its upper side, a strut supported by said members parallel to said tube and below said tube, grooves in opposite side faces of said strut spaced apart in pairs, plates having notches in lower edges the sides of which are received in said grooves and provided with openings in upper edges through which said tube member extends, the sides of said notches of the plates and the bottoms of said grooves being similarly diverging whereby a wedging action thereof causes the upper side portions of the plates to be urged inwardly towards one another so that said tube is firmly gripped in the openings of the plates.

2,409,422
TREATMENT OF BIMETALLIC BILLETS
Francis A. Egan, Mount Lebanon, Pa., assignor to Superior Steel Corporation, Pittsburgh, Pa., a corporation of Virginia
Application May 26, 1942, Serial No. 444,609
3 Claims. (Cl. 80—60)

1. A method of treating a bimetallic billet having a relatively less plastic component and a relatively more plastic component assembled together comprising heating the billet to bring it at least to the hot rolling temperature of the relatively less plastic component, thereafter cooling the relatively more plastic component so that the components are at such temperatures that in hot rolling they will both elongate to approximately the same length and hot rolling the thus prepared billet to elongate the same.



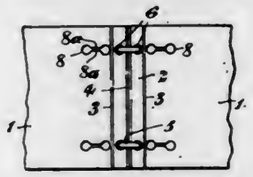
2,409,423
DRIVING MEANS FOR GLASS FORMING MACHINES
Charles Eisler, South Orange, N. J.
Original application January 20, 1944, Serial No. 519,061. Divided and this application March 7, 1945, Serial No. 581,385
3 Claims. (Cl. 192—4)



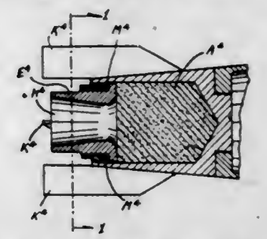
1. Driving means for glass working machines having a head for receiving glass objects said head being rotatably journalled in said machine and being provided with a vertical slotted recess, said driving means comprising a driven friction cone, a key member on said cone projecting into said recess to key said cone to said head for limited axial reciprocation thereon, said cone being circumferentially tapered, a driving cone complementarily tapered circumferentially, means to position said driving cone for engagement with said driven cone, means projecting from said driven cone, and a stop member in the machine to be engaged by said projecting means to stop rotation of the driven cone.

2,409,424
LAMINATED LOCK
Morris Falk, Leominster, Mass., assignor to Independent Lock Company, Fitchburg, Mass., a corporation of Massachusetts
Application September 27, 1944, Serial No. 555,915
15 Claims. (Cl. 70—38)

1. A lock comprising a casing formed of a plurality of superimposed plates and including orifices through some of the plates providing wells for receiving a shackle, and locking means in said casing for said shackle, a keying plate to engage one branch of said shackle, rivet holes through said plates, said keying plate having a rivet pin receiving orifice formed to permit bodily movement of said plate to and from shackle engaging position when a rivet pin unites said laminations and keying plate together.



2,409,425
DRAPERY MOUNTING
Douglass R. Falkenberg, Lakewood, Ohio
Application December 4, 1944, Serial No. 566,591
19 Claims. (Cl. 160—84)



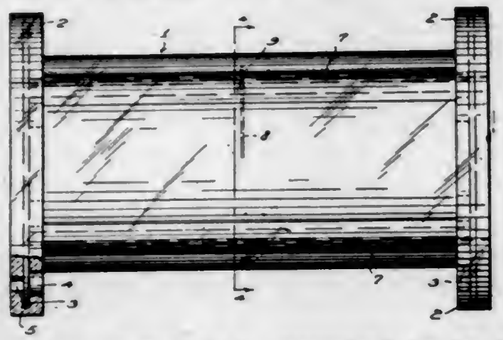
3. A drapery mounting comprising a substantially rectangular body member having an edge thereof intersected by a plurality of spaced slots, and enlarged pockets formed through the body into which the respective slots open, the body having an end extension from the opposite edge formed with a slot opening in the general direction of said plurality of slots.

2,409,426
BINDER FOR STATIONERY SHEETS
Hugo Feldmann, Birmingham, England
Application November 27, 1944, Serial No. 565,319
In Great Britain June 6, 1944
1 Claim. (Cl. 281—29)

A binder for stationery sheets, comprising two cover sheets of stiff material, a hinge strip foldable at each edge on the cover sheets and flexible at the centre and connecting the inner ends of the cover sheets and arranged to lie inwardly of the cover sheets when the binder is closed, perforations in the hinge strip equidistant from the longitudinal centre, to lie opposite one another when the binder is closed, a binder ring for holding the stationery sheets fixed to the binder by engaging through the two perforations in the hinge strip which permit the hinge strip to open out or fold on itself by the perforations sliding on the ring, and a slot in each cover sheet with the slot registering with the ring in the hinge strip when the binder is closed, such slots having an inward projection at the side for clipping inside the binder ring.

2,409,427
EQUILIBRATED ROCKET SHELL
Zygmunt Fonberg, New York, N. Y.
Application July 1, 1943, Serial No. 493,023
5 Claims. (Cl. 102—49)

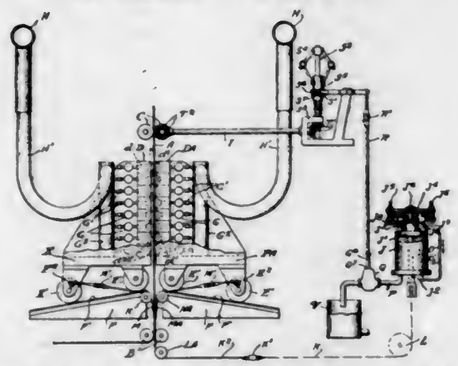
2. A rocket shell comprising: a chamber having propulsive material therein adapted to produce gas at high pressure; a choke rotatably mounted on said chamber and through which said gas is emitted; first means to rotate said choke in one direction and second means to rotate said chamber in an opposite direction; whereby the gyroscopic effect of said rotative choke in rotating is counter-acted by the counter rotation of the chamber.



2,409,428
PROCESS OF TREATING IRON ORES CONTAINING CHROMIUM AND RELATED OXIDES
Daniel Gardner, New York, N. Y., assignor to Virginia Metal Industries, Inc., a corporation of West Virginia
Application November 14, 1941, Serial No. 419,222
7 Claims. (Cl. 23—56)

1. The process of treating metal oxide mixtures in finely divided form containing iron and chromium oxides for the separate recovery of such iron and chromium values free from the gangue; said process comprising the steps of mixing calcium hydroxide into the finely divided material and subjecting the mixture in a non-oxidizing atmosphere, to an oxidizing temperature above about 500° C. but insufficiently high for substantial loss from the calcium hydroxide of its water of constitution, and for a duration sufficient to ensure the substantial conversion of the iron oxides to Fe_3O_4 and the chromium oxides to a water soluble calcium chromate; followed by quenching of the mixture in an aqueous vehicle, and causing the converted chromium compound to be dissolved into solution and thus separated from the gangue and the insoluble iron compound.

2,409,429
PRODUCTION OF HYDROCYANIC ACID
Howard Donovan Green, Pasadena, Calif., and Philip Roe Hendrixson, Moundsville, W. Va., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application October 30, 1944, Serial No. 561,152
7 Claims. (Cl. 23—151)



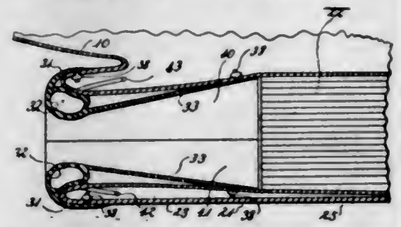
1. In the production of hydrocyanic acid by reacting, in a refractory container, a mixture containing nitric oxide and a gaseous hydrocarbon together with at least one of the gases taken from the group consisting of water vapor, oxygen and nitrogen in the presence of a catalyst containing a metal of the platinum group, said reaction being free from carbon formation, the steps comprising periodically interrupting the reaction, abrading the walls of the refractory which are contacted by said gaseous reaction mixture, and resuming the reaction.

2,409,430
FLOW INDICATOR FOR PIPE LINES
Carroll V. Greenleaf, Edmonds, Wash.
Application May 1, 1944, Serial No. 533,628
1 Claim. (Cl. 138—76)

A device of the class described to be interposed between sections of a pipe line comprising a pipe section of transparent insulating plastic provided with circumferential end flanges having bolt holes therein for bolting in the line, and means embedded in said section for obviating the accumulation of static electricity in the section and constructed and arranged for bonding with said line through said bolts comprising a pair of conductor rings embedded in said flanges and provided with tubular bosses aligned with said bolt holes and adapted for the extension of said bolts therethrough, and longitudinal conductor bars embedded in said section and connecting said rings.

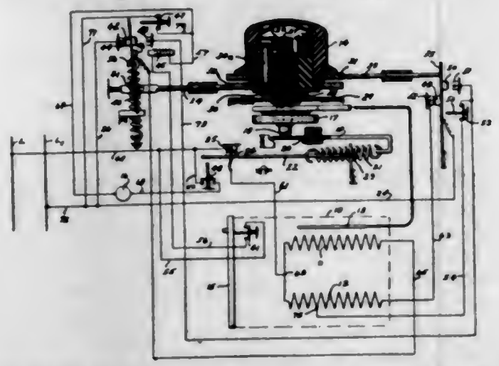
2,409,431
HEATING WORK
Frederic O. Hess, Germantown, Pa., assignor to Selas Corporation of America, a corporation of Pennsylvania
Application August 31, 1942, Serial No. 456,787
23 Claims. (Cl. 263—3)

1. Apparatus for hot finishing tin plate stock in the form of a thin strip having a tin coating, comprising in combination a pair of refractory walls having opposing faces normally in close proximity to each other, means carried by said walls for maintaining said faces at temperatures substantially higher than the melting point of tin, means normally moving said strip rapidly through the space between said walls, and means responsive to the speed of said strip for increasing the distance between said faces when the speed of said strip diminishes.



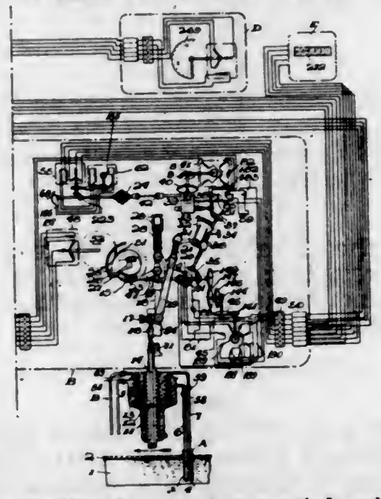
2,409,432
INTRAVENOUS NEEDLE HOLDER
Edward R. Hubbard, Taunton, Mass.
Application February 5, 1945, Serial No. 576,253
6 Claims. (Cl. 128—216)

1. An intravenous needle holder comprising a leaf base, a second leaf hingedly related to the base and provided with means to bind a needle



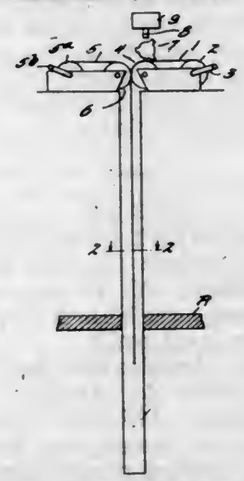
therein, and means to angularly adjust said leaves.

2,409,433
DUCT THROTTLE
Willson H. Hunter, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application September 10, 1943, Serial No. 501,785
8 Claims. (Cl. 138—45)



2. Apparatus for throttling the flow of air through the intake end of a duct, said apparatus comprising a covering for the wall of said duct at said end, said covering comprising a frontal portion positionable about said end and having a margin for attachment to the outer wall of said duct and an inflatable tube at the inner wall of the duct at said end advancing the surface of said covering immediately at said end across said duct toward an opposite inner wall of the latter for reducing the area of said duct immediately at said end to effect said throttling of flow of air while presenting a generally curved frontal surface at said end to promote smooth flow of air around the outside of and through the duct at said end.

2,409,434
DOMESTIC APPLIANCE
James W. Jacobs, Dayton, Ohio, assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware
Application November 20, 1940, Serial No. 366,444
8 Claims. (Cl. 219—20)

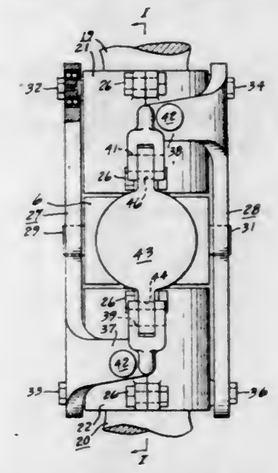


7. In combination, an oven, an oven door, electrical heating means in said oven, a source of electrical power, a snap switch having first and second positions, connections between said source of power and electrical heating means controlled differently by said snap switch in said two positions, an actuator moved by said door in a first direction while said door is being opened and moved by said door in a second direction while said door is being closed, manual means independent of said actuator, for moving said snap switch from said first to said second position while said door is closed, said actuator moving said snap switch from said second position to said first position when said door is moved.

2,409,435
INDICATING MECHANISM
Morris F. Ketay and Michael Sherman, Brooklyn, N. Y., assignors to Bendix Aviation Corporation, Teterboro, N. J., a corporation of Delaware
Application September 13, 1943, Serial No. 502,210
9 Claims. (Cl. 73—388)

1. In an indicating instrument having a substantially vertically disposed actuating element; a support; means guiding said element for endwise movement on said support; an indicating device actuated by endwise movement of said element; and means responsive to inclination for automatically exerting downwardly directed forces upon said actuating element whenever the latter inclines a predetermined degree from the vertical in any vertical plane, to thereby modify the resulting actuation of said indicating device by said element.

2,409,436
METHOD AND APPARATUS FOR DIRECT RECORDING OF BOREHOLE RADIOACTIVITY
Shelley Krasnow, New York, N. Y., and Leon F. Curtiss, Montgomery County, Md., assignors to Geophysical Development Corporation, Washington, D. C., a corporation of Delaware
Application December 10, 1941, Serial No. 422,450
15 Claims. (Cl. 250—83)

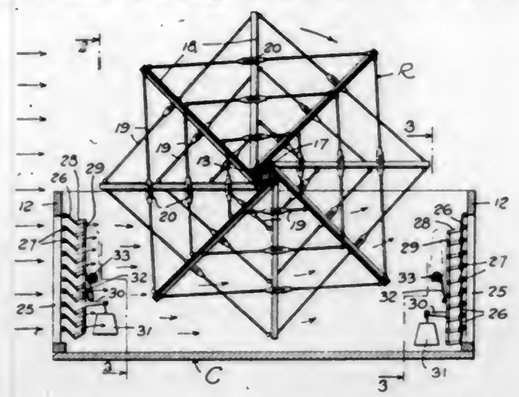


1. In an apparatus for measuring radioactivity in a deep narrow borehole, a long narrow element sensitive to radioactivity, means to indicate the radioactive intensity of rays impinging on the element, and a filter, the filter serving to absorb a portion of the rays impinging upon the element sensitive to radioactivity.

2,409,437
COMPOUNDING MATERIAL FOR RUBBER AND RUBBER SUBSTITUTES
Clifford G. La Crosse, Baltimore, Md.
No Drawing. Application February 21, 1945, Serial No. 579,148
6 Claims. (Cl. 196—152)

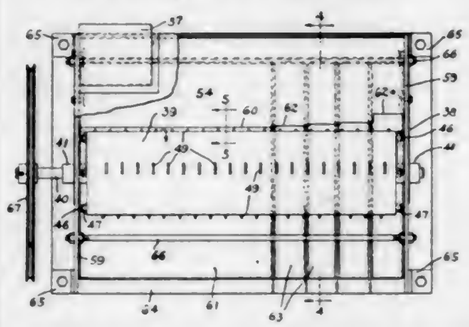
1. A rubber compounding material comprising a friable resin made by heating together, with the ingredients in a fused condition a mixture of a petroleum pitch polymer that has a softening point above 200° F. and that contains vanadium pentoxide, in excess of 0.20%, as a natural ingredient; and a bituminous hydrocarbon mixture that is compatible with rubber and that melts below 70° F.

2,409,438
AIRCRAFT PROPELLER
Porter Landrum, Birmingham, Ala.
Application April 28, 1942, Serial No. 440,763
6 Claims. (Cl. 170—160)



1. In a variable pitch propeller, a body, radially disposed journals formed on the body, blades having their hub ends recessed to receive said journals, collars secured around the hub ends of the blades, control arms pivotally mounted on the body and having their ends pivotally connected to said collars, a housing mounted for axial movement on the forward end of the body, cam means provided on the housing for actuating each control arm, and means for moving the housing axially for changing the pitch of the blades.

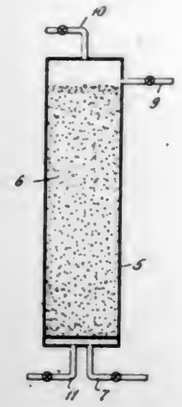
2,409,439
WIND POWER PLANT
Thomas E. Law, Central Heights Globe, Ariz.
Application September 19, 1944, Serial No. 554,811
1 Claim. (Cl. 170—14)



In a wind driven power plant, a chamber having an air inlet at one side and open at the top; a rotor having circumferentially spaced vanes and rotatably mounted about a horizontal axis, with the portion of the rotor below its axis disposed in said chamber, and the portion of the rotor above its axis projecting above the chamber; shutters spanning said air inlet and operatively connected for adjustment as a unit to open and close said inlet; a weight connected to

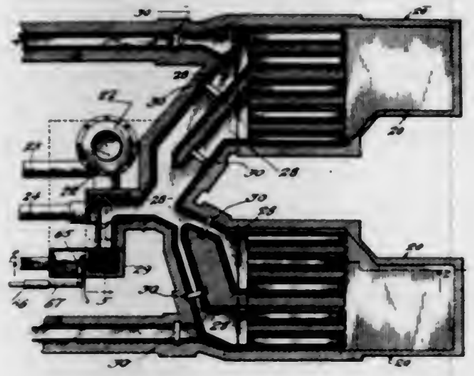
said shutters and urging the latter closed with a predetermined force in opposition to the force of the wind tending to open the shutters and act upon the portion of the rotor in the chamber; a winding shaft having a drum; a handle secured to the winding shaft; a flexible member

wound upon the drum and connected to the shutters to move the latter to open position in response to winding of the flexible member on the drum; and a latching device by which said member can be maintained wound on the drum to sustain the shutters in fully open position against the action of said weight.



2,409,440
RIVET SORTING MACHINE
Waite McClain, Canton, Ohio
Application April 26, 1944, Serial No. 532,787
6 Claims. (Cl. 209—101)

1. A machine for sorting rivets in accordance with their diameter, comprising a substantially horizontal cylinder having slots in its peripheral portion, a spirally arranged series of pivoted, spring loaded projections operating within the cylinder through said slots, an inclined plate having its lower edge spaced from and parallel with the cylinder, a portion of the lower edge of the plate being so spaced from the cylinder that only the smallest rivets may pass between the plate and the cylinder, the remainder of said lower edge of the plate being progressively cut away to allow progressively larger diameter rivets to pass between the same and the cylinder, and means for feeding rivets to said inclined plate.



2,409,441
PRODUCTION OF GLYCOLS
Floyd J. Metzger, New York, N. Y., assignor, by mesne assignments, to U. S. Industrial Chemicals, Inc., New York, N. Y., a corporation of Delaware
Application May 7, 1943, Serial No. 486,057
3 Claims. (Cl. 260—635)

2. The method of liberating the acid from the non-titratable glycol-acid complex formed during the hydration of an aqueous solution of the corresponding olefin oxide in the presence of an acid hydration catalyst that forms such a com-

plex with the glycol and removing the free acid from the resulting glycol solution, which comprises passing the aqueous glycol solution through a bed of anion adsorbing resin.

2,409,442
METHOD AND APPARATUS FOR CLEANING FURNACE CHECKERS AND FLUES
William J. Montgomery, Warren, Ohio
Application August 20, 1945, Serial No. 611,602
17 Claims. (Cl. 263—19)

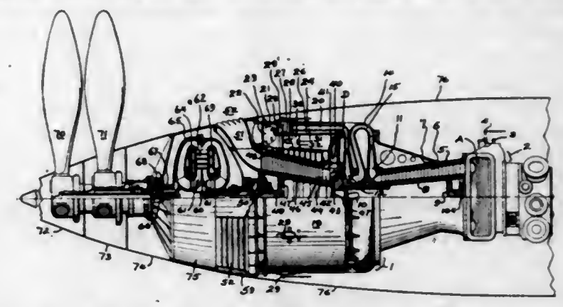
1. The herein described method of cleaning furnace checkers and flues which includes directing a fluid blast against the checkers to dislodge flue dust and debris therefrom, collecting the flue dust and debris so dislodged on the floor of the furnace stock, isolating the portion of the floor of the stack upon which the flue dust and debris is collected, and removing the flue dust and debris from the isolated area.

2,409,443
INSTRUMENT LUBRICANT
John D. Morgan, South Orange, and Russell E. Lowe, East Orange, N. J., assignors to Cities Service Oil Company, New York, N. Y., a corporation of Pennsylvania
No Drawing. Application July 21, 1944, Serial No. 546,057
5 Claims. (Cl. 252—49.8)

1. A lubricant for instrument bearings or the like comprising tricresyl phosphate and ethylene glycol monobenzyl ether in about equal percentages by weight.

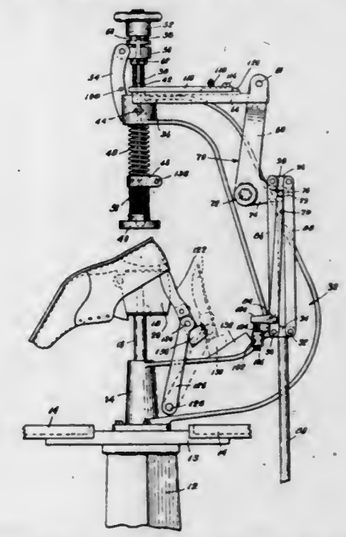
2,409,444
CLOCK LUBRICANT
John D. Morgan, South Orange, and Russell E. Lowe, East Orange, N. J., assignors to Cities Service Oil Company, New York, N. Y., a corporation of Pennsylvania
No Drawing. Application August 14, 1944, Serial No. 549,494
2 Claims. (Cl. 252—49.8)

1. A lubricant consisting essentially of a mixture of from 40 to 60 percent of tricresyl phosphate, from 25 to 15 percent of di butyl phthalate, and from 35 to 25 percent of triethylene glycol di-2-ethylbutyrate, all of said percentages being by weight.



2,409,445
SEWING MACHINE NEEDLE
Max M. Newman, New York, N. Y.
Application May 2, 1944, Serial No. 533,694
3 Claims. (Cl. 112—222)

1. A needle which has a flattened eye-portion and a shank which has a free end, said shank being of cylindrical cross-section, said shank having a flattened portion in its sewing portion intermediate the free end of said shank and the rear end of said eye-portion, the length of said flattened shank portion being at least twice the length of said eye-portion, the distance between the rear end of said eye-portion and the front end of said flattened portion being greater than the length of said flattened portion and the width of said flattened portion being greater than the diameter of said shank.

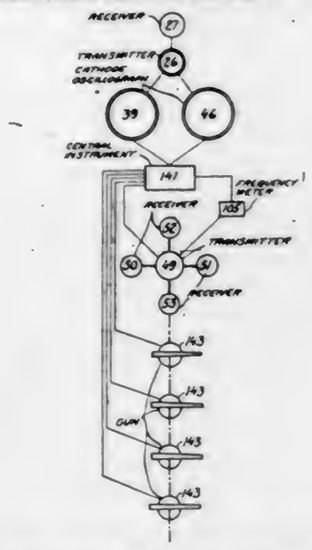


2,409,446
AIRPLANE POWER PLANT
Vladimir H. Pavlecka, Pacific Palisades, and John K. Northrop, Los Angeles, Calif., assignors to Northrop Aircraft, Inc., Hawthorne, Calif., a corporation of California
Application November 10, 1941, Serial No. 418,476
9 Claims. (Cl. 170—135.5)

1. In combination, an aircraft power plant comprising a central rotor surrounded by a stator, cooperating air compressor members mounted adjacent one end of said rotor and said stator to provide a flow of compressed air in said stator, a fuel burner mounted in said stator in the path of said air, cooperating turbine elements on said rotor and stator driven by the gases of combustion from said burner, an impeller on the other end of said rotor, a source of liquid for said impeller, a pair of concentric propeller shafts mounted coaxially with said rotor and each having rotating blades connected thereto mounted to move in opposite directions under impact of the liquid

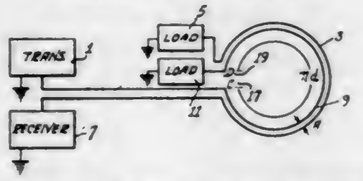
from said impeller, and automatic pitch controlling contra-rotation propellers mounted on said propeller shafts.

2,409,447
RELASTING MACHINE
Angelo Perri, Groveland, Mass., assignor to Allied Shoe Machinery Corp., Haverhill, Mass., a corporation of Massachusetts
Application January 13, 1945, Serial No. 572,620
11 Claims. (Cl. 12—15)



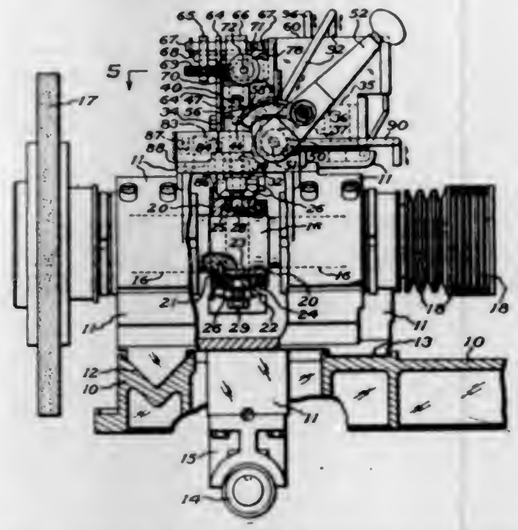
1. A re-lasting machine comprising a support for a last, a plunger mounted for movement between an inactive position and a position in which it engages a shoe partially engaged over a last on said support, spring means biasing the plunger to its said shoe-engaging position, latch means for releasably holding the plunger in its said inactive position, means for releasing said latch means thereby to cause a single forcible snap movement of the plunger to its said shoe-engaging position for completing the engagement of the shoe over the last, and means for moving the last support in opposition to the said spring means biasing the plunger thereby to restore the plunger to its said inactive position.

2,409,448
SELF-TRACKING RADIO DIRECTION AND DISTANCE DEVICE
Helge Fabian Rost, Djursholm, Karl Harry Thunell, Nockeby, Sten Daniel Vigren, Stockholm, and Per Harry Elias Claesson, Jakobsberg, Sweden
Application February 4, 1941, Serial No. 377,344
In Sweden January 10, 1940
16 Claims. (Cl. 250—1.54)



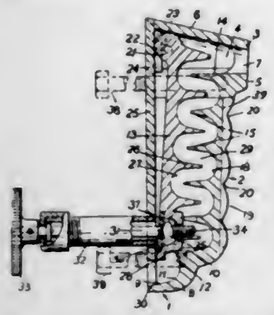
1. A system for locating and following an object in space comprising, in combination, a single

transmitter adapted to emit a highly directive beam of radio waves, receiving means comprising directional scanning means adapted to scan in slightly diverging directions to receive the waves reflected by said object when hit by said directive beam of radio waves, means for orientating said receiving means in at least one plane, said orientating means comprising driving means, a distributing device coupled to the receiving means and to the said driving means, a single amplifier and a rectifier interconnected between the receiving means and said distributing device to amplify



and rectify the received radio energy, said distributing device being adapted to counter-direct two successively received amounts of radio energy from two slightly different directions in a certain plane of a field of scanning, said two amounts of energy corresponding to two oppositely located equal parts of the said field, said distributing device directing the resulting difference of the received radio energies to said driving means to operate same in one or the other direction in said plane, depending upon which of the said two amounts of energy is the major one, in order to automatically follow the object.

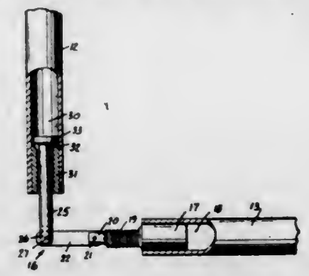
2,409,449
PHASE MODULATOR
Royden C. Sanders, Jr., and William R. Mercer, Hightstown, and Daniel Blitz, Princeton, N. J., assignors to Radio Corporation of America, a corporation of Delaware
Application December 30, 1943, Serial No. 516,254
7 Claims. (Cl. 178—44)



1. A phase modulator system including two spaced parallel transmission lines, means for applying radio frequency energy to one end of one of said lines, means for absorbing radio frequency energy from the corresponding end of the other of said lines, movable shield means disposed between said lines, said shield means provided with at least one gap whereby coupling between said lines is prevented except at said gap, and motion of said shield means moves said coupling longitudinally with respect to said lines to vary the effective length of the transmission path between said means for applying energy and said means for absorbing energy.

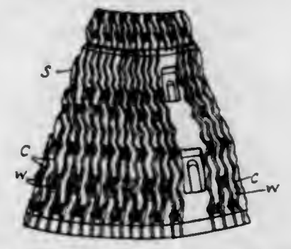
2,409,450
GRINDING WHEEL SPINDLE RECIPROCATING MECHANISM
Herbert A. Silven, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a corporation of Massachusetts
Application October 29, 1945, Serial No. 625,374
11 Claims. (Cl. 51—34)

1. In a grinding machine having a transversely movable wheel slide, spindle bearings in said slide, a rotatable axially reciprocable wheel spindle supported in said bearings, means including a fluid motor to reciprocate said spindle, a control valve therefor, means including a normally operative locking device to connect said motor with said spindle to reciprocate the spindle for a plunge-cut grinding operation, a manually operable control lever to actuate said valve, and means actuated by said lever when the lever is shifted to close said valve to disconnect said motor from said wheel spindle.



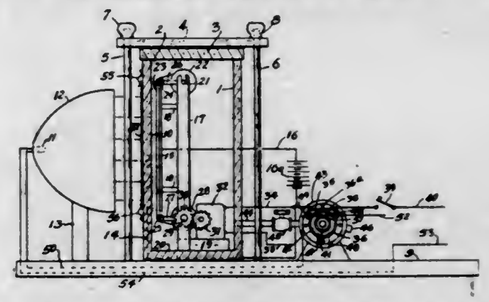
2,409,451
AIR PREHEATER FOR FURNACES AND THE LIKE
Marek Steuerman, London, England
Application January 8, 1944, Serial No. 517,601
In Great Britain March 26, 1942
4 Claims. (Cl. 110—175)

1. An air preheater for furnaces and the like comprising a hollow body, its top wall being substantially imperforate, its rear wall being provided adjacent its bottom edge with air inflow means, the rear wall being otherwise substantially imperforate, the front wall of said hollow body being provided with air outflow means adjacent its upper edge, the front wall being otherwise substantially imperforate, the inner face of the front wall being provided with baffle-like formations extending generally in like directions and transversely to the direction from said air inflow



means to said air outflow means; a plate disposed within said hollow body intermediate the inner face of said rear wall and said baffle-like formations of said front wall, said inwardly disposed plate having baffle-like formations facing said baffle-like formations of said front wall and generally in like directions and extending transversely to the direction from said air inflow means to said air outflow means, the free edges of said baffle-like formations of said inwardly disposed plate being disposed alternately with respect to the free edges of said baffle-like formations of said front wall; means for pivotally mounting said inwardly disposed plate at its upper portion; and means extending through said rear wall for adjusting the pivotal position of said inwardly disposed plate.

2,409,452
COLLAPSIBLE DEVICE
Edmund J. Stone, New York, N. Y.
Application March 6, 1945, Serial No. 581,284
3 Claims. (Cl. 287—3)



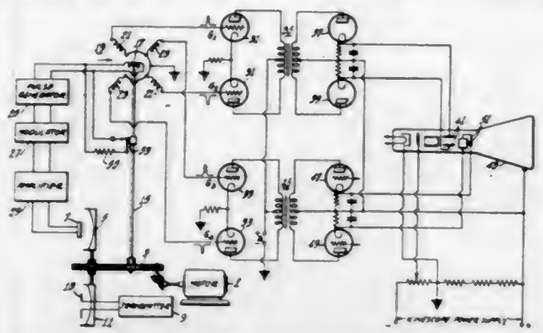
1. In an article of manufacture two members, each of said members having a hollow end portion, and means connecting said members together at said end portions, said means comprising an internally threaded tubular element fitting into one of said end portions, said element being less in length than the depth of said hollow whereby a space is provided beyond said element, a shaft movable in said space and having its forward portion extendible from said element, stop means preventing said shaft from leaving said space, a stud fixed to the other of said members, said stud having a threaded extension adapted to threadedly engage said element, and a link pivotally connected to adjacent ends of said shaft and said extension, said shaft and said link being adapted to pass through said element into said space permitting threaded engagement of said element and said extension.

2,409,453
JORDAN ENGINE LINING
Harold D. Stuck, Andover, and William W. Bolton, North Andover, Mass., assignors to John W. Bolton & Sons, Inc., Lawrence, Mass., a corporation of Massachusetts
Application July 5, 1941, Serial No. 401,066
4 Claims. (Cl. 92—27)

1. The combination with a frustro-conical Jordan engine backing; of a plurality of cutting members each member being bent to form sections, each cutting member being formed on its cutting edge with serrations, each serration having a straight edge disposed at an angle of less than thirty degrees with the general direction of the cutting member; and separating members between the cutting members and conforming to the shape thereof up to and including part of the serrations, the separating members being formed on their exposed faces in successive ripples, each ripple having a long face at a low angle with the edges of the cutting members and a short face at a high angle therewith.

2,409,454
ELECTRONIC DEVICE
Albert G. Thomas, Lynchburg, Va.
Application January 27, 1944, Serial No. 519,924
21 Claims. (Cl. 250—41.5)

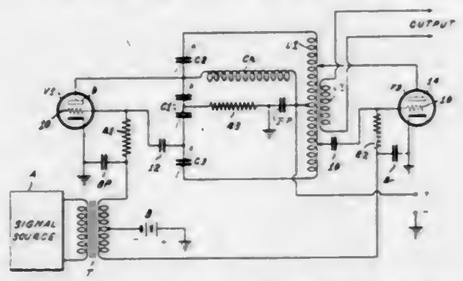
3. An electronic device comprising, a container having a light transmitting wall, a closure for said container, a translucent coating of photoemissive material on at least a portion of the inner surface of said wall, an electrically conducting plate substantially parallel with said wall, electrical conductors connected with said coating and said plate, electrical means connected with said conductors for charging said plate positively with respect to said coating, a pair of rollers within said container, means to support said rollers, and electrical means operatively connected with at least one said roller to rotate said roller.



2,409,455
TETRAACETYL RIBONIC ACID AND PROCESS OF MAKING IT
Max Tishler, Rahway, N. J., assignor to Merck & Co., Inc., Rahway, N. J., a corporation of New Jersey
No Drawing. Application May 21, 1941, Serial No. 394,505
2 Claims. (Cl. 260—488)

1. As a new product, tetraacetyl ribonic acid.

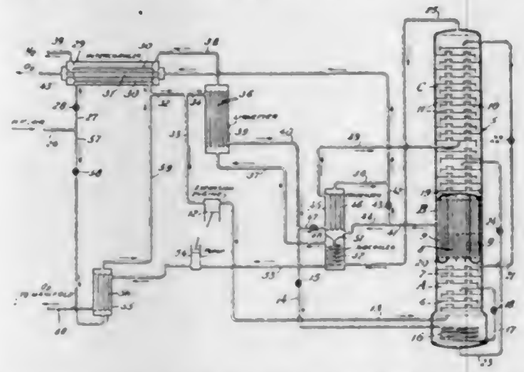
2,409,456
RADIANT ENERGY LOCATING SYSTEM
William A. Tolson and Carl A. Meneley, Princeton, N. J., assignors to Radio Corporation of America, a corporation of Delaware
Application January 29, 1944, Serial No. 520,336
14 Claims. (Cl. 250—11)



1. A radiant energy locating system including in combination means for receiving radiant energy, rotatable means for limiting the reception of said radiant energy to a predetermined angular range, a cathode ray tube for indicating the angular position at which said energy is received, said tube including elements for deflecting said ray throughout said range, a goniometer having a rotatable coil movable in synchronism with said rotatable means and having fixed coils disposed in operative relation to said rotatable coil, a generator connected to said rotatable coil for

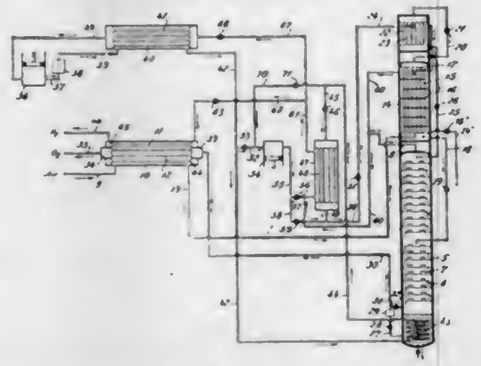
inducing energy in quadrature phase in said fixed coils, and connecting means between said fixed coils and said deflecting elements for applying

potentials to said deflecting elements for rotating said ray in synchronism with said rotatable means and for deflecting said ray in a radial direction.



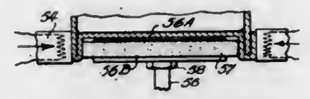
2,409,457
WAVELENGTH MODULATION
George L. Usselman, Port Jefferson, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application February 21, 1944, Serial No. 523,232
9 Claims. (Cl. 179—171.5)

1. In a wave generating and wave length modulating system, a capacitive element and an inductive element, a discharge device having an anode, a control grid and a cathode, connections including at least a part of one of said elements regeneratively coupling the anode, control grid, and cathode of said device in a circuit for the production of oscillations, the arrangement being such that a part at least of said one element is shunted by the impedance between the anode and cathode of said one device, a second electron discharge device having an anode, a cathode and a control grid, connections including at least a part of the other of said elements regeneratively coupling the anode, control grid and cathode of the second device in a circuit for the production of oscillations of substantially the same frequency, the arrangement being such that the impedance between the anode and cathode of said second device is in shunt to a part at least of said other element, and a source of modulating potentials coupled differentially between corresponding electrodes of said devices.



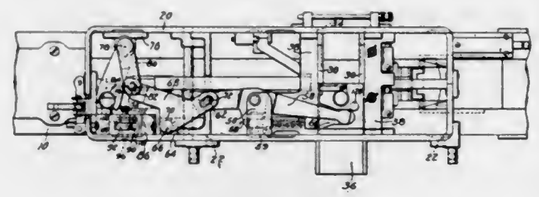
2,409,458
SEPARATION OF THE CONSTITUENTS OF GASEOUS MIXTURES
Claude C. Van Nuys, Greenwich, Conn., assignor to Air Reduction Company, Incorporated, New York, N. Y., a corporation of New York
Application April 27, 1943, Serial No. 484,720
9 Claims. (Cl. 62—175.5)

9. The method of separating air into its constituents, oxygen and nitrogen, which comprises compressing and cooling air at high pressure, liquefying a portion of the compressed and cooled air without substantial prior reduction of the pressure thereof, reducing the pressure of the remainder of the compressed and cooled air, subjecting the air at reduced pressure to liquefaction and subsequent rectification to separate it into two fractions, one consisting essentially of oxygen and the other consisting essentially of nitrogen, withdrawing oxygen in the gaseous form from said one fraction and subjecting it to backward return condensation by heat exchange substantially solely with air liquefied from the initially compressed and cooled



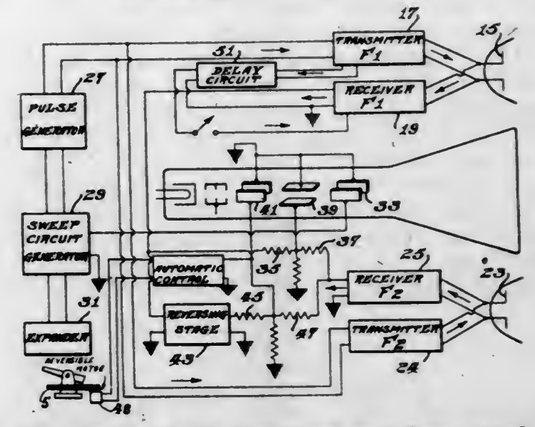
air, separately withdrawing the liquid oxygen and the uncondensed residue thereof from the zone of backward return condensation, delivering the air vaporized in cooling the gaseous oxygen to the zone of rectification for liquefaction of oxygen contained therein, sub-cooling the liquid oxygen from the zone of backward return condensation by heat exchange with said other fraction, and pumping the liquid oxygen from the zone of subcooling to a relatively high pressure and utilizing the cold of the liquid oxygen at high pressure to cool a portion of the incoming high pressure air.

2,409,459
SEPARATION OF THE CONSTITUENTS OF AIR
Claude C. Van Nuys, Greenwich, Conn., assignor to Air Reduction Company, Incorporated, New York, N. Y., a corporation of New York
Application June 16, 1944, Serial No. 540,620
10 Claims. (Cl. 62—175.5)



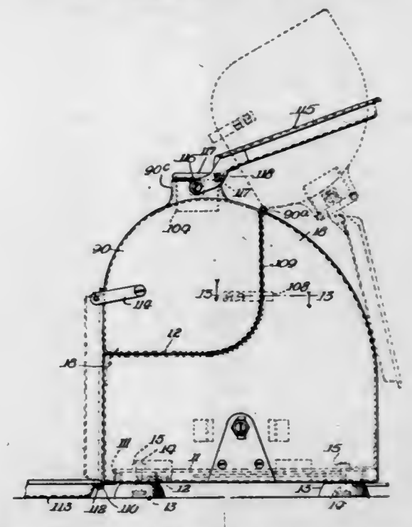
1. The method of separating the constituents of atmospheric air by liquefaction and rectification under conditions affording resistance to travel of the air which comprises compressing air to a relatively low pressure not materially in excess of that required to overcome resistance to travel, subjecting the air to liquefaction by indirect heat exchange with liquid nitrogen and subsequently to rectification to separate liquid oxygen and a gaseous effluent, compressing nitrogen, expanding a portion of the nitrogen to a lower pressure with external work, liquefying the other portion of the nitrogen by indirect heat exchange with the expanded portion and the gaseous effluent from the rectification, and thereby supplying the liquid nitrogen utilized in the liquefaction of the air.

2,409,460
MANUFACTURE OF CONTAINERS
Harry F. Waters, New York, N. Y.
Original application July 18, 1936, Serial No. 91,365. Divided and this application November 12, 1941, Serial No. 418,745
2 Claims. (Cl. 93—55.1)



1. A process for securing a closure to a container provided on its interior surface with a thermoplastic liquidproof material which comprises coating the closure with a thermoplastic liquidproof material, bringing into juxtaposition only coated surfaces of the closure and container, applying heat and pressure to bond said surfaces together by pressing said surfaces and the plies of the container and closure between a heated pressure member and a resilient backing member whereby to distribute said pressure substantially uniformly to all parts of the area to be bonded.

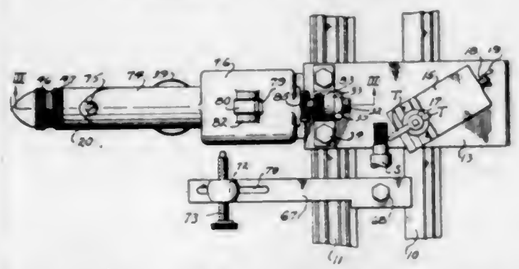
2,409,461
FEEDING MECHANISM FOR AUTOMATIC FIREARMS
George Webb, Hartford, Conn., assignor to Colt's Patent Fire Arms Manufacturing Company, Hartford, Conn., a corporation of Connecticut
Application December 23, 1943, Serial No. 515,392
3 Claims. (Cl. 89—33)



1. In combination, a firearm feed lever provided with a projection extending laterally from one side thereof and adapted to engage a component part of a firearm, a block adapted to be secured to a portion of a firearm for support and provided with an aperture intermediate opposed sides thereof to receive one end of said feed lever, said block also having a clearance opening intersecting said aperture and one side of said block and said opening being of less width than said end of said feed lever but sufficiently wide to pass said projection when longitudinally moving said feed lever through said aperture incident to removing said feed lever from said block, and a pivot pin removably carried by said block and extending through said end of said feed lever to pivotally secure the same to said block, said pin when in operative position having a portion engaging at least a portion of the walls of said opening to provide at least partial support for said pin.

2,409,462
RADIO GUNFIRE CONTROL
Vladimir K. Zworykin, Philadelphia, Pa., and Arthur W. Vance, Haddonfield, N. J., assignors to Radio Corporation of America, a corporation of Delaware
Application May 31, 1941, Serial No. 395,998
10 Claims. (Cl. 89—41)

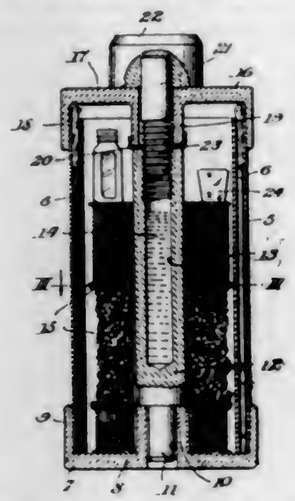
1. The method of directing gunfire which includes directing pulses of energy at a target and including a region about the target within which shells directed at the target fall, receiving the pulses reflected from said target, indicating by means of said pulses the range and angular position of the target with respect to the gun to be directed; firing into said region a shell from said gun; and observing the pulses, reflected from the effects of said shell at its final position within said region, to determine said final shell position with respect to the pulse indicated target position.



2,409,463
FOOD TENDERING MACHINE
Arthur H. Ahrndt, La Porte, Ind., assignor to U. S. Slicing Machine Company, La Porte, Ind., a corporation of Indiana
Application August 21, 1942, Serial No. 455,561
11 Claims. (Cl. 17—26)

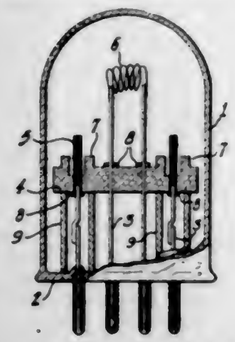
1. A machine of the character described comprising a base, a housing adapted to be secured to said base, said housing having a material inlet and a material outlet in communication with each other, locking means for securing said housing to said base, a support mounted on said base, cutting means rotatably mounted in said support, driving means operatively connected with said cutting means, guide means detachably mounted on said support in communication with

said inlet and adapted to direct material introduced through said inlet to said cutting means and substantially prevent said material from by-passing said cutting means, said cutting means comprising a plurality of knife shafts, each of said shafts having fixedly mounted thereon a plurality of spaced, radially extending knives, said shafts being so positioned with respect to each other and the knives of one shaft so spaced and arranged with respect to those of another, that the path of rotation of the knives of each shaft will be substantially parallel to and overlap the path of rotation of the knives of another shaft, and each knife of one shaft, except in the case of knives in an end position, will rotate in a space intermediate two adjacent knives of another shaft, said driving means being adapted to drive one knife shaft in a direction opposite to that of another, and means for discharging from said machine material cut therein.



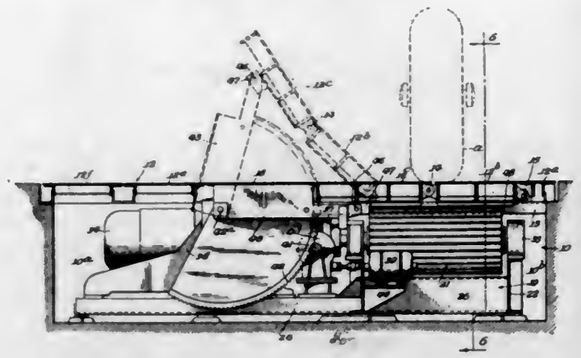
2,409,464
LATHE ATTACHMENT
Raymond H. Andresen, Chicago, Ill., assignor to Peerless Tool and Engineering Company, Chicago, Ill., a corporation of Illinois
Application January 29, 1945, Serial No. 575,091
9 Claims. (Cl. 82—5)

1. An attachment for application to the carriage and tool supporting cross slide of a lathe, comprising a frame and means for supporting it rigidly from the lathe carriage to be moved therewith when the lathe is operated, an actuating member movable in said frame and adapted for connection with the cross slide of the lathe, spring means tending to shift said actuating member for shift of the tool slide to retract the tool thereon from work in the lathe, means providing a latch interconnection between said frame and said actuating member for normally holding said actuating member with the cross slide in position for application of the tool to the work, a trigger on said actuating member for said latching connection, a stop adapted to be applied on the lathe bed for engagement by the trigger for release of the latching connection and movement of said actuating member and cross slide by said spring means for retraction of the tool from the work when the tool has reached a predetermined position in the cutting operation, and a lever on said frame forming a stop for limiting the shift of said actuating member and cross slide by said spring means and operable to shift said actuating member back into normal latched position.



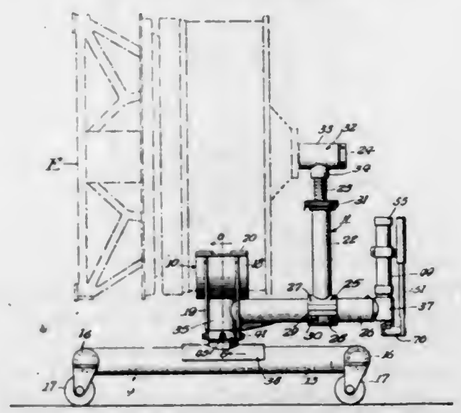
2,409,465
FIRST-AID CONTAINER
Frank Armbruster, Waverly, and Edison Stearns, Columbus, Ohio
Application April 5, 1944, Serial No. 529,597
2 Claims. (Cl. 206—63.2)

2. A kit for first aid appliances comprising a cylindrical casing closed at one end and open at its other, said casing having inner and outer concentric side walls separated by a corrugated spacer, the latter forming in conjunction with said inner and outer walls a plurality of circularly arranged vertical pockets substantially coextensive with the full height of said walls, a removable cover normally closing the open ends of said casing and said pockets, a liquid-holding member disposed in said casing and provided with an outlet arranged in registration with an



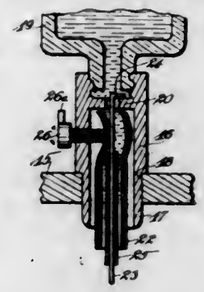
opening formed axially in said cover, and means normally closing the outlet of said member, said means including a knob adapted to be seated exteriorly on said cover, and a depending stud, the lower end of said stud being threaded in the outlet of said liquid-holding member to retain the cover against accidental displacement on the open end of said casing and prevent loss of liquid from said member.

2,409,466
ELECTRON DISCHARGE DEVICE
Walter E. Bahls, Haddonfield, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application July 21, 1944, Serial No. 545,924
5 Claims. (Cl. 250—27.5)



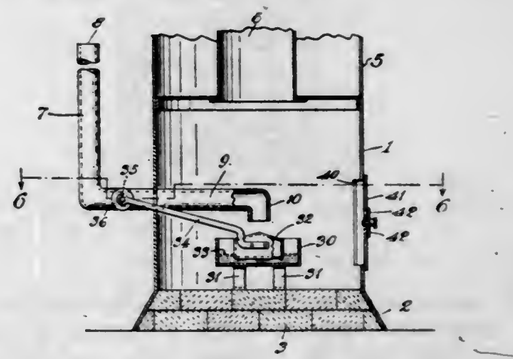
1. A rectifier comprising a tubular envelope, a flat glass disc header closing one end of said envelope, a disc-shaped insulating spacer in and disposed across the envelope parallel to said header, parallel lead-in conductors sealed perpendicularly through said header and extending through said insulating spacer, metal tabs welded to said conductors to prevent movement of said spacer along said conductors, a cathode mounted on the inner ends of two of said conductors, a rod-like anode mounted on the inner end of another of said conductors, an insulating element surrounding said anode, the anode and cathode electrodes being in operative relationship on one side of said spacer and separated from said header by said spacer.

2,409,467
APPARATUS FOR TESTING THE BRAKES ON AIRPLANE GROUND WHEELS
George E. Bock, Chicago, Ill., assignor to Whiting Corporation, Harvey, Ill., a corporation of Illinois
Application January 23, 1943, Serial No. 473,334
5 Claims. (Cl. 73—126)



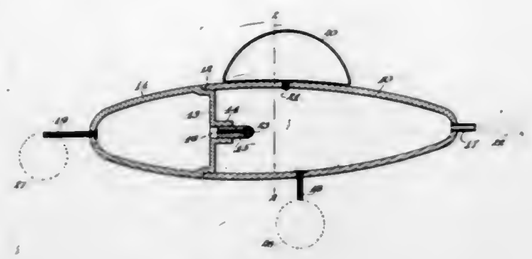
1. The combination with a pit having therein a pair of side by side rollers for use in testing the brake on a vehicle wheel, of a platform type element at the top of the pit mounted so that it is shiftable back and forth lengthwise of the rollers between an operative position wherein it overlies, and is supported directly on, the rollers and an inoperative position wherein it is free or clear of said rollers, and adapted and designed, when in its operative position, to have the vehicle wheel propelled thereon and to support said wheel, and further adapted, upon elevation of the wheel, to be shifted into its inoperative position so as to permit the wheel to be lowered into operative relation with the brake testing rollers, and means including an electric motor and gearing in the pit for shifting the element back and forth between its operative and inoperative positions.

2,409,468
ENGINE WORK STAND
George E. Bock, Chicago, Ill., assignor to Whiting Corporation, Harvey, Ill., a corporation of Illinois
Application October 20, 1943, Serial No. 506,937
5 Claims. (Cl. 29—289)



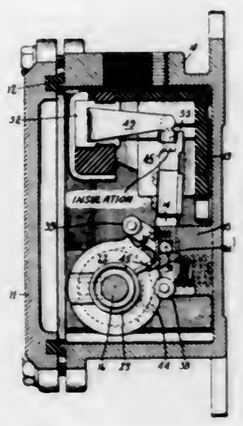
1. A workstand adapted to support an engine having a drive shaft with an exposed end, and comprising a base frame, a unitary assembly over the base frame embodying a member for supporting the engine and an element in opposed relation with the member and provided with a bearing for receiving and supporting the exposed end of the engine drive shaft when the engine is on the member, means between the base frame and assembly for supporting said assembly so that it together with the engine may be conjointly raised and lowered to a limited extent relatively to the base frame and also rotated about a vertical axis, and means for locking said assembly against rotation relatively to the base frame when it is lowered to substantially its fullest extent.

2,409,469
INCENSE DISPENSER
Mauricio Bravo, Chicago, Ill.
Application July 14, 1944, Serial No. 544,973
3 Claims. (Cl. 222—422)



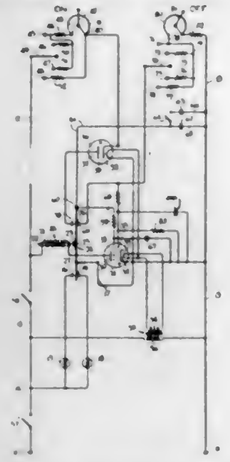
1. A dispenser for slowly flowing liquids comprising a member having a receptacle in its top for the mouth of a container of the liquid, a downwardly-opening chamber in its lower part, a perforated partition between the receptacle and the chamber, a vertical wire suspended from the perforated portion of the partition for leading the liquid downwardly from said mouth, and means for limiting the flow of the liquid along said wire, said means comprising a flexible tube surrounding the wire, and a set screw applied to the tube by way of the chamber wall to constrict the tube in respect to the wire.

2,409,470
BURNER AND FUEL FLOW CONTROL MEANS
James L. Breese, Santa Fe, N. Mex., assignor to Oil Devices, Santa Fe, N. Mex., a limited partnership of Illinois
Application July 13, 1944, Serial No. 544,736
9 Claims. (Cl. 158—42.3)



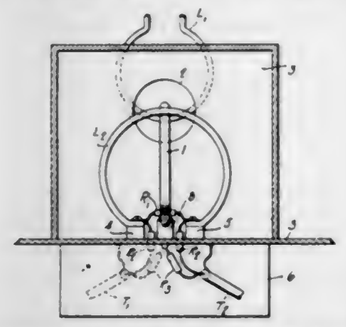
1. In combination, in a liquid fuel burner, a mixing and combustion chamber element therefor, having air inlet means, means for delivering a liquid fuel to the interior of said chamber element, a liquid fuel receiving cup, located in said interior of said chamber element and in the line of delivery of liquid fuel to the interior of said chamber element, and means for varying the flow of liquid fuel to the interior of said chamber element in response to changes in the volume of the liquid fuel in said cup.

2,409,471
AIRPLANE TOY
Mary A. Brosseit, Chicago, Ill.
Application June 18, 1945, Serial No. 600,056
4 Claims. (Cl. 46—9)



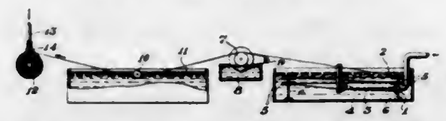
1. A simulated toy airplane comprising an elongated hollow body separable at an intermediate point, a cross-partition carried by one body portion at the junction site and formed with a receptacle, a porous incense stick fitted into the latter and projecting into the other body portion to fill the same with smoke when burning, pressure means applied to said other body portion and effective to force smoke through said stick into the first-mentioned body portion, and a discharge element at the outer end of such first-mentioned body portion for the smoke received therein.

2,409,472
ELECTRIC SWITCH
William Lawrence Butler, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application May 29, 1943, Serial No. 489,021
8 Claims. (Cl. 200—165)



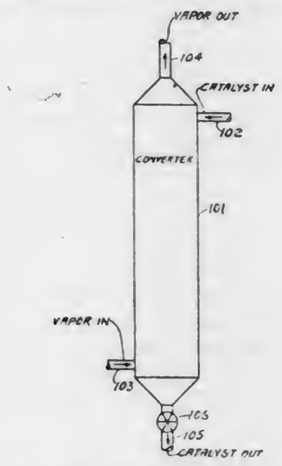
1. An electric switch comprising a base, a pair of cantilever spring strips mounted at one end upon said base in substantially parallel spaced relation and providing at their free ends cooperating switch contact portions and separate juxtaposed camming portions extending laterally from said spring strips in parallel spaced relation, said spring strips being biased to maintain said contact portions in engagement and said camming portions in proximate spaced relation, and switch actuating means comprising a wedge-shaped cam movable from a position of disengagement to a position between said camming portions only, thereby to separate said contact portions with a torsional rolling action.

2,409,473
ELECTRONIC TIMING DEVICE
Edwin M. Callender, Philadelphia, Pa., assignor to The Budd Company, Philadelphia, Pa., a corporation of Pennsylvania
Application January 4, 1944, Serial No. 516,928
11 Claims. (Cl. 171—97)



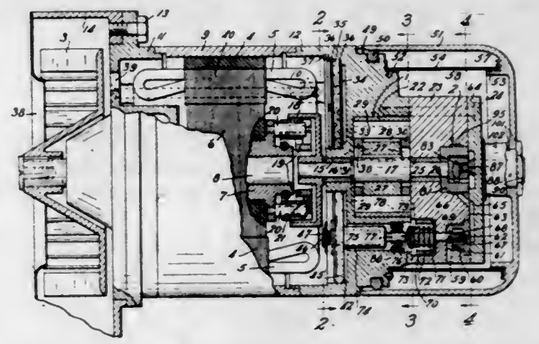
11. An electronic timing device comprising power mains, dual load circuits, relay means for connecting said load circuits alternately across said mains, and time change means for adjusting the timing of said alternate load circuit connections, said relay means comprising a relay, load circuit switch contacts operable by said relay, an electronic device including a control grid, a branch circuit conductor connecting said relay and electronic device across said mains, and means connected to said electronic device for recurrently blocking current flow therethrough.

2,409,474
HIGH-FREQUENCY ATTENUATOR AND DIVIDER CIRCUITS
Richard G. Clapp, Haverford, Pa., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application May 13, 1943, Serial No. 486,877
10 Claims. (Cl. 178—44)



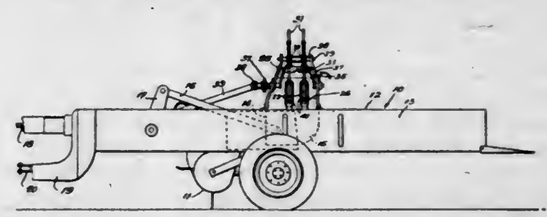
1. The combination with a high frequency signal source and a pair of load circuits to be supplied therefrom, said load circuits having a common terminal, of a signal divider and attenuator including a first inductor connected to said source, a second inductor having only a portion thereof disposed so as to be magnetically coupled to said first inductor, shielding means for substantially eliminating electrostatic coupling between said inductors, means including an impedance network connecting the respective ends of said second inductor to the respective load circuits, an adjustable contact engaging said second inductor, and means connecting said contact to said common terminal of said load circuits.

2,409,475
SHAPED PROTEIN STRUCTURES AND THEIR PREPARATION
Edward T. Cline, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application January 11, 1944, Serial No. 517,855
4 Claims. (Cl. 18—54)



1. In a process for obtaining synthetic protein fibers and the like, the steps of extruding an aqueous alkaline solution of a water-insoluble globular protein selected from the group consisting of phosphoproteins, prolamines and vegetable globulins, said solution containing from 10% to 30% by weight of protein and having a pH of at least 9, into an aqueous coagulating bath containing at least 0.5% by weight of formaldehyde, from 0.5% to 10% by weight of acid selected from the group consisting of strong mineral acids and admixtures of said acids, and at least 10% by weight of salt material selected from the group consisting of water-soluble inorganic salts and admixtures of said salts, stretching the resultant formed filaments from 25% to 300% in the coagulating bath, further stretching said filaments at least 50% of their maximum draw ratio in a hot concentrated aqueous solution of salt material selected from the group consisting of water-soluble neutral and acid-reacting salts of mineral acids and admixtures of said salts, and then immersing the resultant stretched filaments in an aqueous formaldehyde hardening solution.

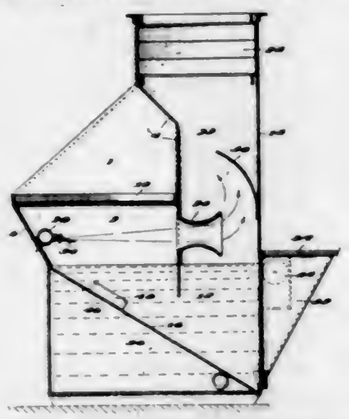
2,409,476
CONTACTING SOLIDS WITH VAPORS
George D. Creelman, Mountain Lakes, N. J., and John F. Crowther, Mount Vernon, N. Y., assignors to The M. W. Kellogg Company, Jersey City, N. J., a corporation of Delaware
Application July 19, 1940, Serial No. 346,270
6 Claims. (Cl. 196—52)



1. A method of conducting catalytic vapor-phase conversions wherein two separate and different solid catalysts are employed which comprises continuously passing vapors to be converted upwardly through a conversion zone, continuously introducing two separate and different subdivided solid catalysts each of said catalysts being adapted to catalyze a distinctly different reaction into said zone to catalyze the conversion of said vapors, withdrawing conversion products from said zone, each of said catalysts being characterized by its own substantially uniform particle size and particle settling rate, continuously withdrawing at least partially inactivated catalysts from said zone after movement thereof through said zone by the resultant of the gravitational force and the frictional resistance of said vapors, the absolute movements of said catalysts in said zone being different because of a difference in the settling rates of the particles into which the two catalysts are subdivided.

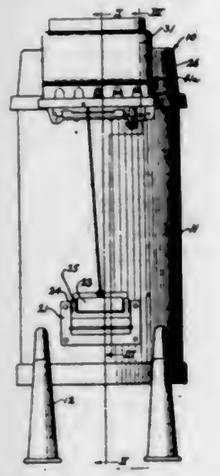
2,409,477
FLUID SUPPLY APPARATUS FOR BURNERS
Warren H. De Lancey, Springfield, Mass., assignor to Gilbert & Barker Manufacturing Company, West Springfield, Mass., a corporation of Massachusetts
Original application September 16, 1944, Serial No. 554,367. Divided and this application August 30, 1945, Serial No. 613,683
3 Claims. (Cl. 103—6)

1. Apparatus for supplying air and oil to a burner, comprising, a positively-acting displacement pump for supplying air, inlet and discharge conduits for said pump including in the discharge conduit, a chamber, a wall in said chamber movable by pressure of the pumped air, a pump for supplying oil, a cut-off valve preventing flow of oil to the oil pump, a by-pass from the pressure to the suction side of the air pump, a valve controlling said by-pass, and means actuated by said movable wall for opening said cut-off valve when a predetermined air pressure has been built up in said chamber and for subsequently opening the by-pass valve when the pressure in said chamber exceeds said predetermined pressure.



2,409,478
FEEDER FOR BALERS
Frederick P. Dickow, Chicago, Ill., assignor to International Harvester Company, a corporation of New Jersey
Application November 17, 1943, Serial No. 510,579
5 Claims. (Cl. 100—25)

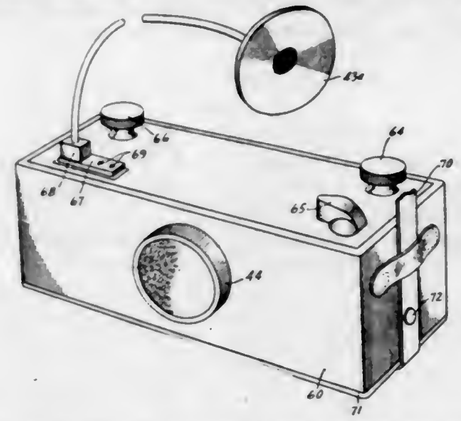
1. In combination, a baling chamber having a feed opening in a vertical side, a baling plunger mounted for reciprocation in the baling chamber, a packer element adapted to move material through the said feed opening into the baling chamber, and means mounting the packer ele-



ment for movement into and out of the baling chamber, said mounting means comprising a rotatable member rotatable about a certain axis, means pivotally connecting the packing member to a point of the rotatable member spaced from its axis of rotation, a guide pivotally mounted at a point spaced from the axis of rotation of the member a greater distance than the spacing between the axis of rotation and the pivot of the packer element on the rotatable member, and an elongated part associated with the packer element and slidably mounted in the guide for causing the packer element to have a relatively large angle of movement about its pivot on the rotatable member for a given angle of movement of the rotatable member when the pivot of the packer element is between the pivot of the guide and the axis of the rotation of the rotatble member and to have a relatively large angle of movement about its pivot on the rotatable member for the same given angle of movement of the rotatable member when the axis of rotation of the rotatable member is between the pivot of the guide and the pivot of the packer element on the rotatable member.

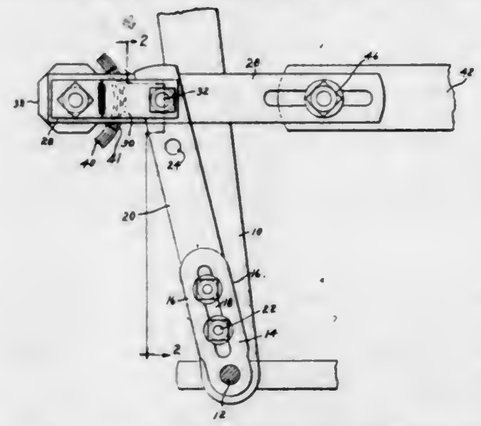
2,409,479
GRINDING AND POLISHING BOOTH
Ernest F. Fisher, Harvey, Ill., assignor to Whiting Corporation, Harvey, Ill., a corporation of Illinois
Application April 29, 1943, Serial No. 485,041
2 Claims. (Cl. 51—273)

1. A grinding and polishing booth comprising an upright casing having a sump in the bottom thereof for a body of water, an upstanding open top air inlet chamber in its front portion and above and communicating with the sump, and an upstanding open top air outlet chamber in its back portion and above and communicating with said sump, and embodying a work supporting grill across the open top of the air inlet, a vertically extending cross wall extending between and serving to separate the inlet and outlet chambers and having the lower end thereof dipping into the sump to form a water seal between the lower portions of the two aforementioned chambers, and a diagonally extending wall disposed in the sump, serving to define a sludge compartment above it and a clear water compartment beneath it, and having means at the upper portion thereof for permitting clear water from the sludge compartment to flow into the clear water compartment; a horizontally elongated Venturi tube extending transversely through the cross wall at a point above the sump and serving to connect the two chambers; and means operative to spray liquid horizontally through the Venturi tube into the outlet chamber and thereby cause air to flow downward past the grill and into the inlet chamber and thence upward through the outlet chamber, and including a horizontally extending nozzle-equipped pipe disposed in the inlet chamber adjacent the Venturi tube and a pump arranged to pump water from the clear water compartment to the pipe.



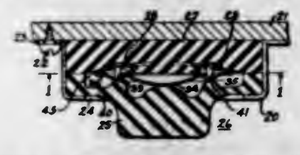
2,409,480
AUTOMATIC CHECK AND DRAFT CONTROL FOR STOVES
Harry H. Fleer, Quincy, Ill., assignor to Gem City Pattern Co., Quincy, Ill., a corporation of Illinois
Application March 3, 1943, Serial No. 477,797
5 Claims. (Cl. 236—16)

1. A heater comprising a casing, a grate construction separating the casing into an upper combustion chamber and a lower ashpit chamber, a pouch on said casing communicating with the ashpit chamber, said pouch having a top wall with an air inlet, a first door hinged on said pouch for opening and closing the air inlet, a top member mounted on top of the casing defining a burning zone above the combustion chamber, said top member having a fuel inlet, a smoke outlet, and a door frame opening, a door frame secured to the top member having a check draft inlet, a second door, means hinging said second door on said door frame for opening and closing said inlet, means biasing said second door toward closed position, a bi-metal strip anchored at one end thereof on said door frame, a lever pivoted on said door frame having a finger in the path of the free end of said strip, an arm pivoted on said second door extending across the path of said lever, means for holding the arm at a selected distance from the lever pivot, said strip being warped by heat to move the free end thereof against the finger for swinging the lever to act on the arm for opening the second door, and flexible means connecting the second door with the first door to control positions of the first door.



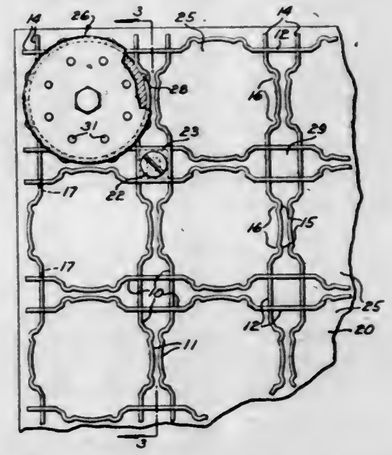
2,409,481
COMBINED HEARING AID AND RADIO RECEIVING SET
Thomas B. Fordham and Thomas W. Moore, Dayton, Ohio
Application June 26, 1941, Serial No. 399,770
8 Claims. (Cl. 179—107)

5. In a self-contained portable apparatus of the type including a case, a radio set, a final audio frequency amplifier and a source of electrical energy all mounted within said case; an antenna built into a fixed wall of said case, a microphone mounted on a wall of said case and operable



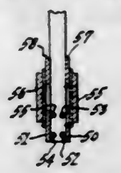
means for connecting said amplifier with said radio receiving set or said microphone.

2,409,482
LUG STRAP AND POWER STICK FOR LOOMS
Frank L. Furgal, Dover, N. H.
Application January 9, 1945, Serial No. 572,025
4 Claims. (Cl. 139—152)



1. In a loom, a power stick comprising an elongated element, a pair of spaced plates for connection to a sweep stick, a pivot connection between one plate and the element, so that the plates are completely reversible relative to the element, and an offset holder secured to said one strap and embracing the power stick element, and a bumper spacing the plates, a fastener thru the bumper, said fastener securing the holder to said one plate.

2,409,483
ELECTRIC SWITCH
Howard K. Gandelot, Grosse Pointe, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application January 24, 1944, Serial No. 519,425
8 Claims. (Cl. 200—159)



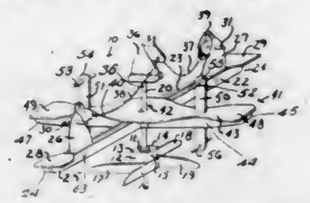
1. An electric switch comprising in combination; a dielectric base having bead portions projecting from one face thereof; spaced stationary contacts supported by the base; a dish-shaped snap-acting member having grooved portions for receiving the bead portions to prevent lateral movement of the snap-acting member relative to the base and having rim portions only normally engaging the fixed contacts to close a circuit; a resilient cup-shaped closure for the base, said closure having portions for engaging the disc to hold groove portions of the disc against the bead portions of the base and having another portion arranged in a position to engage portions of the disc remote from the groove portions to change the curvature thereof when external pressure is applied to the closure whereupon rim portions of the disc are snapped out of engagement from the stationary contacts to open the circuit.

2,409,484
SUPPORTING APPARATUS
Marcel C. Gauthier, Montclair, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application September 16, 1944, Serial No. 554,477
3 Claims. (Cl. 211—72)

1. An apparatus adapted to support cylindrical articles having outwardly projecting lugs, the apparatus comprising a panel, like elements formed of strips of resilient material, all portions of which are disposed at right angles with respect to the panel, with spaced straight portions notched for interlocking assembly of pairs of the elements disposed at right angles to each other, intermediate arcuate portions forming substantially cylindrical pockets for the articles and grooves at a plurality of positions for the lugs of the articles, and means to secure the assembled elements to the panel in a unitary structure.

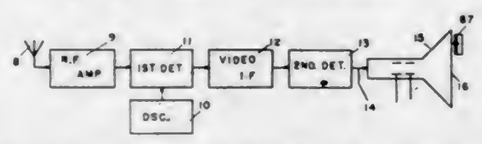
2,409,485
ELECTRON DISCHARGE DEVICE
Edward W. Herold, Kingston, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application January 24, 1945, Serial No. 574,263
7 Claims. (Cl. 315—17)

1. An electron discharge device having a cathode means for supplying a beam of electrons and an electrode in the path of said electrons, and means positioned between said cathode means and said electrode and including an electron lens system comprising oppositely disposed apertured plates adapted to have a biasing potential ap-



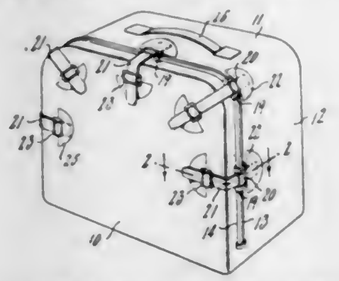
plied thereto and between which the beam path extends, and electrode elements mounted in registry with said apertures on the outside of and out of contact with said plates and adapted to have a lower biasing potential applied thereto than to said plates.

2,409,486
PROCESS FOR MAKING BALLOONS
John A. Hagen, Glen Rock, Edmund L. Gregor, Ramsey, and Laurence Prendergast, Passaic, N. J., assignors to Molded Latex Products, Inc., Passaic, N. J., a corporation of New Jersey
Original application October 25, 1944, Serial No. 560,240. Divided and this application July 18, 1945, Serial No. 605,779
7 Claims. (Cl. 244—31)



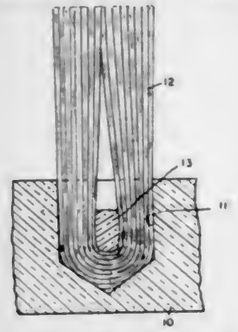
1. The process of making a balloon which comprises preparing an elastic bladder with metal discs anchored therein, preparing a casing of substantially inelastic material having openings at opposite ends thereof, inserting said bladder through one of said openings and anchoring said discs in said openings.

2,409,487
TEETER-GO-ROUND
Henry Maurice Hilger, Fort Wayne, Ind.
Application April 20, 1945, Serial No. 589,342
4 Claims. (Cl. 272—30)



1. In a device as described, a teeter, a teeter-totter removably seated thereon, a rotatable shaft upon which the teeter is vertically and horizontally adjustably mounted, a slot in the teeter-totter through which the shaft is adapted to project, a removable head on the shaft, and means for automatic movement of the head.

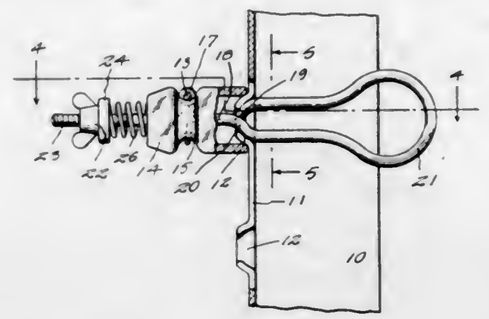
2,409,488
FACSIMILE COMMUNICATION SYSTEM
John H. Homrighous, Oak Park, Ill.
Original application November 28, 1939, Serial No. 306,537, now Patent No. 2,309,393, dated January 26, 1943. Divided and this application December 24, 1942, Serial No. 470,039
14 Claims. (Cl. 178—5.6)



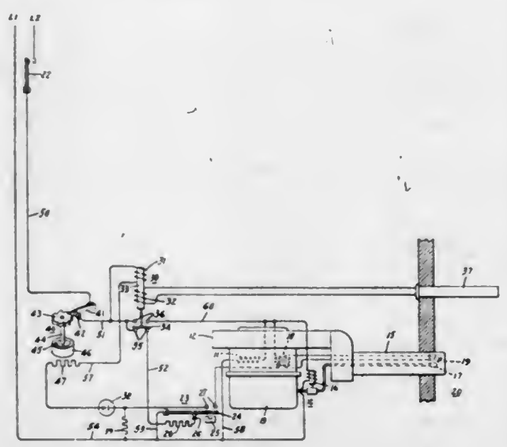
1. Apparatus for varying the intensity of light rays comprising a source of light, a stationary member having a screen of light polarizing material, and another member having a screen of light polarizing material arranged in a plane adjacent and parallel to the screen in the stationary member, means for directing light rays from the said source of light through said screens, and electromagnetic means for vibrating said last member to vary the intensity of the light rays directed through said screens.

2,409,489
WATERTIGHT CLOSURE
Victor H. Hurt, Cranston, R. I., assignor to United States Rubber Company, New York, N. Y., a corporation of New Jersey
Application January 27, 1944, Serial No. 519,893
3 Claims. (Cl. 150—3)

1. A receptacle having an entrance opening, a watertight closure for said opening comprising flexible strips having elastic properties and a tongue on one and groove in the other for interlocking engagement one with the other, a removable spanner clamp for holding the strips in their interlocked relation and movable laterally to the strips into and out of spanning relation therewith, and a strap slidably secured to said clamp and having one end permanently secured to the receptacle and other end removably secured thereto to hold the clamp in place.



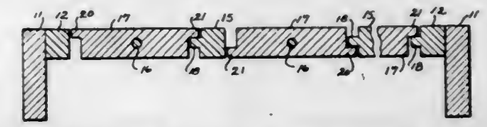
2,409,490
TUFT ANCHORING MEANS FOR BRUSHES
Conrad Jobst, Toledo, Ohio, assignor to The Toledo Automatic Brush Machine Company, Toledo, Ohio, a corporation of Ohio
Application May 11, 1944, Serial No. 535,166
1 Claim. (Cl. 15—190)



In combination with a brush back of a polymerized synthetic plastic material and having a bore therein and a bristle tuft within said bore, of an anchor formed of a copolymer of vinyl chloride and vinyl acetate, said anchor having the ends thereof laterally expanded to be embedded in the walls of said bore and bonded to the brush back.

2,409,491
ADJUSTABLE FASTENER FOR ELECTRIC FENCE INSULATORS
Harry C. Johnson, Mason City, Nebr.
Application January 15, 1944, Serial No. 518,453
3 Claims. (Cl. 174—161)

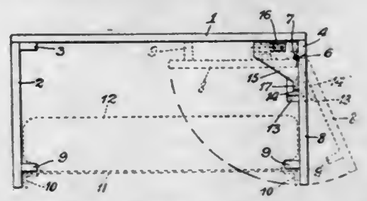
1. In combination with a support having a slot, a bolt, said bolt having an enlargement insertable through the slot and turnable to prevent retraction through the slot, an insulator on the bolt engageable with the opposite face of the support to said enlargement, spring means on the bolt for urging the enlargement snugly against the support when said enlargement is disposed transverse of said slot and holding the insulator firmly against the adjacent side of the support, said support having a struck-out portion providing a depression to receive the enlargement, said insulator having a recess on one end entered by the struck-out portion for centering purposes.



2,409,492
THERMAL TIME SEQUENCING CONTROL SYSTEM
Benjamin W. Jones, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application March 7, 1944, Serial No. 525,445
20 Claims. (Cl. 158—28)

1. In combination, a pair of heaters, energizing circuit means including a selective electroresponsive control device therefor having means biased for energizing one of said heaters while said device is energized below a predetermined value and operable to energize the other of said heaters while said device is energized above said value, a snap action thermal time switching element heated by said one heater and connected for deenergizing said one heater after a heating time delay and temporarily energizing said device above said value during the initial part of the ensuing cooling time delay, and means responsive to an operating condition of the other of said heaters for maintaining said device energized above said value independently of said time switching element during and after the subsequent part of said cooling time delay to maintain said other heater energized.

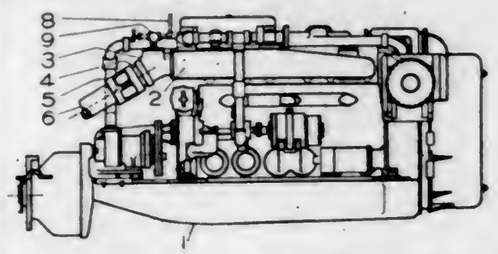
2,409,493
GAME BOARD
Edward L. Jones, Greenville, S. C.
Application June 19, 1944, Serial No. 541,061
1 Claim. (Cl. 273—135)



A game board having a plurality of openings formed by vertical and horizontal ribs extending longitudinally and transversely respectively of the board, a planar member mounted for oscillation in each opening by pivot points on opposed sides thereof extending into the vertical ribs, the planar member having outwardly projecting portions near one surface thereof on its two sides which are parallel to its axis of oscillation, each of the horizontal ribs having a projection on one side thereof substantially midway of its top and bottom edges whereby when the planar member is oscillated in one direction one of its projecting portions will lie on top of the projection extending from its associated rib, and when the planar member is oscillated in the reverse direction, its other projecting portion will fit below the projection on the rib.

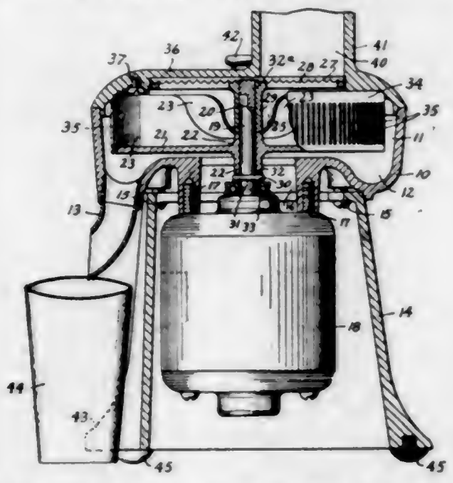
2,409,494
CATALYST MANUFACTURE
George H. Keating, Port Arthur, Tex., assignor to The Texas Company, New York, N. Y., a corporation of Delaware
No Drawing. Application February 11, 1944, Serial No. 521,974
6 Claims. (Cl. 252—259.2)

1. A process for the production of a catalyst comprising at least a major proportion of an inorganic gel prepared by precipitation in aqueous solution which comprises mixing the inorganic catalyst gel while in moist and hydrated state with a starch material in an amount corresponding to between about 30 to 60 per cent of the dry weight of the catalyst gel to form a plastic mass, extruding the plastic mass in substantially tubular form, dividing the extruded catalyst into rings, drying resulting rings at an elevated temperature in the range of about 150 to 300° F. in an atmosphere maintained at about 20 to 50 per cent relative humidity and calcining resulting dried rings.



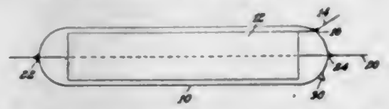
2,409,495
TABLE
Charles F. Kelley, Chicago, Ill.
Application May 10, 1943, Serial No. 486,311
1 Claim. (Cl. 311—26)

In combination in a table adapted for use with and to be supported upon a bed, members defining a table surface member, and a leg fixed thereto, a downwardly projecting support fixed on the opposite end of said surface member, and a movable leg movably supported from said surface member by said support, and bed rail en-



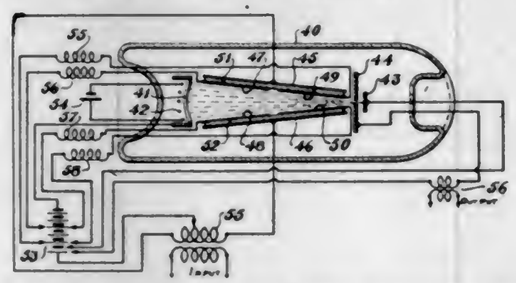
gaging members mounted one on each of said legs and adapted to engage a bed, the width of said bed rail engaging members being approximately the same as the length of the said support, whereby when the movable leg is folded against the table surface member it is substantially parallel therewith.

2,409,496
EXHAUST GAS DEFLECTOR FOR INTERNAL-COMBUSTION ENGINES
Theron R. Kelley, Springfield, Ohio, assignor to The National Supply Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application January 8, 1943, Serial No. 471,774
5 Claims. (Cl. 181—43)



1. An exhaust gas deflector adapted to be axially inserted in the run of an exhaust pipe for accentuating the discharge of hot exhaust gases from an internal combustion engine, comprising a hollow coupling with an axial bore therethrough, a plurality of symmetrically spaced helical shaped fins formed integral with the inner wall within said bore, a conical fluid spreader with its apex slightly in advance of said fins and formed integral therewith, a water discharge orifice positioned axially within said exhaust pipe to discharge a stream of cooling water in the direction of flow of the escaping hot gases to impinge against the apex of said spreader and rapidly swirl towards said helical fins, whereby said hot exhaust gases and water are intimately intermingled, producing a sudden chilling effect upon said hot gases and creating a partial vacuum in said exhaust pipe that reduces back pressure and noise of the engine exhaust.

2,409,497
JUICE EXTRACTOR
Johannes B. Kessel, Chicago, Ill., assignor to Glendra B. Von Kessel, Chicago, Ill.
Application May 17, 1944, Serial No. 535,953
5 Claims. (Cl. 146—76)

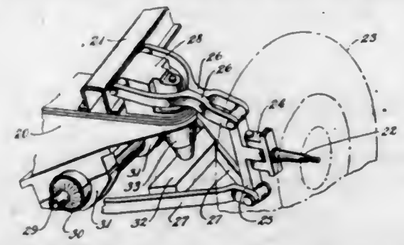


1. A juice extractor embodying a grinding element comprising a disc with adjacent teeth and openings through the disc, means for rotating said element, means for holding an article against said element to produce a pulp therefrom, suction creating means operating upon the pulp to remove it through the openings from said grinding element, a casing for said suction creating means, said casing embodying a fixed apertured wall, against which the pulp is delivered, by centrifugal force, by said suction creating means, and a removable cover for the extractor, to which cover said wall is connected, for removal therewith.

2,409,498
GEIGER-MÜLLER COUNTER
Albert S. Keston, New York, N. Y.
Application October 27, 1944, Serial No. 560,668
4 Claims. (Cl. 250—83.6)

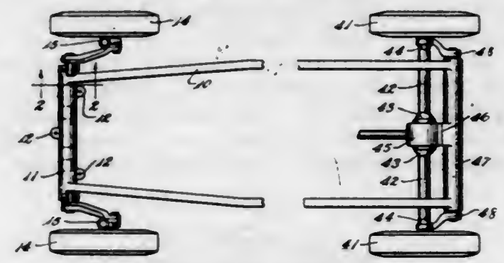
1. A Geiger-Müller counter tube filled with a vapor comprising an organo-metallic compound consisting of an alkyl compound of a non-radioactive metal of series 9 of the periodic system and having an atomic weight of at least 200.

2,409,499
BEAM DEFLECTION ELECTRON DISCHARGE DEVICE
George Ross Kilgore, Verona, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application March 6, 1942, Serial No. 433,579
9 Claims. (Cl. 250—158)



1. An electron discharge device having means for supplying a converging beam of electrons, an apertured electrode through which said beam of electrons is directed, and a collector all in the order named, and a single pair of oppositely disposed deflecting electrodes positioned closely adjacent said beam and between said beam supplying means and said apertured electrode and having surfaces continuously approaching each other in the direction of movement of the beam, said beam supplying means and said output electrode being next adjacent said deflecting electrodes.

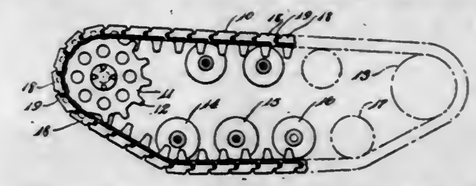
2,409,500
SPRING
Alvin S. Krotz, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application February 3, 1943, Serial No. 474,545
8 Claims. (Cl. 267—21)



7. A torsion bushing assembly comprising a support formed with an opening having an axial shoulder and a torsion spring mounted in the opening, said torsion spring comprising inner and outer elements spaced-apart from each other and

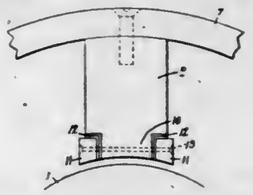
an intervening body of resilient rubber-like material in torque-transmitting relation to said elements, said body comprising the sole torque-transmitting means between said elements, said outer element comprising sheet metal bonded to the outer surface of said intervening body with an axially extending margin thereof continuing

radially beyond an adjacent curved portion and abutting said axial shoulder, the remainder of said outer element being free of attachment to said support and being adapted to engage said support frictionally by increasing pressure when subjected to torsion by virtue of the engagement of its axial margin against the shoulder.



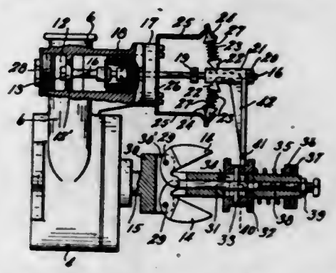
2,409,501
VEHICLE SUSPENSION
Alvin S. Krotz, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application June 15, 1943, Serial No. 490,887
12 Claims. (Cl. 267—21)

1. A vehicle spring suspension comprising a tubular housing extending transversely of the vehicle, a pair of shafts extending into said housing from the ends of the latter and having wheel-supporting arms at their outer ends, bodies of resilient material between said shafts and housing and secured to each for resiliently resisting deflection of said arms, a sleeve rotatable within said housing and telescopically overlapping the inner ends of said shafts, bodies of resilient material between said sleeve and said shafts and secured to both said sleeve and said shafts to resist relative rotation of said shafts, and a bearing in said housing for said sleeve.



2,409,502
TRACK FOR SELF-LAYING TRACK TYPE VEHICLES
Charles W. Leguillon and Alvin S. Krotz, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application June 22, 1943, Serial No. 491,760
6 Claims. (Cl. 305—10)

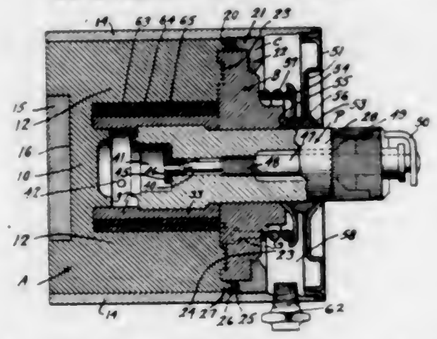
1. A track block for a self-laying track type vehicle in which a series of blocks are hingedly connected, said block comprising a metal frame having retaining walls extending substantially to a face of the block, a partition spaced from said face dividing the space between said retaining walls, said partition being apertured to provide a communicating opening therebetween, and a filling of resilient material in said space and ex-



tending between the tread face and the wheel-contacting face of the block.

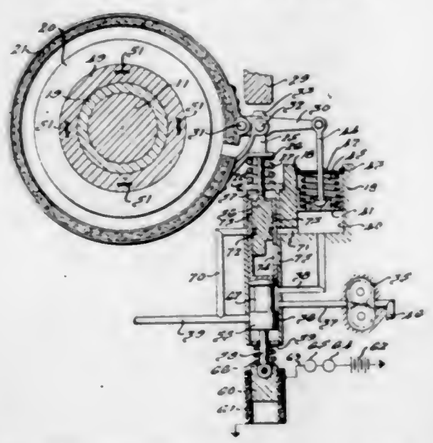
2,409,503
DYNAMOELECTRIC MACHINE
Thomas M. Linville, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application September 28, 1944, Serial No. 556,137
8 Claims. (Cl. 171—228)

1. A dynamoelectric machine having an armature provided with a commutator, a commutating pole having a field exciting winding arranged about a pole piece core of magnetic material with a pole tip formed by magnetic material connected by magnetic material to said core portion having a transverse width less than that of the main core portion, pole tip elements of magnetic material extending axially of the machine along both axial sides of said core pole tip portion and spaced from said tip and core, and non-magnetic material between said axially extending elements and said core for providing an effective air gap therebetween.



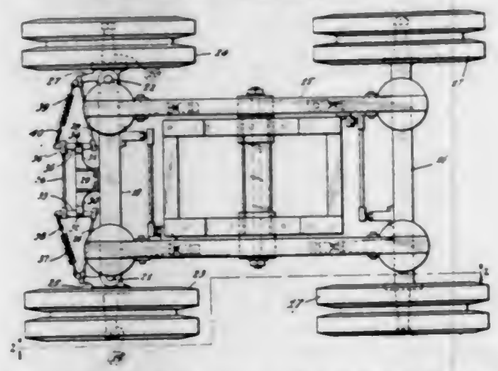
2,409,504
OIL BURNER
Joseph A. Logan, Hadley, Mass., assignor to Gilbert & Barker Manufacturing Company, West Springfield, Mass., a corporation of Massachusetts
Application February 1, 1945, Serial No. 575,678
3 Claims. (Cl. 158—36.3)

1. The combination in an oil burner, having a nozzle, a pump to supply oil to the nozzle, and a cut-off valve for preventing flow of oil to the nozzle whenever the pressure of the pumped oil is less than a predetermined value; of a by-pass from the outlet to the inlet of said pump, a valve to control said by-pass and normally closed during operation of the burner while the pump is moving at full speed, means for opening said valve with a snap action, a centrifugal device rotatable with said pump and operable when the speed of said pump falls below a predetermined



value and before the pressure of the pumped oil falls to said predetermined value to initiate the action of said means and cause the sudden opening of the by-pass valve.

2,409,505
HYDRAULIC SHOCK ABSORBER PISTON AND CYLINDER CONSTRUCTION
Gervase M. Magrum, Buffalo, N. Y., assignor to Houdaille-Hershey Corporation, Detroit, Mich., a corporation of Michigan
Application September 18, 1944, Serial No. 554,578
18 Claims. (Cl. 309—1)



5. In a hydraulic damping device, a cylinder structure comprising a cup-shaped body part in the form of an integral molding of plastic material with abutments extending radially therefrom, an end wall for said body in the form of an integral molding of plastic material and having a bearing passageway therethrough, a piston structure comprising a head within the cylinder structure and a shaft extending through and having bearing support in said bearing passageway, said head being surrounded by plastic material intimately molded thereto and defining a cylindrical hub portion for bearing engagement with said abutments and radially extending vanes for bearing engagement with the cylinder surface of said cylinder structure between said abutments.

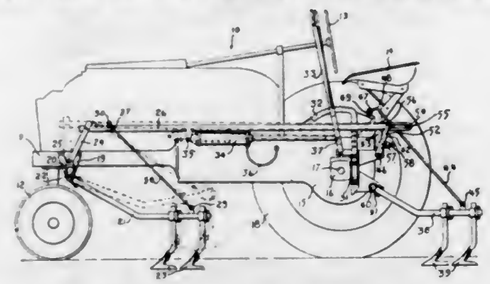
2,409,506
DRIVE MECHANISM
Forest R. McFarland, Huntington Woods, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a corporation of Michigan
Application September 23, 1943, Serial No. 503,455
13 Claims. (Cl. 74—290)

1. In a drive mechanism, a drive shaft, a driven shaft, planetary gearing including a plurality of members adapted to connect said shafts in drive relation, clutch means operable to lock two of said planetary gearing members together for unitary rotation, brake means applicable to hold one of said planetary gearing members from rotation and responsive to torque reaction on the member to maintain the application, means for selectively engaging the brake means or the clutch means, and means opposing the force of torque reaction to maintain application of the brake means whereby the brake means will be released in advance of the full application of the clutch means.

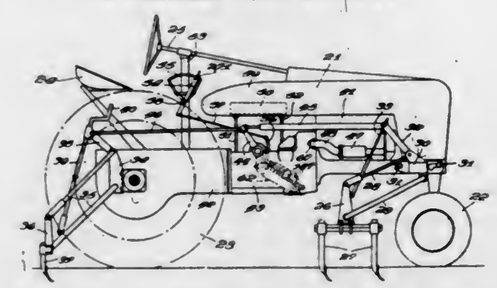
2,409,507
AUTOMATIC DIRIGIBLE TANDEM WHEEL UNIT
Donald Mettetal, Jr., Indianapolis, Ind.
Application February 22, 1945, Serial No. 579,289
7 Claims. (Cl. 280—80)

1. A tandem wheel unit comprising a first axle, a pair of wheels journalled thereon, a second axle, stub axles movably mounted at opposite ends of said second axle through king pins, wheels journalled on said stub axles, a radius rod for each of said stub axles, means providing an operative connection between said radius rods, yielding means normally holding said last-named means in a median position, and means providing a connection between said first and second axles.

2,409,508
PUSH FASTENER
Edwin August Miller, Fairfield, Conn.
Application March 9, 1945, Serial No. 581,809
2 Claims. (Cl. 85—11)



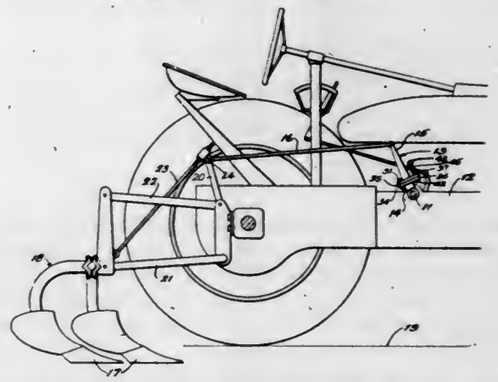
1. A push fastener comprising a sheet-stock structure having a base seat body part, said structure including a resistingly yielding and upwardly extending fin element supported by said base part at an obtuse angle thereto; a convex-preformed upper free end portion with which the fin element is provided; and an outer cutting edge of the most far distant mid-portion of said free end of said fin element.



2,409,509
TRACTOR-MOUNTED IMPLEMENT
Carl W. Mott, La Grange, Ill., assignor to International Harvester Company, a corporation of New Jersey
Application June 16, 1941, Serial No. 398,181
7 Claims. (Cl. 97—47)

1. In combination, a tool-supporting structure, working tools respectively connected to the tool-supporting structure for separate movement from one position to another position, oppositely movable means advanceable for successively moving

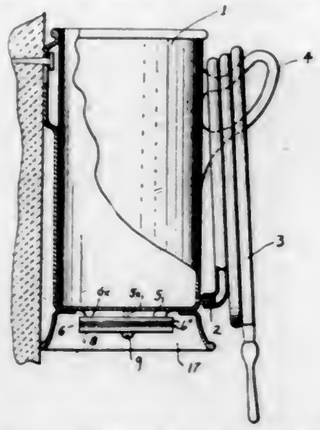
the working tools and including a lost-motion connection with one of the tools whereby lost motion may be taken up prior to movement of the one tool, an overcenter device associated with the one tool and the lost-motion connection and being adapted to lock the same after movement from the one position to the other position and to be unlocked for permitting movement of such one tool back to the one position, said lost-motion connection facilitating retractive movement of said oppositely movable means while such one tool is locked in said other position, said oppositely movable means being operable to cause return of the other tool to its one position pursuant to said retractive movement, and means movable with said retractively moving means for unlocking the locking means following sufficient retractive movement for the other tool to have returned a substantial distance toward its one position.



2,409,510
POWER ADJUSTING MECHANISM
Carl W. Mott, La Grange, Ill., assignor to International Harvester Company, a corporation of New Jersey
Original application November 21, 1942, Serial No. 466,463. Divided and this application March 22, 1944, Serial No. 527,625
5 Claims. (Cl. 97—50)

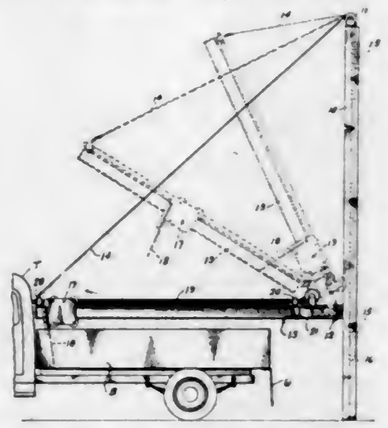
1. In a mechanical organization for the practice of a new tillage technique; a tractor; a tillage tool disposed on said tractor for movement between a lowered field tillage position and an elevated transport position and for depth adjustment within the tillage position; a power transmitting mechanism, said mechanism including a motor energized by power received from the tractor power plant, said motor being selectively energizable for moving a work member thereof in either of opposite directions and effective to lock said work member against movement excepting during such energization, said mechanism also including a control member movable in either of opposite directions to incur energization of said motor for moving its work member coordinately in direction and amount with the movement of such control member; and means connecting said work member with said tool to respectively raise and lower the same pursuant to the movement of the work member in opposite directions, whereby movement of the control member within one zone of its movement range will positively incur tool tillage depth adjustment correlated in either didection and amount with the movement of said member and whereby movement of the control member into another zone of such movement range will incur movement of the tool into the transport position.

2,409,511
OVERLOAD RELEASE FOR ROCKABLE ARMS
Carl W. Mott, La Grange, Ill., assignor to International Harvester Company, a corporation of New Jersey
Application November 20, 1944, Serial No. 564,377
1 Claim. (Cl. 74—599)



A rockable force-transmitting arm structure comprising a root portion adapted for rocking about an axis, an arm portion disposed in end-to-end relation with said root portion, the adjacent ends of said arm and root portions having end face portions normally resting against one another, said arm portion having ears projecting laterally of and oppositely from its said end portion, said root portion having ears projecting laterally of and oppositely from its said end portion and respectively paired with the ears of said root portion, each pair of said ears having axially registering openings of which the axes extend lengthwise of the arm structure, the opposed faces of one pair of said ears being spaced apart while said end faces of the arm and root portions are resting against one another, a bolt shank under-size in respect to and disposed within the openings in said one pair of ears, a second bolt shank under-size in respect to and disposed within the openings of the other pair of ears and having a portion extending outwardly through one of the openings associated therewith lengthwise of the arm structure, a helical spring disposed about said extending bolt shank portion and reacting expansively therebetween, and one of the ears in said other pair for urging the ears of such pair together and normally maintaining the end faces of said arm and shank portions in the relation resting against one another but being compressible pursuant to rocking of the arm portion relatively to the shank portion in a manner incurring separation of said end faces and engagement of the opposed faces of the one pair of ears.

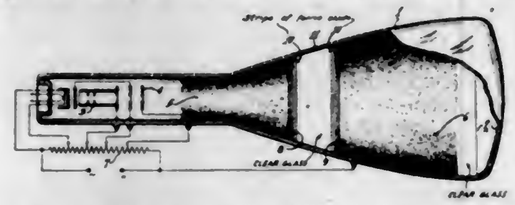
2,409.512
CONTROLLED ELECTRIC WATER HEATER FOR HYGIENIC USE
Thomas A. Mungo, New York, N. Y.
Application October 31, 1944, Serial No. 561,965
1 Claim. (Cl. 219—38)



An electric water heater for hygienic use which consists of a metallic vessel having a closed bottom wall having an inner face directly receiving water when contained in the vessel, an electrothermal heating member secured to the outside of

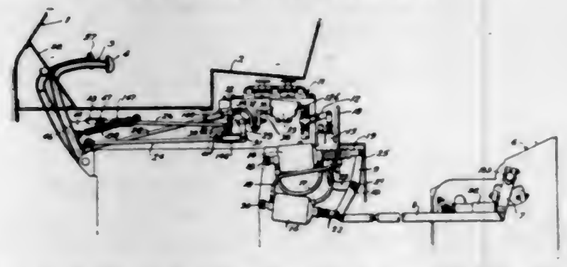
and depending from said bottom wall and having terminals, a heat-conduction thermostat also secured to and depending from said bottom wall, there being a space of bottom wall between the heating element and the thermostat, conductor

members for connection to a power line, one of said conductors being connected to one terminal of the electro-thermal heating member, the second terminal being connected to the thermostat and the thermostat being connected to the second conductor.



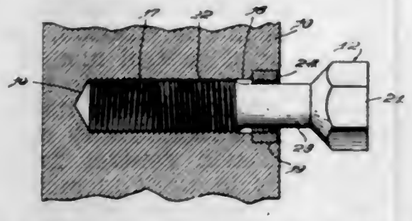
2,409,513
LOADING AND UNLOADING MACHINE
William M. Patience and Donald E. Kimball, II, Chicago, Ill., assignors to Darling & Company, Chicago, Ill., a corporation of Illinois
Application March 27, 1944, Serial No. 528,216
5 Claims. (Cl. 198—222)

1. A device for controlling, from a remote point, the movement of masses of material which comprises a support, an arm swingably mounted on said support, a carriage mounted on said arm for movement along the length of the arm, material-engaging means depending from said carriage, reversible positive propulsion means for driving said carriage in both directions along the length of said arm, and counterbalancing means cooperating with said support for automatically raising said arm when said carriage is moved to a position adjacent said support.



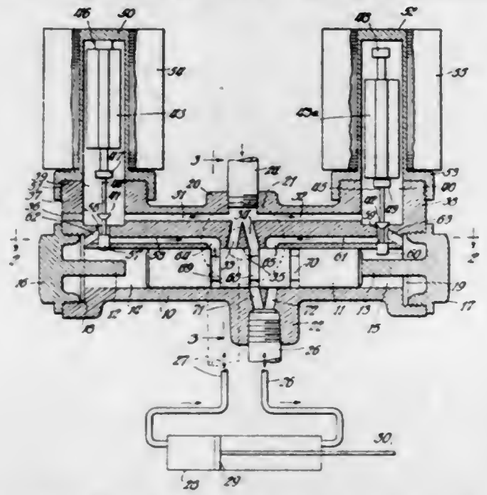
2,409,514
CATHODE-RAY TUBE
George W. Pratt, Lancaster, Pa., assignor to Radio Corporation of America, a corporation of Delaware
Application January 30, 1945, Serial No. 575,273
10 Claims. (Cl. 250—155)

1. A cathode ray tube comprising a highly evacuated elongated vitreous envelope enclosing electrodes for producing an electron discharge lengthwise of said envelope, two conductive coatings on the inner wall of said envelope and spaced along the length of said envelope, and an ad-



herent substantially gas-free coating of finely powdered Fe_2O_3 and sodium silicate on and covering said inner wall between the adjacent edges of said coatings and adjoining said edges.

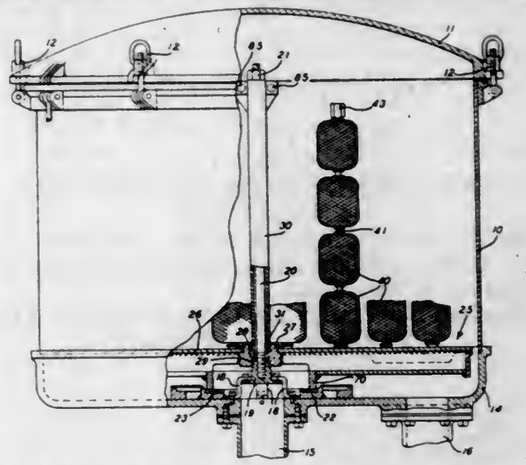
2,409,515
CLUTCH CONTROL
Clifford R. Rogers, Oak Park, William O. Bechman, Chicago, and Joseph F. Ziskal, Cicero, Ill., assignors to International Harvester Company, a corporation of New Jersey
Application October 11, 1943, Serial No. 505,810
6 Claims. (Cl. 192—87)



1. In a vehicle having dual clutches and actuating means therefor comprising an operating pedal, a clutch selector, said actuating means capable of effecting alternate engagement of either clutch upon successive depressions of said operating pedal, said clutch selector comprising a pair of shafts adapted to be successively rotated by the operating pedal, one of said shafts having a bell-crank lever keyed thereto, a pair of levers joined to opposite ends of said bell-crank lever, a third shaft, and a bell-crank lever keyed to said third shaft, the other of said pair of shafts operating means to cause interlocking of either of said levers to the bell-crank on the third shaft, whereby said third shaft has motion in either direction of rotation depending on which lever is locked to the bell-crank on the third shaft.

2,409,516
IMPLEMENT ATTACHING DEVICE
William C. Rosenthal and Clarence A. Hubert, Chicago, Ill., assignors to International Harvester Company, a corporation of New Jersey
Application July 12, 1944, Serial No. 544,612
3 Claims. (Cl. 151—32)

3. In a work piece or support, a threaded recess, a coaxial unthreaded section and counterbore adjacent the mouth thereof, each of progressively larger diameter, a headed screw having a threaded end fitted in the recess with a neck portion of lesser diameter, the threaded end being of greater axial length than said unthreaded section, and a retaining collar frictionally held in the counterbore and engageable with the threaded portion of the screw to inhibit withdrawal thereof.

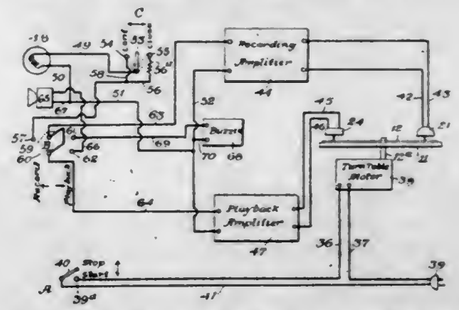


2,409,517
VALVE CONSTRUCTION
Louis D. Schmit, Savanna, Ill.
Application January 17, 1944, Serial No. 518,546
4 Claims. (Cl. 137—139)

1. A valve body having a bore therethrough, said bore being enlarged at both ends, a valve slidable in said bore, means closing the enlarged ends of said bore and having stops projecting inward beyond the enlarged portion of the bore to limit the movement of the valve, said valve body having an inlet opening provided with two branches extending to the bore, two combination inlet and outlet openings each having two branches extending to the bore, and an outlet opening having two branches extending to the bore, said valve having channels therein operable when the valve is against one of said stops to provide fluid passage from the inlet opening through one of its branches to one of said combination openings through one of its branches and to provide fluid passage from the other combination opening through one of its branches to the outlet opening through one of its branches, the valve channels being operable when the valve is against the other stop to provide fluid passage in a reverse direction through the combination openings by means of the other branches in the several inlet and outlet openings.

2,409,518
CARRIER STRUCTURE
Charles C. Smith, Cranford, and Daniel V. Waters, Flemington, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application December 5, 1942, Serial No. 468,014
2 Claims. (Cl. 68—189)

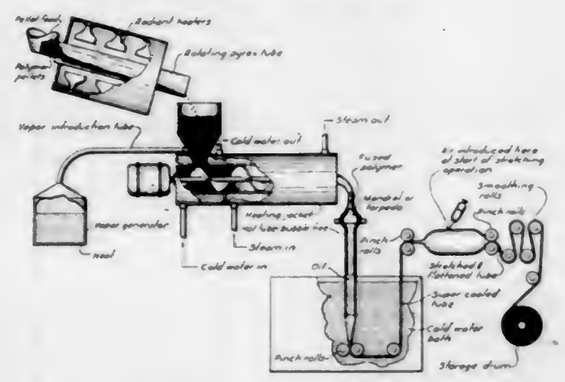
1. A carrier for use in carrying articles into and out of a casing having a fluid inlet and a fluid outlet together with a central support, the carrier comprising a circular supporting plate, a centering element mounted at the center of the supporting plate and adapted to cooperate with the central support to center the carrier in the casing, a U-shaped sector secured to the said surface and having legs extending radially from the said center, angular sectors successively secured to the said surface and having legs extending radially from the said center, a flat sector secured between the U-shaped sector and the last angular sector to complete a circular arrange-



ment of hollow sectors, means to close the outer ends of the sectors, and means to provide communication between the hollow sectors and the inlet.

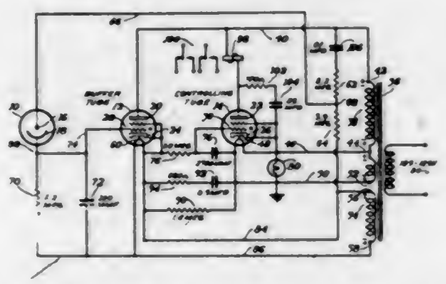
2,409,519
SODIUM DISPERSION
Charles Cyril Tanner, Widnes, England, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application September 29, 1943, Serial No. 504,331. In Great Britain December 20, 1940
6 Claims. (Cl. 252—309)

1. A process for the production of a dispersion of sodium in a mixture of inert liquids to be used in a chemical reaction which comprises dispersing, with agitation, molten sodium in an inert liquid having a boiling point above the melting point of sodium, cooling the dispersion to below the melting point of sodium while maintaining the latter in the dispersed condition and adding to said dispersion a second inert liquid having a boiling point below the melting point of sodium, said second liquid being added in sufficient amount to form with the first a mixture boiling below the melting point of the sodium.



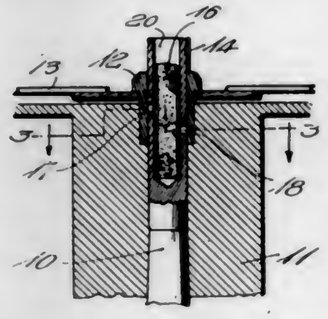
2,409,520
TWO-AMPLIFIER RECORDING AND REPRODUCING PHONOGRAPH
Lincoln Thompson, Cheshire, Conn., assignor to The Sound Scriber Corporation, New Haven, Conn., a corporation of Connecticut
Application February 12, 1944, Serial No. 522,113
17 Claims. (Cl. 179—100.4)

1. In a dictating machine, a moving record, a microphone, an amplifier connected with said microphone, a stylus-carrying recording head connected to the output of said amplifier for producing a continuous groove on said record, a



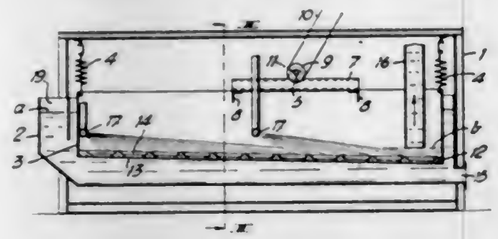
stylus-carrying playback head resting in said groove, an amplifier for the energy received by said playback head, a loudspeaker connected to the output of said playback amplifier, means to switch the connections of said machine selectively from "recording" to "playback," and means to automatically record a prolonged characteristic signal in said groove during playback periods.

2,409,521
VINYLIDENE CHLORIDE POLYMER EXTRUSION
Ralph M. Wiley, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a corporation of Michigan
Application November 22, 1943, Serial No. 511,343
3 Claims. (Cl. 18—55)



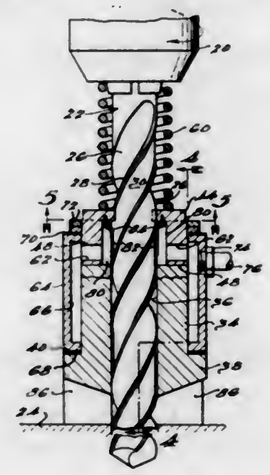
1. In the extrusion of a vinylidene chloride polymer, the step of introducing into and mixing with the polymer feed to the extrusion zone at atmospheric pressure, the vapor of a chlorinated lower aliphatic hydrocarbon which is volatile at temperatures in the extrusion zone, in small amounts such that the partial pressure of the chlorinated hydrocarbon in the extruded polymer is below atmospheric pressure at extrusion temperature.

2,409,522
GAS TUBE CIRCUIT
Harry J. Woll, Indianapolis, Ind., assignor to Radio Corporation of America, a corporation of Delaware
Application March 31, 1944, Serial No. 528,865
6 Claims. (Cl. 315—152)



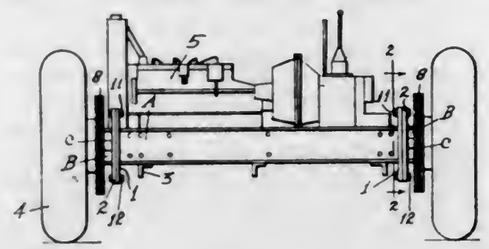
6. In a gas tube which has (*a*) at least one control electrode in addition to a cathode and an anode, (*b*) a circuit connecting said control electrode to said cathode and including a time delay combination and (*c*) connections to a source of alternating voltage for applying an alternating potential to said anode and an alternating bias to said control electrode to prevent conduction of said tube, the improvement which consists in including in said circuit in addition to said time delay combination a resistor and a capacitor effectively connected in parallel with said resistor whereby to vary said bias as a function of any variation in the voltage of said source and thereby to make the delay created by said time delay combination independent of the variation in said source.

2,409,523
DEVICE FOR OILING FLIERS
Hal McColman Adams, Lexington, N. C., assignor to Burlington Mills Corporation, Greensboro, N. C.
Application April 7, 1945, Serial No. 587,149
3 Claims. (Cl. 57—116)



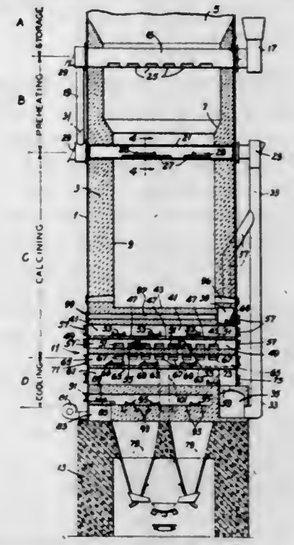
1. In a spinning machine, comprising a spindle having a delivery bobbin mounted thereon, and a flier block fitting over the upper portion of the spindle and in direct rotary contact therewith, the improvement wherein the upper portion of the spindle comprises an oil compartment having one or more apertures communicating with the interior surface of the flier block.

2,409,524
METHOD OF STRAINING FIBROUS SUSPENSIONS
Sten Eskil Einarsson Ahlfors, Hedemora, Sweden
Application January 30, 1942, Serial No. 428,930
In Sweden July 22, 1940
4 Claims. (Cl. 92—33)



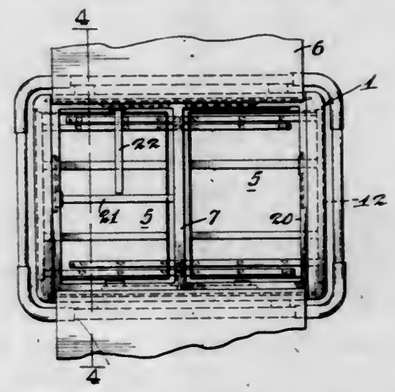
1. A method of straining fibrous suspensions, particularly paper pulp, comprising supplying the pulp to be strained to the bottom surface of a strainer element having straining slots therein which have side walls which are divergent upwardly, causing the pulp thus supplied to pass upwards through said strainer element, imparting vibratory motion of a frequency of about 1200 to 1400 vibrations per minute to said strainer element so as to cause a thickening of the pulp when passing upwards through said strainer element, discharging the thickened strained pulp at the top of said strainer element and the material rejected by said strainer element at the bottom thereof, the discharges being regulated so as to maintain a thin layer of strained pulp on the screen, and cleaning the slots of said strainer element by spraying liquid against the side thereof facing the pulp strained.

2,409,525
DRILLING DEVICE
Rudolf W. Andreasson, Franklin, Mich.
Continuation of application Serial No. 504,351, September 30, 1943. This application September 27, 1944, Serial No. 556,008
19 Claims. (Cl. 77—68)



19. In combination, a drill comprising a body having a point at one end thereof and having a flute and a land extending longitudinally of said body from said point, said land being provided in its peripheral surface and between its opposite edges with a relief open to said peripheral surface along the length thereof, and means mounted upon and rotatable with said drill for supplying a coolant thereto, said means including a passage adapted to receive coolant under pressure and arranged so that it delivers the coolant only to said relief in said land for flow toward said point, said flute serving as an escape passage for said coolant from a hole being drilled by said drill.

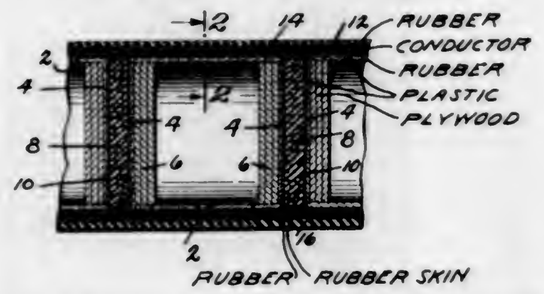
2,409,526
CHAIN TIGHTENING MEANS
Harry S. Ausherman, Wichita, Kans.
Application February 19, 1945, Serial No. 578,597
2 Claims. (Cl. 74—242.16)



1. In driving chain tensioning means for the drive wheel of a combine, a toothed gear secured to one side of the drive wheel, a coupling for the drive wheel to the axle, said coupling being interposed in the axle by severing the same adjacent the drive wheel, whereby a stationary and a rockable portion is provided for the axle, said coupling comprising two members that are rockably connected eccentric to the wheel and longitudinal axis of the axle, one member of the coupling being secured to the stationary portion of the axle while the other member is secured to the rockable portion of the axle and on said rockable portion of the axle the wheel is journalled and adapted to rock to and fro horizontally across the longitudinal axis of the stationary portion of the axle to adjust tension of a drive chain connecting the drive wheel toothed gears to a power driven toothed gear to turn said drive wheel, and bolt means to secure the coupling members rigid together when the chain is properly tensioned.

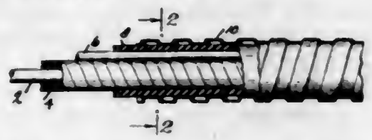
2,409,527
CALCINING APPARATUS
Victor J. Azbe, Webster Groves, Mo.
Application April 13, 1945, Serial No. 588,185
19 Claims. (Cl. 263—29)

1. A kiln comprising a vertical shaft having a pre-heating zone and a calcining zone, a cross-pipe within said shaft located near the top of the calcining zone and having inlet means for hot gas from the calcining zone, means connected with said pipe for recirculating said gas to a point at the lower end of the calcining zone, a second pipe across the interior of said shaft and located near the top of the pre-heating zone and having inlets for receiving cooler gas from said pre-heating zone, and a connection between said last-named pipe and the first pipe whereby the cooler gas from the pre-heating zone flows through the first pipe and tends to cool the latter and to temper the hot gas from the calcining zone flowing therethrough.



2,409,528
FOOD CONVEYER OR HEATER
Roy J. Baunach, Toledo, Ohio, assignor to The Swartzbaugh Manufacturing Company, Toledo, Ohio, a corporation of Ohio
Application March 13, 1944, Serial No. 526,295
9 Claims. (Cl. 312—172)

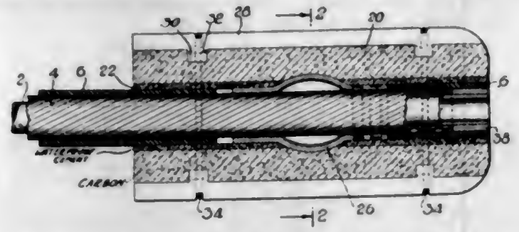
1. A food conveyer having an open top compartment into which one or more food receptacles may be suspended, a bar, means whereby said bar



is pivotally and slidingly attached at one end to a wall of the receptacle adjacent to its top whereby the bar may be swung into and out of dividing relation to the top portion of the compartment and may have an inclined sliding movement lengthwise of such side wall and whereby the bar may be raised to receptacle supporting position in the compartment and may be lowered a predetermined extent relative to the top of the compartment when the bar is slidingly shifted a predetermined distance from said position.

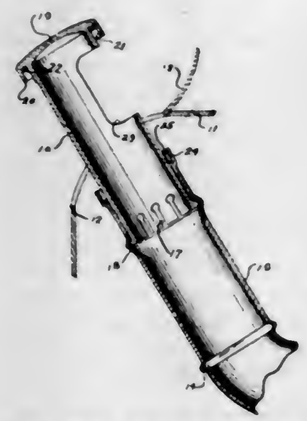
2,409,529
BUOYANT ELECTRIC CABLE
Harry L. Beede, Fort Lee, N. J., assignor to The Okonite-Callender Cable Company, Incorporated, Paterson, N. J., a corporation of New Jersey
Application February 6, 1943, Serial No. 474,932
9 Claims. (Cl. 174—110)

1. In a buoyant electric cable, the combination of a plurality of hermetically sealed, plastic center members or cells, braced internally, with transversely extending wooden discs, spacers between adjacent cylinders, a conductor stranded about said cells and spacers, and an enclosing, non-metallic, water-impervious, flexible sheath, the weight to volume ratio of the cable being such as to enable the same to float in a medium such as sea water.



2,409,530
ELECTRIC CABLE
Charles E. Bennett, Ridgewood, N. J., assignor to The Okonite Company, Passaic, N. J., a corporation of New Jersey
Application July 3, 1942, Serial No. 449,575
1 Claim. (Cl. 174—115)

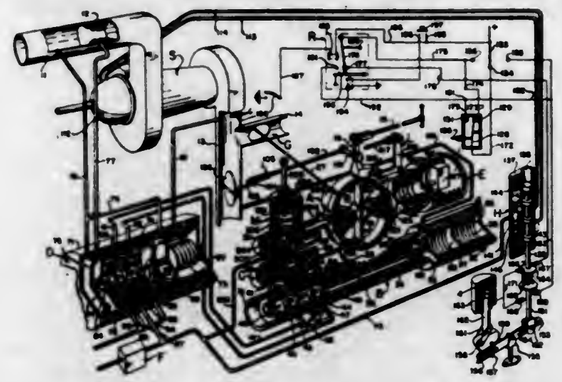
An electric cable comprising in combination a paper insulated conductor, a bare conductor, an enclosing polyethylene tetrasulfide sheath, and an armor of paper impregnated with terpin hydrate.



2,409,531
ELECTRODE FOR BUOYANT CABLES
Charles E. Bennett, Ridgewood, N. J., assignor to The Okonite-Callender Cable Company, Incorporated, Paterson, N. J., a corporation of New Jersey
Original application February 22, 1943, Serial No. 476,741. Divided and this application March 29, 1944, Serial No. 528,519
6 Claims. (Cl. 174—77)

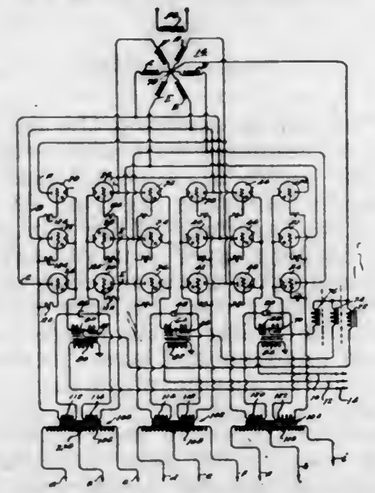
1. An electrode for buoyant electric cables, said electrode comprising in combination a central conductor, electrically insulating water impervious-tubing surrounding the conductor, an electrode element of electrically conducting water-proofed material strung upon said tubing,

and a spring metal electrical contact element within the interior of the electrode and electrically connecting the conductor and electrode element.



2,409,532
FILLING SPOUT
Robert Bentley, Monroe, and Howard Bentley, Detroit, Mich.
Application July 21, 1944, Serial No. 545,920
2 Claims. (Cl. 220—86)

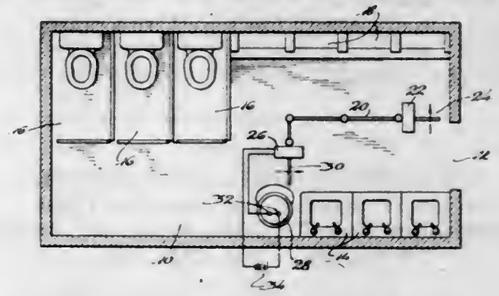
1. A device of the class described, comprising: a tank; a tubular filling spout projecting outwardly from said tank and having a pair of spaced peripheral grooves on its inner surface and outwardly flared at its outer end; a sealing ring mounted on the inner surface of the outwardly flared end of said spout; a telescoping tube mounted in said spout and snugly engaged at its periphery with said ring and provided on its inner end with a plurality of circumferentially spaced, axially directed slits; a peripheral bead on the slitted end of said tube engageable in either of said grooves, said bead being in frictional contact with the inner surface of said spout in its slidable movements therein, there being a filling opening formed in one side of said telescoping tube; a closure on the outer end of said telescoping tube; an overhanging spaced apart flange on the outer end of said telescoping tube to provide a channel; and a sealing ring mounted in said channel and engageable with the end of said spout upon full telescoping of said telescoping tube therewith.



2,409,533
APPARATUS FOR CONTROLLING SUPERCHARGERS
David M. Borden, Royal Oak, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Application January 19, 1944, Serial No. 518,829
16 Claims. (Cl. 230—115)

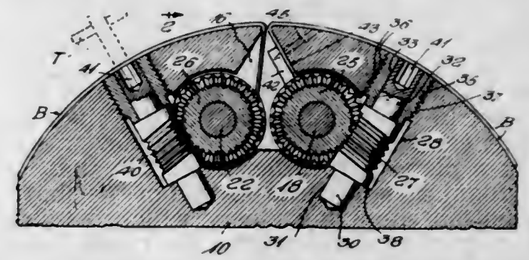
3. The combination with a supercharger adapted to receive gas at one pressure and to deliver it at another greater pressure; of means for reducing the pressure of the delivered gas to keep the supercharger within the pumping limit, said means being responsive to arising of a condition in which the increase in gas pressure effected by

the supercharger is in a neighborhood of value equal to a constant times the equare of the velocity of the gas received by the supercharger plus a constant times the absolute pressure of the gas received by the supercharger.



2,409,534
ELECTRICAL CONTROL SYSTEM
Omer E. Bowlus, Detroit, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Application November 30, 1944, Serial No. 565,954
20 Claims. (Cl. 172—281)

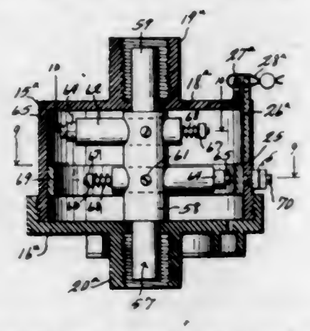
17. In a system for producing multiphase control voltages, the combination of a source of periodic control voltage common to such phases, a counter-network including an electric valve individual to each such phase, means coupling said valves to said source of periodic voltage so as to alter the conductive conditions of said valves in rotation, and means operably responsive to the condition of each valve for producing a control voltage for the corresponding phase.



2,409,535
LAVATORY AND DISINFECTION CONTROL
Robert F. Bracke, Arlington Heights, Ill., assignor to R. F. Bracke & Company, Chicago, Ill., a partnership composed of Robert F. Bracke and Robert Anderson
Application August 16, 1943, Serial No. 498,810
5 Claims. (Cl. 4—222)

1. A lavatory comprising toilet facilities and wash basins, means separating that portion of the lavatory containing the toilet facilities from that portion of the lavatory containing the wash basins, said means requiring a person leaving the toilet compartment to pass a disinfecting station located at the exit from this compartment, hand

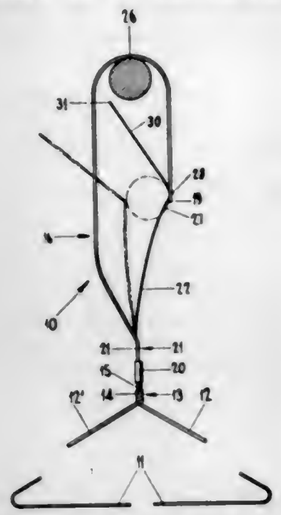
disinfecting means located at this station, a movable member normally preventing a person from leaving the toilet compartment, and means including hand controlled means requiring use of said disinfecting means for releasing said member.



2,409,536
PRINTING CYLINDER BLANKET SECURING MECHANISM
Albert Braunworth, Queens Village, N. Y., assignor to R. Hoe & Co., Inc., New York, N. Y., a corporation of New York
Application February 16, 1943, Serial No. 476,110
2 Claims. (Cl. 101—415.1)

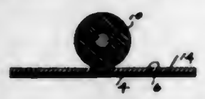
1. In an impression cylinder adapted to receive a flexible blanket therearound and having an annular bearer recessed in the cylinder at each end thereof, an arcuate plate recessed in the cylinder against the inner side of each bearer, an axially-extending clamping surface in the cylinder, a shaft disposed in axial relation to the cylinder and rotatably supported in bearing apertures formed in the arcuate plates, a worm gear rotatable with the shaft, clamping members carried by the shaft to engage a terminal of the blanket and clamp it against the clamping surface, a worm-receiving recess formed in the cylinder, a radial inner bearing aperture formed in the cylinder in communication with the worm-receiving recess, an annular thrust shoulder formed in the cylinder at the inner radial terminal of the worm-receiving recess, a radially-disposed threaded aperture formed in the cylinder in axial alinement with the inner bearing aperture and located between the worm-receiving recess and the cylinder surface, a bearing sleeve threadedly secured in the threaded aperture and having an outer bearing aperture formed therein in axial alinement with the inner bearing aperture, an annular thrust surface formed at the inner terminal of the bearing sleeve, a worm located in the worm-receiving recess in mesh with the worm gear and having its inner and outer terminals engaging the thrust shoulder and thrust surface respectively, an inner stub shaft extending axially from the inner terminal of the worm and rotatably received in the inner bearing aperture, an outer stub shaft extending axially from the

outer terminal of the worm into the outer bearing aperture and having a tool-receiving socket formed therein at the cylinder surface for operable engagement by a radially-disposed tool whereby the worm, worm gear and clamping shaft are rotated by rotation of the tool to thereby move the clamping members into clamping engagement with the blanket, and means for tensioning the clamped blanket around the cylinder.



2,409,537
EXCESSIVE SPEED EXHIBITOR
John W. Bright, Los Angeles, Calif.
Application June 29, 1942, Serial No. 448,973
9 Claims. (Cl. 234—70)

2. An information supplying device comprising a completely closed casing having a circular chamber and opposite end walls, said end walls having axial openings therein, a shaft extending axially through the chamber and having its ends supported in and extending through said openings for connection at one end with a source of power by which the shaft is rotated, a window panel set in the circular wall of the chamber, an element carried by said shaft for movement on a line in a plane perpendicular to the shaft under centrifugal action upon rotation of the shaft, and information supplying means which is made operative upon outward movement of said element at a predetermined speed of rotation of the shaft to disclose through said window panel and from within the closed casing that the shaft has operated at the stated predetermined speed.

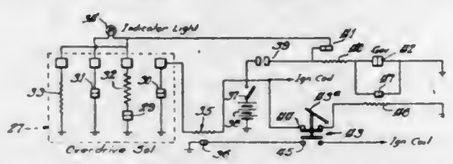


2,409,538
SAFETY INTERLOCKING CLOTHES HANGER
Aron Brill, Brooklyn, N. Y., and Walter Kneissler, Roselle, N. J.
Application October 17, 1944, Serial No. 558,992
2 Claims. (Cl. 223—88)

1. In a clothes hanger comprising a hook for a supporting bar, said hook having parallel walls spaced apart throughout its entire extent and having a bifurcation at its free end, an elongated leaf spring pivotally held at its lower end and intermediate of said hook walls, said spring having an angularly bent portion extending into interengagement with said bifurcation and being held thereby against lateral sway, a clamp having vertically elongated tubular end walls in fixed engagement with both of said walls, the portion of said clamp intermediate said end walls being flattened, said clamp holding said spring in immovable engagement with the lower end portion of said hook, said hanger being attachable to said bar by pressing the free end portion of said spring below said bifurcation against said bar and causing movement of said spring inwardly of said hook and between said parallel walls sufficiently to provide passage for said bar into said hook, said spring having an upwardly facing angularly directed extension, the free end of said extension terminating past the mid portion of said bar to permit said hanger to be moved upwardly into

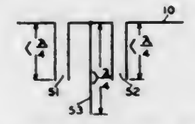
disengagement from said bar by forcibly pressing said spring inwardly of said hook sufficiently to provide outward passage for said bar.

2,409,539
INSULATED WIRE AND CABLE
Grover W. Brown, Wyckoff, N. J., assignor to The Okonite Company, Passaic, N. J., a corporation of New Jersey
Application July 14, 1943, Serial No. 494,623
2 Claims. (Cl. 41—33)



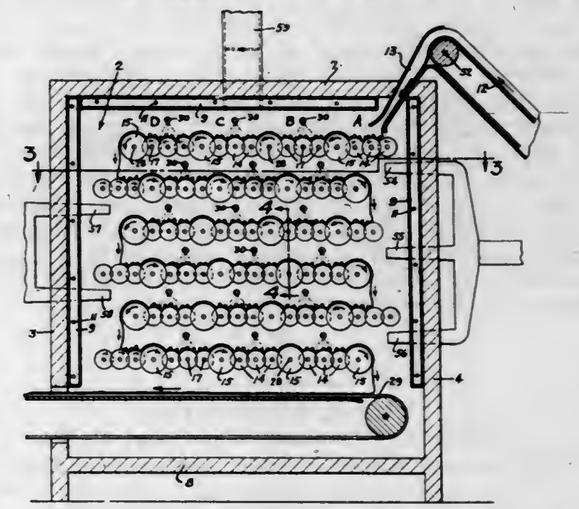
1. The method of marking the surface of the insulation of insulated wire and cable and vulcanizing the same in a continuous operation, which method comprises applying desired markings in ink to one face of an elongated metal strip, calendering a layer of unvulcanized rubber-like compound upon the inked face of said strip, said ink comprising color pigment and a solution of a compound similar to the compound composing the said unvulcanized layer, forming this assembly about the unvulcanized insulation of the wire or cable to bring the rubber-like compound into intimate contact with the said insulation and completely envelop the same, subjecting the assembly to a vulcanizing temperature with said metal strip restraining the insulation against distortion and then removing the metal strip, whereby the said markings are transferred to the exterior of said compound and the wire or cable insulation and said compound are vulcanized.

2,409,540
EXTRUDED PIPE MADE FROM LEAD ALLOYS
William Thomas Butcher and Arnold Lloyd, Greenford, England, assignors to Goodlass Wall & Lead Industries Limited, Oxted, England
No Drawing. Application January 23, 1945, Serial No. 574,218. In Great Britain January 4, 1944
1 Claim. (Cl. 138—47)



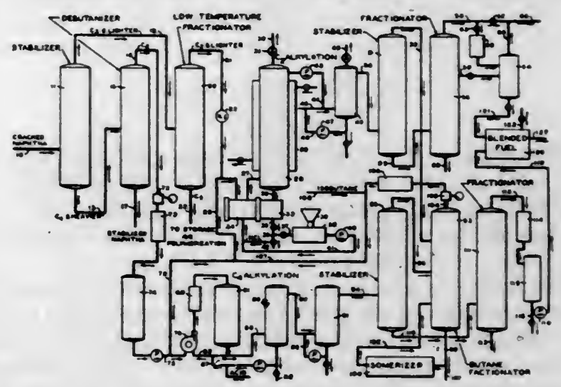
An extruded pipe for use under conditions requiring high creep resistance and high tensile strength, said pipe being composed of lead and silver, containing from 0.7% to 1.5% of silver, the balance being substantially lead.

2,409,541
VARIABLE-SPEED TRANSMISSION CONTROL
Harold E. Carnagua, Muncie, Ind., assignor to Borg-Warner Corporation, Chicago 4, Ill., a corporation of Illinois
Application July 1, 1944, Serial No. 543,165
5 Claims. (Cl. 192—3)



1. A control mechanism for a vehicle change speed transmission to be used with a prime mover having an ignition circuit, said transmission including positively interengageable transmission control elements, one of which elements is movable toward and away from another element to establish and release a drive of a predetermined ratio through the transmission, means for moving said movable element into engagement with the said other element, electro-magnetic means for controlling the moving means, a plurality of switches which are closed in response to movement of the movable element to a released position and opened in response to movement of the movable element to engaged position, a relay, a switch operated by said relay and having contacts which are closed when the relay is deenergized, a source of electrical energy, a manually operated switch; said relay-operated switch, said manually operated switch, a portion of the electro-magnetic means and one of said plurality of switches being connected in series; a relay in series with another of said plurality of switches and with the source of electrical energy, a switch controlled by the second-mentioned relay and opened when the said second-mentioned relay is energized, vehicle speed controlled switch means controlling the energization of the first electro-magnetic means, and a manually controlled switch effective, when closed and when the positively interengageable elements are engaged and the prime mover is impressing a torque load on the elements, to ground the ignition circuit and thereby relieve the torque load on the elements.

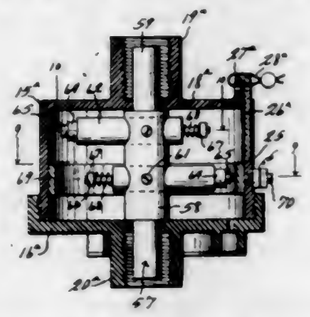
2,409,542
HIGH-FREQUENCY TRANSDUCER SYSTEM
Philip S. Carter, Rocky Point, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application November 20, 1942, Serial No. 466,321
13 Claims. (Cl. 250—11)



2. A phase shifting network for insertion in a single wire carrying high frequency energy including series reactance elements and at least one reactance element adapted to function as a shunt reactance in said network, said last named element including a length of conductor having such length that its effect on said network is inductive, said series reactance elements including conductors so disposed as to have inappreciable radiation resistance and having a length less than one quarter of the operating wavelength whereby they are capacitive in effect the reactances of said elements being so proportioned that the characteristic impedance of said network is equal to the impedance of said single wire to prevent reflection of energy at the point of insertion of said network.

2,409,543
APPARATUS FOR SHRINKING FABRICS
Franklin Chatfield, Minneapolis, Minn., assignor to Munsingwear, Inc., Minneapolis, Minn., a corporation of Delaware
Application August 28, 1944, Serial No. 551,576
10 Claims. (Cl. 26—18.5)

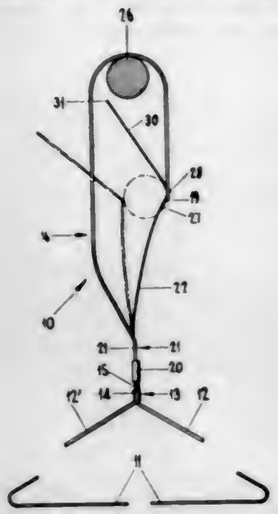
1. In an apparatus for shrinking textile fabrics, a steam chamber, a plurality of closely spaced rotatable disks in said chamber, all of said disks being disposed beneath the path of travel of the fabric and having their peripheries arranged to convey the fabric through the chamber in a slack and relaxed condition and without exerting a pushing or pulling action thereon, certain of said disks having a relatively higher peripheral speed than others and cooperating with said other disks to continually alternately transversely wrinkle and dewrinkle the fabric as it passes through the chamber.



2,409,544
ALKYLATION OF HYDROCARBONS
Louis A. Clarke, Fishkill, N. Y., assignor to The Texas Company, New York, N. Y., a corporation of Delaware
Application April 17, 1942, Serial No. 439,299
10 Claims. (Cl. 260—683.4)

6. In the continuous alkylation of isobutane with ethylene in the presence of an aluminum chloride alkylation catalyst, wherein isobutane and ethylene are continuously fed into an alkylation reaction zone containing an aluminum chloride catalyst, reaction products are continuously discharged from said zone and a stabilized hydro-

outer terminal of the worm into the outer bearing aperture and having a tool-receiving socket formed therein at the cylinder surface for operable engagement by a radially-disposed tool whereby the worm, worm gear and clamping shaft are rotated by rotation of the tool to thereby move the clamping members into clamping engagement with the blanket, and means for tensioning the clamped blanket around the cylinder.



2,409,537
EXCESSIVE SPEED EXHIBITOR
John W. Bright, Los Angeles, Calif.
Application June 29, 1942, Serial No. 448,973
9 Claims. (Cl. 234—70)

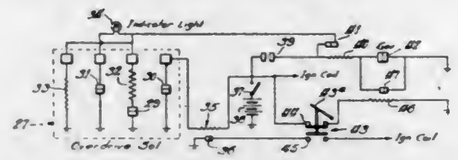
2. An information supplying device comprising a completely closed casing having a circular chamber and opposite end walls, said end walls having axial openings therein, a shaft extending axially through the chamber and having its ends supported in and extending through said openings for connection at one end with a source of power by which the shaft is rotated, a window panel set in the circular wall of the chamber, an element carried by said shaft for movement on a line in a plane perpendicular to the shaft under centrifugal action upon rotation of the shaft, and information supplying means which is made operative upon outward movement of said element at a predetermined speed of rotation of the shaft to disclose through said window panel and from within the closed casing that the shaft has operated at the stated predetermined speed.

2,409,538
SAFETY INTERLOCKING CLOTHES HANGER
Aron Brill, Brooklyn, N. Y., and Walter Kneissler, Roselle, N. J.
Application October 17, 1944, Serial No. 558,992
2 Claims. (Cl. 223—88)

1. In a clothes hanger comprising a hook for a supporting bar, said hook having parallel walls spaced apart throughout its entire extent and having a bifurcation at its free end, an elongated leaf spring pivotally held at its lower end and intermediate of said hook walls, said spring having an angularly bent portion extending into interengagement with said bifurcation and being held thereby against lateral sway, a clamp having vertically elongated tubular end walls in fixed engagement with both of said walls, the portion of said clamp intermediate said end walls being flattened, said clamp holding said spring in immovable engagement with the lower end portion of said hook, said hanger being attachable to said bar by pressing the free end portion of said spring below said bifurcation against said bar and causing movement of said spring inwardly of said hook and between said parallel walls sufficiently to provide passage for said bar into said hook, said spring having an upwardly facing angularly directed extension, the free end of said extension terminating past the mid portion of said bar to permit said hanger to be moved upwardy into

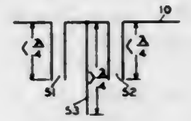
disengagement from said bar by forcibly pressing said spring inwardly of said hook sufficiently to provide outward passage for said bar.

2,409,539
INSULATED WIRE AND CABLE
Grover W. Brown, Wyckoff, N. J., assignor to The Okonite Company, Passaic, N. J., a corporation of New Jersey
Application July 14, 1943, Serial No. 494,623
2 Claims. (Cl. 41—33)



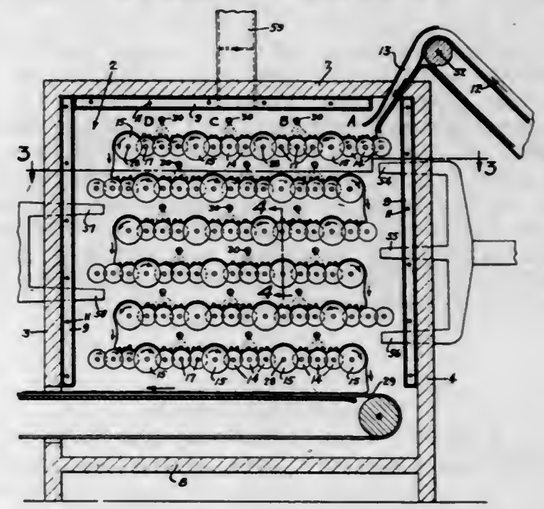
1. The method of marking the surface of the insulation of insulated wire and cable and vulcanizing the same in a continuous operation, which method comprises applying desired markings in ink to one face of an elongated metal strip, calendering a layer of unvulcanized rubber-like compound upon the inked face of said strip, said ink comprising color pigment and a solution of a compound similar to the compound composing the said unvulcanized layer, forming this assembly about the unvulcanized insulation of the wire or cable to bring the rubber-like compound into intimate contact with the said insulation and completely envelop the same, subjecting the assembly to a vulcanizing temperature with said metal strip restraining the insulation against distortion and then removing the metal strip, whereby the said markings are transferred to the exterior of said compound and the wire or cable insulation and said compound are vulcanized.

2,409,540
EXTRUDED PIPE MADE FROM LEAD ALLOYS
William Thomas Butcher and Arnold Lloyd, Greenford, England, assignors to Goodlass Wall & Lead Industries Limited, Oxted, England
No Drawing. Application January 23, 1945, Serial No. 574,218. In Great Britain January 4, 1944
1 Claim. (Cl. 138—47)



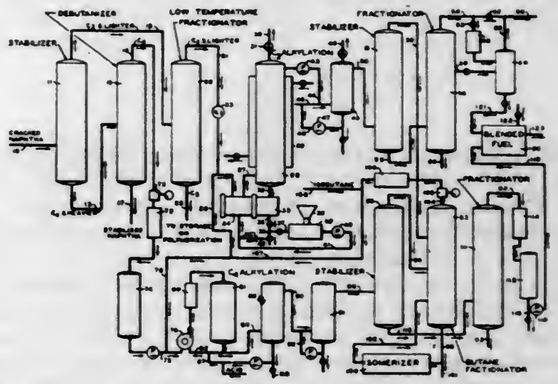
An extruded pipe for use under conditions requiring high creep resistance and high tensile strength, said pipe being composed of lead and silver, containing from 0.7% to 1.5% of silver, the balance being substantially lead.

2,409,541
VARIABLE-SPEED TRANSMISSION CONTROL
Harold E. Carnagua, Muncie, Ind., assignor to Borg-Warner Corporation, Chicago 4, Ill., a corporation of Illinois
Application July 1, 1944, Serial No. 543,165
5 Claims. (Cl. 192—3)



1. A control mechanism for a vehicle change speed transmission to be used with a prime mover having an ignition circuit, said transmission including positively interengageable transmission control elements, one of which elements is movable toward and away from another element to establish and release a drive of a predetermined ratio through the transmission, means for moving said movable element into engagement with the said other element, electro-magnetic means for controlling the moving means, a plurality of switches which are closed in response to movement of the movable element to a released position and opened in response to movement of the movable element to engaged position, a relay, a switch operated by said relay and having contacts which are closed when the relay is deenergized, a source of electrical energy, a manually operated switch; said relay-operated switch, said manually operated switch, a portion of the electro-magnetic means and one of said plurality of switches being connected in series; a relay in series with another of said plurality of switches and with the source of electrical energy, a switch controlled by the second-mentioned relay and opened when the said second-mentioned relay is energized, vehicle speed controlled switch means controlling the energization of the first electro-magnetic means, and a manually controlled switch effective, when closed and when the positively interengageable elements are engaged and the prime mover is impressing a torque load on the elements, to ground the ignition circuit and thereby relieve the torque load on the elements.

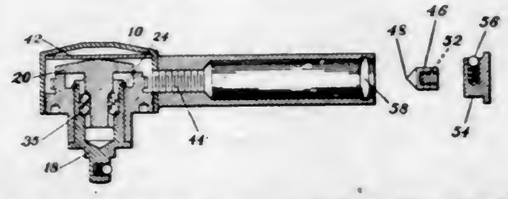
2,409,542
HIGH-FREQUENCY TRANSDUCER SYSTEM
Philip S. Carter, Rocky Point, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application November 20, 1942, Serial No. 466,321
13 Claims. (Cl. 250—11)



2. A phase shifting network for insertion in a single wire carrying high frequency energy including series reactance elements and at least one reactance element adapted to function as a shunt reactance in said network, said last named element including a length of conductor having such length that its effect on said network is inductive, said series reactance elements including conductors so disposed as to have inappreciable radiation resistance and having a length less than one quarter of the operating wavelength whereby they are capacitive in effect the reactances of said elements being so proportioned that the characteristic impedance of said network is equal to the impedance of said single wire to prevent reflection of energy at the point of insertion of said network.

2,409,543
APPARATUS FOR SHRINKING FABRICS
Franklin Chatfield, Minneapolis, Minn., assignor to Munsingwear, Inc., Minneapolis, Minn., a corporation of Delaware
Application August 28, 1944, Serial No. 551,576
10 Claims. (Cl. 26—18.5)

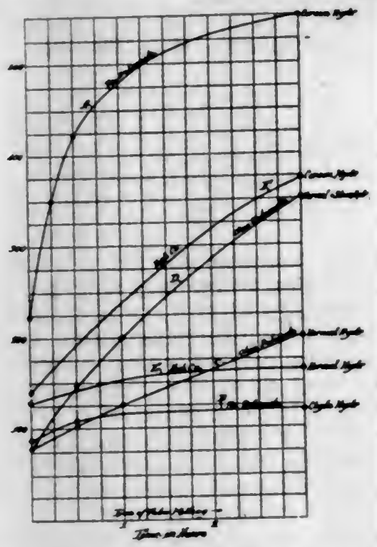
1. In an apparatus for shrinking textile fabrics, a steam chamber, a plurality of closely spaced rotatable disks in said chamber, all of said disks being disposed beneath the path of travel of the fabric and having their peripheries arranged to convey the fabric through the chamber in a slack and relaxed condition and without exerting a pushing or pulling action thereon, certain of said disks having a relatively higher peripheral speed than others and cooperating with said other disks to continually alternately transversely wrinkle and dewrinkle the fabric as it passes through the chamber.



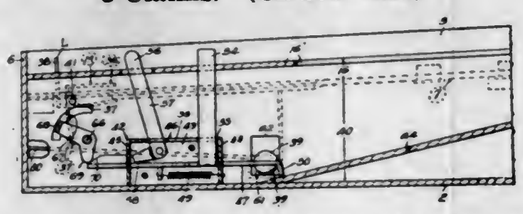
2,409,544
ALKYLATION OF HYDROCARBONS
Louis A. Clarke, Fishkill, N. Y., assignor to The Texas Company, New York, N. Y., a corporation of Delaware
Application April 17, 1942, Serial No. 439,299
10 Claims. (Cl. 260—683.4)

6. In the continuous alkylation of isobutane with ethylene in the presence of an aluminum chloride alkylation catalyst, wherein isobutane and ethylene are continuously fed into an alkylation reaction zone containing an aluminum chloride catalyst, reaction products are continuously discharged from said zone and a stabilized hydro-

carbon alkylate recovered from said products, the improvement which comprises maintaining the molar ratio of isobutane to olefin in excess of about 3:1, providing an olefin feed containing ethylene as the essential olefinic component with not more than about 20% by weight based on the ethylene of other olefins including propylene, providing sufficient pressure to maintain the isobutane in liquid phase, maintaining the temperature of the reaction zone within the range of 105° F. to about 130° F., maintaining the catalyst to hydrocarbon volume ratio in the reaction zone in excess of about 0.06:1, adding to the reaction zone a small amount of material selected from the group consisting of HCl, water and alkyl chlorides which provides HCl promoter in the reaction zone in an amount equivalent to not substantially more than about 0.2% by weight of HCl on the basis of the hydrocarbon charge, and providing a contact time within the reaction zone of less than 20 minutes but not less than about 5 minutes, whereby an overall normally liquid alkylate is produced containing a major proportion by volume of hexanes consisting primarily of 2,3-dimethylbutane.



2,409,545
TORQUE WRENCH
Arthur L. Cornwell, Wellsville, N. Y.
Application March 7, 1944, Serial No. 525,457
10 Claims. (Cl. 64—29)

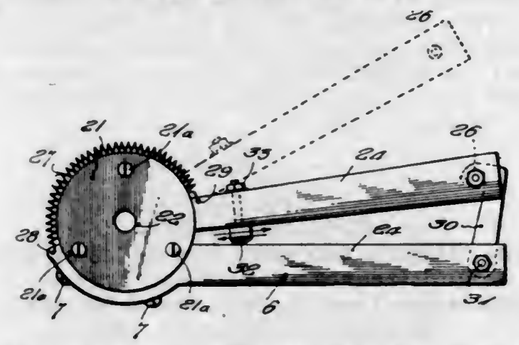


1. A torque wrench comprising the combination of a chambered body, a driven member therein having a centrally disposed portion extending outwardly of the body and a cooperating portion non-rotatably connected to the first portion, said cooperating portion and body having co-engaging and non-positive driving faces disposed about said centrally disposed portion, a substantially flat plate spring disposed rearwardly of and having its intermediate portion in contact with the driven member at its axis of rotation, said spring being supported in the body at spaced points remote from said intermediate portion and normally operative against the driven member to hold said faces in engagement with a predetermined resilient pressure.

2,409,546
METHODS OF CONDITIONING AND TREATING LIME AND PRODUCT THEREOF
Bolton L. Corson, Plymouth Meeting, Pa.
Application July 15, 1940, Serial No. 345,498
17 Claims. (Cl. 23—188)

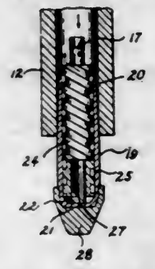
15. A dry hydrated lime comprising clusters of individual finely divided particles and having improved properties, including a plasticity in excess of 200 available substantially immediately upon mixture with water as distinguished from a plasticity requiring hours of soaking to develop, which has had its calcium oxide substantially completely hydrated in the presence of so large an excess of water in the liquid phase that the product after hydration of the calcium oxide contained a surplus of liquid water, water in the liquid phase having come into contact with practically every individual particle of the lime and each said individual particle having been in contact with water in the liquid phase until the hydration of the calcium oxide content of that individual particle was completed, and which has been prepared by pounding in a powder form between surfaces to such as extent that its particles have been thus gathered into clusters while maintaining the lime as a powder.

2,409,547
GAME
George S. Cox and Emil J. Sandel, St. Louis, Mo.; said Sandel assignor to said Cox
Application March 20, 1944, Serial No. 527,293
3 Claims. (Cl. 273—129)



2. In a ball projecting device of the class described comprising a housing, a ball impact member having a plurality of openings therein slidably mounted in openings in the end walls of the housing, a spring for controlling the ball impact movement of the impact member, an upright handle projecting from the impact member and passing through a slotted opening in the top wall of the housing for retracting the impact member to a selected starting position against the action of the spring, a pivotally supported trigger having an offset extension to form a dog for engagement in a selected impact member opening to hold the impact member in its retracted position until the dog is released from engagement with the selected opening by forward pressure on the handle.

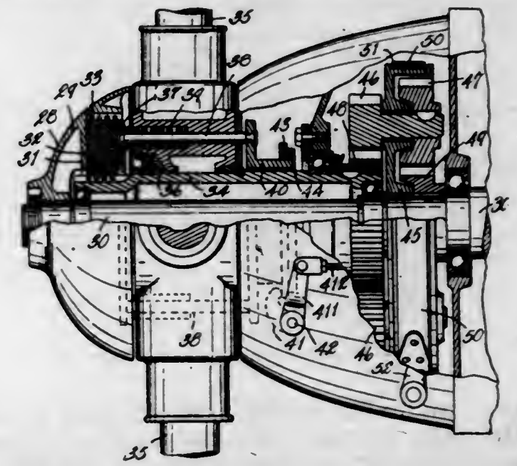
2,409,548
PLASTICIZED POLYVINYL ACETAL
Max O. Debacher, Springfield, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application September 24, 1943, Serial No. 503,657
19 Claims. (Cl. 260—36)



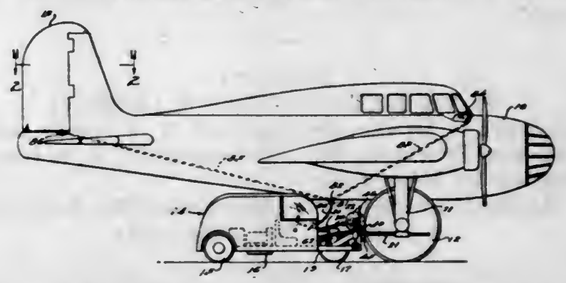
1. A composition comprising a polyvinyl acetal resin and a partial ester of a polyhydric alcohol and a saturated monocarboxylic aliphatic acid containing more than 9 but less than 21 carbon atoms, the polyhydric alcohol residue containing two unreacted hydroxyl groups.

2,409,549
BLASTING CAP CRIMPER
Alexander Djidics, Tamaqua, Pa., assignor to Atlas Powder Company, Wilmington, Del., a corporation of Delaware
Application April 21, 1944, Serial No. 532,201
8 Claims. (Cl. 86—40)

1. Means for crimping blasting caps upon fuses, comprising a head spanned by a web, said web having guide ways formed in its opposite faces, said guide ways lying substantially at right angles with respect to each other, a pair of jaws mounted in each of said guide ways, a pair of cam plates seated in said head, one upon each side of said web, interengaging cam means upon each of the cam plates and a pair of the jaws, and means for imparting movement to the cam plates from the exterior of the head, the confronting ends of the jaws being provided with working surfaces shaped to complementally and circumferentially indent a blasting cap to crimp the same upon a fuse.



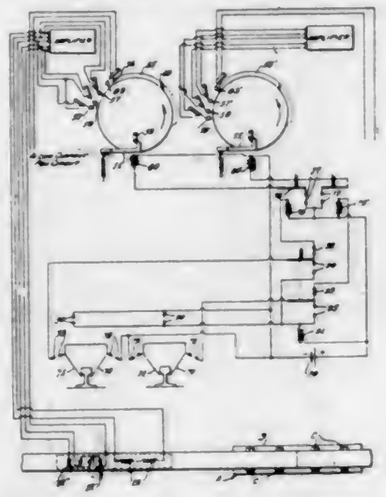
2,409,550
ELECTRODE FOR SPOT WELDING
Matthew Dobkowski, Detroit, Mich.
Application December 4, 1944, Serial No. 566,528
4 Claims. (Cl. 219—4)



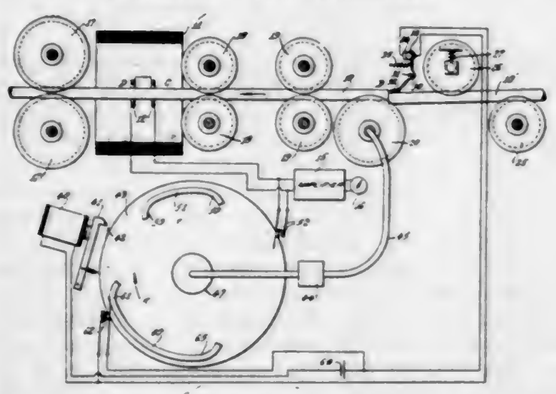
1. An electrode of the kind described, comprising a thin cylindrical shell, closed at one end by a transverse wall, an elongated member axially disposed within said shell, having an axial passage therein and having a spiral groove on its outer surface, the inner end of the member terminating short of said transferse wall, to leave a free space adjoining said wall, the axial passage in said member serving to convey cooling liquid to the said free space, while the groove affords an outlet for said liquid from said shell.

2,409,551
AIRCRAFT PROPULSION
Maurice L. Donnellan, Ypsilanti, Mich.
Application June 15, 1942, Serial No. 447,099
1 Claim. (Cl. 170—135.5)

In a power transmission system for driving a fixed blade aircraft propeller from a power driven shaft, the combination of a sleeve concentric with the driven shaft, a propeller hub secured to said sleeve, a clutch member carried by said hub forwardly of the propeller and arranged upon engagement to drive said sleeve from said shaft at the same speed, a transmission connecting said shaft with said sleeve for driving said sleeve at a different speed from the speed of such shaft when said clutch is disengaged, and operating means for simultaneously effecting a timed engagement and disengagement of said clutch with relation to the driving of said sleeve through said transmission, and comprising clutch operating members extending through said hub, means for blocking the operation of said transmission, and a connecting link between said clutch operating member and said transmission blocking means whereby the said transmission is rendered inoperative when the clutch is engaged and said shaft and sleeve are connected thereby in driving relation, and said transmission is rendered operative only when said clutch is disengaged.

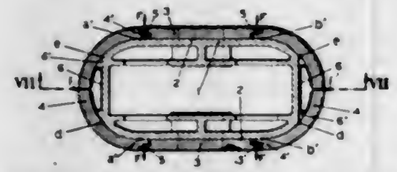


2,409,552
AIRCRAFT PROPULSION DEVICE
Maurice L. Donnellan, Ypsilanti, Mich.
Application May 27, 1943, Serial No. 488,763
2 Claims. (Cl. 244—63)



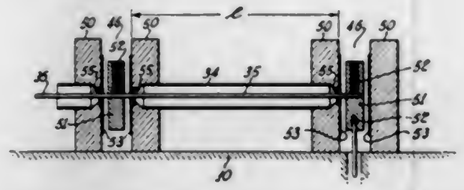
1. A take-off device to assist in the horizontal take-off movement of airplanes and comprising in combination a frame, a plurality of power driven wheels, a steerable wheel, a steering arm attached to said device for steering said steerable wheel, a power head, and a power source, means for selectively driving said power driven wheels and said power head from said power source, means for effecting a positive driving connection between said power head and a landing wheel of an airplane, and comprising a power driven toothed gear member driven by the power source and meshed in driving relation with gear tooth members provided on the landing wheel of an airplane, and quick detachable means for selectively coupling and uncoupling said steering arm and the airplane landing gear.

2,409,553
RAIL FLAW DETECTOR MECHANISM
Harcourt C. Drake, Hempstead, N. Y., assignor to Sperry Products, Inc., Hoboken, N. J., a corporation of New York
Application April 13, 1943, Serial No. 482,848
14 Claims. (Cl. 175—183)



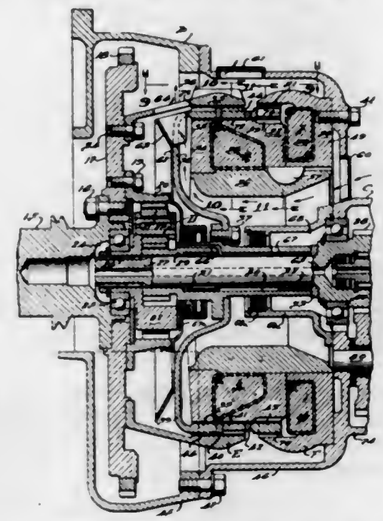
1. In a rail fissure detector car adapted to move over the rails for detecting rail flaws, flaw indicating mechanism, means responsive to flaw and adapted to actuate said indicating mechanism, said rails having joints, said flaw responsive means responding also to joints, a second means responsive to joints and adapted to cooperate with said joints before said flaw responsive means is in a position to be affected by said joints, a rotatable member normally held against rotation, means whereby said second responsive means causes rotation of said member in response to a joint, and means whereby said member renders said flaw responsive means ineffective to actuate said indicating mechanism during a predetermined angular rotation of said member, said last named means comprising a cam carried by said member, a switch positioned in the path of said cam to be actuated thereby, and means whereby the position of the switch with respect to the leading edge of the cam may be varied to vary the length of rail in advance of the joint which remains untested.

2,409,554
FLAW DETECTOR FOR TUBING
Harcourt C. Drake, Hempstead, N. Y., assignor to Sperry Products, Inc., Hoboken, N. J., a corporation of New York
Application June 16, 1944, Serial No. 540,674
4 Claims. (Cl. 175—183)



1. In a flaw detector mechanism for tubing, said mechanism comprising means for energizing the tube with flux, means responsive to variations in flux in the tube, and indicating means adopted to be actuated by variations in the responsive means, the ends of the tube causing flux variations similar to those caused by a flaw, means for moving the tubes through the detector mechanism with the ends of adjacent tubes in contact to form a closed joint whereby the region of end effect is reduced, means for rendering the indicating means ineffective during the passage of said joint past the flaw responsive means, means for maintaining the adjacent end of one of the tubes at a joint initially out of alignment, means for moving said last-named end into alignment, and means actuated by said last-named end when moving into alignment for rendering effective the means for rendering the indicating means ineffective during the passage of the joint past the flaw responsive means.

2,409,555
PISTON ENGINE
Eugène Marius Gadoux, Cormeilles-en-Parisis, and Jacques Fouré, Paris, France
Application June 15, 1945, Serial No. 599,577
In France February 2, 1945
2 Claims. (Cl. 309—4)

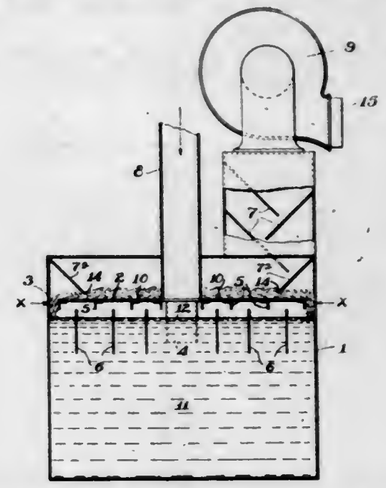


2. In a piston, the provision of an elongated grooved piston, a cylinder of corresponding shape inside which said piston is adapted to reciprocate and a plurality of fluidtight superposed packing-rings fitting inside the grooves of the pistons and constituted by two rectilinear bars, two semi-circular elements engaging said bars through their terminal heels for forming a closed structure and springs urging the semi-circular elements outwardly.

2,409,556
FILTER
Ralph W. George, Riverhead, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application October 12, 1942, Serial No. 461,715
10 Claims. (Cl. 178—44)

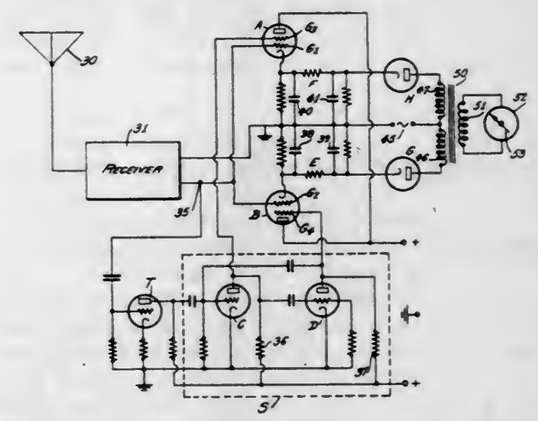
1. A band rejection filter including a coaxial transmission line having an inner conductor and an outer shell, said outer shell being divided into sections, parallel conductive plates arranged in pairs connected to adjacent ends of each of said sections and a conductive disc between each of said pairs of plates and connected to said inner conductor, the capacity between said conductive plates and said disc being so large as to present an extremely low reactance to the band of frequencies to be rejected, the space between said conductive plates being such as to present a high impedance to the band of frequencies to be rejected.

2,409,557
POWER TRANSMISSION
Henry W. Gilfillan, Detroit, and Edgar L. Bailey, Birmingham, Mich., assignors to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Original application September 20, 1940, Serial No. 357,528. Divided and this application January 1, 1942, Serial No. 425,292
18 Claims. (Cl. 192—13)



1. In a motor vehicle having an engine, a drive shaft driven by the engine and a driven shaft, means for coupling said shafts together for driving the vehicle comprising an annular member rotatable with said drive shaft and having a cylindrical iron portion; a second annular member rotatable with said driven shaft and having a cylindrical iron portion; means for inducing flow of eddy currents in at least one of said iron portions of said annular iron members during relative rotation thereof of such strength and direction that said relative rotation is opposed, comprising a stationary core having axially spaced cylindrical pole faces disposed in close radial proximity to and surrounded by said iron portion of one of said annular members and also in substantially radial alignment with the iron portion of the other member such that magnetic flux enters said surrounding iron portions from one of said cylindrical pole faces and returns from said surrounding iron portions to the other of said pole faces, and means for exciting said core.

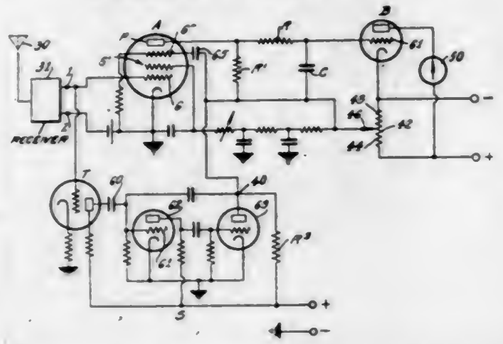
2,409,558
TREATMENT OF GAS
Robert D. Gunn, Cleveland, Ohio, assignor to Aluminum Company of America, Pittsburgh, Pa., a corporation of Pennsylvania
Application October 27, 1942, Serial No. 463,461
9 Claims. (Cl. 183—24)



1. A method of separating solids from gas containing the same which includes creating an enclosed gas stream, deflecting at least a portion of said stream against the free surface of a liquid body and thereafter passing said stream through and in contact with a flowing layer of liquid in a path divergent to the direction of flow of said layer.

7. In a gas treating device, a lower compartment, a body of liquid disposed in said compartment and having a free liquid surface which in operative position forms with the compartment walls a gas passage, means disposed in said passage to deflect gas against said free liquid surface, a gas delivery port communicating with said passage, an upper chamber communicating with said compartment and said passage, means for continuously displacing a portion of said body of liquid to said upper chamber and means for continuously returning said displaced liquid to said body of liquid whereby a layer of flowing liquid is formed and maintained in the lower level of the upper chamber, a discharge port in the upper

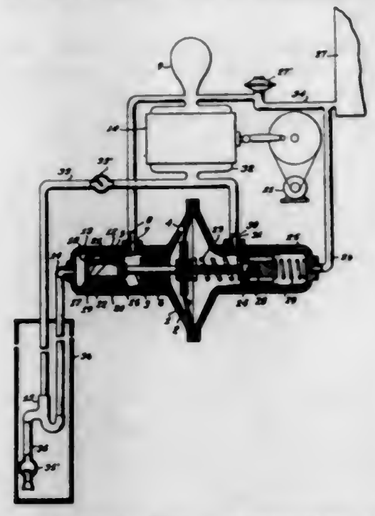
levels of said chamber in communication with the space above said layer, means for causing flow of gas from the delivery port through said gas passage into said upper chamber and through said discharge port and means disposed in the path of gas flow to cause said gas to pass into and through said liquid layer after it has left said passage and before it has reached said discharge port.



2,409,559
DATA TRANSMITTER
Norman L. Haight, Hoboken, N. J., assignor to Sperry Products, Inc., Hoboken, N. J., a corporation of New York
Application April 10, 1943, Serial No. 482,583
2 Claims. (Cl. 177—351)

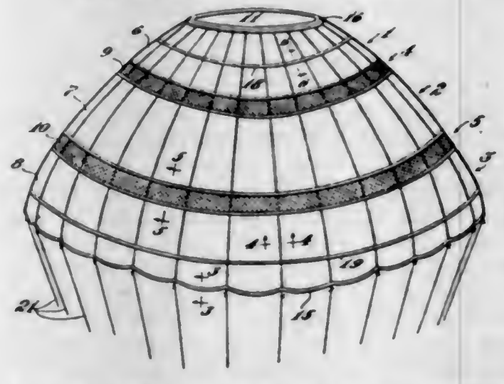
1. A system for transmitting the relative values of a pair of impedances, comprising means for generating a carrier, means whereby said impedances alternately modulate the carrier corresponding to the values of said impedances, means for transforming the carrier into the modulation components, a pair of opposed condenser circuits, means whereby the modulation components corresponding to said impedances charge the respective condenser circuits to generate a differential current, whereby the magnitude of the differential current will depend upon the differences in magnitude between the respective impedances and the direction of the differential current will

depend upon the predominance of one or the other of said impedances, and means responsive to the magnitude and direction of said differential current.



2,409,560
DATA TRANSMITTER
Norman L. Haight, Hoboken, N. J., assignor to Sperry Products, Inc., Hoboken, N. J., a corporation of New York
Application January 18, 1944, Serial No. 518,770
4 Claims. (Cl. 177—351)

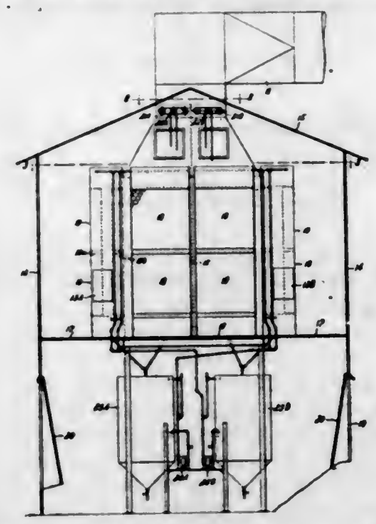
1. A system for transmitting the relative values of a pair of impedances, comprising a circuit including said impedances and a source of energy, means for generating a carrier, means whereby the voltage drop across said impedances alternately modulates said carrier so that the average modulation increases continuously from minimum to maximum as one impedance increases from zero to maximum while the other impedance correspondingly decreases from maximum to zero, means for transforming the carrier into the modulation components, means responsive to the peak values of said modulation components, indicating means actuated by the output from said responsive means, means whereby said indicating means is caused to give a predetermined indication when there is a predetermined output from said responsive means corresponding to a predetermined relationship of said impedances and whereby said indicating means is caused to be actuated in one direction or the other in response to change in one direction or the other, respectively, in said predetermined relationship.



2,409,561
AUTOMATIC CONTROL VALVE FOR JET PUMPS
Thaddeus S. Harris, Waverly, Ill.
Application February 19, 1945, Serial No. 578,590
5 Claims. (Cl. 103—5)

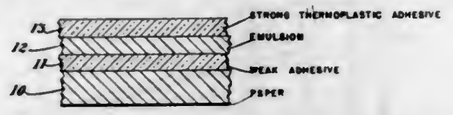
1. In a jet type deep well pumping plant, the combination of a suction type force pump, means for operating said pump, a storage tank, a discharge passage from said pump to said tank, a pressure control valve in said discharge passage, an intake pipe extended downwardly from said pump, a jet booster unit connected to said pipe, an automatic control unit, said unit comprising a diaphragm chamber, a diaphragm across said chamber, one side of said diaphragm being open to atmospheric pressure, a push spring disposed against said diaphragm in the closed side of said diaphragm chamber, two ports from this side of said diaphragm chamber, one of said ports being connected by a pipe to said intake pipe at a point near the pump, the remaining port being connected by a pipe to said storage tank, a valve disposed to control this port, said valve being operably connected with said diaphragm; a valve chamber fixed to that side of diaphragm chamber that is open to atmospheric pressure, an intake port into said valve chamber, said port being connected by a pipe to said discharge passage near the pump, a discharge port from said valve

chamber, said port being connected by a pipe to the jet of said jet unit, a valve controlling said discharge port, said valve being operably connected to said diaphragm.



2,409,562
PAPER PARACHUTE
Dana B. Hastings, Framingham, Mass., assignor to Dennison Manufacturing Company, Framingham, Mass., a corporation of Massachusetts
Application December 4, 1943, Serial No. 512,864
5 Claims. (Cl. 244—145)

1. A parachute comprising an approximately hemispheroidal canopy having a plurality of circumferential sections of crepe paper and a circumferential section of open mesh fabric interposed between the crepe paper sections, the ratio of the open mesh material to crepe paper being high enough substantially to vent the canopy, each paper section consisting of a plurality of expansible segments having their creping extending radially of said canopy, and a plurality of tapes extending radially and circumferentially of said canopy, said tapes being secured to the margins of said paper segments.

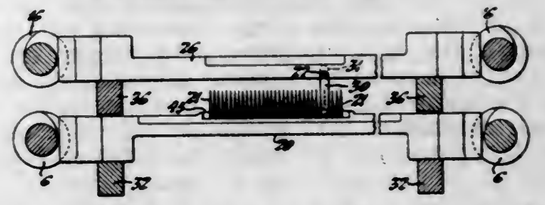


2,409,563
AIR CLEANING PLANT
Carl W. J. Hedberg, Bound Brook, N. J., assignor to Research Corporation, New York, N. Y., a corporation of New York
Application February 27, 1945, Serial No. 579,908
6 Claims. (Cl. 183—7)

1. An air cleaner comprising a vertical shaft, a plurality of electrical precipitators forming at least a portion of the vertical walls of the shaft, means closing one end of the shaft, vertical partition members dividing said shaft into a plurality of vertical conduits each having at least

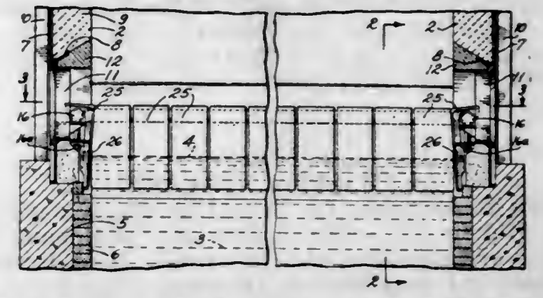
one of said electrical precipitators in an external wall thereof, and means in each of said vertical conduits at the end thereof opposite the closed end for closing said conduit independently of the other of said conduits.

2,409,564
TRANSFER MATERIAL
William Heinecke and Frieda Heinecke, Verona, N. J., assignors to The Di-Noc Manufacturing Company, Cleveland, Ohio, a corporation of Ohio
Application May 28, 1941, Serial No. 395,542
7 Claims. (Cl. 95—8)



1. A composite transfer sheet comprising in combination a bottom base sheet of paper; a sheet of ethyl cellulose coated on the upper face of said base sheet; a photosensitive layer on the upper face of said sheet of ethyl cellulose, and a top layer of vinyl resin.

2,409,565
GILL BAR OR FALLER FOR GILL-DRAWING MACHINES
Willie Holdsworth, Seekonk, Mass.
Application July 24, 1943, Serial No. 496,029
3 Claims. (Cl. 19—129)

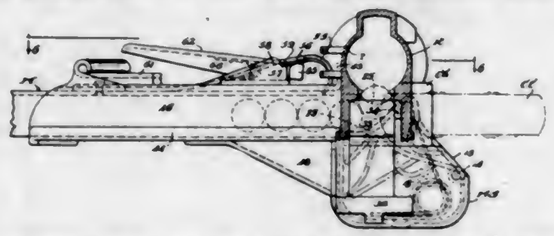


2. A faller for gill-boxes and the like comprising a metal bar having its ends adapted for engagement with the traversing screws of the gill-box, a plurality of toothed units each constructed of plastic material such as a resin or resin derivative molded to form a longitudinally-extending strip-like basal portion with upstanding teeth molded from the same plastic material as said basal portion in one piece therewith, and means integral with the metal bar for fastening several units in abutting relationship along the top of the bar with their teeth projecting thereabove.

2,409,566
MACHINE FOR PRODUCING STAPLE FIBERS FROM SLIVERS COMPOSED OF CONTINUOUS FIBERS
Willie Holdsworth, Seekonk, Mass.
Application July 24, 1943, Serial No. 496,030
9 Claims. (Cl. 19—129)

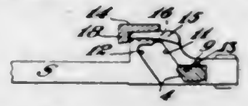
1. A mechanism for producing staple fibers from a sliver composed of continuous fibers comprising means for continuously feeding the sliver, a plurality of toothed fallers for gilling the fibers, a plurality of relatively narrow rectangular knife-blades projecting vertically in overlying relation to the sliver and means for depressing said knife-blades in sequence at points between adjacent fallers to cause them to cut through relatively small groups of the fibers at intervals staggered therealong.

2,409,567
HOPPER CONSTRUCTION
Ernest L. Hopping, Brookline, Pa.
Application August 28, 1944, Serial No. 551,611
11 Claims. (Cl. 110—171)



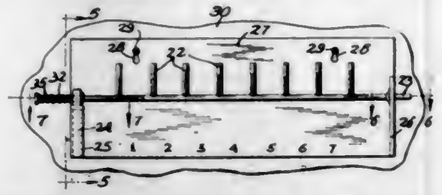
1. A hopper of the submerged type comprising walls defining an open-topped, water-retaining chamber, water pipes disposed along said walls above the normal surface level of water in the chamber and having a plurality of outlets to discharge water toward said chamber and metal plates constituting a lining for said walls and extending from above said pipes to below the normal surface level of water in the chamber, said plates being arranged side by side with small vertical spaces therebetween and so positioned relative to the discharge outlets in said pipes that water passing thru said outlets will impinge against the exterior surfaces of said plates near their upper ends.

2,409,568
FIREARM
Melvin M. Johnson, Jr., Brookline, Mass., assignor to Melvin M. Johnson and Melvin M. Johnson, Jr., both of Brookline, and Edward E. Rice, Boston, Mass., as trustees of Johnson Patent Trust of Boston, Mass.
Application March 13, 1941, Serial No. 383,072
7 Claims. (Cl. 42—18)



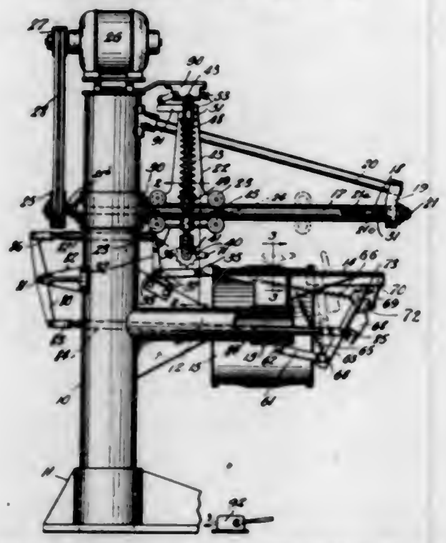
1. A firearm comprising a receiver having a bolt chamber for a recoiling bolt, a cartridge magazine, a magazine support for detachably holding the magazine in position to deliver cartridges along a passageway leading from one side of the receiver to an outlet adjacent the path

of the bolt, a spring-pressed follower for advancing the cartridges along said passageway to said outlet, the receiver having a loading opening in the other side thereof in alignment with said passageway through which cartridges may be loaded into the magazine along a path passing through the receiver past the bolt chamber tangentially, without first retracting the spring-pressed follower and without passing cartridges through the bolt chamber, and means on the magazine support for closing said loading opening, the magazine having an open mouth through which cartridges may enter or leave the magazine lengthwise of the cartridge channel leading



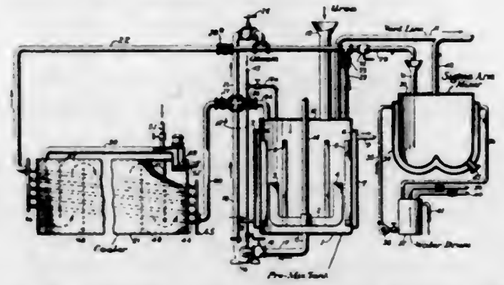
to the mouth, a detent for obstructing said mouth when the magazine is removed from the support to prevent the cartridges from being ejected by said follower through the open mouth, and a door pivotally mounted to swing into the magazine support in response to pressure on its outer surface to permit the magazine to be loaded through the magazine support, the door having an inner surface inclined to said outer surface for guiding cartridges along said passageway toward the outlet adjacent the path of the bolt, whereby the magazine may be loaded either before or after it is attached to the support by pushing cartridges through said mouth lengthwise of said channel.

2,409,569
AUTOMATIC FIREARM
Melvin M. Johnson, Jr., Brookline, Mass., assignor to Melvin M. Johnson and said Johnson, Jr., both of Brookline, and Edward E. Rice, Boston, Mass., as trustees of Johnson Patent Trust, Boston, Mass.
Application May 13, 1943, Serial No. 486,782
4 Claims. (Cl. 42—3)



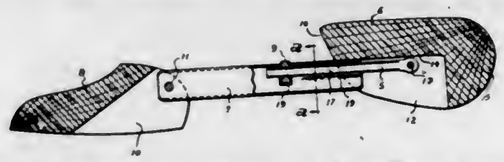
1. An automatic firearm comprising a receiver, a reciprocating breech bolt having one or more locking lugs engageable in front of abutments on the receiver to transmit the breech pressure to the receiver, the bolt being rotatable to remove the lugs from their locking positions in front of the abutments, the abutting surfaces of said lugs and abutments being inclined to the direction of breech pressure so that the breech pressure tends to produce unlocking rotation of the bolt, a slide for controlling the movement of the bolt, the slide being movable in unlocking direction in response to the discharge of the firearm, and a spring for moving the slide in locking direction, the slide having an abutment surface which obstructs said unlocking rotation of the bolt until the slide has moved a predetermined distance from firing position in said unlocking direction, the slide having a cam surface for camming the locking lugs out of locking position after the slide has moved said predetermined distance from firing position, and the slide also having a cam surface for camming the locking lugs into locking position near the end of the movement of the slide in said locking direction.

2,409,570
TIE RACK
Tobias Kramer, Brooklyn, N. Y.
Application June 30, 1944, Serial No. 542,871
5 Claims. (Cl. 211—96)



1. A tie rack, comprising a horizontal tie rack bar having vertical pins intermediate of its ends and a loop portion at its outer end, a vertical stem having a square horizontal socket, a shank connected with the inner end of said bar and having a square section slidably engaging said socket and also having an adjacent round section, a support lug turnably supporting said stem, another support lug having means for releasably holding said loop portion of said bar and having a noncircular recess, resilient means for urging said shank laterally for normally engaging said square section in said socket and said loop portion in said recess.

2,409,571
APPARATUS FOR SPLICING RUBBERLIKE MATERIAL
Charles W. Leguillon, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application April 29, 1942, Serial No. 440,928
1 Claim. (Cl. 154—10)

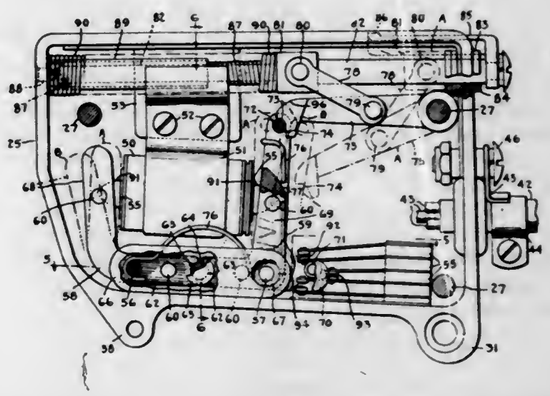


Apparatus for treating unvulcanized rubber-like tread material to effect a union of a splice throughout the depth of the splice, said apparatus comprising means for supporting the material along the splice, a carriage adapted to be moved back and forth along the splice, a splice-treating roller rotatably mounted on the carriage in position to engage the material at the splice, means for pressing the roller against the material along the splice during its oscillating movement, said roller having alternate axially disposed ribs and grooves on its face for kneading the material deeply and progressively along the splice, means in the path of said carriage for locating the spliced material, and means for withdrawing said locating means from contact with said roller as the roller approaches said locating means.

2,409,572
MANUFACTURE OF SULFAMIC ACID
James W. Leonard, Westfield, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application November 6, 1943, Serial No. 509,213
5 Claims. (Cl. 23—166)

5. In a process for the manufacture of sulfamic acid, the steps comprising bringing together as reactants urea and oleum of at least 45% and not more than 50% strength in proportions to supply substantially one mole of sulfuric acid for each mole of urea to form a liquid in a main body of liquid which has been similarly formed from said reactants in said proportions by cooling to suppress the formation of sulfamic acid, the rate of addition of the reactants to said main body of liquid being regulated to keep the temperature of said main body of liquid below about 100° F. thereby suppressing the formation of sulfamic acid, withdrawing a portion of the main body of liquid, cooling said portion, and returning said portion to said main body of liquid, the rate of withdrawal and the degree of cooling being such that said body of liquid is maintained in a continuous liquid phase at a temperature above about 96° F., and withdrawing another portion of said body of liquid and heating to convert the last said portion to sulfamic acid.

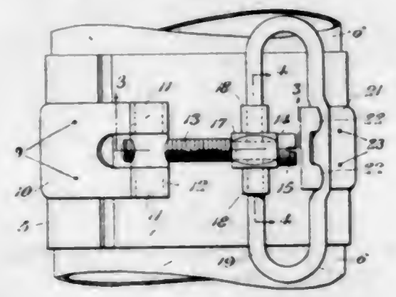
2,409,573
SHOE TREE
Albert F. Levaggi, Brockton, Mass., assignor to Robert Channing Company, East Bridgewater, Mass., a corporation of Massachusetts
Application February 10, 1945, Serial No. 577,179
3 Claims. (Cl. 12—128.6)



1. A shoe tree comprising a fore part having a slot through its rear face, a rear part having a slot establishing a chamber opening through its front and bottom faces and establishing a shoulder and connecting means for said fore and rear parts, said connecting means comprising a threaded element pivotally connected at one end to said rear part within said chamber, a member pivotally connected at one end to said forepart within said slot, said member slidably supporting the other end of said element and having a slot intersecting the path of said element, and a nut in said slot threaded on said element to permit said device to be extended or shortened to effect the desired adjustment of the shoe tree, said rear part and said connecting means constituting a toggle for extending or shortening said shoe tree into operative and inoperative positions, and said shoulder and said member being in engagement when said shoe tree is in an operative position.

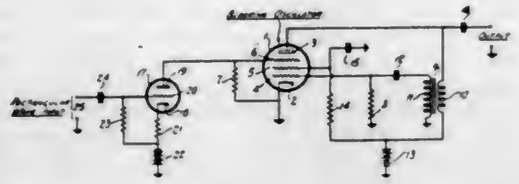
2,409,574
LUMINESCENT MATERIAL AND METHOD OF MANUFACTURE
Humboldt W. Leverenz, South Orange, N. J., assignor to Radio Corporation of America, a corporation of Delaware
No Drawing. Application June 11, 1942, Serial No. 446,626
9 Claims. (Cl. 252—301.6)

1. A luminescent phosphor essentially consisting of a thermally crystallized combination of a sulphide and fluoride of a metal selected from the group of metals consisting of zinc and cadmium wherein the fluoride is between 0.1% and 15% by weight based on the weight of said sulphide.



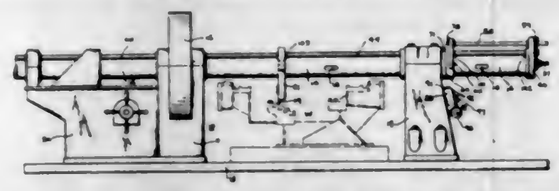
2,409,575
BOMB RELEASING SHACKLE
Roscoe I. Markey, Montclair, N. J., assignor to Pollak Manufacturing Company, Arlington, N. J., a corporation of New Jersey
Application July 7, 1944, Serial No. 543,886
11 Claims. (Cl. 89—1.5)

1. A control unit for housing the electrical mechanism for operating a bomb releasing shackle, said control unit having in combination, a casing, an electro-magnet mounted in said casing, a pair of statically balanced bell crank levers pivoted in said casing, one of the arms of each of said statically balanced levers functioning as armatures for said electro-magnet means between the other arms of said statically balanced levers for causing them to move in unison with each other, and means releasable by one of said arms of one of said statically balanced levers for releasing the bomb holding mechanism of said shackle when said magnet is energized.



7. A control unit for housing the electrical mechanism for operating a bomb releasing shackle, said control unit having in combination, a casing, an electro-magnet mounted in said casing, a pair of statically balanced bell crank levers pivoted in said casing, one of the arms of each of said statically balanced levers functioning as an armature for said electro-magnet, means interposed between the adjacent ends of the other arms of said statically balanced levers to cause said levers to move in unison with each other, a pair of normally closed switches and a normally open switch mounted in said casing, means carried by one of said statically balanced levers for opening said normally closed switches and closing said normally open switch, and means releasable by one of the first mentioned arms of one of said statically balanced levers for releasing the bomb holding mechanism of said shackle when said magnet is energized.

2,409,576
JOINT BAND FOR EXHAUST MANIFOLD SYSTEMS
Roscoe I. Markey, Montclair, N. J., assignor to Pollak Manufacturing Company, Arlington, N. J., a corporation of New Jersey
Application October 28, 1944, Serial No. 560,871
4 Claims. (Cl. 24—19)

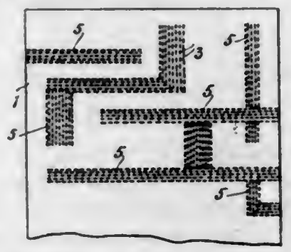


4. In a device of the character described, the combination of a split clamping member, a pivot pin mounted on one end of said split clamping member, a cap screw threaded into said pivot pin, flats on said cap screw adjacent the head thereof, a block through which said cap screw freely passes, a resilient ring-like locking member having its ends mounted in said block, and ears carried by the other end of said split clamping member and over which said locking member takes when the parts are in their locked position, the rotation of said cap screw being adapted to relieve excessive pressure on the locking ring when the parts are moved from the locked position to the release position or vice versa, and the ends of said locking ring engaging said flats on said cap screw to prevent normal rotation of said cap screw.

2,409,577
SYNCHRONIZED BLOCKING OSCILLATOR
Leslie E. Matson, Jr., Merchantville, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application December 3, 1943, Serial No. 512,681
5 Claims. (Cl. 250—36)

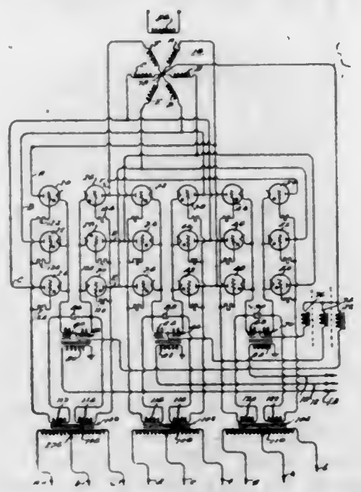
1. In a device of the class described, an oscillation generator comprising a discharge tube having a cathode, an anode, and at least two grids, resonant circuit means connected to the cathode, anode, and first grid for producing oscillations, and a keying circuit for at times blocking said oscillations, said keying circuit comprising a second discharge tube having at least a cathode, an anode and a control grid, the anode whereof is directly connected to a grid of the oscillator tube adjacent its anode, an input circuit connected between the cathode and control grid of said second discharge tube, and an output circuit for the second discharge tube including a direct current source the positive terminal of which is maintained at the cathode potential of the first said tube, a fixed resistor being interposed between said positive terminal and the anode of the second discharge tube.

2,409,578
BORING MACHINE
Andrew Joseph McDonald, Philadelphia, Pa.
Application December 20, 1944, Serial No. 568,946
3 Claims. (Cl. 90—24)



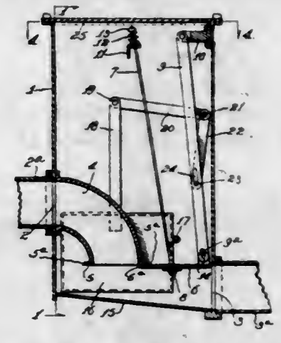
1. Apparatus of the character described comprising a pair of spaced pedestals, a hollow bar rotatably and slidably supported in horizontal position by said pedestals, a cutter head secured on said bar and including a radially-movable cutting tool, a wedge axially movable in the bore of the hollow bar and adapted when so moved to move the cutting tool radially, an end plate secured to one terminal portion of the bar, a rod secured at one end to the wedge and having its other end externally threaded and extending through and beyond said end plate, a train of meshing gears mounted on said end plate and including a driving gear having an axial bore and a driven gear having a threaded bore threadedly receiving the threaded end of the rod, a star-supporting ring secured on the bar adjacent the pedestal nearest the end plate and having a bore therein axially aligned with the bore of the driving gear, a shaft mounted in said axially-aligned bores, a star fixedly secured on said shaft, and a kicker mounted on the last-mentioned pedestal for engaging and rotating the star responsive to rotation of the bar, the shaft being rotatably and non-slidably mounted in the bore of the star-supporting ring and being slidably and non-rotatably mounted in the bore of the driving gear, whereby rotation of the star upon contact thereof with the kicker will actuate the wedge-moving rod regardless of axial adjustments of the hollow bar relative to the pedestal-supported kicker.

2,409,579
COMPOSITE ELECTRODE
Archibald F. Meston, Bound Brook, N. J., assignor to Research Corporation, New York, N. Y., a corporation of New York
Application June 16, 1944, Serial No. 540,609
11 Claims. (Cl. 183—7)



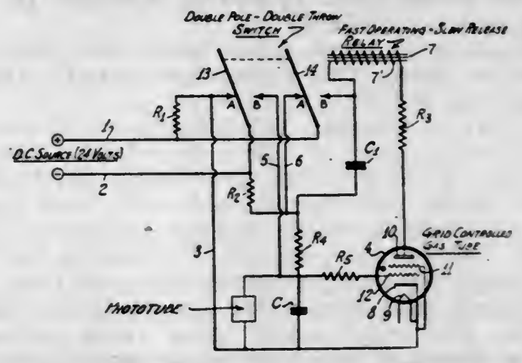
1. In an electrical treater including complementary discharge and collecting electrodes, a discharge electrode comprising an extended surface member including a surface portion depressed below the level of adjacent surface portions to provide a concavity in said extended surface member, and attenuated discharge elements positioned in said concavity wholly below the level of said adjacent surface portions.

2,409,580
RUG
Lillian M. Mosseller, New York, N. Y.
Application July 27, 1945, Serial No. 607,444
3 Claims. (Cl. 2—278)



1. In a hooked rug, a base fabric, a pattern formed thereon by loops inserted therethrough, said loops arising from one face of the base fabric a second pattern formed on the opposite face of the base fabric by loops inserted through the base fabric and arising from the last-mentioned face thereof whereby the base fabric carries a pattern formed of loops on each of its faces, the pattern on one face being located in areas situated between the pattern elements on the other face.

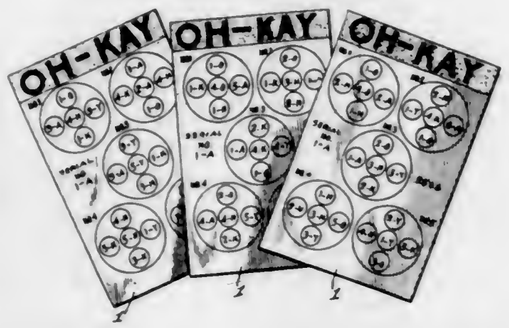
2,409,581
ELECTRICAL CONTROL SYSTEM
Paul T. Nims and Omer E. Bowlus, Detroit, Mich., assignors to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Application November 30, 1944, Serial No. 565,956
16 Claims. (Cl. 172—281)



9. In a system for delivering multiphase alternating current energy to a load circuit from a source of alternating current energy having a plurality of phases, a plurality of translating units each individual to a corresponding phase of said load circuit, each unit comprising electric valve means defining a plurality of discharge paths the anodes whereof are connected to corresponding terminals of corresponding ones of said phases and additional electric valve means defining a plurality of discharge paths the anodes whereof are connected to corresponding ones of said phases, translating means for each unit connected between the cathodes of each of the valve means of the respective unit and another terminal of each of the phases which are connected to the anodes of the valve means of the respective unit and, current flow in each valve means tending to cause current flow in a corresponding direction in the corresponding translating means, control means for each of said units operable to alternately render the valve means conductive, and means coupling the load circuit of each unit to the respective translating means so that successive current impulses passed by the respective valve means cause current flow in respectively opposite directions in the respective load circuits, and timing means for actuating each of said control means in predetermined phase relation to each other.

2,409,582
BACKWATER VALVE
Samuel Olson, Chicago, Ill.
Application October 26, 1944, Serial No. 560,444
6 Claims. (Cl. 182—1)

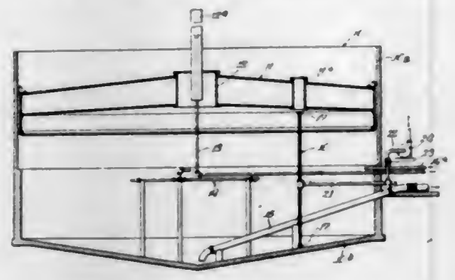
1. In combination with a sewer drain conduit, a chamber interposed therein having an inlet and an outlet, the inlet entering the chamber above the level of the outlet and terminating in an elbow discharging downwardly in the chamber through a downwardly facing valve seat, a normally open valve disposed out of the path of flow when in open position, said valve being slidable across said seat to close the inlet against backflow, and a float in the chamber with means connecting said float to said valve for sliding it to closing position over the seat in response to a rise of liquid in the chamber above a predetermined level.



2,409,583
VOLTAGE DOUBLER AND TIMER CIRCUIT
Theodore B. Perkins, West Orange, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application November 25, 1942, Serial No. 466,899
1 Claim. (Cl. 315—226)

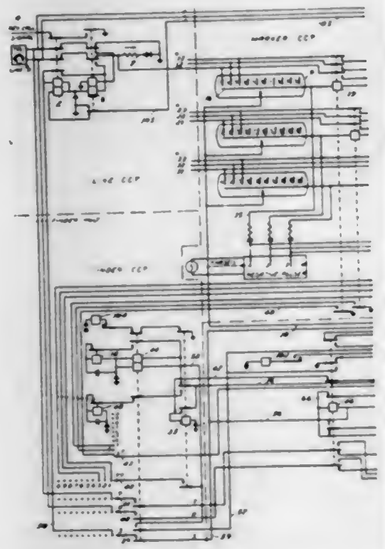
In combination with a source of direct current of relatively low voltage value, a pair of condensers, a double-pole double-throw switch, said switch

in a first position thereof separately connecting said condensers to said source to charge them, a thyratron tube provided with at least an electron emitter, a control grid and plate, means connecting one of the charged condensers between the control grid and emitter in a manner to charge the control grid negative relative to the emitter, means connecting the second charged condenser in a circuit for applying a positive voltage to said plate, said last circuit including said switch in the second position thereof which connects said current source and second charged condenser in additive relation whereby a positive voltage is applied to the plate which is substantially higher than said low voltage value, said switch in its said second position connecting said first charged condenser to said direct current source in a sense to reduce the negative charge on the control grid, and means in circuit with said plate for automatically actuating said switch to said first position in response to firing of said thyratron tube thereby to recharge said two condensers.



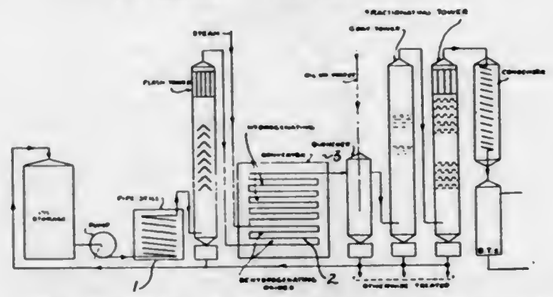
2,409,584
CARD GAME
William Wilson Peterman, Wilkes-Barre, Pa.
Application June 7, 1945, Serial No. 598,124
1 Claim. (Cl. 273—135)

As a new article of manufacture, a card game comprising a series of playing cards, each card being provided with two upper large circles and two lower large circles and a central large circle, each large circle being provided therein with five small circles, a numeral and a character in each small circle, and said card provided outside of each large circle and contiguous thereto with a designating numeral, substantially as shown and described.



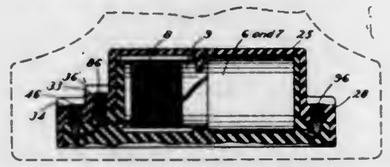
2,409,585
SUPERNATANT SELECTOR DEVICE FOR SLUDGE DIGESTION TANKS
William M. Piatt, Durham, N. C., assignor to Pacific Flush Tank Company, Chicago, Ill., a corporation of Illinois
Continuation of application Serial No. 439,188, April 16, 1942. This application July 21, 1945, Serial No. 606,412
3 Claims. (Cl. 210—2)

1. In structure of the class described, a closed tank free of obstructions preventing horizontal flow of liquid material in said tank, said tank being adapted to receive sewage sludge for digestion thereof and without mechanical agitation, means for passing sludge into said tank to be digested, and means for automatically discharging the supernatant liquor from varying levels at which it may accumulate and substantially free of suspended solids, including a tubular member disposed vertically in said tank and extending from near the top thereof downwardly through at least the upper half of said tank, said member being provided with elongated slots of a width varying from $\frac{1}{16}$" to $\frac{3}{8}$", said slots being located both circumferentially around and longitudinally of said member whereby supernatant liquor at varying levels in said tank which



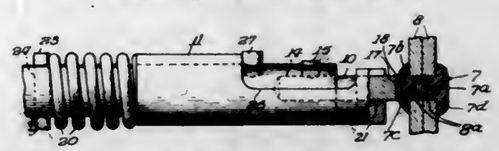
is freed sufficiently of suspended solids to pass through said slots will pass into said tubular member, and means including a generally horizontal closed conduit connected to said tubular member between its ends for discharging the liquor from said tubular member to a point of disposal.

2,409,586
AUTOMATIC TELEPHONE SYSTEM
Winfred T. Powell, Rochester, N. Y., assignor to Stromberg-Carlson Company, Rochester, N. Y., a corporation of New York
Application August 24, 1944, Serial No. 551,003
12 Claims. (Cl. 179—18)



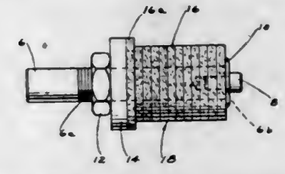
1. In a telephone system, a plurality of incoming lines, a plurality of outgoing lines, automatic switching means for interconnecting said lines, said incoming lines being arranged in primary sets according to one grouping, said incoming lines being arranged in secondary sets according to another grouping with only one incoming line common to a given primary set and to a given secondary set, a primary relay individual to each primary set of lines and a secondary relay individual to each secondary set of lines, and electrical discharge means actuated under the control of any given one of said incoming lines for operating the primary relay and the secondary relay individual to the two sets of lines including said given incoming line, said last-mentioned primary relay and secondary relay governing the operation of said switching means to interconnect said given incoming line to an outgoing line.

2,409,587
COMBINATION HYDROCARBON DEHYDROGENATION AND HYDROGENATION PROCESS
Alexander S. Ramage, Detroit, Mich., assignor to Albert A. F. Maxwell, Detroit, Mich., as trustee
Application August 25, 1944, Serial No. 551,265
9 Claims. (Cl. 260—673)



1. The process of transforming hydrocarbons into other hydrocarbons relatively poorer in hydrogen, which consists in bringing the hydrocarbon to be transformed in a state of vapor substantially unmixed with reactive oxygen, into contact with a mixture of molybdenum oxide, chromium oxide, and ferric oxide and vanadium pentoxide, and so regulating the temperature of the oxide mixture and vapor between about 800° F. and about 1100° F. so as to oxidize a part only of the hydrogen component of the hydrocarbon producing thereby as reaction products hydrocarbons comprising principally aromatics and lesser quantities of other unsaturated hydrocarbons relatively poorer in hydrogen, and steam.

2,409,588
TELEPHONE SUBSTATION APPARATUS
Leland A. Reed, Rochester, N. Y., assignor to The Stromberg-Carlson Company, Rochester, N. Y., a corporation of New York
Application June 27, 1944, Serial No. 542,344
4 Claims. (Cl. 179—100)

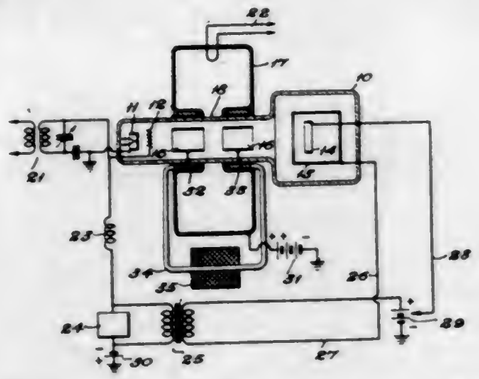


1. Telephone substation apparatus comprising a transmitter, a receiver, a hook-switch and a ringer, electrical components connectible with said transmitter and receiver, a receptacle having an offset portion defining a shoulder with a surface generally parallel to the bottom of the receptacle at each end thereof, a plurality of terminals mounted in each shoulder to extend in a direction generally perpendicular to the surface of said shoulder, each terminal having an external end accessible from the outside of the receptacle at the mentioned surface of its related shoulder and having its inner end terminating within the receptacle, said electrical components including an induction coil with its several windings and a capacitor contained within the receptacle, conductors within said receptacle electrically connecting said units with one another and with the inner ends of said terminals, a fusible compound in the receptacle sealing said conductors and said components therein, certain of said external terminals being connectible to the two sides of a telephone line, certain others of said external terminals being electrically connected to said transmitter, said receiver and said ringer.

2,409,589
RIVET REMOVING DEVICE
Harry D. Rocheville, Los Angeles, Calif., assignor to Consolidated Vultee Aircraft Corporation, San Diego, Calif., a corporation of Delaware
Application August 29, 1945, Serial No. 613,378
6 Claims. (Cl. 164—94)

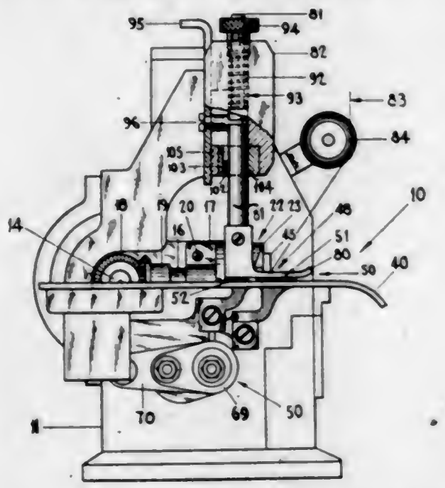
1. A device adapted in conjunction with a rivet gun to remove a head-equipped rivet from a plurality of abutting plates with registering circular holes therethrough for the shank of the rivet, and comprising an elongated arbor having one end thereof shaped to fit within the nozzle of the rivet gun and extend into the path of the gun hammer and provided with means for yieldingly holding it in connected relation with the gun nozzle, and a cylindrical cutting tool of less diameter than the holes in the plates, connected to the other end of the arbor, extending lengthwise of said arbor, having in its outer end face a concentric annular groove defining outwards thereof an annular cutting edge for placement against the central portion of the head of the rivet, and adapted when said cutting edge is placed in centered relation with the head of the rivet and the arbor is subjected to hammer blows by the gun to sever the outer portion of the rivet head from the rivet shank and eject the shank from the holes in the plate.

2,409,590
WORK HOLDING MEANS
George L. Russell, Detroit, Mich., assignor to Ex-Cell-O Corporation, Detroit, Mich., a corporation of Michigan
Application June 21, 1944, Serial No. 541,437
4 Claims. (Cl. 279—2)



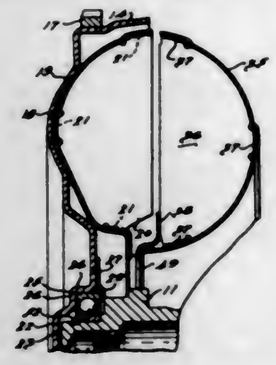
1. A work holding means comprising, in combination, a body having a shank at one end adapted to be secured in a work rotating means, an axially facing annular backing on said body, a plurality of annular work gripping washers supported coaxially in face to face engagement and collectively against said backing, all of said washers being composed of relatively deformable material, and means adjustable on the end of said body opposite said shank to vary the diameter of one peripheral surface of said washers adapted for engagement with the cylindrical surface of a workpiece and thereby to alter the frictional engagement of said washers with said workpiece.

2,409,591
ELECTRON DISCHARGE DEVICE AND CIRCUIT
Bernard Salzberg, Washington, D. C., assignor to Radio Corporation of America, a corporation of Delaware
Application November 11, 1942, Serial No. 465,247
7 Claims. (Cl. 179—171.5)



1. An electron discharge device having means for supplying a stream of electrons and a col-

lector for receiving said electrons, electrode means for modulating said stream of electrons, and other electrode means between said modulating electrode means and collector and through

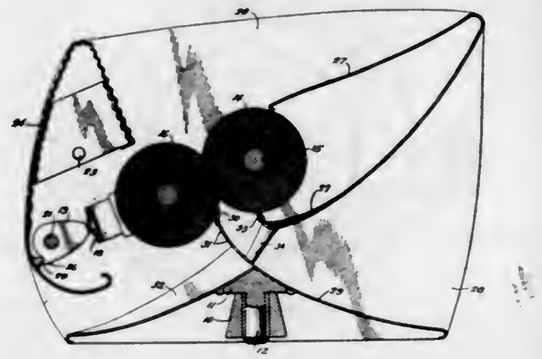


which said stream of electrons passes, and means for applying a modulating voltage on said collector in phase with the voltage on said modulating electrode means.

2,409,592
OVERCASTING SEWING MACHINE
Anthony Sardu, Brooklyn, N. Y.
Application October 2, 1943, Serial No. 504,787
1 Claim. (Cl. 112—172)

In a sewing machine having a stationary frame, a needle shaft, a horizontally positioned work supporting base fixed to said frame and in line with the axis of said needle shaft, a rotatable needle in the form of a semi-circular arc and having a threading passageway in a portion of its arcuate body, and an opening at each end of said passageway, permitting passage of a thread through said passageway, means for causing rotation of said needle, a needle plate positioned parallel with said needle shaft and having a tongue projecting therefrom, said needle being movable between said tongue and the body of said needle plate, said needle plate being adapted to support fabric thereon in a horizontal position, resiliently contacting thread tension disks mounted above said work supporting base, a stationary threading door mounted on said frame in spaced relation from said needle and in parallel relation with the plane of rotation of said needle, said door having a threading aperture in alinement with the axis of said needle, said axially alined door aperture permitting a continuous supply of thread to be fed to said needle in a conical orbit during rotation of said needle.

2,409,593
FLUID COUPLING
Lee C. Sassmanhausen, Grosse Pointe Woods, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Application April 10, 1944, Serial No. 530,418
4 Claims. (Cl. 60—54)

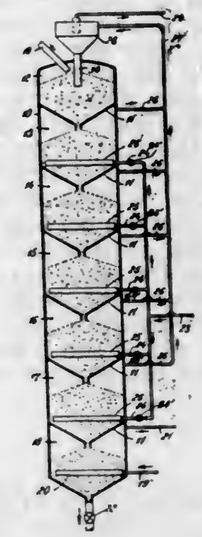


1. A fluid coupling including vaned impeller and runner structures, an annular casing for said structures including a segment having an annular disk-shaped part drivingly secured to the impeller vanes and an annular bearing seat disposed radially inwardly from said dish-shaped part, a hub mounting said runner structure extending into said casing at said bearing seat, bearing means engaged with said seat journalling said hub in said casing, a retainer engaging said bearing means for preventing unintended axial displacement thereof relative to said seat in one direction axially and adapted to be secured to said segment, said hub and said runner structure including cooperating generally radially disposed attaching portions having registering openings therein for accommodating insertion of a tool therethrough for securing said retainer to said segment when said bearing means is in said seat and said hub is journalled therein.

2,409,594
METHOD OF FORMING PEDAL APPLIANCES
Louis H. Sherman, Camden, N. J.
Application July 11, 1944, Serial No. 544,413
4 Claims. (Cl. 12—146)

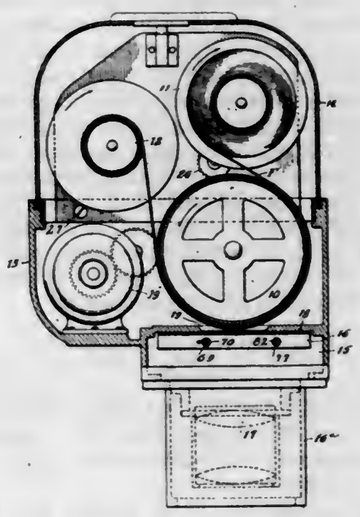
2. The method of forming a corrective plantar foot appliance suitable for use in a shoe and made in part from a supple sheet material capable of being shaped and of becoming relatively permanently set in shape in the course of time when treated with an activator, said method comprising adhering to the plantar region of a foot requiring correction the first of two substantially similarly shaped sheets of said material, adhering to said first sheet one or more requisite corrective members at points where correction is needed, treating the exposed parts of said first sheet with said activator, treating the second one of said two sheets with said activator, applying said second sheet over said corrective members and said first sheet and causing said two sheets and said members to adhere to each other as a unit to ultimately constitute the appliance, shaping said sheets while still supple to the contour of said region, placing said shoe on said foot while said unit remains adhered to said foot and while said sheets are still supple, and effecting pressure between said foot and said shoe whereby to cause said appliance to conform to the contours of both said foot and said shoe, said pressure being maintained for a period of time sufficient for said sheets to become substantially set in said contours under the influence of said activator.

2,409,595
WRINGER
Robert W. Shield, Chicago, Ill.
Application January 7, 1944, Serial No. 517,355
10 Claims. (Cl. 68—262)



1. A wringer comprising a frame, a pair of rolls rotatably mounted on the frame, means including a latch to urge the rolls together, a guard plate movably mounted on the frame above the rolls over which material is fed to pass downwardly into the rolls, and a connection between the guard plate and the latch to release the latch upon a predetermined movement of the guard plate.

2,409,596
METHOD AND APPARATUS FOR REACTIONS IN A CONTACT MASS
Thomas P. Simpson, John W. Payne, and Louis P. Evans, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application June 17, 1942, Serial No. 447,431
12 Claims. (Cl. 196—52)



1. In a contacting apparatus, means defining a substantially vertical chamber, a plurality of substantially horizontal deflectors each comprising means defining an inverted trough, said deflectors being arranged in a plurality of substantially parallel vertical series, means to admit fluid to the under side of deflectors of alternate series and means to withdraw fluid from under the deflectors of each other series, the vertical distance between successively lower deflectors of each series being progressively greater.

6. A method of contacting a particle-form solid with a gaseous reactant comprising passing the solid as a continuously moving substantially solid confined stream through a contact zone, maintaining two series of open channels in said solid stream transversely of said contact zone, openings of one series being longitudinally displaced along the stream from openings of the second series, introducing gaseous reactant to the solid from openings of one series, passing the gaseous reactant longitudinally through the solid of said stream, and removing it through openings

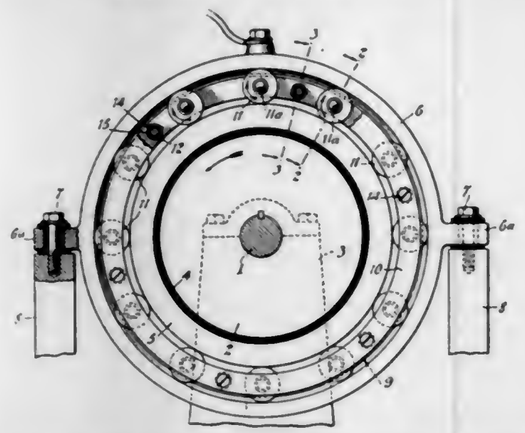
of the second series, the said longitudinal displacement between channels of the admission series and channels of the removal series being progressively greater in the direction of movement of said stream.

2,409,597
SCANNING CAMERA
Frederick Theodore Sonne, Golf, and Victor Sussin, Chicago, Ill., assignors to Chicago Aerial Survey Company, Chicago, Ill., a corporation of Illinois
Application August 16, 1943, Serial No. 498,754
2 Claims. (Cl. 95—12.5)

1. In an aerial camera, a vertical casing provided at its lower end with a downwardly opening exposure slit; a downwardly projecting photographic objective secured to the casing beneath said slit; a focal drum mounted in the casing above and with only scant clearance between the slit and the peripheral face of said drum; film pay-off and film pay-on spools mounted in said casing, from the former of which, the film may be trained about said peripheral face and through the space between said face and said slit thence

wound onto said pay-on spool; friction inducing means including a rotatable part detachably splined to the pay-off spool at the axis of rotation thereof; friction inducing means including a rotatable part detachably splined to the pay-on spool at the axis of rotation thereof; means for positively driving the focal drum at any assigned angular velocity and for positively driving the rotatable part of the second named friction inducing means; and means by which friction at the respective friction inducing means can be controlled and the film maintained under constant tension such that the surface of contact of the film with the peripheral face of said focal drum and the distance between the slit and the effective focal point of said drum are each thereof invariable during translation of the film at any selected angular velocity, and whereby the rate of translation of the film across said slit is the same as that at which the film is paid from the pay-off spool and the rate at which it is wound onto said pay-on spool.

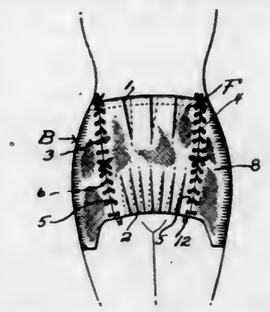
2,409,598
PORTABLE PLAY PEN FOR CHILDREN
Edward S. Swazey, Rochester, N. Y., assignor to Trimble Nurseryland Furniture, Inc., Rochester, N. Y., a corporation of New York
Application November 23, 1944, Serial No. 564,765
3 Claims. (Cl. 256—25)



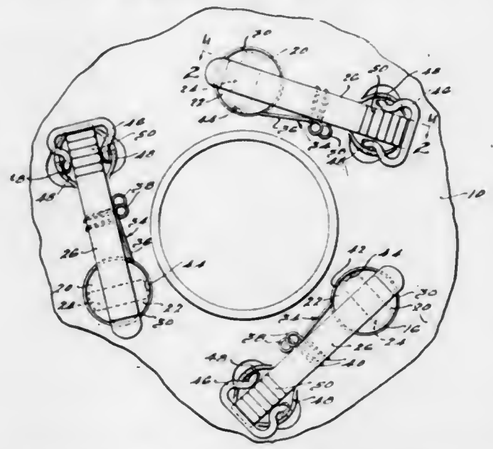
1. A portable play pen for children including oppositely arranged supporting walls having posts at each end, one of said posts having annular horizontal kerfs extending peripherally around and in spaced relation to the top and bottom of the post, oppositely arranged intermediate walls each of which is pivotally connected at one end to a supporting wall and foldable inwardly into parallel relation therewith, one of said intermediate walls being separably connected at its other end to the adjacent supporting wall, and hinge members each consisting of two cooperating superposed metal plates fixedly attached to the other of said intermediate walls and each of said plates including an arcuate portion located in one of said kerfs and rotatable around the central part of the post permitting relative swinging movement outwardly between the wall carrying the post and said intermediate wall, each through an arc of 135°, until they are in folded parallel relation between the other two walls.

2,409,599
COAXIAL LINE TERMINATION
John W. Tiley, Philadelphia, Pa., assignor to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application April 28, 1944, Serial No. 533,231
7 Claims. (Cl. 178—44)

3. A termination for a coaxial transmission line, comprising inner and outer coaxial conductors, a dielectric member mounted adjacent said conductors, said member being formed of a material having a high loss characteristic at ultra high frequencies, said member having a cylindrical portion and a tapered portion, said cylindrical portion being arranged in good heat conductive relation to both said conductors, said tapered portion being arranged to minimize reflection of incident ultra high frequency energy, and means for dissipating the heat generated by said member.



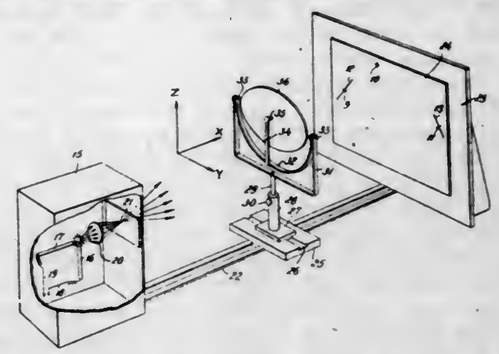
2,409,600
ROLLER ARRANGEMENT FOR CONDUCTING ELECTRICAL CURRENT
Reginald Trautschold, Passaic, N. J., assignor to Curtiss-Wright Corporation, a corporation of Delaware
Application April 7, 1944, Serial No. 530,072
10 Claims. (Cl. 171—322)



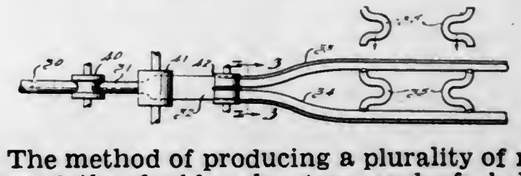
1. In a device of the class described, the combination of a bearing, a rotor including a shaft supported by and journaled in the bearing, a disk carried by the shaft, a band of insulating material encircling the disk, a collector ring encircling the insulating band, a stator including a stationary ring, said collector ring and stationary ring coacting to provide a raceway therebetween, a cage located in the raceway and free to turn therein about the axis of the rotor and stator rings, a plurality of all-metal rollers each journaled at its opposite ends in the cage for rotation about an axis parallel to the axis of the rings, said cage being formed at least in part of insulating material and acting to insulate each roller from every other roller in the set, said rollers fitting between and in electric engagement with the annular faces of the rings which define the raceway to provide a generated surface contact for the transference of electric energy between the rings, said stationary ring being provided with lugs projecting from opposite sides thereof and a pair of supports, one for each lug, and insulating means between each of said pair of supports and its associated lug and providing means for adjusting the stator ring relative to the collector ring to fix their axes in coaxial relation.

2,409,601
BODY GARMENT
Virginia M. Truesdell, Los Angeles, Calif.
Application April 19, 1943, Serial No. 483,637
3 Claims. (Cl. 2—43)

1. A maternity garment comprising a back section and a front section, said back section being of sufficient width to extend, in the use of the garment, entirely across the buttocks and across the hips to the sides of the abdomen, the front section being of a width to cover the abdomen only, adjustable coupling means between the adjacent side edges of the two sections through substantially the upper halves of such edges, adjustable coupling means between the adjacent side edges of the two sections through substantially the lower halves of such edges, and darts formed in the front section at the top and bottom edges to cup the front section over the curvature of the abdomen, the darts in the lower edge of the front section being formed to draw in such edge to a greater extent than the top edge, said darts forming the sole reinforcing for the front section.



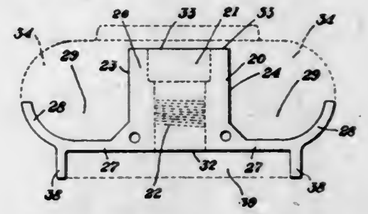
2,409,602
AUTOMOBILE WHEEL CLAMP
Ralph A. Vogt, Berkeley, Mich.
Application October 13, 1945, Serial No. 622,134
8 Claims. (Cl. 301—9)



1. A vehicle wheel assembly comprising a wheel provided with a plurality of openings; a support for the wheel; and pivoted levers carried by said support and located to align with the openings, said levers adapted to pass through the openings when positioned to extend outwardly from the support and having cam surfaces which engage the wheel at the edges of the openings when the levers are swung toward the support whereby to hold the wheel securely on the support.

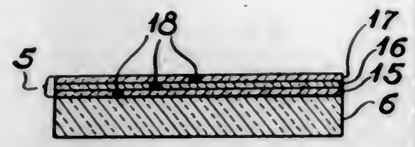
2,409,603
METHOD AND APPARATUS FOR GENERATING CURVES
Robert Warner Wood, Princeton, N. J., assignor, by mesne assignments, to Kaiser Fleetwings, Inc., a corporation of California
Application November 22, 1943, Serial No. 511,291
7 Claims. (Cl. 88—24)

1. An apparatus for generating curves comprising a plane surface on which a plurality of points not in a straight line and through which the curve is to pass may be indicated, a support for said surface, a point-light source mounted to project a beam of light toward said surface, a curved outline, a support on which said curved outline is mounted in the beam of light, and means for adjusting the angle of the plane of said outline relative to the axis of the beam of light.



2,409,604
METHOD OF MANUFACTURING SAFETY RAZOR BLADES
Leonard A. Young, Detroit, Mich.
Original application February 14, 1942, Serial No. 430,895. Divided and this application August 2, 1944, Serial No. 547,738
3 Claims. (Cl. 76—104)

1. The method of producing a plurality of razor blades of the double edge type and of skeleton form from a blank of steel wire, which comprises the steps of flattening the wire by rolling continuously into a ribbon-like strip having a thickness substantially corresponding to that of the blades to be produced, longitudinally slitting the strip in two while at the same time forming cutting edge blank portions along the outside edges of the two sections of the strip, separating the strip sections and securing thereto at predetermined points pairs of metal cross struts formed from a lower grade steel, heat treating the attached strips and cross struts, thereafter cutting pieces of predetermined length from the strips and struts to provide the finished blades, and thereafter sharpening the cutting edges of said cutting edge blank portions.



2,409,605
PHOTOGRAPHIC CAMERA
Jacques Bolsey, New York, N. Y.
Application October 18, 1943, Serial No. 506,699
6 Claims. (Cl. 95—31)

1. In a photographic camera, a camera body, an exposure chamber within said camera body, a front wall arranged at the front end of said camera body and having the same height as but being wider than said camera body, thus forming at the front end of said camera body on both sides thereof projecting front wall portions, the

ends of said projecting front wall portions being bent rearwards, additional wall-like projections on the outer face of said front wall extending parallel to each other and to the side walls of said camera body, said additional projections being arranged on said front wall at both sides of said camera body, having the same height as said camera body and forming together with said front wall an open channel shaped space, and a top and a bottom plate secured to the corresponding top and bottom faces respectively of said camera body, extending from the front edges of said additional wall-like projections at least to the rear end of said camera body, thus forming together with said front wall and said additional wall-like projections a frontal shutter compartment for the camera shutter mechanism and forming on the two sides of said camera body film compartments being closed at the sides, the top and the bottom but being open at the rear end and thus being adapted to house the film coil containers of a film magazine when the same is in operative picture taking position with said film coil containers positioned on both sides of said camera body.

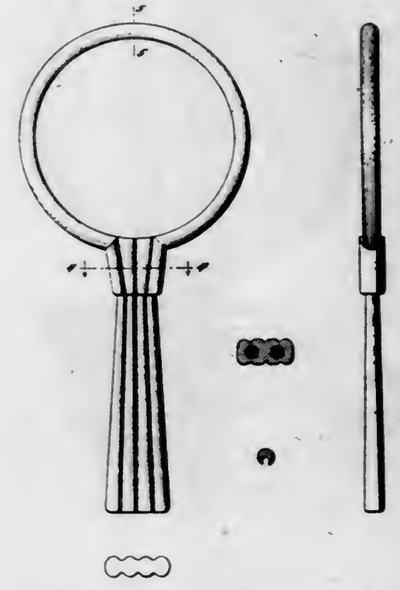
2,409,606
ALKALI HALIDE SCREEN AND METHOD OF MANUFACTURE
Humboldt W. Leverenz, South Orange, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application September 29, 1942, Serial No. 460,055
11 Claims. (Cl. 250—164)

1. The method of manufacturing a cathode ray tube having an envelope and a target foundation comprising evacuating said envelope to a pressure corresponding at least to 10^{-4} mm. Hg, bombarding said foundation with cathode rays, vaporizing an alkali metal halide within said evacuated envelope and condensing said alkali halide on said foundation during the cathode ray bombardment thereof.

DESIGNS

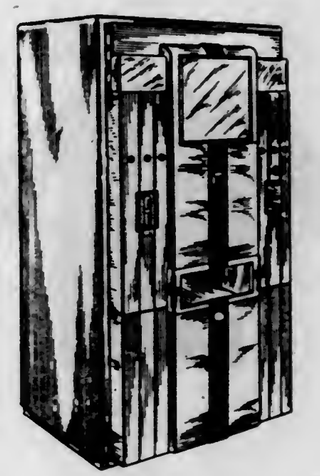
OCTOBER 15, 1946

145,707
DESIGN FOR A BROOCH
Antonio Aquilino, Providence, R. I.
Application February 4, 1946, Serial No. 126,234
Term of patent 3½ years
(Cl. D45—19)



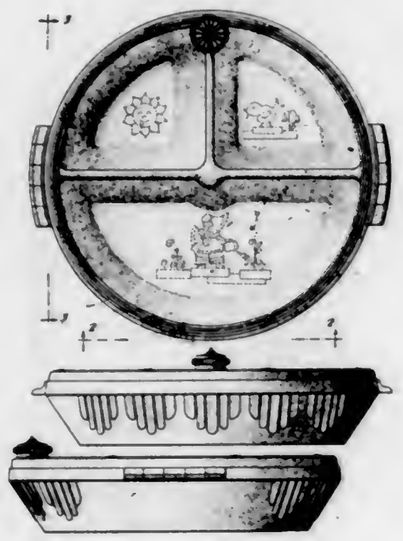
The ornamental design for a brooch, as shown.

145,708
DESIGN FOR A BROOCH
Antonio Aquilino, Providence, R. I.
Application February 4, 1946, Serial No. 126,235
Term of patent 3½ years
(Cl. D45—19)



The ornamental design for a brooch, as shown.

145,709
DESIGN FOR A HAND MIRROR FRAME
Joseph Casalino, Forest Hills Gardens, Long Island, N. Y., assignor to Dieplast Corporation, New York, N. Y., a corporation of New York
Application November 28, 1945, Serial No. 124,124
Term of patent 3½ years
(Cl. D86—10)



The ornamental design for a hand mirror frame, as shown.

145,710
DESIGN FOR A VENDING MACHINE
Arthur R. Constantine and Melvin H. Boldt, South Bend, Ind., assignors to Bendix Home Appliances, Inc., South Bend, Ind., a corporation of Delaware
Application August 7, 1944, Serial No. 114,761
Term of patent 14 years
(Cl. D52—3)

The ornamental design for a vending machine, as shown and described.

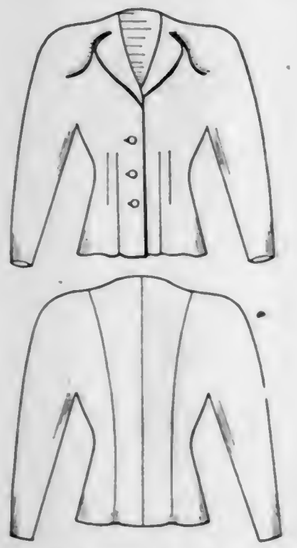
145,711
DESIGN FOR A SERVING DISH OR SIMILAR ARTICLE
Joseph Davis, South Orange, N. J., assignor to Joseph Davis Plastics Co., Arlington, N. J., a corporation of New Jersey
Application January 9, 1946, Serial No. 125,372
Term of patent 14 years
(Cl. D44—15)

The ornamental design for a serving dish or similar article, as shown and described.

145,712
DESIGN FOR A SWEATER OR SIMILAR ARTICLE
Dorthi Engleman, New York, N. Y., assignor to Carl Gutmann & Co., Inc., New York, N. Y.
Application April 12, 1946, Serial No. 128,498
Term of patent 3½ years
(Cl. D3—4)

The ornamental design for a sweater or similar article, substantially as shown and described.

145,713
DESIGN FOR A SWEATER OR SIMILAR ARTICLE
Dorthi Engleman, New York, N. Y., assignor to Carl Gutmann & Co., Inc., New York, N. Y.
Application June 21, 1946, Serial No. 130,922
Term of patent 3½ years
(Cl. D3—4)



The ornamental design for a sweater or similar article, substantially as shown and described.

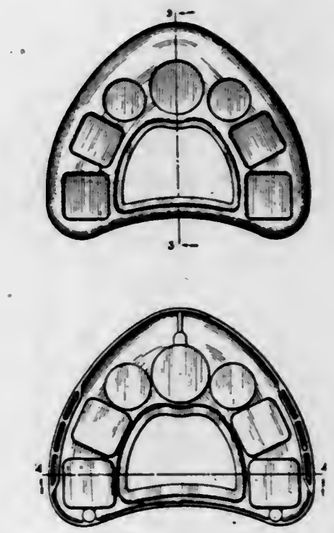
145,714
DESIGN FOR A SWEATER
Dorthi Engleman, New York, N. Y., assignor to Carl Gutmann & Co., Inc., New York, N. Y.
Application June 25, 1946, Serial No. 131,009
Term of patent 3½ years
(Cl. D3—4)

The ornamental design for a sweater, substantially as shown and described.

145,715
DESIGN FOR A JACKET
Simon Etkin, New York, N. Y.
Application July 23, 1946, Serial No. 131,829
Term of patent 3½ years
(Cl. D3—4)

The ornamental design for a jacket, substantially as shown.

145,716
DESIGN FOR A COMPACT
Edmond Foret, New York, N. Y., and Harold Graeter, Sherman, Conn., assignors to Cartier, Inc., New York, N. Y., a corporation of New York
Application December 4, 1945, Serial No. 124,327
Term of patent 14 years
(Cl. D86—10)



The ornamental design for a compact, as shown.

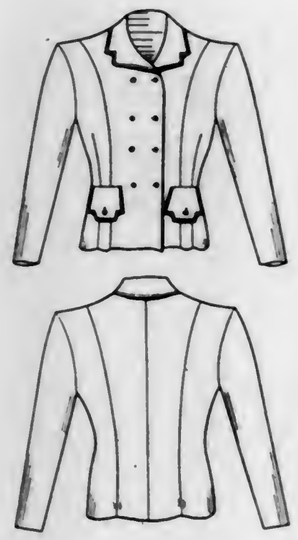
145,717
DESIGN FOR A COAT
Jules Freedman, New York, N. Y.
Application July 1, 1946, Serial No. 131,230
Term of patent 3½ years
(Cl. D3—4)

The ornamental design for a coat, substantially as shown.

145,718
DESIGN FOR A PORTABLE BAR TRAY
Norman Bel Geddes, New York, N. Y., assignor to Creative Plastics Corp., Brooklyn, N. Y., a corporation of New York
Application September 8, 1945, Serial No. 121,949
Term of patent 14 years
(Cl. D44—10)

The ornamental design for a portable bar tray, substantially as shown.

145,719
DESIGN FOR A COAT
Harry Goldberg, New York, N. Y.
Application June 26, 1946, Serial No. 131,028
Term of patent 3½ years
(Cl. D3—4)



The ornamental design for a coat, substantially as shown.

145,720
DESIGN FOR A COAT
Harry Goldberg, New York, N. Y.
Application June 26, 1946, Serial No. 131,029
Term of patent 3½ years
(Cl. D3—4)

The ornamental design for a coat, substantially as shown.

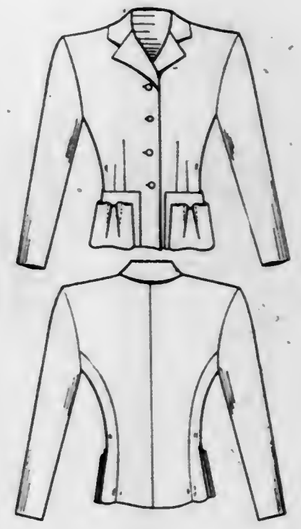
145,721
DESIGN FOR A JACKET
Zelma Golden, New York, N. Y.
Application July 23, 1946, Serial No. 131,831
Term of patent 3½ years
(Cl. D3—4)

The ornamental design for a jacket, substantially as shown.

145,722
DESIGN FOR A JACKET
Zelma Golden, New York, N. Y.
Application July 23, 1946, Serial No. 131,834
Term of patent 3½ years
(Cl. D3—4)

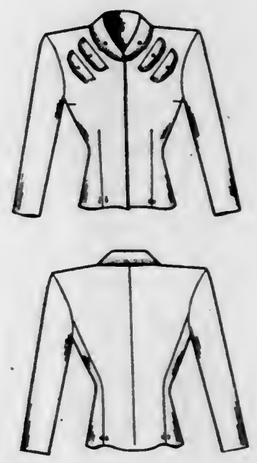
The ornamental design for a jacket, substantially as shown.

145,723
DESIGN FOR A JACKET
Zelma Golden, New York, N. Y.
Application July 23, 1946, Serial No. 131,835
Term of patent 3½ years
(Cl. D3—4)



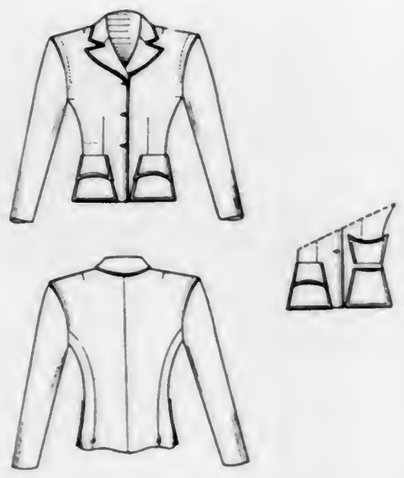
The ornamental design for a jacket, substantially as shown.

145,724
DESIGN FOR A JACKET
Zelma Golden, New York, N. Y.
Application July 23, 1946, Serial No. 131,837
Term of patent 3½ years
(Cl. D3—4)



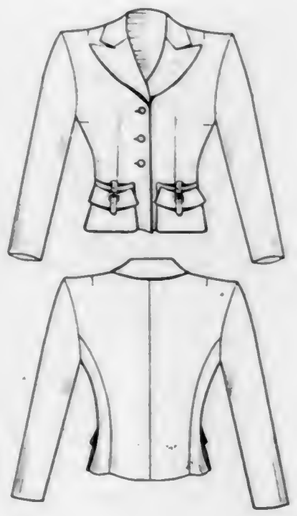
The ornamental design for a jacket, substantially as shown.

145,725
DESIGN FOR A JACKET
Zelma Golden, New York, N. Y.
Application July 23, 1946, Serial No. 131,842
Term of patent 3½ years
(Cl. D3—4)



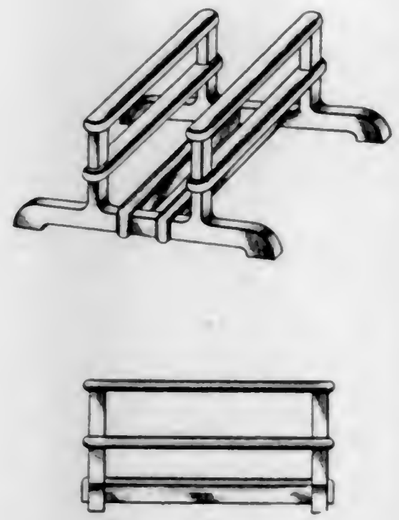
The ornamental design for a jacket, substantially as shown.

145,726
DESIGN FOR A JACKET
Zelma Golden, New York, N. Y.
Application July 23, 1946, Serial No. 131,843
Term of patent 3½ years
(Cl. D3—4)



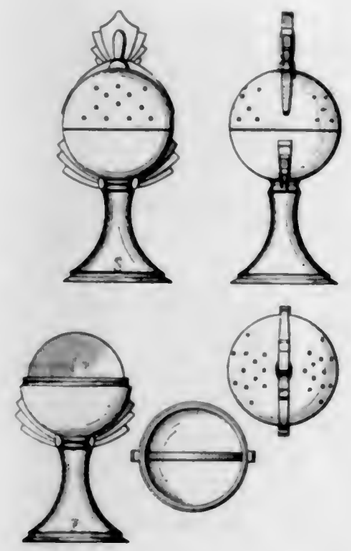
The ornamental design for a jacket, substantially as shown.

145,727
DESIGN FOR A JACKET
Zelma Golden, New York, N. Y.
Application July 23, 1946, Serial No. 131,844
Term of patent 3½ years
(Cl. D3—4)



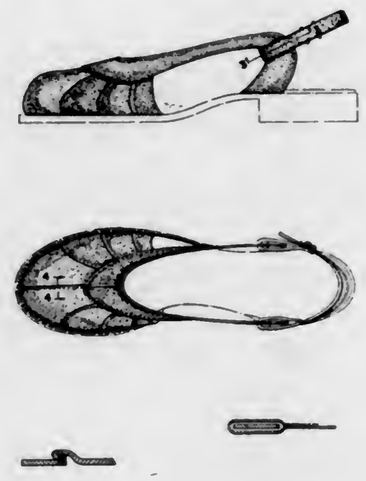
The ornamental design for a jacket, substantially as shown.

145,728
DESIGN FOR A JACKET
Zelma Golden, New York, N. Y.
Application July 23, 1946, Serial No. 131,845
Term of patent 3½ years
(Cl. D3—4)



The ornamental design for a jacket, substantially as shown.

145,729
DESIGN FOR A SOAP CAKE HOLDER OR SIMILAR ARTICLE
Harry H. Gray, Kansas City, Mo.
Application November 15, 1945, Serial No. 123,798
Term of patent 7 years
(Cl. D4—3)



The ornamental design for a soap cake holder or similar article, substantially as shown.

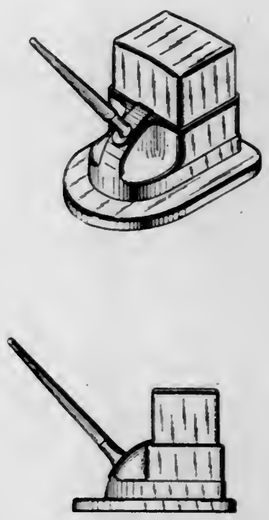
145,730
DESIGN FOR A COMBINED SALT AND PEPPER SHAKER OR SIMILAR ARTICLE
Frank Richard Hale, Paterson, N. J., assignor to Harry S. La Poff, Paterson, N. J.
Application August 30, 1945, Serial No. 121,738
Term of patent 14 years
(Cl. D44—22)

The ornamental design for a combined salt and pepper shaker or similar article, substantially as shown.

145,731
DESIGN FOR A SHOE
James J. Hickey, Binghamton, N. Y., assignor to Endicott Johnson Corporation, Endicott, N. Y., a corporation of New York
Application May 27, 1946, Serial No. 130,110
Term of patent 7 years
(Cl. D7—7)

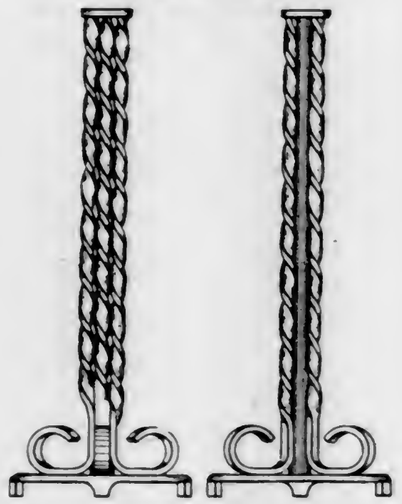
The ornamental design for a shoe, substantially as shown and described.

145,732
DESIGN FOR A COMBINED DOLL AND PARACHUTE
Marion Hoyle, Pasadena, Calif.
Application November 26, 1945, Serial No. 124,090
Term of patent 14 years
(Cl. D34—4)



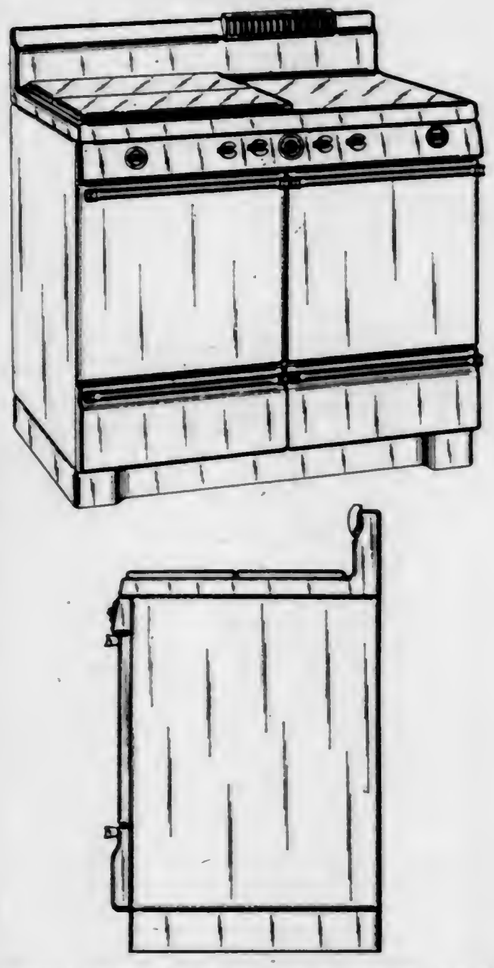
The ornamental design for a combined doll and parachute, as shown.

145,733
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 23, 1946, Serial No. 126,838
Term of patent 7 years
(Cl. D45—19)



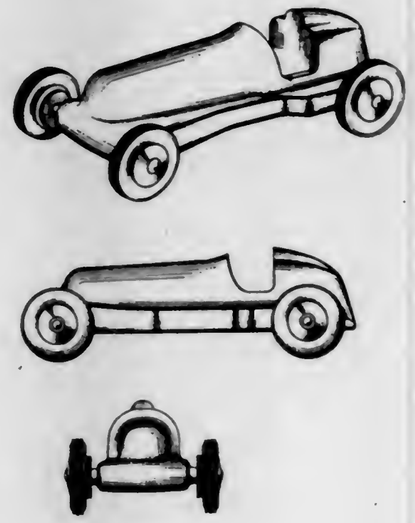
The ornamental design for a brooch or similar article, substantially as shown.

145,734
DESIGN FOR A COMBINATION DESK UNIT
Laurence W. Kendrick, Wellesley, Mass., assignor to The Carter's Ink Company, Cambridge, Mass., a corporation of Massachusetts
Application April 10, 1946, Serial No. 128,448
Term of patent 7 years
(Cl. D74—1)



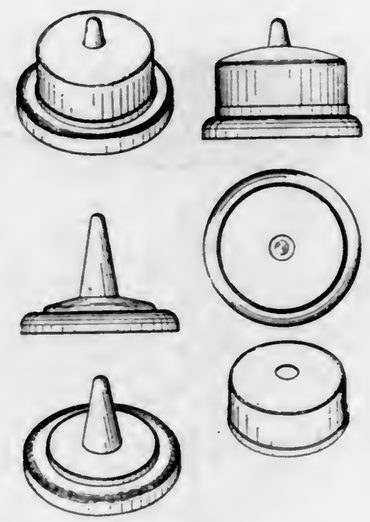
The ornamental design for a combination desk unit, substantially as shown.

145,735
DESIGN FOR A STAND
Edmund D. Kissling, New York, N. Y.
Application November 19, 1945, Serial No. 123,916
Term of patent 14 years
(Cl. D48—20)



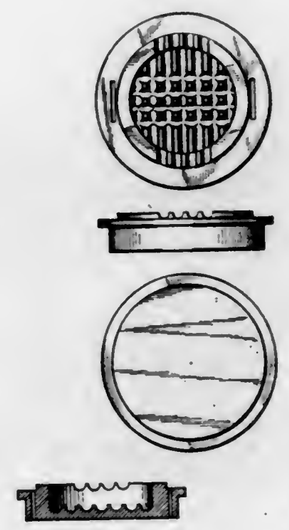
The ornamental design for a stand, as shown.

145,736
DESIGN FOR A RANGE
Ralph E. Kruck, Longmeadow, Mass., assignor to Florence Stove Company, Gardner, Mass., a corporation of Massachusetts
Application November 9, 1945, Serial No. 123,640
Term of patent 14 years
(Cl. D81—4)



The ornamental design for a range, as shown.

145,737
DESIGN FOR A TOY VEHICLE
Robert F. Kuntz, Santa Monica, Calif.
Application December 10, 1945, Serial No. 124,581
Term of patent 3½ years
(Cl. D34—15)



The ornamental design for a toy vehicle, substantially as shown.

145,738
DESIGN FOR A RING BOX
Fred H. Lewis, Wilmette, Ill.
Application December 14, 1945, Serial No. 124,743
Term of patent 14 years
(Cl. D80—5)

The ornamental design for a ring box, substantially as shown.

145,739
DESIGN FOR AN ASH TRAY
Louis Lomasney, North Attleboro, Mass.
Application October 26, 1944, Serial No. 115,996
Term of patent 3½ years
(Cl. D85—2)

The ornamental design for an ash tray, as shown.

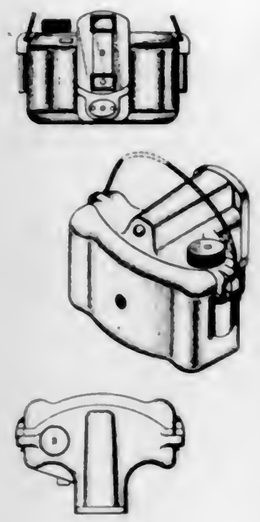
145,740
DESIGN FOR A ROBE OR SIMILAR ARTICLE
George H. McLaughlin, New York, N. Y.
Application May 7, 1946, Serial No. 129,399
Term of patent 3½ years
(Cl. D3—26)

The ornamental design for a robe or similar article, substantially as shown.

145,741
DESIGN FOR A DRESS
Caroline Della Monica, New York, N. Y.
Application June 20, 1946, Serial No. 130,878
Term of patent 3½ years
(Cl. D3—26)

The ornamental design for a dress, substantially as shown.

145,742
DESIGN FOR AN EARRING
Frank Morrow, Johnston, R. I.
Application July 18, 1945, Serial No. 120,792
Term of patent 3½ years
(Cl. D45—9)

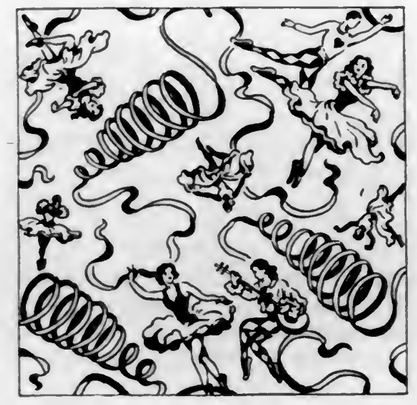


The ornamental design for an earring, substantially as shown.

145,743
DESIGN FOR A JEWELRY PIN OR SIMILAR ARTICLE
Frank Morrow, Johnston, R. I.
Application July 18, 1945, Serial No. 120,796
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a jewelry pin or similar article, substantially as shown.

145,744
DESIGN FOR A CAMERA
Freeman H. Owens, New York, N. Y.
Application October 16, 1945, Serial No. 122,901
Term of patent 14 years
(Cl. D61—1)



The ornamental design for a camera, substantially as shown and described.

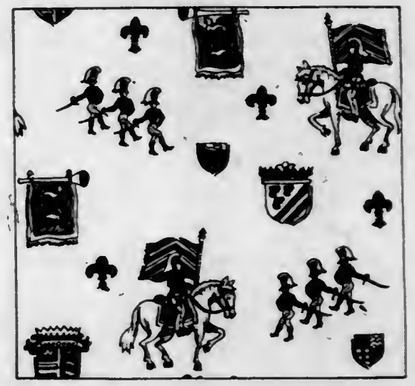
145,745
DESIGN FOR A FABRIC
Arthur Y. Park, Los Angeles, Calif.
Application February 19, 1946, Serial No. 126,704
Term of patent 3½ years
(Cl. D92—1)

The ornamental design for a fabric, as shown and described.

145,746
DESIGN FOR A FABRIC
Arthur Y. Park, Los Angeles, Calif.
Application February 19, 1946, Serial No. 126,705
Term of patent 3½ years
(Cl. D92—1)

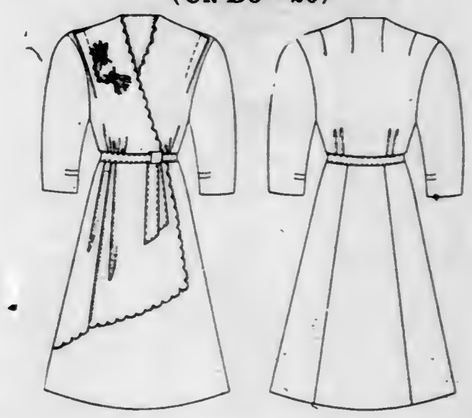
The ornamental design for a fabric, as shown and described.

145,747
DESIGN FOR A FABRIC
Arthur Y. Park, Los Angeles, Calif.
Application February 19, 1946, Serial No. 126,706
Term of patent 3½ years
(Cl. D92—1)



The ornamental design for a fabric, as shown and described.

145,748
DESIGN FOR A FABRIC
Arthur Y. Park, Los Angeles, Calif.
Application February 19, 1946, Serial No. 126,707
Term of patent 3½ years
(Cl. D92—1)



The ornamental design for a fabric, as shown and described.

145,749
DESIGN FOR A FABRIC
Arthur Y. Park, Los Angeles, Calif.
Application February 19, 1946, Serial No. 126,708
Term of patent 3½ years
(Cl. D92—1)

The ornamental design for a fabric, as shown and described.

145,750
DESIGN FOR A DRESS
Katheryn Rost, New York, N. Y.
Application June 20, 1946, Serial No. 130,872
Term of patent 3½ years
(Cl. D3—26)

The ornamental design for a dress, substantially as shown.

145,751
DESIGN FOR A JEWELRY FINDING
Harry Rubin, New York, N. Y.
Application November 23, 1945, Serial No. 123,999
Term of patent 7 years
(Cl. D45—1)

The ornamental design for a jewelry finding, as shown.

145,752
DESIGN FOR A JEWELRY FINDING
Carl Schraysshuen, Providence, R. I.
Application February 21, 1946, Serial No. 126,807
Term of patent 7 years
(Cl. D45—1)

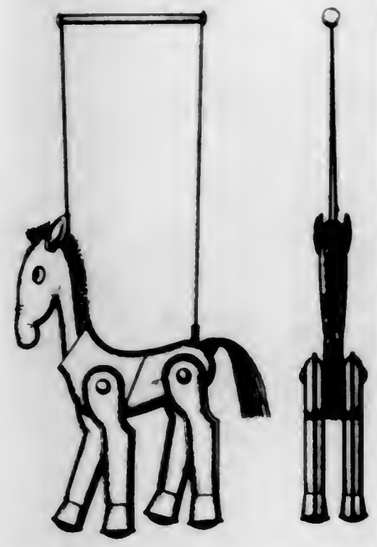
The ornamental design for a jewelry finding, substantially as shown.

145,753
DESIGN FOR A JEWELRY FINDING
Carl Schraysshuen, Providence, R. I.
Application February 21, 1946, Serial No. 126,808
Term of patent 7 years
(Cl. D45—1)

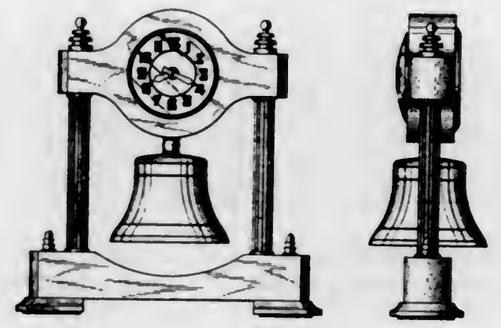
The ornamental design for a jewelry finding, substantially as shown.

145,754
DESIGN FOR A JEWELRY FINDING
Carl Schraysshuen, Providence, R. I.
Application February 21, 1946, Serial No. 126,811
Term of patent 7 years
(Cl. D45—1)

The ornamental design for a jewelry finding, substantially as shown.



145,755
DESIGN FOR A JEWELRY FINDING
Carl Schraysshuen, Providence, R. I.
Application February 21, 1946, Serial No. 126,813
Term of patent 7 years
(Cl. D45—1)

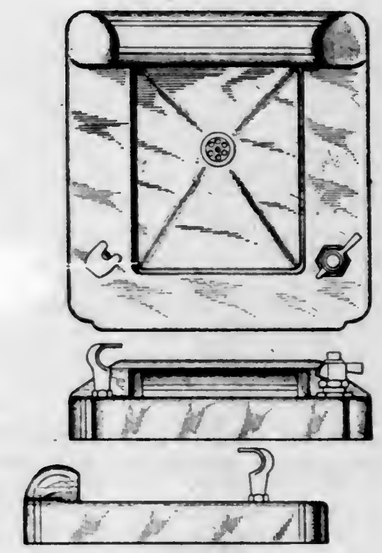


The ornamental design for a jewelry finding, substantially as shown.

145,756
DESIGN FOR A STUFFED PUPPET TOY ANIMAL
Martin Shrier, Forest Hills, N. Y., assignor to Ideal Novelty & Toy Co., Long Island City, N. Y., a corporation of New York
Application July 8, 1946, Serial No. 131,375
Term of patent 3½ years
(Cl. D34—2)

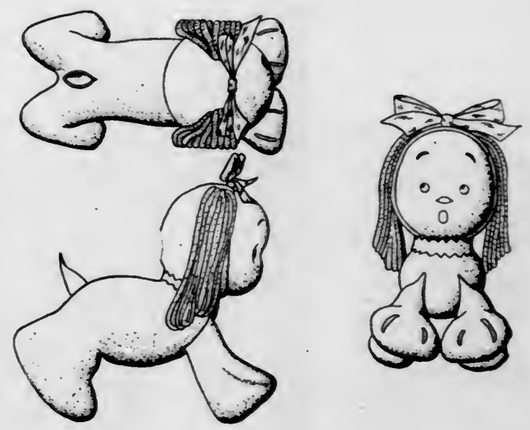
The ornamental design for a stuffed puppet toy animal, substantially as shown.

145,757
DESIGN FOR A CLOCK OR SIMILAR ARTICLE
Abraham K. Simons, Chicago, Ill.
Application May 17, 1946, Serial No. 129,783
Term of patent 7 years
(Cl. D42—7)



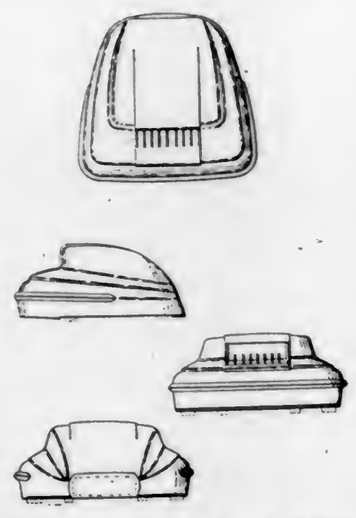
The ornamental design for a clock or similar article, substantially as shown.

145,758
DESIGN FOR A JAR OR SIMILAR ARTICLE
John L. Snyder, Jr., Wapakoneta, Ohio, assignor to The Standard Churn Company, Wapakoneta, Ohio, a corporation of Ohio
Application December 5, 1945, Serial No. 124,392
Term of patent 14 years
(Cl. D58—25)



The ornamental design for a jar or similar article, substantially as shown.

145,759
DESIGN FOR A TOP FOR WATER COOLERS
Elmer A. Steele, Chicago, Ill., assignor to Maurice J. Blons, doing business as M. J. Blons and Company, Chicago, Ill.
Application November 7, 1945, Serial No. 123,554
Term of patent 3½ years
(Cl. D67—4)

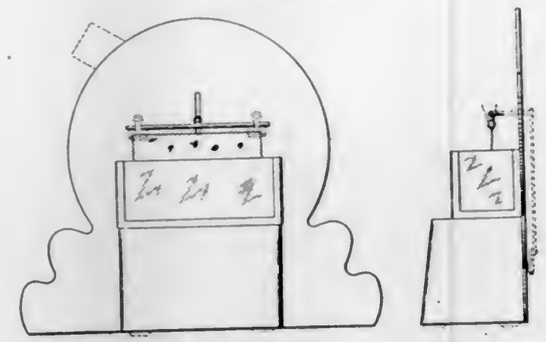


The ornamental design for a top for water coolers, as shown.

145,760
DESIGN FOR A TOY ANIMAL
Charlotte Steiner, New York, N. Y.
Application May 1, 1946, Serial No. 129,209
Term of patent 7 years
(Cl. D34—2)

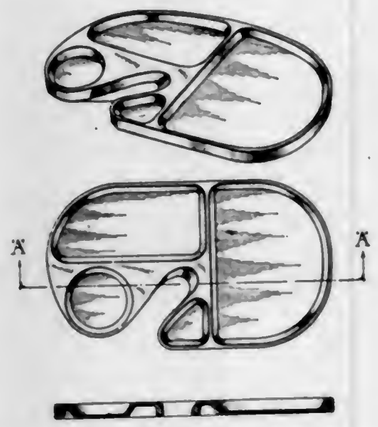
The ornamental design for a toy animal, as shown.

145,761
DESIGN FOR A VACUUM CLEANER CASING
George W. Walker, Pleasant Ridge, Mich., assignor to Eureka Williams Corporation, a corporation of Michigan
Application January 9, 1946, Serial No. 125,400
Term of patent 14 years
(Cl. D9—2)



The ornamental design for a vacuum cleaner casing, substantially as shown and described.

145,762
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
William B. Weinstock, Kew Garden Hills, Flushing, N. Y.
Application October 29, 1945, Serial No. 123,283
Term of patent 3½ years
(Cl. D45—19)



The ornamental design for a brooch or similar article, substantially as shown and described.

145,763
DESIGN FOR A FABRIC TESTING DISPLAY STAND
Herbert W. Wilkinson, Jr., Southbridge, Mass.
Application September 6, 1945, Serial No. 121,895
Term of patent 14 years
(Cl. D80—9)

The ornamental design of a fabric testing display stand, substantially as shown and described.

145,764
DESIGN FOR A TRAY
Victor I. Zelov, Rosemont, Pa.
Application September 29, 1945, Serial No. 122,401
Term of patent 14 years
(Cl. D44—10)

The ornamental design for a tray, as shown.

Salami dry sausage. Omaha Packing Company. 219,176; renewed Oct. 12, 1946. O. G. Oct. 15.
Sauce for meat products. Francis H. Leggett & Company. 424,610; Oct. 15; Serial No. 489,876; published July 23, 1946.
Weiners and sauerkraut, barbecue spareribs and sauerkraut, etc. Allied Foods. 424,615; Oct. 15; Serial No. 490,350; published July 23, 1946.
Wheat-flour. John F. Meyer & Sons Milling Co. 57,596; re-renewed Nov. 13, 1946. O. G. Oct. 15.

CLASS 47

Wines. Cruse & Fils Freres. 424,663; Oct. 15.
Wines. Marco Importing Co. 424,587; Oct. 15; Serial No. 468,523; published July 16, 1946.

CLASS 48

Ale and stout. C. Machen & Hudson. 51,802; re-renewed Apr. 24, 1946. O. G. Oct. 15.
Beer. Horlacher Brewing Company. 424,674; Oct. 15.

CLASS 49

Distilled Spiritous beverages, particularly whiskey, Potable. W. A. Haller Company, Inc. 424,637; Oct. 15; Serial No. 496,308; published July 16, 1946.
Rum. Schieffelin & Co. 424,668; Oct. 15.
Whiskey. John Wagner & Sons. 57,616; re-renewed Nov. 13, 1946. O. G. Oct. 15.

CLASS 50

Paddle, Decorative. J. C. Rader. 424,688; Oct. 15.
Tents, wagon and truck covers, and tarpaulins. Little Rock Tent & Awning Company. 220,107; renewed Nov. 2, 1946. O. G. Oct. 15.

LIST OF REISSUE PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 15TH DAY OF OCTOBER, 1946

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Baade, Henry, Ypsilanti, Mich., assignor to Bendix Products Corporation, South Bend, Ind. Braking system. Re. 22,802; Oct. 15.
Bendix Products Corporation, assignee: *See*—
Baade, Henry.
Line Material Company, assignee: *See*—
Schultz, William O., and Steinmayer.
McLemore, Price C., Waugh, Ala. Flame cultivation of plants. Re. 22,803; Oct. 15.
Robinson, Jonas, Clarke Summit, Pa. Jacquard compensating means. Re. 22,804; Oct. 15.
Schultz, William O., South Milwaukee, and A. G. Steinmayer, Shorewood, assignors to Line Material Company, Milwaukee, Wis. Fuse device. Re. 22,805; Oct. 15.
Steinmayer, Alwin G.: *See*—
Schultz, William O., and Steinmayer.

LIST OF DESIGN PATENTEES

Aquilino, Antonio, Providence, R. I. Brooch. 145,707; Oct. 15.
Aquilino, Antonio, Providence, R. I. Brooch. 145,708; Oct. 15.
Casalino, Joseph, Forest Hills Gardens, Long Island, assignor to Dieplast Corporation, New York, N. Y. Hand mirror frame. 145,709; Oct. 15.
Bel Geddes, Norman, New York, assignor to Creative Plastics Corp., Brooklyn, N. Y. Portable bar tray. 145,718; Oct. 15.
Bendix Home Appliances, Inc., assignee: *See*—
Constantine, Arthur R., and Boldt.
Blons, M. J., and Company, assignee: *See*—
Steele, Elmer A.
Blons, Maurice J., assignee: *See*—
Steele, Elmer A.
Boldt, Melvin H.: *See*—
Constantine, Arthur R., and Boldt.
Carter's Ink Company, The, assignee: *See*—
Kendrick, Laurence W.
Cartier, Inc., assignee: *See*—
Foret, Edmond, and Graeter.
Constantine, Arthur R., and M. H. Boldt, assignors to Bendix Home Appliances, Inc., South Bend, Ind. Vending machine. 145,710; Oct. 15.
Coro, Inc., assignee: *See*—
Katz, Adolph.
Creative Plastics Corp., assignee: *See*—
Bel Geddes, Norman.
Davis, Joseph, South Orange, assignor to Joseph Davis Plastics Co., Arlington, N. J. Serving dish or similar article. 145,711; Oct. 15.
Davis, Joseph, Plastics Co., assignee: *See*—
Davis, Joseph.
Dieplast Corporation, assignee: *See*—
Casalino, Joseph.
Endicott Johnson Corporation, assignee: *See*—
Hickey, James J.
Engleman, Dorthi, assignor to Carl Gutmann & Co., Inc., New York, N. Y. Sweater or similar article. 145,712; Oct. 15.
Engleman, Dorthi, assignor to Carl Gutmann & Co., Inc., New York, N. Y. Sweater or similar article. 145,713; Oct. 15.
Engleman, Dorthi, assignor to Carl Gutmann & Co., Inc., New York, N. Y. Sweater. 145,714; Oct. 15.
Etkin, Simon, New York, N. Y. Jacket. 145,715; Oct. 15.
Eureka Williams Corporation, assignee: *See*—
Walker, George W.
Florence Stove Company, assignee: *See*—
Kruck, Ralph E.
Foret, Edmond, New York, N. Y., and H. Graeter, Sherman, Conn., assignors to Cartier, Inc., New York, N. Y. Compact. 145,716; Oct. 15.
Freedman, Jules, New York, N. Y. Coat. 145,717; Oct. 15.
Goldberg, Harry, New York, N. Y. Coat. 145,719; Oct. 15.
Goldberg, Harry, New York, N. Y. Coat. 145,720; Oct. 15.
Golden, Zelma, New York, N. Y. Jacket. 145,721; Oct. 15.
Golden, Zelma, New York, N. Y. Jacket. 145,722; Oct. 15.
Golden, Zelma, New York, N. Y. Jacket. 145,723; Oct. 15.
Golden, Zelma, New York, N. Y. Jacket. 145,724; Oct. 15.
Golden, Zelma, New York, N. Y. Jacket. 145,725; Oct. 15.
Golden, Zelma, New York, N. Y. Jacket. 145,726; Oct. 15.
Golden, Zelma, New York, N. Y. Jacket. 145,727; Oct. 15.
Golden, Zelma, New York, N. Y. Jacket. 145,728; Oct. 15.
Graeter, Harold: *See*—
Foret, Edmond, and Graeter.
Gray, Harry H., Kansas City, Mo. Soap cake holder or similar article. 145,729; Oct. 15.
Gutmann, Carl, & Co., Inc., assignee: *See*—
Engleman, Dorthi.
Hale, Frank R., assignor to H. S. La Poff, Paterson, N. J. Combined salt and pepper shaker or similar article. 145,730; Oct. 15.
Hickey, James J., Binghamton, assignor to Endicott Johnson Corporation, Endicott, N. Y. Shoe. 145,731; Oct. 15.
Hoyle, Marion, Pasadena, Calif. Combined doll and parachute. 145,732; Oct. 15.
Ideal Novelty & Toy Co., assignee: *See*—
Shrier, Martin.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 145,733; Oct. 15.
Kendrick, Laurence W., Wellesley, assignor to The Carter's Ink Company, Cambridge, Mass. Combination desk unit. 145,734; Oct. 15.
Kissling, Edmund D., New York, N. Y. Stand. 145,735; Oct. 15.
Kruck, Ralph E., Longmeadow, assignor to Florence Stove Company, Gardner, Mass. Range. 145,736; Oct. 15.
Kuntz, Robert F., Santa Monica, Calif. Toy vehicle. 145,737; Oct. 15.
La Poff, Harry S., assignee: *See*—
Hale, Frank R.
Lewis, Fred H., Wilmette, Ill. Ring box. 145,738; Oct. 15.
Lomasney, Louis, North Attleboro, Mass. Ash tray. 145,739; Oct. 15.
McLaughlin, George H., New York, N. Y. Robe or similar article. 145,740; Oct. 15.
Monica, Caroline D., New York, N. Y. Dress. 145,741; Oct. 15.
Morrow, Frank, Johnston, R. I. Earring. 145,742; Oct. 15.
Morrow, Frank, Johnston, R. I. Jewelry pin or similar article. 145,743; Oct. 15.
Owens, Freeman H., New York, N. Y. Camera. 145,744; Oct. 15.
Park, Arthur Y., Los Angeles, Calif. Fabric. 145,745; Oco. 15.
Park, Arthur Y., Los Angeles, Calif. Fabric. 145,746; Oct. 15.
Park, Arthur Y., Los Angeles, Calif. Fabric. 145,747; Oct. 15.
Park, Arthur Y., Los Angeles, Calif. Fabric. 145,748; Oct. 15.
Park, Arthur Y., Los Angeles, Calif. Fabric. 145,749; Oct. 15.
Rost, Katheryn, New York, N. Y. Dress. 145,750; Oct. 15.
Rubin, Harry, New York, N. Y. Jewelry finding. 145,751; 145,751; Oct. 15.
Schrayesshuen, Carl, Providence, R. I. Jewelry finding. 145,752; Oct. 15.
Schrayesshuen, Carl, Providence, R. I. Jewelry finding. 145,753; Oct. 15.
Schrayesshuen, Carl, Providence, R. I. Jewelry finding. 145,754; Oct. 15.

Schraysshuen, Carl, Providence, R. I. Jewelry finding. 145,755; Oct. 15.
Shrier, Martin, Forest Hills, assignor to Ideal Novelty & Toy Co., Long Island City, N. Y. Stuffed puppet toy animal. 145,756; Oct. 15.
Simons, Abraham K., Chicago, Ill. Clock or similar article. 145,757; Oct. 15.
Snyder, John L., Jr., assignor to The Standard Churn Company, Wapakoneta, Ohio. Jar or similar article. 145,758; Oct. 15.
Standard Churn Company, The, assignee: *See*—
Snyder, John L., Jr.
Steele, Elmer A., assignor to M. J. Blons, doing business as M. J. Blons and Company, Chicago, Ill. Top for water coolers. 145,759; Oct. 15.
Steiner, Charlotte, New York, N. Y. Toy animal. 145,760; Oct. 15.
Walker, George W., Pleasant Ridge, Mich., assignor to Eureka Williams Corporation. Vacuum cleaner casing. 145,761; Oct. 15.
Weinstock, William B., Kew Gardens Hills, Flushing, N. Y. Brooch or similar article. 145,762; Oct. 15.
Wilkinson, Herbert W., Jr., Southbridge, Mass. Fabric testing display stand. 145,763; Oct. 15.
Zelov, Victor I., Rosemont, Pa. Tray. 145,764; Oct. 15.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 15TH DAY OF OCTOBER, 1946

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Adams, Arben H., and T. S. Tucker, North Hollywood, Calif., assignors, by mesne assignments, to Bendix Aviation Corporation, South Bend, Ind. Hydraulic system. 2,409,175; Oct. 15.
Adams, Hal McC., Lexington, assignor to Burlington Mills Corporation, Greensboro, N. C. Device for oiling fliers. 2,409,523; Oct. 15.
Aerojet Engineering Corporation, assignee: *See*—
Pridonoff, Eric L., and Schneider.
Ahlfors, Sten E. E., Hedemora, Sweden. Straining fibrous suspensions. 2,409,524; Oct. 15.
Ahrndt, Arthur H., assignor to U. S. Slicing Machine Company, La Porte, Ind. Food tendering machine. 2,409,463; Oct. 15.
Aircraft Tools, Inc., assignee: *See*—
Miller, Wade E.
Air Reduction Company, Incorporated, assignee: *See*—
Van Nuys, Claude C.
Alien Property Custodian: *See*—
Bouwers, Albert.
Lipp, Rudolf W.
Rambold, Adolf.
Rosa, Laszlo, and Zakariàs.
Allen, Robert C., Wauwatosa, assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Gas turbine system. 2,409,176; Oct. 15.
Allen, Robert C., and J. T. Rettaliata, Wauwatosa, assignors to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Jet propulsion apparatus. 2,409,177; Oct. 15.
Allied Shoe Machinery Corp., assignee: *See*—
Perri, Angelo.
Allis-Chalmers Manufacturing Company, assignee: *See*—
Allen, Robert C.
Allen, Robert C., and Rettaliata.
Allison, Byron L., Williston Park, N. Y., and L. J. Wong, Hoboken, N. J., assignors to Sperry Gyroscope Company, Inc. Mounting means for gyroscopes. 2,409,178; Oct. 15.
Alton, William H., Westport, and F. E. Hutchins, Norwalk, Conn., assignors to R. T. Vanderbilt Company, Inc., New York, N. Y. Emulsion. 2,409,338; Oct. 15.
Aluminum Company of America, assignee: *See*—
Gunn, Robert D.
American Cyanamid Company, assignee: *See*—
Davis, Arnold R.
Dean, Russell T., and King.
American Optical Company, assignee: *See*—
Bernheim, Daniel P., and Glasberg.
Jackson, George W.
Joyce, William J.
American Safety Razor Corporation, assignee: *See*—
Kleinmann, Max.
American Steel and Wire Company of New Jersey, The, assignee: *See*—
Fenton, George D.
Anderson, Alva E., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Electron beam relay. 2,409,179; Oct. 15.
Andreasson, Rudolf W., Franklin, Mich. Drilling device. 2,409,525; Oct. 15.
Andresen, Raymond H., assignor to Peerless Tool and Engineering Company, Chicago, Ill. Lathe attachment. 2,409,464; Oct. 15.
Angell, Charles H.: *See*—
Giuliani, Chester J., and Angell.
Annett, Charles E., 2d, and M. Armstrong, Short Hills, N. J.; said Armstrong assignor to said Annett. Fastening device. 2,409,180; Oct. 15.
Armbruster, Frank, Waverly, and E. Stearns, Columbus, Ohio. First-aid container. 2,409,465; Oct. 15.
Armistead, William H., Jr., assignor to Corning Glass Works, Corning, N. Y. Ultraviolet absorbing glass. 2,409,412; Oct. 15.
Armstrong Cork Company, assignee: *See*—
McGarvey, Alan R.
Armstrong, Malcolm: *See*—
Annett, Charles E., 2nd.
Arveson, Maurice H., Flossmoor, assignor to Standard Oil Company, Chicago, Ill. Revivifying adsorptive material. 2,409,234; Oct. 15.
Atlas Powder Company, assignee: *See*—
Djidics, Alexander.
Atwell, Harold V., Beacon, assignor, by mesne assignments, to The Texas Company, New York, N. Y. Continuous process for effecting catalytic reactions. 2,409,235; Oct. 15.

Ausherman, Harry S., Wichita, Kans. Chain tightening means. 2,409,526; Oct. 15.
Autopulse Corporation, assignee: *See*—
Eldred, Andrew J.
Azbe, Victor J., Webster Groves, Mo. Calcining apparatus. 2,409,527; Oct. 15.
Babcock & Wilcox Company, The, assignee: *See*—
Maxwell, Carl A.
Bagley, Ronald D., Indiana, Pa., and J. E. Berman, Suffolk, Va. Airborne cargo truck. 2,409,181; Oct. 15.
Bahls, Walter E., assignor to Radio Corporation of America, Haddonfield, N. J. Electron discharge device. 2,409,466; Oct. 15.
Bailey, Edgar L.: *See*—
Gilfillan, Henry W., and Bailey.
Baker, James D.: *See*—
Hamilton, Clarence R., King, and Baker.
Ballard, J. D., Fort Worth, Tex. Intermixing device. 2,409,339; Oct. 15.
Banker, Oscar H., Evanston, Ill. Making roller cages. 2,409,236; Oct. 15.
Banks, Joseph L., Baltimore, Md., assignor to J. L. Schilling, J. C. Doig, and I. G. Rubin, doing business as J. L. Schilling Co. Toy typewriter. 2,409,237; Oct. 15.
Barber, Theodore C., Seattle, Wash. Airplane flight trainer. 2,409,238; Oct. 15.
Barili, Arthur E., Los Angeles, Calif. Bomb sight and bomb-releasing device. 2,409,239; Oct. 15.
Barker, George A., Rochester, N. Y. Tire shoe. 2,409,182; Oct. 15.
Barker, Paul F., H. G. Hartman, C. T. Galloway, and B. M. Kunes, assignors to Gleason Works, Rochester, N. Y. Dressing mechanism. 2,409,240; Oct. 15.
Bashour, Joseph T., assignor to E. R. Squibb & Sons, New York, N. Y. Producing substantially pure d-tubocurarine chloride. 2,409,241; Oct. 15.
Baunach, Roy J., assignor to The Swartzbaugh Manufacturing Company, Toledo, Ohio. Food conveyer or heater. 2,409,528; Oct. 15.
Bausch & Lomb Optical Company, assignee: *See*—
Hutchings, Charles F.
Kurtz, Henry F., and Morrison.
Turner, Arthur F.
Bechman, William O.: *See*—
Rogers, Clifford R., Bechman, and Ziskal.
Beck, Alfred C., Red Bank, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Microwave antenna. 2,409,183; Oct. 15.
Becker, Harold J., assignor to Merck & Co., Inc., Rahway, N. J. Stabilized cuprous oxide. 2,409,413; Oct. 15.
Becker, Rudolph, North Plainfield, assignor to The Singer Manufacturing Company, Elizabeth, N. J. Work feeding mechanism for sewing machines. 2,409,242; Oct. 15.
Beede, Harry L., Fort Lee, assignor to The Okonite-Callender Cable Company, Incorporated, Paterson, N. J. Buoyant electric cable. 2,409,529; Oct. 15.
Bell Aircraft Corporation, assignee: *See*—
Trotter, John C.
Bell Telephone Laboratories, Incorporated, assignee: *See*—
Anderson, Alva E.
Beck, Alfred C.
Morton, Jack A.
Samuel, Arthur L.
Shockley, William.
Bendix Aviation Corporation, assignee: *See*—
Adams, Arben H., and Tucker.
Ketay, Morris F., and Sherman.
Miles, George S.
Bennett, Charles E., Ridgewood, assignor to The Okonite Company, Passaic, N. J. Electric cable. 2,409,530; Oct. 15.
Bennett, Charles E., Ridgewood, assignor to The Okonite-Callender Cable Company, Incorporated, Paterson, N. J. Electrode for buoyant cables. 2,409,531; Oct. 15.
Bentley, Howard: *See*—
Bentley, Robert and H.
Bentley, Robert, Monroe, and H. Bentley, Detroit, Mich. Filling spout. 2,409,532; Oct. 15.
Berman, Joseph E.: *See*—
Bagley, Ronald D., and Berman.
Berneski, Anthony J., Latrobe, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Generator construction. 2,409,184; Oct. 15.
Bernheim, Daniel P., Southbridge, and M. M. Glasberg, Revere, assignors to American Optical Company, Southbridge, Mass. Collapsible type eyeshield. 2,409,243; Oct. 15.

Bilan, John, Flint, Mich. Glass electric hot plate. 2,409,244; Oct. 15.

Bitter, H. Calvin: *See*—
Wild, Edward, and Bitter.

Black, John B., assignor to The Glenn L. Martin Company, Middle River, Md. Fuel system. 2,409,245; Oct. 15.

Blasutta, Victor V., assignor to The Denison Engineering Company, Columbus, Ohio. Hydraulic apparatus. 2,409,185; Oct. 15.

Bletz, Edward, Lexington, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Heating apparatus. 2,409,414; Oct. 15.

Blitz, Daniel: *See*—
Sanders, Royden C., Jr., Mercer, and Blitz,

Blomquist, Anders B., Cranston, R. I. Universal bench grinder. 2,409,415; Oct. 15.

Bloom, Frederick S., assignee: *See*—
Guthrie, James M.

Bock, George E., Chicago, assignor to Whiting Corporation, Harvey, Ill. Apparatus for testing the brakes on airplane ground wheels. 2,409,467; Oct. 15.

Bock, George E., Chicago, assignor to Whiting Corporation, Harvey, Ill. Engine work stand. 2,409,468; Oct. 15.

Bohler, Francis M., Long Beach, Calif. Portable surface grinder. 2,409,340; Oct. 15.

Bohmer, Charles W., Jr.: *See*—
Wright, Donald L., and Bohmer.

Bolsey, Jacques, New York, N. Y. Photographic camera. 2,409,605; Oct. 15.

Bolton, John W., & Sons, Inc., assignee: *See*—
Stuck, Harold D., and Bolton.

Bolton, William W.: *See*—
Stuck, Harold D., and Bolton.

Borden, David M., Royal Oak, assignor to Chrysler Corporation, Highland Park, Mich. Apparatus for controlling superchargers. 2,409,533; Oct. 15.

Borg, Edward M., Seattle, Wash. Centrifugal extractor. 2,409,341; Oct. 15.

Borg-Warner Corporation, assignee: *See*—
Carnagua, Harold E.

Bouwers, Albert, Eindhoven, Netherlands; vested in the Alien Property Custodian. Telescope system. 2,409,186; Oct. 15.

Bower, John H., Burlingame, Calif. Shampoo cabinet combination. 2,409,187; Oct. 15.

Bowlus, Omer E.: *See*—
Nims, Paul T., and Bowlus.

Bowlus, Omer E., Detroit, assignor to Chrysler Corporation, Highland Park, Mich. Electrical control system. 2,409,534; Oct. 15.

Bracke, R. F., & Company, assignee: *See*—
Bracke, Robert F.

Bracke, Robert F., Arlington Heights, assignor to R. F. Bracke & Company, Chicago, Ill. Lavatory and disinfection control. 2,409,535; Oct. 15.

Braddon, Frederick D., Babylon, and S. Kellogg, 2nd, Rye, assignors to Sperry Gyroscope Company, Inc., Brooklyn, N. Y. Erection controlling device for gyroscopes. 2,409,188; Oct. 15.

Braunworth, Albert, Queens Village, assignor to R. Hoe & Co., Inc., New York, N. Y. Printing cylinder blanket securing mechanism. 2,409,536; Oct. 15.

Bravo, Mauricio, Chicago, Ill. Incense dispenser. 2,409,469; Oct. 15.

Breese, James L., assignor to Oil Devices, Santa Fe, N. Mex. Burner and fuel flow control means. 2,409,470; Oct. 15.

Breeze, Charles A., Aberdeen, Scotland. Tractor wheel attachment. 2,409,246; Oct. 15.

Bright, John W., Los Angeles, Calif. Excessive speed exhibitor. 2,409,537; Oct. 15.

Brill, Aron, Brooklyn, N. Y., and W. Kneissler, Roselle, N. J. Safety interlocking clothes hanger. 2,409,538; Oct. 15.

Broberg, Fred E., Racine, Wis. Blade grinder. 2,409,416; Oct. 15.

Brooker, Leslie G. S., Rochester, N. Y., and H. W. J. Cressman, Glenside, Pa., assignors to Eastman Kodak Company, Rochester, N. Y. Merocyanine dyes. 2,409,189; Oct. 15.

Brooks, John W., Wenonah, and A. A. O'Kelly, Woodbury, N. J., and R. H. Work, Philadelphia, Pa., assignors to Socony-Vacuum Oil Company, Incorporated. Polymerization process. 2,409,247; Oct. 15.

Brooks, John W., Wenonah, and A. A. O'Kelly, Woodbury, N. J., and R. H. Work, Philadelphia, Pa., assignors to Socony-Vacuum Oil Company, Incorporated. Polymerization. 2,409,248; Oct. 15.

Brosseit, Mary A., Chicago, Ill. Airplane toy. 2,409,471; Oct. 15.

Brown, George B., Martinsville, N. J., assignor to Johns-Manville Corporation, New York, N. Y. Insulating covering and making the same. 2,409,249; Oct. 15.

Brown, Gordon S., Wellesley Hills, Mass., and J. W. Forrester, Anselmo, Nebr., assignors, by mesne assignments, to Sperry Gyroscope Company, Inc. Remote control system. 2,409,190; Oct. 15.

Brown, Grover W., Wyckoff, assignor to The Okonite Company, Passaic, N. J. Insulated wire and cable. 2,409,539; Oct. 15.

Brown, Joseph M., Philadelphia, Pa. Firearm bolt tool. 2,409,191; Oct. 15.

Budd Company, The, assignee: *See*—
Callender, Edwin M.

Bull, Cabot S., Hillingdon, England, assignor to Electric and Musical Industries Limited. Electron discharge device. 2,409,417; Oct. 15.

Burlington Mills Corporation, assignee: *See*—
Adams, Hal M.

Butcher, William T., and A. Lloyd, Greenford, assignors to Goodlass Wall & Lead Industries Limited, Oxted, England. Extruded pipe made from lead alloys. 2,409,540; Oct. 15.

Butler, William L., Schenectady, N. Y., assignor to General Electric Company. Electric switch. 2,409,472; Oct. 15.

Callender, Edwin M., assignor to The Budd Company, Philadelphia, Pa. Electronic timing device. 2,409,473; Oct. 15.

Cannon, Edward J., Dunbar, and H. A. Stuewe, South Charleston, W. Va., assignors to Carbide and Carbon Chemicals Corporation. Separation of butadiene. 2,409,250; Oct. 15.

Cantley, Joseph C., Beverly, and A. F. Pym, deceased, Topsfield, by G. H. Heys, administrator, Swampscott, Mass., assignors to United Shoe Machinery Corporation, Flemington, N. J. Automatic firearm. 2,409,251; Oct. 15.

Carbide and Carbon Chemicals Corporation, assignee: *See*—
Cannon, Edward J., and Stuewe.

Carmichael, Asa B., Tujunga, Calif. Vehicle step. 2,409,418; Oct. 15.

Carnagua, Harold E., Muncie, Ind., assignor to Borg-Warner Corporation, Chicago, Ill. Variable-speed transmission control. 2,409,541; Oct. 15.

Carswell, Thomas S., Longmeadow, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo. Container. 2,409,252; Oct. 15.

Carter Carburetor Corporation, assignee: *See*—
Martin, Charles L.

Carter, Philip S., Rocky Point, N. Y., assignor to Radio Corporation of America. High-frequency transducer system. 2,409,542; Oct. 15.

Case, J. I., Company, assignee: *See*—
MacGregor, Wallace F.
Richardson, Martin A.

Cassidy, Joseph J., Fort Wayne, Ind. Rod support for reinforced concrete structures. 2,409,342; Oct. 15.

Cefoil Limited, assignee: *See*—
Speakman, John B., and Chamberlain.

Celanese Corporation of America, assignee: *See*—
Croft, Cyril M., and Waller.
Ward, George C., and Pull.

Chain Belt Company, assignee: *See*—
Sivyer, Benjamin E.

Chamberlain, Norman H.: *See*—
Speakman, John B., and Chamberlain.

Channing, Robert, Company, assignee: *See*—
Levaggi, Albert F.

Chatfield, Franklin, assignor to Munsingwear, Inc., Minneapolis, Minn. Apparatus for shrinking fabrics. 2,409,543; Oct. 15.

Chicago Aerial Survey Company, assignee: *See*—
Sonne, Frederick T., and Sussin.

Chris, Stephen J., Pacific Palisades, assignor to Douglas Aircraft Company, Inc., Santa Monica, Calif. Clamping structure. 2,409,253; Oct. 15.

Christaldi, Peter S., Upper Montclair, assignor to Allen B. Du Mont Laboratories, Inc., Passaic, N. J. Device for measuring impedances. 2,409,419; Oct. 15.

Chrysler Corporation, assignee: *See*—
Borden, David M.
Bowlus, Omer.
Gilfillan, Henry W., and Bailey.
Nims, Paul T., and Bowlus.
Sassmanhausen, Lee C.

Cities Service Oil Company, assignee: *See*—
Morgan, John D., and Lowe.

Claesson, Per H. E.: *See*—
Rost, Helge F., Thunell, Vigren, and Claesson.

Clapp, Richard G., Haverford, assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa. High-frequency attenuator and divider circuits. 2,409,474; Oct. 15.

Clark, Earl K., Mansfield, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Heating appliance. 2,409,420; Oct. 15.

Clarke, Louis A., Fishkill, assignor to The Texas Company, New York, N. Y. Alkylation of hydrocarbons. 2,409,544; Oct. 15.

Cline, Edward T., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Shaped protein structures and their preparation. 2,409,475; Oct. 15.

Collins, Arthur A., Cedar Rapids, Iowa, assignor to Collins Radio Company. Tuning device clutch. 2,409,192; Oct. 15.

Collins Radio Company, assignee: *See*—
Collins, Arthur A.

Colt's Patent Fire Arms Manufacturing Company, assignee: *See*—
Webb, George.

Cone Automatic Machine Company Inc., assignee: *See*—
Miller, Carroll E., and Parker.

Consolidated Vultee Aircraft Corporation, assignee: *See*—
Rocheville, Harry D.

Container Corporation of America, assignee: *See*—
Jacobson, Egbert.

Conzelman, John E., Jr., assignor to Solar Aircraft Company, San Diego, Calif. Apparatus for die-forming sheet material. 2,409,254; Oct. 15.

Corning Glass Works, assignee: *See*—
Armistead, William H., Jr.

Cornish, Irving R., assignee, et al.: *See*—
Paxton, John W.

Cornwell, Arthur L., Wellsville, N. Y. Torque wrench. 2,409,545; Oct. 15.

Corson, Bolton L., Plymouth Meeting, Pa. Conditioning and treating lime and product thereof. 2,409,546; Oct. 15.

Cotchett, Louis M., Hingham, assignor to Saco-Lowell Shops, Boston, Mass. Weighting apparatus for textile drafting mechanisms. 2,409,255; Oct. 15.

Courchene, Theodore P., Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Lasting machine. 2,409,193; Oct. 15.

Courchene, Theodore P., Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Lasting machine. 2,409,194; Oct. 15.

Cox, George S., and E. J. Sandel, St. Louis, Mo.; said Sandel assignor to said Cox. Game. 2,409,547; Oct. 15.

Crawford, Walter J., New Orleans, La. Surgical splint. 2,409,195; Oct. 15.

Creelman, George D., Mountain Lakes, N. J., and J. F. Crowther, Mount Vernon, N. Y., assignors to The M. W. Kellogg Company, Jersey City, N. J. Contacting solids with vapors. 2,409,476; Oct. 15.

Cressman, Homer W. J.: *See*—
Brooker, Leslie G. S., and Cressman.

Crites, Wilbur J., deceased, by First National Bank in Bartlesville, Bartlesville, Okla., executor; said Crites assignor to Phillips Petroleum Company. Hydraulic coupling. 2,409,256; Oct. 15.

Croft, Cyril M., and T. S. Waller, Cumberland, Md., assignors to Celanese Corporation of America. Acid fading inhibition. 2,409,257; Oct. 15.

Crowther, John F.: *See*—
Creelman, George D., and Crowther.

Cunningham, Thomas P., Kearny, N. J. Automatic turboplanetary transmission. 2,409,196; Oct. 15.

Curtis, Raymond M., Baltimore, Md., assignor to Macalaster Bicknell Company, Cambridge, Mass. Fluid inlet-outlet device, particularly for clinical purposes. 2,409,343; Oct. 15.

Curtiss, Leon F.: *See*—
Krasnow, Shelley, and Curtiss.

Curtiss-Wright Corporation, assignee: *See*—
Trautschold, Reginald.

Cutler-Hammer, Inc., assignee: *See*—
Feldhausen, Cyril P.
Reeves, James B.

Darling & Company, assignee: *See*—
Patience, William M., and Kimball.

David, Raymond C., Leominster, Mass., assignor to Delamere Company, Inc., New York, N. Y. Hair wave clip. 2,409,197; Oct. 15.

Davis, Arnold R., Riverside, Conn., assignor to American Cyanamid Company, New York, N. Y. Plasticizing chloroprene polymers. 2,409,344; Oct. 15.

Davis, Lewis, Worcester, and A. J. Gauthier, Brookfield, assignors to McLaurin-Jones Co., Brookfield, Mass. Asphalt adhesive. 2,409,258; Oct. 15.

Dean, Russell T., Stamford, Conn., and V. L. King, Bound Brook, N. J., assignors to American Cyanamid Company, New York, N. Y. Preparation of nicotinic acid. 2,409,345; Oct. 15.

Debacher, Max O., Springfield, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo. Plasticized polyvinyl acetal. 2,409,548; Oct. 15.

Deere & Company, assignee: *See*—
Silver, Walter H.

Deering, Roland F.: *See*—
Doumani, Thomas F., and Deery.

Deery, Roland: *See*—
Doumani, Thomas F., and Deery.

Delamere Company, Inc., assignee: *See*—
David, Raymond C.

De Lancey, Warren H., Springfield, assignor to Gilbert & Barker Manufacturing Company, West Springfield, Mass. Fluid supply apparatus for burners. 2,409,477; Oct. 15.

Denison Engineering Company, The, assignee: *See*—
Blasutta, Victor V.

Dennison Manufacturing Company, assignee: *See*—
Hastings, Dana B.

Dickow, Frederick P., Chicago, Ill., assignor to International Harvester Company. Feeder for balers. 2,409,478; Oct. 15.

Dickson, Wilbur R., Columbus, Ohio, assignor, by mesne assignments, to The Jeffrey Manufacturing Company. Material handling mechanism. 2,409,346; Oct. 15.

Di-Noc Manufacturing Company, The, assignee: *See*—
Heinecke William and F.

Djidics, Alexander, Tamaqua, Pa., assignor to Atlas Powder Company, Wilmington, Del. Blasting cap crimper. 2,409,549; Oct. 15.

Dobkowski, Matthew, Detroit, Mich. Electrode for spot welding. 2,409,550; Oct. 15.

Doig, John C., assignee, et al.: *See*—
Banks, Joseph L.

Donnellan, Maurice L., Ypsilanti, Mich. Aircraft propulsion. 2,409,551; Oct. 15.

Donnellan, Maurice L., Ypsilanti, Mich. Aircraft propulsion device. 2,409,552; Oct. 15.

Dootson, Norman L., San Francisco, Calif. Dial calendar. 2,409,347; Oct. 15.

Douglas Aircraft Company, Inc., assignee: *See*—
Chris, Stephen J.
Rogers, Allan B., Sr.

Doumani, Thomas F., Wilmington, and R. Deery, Long Beach, now by judicial change of name to R. F. Deering, assignors to Union Oil Company of California, Los Angeles, Calif. Preparation of conjugated dienes. 2,409,259; Oct. 15.

D'Ouville, Edmond L., and B. L. Evering, assignors to Standard Oil Company, Chicago, Ill. Butane isomerization. 2,409,260; Oct. 15.

Dow Chemical Company, The, assignee: *See*—
Wiley, Ralph M.

Dow, Raymond, Flushing, N. Y. Wound closing device. 2,409,261; Oct. 15.

Drake, Harcourt C., Hempstead, N. Y., assignor to Sperry Products, Inc., Hoboken, N. J. Rail flaw detector mechanism. 2,409,553; Oct. 15.

Drake, Harcourt C., Hampstead, N. Y., assignor to Sperry Products, Inc., Hoboken, N. J. Flaw detector for tubing. 2,409,554; Oct. 15.

Dufault, Homer D., Easthampton, assignor to Heatbath Corporation, Indian Orchard, Mass. Reinforced gas burner. 2,409,421; Oct. 15.

Du Mont, Allen B., Laboratories, Inc., assignee: *See*—
Christaldi, Peter S.

Dunlop, James, Ridgewood, N. J., assignor, by mesne assignments, to Westinghouse Electric Corporation, East Pittsburgh, Pa. Elevator control system. 2,409,198; Oct. 15.

Dunlop, James, Ridgewood, N. J., assignor, by mesne assignments, to Westinghouse Electric Corporation, East Pittsburgh, Pa. Elevator control system. 2,409,199; Oct. 15.

Du Pont, E. I., de Nemours & Company, assignee: *See*—
Cline, Edward T.
Green, Howard D., and Hendrixson.
Hanford, William E., and Rigby.
Leonard, James W.
Rigby, George W., and Schroeder.

Eastman Kodak Company, assignee: *See*—
Brooker, Leslie G. S., and Cressman.

Egan, Francis A., Mount Lebanon, assignor to Superior Steel Corporation, Pittsburgh, Pa. Treatment of bimetallic billets. 2,409,422; Oct. 15.

Eisler, Charles, South Orange, N. J. Driving means for glass forming machines. 2,409,423; Oct. 15.

Elastic Stop Nut Corporation, of America, assignee: *See*—
Johnson, John E.

Eldred, Andrew J., Grosse Pointe Farms, assignor to Autopulse Corporation, Detroit, Mich. Manifold assembly. 2,409,262; Oct. 15.

Electric and Musical Industries Limited, assignee: *See*—
Bull, Cabot S.

Elkins, Hervey B.: *See*—
Finkelstein, Leo.

Evans, Lewis W., Pittsfield, Mass., assignor to General Electric Company. Electrical connector. 2,409,200; Oct. 15.

Evans, Louis P.: *See*—
Simpson, Thomas P., Payne, and Evans.

Evans, William I., Los Angeles, Calif. Convertible appliance stand and service table. 2,409,348; Oct. 15.

Evering, Bernard L.: *See*—
D'Ouville, Edmond L., and Evering.

Ewing, Frederick J., Pasadena, and R. A. Lovett, East Los Angeles, assignors to Filtrol Corporation, Los Angeles, Calif. Desiccant. 2,409,263; Oct. 15.

Ex-Cell-O Corporation: *See*—
Russell, George L.

Falk, Morris, Leominster, assignor to Independent Lock Company, Fitchburg, Mass. Laminated lock. 2,409,424; Oct. 15.

Falkenberg, Douglas R., Lakewood, Ohio. Drapery mounting. 2,409,425; Oct. 15.

Feldhausen, Cyril P., Wauwatosa, assignor to Cutler-Hammer, Inc., Milwaukee, Wis. Motor controller. 2,409,264; Oct. 15.

Feldman, Hugo, Birmingham, England. Binder for stationery sheets. 2,409,426; Oct. 15.

Fenton, George D., Worcester, Mass., assignor to The American Steel and Wire Company of New Jersey. Classifier. 2,409,265; Oct. 15.

Filtrol Corporation, assignee: *See*—
Ewing, Frederick J., and Lovett.

Finkelstein, Leo, Aberdeen, Md., and H. B. Elkins, U. S Army. Smoke-producing mixture. 2,409,201; Oct. 15

First National Bank in Bartlesville, executor: *See*—
Crites, Wilbur J.

Fisher, Ernest F., assignor to Whiting Corporation, Harvey, Ill. Grinding and polishing booth. 2,409,479; Oct. 15.

Fleer, Harry H., assignor to Gem City Pattern Co., Quincy, Ill. Automatic check and draft control for stoves. 2,409,480; Oct. 15.

Focht, Nevin S., Syracuse, N. Y. Hydraulic shock absorber. 2,409,349; Oct. 15.

Fomberg, Zygmunt, New York, N. Y. Equilibrated rocket shell. 2,409,427; Oct. 15.

Fordham, Thomas B., and T. W. Moore, Dayton, Ohio. Combined hearing aid and radio receiving set. 2,409,481; Oct. 15.

Forrest, Mark L., Leavenworth, Wash. Internal-combustion engine. 2,409,350; Oct. 15.

Forrester, Jay W.: *See*—
Brown, Gordon S., and Forrester.

Fourè, Jacques: *See*—
Gadoux, Eugéne M., and Fourè.

Fowler, Victor M., Spokane, Wash. Ladder. 2,409,266; Oct. 15.

Francis, Oliver T., Renville, Minn. Electronic ignition system. 2,409,202; Oct. 15.

Fuchs, Charles F.: *See*—
Kharasch, Morris S., and Fuchs.

Furgal, Frank L., Dover, N. H. Lug strap and power stick for looms. 2,409,482; Oct. 15.

Gadoux, Eugéne M., Cormeilles-en-Parisis, and J. Fourè, Paris, France. Piston engine. 2,409,555; Oct. 15.

Gale, James A., New York, N. Y. Sheet slitting device. 2,409,203; Oct. 15.

Gall, James E., Washington, D. C. Shaft locking device. 2,409,204; Oct. 15.

Galloway, Clarence T.: *See*—
Barker, Paul F., Hartman, Galloway, and Kunes.

Gandelot, Howard K., Grosse Pointe, assignor to General Motors Corporation, Detroit, Mich. Electric switch. 2,409,483; Oct. 15.

Gardner, Daniel, New York, N. Y., assignor to Virginia Metal Industries, Inc. Treating iron ores containing chromium and related oxides. 2,409,428; Oct. 15.

Gatke, Thomas L., Oak Park, Ill. Bearing stave and making same. 2,409,267; Oct. 15.

Gauthier, Armand J.: *See*—
Davis, Lewis, and Gauthier.

Gauthier, Marcel C., Montclair, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Supporting apparatus. 2,409,484; Oct. 15.

Gearhart, Ishmael H., Salem, Va. Stitch picker. 2,409,351; Oct. 15.

Gem City Pattern Co., assignee: *See*—
Fleer, Harry H.

General Controls Co., assignee: *See*—
Ray, William A.

General Electric Company, assignee: *See*—
Butler, William L.
Evans, Lewis W.
Jones, Benjamin W.
Kettlewell, Eric.
Linville, Thomas M.

General Machinery Corporation, assignee: *See*—
Lewis, Frank M.

General Motors Corporation, assignee: *See*—
Gandelot, Howard K.
Jacobs, James W.
Leland, Robert W.
Marvin, John T., and Koehring.
Patch, Earl S., and Moore.
Spicacci, Attilio R.

Geophysical Development Corporation, assignee: *See*—
Krasnow, Shelley, and Curtiss.

George, Ralph W., Riverhead, N. Y., assignor to Radio Corporation of America. Filter. 2,409,556; Oct. 15.

Gerlich, Stephen, Chicago, Ill. Shoe rack. 2,409,268; Oct. 15.

Gersohn, William, Yonkers, N. Y. Collapsible garment hanger. 2,409,269; Oct. 15.

Gilbert & Barker Manufacturing Company, assignee: *See*—
De Lancey, Warren H.
Logan, Joseph A.

Gilfillan, Henry W., Detroit, and E. L. Bailey, Birmingham, assignors to Chrysler Corporation, Highland Park, Mich. Power transmission. 2,409,557; Oct. 15.

Gill, Ray H., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Rivet. 2,409,352; Oct. 15.

Gillette Safety Razor Company, assignee: *See*—
Testi, Nicholas.

Giuliani, Chester J., and C. H. Angell, assignors to Universal Oil Products Company, Chicago, Ill. Conversion of hydrocarbons. 2,409,353; Oct. 15.

Glasberg, Myer M.: *See*—
Bernheim, Daniel P., and Glasberg.

Gleason Works, assignee: *See*—
Barker, Paul F., Hartman, Galloway, and Kunes.

Glessner, Milton O., Salina, Kans. Handling granular materials. 2,409,270; Oct. 15.

Goldowski, Natacha, assignor to Welding Research, Inc., Chicago, Ill. Cleaning aluminum. 2,409,271; Oct. 15.

Goodlass Wall & Lead Industries Limited, assignee: *See*—
Butcher William T., and Lloyd.

Goodrich, B. F., Company, The, assignee: *See*—
Gill, Ray H.
Hunter, Willson H.
Krotz, Alvin S.
Leguillon, Charles W.
Leguillon, Charles W., and Krotz.
Leguillon, Charles W., and Krupp.

Graumann, Raymond L., Alexandria, Va. Bomb fuse. 2,409,205; Oct. 15.

Green, Donald W., trustee, assignee: *See*—
McGill, Daniel F.

Green, Howard D., Pasadena, Calif., and P. R. Hendrixson, Moundsville, W. Va., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Production of hydrocyanic acid. 2,409,429; Oct. 15.

Greenleaf, Carroll V., Edmonds, Wash. Flow indicator for pipe lines. 2,409,430; Oct. 15.

Gregor, Edmund L.: *See*—
Hagen, John A., Gregor, and Prendergast.

Grunwell, Alfred M., Washington, D. C. Gas mask carrier pocket attachment for firemen's coats. 2,409,354; Oct. 15.

Gunn, Robert D., Cleveland, Ohio, assignor to Aluminum Company of America, Pittsburgh, Pa. Treatment of gas. 2,409,558; Oct. 15.

Guthrie, James M., Allison Park, assignor to F. S. Bloom, Pittsburgh, Pa. Industrial furnace and firing apparatus. 2,409,272; Oct. 15.

Hagen, John A., Glen Rock, E. L. Gregor, Ramsey, and L. Prendergast, assignors to Molded Latex Products, Inc., Passaic, N. J. Making balloons. 2,409,486; Oct. 15.

Haight, Norman L., assignor to Sperry Products, Inc., Hoboken, N. J. Data transmitter. 2,409,559; Oct. 15.

Haight, Norman L., assignor to Sperry Products, Inc., Hoboken, N. J. Data transmitter. 2,409,560; Oct. 15.

Hamilton, Clarence R., Roseville, J. King, Glendale, Calif., and J. D. Baker, Winnetka, Ill., assignors to Johns-Manville Corporation, New York, N. Y. Refrigerator car drip pan. 2,409,273; Oct. 15.

Hanford, William E., Easton, Pa., and G. W. Rigby, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Polyfluoro organic ethers and their preparation. 2,409,274; Oct. 15.

Harris, Benjamin R., Chicago, Ill. Chemical compounds and producing same. 2,409,275; Oct. 15.

Harris, Thaddeus S., Waverly, Ill. Automatic control valve for jet. 2,409,561; Oct. 15.

Hartford-Empire Company, assignee: *See*—
Merrill, Donald G.

Hartman, Herbert G.: *See*—
Barker, Paul F., Hartman, Galloway, and Kunes.

Harvel Research Corporation, assignee: *See*—
Harvey, Mortimer T.

Harvey, Mortimer T., East Orange, N. J., assignor to Harvel Research Corporation. Compositions comprising blown terpenic products and vinyl polymers and making. 2,409,276; Oct. 15.

Harvey, Mortimer T., South Orange, N. J., assignor to The Harvel Corporation. Plasticized polychloroprene. 2,409,277; Oct. 15.

Hastings, Dana B., assignor to Dennison Manufacturing Company, Framingham, Mass. Paper parachute. 2,409,562; Oct. 15.

Heatbath Corporation, assignee: *See*—
Dufault, Homer D.

Hedberg, Carl W. J., Bound Brook, N. J., assignor to Research Corporation, New York, N. Y. Air cleaning plant. 2,409,563; Oct. 15.

Hedges, Lee M., Somerville, N. J., assignor to Johns-Manville Corporation, New York, N. Y. Filter. 2,409,278; Oct. 15.

Heinecke, Frieda: *See*—
Heinecke, William and F.

Heinecke, William and F., Verona, N. J., assignors to The Di-Noc Manufacturing Company, Cleveland, Ohio. Transfer material. 2,409,564; Oct. 15.

Hendrixson, Philip R.: *See*—
Green, Howard D., and Hendrixson.

Herold, Edward W., Kingston, N. J., assignor to Radio Corporation of America. Electron discharge device. 2,409,485; Oct. 15.

Hess, Frederic O., Germantown, Pa., assignor to Selas Corporation of America. Heating work. 2,409,431; Oct. 15.

Hessman, William E., Luckey, Ohio, assignor to National Gypsum Company, Buffalo, N. Y. Method and apparatus for calcining materials. 2,409,206; Oct. 15.

Heys, George H., administrator: *See*—
Cantley, Joseph C., and Pym.

Hilger, Henry M., Fort Wayne, Ind. Teeter-go-round. 2,409,487; Oct. 15.

Hiller, Abe, assignor of one-third to J. G. Lichtig, and one-third to M. Hiller, Milwaukee, Wis. Refrigeration apparatus. 2,409,279; Oct. 15.

Hiller, Max, assignee, et al.: *See*—
Hiller, Abe.

Hoe, R., & Co., Inc., assignee: *See*—
Braunworth, Albert.

Hohwart, Ernest F., Detroit, assignor to N. A. Woodworth Company, Ferndale, Mich. Comparator. 2,409,280; Oct. 15.

Holdsworth, Willie, Seekonk, Mass. Gill bar or faller for gill-drawing machines. 2,409,565; Oct. 15.

Holdsworth, Willie, Seekonk, Mass. Machine for producing staple fibers from slivers composed of continuous fibers. 2,409,566; Oct. 15.

Hollenkamp, Theodore J., Detroit, Mich. Extended end connection. 2,409,207; Oct. 15.

Holsclaw, Neil, Los Angeles, Calif., assignor of one-half to F. E. Sudlow, Rock Island, Ill. Tonsorial device. 2,409,281; Oct. 15.

Holst, Paul F. G., and L. R. Kirkwood, Oaklyn, N. J., assignors to Radio Corporation of America. Signaling system. 2,409,208; Oct. 15.

Homrighous, John H., Oak Park, Ill. Facsimile communication system. 2,409,488; Oct. 15.

Hopkins, Nevil M., deceased, New York, N. Y.; R. B. Hopkins, executor, assignor, by mesne assignments, to R. B. Hopkins, S. Lloyd, and M. T. Quigg, as trustees. Dual-purpose aerial bomb. 2,409,282; Oct. 15.

Hopkins, Raymonde B., executor: *See*—

Johnson, Melvin M., Jr.

Jolly, Carl H., U. S. Navy. Rocket launching device. 2,409,210; Oct. 15.

Jones, Benjamin W., Schenectady, N. Y., assignor to General Electric Company. Thermal time sequencing control system. 2,409,492; Oct. 15.

Jones, Edward L., Greenville, S. C. Game board. 2,409,493; Oct. 15.

Joyce, William J., Sturbridge, assignor to American Optical Company, Southbridge, Mass. Eye protective means. 2,409,286; Oct. 15.

K-D Lamp Company, The, assignee: *See*—
Trautner, Wagn.

Kaiser Fleetwings, Inc., assignee: *See*—
Wood, Robert W.

Källe, Karl T., Saffle, Sweden. Device for removing particle deposits from gas purifying apparatus associated with gas generators. 2,409,211; Oct. 15.

Kaplan, Jacob J., Boston, Mass. Automatic recording apparatus. 2,409,358; Oct. 15.

Kaul, Richard D., Fairfield, assignor to The Sealand Corporation, Southport, Conn. Thermoresponsive cable. 2,409,359; Oct. 15.

Kautz, Frederick, Philadelphia, Pa. Structural member. 2,409,212; Oct. 15.

Kawneer Company, The, assignee: *See*—
Peterson, Victor E.

Keating, George H., Port Arthur, Tex., assignor to The Texas Company, New York, N. Y. Catalyst manufacture. 2,409,494; Oct. 15.

Kelley, Charles F., Chicago, Ill. Table. 2,409,495; Oct. 15.

Kelley, Theron R., Springfield, Ohio, assignor to The National Supply Company, Pittsburgh, Pa. Exhaust gas deflector for internal-combustion engines. 2,409,496; Oct. 15.

Kellogg, M. W., Company, The, assignee: *See*—
Creelman, George D., and Crowther.

Kellogg, Spencer, 2nd: *See*—
Braddon, Frederick D., and Kellogg.

Kessel, Johannes B., assignor to G. B. Von Kessel, Chicago, Ill. Juice extractor. 2,409,497; Oct. 15.

Keston, Albert S., New York, N. Y. Geiger-Müller counter. 2,409,498; Oct. 15.

Ketay, Morris F., and M. Sherman, Brooklyn, N. Y., assignor to Bendix Aviation Corporation, Teterboro, N. J. Indicating mechanism. 2,409,435; Oct. 15.

Kettlewell, Eric, Kingsbury, London, England, assignor to General Electric Company. Seal structure for electric lamps and similar devices. 2,409,360; Oct. 15.

Kettlewell, Eric, Kingsbury, London, England, assignor to General Electric Company. Seal for electric lamps and similar devices. 2,409,361; Oct. 15.

Kharasch, Morris S., and C. F. Fuchs, Chicago, Ill., assignor to Eli Lilly & Company, Indianapolis, Ind. Unsaturated amines and making same. 2,409,287; Oct. 15.

Kilgore, George R., Verona, N. J., assignor to Radio Corporation of America. Beam deflection electron discharge device. 2,409,499; Oct. 15.

Kilgore, Lee A., Wilkinsburg, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Damping for electrical machines. 2,409,213; Oct. 15.

Kimball, Donald E., 2nd: *See*—
Patience, William M., and Kimball.

King, James: *See*—
Hamilton, Clarence R., King, and Baker.

King, Victor L.: *See*—
Dean, Russell T., and King.

Kirkwood, Loren R.: *See*—
Holst, Paul F. G., and Kirkwood.

Kleinmann, Max, assignor to American Safety Razor Corporation, Brooklyn, N. Y. Package. 2,409,362; Oct. 15.

Kneissler, Walter: *See*—
Brifl, Aron, and Kneissler.

Koehring, Roland P.: *See*—
Marvin, John T., and Koehring.

Kramer, Tobias, Brooklyn, N. Y. Tie rack. 2,409,570; Oct. 15.

Krasnow, Shelley, New York, N. Y., and L. F. Curtiss, Montgomery County, Md., assignors to Geophysical Development Corporation, Washington, D. C. Method and apparatus for direct recording of borehole radioactivity. 2,409,436; Oct. 15.

Kratky, Anton, New York, N. Y. Grinding and polishing tool. 2,409,363; Oct. 15.

Krotz, Alvin S.: *See*—
Leguillon, Charles W., and Krotz.

Krotz, Alvin S., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Spring. 2,409,500; Oct. 15.

Krotz, Alvin S., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Vehicle suspension. 2,409,501; Oct. 15.

Krupp, Carroll P.: *See*—
Leguillon, Charles W., and Krupp.

Kuder, Milton L.: *See*—
Smith, Carl H., Jr.

Kunes, Bernard M.: *See*—
Barker, Paul F., Hartman, Galloway, and Kunes.

Kurtz, Henry F., Rochester, and R. G. Morrison, Greece, assignors to Bausch & Lomb Optical Company, Rochester, N. Y. Optical instrument. 2,409,364; Oct. 15.

La Crosse, Clifford G., Baltimore, Md. Compounding material for rubber and rubber substitutes. 2,409,437; Oct. 15.

Lamb, Thomas, New York, N. Y. Crutch. 2,409,365; Oct. 15.

Landrum, Porter, Birmingham, Ala. Aircraft propeller. 2,409,438; Oct. 15.

Lang, Felix E., Sayreville, N. J. Frame structure. 2,409,366; Oct. 15.

Law, Thomas E., Central Heights Globe, Ariz. Wind power plant. 2,409,439; Oct. 15.

Lebworth, Mark K.: *See*—
Mautner, Oscar, and Lebworth.

Lee, Ernest D., West Englewood, N. J., assignor to Interchemical Corporation, New York, N. Y. Intaglio ink. 2,409,214; Oct. 15.

Lee, Ernest D., West Englewood, N. J., assignor to Interchemical Corporation, New York, N. Y. Printing ink. 2,409,215; Oct. 15.

Lee, Ernest D., West Englewood, N. J., assignor to Interchemical Corporation, New York, N. Y. Refining resin. 2,409,216; Oct. 15.

Leguillon, Charles W., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Apparatus for splicing rubberlike materials. 2,409,571; Oct. 15.

Leguillon, Charles W., and C. P. Krupp, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y. Protective clothing. 2,409,367; Oct. 15.

Leguillon, Charles W., and A. H. Krotz, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y. Track for self-laying track type vehicle. 2,409,502; Oct. 15.

Leland, Robert W., Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich. Actuator seal. 2,409,288; Oct. 15.

Leonard, James W., Westfield, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Manufacture of sulphamic acid. 2,409,572; Oct. 15.

Lessin, Maurice E., New York, N. Y., assignor to Minnesota Mining & Manufacturing Company, St. Paul, Minn. Adhesive tape dispenser. 2,409,217; Oct. 15.

Levaggi, Albert F., Brockton, assignor to Robert Channing Company, East Bridgewater, Mass. Shoe tree. 2,409,573; Oct. 15.

Leverenz, Humboldt W., South Orange, N. J., assignor to Radio Corporation of America. Luminescent material and manufacture. 2,409,574; Oct. 15.

Leverenz, Humboldt W., South Orange, N. J., assignor to Radio Corporation of America. Alkali halide screen and manufacture. 2,409,606; Oct. 15.

Levin, Carl A., and O. A. Lorenz, assignors to Teletype Corporation, Chicago, Ill. Plug separator. 2,409,289; Oct. 15.

Lewis, Frank M., Weston, Mass., assignor to General Machinery Corporation, Hamilton, Ohio. Strain relieving and dephasing stop means for free piston engines. 2,409,218; Oct. 15.

Lichtig, Jack G., assignee, et al.: *See*—
Hiller, Abe.

Lilly, Eli, & Company, assignee: *See*—
Kharasch, Morris S., and Fuchs.

Linville, Thomas M., Schenectady, N. Y., assignor to General Electric Company. Dynamoelectric machine. 2,409,503; Oct. 15.

Lipp, Rudolf W., Berlin-Pankow, Germany; vested in the Alien Property Custodian. Tool guiding device. 2,409,290; Oct. 15.

Lipton, Morris, Rutherford, N. J., assignor to Sun Chemical Corporation. Combined printing press and conveyer means. 2,409,368; Oct. 15.

Lloyd, Arnold: *See*—
Butcher, William T., and Lloyd.

Lloyd, Samuel, trustee, assignee, et al.: *See*—
Hopkins, Nevil M.

Lo Curto, Anthony R., Brooklyn, N. Y. Ear ornament. 2,409,369; Oct. 15.

Logan, Joseph A., Hadley, assignor to Gilbert & Barker Manufacturing Company, West Springfield, Mass. Oil burner. 2,409,504; Oct. 15.

Lorenz, Otto A.: *See*—
Levin, Carl A., and Lorenz.

Lott, William A., Maplewood, and R. Van Winkle, Highland Park, N. J., assignors to E. R. Squibb & Sons, New York, N. Y. Chemotherapeutic sulphanilamide derivatives. 2,409,291; Oct. 15.

Lovett, Roger A.: *See*—
Ewing, Frederick J., and Lovett.

Lowe, Russell E.: *See*—
Morgan, John D., and Lowe.

Macalaster Bicknell Company, assignee: *See*—
Curtis, Raymond M.

MacGregor, Wallace F., deceased; R. D. Miller, special administrator, assignor to J. I. Case Company, Racine, Wis. Stationary concave screen. 2,409,292; Oct. 15.

Magrum, Gervase M., Buffalo, N. Y., assignor to Houdaille-Hershey Corporation, Detroit, Mich. Hydraulic shock absorber piston and cylinder construction. 2,409,505; Oct. 15.

Manson, Frank G., Chicago, Ill., and J. J. Maskey, Ferndale, Mich. Fabric. 2,409,370; Oct. 15.

Margrave, Wilton: *See*—
Melichar, Joseph F., and Margrave.

Marker, Russell E., Mexico City, Mexico, assignor to Parke, Davis & Company, Detroit, Mich. Hormone intermediates and preparation of same. 2,409,293; Oct. 15.

Markey, Roscoe I., Montclair, assignor to Pollak Manufacturing Company, Arlington, N. J. Bomb releasing shackle. 2,409,575; Oct. 15.

Markey, Roscoe I., Montclair, assignor to Pollak Manufacturing Company, Arlington, N. J. Joint band for exhaust manifold systems. 2,409,576; Oct. 15.

Marley Company, Inc., The, assignee: *See*—
Mart, Leon T.

Mart, Leon T., Mission Township, Johnson County, assignor to The Marley Company, Inc., Kansas City, Kans. Multipart distribution nozzle. 2,409,371; Oct. 15.

Martin, Charles L., Overland, assignor to Carter Carburetor Corporation, St. Louis, Mo. Passage plug. 2,409,294; Oct. 15.

Martin, Glenn L., Company, The, assignee: *See*—
Black, John B.
Piper, Paul A.
Von Stackelberg, Yurgen Z.

Marvin, John T., and R. P. Koehring, Dayton, Ohio, assignors to General Motors Corporation, Detroit, Mich. Porous metal article. 2,409,295; Oct. 15.

Maskey, James J.: *See*—
Manson, Frank G.

Matson, Leslie E., Jr., Merchantville, N. J., assignor to Radio Corporation of America. Synchronized blocking oscillator. 2,409,577; Oct. 15.

Matuszak, Maryan P., Bartlesville, Okla., assignor to Phillips Petroleum Company. Removal of organic fluorine. 2,409,372; Oct. 15.

Mautner, Oscar, Crestwood, and M. K. Lebworth, New York, N. Y. Gameboard device. 2,409,373; Oct. 15.

Maxwell, Albert A. F., trustee, assignee: *See*—
Ramage, Alexander S.

Maxwell, Carl A., Akron, Ohio, assignor to The Babcock & Wilcox Company, Rockleigh, N. J. Tube expanding. 2,409,219; Oct. 15.

McClain, Waite, Canton, Ohio. Rivet sorting machine. 2,409,440; Oct. 15.

McCleary, Rush F.: *See*—
Morris, John R., and McCleary.

McCleary, Rush F., Beacon, assignor to The Texas Company, New York, N. Y. Lubricants. 2,409,296; Oct. 15.

McDonald, Andrew J., Philadelphia, Pa. Boring machine. 2,409,578; Oct. 15.

McFarland, Forest R., Huntington Woods, assignor to Packard Motor Car Company, Detroit, Mich. Drive mechanism. 2,409,506; Oct. 15.

McGarvey, Alan R., Manheim Township, Lancaster County, assignor to Armstrong Cork Company, Lancaster, Pa. Producing molded basic magnesium carbonate. 2,409,297; Oct. 15.

McGill, Daniel F., assignor to D. W. Green, Portland, Oreg., as trustee. Fluid transmission mechanism. 2,409,374; Oct. 15.

McGuire, John S., Kansas City, Kans., assignor to C. E. Hovey, Kansas City, Mo. Apparatus for contouring the ends of tubular stock. 2,409,375; Oct. 15.

McLaurin-Jones Co., assignee: *See*—
Davis, Lewis, and Gauthier.

Mekler, Lev A., Washington, D. C., assignor to Universal Oil Products Company, Chicago, Ill. Controlling the cooling of convective fluid streams. 2,409,376; Oct. 15.

Melichar, Joseph F., and W. Margrave, assignors to The Parker Appliance Company, Cleveland, Ohio. Sump selector valve. 2,409,220; Oct. 15.

Meneley, Carl A.: *See*—
Tolson, William A., and Meneley.

Mercer, William R.: *See*—
Sanders, Royden C., Jr., Mercer, and Blitz.

Merck & Co., Inc., assignee: *See*—
Becker, Harold J.
Tishler, Max.

Merrill, Donald G., West Hartford, assignor to Hartford-Empire Company, Hartford, Conn. Drier for decorated ware. 2,409,298; Oct. 15.

Messana, Joseph, Jr., assignor to The Jaeger Machine Company, Columbus, Ohio. Groove-forming attachment for machine tools. 2,409,299; Oct. 15.

Meston, Archibald F., Bound Brook, N. J., assignor to Research Corporation, New York, N. Y. Composite electrode. 2,409,579; Oct. 15.

Mettetal, Donald, Jr., Indianapolis, Ind. Automatic dirigible tandem wheel unit. 2,409,507; Oct. 15.

Metzger, Floyd J., assignor, by mesne assignments, to U. S. Industrials Chemicals, Inc., New York, N. Y. Production of glycols. 2,409,441; Oct. 15.

Miles, George S., Maywood, assignor to Bendix Aviation Corporation, Teterboro, N. J. Step-by-step follow-up and antihunt mechanism. 2,409,300; Oct. 15.

Miller, Carroll E., and D. H. Parker, assignors to Cone Automatic Machine Company Inc., Windsor, Vt. Cam cutting machine. 2,409,301; Oct. 15.

Miller, Edwin A., Fairfield, Conn. Push fastener. 2,409,508; Oct. 15.

Miller Pottery Engineering Company, assignee: *See*—
Miller, William J.

Miller, Richard D., special administrator: *See*—
MacGregor, Wallace F.

Miller, Wade E., assignor to Aircraft Tools, Inc., Los Angeles, Calif. Micrometer stop countersink. 2,409,377; Oct. 15.

Miller, William J., Swissvale, assignor to Miller Pottery Engineering Company, Swissvale, Pittsburgh, Pa. Puddling machine. 2,409,221; Oct. 15.

Millikin, Arnold S., assignor to The Jaeger Machine Company, Columbus, Ohio. Machine for lifting and stacking receptacles. 2,409,302; Oct. 15.

Minnesota Mining & Manufacturing Company, assignee: *See*—
Lessin, Maurice E.

Molded Latex Products, Inc., assignee: *See*—
Hagen, John A., Gregor, and Prendergast.

Monsanto Chemical Company, assignee: *See*—
Carswell, Thomas S.
Debacher, Max O.

Montgomery, William J., Warren, Ohio. Method and apparatus for cleaning furnace checkers and flues. 2,409,442; Oct. 15.

Thompson, Harry H., and Moore.

Moore, Thomas W.: *See*—
Fordham, Thomas B., and Moore.

Moore, Wiley T.: *See*—
Patch, Earl S., and Moore.

Morgan, John D., South Orange, and R. E. Lowe, East Orange, N. J., assignors to Cities Service Oil Company, New York, N. Y. Instrument lubricant. 2,409,443; Oct. 15.

Morgan, John D., South Orange, and R. E. Lowe, East Orange, N. J., assignors to Cities Service Oil Company, New York, N. Y. Clock lubricant. 2,409,444; Oct. 15.

Morgan, Milton F., Shaker Heights, Ohio. Feeding method and apparatus. 2,409,378; Oct. 15.

Morris, John R., Lawrenceville, Ill., and R. F. McCleary, Beacon, assignors to The Texas Company, New York, N. Y. Lubricating oil. 2,409,303; Oct. 15.

Morrison, Joseph I., Lincolnwood, Ill. Compressible core for cooling pipes. 2,409,304; Oct. 15.

Morrison, Robert G.: *See*—
Kurtz, Henry F., and Morrison.

Morton, Jack A., Upper Montclair, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Electron discharge device. 2,409,222; Oct. 15.

Mosaly, Earl M., Eagle Rock, Calif. Clothespin. 2,409,379; Oct. 15.

Mosseller, Lillian M., New York, N. Y. Rug. 2,409,580; Oct. 15.

Mott, Carl W., La Grange, Ill., assignor to International Harvester Company. Tractor-mounted implement. 2,409,509; Oct. 15.

Mott, Carl W., La Grange, Ill., assignor to International Harvester Company. Power adjusting mechanism. 2,409,510; Oct. 15.

Mott, Carl W., La Grange, Ill., assignor to International Harvester Company. Overload release for rockable arms. 2,409,511; Oct. 15.

Muir, Wellington W., Lockport, N. Y. Heat control. 2,409,305; Oct. 15.

Mungo, Thomas A., New York, N. Y. Controlled electric water heater for hygienic use. 2,409,512; Oct. 15.

Munsingwear, Inc., assignee: *See*—
Chatfield, Franklin.

National Bank of Bloomington, The, executor: *See*—
Paxton John W.

National Gypsum Company, assignee: *See*—
Hessman, William.

National Supply Company, assignee: *See*—
Kelley, Theron R.

Navy, United States of America, as represented by the Secretary of the, assignee: *See*—
Nichols, Harry J.

Newman, Max M., New York, N. Y. Sewing machine needle. 2,409,445; Oct. 15.

Nichols, Harry J., Washington, D. C., assignor to the United States of America, as represented by the Secretary of the Navy. Spotting projectiles. 2,409,380; Oct. 15.

Nims, Paul T., and O. E. Bowlus, Detroit, assignors to Chrysler Corporation, Highland Park, Mich. Electrical control system. 2,409,581; Oct. 15.

North American Aviation, Inc., assignee: *See*—
Torresen, Carel T.

Northrop Aircraft, Inc., assignee: *See*—
Pavlecka, Vladimir H., and Northrop.

Northrop, John K.: *See*—
Pavlecka, Vladimir H., and Northrop.

Norton Company, assignee: *See*—
Silven, Herbert A.

Oil Devices, assignee: *See*—
Breese, James L.

O'Kelly, Arlie A.: *See*—
Brooks, John W., O'Kelly, and Work.

Beede, Harry L.
Bennett, Charles E.

Okonite Company, The, assignee: *See*—
Bennett, Charles E.
Brown, Grover W.

Olson, Samuel, Chicago, Ill. Backwater valve. 2,409,582; Oct. 15.

Osborn Manufacturing Company, The, assignee: *See*—
Peterson, Ruben O.

Pacific Flush Tank Company, assignee: *See*—
Platt, William M.

Packard Motor Car Company, assignee: *See*—
McFarland, Forest R.

Page, Albert E. and F. R., assignors to Scott & Williams, Incorporated, Laconia, N. H. Knitting machine. 2,409,306; Oct. 15.

Page, Frank R.: *See*—
Page, Albert E. and F. R.

Parke, Davis & Company, assignee: *See*—
Marker, Russell E.

Parker Appliance Company, The, assignee: *See*—
Melichar, Joseph F., and Margrave.
Parker, Arthur L.

Parker, Arthur L., deceased, by H. M. Parker, executrix, Shaker Heights, assignor to The Parker Appliance Company, Cleveland, Ohio. Sump selector valve. 2,409,223; Oct. 15.

Parker, Daniel H.: *See*—
Miller, Carroll E.

Parker, Helen M., executrix: *See*—
Parker, Arthur L.

Parker Stamp Works, Inc., The, assignee: *See*—
Wild, Edward, and Bitter.

Patch, Earl S., Dayton, Ohio, and W. T. Moore, Washington, D. C., assignors to General Motors Corporation, Detroit, Mich. Projectile. 2,409,307; Oct. 15.

Patience, William M., and D. E. Kimball, 2nd, assignors to Darling & Company, Chicago, Ill. Loading and unloading machine. 2,409,513; Oct. 15.

Pavlecka, Vladimir H., Pacific Palisades, and J. K. Northrop, Los Angeles, assignors to Northrop Aircraft, Inc., Hawthorne, Calif. Airplane power plant. 2,409,446; Oct. 15.

Paxton, Arlie L., executrix, et al.: *See*—
Paxton, John W.

Paxton, George N., assignee, et al.: *See*—
Paxton, John W.

Paxton, John W., assignor of one-third to G. N. Paxton, Bloomington, and one-third to I. R. Cornish, Elmhurst, A. L. Paxton and The National Bank of Bloomington, Bloomington, Ill., executors of said G. N. Paxton, deceased. Filing cabinet. 2,409,308; Oct. 15.

Payne, John W.: *See*—
Simpson, Thomas P., Payne, and Evans.

Pease, Benjamin F., Jr., Grafton, Mass. Garment lacing. 2,409,381; Oct. 15.

Peck, Edward B., Elizabeth, N. J., assignor, by mesne assignments, to Standard Catalytic Company. Aviation gasoline production. 2,409,382; Oct. 15.

Pedersen, Axel V., Los Angeles, Calif. Frame structure. 2,409,383; Oct. 15.

Peerless Tool and Engineering Company, assignee: *See*—
Andresen, Raymond H.

Perkins, Theodore B., West Orange, N. J., assignor to Radio Corporation of America. Voltage doubler and timer circuit. 2,409,583; Oct. 15.

Perri, Angelo, Groveland, assignor to Allied Shoe Machinery Corp., Haverhill, Mass. Relasting machine. 2,409,447; Oct. 15.

Peterman, William W., Wilkes-Barre, Pa. Card game. 2,409,584; Oct. 15.

Peterson, Ruben O., University Heights, assignor to The Osborn Manufacturing Company, Cleveland, Ohio. Rotary brush. 2,409,309; Oct. 15.

Peterson, Victor E., assignor to The Kawneer Company, Niles, Mich. Preparing aluminum alloys for heat treatment. 2,409,384; Oct. 15.

Pezzaglia, Philip: *See*—
Ross, William E., and Pezzaglia.

Philco Corporation, assignee: *See*—
Clapp, Richard G.
Stephan, Ingo L.
Tiley, John W.

Phillips Petroleum Company, assignee: *See*—
Crites, Wilbur J.
Matuszak, Maryan P.
Ringham, Clarence R.

Platt, William M., Durham, N. C., assignor to Pacific Flush Tank Company, Chicago, Ill. Supernatant selector device for sludge digestion tanks. 2,409,585; Oct. 15.

Piper, Paul A., Towson, assignor to The Glenn L. Martin Company, Middle River, Md. Weight and balance indicator. 2,409,310; Oct. 15.

Platter, Edgar, Albuquerque, N. Mex. Saw set. 2,409,311; Oct. 15.

Pletcher, Clarence B., assignee: *See*—
Pletcher, Lloyd H.

Pletcher, Lloyd H., assignor of forty per cent to Clarence B. Pletcher, Buchanan, Mich. Coupling. 2,409,385; Oct. 15.

Pollak Manufacturing Company, assignee: *See*—
Markey, Roscoe I.

Powell, Winfred T., assignor to Stromberg-Carlson Company, Rochester, N. Y. Automatic telephone system. 2,409,586; Oct. 15.

Pratt, George W., Lancaster, Pa., assignor to Radio Corporation of America. Cathode ray tube. 2,409,514; Oct. 15.

Prendergast, Laurence: *See*—
Hagen, John A., Gregor, and Prendergast.

Pridonoff, Eric L., Alhambra, and A. J. Schneider, Pasadena, assignors to Aerojet Engineering Corporation, Azusa, Calif. Producing nitrogen from internal-combustion engine exhaust gases. 2,409,386; Oct. 15.

Pull, Burnard T.: *See*—
Ward, George C., and Pull.

Ramage, Alexander S., assignor to A. A. F. Maxwell, Detroit, Mich., as trustee. Combination hydrocarbon dehydrogenation and hydrogenation process. 2,409,587; Oct. 15.

Rambold, Adolf, Dresden, Germany; vested in the Alien Property Custodian. Bag with insoluble automatic fold closing. 2,409,314; Oct. 15.

Ray, William A., Los Angeles, Calif., assignor to General Controls Co. Control device. 2,409,387; Oct. 15.

Reed, Leland A., assignor to The Stromberg-Carlson Company, Rochester, N. Y. Telephone substation apparatus. 2,409,588; Oct. 15.

Rees, John P., Johannesburg, Transvaal, Union of South Africa. Conditioning the atmosphere in subterranean excavations. 2,409,388; Oct. 15.

Reeves, James B., Whitefish Bay, assignor to Cutler-Hammer, Inc., Milwaukee, Wis. Current regulator. 2,409,312; Oct. 15.

Research Corporation, assignee: *See*—
Hedberg, Carl W. J.
Meston, Archibald F.

Rettaliata, John T.: *See*—
Allen, Robert C., and Rettaliata.

Rice, Edward E., trustee, assignee: *See*—
Johnson, Melvin M., Jr.

Richardson, Martin A., assignor to J. I. Case Company, Racine, Wis. Vehicle draw bar. 2,409,313; Oct. 15.

Rigby, George W.: *See*—
Hanford, William E., and Rigby.

Rigby, George W., and H. E. Schroeder, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Fluoracetamides and their preparation. 2,409,315; Oct. 15.

Ringham, Clarence R., Oklahoma City, Okla., assignor to Phillips Petroleum Company. Alkylation process. 2,409,389; Oct. 15.

Rocheville, Harry D., Los Angeles, assignor to Consolidated Vultee Aircraft Corporation, San Diego, Calif. Rivet removing device. 2,409,589; Oct. 15.

Roe, Herbert J.: *See*—
Wood, David H., and Roe.

Rogers, Allan B., Sr., Santa Monica, Calif., assignor to Douglas Aircraft Company, Inc., Santa Monica, Calif. Removable and collapsible seating fixture. 2,409,316; Oct. 15.

Rogers, Clifford R., Oak Park, W. O. Bechman, Chicago, and J. F. Ziskal, Cicero, Ill., assignors to International Harvester Company. Clutch control. 2,409,515; Oct. 15.

Rósa, Laszlo, Budapest VIII, and I. Zakariás, Budapest VII, Hungary; vested in the Alien Property Custodian. Apparatus for the recording of slow processes. 2,409,317; Oct. 15.

Rosenthal, William C., and C. A. Hubert, Chicago, Ill., assignors to International Harvester Company. Implement attaching device. 2,409,516; Oct. 15.

Ross, William E., Berkeley, and P. Pezzaglia, Oakland, assignor to Shell Development Company, San Francisco, Calif. Simultaneously isomerizing and separating cycloparaffins from acyclic paraffins by means of an aluminum halide-hydrocarbon complex. 2,409,390; Oct. 15.

Rost, Helge F., Djursholm, K. H. Thunell, Nockeby, S. D. Vigren, Stockholm, and P. H. E. Claesson, Jakobsberg, Sweden. Self-tracking radio direction and distance device. 2,409,448; Oct. 15.

Rubin, Irving G., assignee, et al.: *See*—
Banks, Joseph L. R.

Rumpel, Harvey H., assignor to Smith Engineering Works, Milwaukee, Wis. Support and actuating structure for gyratory crusher heads. 2,409,391; Oct. 15.

Russell, George L., assignor to Ex-Cell-O Corporation, Detroit, Mich. Work holding means. 2,409,590; Oct. 15.

Saco-Lowell Shops, assignee: *See*—
Cotchett, Louis M.

Saddington, Arthur W., Syracuse, assignor to The Solvay Process Company, New York, N. Y. Manufacture of sodium sulphides. 2,409,392; Oct. 15.

Salzberg, Bernard, Washington, D. C., assignor to Radio Corporation of America. Electron discharge device and circuit. 2,409,591; Oct. 15.

Samuel, Arthur L., Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Oscillator. 2,409,224; Oct. 15.

Sandel, Emil J.: *See*—
Cox, George S., and Sandel.

Sanders, Royden C., Jr., and W. R. Mercer, Highstown, and D. Blitz, Princeton, N. J., assignors to Radio Corporation of America. Phase modulator. 2,409,449; Oct. 15.

Sardu, Anthony, Brooklyn, N. Y. Overcasting sewing machine. 2,409,592; Oct. 15.

Sassmanhausen, Lee C., Grosse Pointe Woods, Mich., assignor to Chrysler Corporation, Highland Park, Mich. Fluid coupling. 2,409,593; Oct. 15.

Schaffer, Leslie L., Vancouver, British Columbia, Canada. Fluid press. 2,409,393; Oct. 15.

Schaich, Wilbur A., Springfield, Mass. Gas system for firearms. 2,409,225; Oct. 15.

Schilling, J. L., Co., assignee: *See*—
Banks, Joseph L. R.

Schilling, Joseph L., assignee, et al.: *See*—
Banks, Joseph L. R.

Schlumbohm, Peter, New York, N. Y. Device for vacuum filtration. 2,409,226; Oct. 15.

Schmit, Louis D., Savanna, Ill. Valve construction. 2,409,517; Oct. 15.

Schnebelen, Paul A., Toledo, Ohio. Armature winder. 2,409,394; Oct. 15.

Schneider, Arthur J.: *See*—
Pridonoff, Eric L., and Schneider.

Schroeder, Herman E.: *See*—
Rigby, George W., and Schroeder.

Schwinn, Frank W., Chicago, Ill. Bicycle carrier. 2,409,395; Oct. 15.

Scott & Williams, Incorporated, assignee: *See*—
Page, Albert E. and F. R.

Sealand Corporation, The, assignee: *See*—
Kaul, Richard D.

Seiler, George, Chicago, Ill. Protective collar unit for refrigerating coils. 2,409,396; Oct. 15.

Selas Corporation of America, assignee: *See*—
Hess, Frederic O.

Sheehan, Edward F., and G. V. Hunt, Philadelphia, Pa. Safety cutoff for power operated hand tools. 2,409,397; Oct. 15.

Shell Development Company, assignee: *See*—
Ross, William E., and Pezzaglia.
Williams, Paul H.

Sherman, Louis H., Camden, N. J. Forming pedal appliances. 2,409,594; Oct. 15.

Sherman, Michael: *See*—
Ketay, Morris F., and Sherman.

Shield, Robert W., Chicago, Ill. Wringer. 2,409,595; Oct. 15.

Shockley, William, Gillette, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Ultra high frequency electronic device. 2,409,227; Oct. 15.

Shoemaker, Robert C., assignor to Hyster Company, Portland, Oreg. Truck loader. 2,409,398; Oct. 15.

Silven, Herbert A., assignor to Norton Company, Worcester, Mass. Grinding wheel spindle reciprocating mechanism. 2,409,450; Oct. 15.

Silver, Walter H., assignor to Deere & Company, Moline, Ill. Power lift. 2,409,228; Oct. 15.

Simpson, Thomas P., J. W. Payne, and L. P. Evans, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Method and apparatus for reactions in a contact mass. 2,409,596; Oct. 15.

Singer Manufacturing Company, The, assignee: *See*—
Becker, Rudolph.

Sivyer, Benjamin E., Whitefish Bay, assignor to Chain Belt Company, Milwaukee, Wis. Conveyer flight. 2,409,318; Oct. 15.

Smith, Carl H., Jr., Arlington, Va., and M. L. Kuder, Washington, D. C. Selector circuit. 2,409,229; Oct. 15.

Smith, Charles C., Cranford, and D. V. Waters, Flemington, N. J., assignors to Western Electric Company, Incorporated. Carrier structure. 2,409,518; Oct. 15.

Smith Engineering Works, assignee: *See*—
Rumpel, Harvey H.

Socony-Vacuum Oil Company, Incorporated, assignee: *See*—
Brooks, John W., O'Kelly, and Work.
Simpson, Thomas P., Payne, and Evans.

Solar Aircraft Company, assignee: *See*—
Conzelman, John E., Jr.

Solon, Alfred F., Oakland, Calif. Trailer hitch device. 2,409,399; Oct. 15.

Solvay Process Company, The, assignee: *See*—
Saddington, Arthur W.

Sonne, Frederick T., Golf, and V. Sussin, assignors to Chicago Aerial Survey Company, Chicago, Ill. Scanning camera. 2,409,597; Oct. 15.

Sound Scriber Corporation, The, assignee: *See*—
Thompson, Lincoln.

Speakman, John B., Far Headingley, Leeds, and N. H. Chamberlain, Headingley, Leeds, assignors to Cefoil Limited, Maidenhead, England. Production of fabrics from alginic materials. 2,409,319; Oct. 15.

Sperry Gyroscope Company, Inc., assignee: *See*—
Allison, Byron L., and Wong.
Braddon, Frederick D., and Kellogg.
Brown, Gordon S., and Forrester.

Sperry Products, Inc., assignee: *See*—
Drake, Harcourt C.
Haight, Norman L.

Spicacci, Attilio R., Bristol, Conn., assignor to General Motors Corporation, Detroit, Mich. Grinding of rollers. 2,409,320; Oct. 15.

Squibb, E. R., & Sons, assignee: *See*—
Bashour, Joseph T.
Lott, William A., and Van Winkle.

Standard Catalytic Company, assignee: *See*—
Peck, Edward B.

Standard Oil Company, assignee: *See*—
Arveson, Maurice H.
D'Ouville, Edmond L., and Evering.

Standard Oil Development Company, assignee: *See*—
Wright, Donald L., and Bohmer.

Standard Railway Equipment Manufacturing Company, assignee: *See*—
Swann, James S.

Stearns, Edison: *See*—
Armbruster, Frank, and Stearns.

Stephan, Ingo L., Delanco, N. J., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa. Cavity tuning device. 2,409,321; Oct. 15.

Steuerman, Marek, London, England. Air preheater for furnaces and the like. 2,409,451; Oct. 15.

Stone, Edmund J., New York, N. Y. Collapsible device. 2,409,452; Oct. 15.

Stromberg-Carlson Company, The, assignee: *See*—
Powell, Winfred T.
Reed, Leland A.

Stuck, Harold D., Andover, and W. W. Bolton, North Andover, assignors to John W. Bolton & Sons, Inc., Lawrence, Mass. Jordan engine lining. 2,409,453; Oct. 15.

Stuewe, Herbert A.: *See*—
Cannon, Edward J., and Stuewe.

Sudlow, Fred E., assignee: *See*—
Holsclaw, Neil.

Sun Chemical Corporation, assignee: *See*—
Lipton, Morris.

Superior Steel Corporation, assignee: *See*—
Egan, Francis A.

Sussin, Victor: *See*—
Sonne, Frederick T., and Sussin.

Swann, James S., Homewood, assignor to Standard Railway Equipment Manufacturing Company, Chicago, Ill. Coupler operating mechanism. 2,409,322; Oct. 15.

Swartzbaugh Manufacturing Company, The, assignee: *See*—
Baunach, Roy J.

Swazey, Edward S., assignor to Trimble Nurseryland Furniture, Inc., Rochester, N. Y. Portable play pen for children. 2,409,598; Oct. 15.

Tanner, Charles C., Widnes, England, assignor to Imperial Chemical Industries Limited. Sodium dispersion. 2,409,519; Oct. 15.

Taylor, Charles H., Springfield, Mass., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Suction cleaning apparatus. 2,409,230; Oct. 15.

Teletype Corporation, assignee: *See*—
Levin, Carl A., and Lorenz.

Telford, Andrew G., Aurora, Ill. Transfer device. 2,409,400; Oct. 15.

Testi, Nicholas, assignor to Gillette Safety Razor Company, Boston, Mass. Blade magazine. 2,409,401; Oct. 15.

Texas Company, The, assignee: *See*—
Atwell, Harold V.
Clarke, Louis A.
Keating, George H.
McCleary, Rush F.
Morris, John R., and McCleary.

Thomas, Albert G., Lynchburg, Va. Electronic device. 2,409,454; Oct. 15.

Thompson, Harry H., and D. V. Moore, assignors to Wingfoot Corporation, Akron, Ohio. Reclaiming. 2,409,402; Oct. 15.

Thompson, Lincoln, Cheshire, assignor to The Sound Scriber Corporation, New Haven, Conn. Two-amplifier recording and reproducing phonograph. 2,409,520; Oct. 15.

Thunell, Karl H.: *See*—
Rost, Helge F., Thunell, Vigren, and Glaesson.

Tiley, John W., assignor to Philco Corporation, Philadelphia, Pa. Coaxial line termination. 2,409,599; Oct. 15.

Tishler, Max, assignor to Merck & Co., Inc., Rahway, N. J. Tetraacetyl ribonic acid and making it. 2,409,455; Oct. 15.

Toledo Automatic Brush Machine Company, The, assignee: *See*—
Jobst, Conrad.

Tolson, William A., and C. A. Meneley, Princeton, N. J., assignors to Radio Corporation of America. Radiant energy locating system. 2,409,456; Oct. 15.

Torresen, Carel T., Santa Monica, assignor to North American Aviation, Inc., Inglewood, Calif. Aircraft power plant arrangement. 2,409,323; Oct. 15.

Trautner, Wagn, Hamilton, assignor to The K-D Lamp Company, Cincinnati, Ohio. Vehicle signal. 2,409,403; Oct. 15.

Trautschold, Reginald, Passaic, N. J., assignor to Curtiss-Wright Corporation. Roller arrangement for conducting electrical current. 2,409,600; Oct. 15.

Trimble Nurseryland Furniture, Inc., assignee: *See*—
Swazey, Edward S.

Trotter, John C., Williamsville, assignor to Bell Aircraft Corporation, Buffalo, N. Y. Shock absorbing gun mount. 2,409,404; Oct. 15.

Trotter, John C., Williamsville, assignor to Bell Aircraft Corporation, Buffalo, N. Y. Aircraft gun mount. 2,409,405; Oct. 15.

Trotter, John C., Burlington, Vt., assignor to Bell Aircraft Corporation, Buffalo, N. Y. Safety control mechanism for power-operated ordnance. 2,409,406; Oct. 15.

Truesdell, Virginia M., Los Angeles, Calif. Body garment. 2,409,601; Oct. 15.

Tucker, Theodore C.: *See*—
Adams, Arben H., and Tucker.

Turenchalk, Harry: *See*—
Turenchalk, John and H.

Turenchalk, John and H., Yonkers, N. Y. Automatic lubricator for tailstock centers. 2,409,324; Oct. 15.

Turner, Arthur F., Brighton, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y. Reflecting element for polarized light. 2,409,407; Oct. 15.

Tweeddale, George W., Glendale, Calif. Dissolving sulphur from ores. 2,409,408; Oct. 15.

Union Oil Company of California, assignee: *See*—
Doumani, Thomas F., and Deery.

United Shoe Machinery Corporation, assignee: *See*—
Cantley, Joseph C., and Pym.
Courchene, Theodore P.

U. S. Industrials Chemicals, Inc., assignee: *See*—
Metzger, Floyd J.

United States Rubber Company, assignee: *See*—
Hurt, Victor H.

U. S. Slicing Machine Company, assignee: *See*—
Ahrndt, Arthur H.

Universal Oil Products Company, assignee: *See*—
Giuliani, Chester J., and Angell.
Mekler, Lev A.

Usselman, George L., Port Jefferson, N. Y., assignor to Radio Corporation of America. Wavelength modulation. 2,409,457; Oct. 15.

Vance, Arthur W.: *See*—
Zworykin, Vladimir K.

Vanderbilt, R. T., Company, Inc., assignee: *See*—
Alton, William H., and Hutchins.

Van Nuys, Claude C., Greenwich, Conn., assignor to Air Reduction Company, Incorporated, New York, N. Y. Separation of the constituents of gaseous mixtures. 2,409,458; Oct. 15.

Van Nuys, Claude C., Greenwich, Conn., assignor to Air Reduction Company, Incorporated, New York, N. Y. Separation of the constituents of air. 2,409,459; Oct. 15.

Van Voorhis, William G., assignor to The Jaeger Machine Company, Columbus, Ohio. Trench excavating machine. 2,409,334; Oct. 15.

Van Winkle, Raymond: *See*—
Lott, William A., and Van Winkle.

Vigren, Sten D.: *See*—
Rost, Helge F., Thunell, Vigren, and Glaesson.

Virginia Metal Industries, Inc., assignee: *See*—
Gardner, Daniel.

Vogt, Ralph A., Berkeley, Mich. Automobile wheel clamp. 2,409,602; Oct. 15.

Von Kessel, Glendra B., assignee: *See*—
Kessel, Johannes B.

Von Stackelberg, Yurgen Z., Baltimore, assignor to The Glenn L. Martin Company, Middle River, Md. Hydraulic brake system. 2,409,335; Oct. 15.

Waite, Philip M., Corry, Pa. Throttle control. 2,409,231; Oct. 15.

Waller, Thomas S.: *See*—
Croft, Cyril M., and Waller.

Ward, George C., and B. T. Pull, Cumberland, Md., assignors to Celanese Corporation of America. Inhibiting treatment. 2,409,325; Oct. 15.

Wargo, Stephen, Streator, Ill. Garbage can holder. 2,409,326; Oct. 15.

Waters, Daniel V.: *See*—
Smith, Charles C., and Waters.
Waters, Harry F., New York, N. Y. Manufacture of containers. 2,409,460; Oct. 15.
Webb, George, assignor to Colt's Patent Fire Arms Manufacturing Company, Hartford, Conn. Feeding mechanism for automatic firearms. 2,409,461; Oct. 15.
Welding Research, Inc., assignee: *See*—
Goldowski, Natacha.
Wesley, Edwin F., Chevy Chase, Md. Automatic mark clearing device. 2,409,232; Oct. 15.
Western Electric Company, Incorporated, assignee: *See*—
Gauthier, Marcel C.
Smith, Charles C., and Waters.
Westinghouse Electric Corporation, assignee: *See*—
Berneski, Anthony J.
Bietz, Edward.
Clark, Earl K.
Dunlop, James.
Kilgore, Lee A.
Taylor, Charles H.
Whiting Corporation, assignee: *See*—
Bock, George E.
Fisher, Ernest F.
Wiggins, Leonard A., Cuyahoga Falls, Ohio. Oxygen demand regulator. 2,409,327; Oct. 15.
Wilcoxon, Kenneth H., Cabin John, Md. Sweep wire passing device. 2,409,233; Oct. 15.
Will, Edward, and H. C. Bitter, West Hartford, assignors to The Parker Stamp Works, Inc., Hartford, Conn. Roll type die holder. 2,409,409; Oct. 15.
Wilder, Raymond S., Waltham, Mass. Illuminating unit for optical projectors. 2,409,328; Oct. 15.
Wiley, Ralph M., Midland, assignor to The Dow Chemical Company, Midland, Mich. Vinylidene chloride polymer extrusion. 2,409,521; Oct. 15.
Williams, Paul H., Berkeley, assignor to Shell Development Company, San Francisco, Calif. Organic thiocyano compounds. 2,409,329; Oct. 15.
Wingfoot Corporation, assignee: *See*—
Thompson, Harry H., and Moore.
Zarth, Charles E.
Woll, Harry J., Indianapolis, Ind., assignor to Radio Corportation of America. Gas tube circuit. 2,409,522; Oct. 15.
Wong, Lan J.: *See*—
Allison, Byron L., and Wong.
Wood, David H., Barnt Green, and H. J. Roe, Knowle, England. Core making machine. 2,409,330; Oct. 15.
Wood, Frederick D., Jacksonville, Fla. Baby carrier. 2,409,331; Oct. 15.
Wood, Robert W., Princeton, N. J., assignor to Kaiser Fleetwings, Inc., Bristol, Pa. Method and apparatus for generating curves. 2,409,603; Oct. 15.
Woodruff, Howard C., Philadelphia, Pa. Resinous composition and producing the same. 2,409,332; Oct. 15.
Woodworth, N. A., Company, assignee: *See*—
Hohwart, Ernest F.
Work, Robert H.: *See*—
Brooks, John W., O'Kelly, and Work.
Wright, Donald L., Westfield, and C. W. Bohmer, Jr., Elizabeth, N. J., assignors to Standard Oil Development Company. Lubricant and preparing same. 2,409,333; Oct. 15.
Young, David W., Roselle, N. J., assignor, by mesne assignments, to Jasco, Incorporated. Chemical-resistant coating material. 2,409,336; Oct. 15.
Young, Leonard A., Detroit, Mich. Manufacturing safety razor blades. 2,409,604; Oct. 15.
Yuhas, Joseph, North Braddock, Pa. Cinder notch cooler clamp. 2,409,337; Oct. 15.
Zakarias, Imre: *See*—
Rosa, Laszlo, and Zakarias.
Zarth, Charles E., assignor to Wingfoot Corporation, Akron, Ohio. Bead lock ring and assembly. 2,409,410; Oct. 15.
Zedler, Arthur O., Yonkers, N. Y. Full display flag holder. 2,409,411; Oct. 15.
Ziskal, Joseph F.: *See*—
Rogers, Clifford R., Bechman, and Ziskal.
Zworykin, Vladimir K., Philadelphia, Pa., and A. W. Vance, Haddonfield, N. J., assignors to Radio Corporation of America. Radio gunfire control. 2,409,462; Oct. 15.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 15TH DAY OF OCTOBER, 1946

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Braking system. H. Baade. Re. 22,802; Oct. 15.
Compensating means, Jacquard. J. Robinson. Re. 22,804; Oct. 15.
Cultivation of plants, Flame. P. C. McLemore. Re. 22,803; Oct. 15.
Fuse device. W. O. Schultz and A. W. Steinmayer. Re. 22,805; Oct. 15.

LIST OF DESIGN INVENTIONS

Ash tray. L. Lomasney. 145,739; Oct. 15.
Box, Ring. F. H. Lewis. 145,738; Oct. 15.
Brooch. A. Aquilino. 145,707–8; Oct. 15.
Brooch or similar article. A. Katz. 145,733; Oct. 15.
Brooch or similar article. W. B. Weinstock. 145,762; Oct. 15.
Camera. F. H. Owens. 145,744; Oct. 15.
Casing, Vacuum cleaner. G. W. Walker. 145,761; Oct. 15.
Clock or similar article. A. K. Simons. 145,757; Oct. 15.
Coat. J. Freedman. 145,717; Oct. 15.
Coat. H. Goldberg. 145,719–20; Oct. 15.
Compact. E. Foret and H. Graeter. 145,716; Oct. 15.
Desk unit, Combination. L. W. Kendrick. 145,734; Oct. 15.
Dish or similar article, Serving. J. Davis. 145,711; Oct. 15.
Doll and parachute, Combined. M. Hoyle. 145,732; Oct. 15.
Dress. C. D. Monica. 145,741; Oct. 15.
Dress. K. Rost. 145,750; Oct. 15.
Earring. F. Morrow. 145,742; Oct. 15.
Fabric. A. Y. Park. 145,745–9; Oct. 15.
Frame, Hand mirror. J. Casalino. 145,709; Oct. 15.
Holder or similar article, Soap cake. H. H. Gray. 145,729; Oct. 15.
Jacket. S. Etkin. 145,715; Oct. 15.
Jacket. Z. Golden. 145,721–8; Oct. 15.
Jar or similar article. J. L. Snyder, Jr. 145,758; Oct. 15.
Jewelry finding. H. Rubin. 145,751; Oct. 15.
Jewelry finding. C. Schrayysshuen. 145,752–5; Oct. 15.
Pin or similar article, Jewelry. F. Morrow. 145,743; Oct. 15.
Range. R. E. Kruck. 145,736; Oct. 15.
Robe or similar article. G. H. McLaughlin. 145,740; Oct. 15.
Shaker or similar article, Combined salt and pepper. F. R. Hale. 145,730; Oct. 15.
Shoe. J. J. Hickey. 145,731; Oct. 15.
Stand. E. D. Kissling. 145,735; Oct. 15.
Stand, Fabric testing display. H. W. Wilkinson, Jr. 145,763; Oct. 15.
Sweater. D. Engleman. 145,714; Oct. 15.
Sweater or similar article. D. Engleman. 145,712–13; Oct. 15.
Top for water coolers. E. A. Steele. 145,759; Oct. 15.
Toy animal. C. Steiner. 145,760; Oct. 15.
Toy animal, Stuffed puppet. M. Shrier. 145,756; Oct. 15.
Toy vehicle. R. F. Kuntz. 145,737; Oct. 15.
Tray. V. I. Zelov. 145,764; Oct. 15.
Tray, Portable bar. N. Bel Geddes. 145,718; Oct. 15.
Vending machine. A. R. Constantine and M. H. Boldt. 145,710; Oct. 15.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 15TH DAY OF OCTOBER, 1946

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Acid and making it, Tetraacetyl ribonic. M. Tishler. 2,409,455; Oct. 15.
Acid fading inhibition. C. M. Croft and T. S. Waller. 2,409,257; Oct. 15.
Acid, Preparation of nicotinic. R. T. Dean and V. L. King. 2,409,345; Oct. 15.
Acid, Production of hydrocyanic. H. D. Green and P. R. Hendrixson. 2,409,429; Oct. 15.
Adhesive, Asphalt. L. Davis and A. J. Gauthier. 2,409,258; Oct. 15.
Adhesive tape dispenser. M. E. Lessin. 2,409,217; Oct. 17.
Adjusting mechanism, Power. C. W. Mott. 2,409,510; Oct. 15.
Adsorptive material, Revivifying. M. H. Arveson. 2,409,234; Oct. 15.
Aircraft propeller. P. Landrum. 2,409,438; Oct. 15.
Aircraft propulsion. M. L. Donnellan. 2,409,551; Oct. 15.
Airplane tire. A. A. Human. 2,409,355; Oct. 15.
Alkali halide screen, and manufacture. H. W. Leverenz. 2,409,606; Oct. 15.
Alkylation process. C. R. Ringham. 2,409,389; Oct. 15.
Aluminum alloys for heat treatment, Preparing. V. E. Peterson. 2,409,384; Oct. 15.
Aluminum, Cleaning. N. Goldowski. 2,409,271; Oct. 15.
Amines and making same, Unsaturated. M. S. Kharasch and C. F. Fuchs. 2,409,287; Oct. 15.
Anchoring for brushes, Tuft. C. Jobst. 2,409,490; Oct. 15.
Antenna, Microwave. A. C. Beck. 2,409,183; Oct. 15.
Apparatus for burners, Fluid supply. W. H. DeLancey. 2,409,477; Oct. 15.
Apparatus for contouring the ends of tubular stock. J. S. McGuire. 2,409,375; Oct. 15.
Apparatus for controlling superchargers. D. M. Borden. 2,409,533; Oct. 15.
Apparatus for die-forming sheet material. J. E. Conzelman, Jr. 2,409,254; Oct. 15.
Apparatus for the recording of slow processes. L. Rosa and I. Zakarias. 2,409,317; Oct. 15.
Apparatus for shrinking fabrics. F. Chatfield. 2,409,543; Oct. 15.
Apparatus for splicing rubberlike materials. C. W. Leguillon. 2,409,571; Oct. 15.
Apparatus for testing the brake on airplane ground wheels. G. E. Bock. 2,409,467; Oct. 15.
Armature winder. P. A. Schnebelen. 2,409,394; Oct. 15.
Attaching device, Implement. W. C. Rosenthal and C. A. Hubert. 2,409,516; Oct. 15.
Attenuator and divider circuits, High-frequency. R. G. Clapp. 2,409,474; Oct. 15.
Automobile wheel clamp. R. A. Vogt. 2,409,602; Oct. 15.
Baby carriage. F. D. Wood. 2,409,331; Oct. 15.
Backwater valve. S. Olson. 2,409,582; Oct. 15.
Bag with insoluble automatic fold closing. A. Rambold. 2,409,314; Oct. 15.
Balloons, Making. J. A. Hagen, E. L. Gregor, and L. Prendergast. 2,409,486; Oct. 15.
Band for exhaust manifold systems, Joint. R. I. Markey. 2,409,576; Oct. 15.
Bar: *See*—
Vehicle draw bar.
Bar or faller for gill-drawing machines, Gill. W. Holdsworth. 2,409,565; Oct. 15.
Bicycle carrier. F. W. Schwinn. 2,409,395; Oct. 15.
Bimetallic billets, Treatment of. F. A. Egan. 2,409,422; Oct. 15.
Binder for stationery sheets. H. Feldmann. 2,409,426; Oct. 15.
Blade magazine. N. Testi. 2,409,401; Oct. 15.
Blades, Manufacturing safety razor. L. A. Young. 2,409,604; Oct. 15.
Blanket securing mechanism, Printing cylinder. A. Braunworth. 2,409,536; Oct. 15.
Board: *See*—
Game board.
Bomb, Dual-purpose aerial. N. M. Hopkins. 2,409,282; Oct. 15.
Bomb sight and bomb-releasing device. A. E. Barili. 2,409,239; Oct. 15.
Booth, Grinding and polishing. E. F. Fisher. 2,409,479; Oct. 15.
Boring machine. A. J. McDonald. 2,409,578; Oct. 15.
Brake system, Hydraulic. Y. Z. von Stackelberg. 2,409,335; Oct. 15.
Brush, Rotary. R. O. Peterson. 2,409,309; Oct. 15.
Buoyant electric cable. H. L. Beede. 2,409,529; Oct. 15.
Burner: *See*—
Oil burner. Reinforced gas burner.
Burner and fuel flow control means. J. L. Breese. 2,409,470; Oct. 15.
Butadiene, Separation of. E. J. Cannon and H. A. Stuewe. 2,409,250; Oct. 15.
Butane isomerization. E. L. d'Ouville and B. L. Evering. 2,409,260; Oct. 15.
Cabinet: *See*—
Filing cabinet.
Cabinet combination, Shampoo. J. H. Bower. 2,409,187; Oct. 15.
Cable: *See*—
Bouyant electric cable. Thermoresponsive cable.
Electric cable.
Cages, Making roller. O. H. Banker. 2,409,236; Oct. 15.
Calcining apparatus. V. J. Azbe. 2,409,527; Oct. 15.
Calcining materials, Method and apparatus for. W. E. Hessman. 2,409,206; Oct. 15.
Calendar, Dial. N. L. Dootson. 2,409,347; Oct. 15.
Camera, Photographic. J. Bolsey. 2,409,605; Oct. 15.
Camera, Scanning. F. T. Sonne and V. Sussin. 2,409,597; Oct. 15.
Carriage: *See*—
Baby carriage. Bicycle carriage.
Carrier structure. C. C. Smith and D. V. Waters. 2,409,518; Oct. 15.
Catalyst manufacture. G. H. Keating. 2,409,494; Oct. 15.
Cathode ray tube. G. W. Pratt. 2,409,514; Oct. 15.
Centrifugal extractor. E. M. Borg. 2,409,341; Oct. 15.
Chart system, Color. E. Jacobson. 2,409,285; Oct. 15.
Check and draft control for stoves, Automatic. H. H. Fleer. 2,409,480; Oct. 15.
Chemical compounds and producing same. B. R. Harris. 2,409,275; Oct. 15.
Chemotherapeutic sulphanilamide derivatives. W. A. Lott and R. Van Winkle. 2,409,291; Oct. 15.
Chloroprene polymers, Plasticizing. A. R. Davis. 2,409,344; Oct. 15.
Cinder notch cooler clamp. J. Yuhas. 2,409,337; Oct. 15.
Circuit: *See*—
Gas tube circuit. Voltage doubler and timer circuit.
Selector circuit.
Clamp: *See*—
Automobile wheel clamp. Cinder notch cooler clamp
Clamping structure. S. J. Chris. 2,409,253; Oct. 15.
Classifier. G. D. Fenton. 2,409,265; Oct. 15.
Cleaning apparatus, Suction. C. H. Taylor. 2,409,230; Oct. 15.
Cleaning plant, Air. C. W. J. Hedberg. 2,409,563; Oct. 15.
Clearing device, Automatic mark. E. F. Wesley. 2,409,232; Oct. 15.
Clip: *See*—
Hair wave clip.
Closing device, Wound. R. Dow. 2,409,261; Oct. 15.
Closure, Watertight. V. H. Hurt. 2,409,489; Oct. 15.
Clothespin. E. M. Mosaly. 2,409,379; Oct. 15.
Clothing, Protective. C. W. Leguillon and C. P. Krupp. 2,409,367; Oct. 15.
Clutch: *See*—
Tuning device clutch.
Clutch control. C. R. Rogers, W. O. Bechman, and J. F. Ziskal. 2,409,515; Oct. 15.
Coating material, Chemical-resistant. D. W. Young. 2,409,336; Oct. 15.
Collapsible device. E. J. Stone. 2,409,452; Oct. 15.
Collapsible garment hanger. W. Gersohn. 2,409,269; Oct. 15.
Communication system, Facsimile. J. H. Homrighous. 2,409,488; Oct. 15.
Comparator. E. F. Hohwart. 2,409,280; Oct. 15.
Compositions comprising blown terpenic products and vinyl polymers and making. M. T. Harvey. 2,409,276; Oct. 15.
Conditioning the atmosphere in subterranean excavations. J. P. Rees. 2,409,388; Oct. 15.
Connector: *See*—
Electrical connector.
Constituents of air, Separation of the. C. C. Van Nuys. 2,409,459; Oct. 15.
Container: *See*—
First-aid container.
Container. T. S. Carswell. 2,409,252; Oct. 15.
Containers, Manufacture of. H. F. Waters. 2,409,460; Oct. 15.
Continuous process for effecting catalytic reactions. H. V. Atwell. 2,409,235; Oct. 15.
Control device. W. A. Ray. 2,409,387; Oct. 15.

Control system, Electrical. O. E. Bowlus. 2,409,534; Oct. 15.
Control system, Electrical. P. T. Nims and O. E. Bowlus. 2,409,581; Oct. 15.
Controller, Motor. C. P. Feldhausen. 2,409,264; Oct. 15.
Controlling device for gyroscopes, Erection. F. D. Braddon and S. Kellogg, 2nd. 2,409,188; Oct. 15.
Conveyer flight. B. E. Sivyer. 2,409,318; Oct. 15.
Conveyer or heater, Food. R. J. Baumach. 2,409,528; Oct. 15.
Core for cooling pipes, Compressible. J. I. Morrison. 2,409,304; Oct. 15.
Core making machine. D. H. Wood and H. J. Roe. 2,409,330; Oct. 15.
Counter, Geiger-Müller. A. S. Keston. 2,409,498; Oct. 15.
Countersink, Micrometer stop. W. E. Miller. 2,409,377; Oct. 15.
Coupling: *See*—
Fluid coupling. Hydraulic coupling.
Coupling. L. H. Pletcher. 2,409,385; Oct. 15.
Coupling for plastic tubes. J. L. Hudson. 2,409,283; Oct. 15.
Covering and making the same, Insulating. G. B. Brown. 2,409,249; Oct. 15.
Crimper, Blasting cap. A. Djidics. 2,409,549; Oct. 15.
Crutch. T. Lamb. 2,409,365; Oct. 15.
Current regulator. J. B. Reeves. 2,409,312; Oct. 15.
Cutoff for power operated hand tools, Safety. E. F. Sheehan and G. V. Hunt. 2,409,397; Oct. 15.
Cutting machine, Can. C. E. Miller and D. H. Parker. 2,409,301; Oct. 15.
Cycloparaffins from acyclic paraffins by an aluminum halide-hydrocarbon complex, Simultaneously isomerizing and separating. W. E. Ross and P. Pezzaglia. 2,409,390; Oct. 15.
D-tubocurarine chloride, Producing substantially pure. J. T. Bashour. 2,409,241; Oct. 15.
Damping for electrical machines. L. A. Kilgore. 2,409,213; Oct. 15.
Dessiccant. F. J. Ewing and R. A. Lovett. 2,409,263; Oct. 15.
Detector for tubing, Flaw. H. C. Drake. 2,409,554; Oct. 15.
Detector mechanism, Rail flaw. H. C. Drake. 2,409,553; Oct. 15.
Device for measuring impedances. P. S. Christaldi. 2,409,419; Oct. 15.
Device for oiling fliers. H. McC. Adams. 2,409,523; Oct. 15.
Device for removing particle deposits from gas purifying apparatus associated with gas generators. K. T. Källe. 2,409,211; Oct. 15.
Device for vacuum filtration. P. Schlumbohm. 2,409,226; Oct. 15.
Dienes, Preparation of conjugated. T. F. Doumani and R. Deery. 2,409,259; Oct. 15.
Dispenser: *See*—
Adhesive tape dispenser. Incense dispenser.
Domestic appliance. J. W. Jacobs. 2,409,434; Oct. 15.
Drapery mounting. D. R. Falkenberg. 2,409,425; Oct. 15.
Dressing mechanism. P. F. Barker, H. G. Hartman, C. T. Galloway, and B. M. Kunes. 2,409,240; Oct. 15.
Drier for decorated ware. D. G. Merrill. 2,409,298; Oct. 15.
Drilling device. R. W. Andreasson. 2,409,525; Oct. 15.
Drive mechanism. F. R. McFarland. 2,409,506; Oct. 15.
Dyes, Merocyanine. L. G. S. Brooker and H. W. J. Cressman. 2,409,189; Oct. 15.
Dynamoelectric machine. T. M. Linville. 2,409,503; Oct. 15.
Ear ornament. A. R. Lo Curto. 2,409,369; Oct. 15.
Electric cable. C. E. Bennett. 2,409,530; Oct. 15.
Electric switch. W. L. Butler. 2,409,472; Oct. 15.
Electric switch. H. K. Gandelot. 2,409,483; Oct. 15.
Electrical connector. L. W. Evans. 2409,200; Oct. 15.
Electrode, Composite. A. F. Meston. 2,409,579; Oct. 15.
Electrode for buoyant cables. C. E. Bennett. 2,409,531; Oct. 15.
Electrode for spot welding. M. Dobkowski. 2,409,550; Oct. 15.
Electron beam relay. A. E. Anderson. 2,409,179; Oct. 15.
Electron discharge device. W. E. Bahls. 2,409,466; Oct. 15.
Electron discharge device. C. S. Bull. 2,409,417; Oct. 15.
Electron discharge device. E. W. Herold. 2,409,485; Oct. 15.
Electron discharge device. J. A. Morton. 2,409,222; Oct. 15.
Electron discharge device. B. Salzberg. 2,409,591; Oct. 15.
Electron discharge device, Beam deflection. G. R. Kilgore. 2,409,499; Oct. 15.
Electronic device. A. G. Thomas. 2,409,454; Oct. 15.
Electronic ignition system. O. T. Francis. 2,409,202; Oct. 15.
Element for polarized light, Reflecting. A. F. Turner. 2,409,407; Oct. 15.
Elevator control system. J. Dunlop. 2,409,198–9; Oct. 15.
Emulsion. W. H. Alton and F. E. Hutchins. 2,409,338; Oct. 15.
End connection, Extended. T. J. Hollenkamp. 2,409,207; Oct. 15.
Engine: *See*—
Internal-combustion engine. Piston engine.
Engine work stand. G. E. Bock. 2,409,468; Oct. 15.
Excavating machine, Trench. W. G. Van Voorhis. 2,409,334; Oct. 15.
Exhibitor, Excessive speed. J. W. Bright. 2,409,537; Oct. 15.
Extractor: *See*—
Centrifugal extractor. Juice extractor.
Eyeshield, Collapsible type. D. P. Bernheim and M. M. Glasberg. 2,409,243; Oct. 15.
Fabric. F. G. Manson and J. J. Maskey. 2,409,370; Oct. 15.
Fabrics from alginic materials, Production of. J. B. Speakman and N. H. Chamberlain. 2,409,319; Oct. 15.
Fastener: *See*—
Push fastener.
Fastener for electric fence insulators, Adjustable. H. C. Johnson. 2,409,491; Oct. 15.
Fastening device. C. E. Annett, 2d, and M. Armstrong. 2,409,180; Oct. 15.
Feeder for balers. F. P. Dickow. 2,409,478; Oct. 15.
Feeding mechanism for automatic firearms. G. Webb. 2,409,461; Oct. 15.
Feeding mechanism for sewing machines, Work. R. Becker. 2,409,242; Oct. 15.
Feeding method and apparatus. M. F. Morgan. 2,409,378; Oct. 15.
Fibrous suspension, Straightening. S. E. E. Ahlfors. 2,409,524; Oct. 15.
Filing cabinet. J. W. Paxton. 2,409,308; Oct. 15.
Filter. R. W. George. 2,409,556; Oct. 15.
Filter. L. M. Hedges. 2,409,278; Oct. 15.
Firearm. M. M. Johnson, Jr. 2,409,568; Oct. 15.
Firearm, Automatic. J. C. Cantley and A. F. Pym. 2,409,251; Oct. 15.
Firearm, Automatic. M. M. Johnson, Jr. 2,409,569; Oct. 15.
Firearm bolt tool. J. M. Brown. 2,409,191; Oct. 15.
First-aid container. F. Armbruster and E. Stearns. 2,409,465; Oct. 15.
Fluid coupling. L. C. Sassmanhausen. 2,409,593; Oct. 15.
Fluid inlet-outlet device, particularly for clinical purposes. R. M. Curtis. 2,409,343; Oct. 15.
Fluid press. L. L. Schaffer. 2,409,393; Oct. 15.
Fluid streams, Controlling the cooling of convective. L. A. Mekler. 2,409,376; Oct. 15.
Fluoracetamides and their preparation. G. W. Rigby and H. E. Schroeder. 2,409,315; Oct. 15.
Food tendering machine. A. H. Ahrndt. 2,409,463; Oct. 15.
Frame structure. F. E. Lang. 2,409,366; Oct. 15.
Frame structure. A. V. Pedersen. 2,409,383; Oct. 15.
Fuel system. J. B. Black. 2,409,245; Oct. 15.
Full display flag holder. A. O. Zedler. 2,409,411; Oct. 15.
Furnace and firing apparatus, Industrial. J. M. Guthrie. 2,409,272; Oct. 15.
Furnace checkers and flues, Method and apparatus for cleaning. W. J. Montgomery. 2,409,442; Oct. 15.
Fuse, Bomb. R. L. Graumann. 2,409,205; Oct. 15.
Game. G. S. Cox and E. J. Sandel. 2,409,547; Oct. 15.
Game board. E. L. Jones. 2,409,493; Oct. 15.
Gameboard device. O. Mautner and M. K. Lebworth. 2,409,373; Oct. 15.
Game, Card. W. W. Peterman. 2,409,584; Oct. 15.
Garbage can holder. S. Wargo. 2,409,326; Oct. 15.
Garment, Body. V. M. Truesdell. 2,409,601; Oct. 15.
Garment lacing. B. F. Pease, Jr. 2,409,381; Oct. 15.
Gas deflector for internal-combustion engines, Exhaust. T. R. Kelley. 2,409,496; Oct. 15.
Gas system for firearms. W. A. Schaich. 2,409,225; Oct. 15.
Gas, Treatment of. R. D. Gunn. 2,409,558; Oct. 15.
Gas tube circuit. H. J. Woll. 2,409,522; Oct. 15.
Gaseous mixtures, Separation of the constituents of. C. C. Van Nuys. 2,409,458; Oct. 15.
Gasoline production, Aviation. E. B. Peck. 2,409,382; Oct. 15.
Generating curves, Method and apparatus for. R. W. Wood. 2,409,603; Oct. 15.
Generator construction. A. J. Berneski. 2,409,184; Oct. 15.
Glass forming machines, Driving means for. C. Eisler. 2,409,423; Oct. 15.
Glass hardening. G. W. Jackson. 2,409,284; Oct. 15.
Glass, Ultraviolet absorbing. W. H. Armistead, Jr. 2,409,412; Oct. 15.
Glycols, Production of. F. J. Metzger. 2,409,441; Oct. 15.
Goggle. C. F. Hutchings. 2,409,356; Oct. 15.

  Drapery mounting.
Mounting means for gyroscopes. B. L. Allison and L. J. Wong. 2,409,178; Oct. 15.
Needle, Sewing machine. M. M. Newman. 2,409,445; Oct. 15.
Nitrogen from internal-combustion engine exhaust gases, Producing. E. L. Pridonoff and A. J. Schneider. 2,409,386; Oct. 15.
Nozzle, Multipart distribution. L. T. Mart. 2,409,371; Oct. 15.
Nut, Removable basket. J. E. Johnson. 2,409,209; Oct. 15.
Oil burner. J. A. Logan. 2,409,504; Oct. 15.
Oil, Lubricating. J. R. Morris and R. F. McCleary. 2,409,303; Oct. 15.
Operating mechanism, Coupler. J. S. Swann. 2,409,322; Oct. 15.
Optical instrument. H. F. Kurtz and R. G. Morrison. 2,409,364; Oct. 15.
Organic fluorine, Removal. M. P. Matuszak. 2,409,372; Oct. 15.
Organic thiocyano compounds. P. H. Williams. 2,409,329; Oct. 15.
Oscillator. A. L. Samuel. 2,409,224; Oct. 15.
Oscillator, Synchronized blocking. L. E. Matson, Jr. 2,409,577; Oct. 15.
Oxide, Stabilized cuprous. H. J. Becker. 2,409,413; Oct. 15.
Oxygen demand regulator. L. A. Wiggins. 2,409,327; Oct. 15.
Package. M. Kleinmann. 2,409,362; Oct. 15.
Pan, Refrigerator car drip. C. R. Hamilton, J. King, and J. D. Baker. 2,409,273; Oct. 15.
Parachute, Paper. D. B. Hastings. 2,409,562; Oct. 15.
Passage plug. C. L. Martin. 2,409,294; Oct. 15.
Pedal appliance, Forming. L. H. Sherman. 2,409,594; Oct. 15.
Pen for children, Portable play. E. S. Swazey. 2,409,598; Oct. 15.
Phase modulator. R. C. Sanders, Jr., W. R. Mercer, and D. Blitz. 2,409,449; Oct. 15.
Phonograph, Two-amplifier recording and reproducing. L. Thompson. 2,409,520; Oct. 15.
Picker, Stitch. I. H. Gearhart. 2,409,351; Oct. 15.
Pipe made from lead alloys, Extruded. W. T. Butcher and A. Lloyd. 2,409,540; Oct. 15.
Piston and cylinder construction, Hydraulic shock absorber. G. M. Magrum. 2,409,505; Oct. 15.
Piston engine. E. M. Badoux. 2,409,555; Oct. 15.
Plate, Glass electric hot. J. Bilan. 2,409,244; Oct. 15.
Plug: *See*—
  Passage plug.
Plug separator. C. A. Levin and O. A. Lorenz. 2,409,289; Oct. 15.
Pocket attachment for firemen's coats, Gas mask carrier. A. M. Grunwell. 2,409,354; Oct. 15.
Polychloropene, Plasticized. M. T. Harvey. 2,409,277; Oct. 15.
Polyfluoro organic ethers and their preparation. W. E. Hanford and G. W. Rigby. 2,409,274; Oct. 15.
Polymerization. J. W. Brooks, A. A. O'Kelly and R. H. Work. 2,409,248; Oct. 15.
Polymerization process. J. W. Brooks, A. A. O'Kelly and R. H. Work. 2,409,247; Oct. 15.
Polyvinyl acetal, Plasticized. M. O. Debacher. 2,409,548; Oct. 15.
Power plant, Airplane. V. H. Pavlecka and J. K. Northrop. 2,409,446; Oct. 15.
Power plant arrangement, Aircraft. C. T. Torresen. 2,409,323; Oct. 15.
Power plant, Wind. T. E. Law. 2,409,439; Oct. 15.
Power transmission. H. W. Gilfillan and E. L. Bailey. 2,409,557; Oct. 15.
Preheater for furnaces and the like, Air. M. Steuerman. 2,409,451; Oct. 15.
Press: *See*—
  Fluid press.
Press and conveyer means, Combined printing. M. Lipton. 2,409,368; Oct. 15.
Projectile. E. S. Patch and W. T. Moore. 2,409,307; Oct. 15.
Projectiles, Spotting. H. J. Nichols. 2,409,380; Oct. 15.
Propulsion device, Aircraft. M. L. Donnellan. 2,409,552; Oct. 15.
Protective means, Eye. W. J. Joyce. 2,409,286; Oct. 15.
Protein structures and their preparation, Shaped. E. T. Cline. 2,409,475; Oct. 15.
Puddling machine. W. J. Miller. 2,409,221; Oct. 15.
Push fastener. E. A. Miller. 2,409,508; Oct. 15.

Rack: *See*—
  Shoe rack. Tie rack.
Radioactivity, Method and apparatus for direct recording of borehole. S. Krasnow and L. F. Curtiss. 2,409,436; Oct. 15.
Radio direction and distance device, Self-tracking. H. F. Rost, K. H. Thunell, S. D. Vigren, and P. H. E. Claesson. 2,409,448; Oct. 15.
Radio gunfire control. V. K. Zworykin and A. W. Vance. 2,409,462; Oct. 15.
Reactions in contact mass, Method and apparatus in. T. P. Simpson, J. W. Payne, and L. P. Evans. 2,409,596; Oct. 15.
Reclaiming. H. H. Thompson and D. V. Moore. 2,409,402; Oct. 15.
Recording apparatus, Automatic. J. J. Kaplan. 2,409,358; Oct. 15.
Refrigeration apparatus. A. Hiller. 2,409,279; Oct. 15.
Regulator: *See*—
  Current regulator. Oxygen demand regulator.
Reinforced gas burner. H. D. Dufault. 2,409,421; Oct. 15.
Relasting machine. A. Perri. 2,409,447; Oct. 15.
Release for rockable arms, Overload. C. W. Mott. 2,409,511; Oct. 15.
Remote control system. G. S. Brown and J. W. Forrester. 2,409,190; Oct. 15.
Resin, Refining. E. D. Lee. 2,409,216; Oct. 15.
Resinous composition and producing the same. H. C. Woodruff. 2,409,332; Oct. 15.
Rivet. R. H. Gill. 2,409,352; Oct. 15.
Rivet removing device. H. D. Rocheville. 2,409,589; Oct. 15.
Roll type die holder. E. Wild and H. C. Bitter. 2,409,409; Oct. 15.
Roller arrangement for conducting electrical current. R. Trautschold. 2,409,600; Oct. 15.
Rubber and rubber substitutes, Compounding material for. C. G. La Crosse. 2,409,437; Oct. 15.
Rug. L. M. Moseller. 2,409,580; Oct. 15.
Safety control, Mechanism for power operated ordnance. J. C. Trotter. 2,409,406; Oct. 15.
Safety interlocking clothes hanger. A. Brill and W. Kneissler. 2,409,538; Oct. 15.
Saw set. E. Platter. 2,409,311; Oct. 15.
Screen: *See*—
  Stationary concave screen.
Seal, Actuator. L. W. Leland. 2,409,288; Oct. 15.
Seal for electric lamps and similar devices. E. Kettlewell. 2,409,361; Oct. 15.
Seating fixture, Removable and collapsible. A. B. Rogers, Sr. 2,409,316; Oct. 15.
Selector circuit. C. H. Smith, Jr., and M. L. Kuder. 2,409,229; Oct. 15.
Selector device for sludge digestion tanks, Supernatant. W. M. Platt. 2,409,585; Oct. 15.
Separator: *See*—
  Plug separator.
Sewing machine, Overcasting. A. Sardu. 2,409,592; Oct. 15.
Shackle, Bomb releasing. R. I. Markey. 2,409,575; Oct. 15.
Shaft locking device. J. E. Gall. 2,409,204; Oct. 15.
Shell, Equilibrated rocket. Z. Fonberg. 2,409,427; Oct. 15.
Shock absorber, Hydraulic. N. S. Focht. 2,409,349; Oct. 15.
Shoe rack. S. Gerlich. 2,409,268; Oct. 15.
Shoe, Tire. G. A. Barker. 2,409,182; Oct. 15.
Signal: *See*—
  Vehicle signal.
Signaling system. P. F. G. Holst and L. R. Kirkwood. 2,409,208; Oct. 15.
Slitting device, Sheet. J. A. Gale. 2,409,203; Oct. 15.
Smoke-producing mixture. L. Finkelstein and H. B. Elkins. 2,409,201; Oct. 15.
Sodium dispersion. C. C. Tanner. 2,409,519; Oct. 15.
Sodium sulphides, Manufacture of. A. W. Saddington. 2,409,392; Oct. 15.
Solids with vapors, Contacting. G. D. Creelman and J. F. Crowther. 2,409,476; Oct. 15.
Sorting machine, Rivet. W. McClain. 2,409,440; Oct. 15.
Splint, Surgical. W. J. Crawford. 2,409,195; Oct. 15.
Spout, Filling. R. and H. Bentley. 2,409,532; Oct. 15.
Spring. A. S. Krotz. 2,409,500; Oct. 15.
Stand: *See*—
  Engine work stand.
Stand and service table, Convertible appliance. W. I. Evans. 2,409,348; Oct. 15.
Stationary concave screen. W. F. MacGregor. 2,409,292; Oct. 15.
Stave and making same, Bearing. T. L. Gatke. 2,409,267; Oct. 15.
Step-by-step follow-up and antihunt mechanism. G. S. Miles. 2,409,300; Oct. 15.
Step, Vehicle. A. B. Carmichael. 2,409,418; Oct. 15.
Stop means for free piston engines, Strain relieving and dephasing. F. M. Lewis. 2,409,218; Oct. 15.
Strap and power stick for looms, Lug. F. L. Furgal. 2,409,482; Oct. 15.
Structural member. F. Kautz. 2,409,212; Oct. 15.
Structure for electric lamps and similar devices, Seal. E. Kettlewell. 2,409,360; Oct. 15.
Structure for gyratory crusher heads, Support and actuating. H. H. Rumpel. 2,409,391; Oct. 15.
Substation apparatus, Telephone. L. A. Reed. 2,409,588; Oct. 15.
Sulphamic acid, Manufacture of. J. W. Leonard. 2,409,572; Oct. 15.
Sulphur from ores, Dissolving. G. W. Tweeddale. 2,409,408; Oct. 15.
Sump selector valve. J. F. Melichar and W. Margrave. 2,409,220; Oct. 15.
Sump selector valve. A. L. Parker. 2,409,223; Oct. 15.
Support for reinforced concrete structures, Rod. J. J. Cassidy. 2,409,342; Oct. 15.
Supporting apparatus. M. C. Gauthier. 2,409,484; Oct. 15.
Switch: *See*—
  Electric switch.
Table. C. F. Kelley. 2,409,495; Oct. 15.
Teeter-go-round. H. M. Hilger. 2,409,487; Oct. 15.
Telephone system, Automatic. W. T. Powell. 2,409,586; Oct. 15.
Telescope system. A. Bouwers. 2,409,186; Oct. 15.
Thermoresponsive cable. R. D. Kaul. 2,409,359; Oct. 15.
Throttle control. P. M. Waite. 2,409,231; Oct. 15.
Throttle, Duct. W. H. Hunter. 2,409,433; Oct. 15.
Tie rack. T. Kramer. 2,409,570; Oct. 15.
Tightening means, Chain. H. S. Ausherman. 2,409,526; Oct. 15.
Time sequencing control system, Thermal. B. W. Jones. 2,409,492; Oct. 15.
Timing device, Electronic. E. M. Callender. 2,409,473; Oct. 15.
Tonsorial device. N. Holsclaw. 2,409,281; Oct. 15.
Tool: *See*—
  Firearm bolt tool.
  Grinding and polishing tool.
Torque wrench. A. L. Cornwell. 2,409,545; Oct. 15.
Toy, Airplane. M. A. Brosselt. 2,409,471; Oct. 15.
Toy typewriter. J. L. Banks. 2,409,237; Oct. 15.
Track for self-laying track type vehicle. C. W. Leguillon and A. H. Krotz. 2,409,502; Oct. 15.
Tractor-mounted implement. C. W. Mott. 2,409,509; Oct. 15.
Trainer, Airplane flight. T. C. Barber. 2,409,238; Oct. 15.
Transfer device. A. G. Telford. 2,409,400; Oct. 15.
Transfer material. W. and F. Heinecke. 2,409,564; Oct. 15.
Transmission, Automatic turboplanetary. T. P. Cunningham. 2,409,196; Oct. 15.
Transmission control, Variable-speed. H. E. Carnagua. 2,409,541; Oct. 15.
Transmission mechanism, Fluid. D. F. McGill. 2,409,374; Oct. 15.
Transmitter, Data. N. L. Haight. 2,409,559–60; Oct. 15.
Tree, Shoe. A. F. Levaggi. 2,409,573; Oct. 15.
Truck, Airborne cargo. R. D. Bagley and J. E. Berman. 2,409,181; Oct. 15.
Truck loader. R. C. Shoemaker. 2,409,398; Oct. 15.
Tube: *See*—
  Cathode ray tube.
Tube expanding. C. A. Maxwell. 2,409,219; Oct. 15.
Tuning device, Cavity. I. L. Stephan. 2,409,321; Oct 15.
Tuning device clutch. A. A. Collins. 2,409,192; Oct. 15.
Turbine system, Gas. R. C. Allen. 2,409,176; Oct. 15.
Ultra high frequency electronic device. W. Shockley. 2,409,227; Oct. 15.
Unit for refrigerating coils, Protective collar. G. Seiler. 2,409,396; Oct. 15.
Valve: *See*—
  Backwater valve. Sump selector valve.
Valve construction. L. D. Schmit. 2,409,517; Oct. 15.
Valve for jet, Automatic control. T. S. Harris. 2,409,561; Oct. 15.
Vehicle draw bar. M. A. Richardson. 2,409,313; Oct. 15.
Vehicle signal. W. Trautner. 2,409,403; Oct. 15.
Vehicle suspension. A. S. Krotz. 2,409,501; Oct. 15.
Vinylidene chloride polymer extrusion. R. M. Wiley. 2,409,521; Oct. 15.
Voltage doubler and timer circuit. T. B. Perkins. 2,409,583; Oct. 15.
Wavelength modulation. G. L. Usselman. 2,409,457; Oct. 15.
Weight and balance indicator. P. A. Piper. 2,409,310; Oct. 15.
Weighting apparatus for textile drafting mechanisms. L. M. Cotchett. 2,409,255; Oct. 15.
Wheel attachment, Tractor. C. A. Breeze. 2,409,246; Oct. 15.
Wheel spindle reciprocating mechanism, Grinding. H. A. Silven. 2,409,450; Oct. 15.
Wheel unit, Automatic dirigible tandem. D. Mettetal, Jr. 2,409,507; Oct. 15.
Wire and cable, Insulated. G. W. Brown. 2,409,539; Oct. 15.
Wire passing device, Sweep. K. H. Wilcoxon. 2,409,233; Oct. 15.
Wrench: *See*—
  Torque wrench.
Wringer. R. W. Shield. 2,409,595; Oct. 15.

CLASSIFICATION OF PATENTS

ISSUED OCTOBER 15, 1946

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number=class, second number=subclass, third number=patent number

U. S. GOVERNMENT PRINTING OFFICE: 1946

THE

OFFICIAL GAZETTE

OF THE

United States Patent Office

Vol. 591—No. 4 TUESDAY, OCTOBER 22, 1946 Price—$16 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $16.00 per annum, including annual index, $18.75; single numbers, 35 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 25 cents each; copies of TRADE-MARKS and DESIGNS at 10 cents each. Address orders to the Commissioner of Patents, Washington 25, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

Disclaimers

2,219,050.—*Louis A. Mikeska,* Roselle, N. J. Wetting Agent and Detergent Aid. Patent dated Oct. 22, 1940. Disclaimer filed Sept. 18, 1946, by the assignee, *Standard Oil Development Company.*

Hereby enters this disclaimer to claim 1.

2,328,825.—*George F. McMahon,* Chicago, Ill. Arc-Extinguishing Means. Patent dated Sept. 7, 1943. Disclaimer filed Sept. 19, 1946, by the assignee, *Schweitzer & Conrad, Inc.*

Hereby enters this disclaimer to claims 11, 22, and 23 of said patent.

Notices of Cancellation

U. S. Patent Office, *Richmond, Va., Oct. 2, 1946.*

Percival E. Falkingham, his assigns or legal representatives, take notice:

A cancellation proceeding has been instituted by this Office upon the application of The Procter & Gamble Company, Sixth and Main Streets, Cincinnati, Ohio, to effect the cancellation of trade-mark registration of Percival E. Falkingham, No. 267,841, dated March 4, 1930. The assignment records of this Office show a transfer of title to this registration to Evenod Perfumer, Inc., a corporation of New York, which has been substituted for said Falkingham to defend the registration concerned. The Patent Office having been unable to obtain service upon the said Evenod Perfumer, Inc., notice is hereby given that unless the assigns, legal representatives, or other person claiming an interest in the registration shall enter an appearance therein within thirty days from the first publication of this order the cancellation will be proceeded with as in the case of default. This notice will be published in the Official Gazette for three consecutive weeks.

LESLIE FRAZER,
First Assistant Commissioner.

U. S. Patent Office, *Richmond, Va., Oct. 2, 1946.*

Cameo Costume and Dress Company, its assigns or legal representatives, take notice:

A petition for cancellation having been filed in this Office by May McEwen Kaiser Company, Incorporated, South Main Street, Burlington, N. C., to effect the cancellation of trade-mark registration of Cameo Costume and Dress Company, 247–263 West 37th Street, New York, N. Y., No. 274,163, dated August 19, 1930, and the notice of such proceeding sent by registered mail to the said Cameo Costume and Dress Company at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Cameo Costume and Dress Company, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the cancellation will be proceeded with as in the case of default. This notice will be published in the Official Gazette for three consecutive weeks.

LESLIE FRAZER,
First Assistant Commissioner.

U. S. Patent Office, *Richmond, Va., Oct. 2, 1946.*

Charles L. R. Russell, his assigns or legal representatives, take notice:

A petition for cancellation having been filed in this Office by Pennsylvania Salt Manufacturing Co., 1000 Widener Building, Philadelphia 7, Pa., to effect the cancellation of trade-mark registration of Charles L. R. Russell, 201 Cook Street, Brooklyn, N. Y., No. 285,029, dated July 14, 1931, and the notice of such proceeding sent by registered mail to the said Russell at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Russell, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the cancellation will be proceeded with as in the case of default. This notice will be published in the Official Gazette for three consecutive weeks.

LESLIE FRAZER,
First Assistant Commissioner.

U. S. Patent Office, *Richmond, Va., October 2, 1946.*

Eye Shade Corporation of America, its assigns or legal representatives, take notice:

A petition for cancellation having been filed in this Office by Charles H. Foster, 550 Fifth Avenue, New York, N. Y., to effect the cancellation of trade-mark registration of Eye Shade Corporation of America, 3746 Prospect Avenue, Cleveland, Ohio, No. 373,558, dated December 12, 1939, and the notice of such proceeding sent by registered mail to the said Eye Shade Corporation of America at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Eye Shade of America, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the cancellation will be proceeded with as in the case of default. This notice will be published in the Official Gazette for three consecutive weeks.

LESLIE FRAZER,
First Assistant Commissioner.

Condition of Applications Under Examination at Close of Business October 4, 1946

(Total number of applications awaiting action, excluding Trade-Mark Division, 125,106; Trade-Mark Division, 10,525. Oldest new case, February 28, 1945; older amended, April 16, 1945.)
(The dates given are 1945 except where † indicates 1946.)

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

In re Cowles

No. 5,200. Decided June 27, 1946

[— F.(2d) —; 70 USPQ 419]

1. Appeal—Rule 139.

Upon consideration of rule 139 and the decision of the Board of Appeals, *Held* that "it would seem clear that if the Board had applied a new ground of rejection it would be its duty, in compliance with the rule, to remand the case to the Examiner, unless this provision was waived by the applicant."

2. Same—Same.

"We are of the opinion that the Board's ground of rejection is not a new one and that its affirmance of the decision of the Examiner and its consideration of the references cited by the Examiner, although using different language in its decision, fully shows why the appealed claims define nothing inventive over the prior art relied upon by both tribunals. No new art was cited."

3. Patentability—Apparatus for Disseminating Materials in Liquids.

Certain claims to apparatus for disseminating materials in liquids *Held* unpatentable over the prior art.

Appeal from the Patent Office. Affirmed.

Messrs. Emery, Varney, Whittemore & Dix (*Mr. Nichol M. Sandoe* of counsel) for Cowles.

Mr. W. W. Cochran (*Mr. E. L. Reynolds* of counsel) for the Commissioner of Patents.

Garrett, *P. J.*:

After allowing claims 1, 2, 3, and 6 of appellant's application for a patent on "Apparatus for Disseminating Materials in Liquids," the Primary Examiner of the United States Patent Office rejected claims 4, 5, 7 and 8. Upon appeal to the Board of Appeals, the Examiner's decision was affirmed and appellant has here appealed from the Board's decision.

Appellant's application states:

This invention relates to apparatus for disseminating or dispersing solids, gases or liquids in liquids. For example, the apparatus may be used for disintegrating, dispersing and maintaining in suspension divisible insoluble solids, and for breaking up and putting into solution solids which are soluble. The apparatus may also be used for disseminating gases in liquids, and for disseminating one liquid in another liquid. Such machines are adapted for a wide range of uses, as for example, for the treatment of paper stock, for defiberizing, for dissolving, for paint mixing, for the preparation of emulsions, etc.

Claim 4 is illustrative of the appealed subject matter and reads:

4. Apparatus of the class described, comprising, a casing, a shaft extending into said casing, said shaft carrying a plurality of impellers mounted for rotation in said casing and submerged in the liquid contents of the container, each of said impellers comprising an imperforate disk having a multiplicity of vanes projecting upwardly from the upper surface of said disk and projecting downwardly from the lower surface thereof and adapted to discharge material radially outwardly therefrom, and said casing being provided with openings at opposite ends of said casing through which material may be introduced into one end and withdrawn from the other end of said casing, said material being subjected to successive action by successive sets of upwardly and downwardly projecting vanes on said impellers while passing from one opening to the other, said impellers being spaced along said shaft to permit such radially discharged material to return between the opposed faces of said disks to points axially inward of said vanes for redischarge thereby.

The references relied upon are: Foret, 1,208,534, Dec. 12, 1916; Johnson, 1,768,957, July 1, 1930; Preleuthner, 1,819,118, Aug. 18, 1931; Brumagim, 2,235,604, Mar. 18, 1941; Seyfried, 2,270,480, Jan. 20, 1942.

The rejection of the appealed claims by the Examiner was upon the patent to Foret in view of either Preleuthner or Seyfried taken separately. The Examiner pointed out that the Foret patent shows an upright cylindrical casing which, like appellant's has an inlet at the top and an outlet at the bottom and has a rotatable shaft suspended from the top of the casing and has impellers spaced along the shaft.

The patent to Johnson, for mixing or emulsifying apparatus, shows the appellant's arrangement by which liquid is discharged radially from rotary impellers.

The patent to Preleuthner was cited by the Examiner to show it was old to provide vanes on the surfaces of a rotary impeller. It was the view of the Examiner that Preleuthner's vanes would cause substantially the same circulation of liquid as does the appellant's device.

The patent to Brumagim also shows appellant's arrangement by which liquid is discharged radially from rotary impellers.

The Seyfried patent shows a drink mixer agitator of the usual variety frequently seen at soda fountains in which the glass or cup or container in which the ice cream and milk or other mixed liquids and solids are placed is so adjusted as to cause the shaft containing blades to circulate inside the cup in substantially the same manner as appellant's impellers operate. These impellers or discs have surfaces which are described as being "alternately symmetrically concave and convex in concentric paths." These would seem to be the equivalent, certainly in effect upon the mixture, of appellant's impellers. This fact appellant denies.

The decision of the Board of Appeals was a rather unusual one and has drawn forth much comment and criticism from the appellant. We quote most of the decision:

Applicant contends that Foret is for an entirely different purpose than applicant's apparatus. Foret treats juice with sulphur dioxide and applicant's specification indicates that his apparatus is for disseminating gases in liquids. The claims state no particular type of apparatus or its intended use. Thus, it will be seen that Foret's apparatus is not for an entirely different purpose as alleged in the brief.

The claims indicate that the impellers are submerged in the liquid contents, which contents are not part of the apparatus.

However, Foret does not disclose the discharge vanes and we find no suggestion in Foret that they be provided.

Seyfried's vanes project upwardly and downwardly but Seyfried relates to an agitator for drink mixers and we see nothing suggestive in Seyfried for the modification of Foret, as contended by the Examiner.

Preleuthner shows a mixer with the ribs on an impeller, but not a plurality of impellers or such a spaced plurality as stated in the claims.

The contention is made that Seyfried shows the axial spacing of the impellers. Even so, Seyfried does not disclose the impeller diameters as related to the casing, or the casing with openings at opposite ends.

Johnson and Brumagim are cited to show the axial impeller displacement and circulation.

It is probable that the Examiner has not combined or used the references properly in making the rejection. As

we view the matter applicant's claims state little if any advance in the art over Seyfried.

The casing or cup conventionally used with an apparatus of the Seyfried type is of such a diameter that claims 5 and 8 are fully met by this reference and while the casing used normally with the Seyfried mixer would not have openings at opposite ends, this is only a mechanical expedient as shown by Foret to make possible a continuous mixing operation. This is stated in claims 4 and 7 which also indicate the axial spacing of the impellers shown by Seyfried, the effect of the spacing being indicated in Brumagim and Johnson.

The decision of the Examiner is affirmed.

It will be noted that the Board holds that the claims "state little if any advance in the art over Seyfried." The Board also stated, "It is probable that the Examiner has not combined or used the references properly in making the rejection," and it seems that the Board did not view the Foret reference as being as pertinent as did the Examiner, and, in effect, held that the claims should be rejected on Seyfried alone. The Board said the Foret patent "does not disclose the discharge vanes and we find no suggestion in Foret that they be provided." In conclusion, however, the Board stated, "The decision of the Examiner is affirmed."

The applicant filed a petition to vacate the Board's decision and requested the Board to write a new and clarified decision reversing the decision of the Examiner on the point on which appeal had been taken and further requested that the application be remanded to the Primary Examiner for further consideration under rule 139 of the Rules of Practice of the United States Patent Office.

Appellant complained about the Board's holding that the casing or cup conventionally used with an apparatus of the Seyfried type "is of such a diameter that claims 5 and 8 are fully met by this reference." Appellant regards the mentioning of the casing or cup as a new ground of rejection and argues that applying the Seyfried reference first and the other references second and in effect rejecting on Seyfried alone also would be new grounds of rejection and that the rules require the Board to pass only upon the points presented in the appeal. Appellant complains here about the Board's violating rules 139 and 66 and 76, rule 66 being with reference to facts within the personal knowledge of an employee of the Patent Office.

The Board's ruling on the petition to vacate is as follows:

Petitioner argues that we rejected the claims on entirely different grounds than did the Examiner. The Examiner rejected the claims on Foret in view of Seyfried. We rejected claims 4 and 7 on Seyfried in view of Foret. We do not regard this rejection as on a ground not involved in the appeal as stated in rule 139.

We rejected claims 5 and 8 as stating no patentable invention over Seyfried alone and we regard this rejection as "involved in the appeal."

The affirmance of the Examiner's rejection is generally in line with the Examiner's holdings and we had no intention of indicating that the case should be reopened for amendment.

Appellant states that he is not aware of any conventional cup that comes within the diameter limitations of the appealed claims. There are no such limitations in claims 4 and 7 so that the diameter is only a matter of choice and the same is true of the diameter of the disc.

We see no reason for vacating our decision which is clear enough nor do we believe the application should be remanded to the Examiner or that our decision should so remand the case.

The petition to vacate the decision • • • is denied.

Appellant filed two sets of reasons of appeal in this court. The first set related to the Board's first decision. Appellant's "Amended Notice of Appeal" added additional reasons in which it was alleged that the Board erred in its second decision in refusing to remand the case to the Examiner for further consideration under the provisions of rule 139.

We think the decision of the Board, while inartfully worded, properly affirmed the decision of the Examiner. It seems clear to us that the appealed claims define nothing inventive over the cited art and it is a matter of little consequence, we think, to consider the Foret patent less pertinent than Seyfried. See *In re Mulligan*, 23 C. C. P. A. (Patents) 1220, 83 F.(2d) 917, 30 USPQ 17, 473 O. G. 233.

It seems that appellant is attempting to make a mountain out of a mole-hill by arguing at great length in two briefs to the effect that we should do something about the failure of the Board to remand the case back to the Examiner. The Solicitor for the Patent Office argues that the question which appellant seeks to present here is one of "mere practice" of the Patent Office and that it was the privilege of the appellant, if he so desired, to invoke the jurisdiction of the Commissioner on a point of practice and that he is not entitled to present the question of violation of rule 139 to this court. On this phase of the case the Solicitor cites *Sundback* v. *Blair and Perrault*, 18 C. C. P. A. (Patents) 1016, 47 F(2d) 378, 8 USPQ 220, 408 O. G. 290; *In re Britton*, 28 C. C. P. A. (Patents) 726, 115 F.(2d) 249, 47 USPQ 265, 523 O. G. 3; and *In re Austin*, 17 C. C. P. A. (Patents) 1202, 40 F.(2d) 756, 5 USPQ 285, 399 O. G. 625. *Ex parte King*, 1928 C. D. 1, 366 O. G. 3, is cited by the Solicitor as being a Patent Office example of the Commissioner having given consideration to such a petition.

Appellant argues in his reply brief, in effect, that the issues he seeks to present here are not mere practice.

In view of our conclusion that the Board did not cite any new grounds of rejection, it is unnecessary for us to make any holding on the question of remanding the case to the Examiner.

Rule 139 provides that the "Board of Appeals" in its decision, shall affirm or reverse the decision of the Primary Examiner only on the points on which appeal shall have been taken," and further states, "Should it discover any apparent grounds not involved in the appeal for granting or refusing Letters Patent in the form claimed, or in any other form, it shall include in its decision a statement to that effect with its reasons for so holding." It also provides that the statement of the Board, if adverse to applicant's right to a patent, where new grounds of rejection are given, will reopen the case "for amendment or showing of facts, or both, before the Primary Examiner responsive thereto." The applicant may waive the right to further prosecution before the Primary Examiner and have the case reconsidered by the Board upon the same record.

[1][2] It would seem clear that if the Board had applied a new ground of rejection it would be its duty, in compliance with the rule, to remand the case to the Examiner, unless this provision was waived by the applicant. In a case of this character it would be a miscarriage of justice to refuse to do so, but as we view the present issue it is not necessary for us to determine whether or not the Board's failure to do so would be a proper matter for us to consider, because, as before stated, we are of the opinion that the Board's ground of rejection is not a new one and that its affirmance of the decision of the Examiner and its consideration of the references cited by the Examiner, although using different language in its decision, fully shows why the appealed claims define nothing inventive over the prior art relied upon by both tribunals. No new art was cited.

Appellant states that it asked the Board, under rule 66, for specific data as to the nature of the cup or casing relied upon and requested that the reference be supported by affidavits and asked for an opportunity to file reply affidavits in accordance with rule 76. There is no reason of appeal in either the first or second set of reasons of appeals filed against the decisions of the Board which alleges error in failing to furnish the affidavit called for and we do not here hold or intimate whether or not this is a proper matter for us to consider if a reason of appeal relating thereto had been submitted.

[3] We think the Examiner's holding that the claims were all unpatentable over the patent to Foret in view of either of the references cited was sound, and we think the decision of the Board, although handling the references in a somewhat different manner, affirmed, and intended to affirm, the holding of the Examiner. It is our view that appellant's device, as defined by the appealed claims, involves nothing that is inventive over the cited prior art, and the decision of the Board affirming that of the Examiner is affirmed.

Affirmed.

Adjudicated Patents

(C. C. A. N. Y.) Allen and Hartley patent, No. 1,967,221, for a printing plate, claims 7 and 8 *Held* invalid. *Addressograph-Multigraph Corp.* v. *Cooper*, 156 F.(2d) 483; 70 USPQ 272.

(C. C. A. N. Y. Calva patent, No. 2,240,388, for method of treating sheepskins, claims 1, 2, 3, 5, 10, and 13 *Held* invalid and not infringed. *Benz* v. *Celeste Fur Dyeing & Dressing Corp.*, 156 F.(2d) 510; 70 USPQ 46.

Order No. 4095

U. S. PATENT OFFICE, *Washington, D. C., Sept. 11, 1946.*

The classification of merchandise under the act of May 4, 1906, is hereby amended as follows:

The title of Class 45 is changed from "Beverages, nonalcoholic," to *Soft Drinks and Carbonated Waters.*

CASPER W. OOMS,
Commissioner.

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

Pat. 2,346,623. AUTOMATIC CONTROL FOR ELECTRIC CIRCUITS. Patented Apr. 11, 1944. An automatic program selector for a radio in the form of a clock. A series of conductor bars represent different radio stations. Forty-eight spring pressed selector disks on bars with electrical conductors countersunk therein represent fifteen minute time periods throughout a twelve hour broadcasting period. (Co-owners) Robert F. and Ohmer E. Stewart. Address correspondence to Robert F. Stewart, R. R. #1, Franklin, Ohio. Group 36—61. Reg. No. 4,137.

Pat. 2,210,801. ANTIGLARE HEADLIGHT. Patented Aug. 6, 1940. A well or cavity is provided at the rear of the lower end of this headlight shell and the usual bulb mounted in a concealed position. Since the beam of light must first be directed to strike the upper polished surface of the shell and then reflect outwardly, glare is eliminated. The bottom portion of the shell is coated black so that it is non-reflecting. (Owner) Newton W. Doane, Box 264, Novato, Calif. Group 34—81. Reg. No. 4,138.

Pat. 2,396,834. RENEWABLE HEEL. Patented Mar. 19, 1946. A heel for a shoe with a removable and replaceable self-latching tread section interlocked in place by a tongue and groove overlapping joint. May be made from plies of fibrous material for longer wear. (Owner) Newton W. Doane, Box 264, Novato, Calif. Group 31—32—41. Reg. No. 4,139.

Pat. 2,158,831. NEST STRUCTURE. Patented May 16, 1939. A series of tray-like chambers, arranged in tiers one above the other, form nests each with a trapping closure and an egg trapping compartment into which eggs roll by gravity from the nest. Nest group may be readily knocked down for shipment or quickly assembled for use. May be made of sheet metal. (Owner) Anna C. Plante. Address correspondence to Frederic E. Anderson, 257 Laurel St., Hartford 5, Conn. Group 34—95. Reg. No. 4,140.

Pat. 2,278,281. POULTRY FEEDER. Patented Mar. 31, 1942. A trough type poultry feeder formed from sheet metal has the margins folded over toward outer surface to form a tongue and channel so feeder may be readily assembled or knocked down. A guard formed of spaced transverse and longitudinal bars (to admit the heads of chickens) rests on surface of feed and forms a screen to prevent scattering of feed by birds. A rod hooked across each end prevents tilting. Trough may be enlarged by adjustable supplemental side panels slidable in margins. (Owners) Anna C. Plante and Frederic E. Anderson. Address correspondence to Frederic E. Anderson, 257 Laurel St., Hartford 5, Conn. Groups 33—12—49; 35—22. Reg. No. 4,141.

Pat. 2,311,867. SHEET MATERIAL STRUCTURE. Patented Feb. 23, 1943. A four-corner structural joint for use with bendable sheet material, efficient in uniting sheet metal to form structures with angularly disposed walls. Comprises the folding of the margins of four sheets to form channels whereby they may be telescoped together to form four internal corners as in a structure made of separate compartments. (Owner) Anna C. Plante. Address correspondence to Frederic E. Anderson, 257 Laurel St., Hartford 5, Conn. Group 33—12. Reg. No. 4,142.

Pat. 2,358,415. SHEET METAL STRUCTURE. Patented Sept. 19, 1944. An easily assembled and disassembled two-corner structural joint for forming sheet material into knock-down structures with angularly disposed walls. Comprises the novel folding of the margins of three sheets whereby they may be slidably sheathed together to form two internal corners as in a structure made of adjoining compartments. (Owner) Anna C. Plante. Address correspondence to Frederic E. Anderson, 257 Laurel St., Hartford 5, Conn. Group 33—12. Reg. No. 4,143.

Pat. 2,199,121. CONVERTER SYSTEM. Patented Apr. 30, 1940. Group 36—61. Reg. No. 4,144.

Pat. 2,329,021. ELECTROMAGNETIC SYSTEM. Patented Sept. 7, 1943. Group 36—61. Reg. No. 4,145.

These two patents relate to kindred subject matter. A pair of coils are wound on cones of magnetic material, connected together and shunted by a condenser. The process comprises magnetizing the cones in a direction to cause only one of the coils to act as an inductance and cooperate with the condenser to form a parallel resonant circuit and the other coil to act as a resistance during part of each cycle; the actions of both coils being reversed during the remainder of each cycle. (Owner) Philip J. Walsh, 945 Pine St., San Francisco 2, Calif.

Pat. 2,399,792. CHILD'S CONVERTIBLE CHAIR. Patented May 7, 1946. While this chair is primarily adapted for use in an automobile, it may easily be converted for use elsewhere. The chair is placed on the vehicle seat and a pair of arcuate strips hooked over the back of the seat to hold the chair in position. The strips are pivotally connected so that they may be swung about to function as rear legs. Variable in height, the chair may be used as a child's toilet by removing the canvas seat cover. The base may be slid in the grooved arm rests and serve as a tray during feeding time. The whole is readily compacted into a small unit for storage when not in use. (Owner) George W. Copp, 418 Burns St. Forest Hills, N. Y. Group 25—11—13. Reg. No. 4,146.

Pat. 2,401,748. AIRCRAFT SEAT SUPPORTING STRUCTURE. Patented June 11, 1946. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) A series of fittings and supports for an airplane seat so constructed as to gradually absorb extreme forces to prevent serious injury to occupant. Shock absorbers are secured to back of seat and main structure of plane and track underneath seat. Should the shear members, which secure the upper and lower part of seat to plane fail, the seat will move forward along track, the movement resisted by the shock absorbers. (Owner) Frederick P. Dillon, 9009 Burton Way, Los Angeles 36, Calif. Groups 25—31; 37—21. Reg. No. 4,147.

Pat. 2,304,781. AUTOMATIC DIVE BOMBER PILOT'S SEAT. Patented Dec. 15, 1942. A pilot's seat for a dive bomber controlled by hydraulic jack to release seat from upright to lowered position when airplane pulls out from a dive. Pilot is automatically raised to normal flying position as plane levels off after the pullout. Release mechanism is coupled with automatic pilot control so with release of bomb the automatic pilot is brought into use. (Owner) Frederick P. Dillon, 9009 Burton Way, Los Angeles 36, Calif. Group 37—21. Reg. No. 4,148.

Pat. 2,402,087. EXHAUST SILENCER. Patented June 11, 1946. An exhaust silencer for an internal combustion engine. A large housing provided with chambers with exhaust receiving openings (one for each cylinder) is attached to engine. Exhaust gases pass through openings which divide gases into several streams. The gases are drawn into fan housing attached to drive shaft and at the same time atmospheric air is drawn into fan housing. Gases pass through a tubular housing and then through conical screens to screen disk at small end of housing eliminating noise. (Owner) Pedro E. Rosales, Piedras Negras, Coah., Mexico. Group 35—19. Reg. No. 4,149.

Pat. 2,129,331. ELECTRICAL CONTROLLING APPARATUS AND METHOD. Patented Sept. 6, 1938. Group 36—19. Reg. No. 4,150.

Pat. 2,209,126. ELECTRICAL CONTROLLING APPARATUS AND METHOD. Patented July 23, 1940. Group 36—19. Reg. No. 4,151.

The two patents listed above relate to an electrical control system in which a translating device, in the form of a valve or motor, controls a supply of water, steam or oil for irrigation, heating or refrigeration purposes. The translating device is arranged on the primary side of a transformer and is controlled by means of a relay, rheostat or thermostatic switch on the secondary side (the arrangement may however be reversed in certain cases). The current voltage supplied to the secondary side is sufficiently low to prevent arcing or heating of the contact points and may therefore be manipulated with safety. (Owner) Edgar E. Littlefield, 834 North Stanley Ave., West Hollywood, Los Angeles 46, Calif.

Pat. 2,373,697. ELECTRICAL APPARATUS. Patented Apr. 17, 1945. This valve may be incorporated within the system described above. Casing of valve structure includes a seat and a bonnet with a cylindrical extension at the top of which is a tubular member having a closed end. Cooperating with the seat is a piston valve having an integrally formed extension provided with a seat at its upper end. The extension and piston form a by-pass within which a resiliently mounted valve stem reciprocates. All of the above parts are formed of a non-magnetizable material such as brass. Formed of a magnetizable material is a valve member threaded to the upper end of the stem and an adjustable lever arm, both parts enclosed within the above-mentioned tubular member with the closed end adjacent to which is a coil and core. When energized, the coil attracts the lever causing it to slide along the wall of the tubular member, unseat the by-pass valve, open the by-pass and release the pressure so that the piston valve is unseated. (Owner) Edgar E. Littlefield, 834 North Stanley Ave., West Hollywood, Los Angeles 46, Calif. Groups 33—61; 36—19. Reg. No. 4,152.

Pat. 2,382,186. TOY. Patented Aug. 14, 1945. As wheeled toy horse and cart are pulled forward, movement of head, legs and tail is effected by the turning of the wheels. Figure of horse is pivotally connected to the shafts of the cart and the head and jointed forelegs provided with springs. A cord looped from the shafts to the lower portion of the head, tail and to each leg causes head to bob, knees to bend, etc., as toy is pulled forward. (Owner) Ernest Valenti, 4007 Third Ave., Brooklyn 32, N. Y. Group 39—41. Reg. No. 4,153.

Pat. 2,398,478. COMBINATION VALISE AND CHAIR. Patented Apr. 16, 1946. Valise functions not only as a carrier but as a seat to which a slatted back is hinged and legs pivotally connected. When in folded position legs are received in separate pockets over which the back is folded to prevent displacement. The legs are each provided with a tensioned spring which urges them into position as soon as the back is lifted. The back is held in an upright position by fasteners. (Owner) Ernest Valenti, 4007 Third Ave., Brooklyn 32, N. Y. Group 25—31. Reg. No. 4,154.

Pat. 2,400,320. PORTABLE DISPLAY TABLE. Patented May 14, 1946. For use by demonstrators and salesmen, its two hinged box-like sections, when folded, resemble a carrying case. A pair of legs hinged within each section support the sections when opened and inverted so that the upper surfaces form a flat table. A multi-panel display back (foldable to fit in the case) is fastened to the sides of the opened case so that it is perpendicular to the supporting surface. The back may also be used to support shelves of various sizes. (Owner) Harry G. Trefry, 19 King St., Belmont, Mass. Groups 31—61; 35—84. Reg. No. 4,155.

Pat. 2,313,830. DOCTOR BLADE. Patented Mar. 16, 1943. Blade is of laminated structure. A graphite lubricant is placed between the two steel sheets which comprise the blade. When excess ink is being scraped from the rotating cylinder of a rotogravure printing press, the structure prevents scratching or wearing of the relatively soft copper face. (Owner) The Crowell Collier Publishing Company. Address correspondence to Campbell, Brumbaugh & Free, 90 Broad St., New York 4, N. Y. Groups 27—71; 35—55. Reg. No. 4,156.

Pat. 2,359,770. APPARATUS FOR REMOVING EXCESS FLUID FROM THE PRINTING CYLINDERS OF PRINTING PRESSES. Patented Oct. 10, 1944. The usual metal doctor blade is replaced by a sectional scraper composed of carbon graphite units. The units are fixed to a holder and held against the rotogravure press to effectively remove excess ink from the intagliated surface. The structure has several advantages in that each unit may be regulated or replaced so that pressure on the soft copper surface is uniform. The units have a tendency to wear less because of lubricating character of the graphite and the resultant reduced friction. (Owner) The Crowell Collier Publishing Company. Address correspondence to Campbell, Brumbaugh & Free, 90 Broad St., New York 4, N. Y. Groups 27—71; 35—55. Reg. No. 4,157.

Pat. 2,377,089. INTAGLIO PRINTING PRESS. Patented May 29, 1945. Press has two systems of spray nozzles situated in a relatively light casing to supply ink or a cleaning solvent. Circulation of ink may be quickly stopped and cleaning solvent forced through part of the ink supply system to thoroughly clean the photogravure cylinders, after which an ink of different color may be substituted if desired. A vacuum arrangement removes surplus ink or the volatile vapors of both the solvent and the ink. The arrangement may be easily installed in the conventional type of rotary photogravure press elminating the usual heavy casings which enclose the cylinder. (Owner) The Crowell Collier Publishing Company. Address correspondence to Campbell, Brumbaugh & Free, 90 Broad St., New York 4, N. Y. Groups 27—71; 35—55. Reg. No. 4,158.

Pat. 2,352,905. METHOD OF FORMING AND CONDITIONING COMPOSITE PRINTING PLATES AND THE LIKE. Patented July 4, 1944. Consists of placing the master plate against a mold and electrolytically depositing nickel and copper on the mold. The mold is then stripped from the copper and nickel plate, the plate washed and submitted to a flux bath consisting of water, zinc chloride and orthophosphoric acid. After drying, electrotype metal may be

cast on the conditioned surface. The tinfoil used in "tinning" the copper is eliminated by use of this method. (Owner) The Crowell Collier Publishing Company. Address correspondence to Campbell, Brumbaugh & Free, 90 Broad St., New York 4, N. Y. Group 35—55. Reg. No. 4,159.

Pat. 2,356,329. METHOD FOR THE SEPARATION AND RECLAMATION OF COPPER FROM PRINTING PLATES AND THE LIKE. Patented Aug. 22, 1944. A method for the recovery of copper from printing plates made of an alloy of lead, antimony, and tin on which a layer of copper and nickel has been deposited. The nickel is first electrolytically stripped and the stripped surface coated with calcium oxide or any other whiting. Direct heat is applied at a temperature sufficient to melt the "base" metal, leaving a thin copper shell. The shell is then heated and suddenly cooled, knurled to break up the scale and then mechanically and chemically cleansed and used as the anode to deposit copper on new plates or cylinders. (Owner) The Crowell Collier Publishing Company. Address correspondence to Campbell, Brumbaugh & Free, 90 Broad St., New York 4, N. Y. Group 35—55. Reg. No. 4,160.

Pat. 1,900,196. ROOFER'S GAUGE. Patented Mar. 7, 1933. A carpenter's gauge which requires only one setting to mark a complete set of right or left hand rafters. Comprises a main straight edge, and a folding straight edge hinged at center and hingedly attached to end of main edge. The other end is slidably attached to the upper surface of main straight edge so all parts may fold into a small flat package. (Owner) Ralph W. Pack, 808 Carmel Ave., Albany 6, Calif. Group 35—43. Reg. No. 4,161.

Pat. 1,900,197. PITCH GAUGE. Patented Mar. 7, 1933. A carpenter's gauge by means of which bevels and slopes may be laid off and the gauge reset to give the length of a diagonal, obviating the necessity for calculations. Comprises a horizontal run scale with a slidable vertical scale pivoted thereto and held by a leaf spring. A pair of adjustable graduated scales are also pivoted to run scale and slidable thereon. All scales fold along horizontal scale when not in use. (Owner) Ralph W. Pack, 808 Carmel Ave., Albany 6, Calif. Group 35—43. Reg. No. 4,162.

Pat. 2,400,769. MECHANICAL MANUAL-TYPE WIRE TWISTER. Patented May 21, 1946. A manually operated device for holding, feeding and twisting the ends of a safety tie-wire. Casing has a revolvable cuplike inner cylinder which coacts with outer cylinder. A gear driven, rotatably mounted, wire holding and twisting unit is mounted in bearing of outer cylinder and provided at outer end with a wire looping and twisting head. The wire is pulled down through the head and forms a loop which is held in position by clamping jaws. By holding outer cylinder and operating crank attached to inner cylinder the gearing comes into play, twisting head and wire. (Owner) William Morris, 95 Ramsdell St., New Haven, Conn. Group 35—42. Reg. No. 4,163.

Pat. 1,875,184. LIQUID INK ERASER FOR POCKET FOUNTAIN PENS AND DESK SET FOUNTAIN PENS. Patented Aug. 30, 1932. A plug in end of fountain pen has a removable, compressible sack which holds ink eradicator. When spring influenced ball valve is depressed, liquid flows through sleeve and rolls over surface to be erased. A removable shield holds pen point and protects sack. May also be used to house writing fluids and draw wide lines, mark boxes, etc. Filling operation is similar to that of fountain pen. (Owner) Frank N. Steigleder, 15 Boylston St., Boston, Mass. Group 39—51. Reg. No. 4,164.

Pat. 2,400,790. BABY COMFORT CAB. Patented May 21, 1946. A device for cooling or heating an infant's carriage, crib, etc. An inner spring mattress has channels formed within springs for air circulation and a tubular member between channels for hot or cold water. Edges of mattress are rolled over and outwardly to form extensions to prevent drafts. Beneath the extensions are openings covered with slidable perforated plates which regulate passage of air. A screen covered opening is provided in center of carriage. A motor mounted therein drives a fan and forces warm or cold air into mattress. (Owner) Willard R. Tolen, 3390 Lime St., Riverside, Calif. Groups 25—15; 35—84. Reg. No. 4,165.

Pat. 2,155,987. SAFETY PIN. Patented Apr. 25, 1939. This patent is concerned with the usual safety pin made of one piece of wire and bent to form a coil spring end, etc. The upper section of this pin, however, is bent near the center to form a triangular or loop-shaped portion which overlaps the piercing member of the pin. In use this prevents any tendency of the pin to open. The pin will lie flat on cloth and be held in position until released by the user. Several modifications are shown. (Owner) Michael V. Assaf, 27 Bennington St., Lawrence, Mass. Group 39—99. Reg. No. 4,166.

United States Government Owned Patent

The following patent, owned by the United States Government, as represented by the Secretary of the Interior, is available for licensing, upon a non-exclusive, royalty-free basis:

Pat. 2,395,475. BENEFICIATION OF BERYLLIUM ORES. Patented Feb. 26, 1946. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) Produces high grade beryllium ore concentrate from low grade beryllium deposits. Comprises subjecting comminuted ore to a pre-treatment to remove iron and then to a mineral concentrating treatment involving selective filming under acidic conditions of a desired constituent in the presence of a soluble fluoride, a long-chain fatty acid and a long-chain alkyl amine salt. Group 34—1. Reg. No. 4,167.

Regulations under which licenses are granted are issued by the Secretary of the Interior. Applications for licenses should be made to the Solicitor, Department of the Interior, Washington 25, D. C.

TRADE-MARKS

OFFICIAL GAZETTE, OCTOBER 22, 1946

[VOL. 591. No. 4]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 2

RECEPTACLES

Ser. No. 488,162. MAVCO SALES, INC., New York, N. Y. Filed Sept. 8, 1945.

Eleanor Hamlin

The mark consists of the facsimile signature of "Eleanor Hamlin," consent given.

FOR COMPACTS MADE OF BASE METAL AND COMPOSITION MATERIALS AND SOLD IN TRADE EMPTY.

Claims use since June 15, 1945.

Ser. No. 496,110. A. L. SIEGEL CO., INC., New York, N. Y. Filed Feb. 6, 1946.

Vita-Guard

FOR CLOSET ACCESSORIES MADE OF PLASTIC FILM—NAMELY, GARMENT BAGS, BLANKET BAGS, COMFORTER BAGS, AND LINEN BAGS.

Claims use since Jan. 4, 1946.

Ser. No. 504,413. F. A. WHITNEY CARRIAGE COMPANY, Leominster, Mass. Filed June 21, 1946.

Glamor-Hamper

No registration rights are claimed for the word "Hamper" apart from the mark.

FOR CLOTHES HAMPERS.

Claims use since June 7, 1946.

Ser. No. 504,888. EMPIRE BOX CORPORATION, Garfield, N. J. Filed July 1, 1946.

EMPIRE

FOR COLLAPSIBLE GLUED BOXES, CARTONS, AND TRAYS MADE OF CARDBOARD, PAPERBOARD, OR CARDBOARD.

Claims use since May 18, 1946.

Ser. No. 504,889. EMPIRE BOX CORPORATION, Garfield, N. J. Filed July 1, 1946.

EMPIRE QUALITY PRODUCTS

Applicant disclaims the words "Quality Products" apart from the mark.

FOR COLLAPSIBLE GLUED BOXES, CARTONS, AND TRAYS MADE OF BOXBOARD, PAPERBOARD, OR CARDBOARD.

Claims use since May 18, 1946.

Ser. No. 506,956. PEERLESS TUBE COMPANY, Bloomfield, N. J. Filed Aug. 6, 1946.

FOR COLLAPSIBLE TUBES.

Claims use since July 1, 1929.

Ser. No. 507,737. MARATHON CORPORATION, Rothschild, Wis. Filed Aug. 21, 1946.

MARALUX

FOR BAGS MADE OF PAPER, CELLOPHANE, GLASSINE, AND OTHER FLEXIBLE SHEET MATERIALS.

Claims use since May 8, 1946.

Ser. No. 508,020. BEMIS BRO. BAG COMPANY, St. Louis, Mo. Filed Aug. 26, 1946.

Lamitex

FOR BAGS MADE OF TEXTILE MATERIAL LAMINATED OR COATED WITH OTHER MATERIALS.
Claims use since Aug. 6, 1946.

Ser. No. 508,021. BEMIS BRO. BAG COMPANY, St. Louis, Mo. Filed Aug. 26, 1946.

Textite

FOR BAGS MADE OF TEXTILE MATERIAL LAMINATED OR COATED WITH OTHER MATERIALS.
Claims use since Aug. 6, 1946.

CLASS 3

BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS

Ser. No. 490,207. SAM ORENSTEIN, doing business as Amelia Earhart Luggage, Newark, N. J. Filed Oct. 19, 1945.

FLEXLITE

FOR LUGGAGE—NAMELY, SUITCASES, HAND BAGS, DRESS TRUNKS, STEAMER TRUNKS, AND WARDROBE TRUNKS.
Claims use since February 1941.

Ser. No. 498,793. PAKULA AND COMPANY, Chicago, Ill. Filed Mar. 22, 1946.

PACER

FOR BILLFOLDS.
Claims use since Jan. 15, 1945.

Ser. No. 502,780. ABEL & BACH, INC., Milwaukee, Wis. Filed May 27, 1946.

"Pla-Mate"

FOR SUITCASES.
Claims use since Jan. 31, 1946.

Ser. No. 508,254. ETHEL L. TERRELL, Brooklyn, N. Y. Filed Aug. 29, 1946.

Ethel

FOR LADIES' HANDBAGS.
Claims use since Jan. 3, 1946.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 482,181. SANI-RUG CO., Chicago, Ill. Filed Apr. 14, 1945.

Sani-Rug

The word "Rug" is disclaimed apart from the mark.
FOR POWDER FOR DRY CLEANING RUGS AND CARPETS.
Claims use since Sept. 15, 1944.

CLASS 5

ADHESIVES

Ser. No. 484,058. NATIONAL STARCH PRODUCTS INC., New York, N. Y. Filed June 1, 1945.

NATIONAL

Filed March 8, 1946. Serial No. 497,842. PUBLISHED JULY 23, 1946. Class 6.

424,790. SYNTHETIC DETERGENT CLEANER FOR DELICATE WASHABLE FABRICS. CARE LABORATORIES, INCORPORATED, Charlotte, N. C.
Filed March 13, 1946. Serial No. 498,112. PUBLISHED JULY 23, 1946. Class 4.

424,791. SYNTHETIC DETERGENT CLEANER FOR DELICATE WASHABLE FABRICS. CARE LABORATORIES, INCORPORATED, Charlotte, N. C.
Filed March 13, 1946. Serial No. 498,113. PUBLISHED JULY 23, 1946. Class 4.

424,792. ROUGE AND LIPSTICKS. PARK & TILFORD, New York, N. Y.
Filed March 13, 1946. Serial No. 498,168. PUBLISHED JULY 16, 1946. Class 6.

424,793. POWDERS FOR KILLING FLEAS, LICE, AND TICKS; POISONS FOR KILLING RODENTS, INSECTICIDES, AND A COMBINED INSECTICIDE AND SULPHUR DUST. J. A. STANLEY, doing business as Stanley Industries, Seattle, Wash.
Filed March 13, 1946. Serial No. 498,178. PUBLISHED JULY 16, 1946. Class 6.

424,794. LIVER, IRON, AND VITAMIN B-COMPLEX PREPARATION FOR THE TREATMENT OF ANEMIA AND VITAMIN DEFICIENCIES. WINTHROP CHEMICAL COMPANY, INC., New York, N. Y.
Filed March 14, 1946. Serial No. 498,263. PUBLISHED JULY 9, 1946. Class 6.

424,795. SUBMERSION ACTUATORS FOR ACTUATING VALVES FOR THE RELEASE OF GAS UNDER PRESSURE FROM CONTAINERS TO INFLATE BAGS WHICH FORM BUOYANT FLOATS FOR SUPPORTING DISABLED AIRCRAFT, SUCH DEVICES INCLUDING A CASING HAVING AN EXPANSIBLE MEDIUM WHICH IS EXPANDED WHEN THE CASING IS BROUGHT INTO CONTACT WITH A LIQUID, WHEREBY TO GENERATE PRESSURE TO ACTUATE THE RELEASE VALVES, ALSO ACTUATORS COMPRISING A PERFORATED CASING ENCLOSING ELECTRODES WHICH UPON CONTACT WITH WATER COMPLETES AN ELECTRIC ACTUATING CIRCUIT TO OPERATE ELECTRICALLY RELEASABLE VALVES, HEAT RESPONSIVE APPARATUS—NAMELY, FIXED TEMPERATURE THERMOSTATS; FUSIBLE LINK DETECTORS; AND RATE-OF-TEMPERATURE-RISE DETECTORS COMPRISING A SMALL METAL AIR CHAMBER, THE AIR IN WHICH EXPANDS UPON A SUDDEN CHANGE IN TEMPERATURE, EACH OF THESE DEVICES BEING CONNECTED TO RELEASE MECHANISM, WHEREBY UPON ACTUATION OF THE DEVICE, THE RELEASE MECHANISM IS OPERATED TO RELEASE A FIRE EXTINGUISHING MEDIUM, AND AUTOMATIC WEIGHT INDICATORS AND SCALES. WALTER KIDDE & COMPANY, INC., New York, N. Y., and Belleville, N. J.

Filed June 30, 1945. Serial No. 485,291. PUBLISHED JULY 23, 1946. Class 26.

[ACT OF MARCH 19, 1920, SEC. 1 (b)]

THESE REGISTRATIONS ARE NOT SUBJECT TO OPPOSITION

424,796. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) E. LEITZ, INC., New York, N. Y. Filed Feb. 2, 1944. Serial No. 467,097.

Leitz

FOR PHOTOGRAPHIC APPLIANCES AND SUPPLIES—NAMELY, MICROSCOPES, PROJECTORS, BINOCULARS, MICRO-PROJECTORS, PHOTOMICROGRAPHIC EQUIPMENT, MICRO METALLOGRAPHS, SPECTROSCOPES, COLORIMETERS, TITRATERS, CARBON METERS, MICROSCOPE HEATING STAGE AND MANIPULATORS, DILATOMETERS, MICROSCOPE LAMPS, X-RAY FILM PROJECTORS, PHOTOMETERS, DRAWING HEADS, DRAWING APPARATUS, OBJECT MARKERS, DEMONSTRATION EYEPIECES, COMPARISON EYEPIECES, MICROSCOPE ACCESSORIES, VERTICAL ILLUMINATORS, MAGNIFIERS, MICROMETER EYEPIECES, CAMERAS, LENSES, VIEW FINDERS, RANGE FINDERS, FILTERS, SUNSHADES, TIMING DEVICES, TRIPOD HEADS, SUPPLEMENTARY CAMERA ACCESSORIES INCLUDING A RAPID WINDER FOR THE SHUTTER OF THE CAMERA TO INCREASE THE SPEED OF TAKING PICTURES AND A GUN USED WITH LONG DISTANCE FOCUS LENSES; SUCH AS SPRING WINDERS, RAPID WINDERS, STEREO APPARATUSES, PHOTOFLASH UNITS, CARRYING AND PROTECTIVE CASES, DARKROOM SUPPLIES, DEVELOPING APPARATUSES, NEGATIVE VIEWERS, NEGATIVE FILE SYSTEMS COMPRISING METAL OR WOODEN BOXES WITH PARTITIONS FOR STORING THEREIN IN A SELECTED ORDER PHOTOGRAPHIC NEGATIVES; FILM AND SLIDE PRINTING APPARATUSES, MATERIAL FOR MOUNTING LANTERN SLIDES, COPY AND REPRODUCTION APPARATUSES, APPARATUSES FOR PHOTOMICROGRAPHY, ENLARGING APPARATUSES FOR COPYING MANUSCRIPTS, DOCUMENTS, BLUEPRINTS AND PICTURES WITH THE AID OF A CAMERA; INTERCHANGEABLE ACCESSORIES FOR ENLARGERS, ENLARGER EASELS, SPECIAL ACCESSORIES FOR ENLARGERS, PROJECTION APPARATUSES, PRISM BINOCULARS, AND RANGE FINDERS.

Claims use since Mar. 2, 1929.

424,797. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) E. LEITZ, INC., New York, N. Y. Filed Feb. 2, 1944. Serial No. 467,098.

E. LEITZ INC. NEW YORK

FOR PHOTOGRAPHIC APPLIANCES AND SUPPLIES—NAMELY, ORANGE FILTERS, VIEW FINDERS, EXPOSURE METERS, SUNSHADES, SPARE ROLL FILM MAGAZINES, TAKE-UP SPOOLS, MAGAZINE SPOOLS, DUST CAPS, LENS CAPS, SHOULDER STRAPS, CAMERA SLINGS, TRIPOD HEADS, CARRYING CASES, PHOTOFLASH UNITS, PROTECTIVE CASES, NEGATIVE VIEWERS, NEGATIVE FILE SYSTEMS COMPRISING METAL OR WOODEN BOXES WITH PARTITIONS FOR STORING THEREIN IN A SELECTED ORDER PHOTOGRAPHIC NEGATIVES, MATERIAL FOR MOUNTING LANTERN SLIDES, COPY AND REPRODUCTION APPARATUSES FOR COPYING MANUSCRIPTS, DOCUMENTS, BLUEPRINTS AND PICTURES WITH THE AID OF A CAMERA; SPECIAL ACCESSORIES FOR ENLARGERS, SPARE LAMPS FOR ENLARGERS, AND ACCESSORIES FOR USING PHOTOFLOOD LAMPS, AND PROJECTION APPARATUSES.

Claims use since Mar. 2, 1929.

424,798. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) E. LEITZ, INC., New York, N. Y. Filed Feb. 2, 1944. Serial No. 467,099.

E. LEITZ WETZLAR

FOR PHOTOGRAPHIC APPLIANCES AND SUPPLIES—NAMELY, CAMERAS, LENSES, ORANGE FILTERS AND CORRECTION LENSES FOR BUILT-IN RANGE FINDERS AND VIEW FINDERS, VIEW FINDERS, RANGE FINDERS, ORANGE FILTERS FOR ENLARGERS, SUNSHADES, SPARE ROLL FILM MAGAZINES, MAGAZINE SPOOLS, TAKE-UP SPOOLS, SPARE FILM HOLDERS, DUST CAPS, LENS CAPS, SPECIAL LENS OPENING COVERS, WIRE CABLE RELEASES, REMOTE RELEASES AND SHUTTER WINDERS, SHOULDER STRAPS, CAMERA SLINGS, TIMING DEVICES, TRIPOD HEADS, STEREO APPARATUSES, CARRYING AND PROTECTIVE CASES, NEGATIVE VIEWERS, NEGATIVE FILE SYSTEMS COMPRISING METAL OR WOODEN BOXES WITH PARTITIONS FOR STORING THEREIN IN A SELECTED ORDER PHOTOGRAPHIC NEGATIVES; FILM AND SLIDE PRINTING APPARATUSES, MATERIAL FOR MOUNTING LANTERN SLIDES, COPY AND REPRODUCTION APPARATUSES FOR COPYING MANUSCRIPTS, DOCUMENTS, BLUEPRINTS AND PICTURES WITH THE AID OF A CAMERA; APPARATUSES FOR PHOTOMICROGRAPHY, ENLARGING APPARATUSES, INTERCHANGEABLE ACCESSORIES FOR ENLARGERS, ENLARGER EASELS, DISTORTION ELIMINATING DEVICES, SPARE LAMPS FOR ENLARGERS AND ACCESSORIES FOR USING PHOTOFLOOD LAMPS, SPECIAL ACCESSORIES FOR ENLARGERS, PROJECTION APPARATUSES, PRISM BINOCULARS, RANGE FINDERS FOR SHOOTING AND SURVEYING INSTRUMENTS, OPTICAL SHORT DISTANCE FOCUSING DEVICES AND STEREO ATTACHMENTS FOR CAMERAS FOR OBTAINING STEREOSCOPIC PICTURES.

Claims use since Mar. 2, 1929.

424,799. (CLASS 37. PAPER AND STATIONERY.) JOS. LIPIC PEN COMPANY, St. Louis, Mo. Filed Dec. 4, 1944. Serial No. 477,201.

JOS. LIPIC PEN CO.

FOR PENCILS AND WRITING PENS.
Claims use since 1929.

424,800. (CLASS 1. RAW OR PARTLY PREPARED MATERIALS.) COLUMBIA NAVAL STORES COMPANY, Savannah, Ga. Filed Feb. 6, 1945. Serial No. 479,466.

COLDRI

FOR GUM ROSIN.
Claims use since Jan. 1, 1945.

424,801. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) WOLF J. OVERHAMM, doing business as Parfums Adrian, New York, N. Y. Filed Feb. 17, 1945. Serial No. 479,945.

Gdrian

FOR COLOGNE ESSENCE AND PERFUME.
Claims use since Apr. 13, 1944.

424,802. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) DR. SALSBURY'S LABORATORIES, Charles City, Iowa. Filed Mar. 30, 1945. Serial No. 481,556.

DR. SALSBURY'S

FOR ANTHELMINTICS, ANTIGENS, BACTERINS, CONDITIONERS, DISINFECTANTS, FUMIGANTS, HERBICIDES, INHALANTS, INSECTICIDES, OINTMENTS, RODENTICIDES, TONICS, VACCINES, AND PREPARATIONS FOR IRRIGATING AND WASHING EARS AND EXTERNAL MEMBRANES, FOR PREVENTING CANNIBALISM, FOR PREVENTING COCCIDIOSIS, AND FOR STIMULATING GROWTH, FOR TREATING POULTRY AND DOMESTIC ANIMALS AND FARM LIVE STOCK.

Claims use since 1924.

424,803. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) H. R. LOVELL, doing business as H. R. Lovell and Company, Greenville, Pa. Filed Apr. 11, 1945. Serial No. 482,000.

MOREHAIR

FOR HAIR TONIC.
Claims use since Nov. 20, 1923.

424,804. (CLASS 3. BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS.) SOL KOFFLER, doing business as American Luggage Works, Providence, R. I. Filed May 7, 1945. Serial No. 483,068.

Verylite

FOR HAND LUGGAGE—NAMELY, WEEK-END CASES, PULLMAN SUIT-CASES, PULLMAN WARDROBES, OVERNIGHT CASES, WARDROBE CASES, HAT BOXES, AND SHOE AND HAT CASES.

Claims use since 1936.

424,805. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) PLANT PRODUCTS COMPANY, Blue Point, N. Y., assignor to Plant Products Corporation, Blue Point, N. Y., a corporation of New York. Filed May 25, 1945. Serial No. 483,786.

Seed-less-Set

FOR INSECTICIDES USED FOR SPRAYING PLANTS.
Claims use since Dec. 20, 1944.

424,806. (CLASS 39. CLOTHING.) KORET OF CALIFORNIA, INC., San Francisco, Calif. Filed June 4, 1945. Serial No. 484,135.

GIRDLSLAX

FOR GIRLS' AND WOMEN'S SLACKS.
Claims use since May 1, 1942.

424,807. (CLASS 37. PAPER AND STATIONERY.) SIDNEY J. BURGOYNE & SONS, Philadelphia, Pa. Filed June 11, 1945. Serial No. 484,389.

PETITE

FOR NOTE PAPER AND ENVELOPES.
Claims use since Sept. 16, 1943.

424,808. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) HOUSE OF HOLLYWOOD, doing business as Sulfa-Aid Company, Los Angeles Calif. Filed June 11, 1945. Serial No. 484,402.

Sulfa-Aid

FOR CELLULOSE PREPARATION FOR THE TREATMENT OF BURNS, ABRASIONS, BRUISES, AND THE LIKE.
Claims use since Oct. 1, 1943.

424,809. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS, AND SUBSTITUTES THEREFOR.) PROTECTIVE COATINGS CORPORATION, Belleville, N. J. Filed June 20, 1945. Serial No. 484,799.

AQUASTOP

FOR WATER IMPERVIOUS TEXTILE FABRICS SOLD BY THE PIECE, YARD OR BOLT AND MADE OF COTTON, RAYON, SILK, WOOL, NYLON, GLASS, PROTEIN AND CELLULOSE DERIVATIVE FILAMENTS.
Claims use since Mar. 23, 1944.

424,810. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS, AND SUBSTITUTES THEREFOR.) BERT LEVI, New York, N. Y. Filed July 13, 1945. Serial No. 485,783.

ivel

The drawing is lined for shading only.
FOR COTTON AND RAYON PIECE GOODS.
Claims use since Apr. 12, 1943 on rayon piece goods, and June 1, 1945 on cotton piece goods.

424,811. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) VITAMIN PRODUCTS COMPANY, Council Bluffs, Iowa. Filed July 18, 1945. Serial No. 485,973.

CHIX-AIDE

FOR HIGH VITAMIN CONCENTRATE TO BE ADDED TO POULTRY FOOD.
Claims use since Apr. 16, 1945.

424,812. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) MCCORMICK & CO., INCORPORATED, Baltimore, Md. Filed July 23, 1945. Serial No. 486,156.

TEA-PAKS

FOR TEA.
Claims use since July 15, 1932.

424,813. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MURRAY'S SUPERIOR PRODUCTS COMPANY, Chicago, Ill. Filed Aug. 1, 1945. Serial No. 486,583.

Murray's
SOFTSHEEN

FOR PRESSING OIL FOR THE SCALP AND HAIR.
Claims use since January 1945.

424,814. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) AMERICAN BANDAGE CORPORATION, Chicago, Ill. Filed Aug. 6, 1945. Serial No. 486,731.

AMERICAINE

FOR PHARMACEUTICAL PREPARATIONS USEFUL, EXTERNALLY, IN THE CONTROL OF PAIN, ITCHING, ANTISEPTIC AND THERAPEUTIC TREATMENT OF INJURED, INFLAMED OR IRRITATED SKIN SURFACES.
Claims use since Aug. 1, 1945.

424,815. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) HOUSE OF LONTAY, INC., New York, N. Y. Filed Aug. 7, 1945. Serial No. 486,858.

CHELSEA HOUSE

FOR HAIR WAVING PREPARATIONS AND HAIR LOTIONS.
Claims use since Aug. 2, 1945.

424,816. (CLASS 39. CLOTHING.) STERN MADE DRESS CO., INC., Boston, Mass. Filed Aug. 14, 1945. Serial No. 487,149.

Joan Hawthorne's
WORKSHOP

FOR MATERNITY DRESSES.
Claims use since Mar. 1, 1945.

424,817. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MURRAY FRANK & ASSOCIATES, Chicago, Ill. Filed Aug. 29, 1945. Serial No. 487,707.

Linda Lee

FOR VINEGAR HAIR RINSE.
Claims use since Jan. 1, 1944.

424,818. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MURRAY FRANK & ASSOCIATES, Chicago, Ill. Filed Aug. 29, 1945. Serial No. 487,709.

Gold Foam

FOR PHARMACEUTICAL PREPARATIONS, FOR USE IN SHAMPOOING THE HAIR.
Claims use since Jan. 1, 1944.

424,819. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) LYDIA E. MEYER, doing business as L. E. Meyer, Fresno, Calif. Filed Sept. 11, 1945. Serial No. 488,276.

Kleen
ut
Keener

FOR LIQUID CLEANER FOR WALLS, FLOORS, FURNITURE, LINOLEUM, AND ALL KINDS OF PAINTED SURFACES.
Claims use since Aug. 25, 1945.

424,820. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) GOLDEN ARROW TOILETRIES, New York, N. Y. Filed Oct. 19, 1945. Serial No. 490,187.

FOR MEN ONLY
Enamel Toothpaste

FOR TOOTHPASTE.
Claims use since Aug. 1, 1944.

424,821. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MARBLEHEAD LIME COMPANY, Chicago, Ill. Filed Oct. 27, 1945. Serial No. 490,599.

FEEDERS CHOICE

FOR MINERAL SUPPLEMENT FOR LIVE STOCK AND POULTRY FEED.
Claims use since July 24, 1945.

424,822. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) DOMINION CHEMICAL CO., INC., New York, N. Y. Filed Nov. 24, 1945. Serial No. 492,131.

FLUEKLEEN

FOR CHEMICAL COMPOUND FOR USE IN THE REMOVAL OF SOOT.
Claims use since July 1936.

424,823. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) SAMUEL M. COHN, New York, N. Y. Filed Nov. 28, 1945. Serial No. 492,310.

MIRRO-TOP

FOR LIPSTICKS.
Claims use since Oct. 27, 1944.

424,824. (CLASS 37. PAPER AND STATIONERY.) SIMON ADHESIVE PRODUCTS CORP., New York, N. Y. Filed Dec. 5, 1945. Serial No. 492,743.

EZE-STIK

FOR LABELS AND TAGS WITH ADHESIVE BACKINGS WITH BLANK LINES TO BE FILLED IN.
Claims use since Feb. 3, 1945.

424,825. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS, AND SUBSTITUTES THEREFOR.) HUDSON VALLEY RUGS COMPANY, New York, N. Y. Filed Dec. 15, 1945. Serial No. 493,357.

TRED-EASY

FOR RUGS AND CARPETS.
Claims use since June 1944.

424,826. (CLASS 39. CLOTHING.) CONSOLIDATED MILLINERY COMPANY, Chicago, Ill. Filed Dec. 20, 1945. Serial No. 493,593.

Modern Miss

FOR LADIES' AND CHILDREN'S HATS.
Claims use since Aug. 20, 1936.

424,827. (CLASS 8. SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS.) CLARENCE W. PHILLIPS, doing business as Phillips Machine and Tool Co., Akron, Ohio. Filed Dec. 20, 1945. Serial No. 493,619.

FORM FITTING

FOR CIGARETTE CASES MADE OF STEEL, BRASS, COPPER, STAINLESS STEEL, NICKEL OR COMBINATIONS THEREOF.
Claims use since Dec. 1, 1943.

424,828. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) EDGAR M. BUTLER, doing business as Butler Engineering Company, New Orleans, La. Filed Dec. 26, 1945. Serial No. 493,882.

BUTLER
DeSLUDGER

FOR CHEMICAL PREPARATION FOR REMOVING SLUDGE FROM OIL.
Claims use since Oct. 20, 1944.

424,829. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS.) ORR & SEMBOWER, INC., Reading, Pa. Filed Dec. 31, 1945. Serial No. 494,165.

POWER-PAK

FOR SOLID OR FLUID FUEL BURNING STEAM AND HOT WATER GENERATING UNITS, AND PARTS THEREOF, FOR USE IN VARIOUS INDUSTRIAL AND DOMESTIC INSTALLATIONS, AND COMPRISED OF A BOILER WITH OR WITHOUT FEEDING APPARATUS THEREFOR, AND WITH OR WITHOUT A BURNER.
Claims use since Oct. 14, 1940.

424,830. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS.) ORR & SEMBOWER, INC., Reading, Pa. Filed Dec. 31, 1945. Serial No. 494,166.

Pressure-Pak

FOR SOLID OR FLUID FUEL BURNING STEAM AND HOT WATER GENERATING UNITS, AND PARTS THEREOF, FOR USE IN VARIOUS INDUSTRIAL AND DOMESTIC INSTALLATIONS, AND COMPRISED OF A BOILER WITH OR WITHOUT FEEDING APPARATUS THEREFOR, AND WITH OR WITHOUT A BURNER.
Claims use since May 25, 1940.

424,831. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS, AND SUBSTITUTES THEREFOR.) SOULES & SOULES, Los Angeles, Calif. Filed Jan. 12, 1946. Serial No. 494,716.

CALIFORNIA STYLE FABRICS

FOR TEXTILE FABRICS IN THE PIECE, OF WOOL, WORSTED, COTTON, RAYON, PROTEIN FIBRES, AND COMBINATIONS THEREOF.
Claims use since Jan. 6, 1942.

424,832. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) T. E. SLEDGE, doing business as T. E. Sledge, Laboratories, Texas City, Tex. Filed Jan. 16, 1946. Serial No. 494,869.

SLEDGE'S

FOR GERMICIDE FOR THE TREATMENT OF ATHLETE'S FOOT, RINGWORM, JOCKEY ITCH AND FUNGUS SKIN INFECTIONS.
Claims use since June 31, 1939.

424,833. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS. KIP, ALDRICH & CO., Richmond Hill, N. Y. Filed Jan. 29, 1946. Serial No. 495,611.

KIP, ALDRICH & CO.

FOR MEDICINES, SALVES, AND PREPARATIONS FOR THE TREATMENT OF POISON-IVY, VITAMIN CAPSULES, ORAL AND VAGINAL DOUCHE, POWDERS AND SOLUTIONS, AND LAXATIVES.
Claims use since Dec. 15, 1942.

424,834. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE PANCARA COMPANY, Chicago, Ill. Filed Feb. 1, 1946. Serial No. 495,815.

220,072. **"AG BRAND" AND DESIGN.** COFFEE. Registered Nov. 2, 1926. ASSOCIATED GROCERS COMPANY, INC., St. Louis, Mo., a corporation of Missouri. Renewed Nov. 2, 1946. Class 46.

220,094. **LO-KO.** DRY CLEANER FOR GLOVES, RIBBONS, SILKS, SHOES, CLOTHING, LEATHER GOODS, AND THE LIKE. Registered Nov. 2, 1926. LOUIS G. KOHLBERG, doing business as Lo-Ko Chemical Company. Renewed Nov. 2, 1946, to Lottie E. Kohlberg, doing business as St. Louis Insecticide Co., St. Louis, Mo. Class 4.

220,178. **THE SAN FRANCISCO CALL AND POST.** DAILY NEWSPAPER. Registered Nov. 2, 1926. THE CALL PUBLISHING COMPANY. Renewed Nov. 2, 1946, to Hearst Publications, Incorporated, San Francisco, Calif., a corporation of California. Class 38.

220,434. **VIVA-TONAL.** RADIO RECEIVING, DETECTING AND TRANSMITTING SETS AND PARTS THEREOF; CRYSTAL RECEIVING SETS, REGENERATIVE RECEIVING SETS, ASSEMBLED RADIO AND AUDIO FREQUENCY AMPLIFYING UNITS, LOUD SPEAKERS, DETECTOR, AMPLIFIER, TRANSMITTING AND RECTIFYING VACUUM TUBES; VACUUM-TUBE SOCKETS, RADIO AND AUDIO FREQUENCY TRANSFORMERS, AND CERTAIN OTHER NAMED ELECTRICAL EQUIPMENT. Registered Nov. 9, 1926. COLUMBIA PHONOGRAPH COMPANY, INC. Renewed Nov. 9, 1946, to Columbia Recording Corporation, Bridgeport, Conn., a corporation of Delaware. Class 21.

220,463. **MAPLE WREATH.** FRESH CITROUS FRUITS—NAMELY, ORANGES, LEMONS, GRAPEFRUIT. Registered Nov. 9, 1926. LINDSAY DISTRICT ORANGE COMPANY, Lindsay, Calif., a corporation of California. Renewed Nov. 9, 1946. Class 46.

220,627. **"FIRST NATIONAL LABORATORIES" AND DESIGN.** AROMATIC SPIRITS OF AMMONIA; BALSAM DE MALTHA; BAY RUM; CASTOR OIL; CAMPHOR SPIRITS; CAMPHORATED OIL; COLD CREAM; GLYCERIN; HAIR POMADE; IODINE TINCTURE; NITER SWEET SPIRITS; PEPPERMINT SPIRITS; PEROXIDE OF HYDROGEN; PETROLEUM JELLY; TURPENTINE SPIRITS; WITCH HAZEL; AND DISINFECTANT AND ANTISEPTIC, AND SWEET OIL. Registered Nov. 16, 1926. FIRST NATIONAL LABORATORIES, INC., Lehighton, Pa., a corporation of Pennsylvania. Renewed Nov. 16, 1946. Class 6.

220,660. **WIRELESS.** FRESH CITROUS FRUITS—NAMELY, LEMONS, ORANGES, GRAPEFRUIT. Registered Nov. 16, 1926. LEMON GROVE FRUIT GROWERS ASSOCIATION. Renewed Nov. 16, 1946, to Lemon Grove Citrus Association, Lemon Grove, Calif., a corporation of California. Class 46.

220,736. **PROTEX.** WRAPPING PAPERS. Registered Nov. 16, 1926. NATIONAL PAPER COMPANY, Atlanta, Ga., a corporation of Georgia. Renewed Nov. 16, 1946. Class 37.

220,740. **"SOLDER SEAL" ETC. AND DESIGN.** COMPOSITION FOR STOPPING LEAKS IN ALL HOT-WATER CIRCULATING SYSTEMS, SUCH AS AUTOMOBILE RADIATORS, BOILERS, STEAM AND HOT-WATER PIPING, STEAM AND HOT-WATER RADIATORS, CYLINDER BLOCKS, AND PUMPS. Registered Nov. 16, 1926. RADIATOR SPECIALTY COMPANY. Renewed Nov. 16, 1946, to Radiator Specialty Company, Charlotte, N. C., a corporation of North Carolina. Class 6.

220,920. **HOW'S THIS.** FRESH CITROUS FRUITS—NAMELY, ORANGES, LEMONS, GRAPE FRUIT. Registered Nov. 16, 1926. LINDSAY DISTRICT ORANGE COMPANY, Lindsay, Calif., a corporation of California. Renewed Nov. 16, 1946. Class 46.

PLANT PATENTS

GRANTED OCTOBER 22, 1946

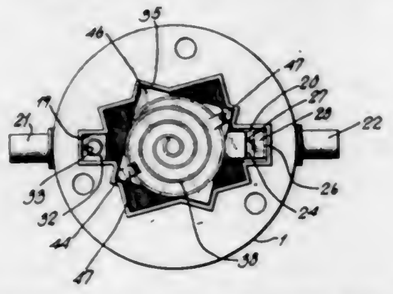
Owing to the fact that almost all of the illustrations of the plant patents are in colors, it is not practicable to print a cut of the drawing.

713

ROSE PLANT

Herbert C. Swim, Ontario, Calif., assignor to Armstrong Nurseries, Inc., Ontario, Calif., a corporation of California

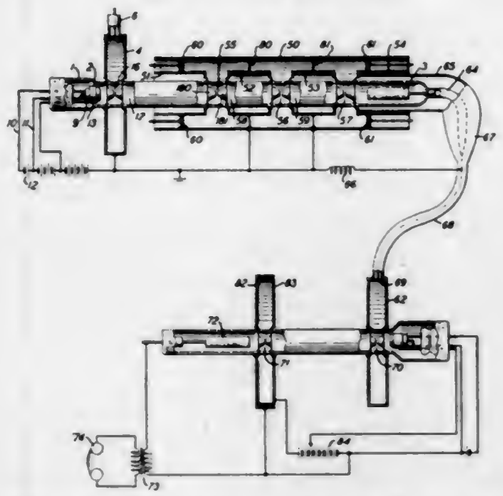
Application December 27, 1945, Serial No. 637,397



1 Claim. (Cl. 47—61)

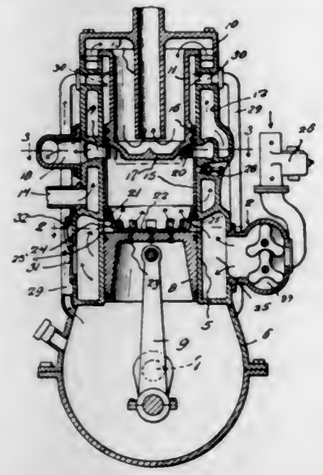
A new and distinct variety of Rose plant, characterized as to novelty by the color of its flowers; the slender form of its buds; the number of petals and petaloids; the lasting quality of the flowers; their mild fragrance; the resistance of its foliage to Orange Rose rust; and its habit of producing more than one bloom per stem in the early part of its blooming season and a single bloom to a stem during the late blooming period, substantially as shown and described.

PATENTS



GRANTED OCTOBER 22, 1946

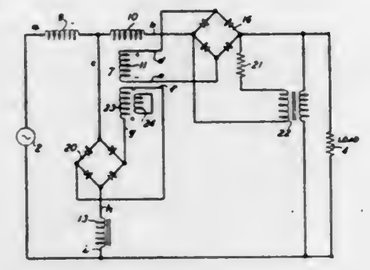
2,409,607
MULTIPLE CRYSTAL HOLDER
Henry M. Bach, Lawrence, N. Y., assignor to Premier Crystal Laboratories, Inc., New York, N. Y., a corporation of New York
Application October 15, 1943, Serial No. 506,303
6 Claims. (Cl. 171—327)



3. A holder for polygonal piezo crystals comprising a member having side walls defining a crystal receiving cavity adapted to receive a crystal of one size with substantial surface abutment of the crystal edges, said side walls being recessed to receive the corners of a crystal of another size with substantial surface abutment of the crystal edges adjacent said corners.

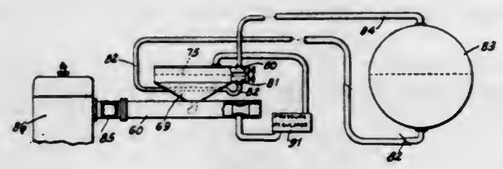
2,409,608
ULTRA HIGH FREQUENCY DETECTOR
Alva Eugene Anderson, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application September 24, 1941, Serial No. 412,065
1 Claim. (Cl. 250—20)

A modulating system comprising an electron beam-type tube, a plurality of resonating chambers arranged in succession along the path of the electron beam, one of said resonating chambers having two electron permeable electrode portions in opposite walls, in alignment with the electron beam to permit the beam to traverse said resonating chamber, another of said resonating chambers being located beyond said first-mentioned resonating chamber and enclosing a drift tube and having two electron permeable electrode portions in opposite walls, said electrode portions and the axis of said drift tube being in alignment with the electron beam, said second-mentioned resonating chamber being resonant at a frequency different from the resonant frequency of the first-mentioned resonating chamber, a source of electro-magnetic waves coupled to said first-mentioned resonating chamber to excite forced oscillations therein and to impress an electron velocity variation upon the electron beam at the frequency of said forced oscillations as the beam traverses the resonating chamber, a substantially field-free drift space between said first and second-mentioned resonating chambers for converting the said velocity variation of the electron beam into a corresponding electron density variation, means including the said electron permeable electrode portions of said second-mentioned resonating chamber and the said drift tube enclosed within said resonating chamber for generating self-oscillations in said second mentioned resonating chamber and for impressing upon the said density varied electron beam at a point ahead of said enclosed drift tube, a second velocity variation at the frequency of said self-oscillations and means including the said enclosed drift tube for converting the compound variation of the electron beam so produced into a second electron density variation comprising an intermodulation of said forced oscillations and said self-oscillations.



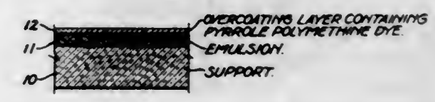
2,409,609
INTERNAL-COMBUSTION ENGINE
Ted R. Anderson, Puunene, Maui, Territory of Hawaii
Application June 9, 1944, Serial No. 539,438
2 Claims. (Cl. 123—65)

1. An internal combustion engine comprising a cylinder, a head closing the top of the cylinder, a chamber carried by the head and projecting downwardly into the top of the cylinder in spaced relation from the walls thereof, a tube adapted for connection to a water circulating system and extending downwardly through the head to a point adjacent the bottom of the chamber, a water jacket surrounding the upper portion of the cylinder and communicating with the chamber, a piston working in the lower portion of the cylinder, said cylinder having inlet and exhaust ports, and a sleeve working between the walls of the cylinder and chamber and connected to the piston for movement therewith, said sleeve



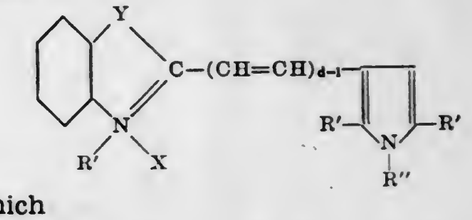
having inlet and exhaust openings adapted to register with the inlet and discharge ports respectively of the cylinder during predetermined movements of the piston.

2,409,610
VOLTAGE REGULATION
William H. Bixby, Detroit, Mich., assignor to Donald R. Middleton and Stanley M. Hanley, doing business as Power Equipment Company, Detroit, Mich., a copartnership
Application January 31, 1945, Serial No. 575,462
4 Claims. (Cl. 171—119)



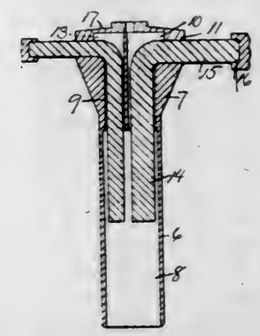
1. Means for controlling the current supplied to a load from an alternating current source to minimize load voltage changes due to voltage changes of said source comprising a first reactor having a first winding through which current from said source is supplied to the load and having a magnetic circuit for said winding, a current path comprising a rectifier and a second reactor, means for supplying current from said source to said path, said second reactor operating in a saturated region of its magnetizing characteristic so that the rate of change of current in said path with respect to the voltage of said source is high, said first reactor having a second winding, and means for controlling the impedance of the first winding of said first reactor comprising means for supplying rectified current from said rectifier to the second winding of said first reactor.

2,409,611
CHARGE FORMING METHOD AND APPARATUS FOR INTERNAL-COMBUSTION ENGINES
Albert G. Bodine, Los Angeles, Calif.
Application October 17, 1939, Serial No. 299,830
17 Claims. (Cl. 123—121)



1. In a device for introducing high vapor pressure fuel into an air passage of an internal combustion engine, the combination of: a fuel metering means; means for supplying liquid fuel under liquefying pressure to said metering means; and means for at least partially vaporizing the metered fuel in the absence of air and in heat interchange relationship with the liquid fuel being supplied to said metering means, whereby the high vapor pressure fuel is cooled ahead of said metering means to insure its complete liquidity when reaching said metering means.

2,409,612
PYRROLE DYES
Leslie G. S. Brooker and Robert H. Sprague, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application August 15, 1941, Serial No. 407,033
In Great Britain February 17, 1939
5 Claims. (Cl. 260—240)

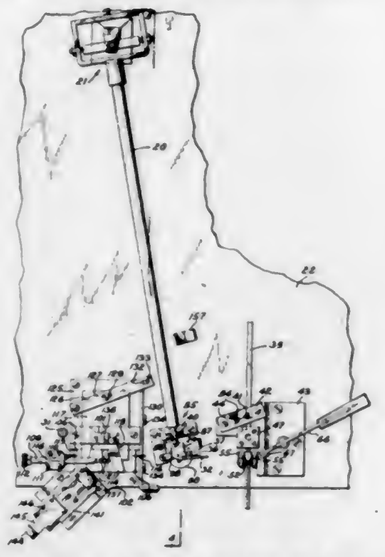


1. A compound having the following general formula:

in which

R′=alkyl
R″=a substituent selected from the group consisting of hydrogen, alkyl and aryl
X=an acid radical
Y=a substituent selected from the group consisting of O, S, and —CH=CH—
d=a positive integer of from 2 to 3.

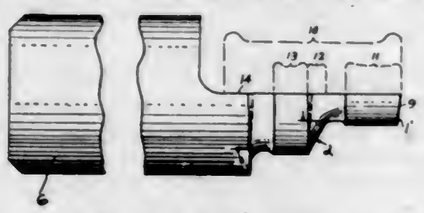
2,409,613
WRENCH HOLDER
Walter C. Brooks, Wethersfield, Conn.
Application January 15, 1945, Serial No. 572,856
7 Claims. (Cl. 306—32)



1. A wrench holder comprising a hollow handle, a head formed on the end of the handle, circumferentially spaced holes of different diameters extending downwardly through said head into the handle to receive the handles of angularly shaped wrenches of corresponding diameters, notches formed on the end of said head and intersecting said holes to receive the working ends of said wrenches, a cap to close said notches and holes, and means for securing the cap in place to the head.

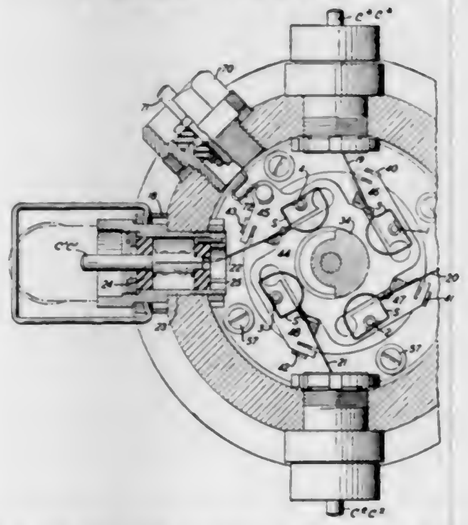
2,409,614
REFINING SULFATE TURPENTINE
Robert Albert Collins, Brunswick, Ga., assignor to Hercules Powder Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application January 15, 1942, Serial No. 426,883
8 Claims. (Cl. 260—675.5)

2. A process which comprises heating a composition consisting of topped sulfate turpentine



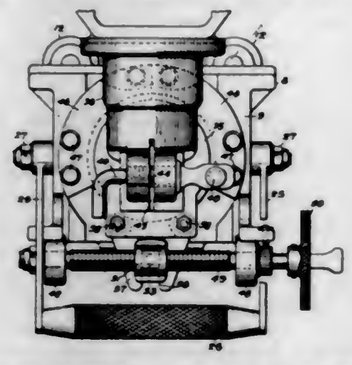
in liquid phase and contaminated with odor-imparting impurities at a temperature between about 60° C. and about 156° C. for about two to about twenty hours while simultaneously passing air through said composition, until the odor of said composition has been improved.

2,409,615
METHOD OF AND APPARATUS FOR SOLDERING
Thomas A. Daniel, Downers Grove, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application September 16, 1943, Serial No. 502,628
10 Claims. (Cl. 29—33)



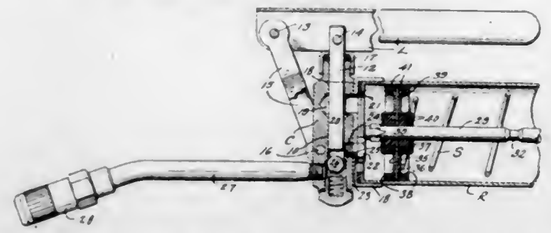
1. An apparatus for soldering a lead wire to a crystal comprising a head for guiding and supplying a wire, means for carrying said head in a predetermined path, a punch and die assembly located in said path for punching a pellet of solder from a strip, means for positioning said head and lead wire in the path of the pellet being punched for impaling the solder on the end of said wire held in said head, a fluxing means located in said path for applying a predetermined amount of flux to the end of said wire extending from said head, means movable into said path for forming the pellet impaled on the end of said wire and for causing it to fuse to said wire, and means for heating said solder while in contact with said crystal in said predetermined path to fuse said wire and to attach the wire to said crystal.

2,409,616
UNITARY BORING AND COUNTERSINKING TOOL
Milton H. de Bruin, Washington, D. C., and Ernest F. Fiock, Chevy Chase, Md.
Application August 15, 1944, Serial No. 549,600
9 Claims. (Cl. 77—66)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



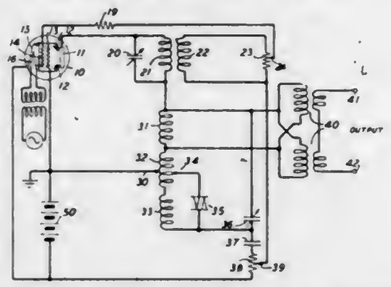
2. A unitary boring and countersinking tool comprising a cylindrical shank having a concentric semi-cylindrical cutting portion comprised of two or more stepped sections joined by semi-conical step sections having a narrow annular relief groove between the smaller section and the conical sections, the edges on one side of the cutting portion and the edge at the outer end of the smallest section forming a continuous cutting edge, the edges on the opposite side of the cutting portion being rounded off and the outer end of the smallest section being relieved away from the cutting edge.

2,409,617
SIGNAL DISTRIBUTOR
Stanley J. Elliott, Forest Hills, N. Y., Ole M. Hovgaard, Murray Hill, N. J., and Rudolph F. Mallina, Hastings-on-Hudson, and Frank M. Thomas, Jackson Heights, N. Y., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application July 18, 1942, Serial No. 451,506
6 Claims. (Cl. 200—30)



1. In a signal distributor, a series of stationary contacts, a series of movable contacts engaging said stationary contacts, each of said movable contacts being in the form of a resilient spring anchored at one end and having its free end looped back on itself and anchored to the body portion of the spring and a contact actuating member adapted to engage said loops in succession to force them out of contact with the respective stationary contacts.

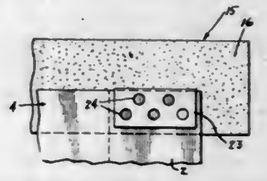
2,409,618
GUN MOUNT
Harold W. Evans, Wilkes-Barre, Pa.
Application December 13, 1940, Serial No. 370,026
2 Claims. (Cl. 89—37)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In a gun mount, a support, a gun-carrying member journaled on the support, a plate fixed to said member and having a slot, a screw shaft mounted in the support, a nut on the screw shaft having a projecting stud disposed in the slot of the plate, and a washer between the nut and plate and having a block journaled on the stud and riding in the slot of the plate.

2,409,619
LEVER GUN
Clifford E. Fitch, Bryan, Ohio, assignor to The Aro Equipment Corporation, Bryan, Ohio, a corporation of Ohio
Original application October 19, 1942, Serial No. 462,597. Divided and this application September 21, 1943, Serial No. 503,191
4 Claims. (Cl. 222—256)

3. In a grease gun, a reservoir cylinder, a follower in said cylinder comprising a pair of sheet metal disks having opposed offset peripheral flanges around their marginal edges, packing rings received in said flanges only, and a flat disk between said packing rings, said flat disk contacting with said pair of discs inwardly of said marginal edges and separating said rings from each other.



2,409,620
OSCILLATION GENERATOR
Walter W. Fritschi, Manhasset, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application January 17, 1942, Serial No. 427,131
7 Claims. (Cl. 250—36)

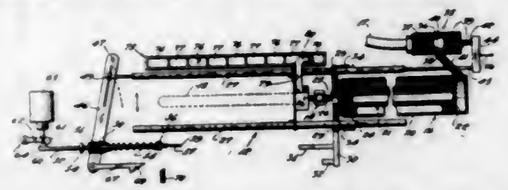
1. A signaling current generator comprising a single thermionic tube, two tuned circuits in the anode-cathode circuit of said tube, one of said tuned circuits resonant at a desired signaling frequency, the other of said tuned circuits resonant at a desired lower frequency, feedback connections from said tuned circuits to the control grid of said tube, and means controlling the relative amplitude of the feedback from said tuned circuits to effect a periodic interruption of the oscillations of said signaling frequency at said lower frequency.

2,409,621
METHOD OF CLOSING BAG TUBE ENDS
William J. Geimer and Frank R. Li..da, Minneapolis, Minn., assignors to Bemis Bro. Bag Co., Minneapolis, Minn., a corporation of Missouri
Application July 27, 1942, Serial No. 452,411
6 Claims. (Cl. 93—35)

1. The method of closing and sealing the open top of a bag of the intucked type, which consists in securing anchor elements to certain wall portions at the sides of the bag top, which anchor elements have ends projecting above the upper edges of the bag top walls, intucking the edge walls of the bag top between the side walls thereof, pressing all of said walls into flatwise

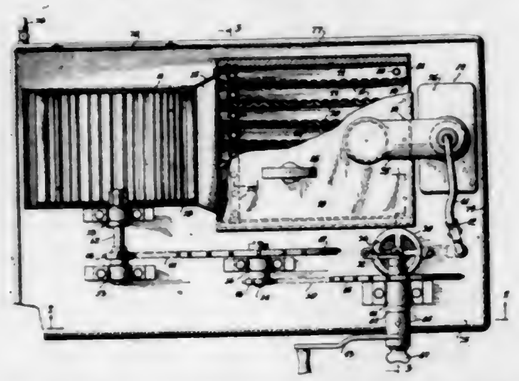
relation, bending the projecting ends of said anchor elements over and against certain of the bag top walls, and folding a strip of tape over the flattened end of the bag top and adhering it to the outer surfaces of opposed walls, thereby to seal the bag top.

2,409,622
BABY CHAIR
Louis Gottfried, Bronx, N. Y.
Application July 17, 1941, Serial No. 402,741
4 Claims. (Cl. 155—188)



2. In a baby chair, an upper seat structure and a lower supporting structure, comprising at least three legs forming a supporting base, base expanding means for said supporting base comprising a plurality of arms pivoted upon said supporting structure, a plurality of levers pivoted upon said supporting structure, each of said levers positioned above and cooperating with one of said arms, and a plurality of links, one link pivotally connected to each of said arms and to one of said cooperating levers, said arms adapted to be shifted independently of each other from inoperative to operative position in a lateral direction outside of said supporting base and again to inoperative position by drawing up said arms independently adjacent to said supporting structure and means for securing each of said arms in its extended position.

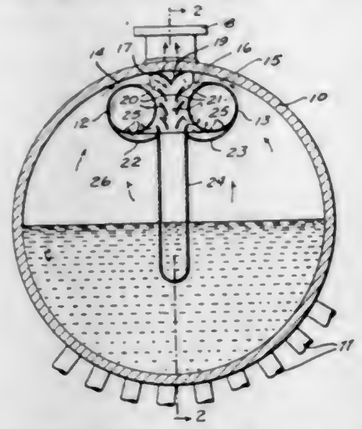
2,409,623
GUN CHARGER
Harry C. Grant, Jr., New York, N. Y., assignor to Specialties Development Corporation, Bloomfield, N. J., a corporation of New Jersey
Application November 14, 1941, Serial No. 419,053
8 Claims. (Cl. 89—1)



1. In a gun charger for a machine gun having a reciprocating member, the combination with said reciprocating member of a normally inactive recharging mechanism for operating the reciprocating member, an electrical control device constructed and arranged to be actuated by a current pulse of a predetermined minimum time interval for rendering said recharging mechanism

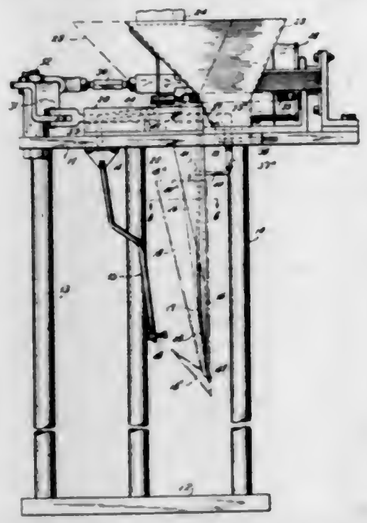
operative, an energizing circuit for said control device, and current pulsing means in said circuit adapted to be driven by said reciprocating member, said pulsing means being constructed and arranged to successively energize said control de-

vice for intervals less than said minimum time interval during the normal operation of said reciprocating member and to energize said control device for said time interval for rendering said recharging mechanism operative upon failure of normal operation of said reciprocating member.



2,409,624
APPARATUS FOR EXTRACTING WATER FROM ATMOSPHERIC AIR
Bernard Granville, Los Angeles, Calif.
Application July 20, 1943, Serial No. 495,452
6 Claims. (Cl. 62—140)

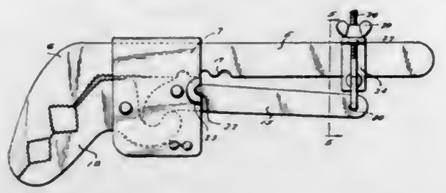
6. Apparatus for extracting water from atmospheric air, comprising in combination a closed tank for containing water, means providing a plurality of air flow passages extending through said tank having walls of heat-conducting material, refrigerating means for cooling the water in said tank to a temperature below the dew point temperature of the surrounding atmosphere, said refrigerating means including a vacuum pump to reduce the pressure above the water in said tank and thereby cause part of said water to vaporize with abstraction of heat from the remainder thereof, a blower for passing air from the surrounding atmosphere through said air passages and driving connections for operating the pump and the blower whereby the pump and the blower may be operated together or either one alone.



2,409,625
SEPARATOR
Robert W. Haase, Westfield, N. J., assignor to Foster Wheeler Corporation, New York, N. Y., a corporation of New York
Application November 26, 1942, Serial No. 467,071
10 Claims. (Cl. 183—83)

1. Apparatus for the separation of substances of different specific gravity from mixtures thereof, comprising means forming an enclosure into which a mixture of said substances is delivered, a plurality of tubular members in the enclosure disposed adjacent each other in spaced relationship and adjacent a wall of the enclosure and providing therewith a plurality of passages through which said mixture flows, baffle means secured to the wall of the enclosure and extending toward the space between the tubular members for directing the mixture flowing from said passages into said space, a plurality of substantially vertical rows of spaced baffles positioned in said space in the path of flow of the mixture directed into the space by said baffle means, each row being disposed adjacent a tubular member and spaced from another row, said mixture impinging against said baffle means and

said baffle thereby separating the substances of lighter and heavier specific gravity, each tubular member having a plurality of apertures in the portion thereof remote from said wall and said rows of baffles, baffle means secured to each tubular member adjacent the apertured portion and extending in spaced relationship with said apertured portion for directing the separated substance of lighter specific gravity into said apertures, and a drain trough secured to the last mentioned baffle means.



2,409,626
BAG OPENING AND FILLING APPARATUS
Michael J. Harrington, Cleveland, Ohio, and Samuel E. Hammer, Eagleville, Pa.
Application June 11, 1943, Serial No. 490,418
12 Claims. (Cl. 226—59)

1. In apparatus of the character described, a pair of adjacent substantially coextending generally flat members adapted to be inserted into a bag by relative telescopic movement between said members and bag, and means for imparting substantially parallel movement to one of said members to cause opening of the bag by spreading the walls thereof, one of said members

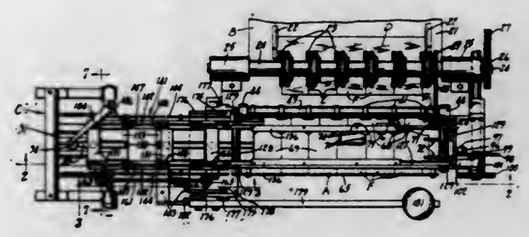
having an opening therein adjacent its lower end and the lower end of said other member being curved toward said one member and adapted to extend into said opening when said members are in their bag-receiving position.

2,409,627
WRENCH
Sten Helgeson, Renville, Minn.
Application April 14, 1944, Serial No. 531,023
1 Claim. (Cl. 81—78)

A wrench comprising a handle having a fixed jaw at one end thereof, a slide carried by the handle, a movable jaw pivoted on the slide and having a rearwardly extending arm, a spring carried by the slide and engaging one edge of the arm to urge the movable jaw into its open position, and a handle pivoted on the slide and having its front end engaging the opposite edge of the arm to actuate the movable jaw into its closed position, and a locking device carried by the fixed handle and engageable with the pivoted handle to secure the latter against movement, said locking device comprising a U-shaped bracket slidably mounted on the fixed handle, a lateral shoulder thereon having an opening, a screw slidably mounted in the opening and having one end connected to said pivoted handle, and a nut threaded on the screw against the shoulder and adapted to secure the pivoted handle against movement in a direction which would permit opening of the movable jaw.

2,409,628
MANUFACTURE OF COATED BOARD
Clark C. Heritage, Cloquet, Minn., assignor to Wood Conversion Company, Cloquet, Minn., a corporation of Delaware
No Drawing. Application September 9, 1939, Serial No. 294,214
16 Claims. (Cl. 92—40)

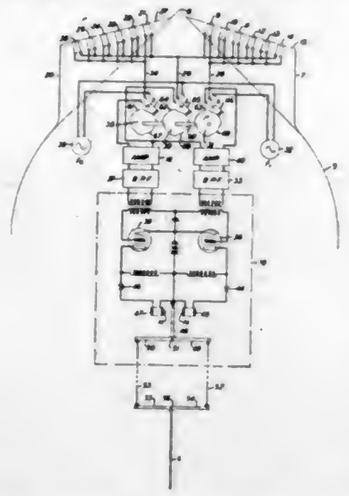
4. The method of making a coated water-resistant rigid porous structural vegetable fiber board which comprises forming a water slurry of wet vegetable fibers carrying a water-proofing agent deposited therein, forming said slurry in a wet structural-board-making mat, coating said wet mat with a composition having sufficient pigment to hide the surface fibers and having also an aqueous vehicle in which is carried a binder capable of binding the pigment to the fiber and to itself upon loss of the vehicular water, and drying the mat and the coat thereon simultaneously in an atmosphere capable of boiling water from the mat to form the board.



2,409,629
MANUFACTURE OF COATED BOARD
Clark C. Heritage, Cloquet, Minn., assignor to Wood Conversion Company, Cloquet, Minn., a corporation of Delaware
No Drawing. Application September 9, 1939, Serial No. 294,213
6 Claims. (Cl. 92—40)

1. The method of making a coated rigid porous structural fiber board which comprises coating a wet structural-board-forming mat of fibers with a composition having sufficient pigment to hide the surface fibers, and having an aqueous vehicle in which is dispersed a heat-reactive binding material capable of binding the pigment to the fiber and to itself, said binding material after reaction by heat being set when dry at normal temperature and exerting an adhesive action at an elevated temperature at least prior to completed thermal reaction, and drying the mat and the coat thereon simultaneously at an elevated temperature to form the board.

2,409,630
METHOD OF MAKING A COATED VEGETABLE-FIBER BOARD
Clark C. Heritage and Henry E. Walter, Cloquet, Minn., assignors to Wood Conversion Company, Cloquet, Minn., a corporation of Delaware
No Drawing. Application September 9, 1939, Serial No. 294,215
4 Claims. (Cl. 92—40)

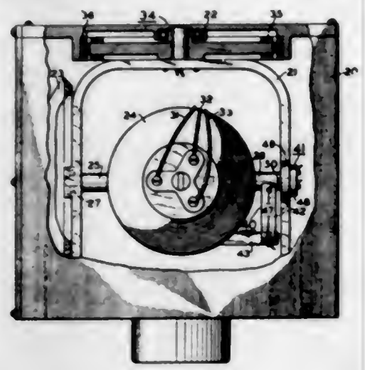


1. The method of making a coated, rigid, porous, structural vegetable-fiber board which comprises forming a water slurry of wet vegetable fibers, forming said slurry into a wet-structural-board-forming mat, which, when dried, yields a rigid, porous, structural board, coating said wet mat with a fluid aqueous coating composition having therein pigment including a major portion of white pigment selected from the group consisting of lithopone and titanated lithopone, said composition being applied in quantity to provide pigment to hide the surface fibers in the final dried board, said composition having a minor portion of diatomaceous earth in quantity from 6% to 20% by weight of the quantity of said white pigment, and said aqueous composition having an aqueous vehicle of water with protein dispersed therein to serve as binder for binding the pigment to the fiber of the mat and also to itself, and simultaneously drying the mat and the coat thereon to form a board with uniformly pigmented surface.

2,409,631
CAN MAKING MACHINE
Lyman L. Jones, Seattle, Wash., assignor to American Can Company, New York, N. Y., a corporation of New Jersey
Application May 6, 1941, Serial No. 392,131
7 Claims. (Cl. 271—84)

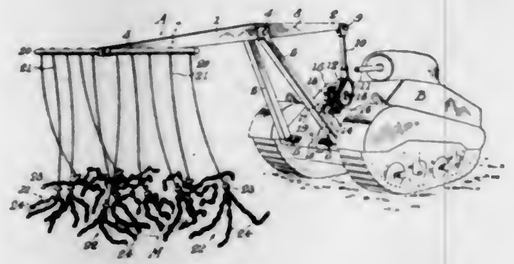
1. In a can making machine, the combination of a plurality of spaced inclined vanes for receiving can part blanks, and longitudinally reciprocating feeding devices continuously operative adjacent said vanes for successively advancing the received blanks from the lower portion of one vane to the upper portion of said vane and thence into superposed position upon the upper portion of an adjacent vane, whereby to ultimately arrange the blanks into a single vertical stack at a still succeeding vane.

2,409,632
GUIDING MEANS FOR SELF-PROPELLED TORPEDOES
Robert W. King, Short Hills, N. J., assignor to American Telephone and Telegraph Company, a corporation of New York
Application June 13, 1942, Serial No. 446,889
6 Claims. (Cl. 114—23)



1. In combination, a self-propelled torpedo adapted to be launched in the water in the wake of a moving vessel, means for projecting from said torpedo a beam of compressional waves of a first supersonic frequency in a substantially horizontal direction inclined to one side of the forward axis of the torpedo, means for projecting from said torpedo a beam of compressional waves of a second supersonic frequency in a substantially horizontal direction inclined to the opposite side of the forward axis of the torpedo, means associated with said torpedo for receiving the energy of said first and said second frequencies reflected by said wake back toward said torpedo and means controlled by said reflected energies for guiding said torpedo toward said vessel.

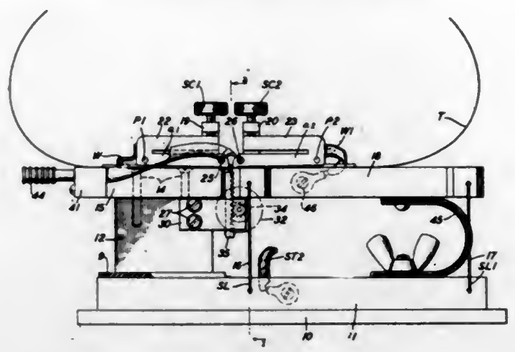
2,409,633
POLYMERS OF UNSATURATED COMPOUNDS AND PROCESSES OF PRODUCING SAME
Edward L. Kropa, Old Greenwich, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application July 17, 1943, Serial No. 495,212
11 Claims. (Cl. 260—42)



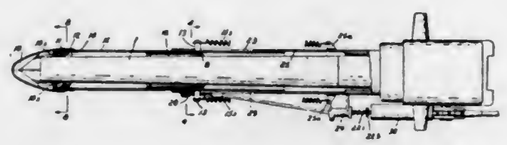
1. A polymerizable composition including (1) an unsaturated alkyd resin (2) triallyl phosphate and (3) a catalyst for accelerating the copolymerization of (1) and (2).

2,409,634
GYROSCOPIC CONTROLLING MEANS
Arthur W. Lane, Freeport, N. Y., assignor to Sperry Gyroscope Company, Inc., Brooklyn, N. Y., a corporation of New York
Application January 19, 1943, Serial No. 472,912
5 Claims. (Cl. 74—5)

1. In an instrument having a member movable about an axis, means operable to move the member about the axis in a clockwise or counterclockwise direction, a thermally cooperable pair of elements comprising a heat radiator and a heat responsive switch having two positions, said elements being mounted respectively on relatively movable parts of the instrument with one thereof being fixed to the member to move therewith with movement about its axis, said switch operating responsive to said radiator to control the moving means to move the member clockwise in one of its positions and to move the member counterclockwise in the other of its positions.

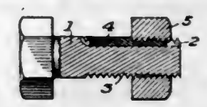


2,409,635
MINE DESTROYER
Lawrence Langner, New York, N. Y., assignor to the Government of the United States of America, as represented by the Secretary of War and his successors in office
Application August 26, 1943, Serial No. 500,061
3 Claims. (Cl. 89—1)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



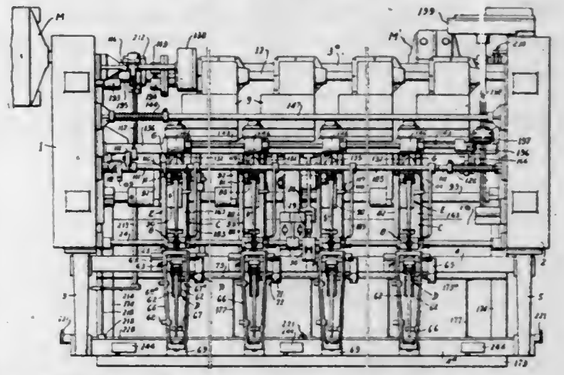
1. In combination, an armored motor vehicle, a pair of bracket members mounted on the front end of said vehicle and extending outwardly and upwardly from the front end of said vehicle and converging upwardly toward each other, a walking beam, said walking beam extending outwardly from and above the front end of said vehicle and pivotally mounted adjacent one end thereof to the upper ends of said bracket members, whereby a long arm portion is provided on the front end of the walking beam and a short arm portion is provided on the rear end thereof, means for actuating said walking beam, said means including a sprocket mechanism connected to be actuated by the vehicle motor, an eccentric rotated by said sprocket mechanism, a ring member actuated by said eccentric and a rod connected to be actuated by said ring member, one end of said rod secured to said ring member and the other end thereof pivotally connected to the rear end of said walking beam, a supporting bar mounted on and extending transversely outwardly from the front end of said walking beam and mine explosion elements connected to said bar, said actuating means being constructed and arranged so that upon the actuation of the vehicle motor the walking beam is oscillated on its pivotal connection with said bracket members for periodically actuating said explosion elements into contact with the ground for exploding mines buried therein.

2,409,636
WELDING MACHINE
John B. Little, Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application October 20, 1944, Serial No. 559,597
4 Claims. (Cl. 219—4)



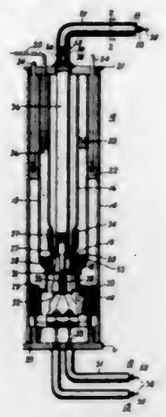
1. In a device for welding the ends of a metallic tape in coaxial abutting relation to each other, said device comprising a base, an electrode secured to said base, a movable electrode, spring means for supporting said movable electrode in spaced relation to said base and in a common plane relative to said stationary electrode, means for adjustably positioning the ends of the tape relative to the adjacent end portions of said electrodes in welding position thereon, and means for securing the ends of the tape on said electrodes in said adjusted welding position, the tension of said supporting spring means serving to impart movement to said movable electrode for urging the ends of the tape against each other an amount corresponding to the thickness of the means positioning the ends of the tape for effecting the weld.

2,409,637
MUZZLE CLOSING MECHANISM
Victor F. Lucht, Washington, D. C.
Application June 2, 1943, Serial No. 489,351
10 Claims. (Cl. 89—31)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



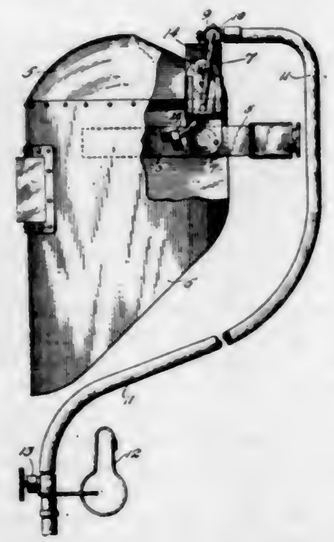
8. In a muzzle closing device for a gun having a fixed part, in combination, a gun barrel, a member reciprocable on the barrel, a plurality of complementary spring-biased sections hinged to said member and having barrel engaging portions constructed and arranged to slide over the barrel with said member, said sections being shaped to fold over and close the gun muzzle when the reciprocable member is in its forward position, spring means connecting said member to the fixed part of the gun and urging said member to a rearward position wherein said sections uncover the muzzle, means for locking said member in forward position, and means for unlocking said member and surrendering it to said spring means connecting said member to said fixed part whereby said member is moved to bring the sections to muzzle uncovering position.

2,409,638
INSERT BOLT
Bruce K. Lyon, Grant, Nebr., assignor to Oliver Iron and Steel Corporation, Pittsburgh, Pa., a corporation of Pennsylvania
Application August 7, 1944, Serial No. 548,365
2 Claims. (Cl. 151—7)



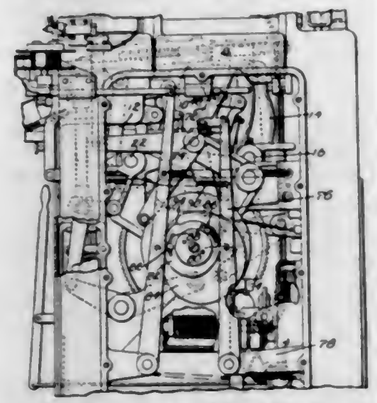
1. In a cap screw or bolt having a shank threaded for running engagement with the cooperatively threaded shank of an associated member, a slot extended longitudinally in the said threaded shank and circumferentially less than 45° and terminated short of the extremity of the shank to leave in that terminal region of the shank an uninterruptedly threaded portion, said slot having a width at the periphery of said shank at least equal to the width of said slot at the base thereof, and a vulcanized fiber insert strip in said slot and adapted to be radially placed therein and extending radially of the shank at least approximately to the apices of the shank threads but not more than slightly beyond the apices of said shank threads to provide excess of substance when threaded, the said insert strip as threaded by the cooperative bore threads of an associated member being compressed both radially and longitudinally of the slot in which it lies and expanded laterally into firm engagement with the sides of the said slot.

2,409,639
BOBBIN WINDING MACHINE
Brooks Marcellus, Rockford, Ill., assignor to Barber-Colman Company, Rockford, Ill., a corporation of Illinois
Application July 8, 1942, Serial No. 450,129
57 Claims. (Cl. 242—32)



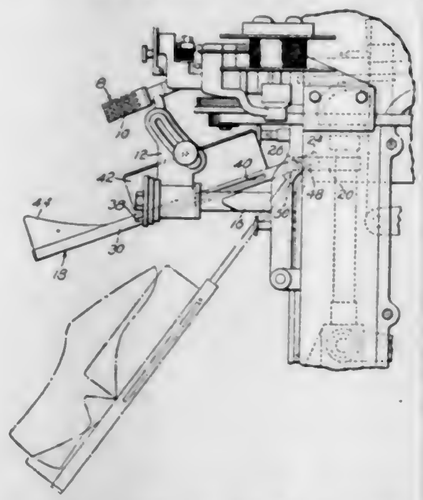
1. A bobbin winding machine having, in combination, bobbin holding means including a spindle rotatably supporting a bobbin to be wound, a traversing device, a support for said device mounted for movement in a direction axially of the spindle, means including a carrier for introducing empty bobbins into said holding means, power actuated means including a clutch for driving said spindle, said traversing device and said movable support, a power driven shaft having cam means for actuating said carrier and said clutch, disengageable latch means for holding said clutch engaged, means acting mechanically in the movement of said support at the end of a winding operation to disengage said latch means, and means adapted to initiate the operation of said cam shaft automatically in response to the movement of said support at the completion of the winding operation.

2,409,640
POWER CABLE FOR HIGH-FREQUENCY OSCILLATORS
Frank J. Moles, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application September 18, 1942, Serial No. 458,821
4 Claims. (Cl. 178—44)



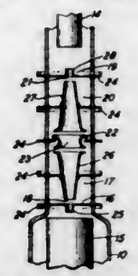
4. A filter for removing high frequency oscillations from a power lead operating at a potential difference with respect to ground comprising a grounded conductive sheath surrounding said lead and spaced therefrom, a compact mass of fibers of a relatively high resistance metal disposed in the space between said lead and said sheath, and means for insulating said metal fibers from both said lead and said sheath whereby power currents of low frequency may be transmitted over said power lead without attenuation by said filter while high frequency currents transmitted over said power lead are highly attenuated.

2,409,641
VENTILATING ATTACHMENT FOR WELDERS' HELMETS
Wilbur Daniel O'Quinn, Wilmington, N. C.
Application August 8, 1945, Serial No. 609,616
3 Claims. (Cl. 2—8)



1. A ventilating attachment for welders' helmets of a type including a horizontal and a vertical head band, a T fitting attached to the vertical head band, an air hose attached to said T fitting and extending downwardly behind the helmet, and a pair of hose sections attached to said fitting at the sides thereof and extending downwardly into the helmet at the sides of the horizontal head band.

2,409,642
LASTING MACHINE
Charles A. Robinson, Salem, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Original application December 20, 1944, Serial No. 568,964. Divided and this application August 10, 1945, Serial No. 610,111
5 Claims. (Cl. 12—14)

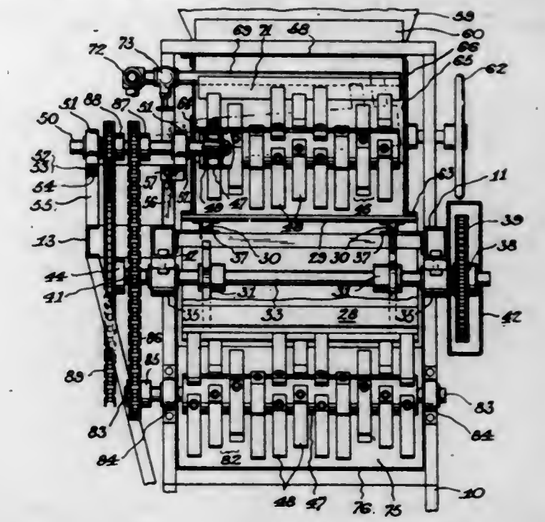


1. In a lasting machine, wipers for engaging an upper about the toe end of a last, power-operated means for effecting relative movement of said wipers and the last to cause the wipers to wipe the upper heightwise of the last, and means for closing the wipers inwardly widthwise of the last in predetermined time relation to said relative movement to bring them into positions thus to act on the upper, said wiper-closing means being adjustable to terminate such closing action on the wipers at a variably predetermined time with respect to said relative movement.

2,409,643
SHOE MACHINE
Charles A. Robinson, Salem, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Original application December 20, 1944, Serial No. 568,964. Divided and this application August 10, 1945, Serial No. 610,112
8 Claims. (Cl. 12—1)

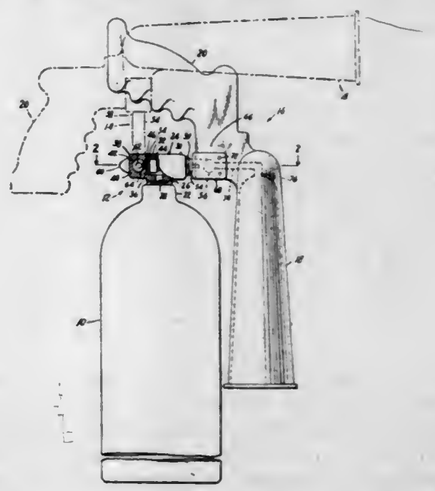
6. In a shoe machine, the combination with means for operating on a shoe, and means for holding the shoe while it is thus operated on and for thereafter releasing it in such manner as to permit it to fall, of a shoe receiver arranged to underlie a portion of the shoe while it is thus operated on and to receive the shoe when it falls, said shoe receiver being yieldingly movable downwardly by the weight of the shoe thereon.

2,409,644
ELECTRON DISCHARGE APPARATUS
Arthur L. Samuel, Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application April 11, 1941, Serial No. 388,031
5 Claims. (Cl. 250—27.5)



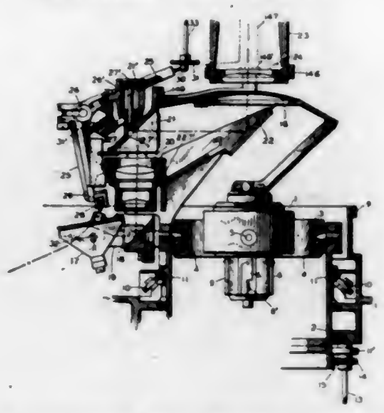
1. An electron discharge device of the velocity variation type comprising a pair of electrodes having juxtaposed aligned apertured portions defining an input gap, means opposite one end of said input gap for projecting an electron stream thereinto, means opposite and spaced from the other end of said input gap defining an output gap, said output gap defining means including an apertured electrode in alignment with said input gap and including also a second electrode mounted behind said apertured electrode relative to said input gap, said input and output gaps being separated by a drift space, and means for producing a retarding field in said drift space, said retarding field producing means comprising a hollow electrode in said drift space and in alignment with said input and output gaps and having its ends in juxtaposition to said first apertured electrode and to the electrode of said pair of electrodes toward said output gap, and the internal transverse dimensions of said hollow electrode being substantially greater than the transverse dimensions of said input gap.

2,409,645
RESIN-FIBER ARTICLE AND METHOD OF MAKING THE SAME
Edward E. Sawyer, Waterville, Maine, assignor, by mesne assignments, to The Canal National Bank of Portland, Portland, Maine, a National Banking Association, as trustee
Application October 21, 1944, Serial No. 559,789
6 Claims. (Cl. 74—445)



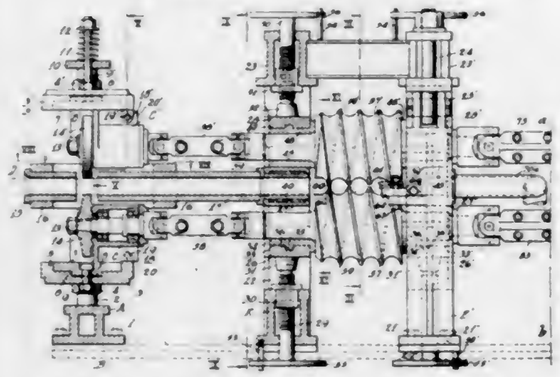
1. A resin-fiber article, comprising a compacted and bonded assembly of superimposed interfelted fibrous layers and resin hardened and integrated under heat and pressure, the ratio of fibers to resin being greater in certain of said layers than in others to produce layers of relatively high resin content and layers of relatively low resin content, the layers of relatively high resin content alternating with the layer of relatively low resin content in the assembly, the resin content of any layer being such as to bond together the fibers composing said layer into an integrated mass, and the resin content of the layers of relatively high resin content also being such as to bond said layers to the layers of relatively low resin content and to furnish at the exposed edges of the article sufficient resin to provide a continuous highly resinous covering encasing the edges of all the layers.

2,409,646
MIXING MACHINE
Harry J. Seaman, Milwaukee, Wis.
Application May 26, 1943, Serial No. 488,539
3 Claims. (Cl. 259—6)



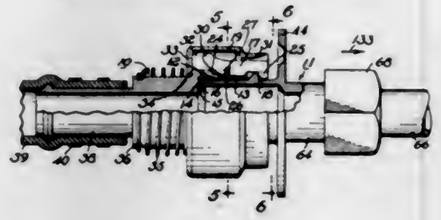
1. In a mixing machine, the combination of an endless belt conveyer having an upper run for supporting thereon loose material to be mixed and for carrying the material therealong, a mixing rotor disposed transversely over said conveyer run for operating on the material, a casing extending over said rotor, means for supporting said rotor from one end thereof and having a pivotal axis extending transversely of the rotor axis to permit upward tilting of said rotor when encountering excessive resistance to rotation, and means for driving said rotor including a sprocket wheel on said rotor adjacent to the vertical plane of the axis of tilt.

2,409,647
DISCHARGE DEVICE
John H. Stroop, New York, N. Y., assignor to Specialties Development Corporation, Bloomfield, N. J., a corporation of New Jersey
Application December 6, 1944, Serial No. 566,815
8 Claims. (Cl. 169—31)



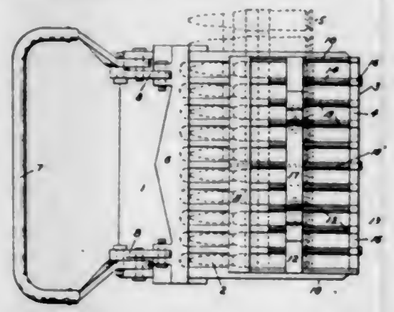
1. In combination, valve means for controlling a pressure fluid medium, a combined discharge means and handle unit, means for mounting said unit for movement relative to said valve means, and means cooperating between said valve means and said unit responsive to said movement for operating said valve means.

2,409,648
BOMB SIGHT
Howard C. Van Auken, Bloomfield, and Gerald N. Hanson, Allendale, N. J., assignors to Sperry Gyroscope Company, Inc., Brooklyn, N. Y., a corporation of New York
Application January 25, 1941, Serial No. 375,900
8 Claims. (Cl. 88—1)



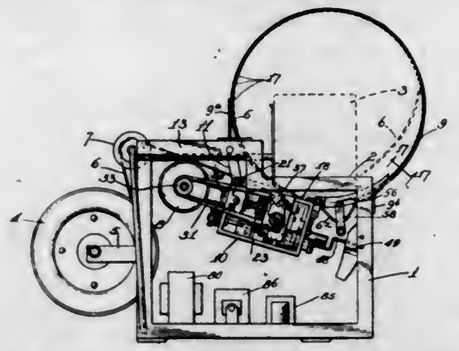
1. In a bombsight for aircraft, in combination with a gyro vertical, a sighting reticle mounted thereon and stabilized thereby about both fore-and-aft and transverse horizontal axes, a reflector for following the target stabilized about said fore-and-aft axes and mounted for turning about a transverse axis, and adapted to direct the line of sight horizontally along said fore-and-aft axis, a second reflector also stabilized about said axis for receiving said line of sight and directing it vertically, a third reflector for receiving the line of sight as reflected from said last-named reflector and directing the same horizontally toward the reticle, and means adapted to produce independent rotation of said last-named reflector relative to said other reflectors about a normally vertical axis to introduce the offset angle.

2,409,649
BALL FORMING MILL
David E. Wells, San Leandro, Calif.
Application June 6, 1944, Serial No. 538,985
4 Claims. (Cl. 80—23)



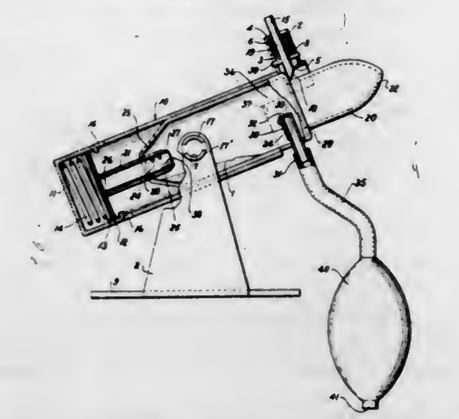
1. In a ball forming mill, a pair of rod cutting and ball forming rollers having helical threads substantially abutting each other throughout the greater portions of their lengths and ball forming grooves disposed between the threads, the leading thread portions having cutting edges that gradually increase in height from points the same distance from the roller axes as the bottoms of the grooves to points where the two thread portions abut each other, concave walls disposed adjacent to the thread portions for forming the ball during the cutting operation, the remaining thread portions forming walls for smoothing the ball surface, and means for rotating the rollers, the opposed cutting portions of the roller threads where they abut each other being provided with a cooperating projection in one thread receivable in a recess in the other thread for causing the projection to extend beyond the midpoint between the two rollers.

2,409,650
COUPLING
Earl B. Wiggins, deceased, late of Los Angeles, Calif., by Irene Lane Wiggins, executrix, Los Angeles, Calif.
Application June 15, 1943, Serial No. 490,882
9 Claims. (Cl. 285—173)



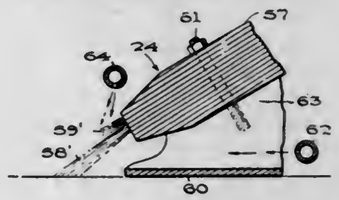
1. In a quick acting coupling, a pair of cooperating members adapted to seat one within the other, means forming a shoulder on one of said members, a plurality of dogs and means mounting said dogs on the other member for movement toward and away from said shoulder, each of said dogs having a locking surface thereon engageable with said shoulder to secure the members in coupled relation, operating means movably mounted on one of said members for moving said dogs toward and away from said shoulder, one of said members having resilient means adapted to be axially deformed by means on said other member, upon movement of said member into coupled relation, said locking surfaces being disposed at a wedge angle with respect to the direction of movement thereof, said wedge angle being within the self-locking range whereby said dogs are held in locking engagement with said shoulder, and independently of said operating means, by friction induced by pressure exerted by said deformed resilient means.

2,409,651
APPARATUS FOR UNBELTING AMMUNITION
Merle R. Williams, San Antonio, Tex.
Application March 1, 1944, Serial No. 524,565
10 Claims. (Cl. 86—48)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



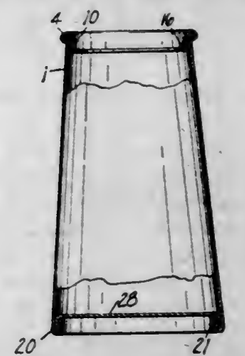
1. In combination with a gang loader ammunition belt filling machine having a bed for sliding motion of cartridges, means spanning said bed and positioned to obstruct sliding motion of the cartridge belt when the cartridges are reversed from their loading position.

2,409,652
BANDING MACHINE
Ernest Robert Workman, Goshen, Ind.
Application May 3, 1939, Serial No. 271,435
81 Claims. (Cl. 100—31)



1. In a banding machine, means to feed a wire, means to guide the wire into the form of a loop, means for contracting the loop onto an object, means for guiding the contracting loop in a definite plane, including means to maintain the wire continuously under tension during contraction, grippers for engaging the loop adjacent its terminals, power driven means arranged to move the grippers to tension the loop and press its terminals into abutting relation, and means supplying an electric welding current to the terminal portions of the loop for butt-welding the ends together.

2,409,653
TOY ROCKET GUN
Leon H. Amdur, Brooklyn, N. Y.
Application June 24, 1946, Serial No. 678,803
21 Claims. (Cl. 124—11)

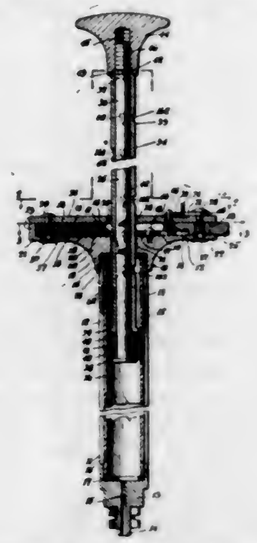


1. A toy rocket gun comprising a frame, a barrel open at one end pivotally mounted on the frame, an air-tight rocket having a central opening at its rear end and an annularly recesssed shoulder near its front end, a rubber disc and a metal disc of slightly smaller diameter than the bore of the barrel near the closed end of the barrel with the rubber disc outermost, lugs tongued-in from the barrel, a compression coil spring between the closed end of the barrel and said metal disc for forcing the discs outwardly with the rubber disc abutting the lugs, the said rocket being inserted at the open end of the barrel with its said rear opening abutting the rubber disc, a spring-pressed latch pin outwardly beveled and positioned at the open end of the barrel to snap in front of the said recessed shoulder of the rocket upon a full insertion thereof in the barrel, the rear end of the latched rocket forcing the rubber disc rearwardly against the compression spring to establish an air-tight closure at the said rear opening of the rocket, an inlet fitting having a pressure check tightly secured in the rocket, and means connectable with said inlet fitting for charging the rocket with air pressure.

2,409,654
BILLET SCARFING METHOD AND APPARATUS
James L. Anderson, Closter, N. J., assignor to Air Reduction Company, Incorporated, New York, N. Y., a corporation of New York
Original application October 30, 1941, Serial No. 417,086, now Patent No. 2,351,653, dated June 20, 1944. Divided and this application October 12, 1943, Serial No. 505,986
5 Claims. (Cl. 148—9)

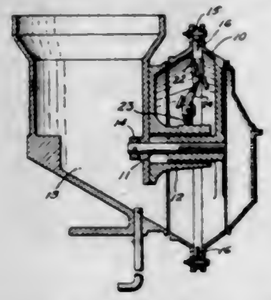
1. The method of scarfing a surface of a workpiece by means of a scarfing torch, which method comprises directing against such surface a row of oxygen streams extending crosswise thereof, causing relative movement of the oxygen streams and work-piece in the direction of the length of the work-piece, directing preheating flames downwardly at an angle to the surface of the work-piece but exclusively from above the oxygen streams, blowing a stream of air between the torch and the work-piece toward the oxygen streams, and aiding combustion of the preheating flames by blowing other streams of air downwardly toward and onto the preheating flames prior to contact of the preheating flames with the work.

2,409,655
PAPER BOTTLES AND THE LIKE AND METHOD OF MANUFACTURE
James E. Annen, Kalamazoo, Mich., assignor to Sutherland Paper Company, Kalamazoo, Mich.
Application March 6, 1943, Serial No. 478,225
11 Claims. (Cl. 93—39.1)



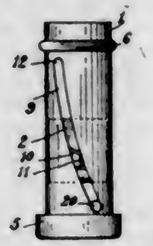
4. The method of making milk bottles and like containers of fibrous material adapted to receive a closure disk comprising the steps of forming a tubular conical wall of fibrous material with an out-turned flange on the upper edge thereof, applying an adhesive sealing material to said flange, inserting a cup-shaped top member of fibrous material in the upper end of said wall with a portion of the side wall thereof projecting above the said wall flange, supporting said wall and top member against relative axial movement

by a tubular conical die and mandrel member supporting said top member below the side wall portion thereof, crimping the projecting portion of the side wall of said top member around said flange on said wall into embracing relation thereto whereby the top member constitutes a curved rim and a reinforcing member for the wall of the container, and punching out the central portion of said top member to provide an inwardly



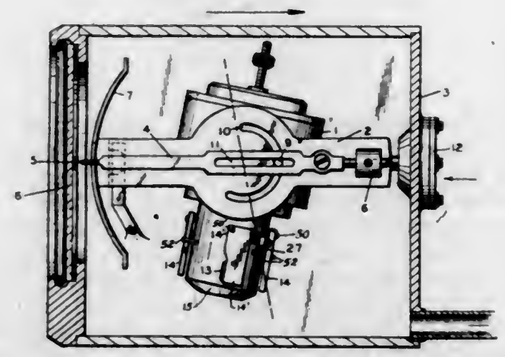
10. A container of fibrous material adapted to receive a closure disk comprising a tubular wall member of fibrous material having an out-turned flange at its upper end, an annular top member of fibrous material disposed within the upper end of said wall member, said top member being crimped around said flange into closely embracing relation thereto, there being adhesive and sealing material between said flange and said top member, said top member having an opening through its inner end surrounded by an annular flange constituting a closure seat, the lower end portion of the side wall of said top member being spaced from said tubular wall to provide expansibility of the top member relative to the container wall when a disk-like closure of predetermined diameter is disposed therein.

2,409,656
HYPODERMIC SYRINGE
Harold S. Austin, Dallas, Tex.
Application April 20, 1945, Serial No. 589,396
13 Claims. (Cl. 128—215)



1. In a hypodermic syringe, the combination comprising, reciprocable plunger shaft means having a plurality of cooperating series of abutment means arranged longitudinally thereof with each series located in a different path, a plurality of movable engaging stop means, means to guide each of said stop means in its motion into and out of the path of travel of one of said series of abutment means, means connecting said plurality of stop means together whereby when one thereof is moved into the path of the series of abutment means associated therewith each of the others will be moved out of the path of the series of abutment means associated with the latter so that said abutment means and stop means associated therewith are adapted alternately to stop longitudinal movement of said shaft means as predetermined by the abutment means when successively moved to engagement with their engaging stop means and to free said shaft means for further longitudinal movement, and means to move one of said engaging stop means out of the path of travel of its cooperating series of abutment means with simultaneous movement of another of said engaging stop means into the path of travel of its cooperating series of abutment means by virtue of the interconnection between said plurality of stop means, so that said shaft means may be moved longitudinally step-by-step with abutment means of one series alternating with others of said abutment means in effective determination of the successive steps of travel of said shaft means.

2,409,657
APPARATUS FOR FEEDING AND DELIVERING AMMUNITION BLANKS
Edwin H. Birdsall, Golden, Colo., assignor to Remington Arms Company, Inc., Bridgeport, Conn., a corporation of Delaware
Application November 4, 1942, Serial No. 464,511
2 Claims. (Cl. 209—72)

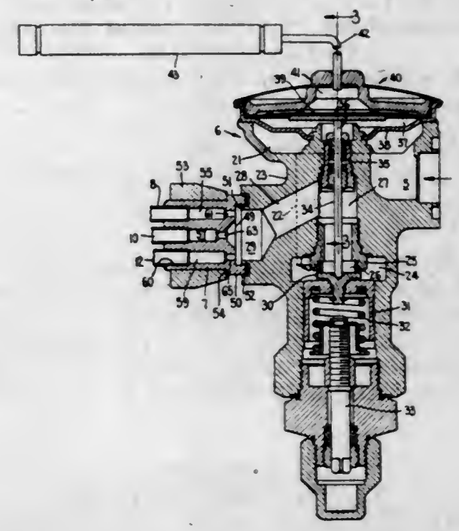


1. In a hopper mechanism, the combination with a rotary member having blank carrying elements arranged to engage said articles in a single position of longitudinal orientation; a track; a discharge tube having an open upper end displaced laterally with respect to said track, said track being adapted to support blanks before being released from said carrier elements; and a chute connecting one end of said feed track and said discharge tube, the open upper end of said chute comprising a continuous spiral surface adapted to impart a twisting movement to said blanks while being fed from said feed track into said discharge tube.

2,409,658
COSMETIC CONTAINER
Charles R. Book, Waterbury, Conn., assignor to The Eyelet Specialty Company, Waterbury, Conn.
Application May 4, 1945, Serial No. 591,927
5 Claims. (Cl. 206—56)

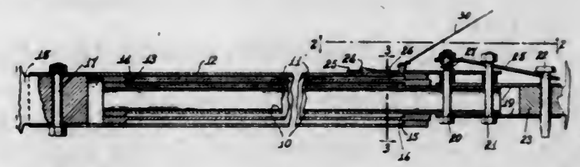
1. A cosmetic container comprising, an inner sleeve provided with a propelling slot, an outer sleeve having a spiral guide slot, a cosmetic-holding cup within the inner sleeve and having a projection entering both of the slots, one of the slots being shorter than the other, the longer slot having an offset part at one end into which the projection is moved when the cosmetic cup is moved to the limit of its axial movement in one direction, the inner sleeve having an aperture in its side wall, and the cosmetic cup having a spring tongue provided with a detent engaging in said aperture when the cup is in its retracted position, to thereby hold the cup against inadvertent advancement.

2,409,659
GYRO VERTICAL
Frederick D. Braddon, Babylon, N. Y., assignor to Sperry Gyroscope Company, Inc., Brooklyn, N. Y., a corporation of New York
Application April 16, 1941, Serial No. 388,736
19 Claims. (Cl. 33—204)



11. As a means for correcting errors in a gyroscopic artificial horizon or gyro-vertical due to turning of aircraft so as not to be apparent, a universally and neutrally mounted gyroscope, a power actuated erection device, and gravitationally responsive means for controlling said device so constructed and arranged with respect to the gyroscope as to normally cause the gyroscope to become inclined at a predetermined angle in the fore and aft plane with respect to the craft and during turns cause precession of the gyroscope at the same rate as the craft turns, whereby no change in the position of the gyroscope takes place which is apparent to the pilot.

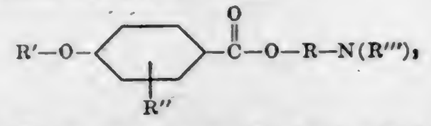
2,409,660
MOP YARN AND MOP MADE THEREFROM
Walter S. Briggs, Needham, Mass.
Application August 11, 1945, Serial No. 610,313
4 Claims. (Cl. 57—153)



1. A mop yarn consisting of a core yarn having a surface coating of substantial thickness intimately bonded thereto and completely surrounding said core yarn for its entire length, said coating consisting substantially of a cellulose sponge mass bonding the fibers of the core yarn together, and providing a filtering casing for said core yarn of much greater water-absorptivity than said core yarn and strengthened and reinforced by such core yarn against attrition and holding adjacent strands against entangling contact with each other when associated together in a mop.

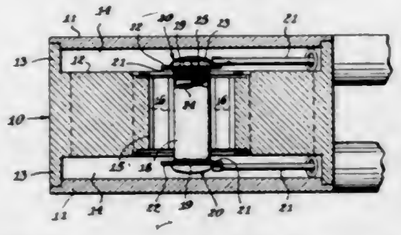
2,409,661
REFRIGERANT DISTRIBUTING MEANS
Franklyn Y. Carter, Detroit, Mich., assignor to Detroit Lubricator Company, Detroit, Mich., a corporation of Michigan
Application November 15, 1943, Serial No. 510,328
1 Claim. (Cl. 138—37)

A refrigerant distributing device comprising a conduit closing member having an unobstructed end wall with a surrounding tubular flange providing a circular inlet chamber, said member having a plurality of passageways therethrough, all of the passageways in said member extending straight from end to end through said member, all of the passageways opening through said end wall into said chamber, all of the passageways in said member communicating with one another through said chamber and all serving to distribute refrigerant admitted to said chamber, each of said passageways having at least three portions of successively increasing diameter with its portion of smallest diameter opening through said wall into said chamber.



2,409,662
TOWING POLE
Edward Carl Christensen, Denmark, Wis.
Application August 9, 1944, Serial No. 548,739
1 Claim. (Cl. 280—33.14)

A towing pole comprising three telescoping tubes, the inner tubes having external stop shoulders at their inner ends and the outer tubes having internal stop shoulders at their outer ends; extension plates secured to the outer end of the inner tube; a traction bolt secured to said extension plates; a latching lug at the outer end of said outer tube; a spring actuated latching plate carried by the outer end of the inner tube and having an opening arranged to engage said lug automatically upon retraction of said tubes; and a flexible releasing element secured to said latching plate.

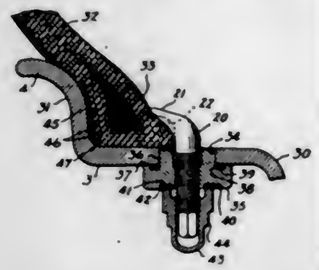


2,409,663
AMINO ALCOHOL ESTERS OF ALKYL-SUBSTITUTED ALKOXY BENZOIC ACIDS
Walter G. Christiansen, Glen Ridge, and Sidney E. Harris, Nutley, N. J., assignors to E. R. Squibb & Sons, New York, N. Y., a corporation of New York
No Drawing. Original application September 9, 1937, Serial No. 163,034. Divided and this application June 28, 1944, Serial No. 542,622
4 Claims. (Cl. 260—473)

1. A compound of the group consisting of: amino-esters of the formula

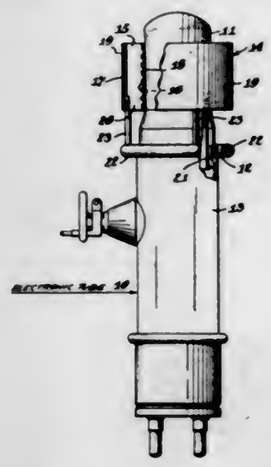
wherein R represents a divalent alkyl residue with 2 to 4 carbon atoms R′ represents an alkyl residue with 2 to 4 carbon atoms, R″ represents an alkyl residue with 1 to 2 carbon atoms, and R‴ represents an alkyl residue with 1 to 2 carbon atoms; and acid-addition salts thereof.

2,409,664
ELECTRODE SUPPORT
David G. Clifford, Palo Alto, Calif., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application September 17, 1943, Serial No. 502,746
8 Claims. (Cl. 250—27.5)



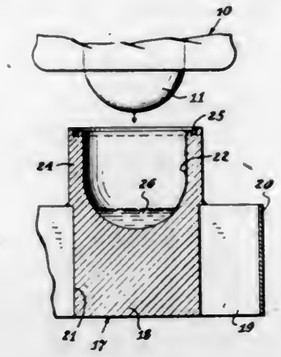
8. An electron discharge device having an electrode, a hollow capsule fixed with respect to said electrode, and tungsten granules in said capsule for damping vibration thereof.

2,409,665
PURIFICATION OF INDUSTRIAL SANDS
Allen T. Cole and James B. Duke, Lakeland, Fla., and Lynn L. McMurray, Lovingston, Va., assignors to Minerals Separation North American Corporation, New York, N. Y., a corporation of Maryland
No Drawing. Application October 19, 1943, Serial No. 506,876
7 Claims. (Cl. 209—166)



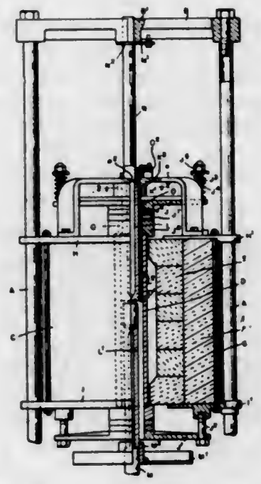
1. The process of removing ferruginous impurities from industrial sands which consists in subjecting such sands to a first froth-flotation treatment in the presence of a fatty acid compound having a hydrocarbon radical of at least 12 carbon atoms, an alkali and a mineral oil, and removing and discarding the froth; and subjecting the pulp residue of the aforesaid first froth-flotation treatment to a second froth-flotation treatment in the presence of cooperating agents consisting of less than about six pounds of a mineral acid and less than about one pound of a cationic-active nitrogenous compound containing an alkyl group which contains from 7 to 19 carbon atoms, both per ton of solids in the feed, and removing and discarding the froth, leaving the residue as the purified sands.

2,409,666
BEAD CLAMP FOR PNEUMATIC TIRES
Fred H. Comey, Akron, Ohio, assignor to The General Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Application August 29, 1942, Serial No. 456,659
3 Claims. (Cl. 152—399)



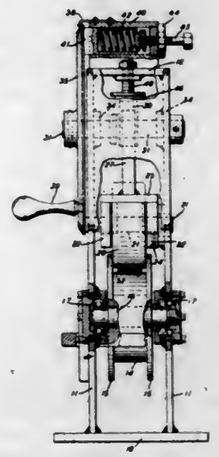
2. The combination with a wheel rim having a tire retaining flange, a substantially cylindrical bead seating portion adjacent the flange and a circular opening in said bead seating portion spaced inwardly from said flange, of a tire having a bead bearing against said flange and provided with a toe portion partially overlying said opening, a lug having a threaded stem, a wrench engaging portion at one end and a laterally inclined flared head portion at its opposite end for engagement with the toe portion of the tire, said head portion being insertable through said opening, and a nut adapted to be screwed on said stem, said nut having a cylindrical portion fitting in said opening and a larger wrench receiving portion engageable with the interior of the rim.

2,409,667
ELECTRON DISCHARGE DEVICE
Hampton J. Dailey, Bloomfield, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 8, 1942, Serial No. 438,141
6 Claims. (Cl. 250—27.5)



6. A cooling means for an electron discharge device having a metallic electrode as an outside part of an envelope, comprising a collar surrounding a part of said electrode substantially coaxial therewith and spaced outwardly therefrom, and a plurality of fins extending from said electrode to said collar, said fins sloping away from radial planes intersecting said fins, each fin having flanges at the inner and outer edges thereof with the flange at the inner edge on the opposite side of the fin from the flange at the outer edge whereby said fin is Z-shape in cross section.

2,409,668
HEAT TRANSFER MEANS AND METHOD OF ASSEMBLY
Hampton J. Dailey, Bloomfield, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application July 18, 1942, Serial No. 451,448
4 Claims. (Cl. 189—36)



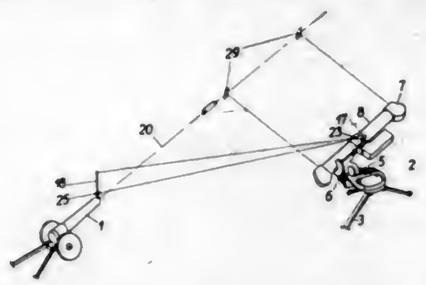
4. A heat exchange means comprising a core having a cavity opening upward and having a closed bottom, said cavity adapted to receive a device for heat exchange purposes by conduction from said device through the material of the core, said cavity adapted to contain material in a fluid state subject to extrusion at the upper edge of the cavity upon introduction of said device into the cavity, said core having a channel for accommodating excess of the fluid material extruded from the cavity, the wall of the channel furthest from the said cavity having greater height than the wall of the channel nearest said cavity.

2,409,669
DILATOMETER STRUCTURE
Harry W. Dietert, Detroit, Mich.
Application March 7, 1944, Serial No. 525,421
9 Claims. (Cl. 219—36)

1. A furnace including a tube extending vertically therethrough and forming the heating chamber, a refractory rod extending into said tube from the upper end thereof, means without the tube for rigidly holding said rod in fixed relation thereto, and for sealing the upper end of said tube, a second refractory rod extending upward into said tube through the lower end thereof and adapted to support the work and press the same against the upper rod, and means for relatively moving said furnace and second rod to separate the same for the insertion of the work.

2,409,670
STRAND FORMING APPARATUS
Waldemar C. Ewaldson, Millington, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application March 15, 1945, Serial No. 582,970
9 Claims. (Cl. 28—1)

1. A strand forming apparatus comprising a main roller mounted for rotation upon a fixed axis, a companion roller, an element to support the companion roller, means to support the element for movement of the companion roller relative to the main roller, a cam actuable to move the element to move the companion roller to positions measured distances from the main roller, whereby a strand advanced between the rollers will be reduced to a thickness equaling the distance between the rollers, and resilient means to normally urge the element to engage the cam.



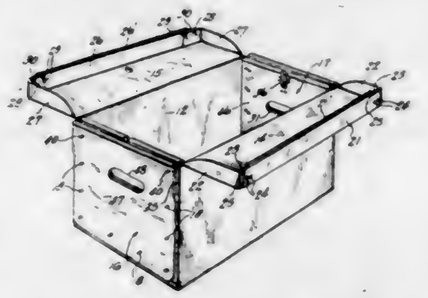
2,409,671
SUBSTANTIALLY OIL SOLUBLE POLYALKYL AROMATIC SULFONATES
Jacob Faust, Belleville, N. J., assignor to L. Sonneborn Sons, Inc., a corporation of Delaware
No Drawing. Application December 8, 1943, Serial No. 513,469
3 Claims. (Cl. 260—505)

1. A new substantially oil-soluble polyalkyl aromatic sulfonate which consists of a substantially oil soluble polyamyl naphthalene sulfonate having one metal sulfonate radical carried by an unalkylated position of the aromatic ring and having at least three amyl radicals.

2,409,672
APPLIANCE FOR MEASURING THE VELOCITY OF PROJECTILES
Friedrich Fischer, Zurich, and Werner Amrein, Rumlang, Switzerland
Application March 18, 1944, Serial No. 527,060
In Switzerland May 1, 1943
14 Claims. (Cl. 250—41.5)

1. In an installation for measuring projectile velocities, in combination, a registering apparatus adjustable parallel to a projectile trajectory and comprising a combined photo-electric cell and electronic multiplier, an electronic preamplifier connected with said cell, means constituting a slit located in front of said photo-electric cell, and means comprising an optical set and systems of mirrors for depicting said slit in two points of said projectile trajectory lying at a predetermined distance from each other, a cable connected to the output of said preampli-

fier, a measuring apparatus comprising at least two cathode ray tubes, and means connected with said cathode ray tubes and said cable for



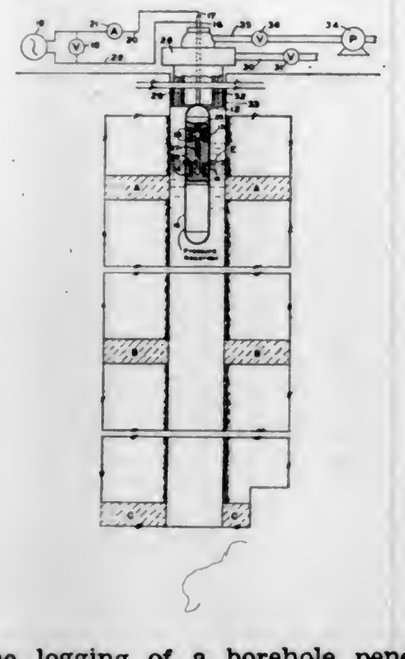
making visible the time interval between the impulses generated by the passage of the projectile through the slit images.

2,409,673

FIBERBOARD CONTAINER HAVING REINFORCED ENDS AND INTEGRAL HINGED CLOSURE

Walter G. Glascoff, Jr., and Charles W. Evert, Milwaukee, Wis., assignors to Downing Box Company, Milwaukee, Wis., a corporation of Wisconsin

Application January 12, 1945, Serial No. 572,444
9 Claims. (Cl. 229—23)



8. In a container having a bottom provided with end flaps and having side walls provided with end flaps, end walls for the container, each end wall comprisng inner and outer layers between which the end flaps of the bottom and side walls of the container are received, the inner layer of each end wall having an upper edge portion folded downwardly and then upwardly to join the upper edge of the outer layer and provide an upwardly opening channel between the two layers, there being a fold line between said downwardly and upwardly folded channel-forming parts with slots in the ends of said fold line for receiving upper end portions of the side wall end flaps, there being a slot extending downwardly from the upper edge of the inner layer of each end wall and there being a registering slot formed in the downwardly folded part of each channel, complementary cover members hinged to said side walls and foldable toward one another over the container, side and end flanges on each cover member, the ends of said cover side flanges being received in the upper edge slots of the end walls, and said cover end flanges being received in said end wall channels when the cover members are closed, metal staples at the ends of each channel extending through the inner and outer end wall layers, through the channel-forming portions, and through the upper ends of the side wall end flaps, and metal staples for securing the side and bottom wall end flaps in position between the layers.

2,409,674

DETERMINING PERMEABILITY OF SUBSURFACE FORMATIONS

Joseph W. Graybeal, Midland, Tex., assignor to Standard Oil Development Company, a corporation of Delaware

Application March 22, 1945, Serial No. 584,183
3 Claims. (Cl. 73—152)

1. In the logging of a borehole penetrating formations having sufficient permeability to allow appreciable amounts of liquid to be forced therein, the steps of determining adjacent the face of a formation the shut-in pressure of the borehole, introducing a body of liquid into the bore of the well, forcing portions of said body of liquid into a plurality of formations and the remainder of the body of liquid downwardly through the bore of the well, determining the rate at which a portion of the body of liquid is forced into the selected formation and simultaneously with the forcing of liquid therein determining the pressure in the borehole adjacent the face of said formation.

2,409,675

PREPARATION OF POLYAMINOACETALS

William Franklin Gresham, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Original application February 14, 1942, Serial No. 430,945. Divided and this application December 26, 1944, Serial No. 569,915
5 Claims. (Cl. 260—584)

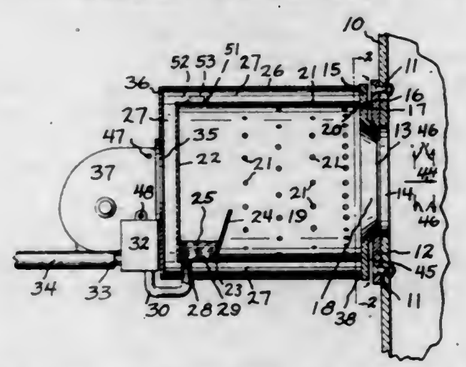
1. A process for the preparation of a di(aminoalkyl) acetal which comprises heating an acetal with aldehyde cyanohydrin whereby an unsymmetrical cyanoalkyl acetal is obtained, heating the resulting cyanoalkyl acetal with hydrogen in the presence of ammonia and a hydrogenation catalyst to form an unsymmetrical aminoalkyl acetal, separating the unsymmetrical aminoalkyl acetal from the hydrogenated reaction mixture, subjecting the separated unsymmetrical aminoalkyl acetal to a reaction with an excess of an inorganic acid, neutralizing the salt obtained with a base, and subsequently removing from the resulting mixture after filtration the di(aminoalkyl) acetal.

2,409,676

PREPARATION OF INDOLE

William F. Gresham and Walter M. Bruner, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application September 20, 1944, Serial No. 555,046
9 Claims. (Cl. 260—319)



1. In a process for the synthesis of indole the steps which comprise heating o-ethylaniline in the presence of a solid dehydrogenation catalyst at a temperature within the range of about 550° to 750° C., and condensing from the resultant gaseous mixture the reaction product containing indole and unreacted o-ethylaniline.

2,409,677

OIL BURNER

James T. Grotenhouse, Orange City, Iowa

Application October 15, 1942, Serial No. 462,080
1 Claim. (Cl. 158—92)

A pot type burner having a longitudinal axis positioned substantially horizontal, a heater wall having an opening, an end plate having a further opening communicating with said opening, a burner end plate having an opening communicating with said heater wall and said end plate openings, means for adjustably spacing said burner plate opening from said end plate opening, including a plurality of adjustable screws threadably engaged with said burner plate, said burner plate being hinged to said end plate, said screws abutting against said end plate, said burner being substantially cylindrical, a sump wall attached across said burner having an arcuate portion thereof attached to the burner walls, the upper edge of said wall leaving an unrestricted opening in said burner, the space between said sump wall and the burner end providing a sump, an outer enclosing shell having an air inlet opening, and a blower attached to and communicating with said opening, said sump wall being substantially at right angles to the longitudinal axis of the burner and extending upwardly a substantial distance from the lower boundary of the burner.

2,409,678

PREPARATION OF SOAPS

Clement Hutton Hamblet, Gordon Heights, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application September 18, 1943, Serial No. 502,991
9 Claims. (Cl. 260—414)

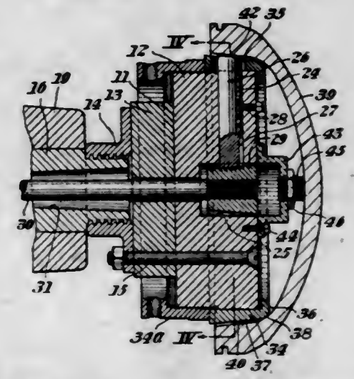
1. In a process for the preparation of heavy metal salts of an organic acid, the step which comprises reacting a heavy metal with a compound selected from the group consisting of organic acids containing unsaturation and at least 8 carbon atoms and their esters in the presence of oxygen and an antioxidant selected from the group consisting of para-hydroxydiphenyl phenols, hydroquinone, para-aminophenol, p,p'-diaminodiphenylmethane, 2,4-meta-toluylene diamine, diphenylamine, o- and p-ditolylamines, phenyl - alpha - naphthylamine, phenyl - beta - naphthylnitrosamine, symmetrical di-beta-naphthyl-para - phenylenediamine, symmetrical diphenyldiaminoethane, 2, 4 - diaminodiphenyl - amine, condensation products of aniline with acetaldehyde, of alphanaphthylamine with aldol, of aniline with acetone, and of diphenylamine with acetone; the antioxidant being present in sufficient amounts to prevent the formation of CO_2 during the reaction.

2,409,679

POLYMERS OF ETHYLENE AND HALOVINYL COMPOUNDS AND PROCESSES FOR THEIR PREPARATION

William E. Hanford, Wilmington, and John R. Roland, McDaniel Heights, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application November 1, 1941, Serial No. 417,477
3 Claims. (Cl. 260—84)



3. A polymer of ethylene and methyl alpha-chloracrylate having an ethylene to ester mole ratio of 1.9:1.

2,409,680

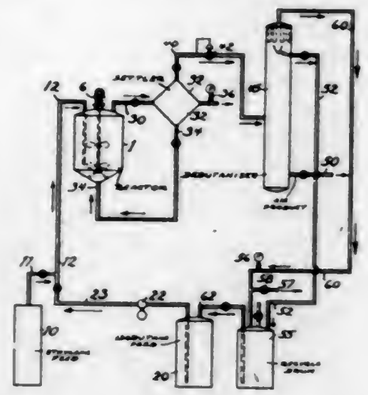
LATHE CHUCK

Colonel C. Heeter, Butler, Pa.

Application May 11, 1943, Serial No. 486,510
8 Claims. (Cl. 279—2)

1. A lathe chuck comprising a cylinder adapted to be mounted on a lathe spindle coaxially therewith, an axial bore in said cylinder, radial bores in said cylinder intersecting said axial bore, gripping studs disposed in said radial bores and slidable longitudinally therein, a conical expander disposed in said axial bore coaxially therewith, a centering ring slidable on said cylinder, and means for advancing said ring into engagement with a workpiece carried on said studs.

2,409,681



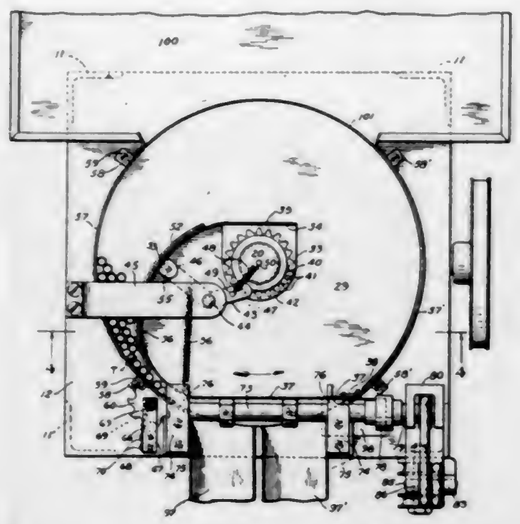
CHEMICAL PROCESS

Ralph M. Hill, Mountainside, and Charles H. Watkins, Cranford, N. J., assignors to Standard Oil Development Company, a corporation of Delaware

Application January 13, 1943, Serial No. 472,192
6 Claims. (Cl. 260—683.4)

1. The method of preparing a catalyst adapted to promote and catalyze the reaction between an

isoparaffin and an olefin which comprises contacting aluminum chloride with an isoparaffin and a lower olefin and one of the class consisting



of an alkyl chloride and hydrogen chloride at elevated temperatures and pressures for 5½ hours to produce a brown mobile liquid having a specific gravity of about 1.2.

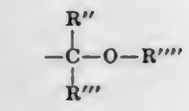
2,409,682

GAUGING AND ASSORTING APPARATUS

Lucien B. Horton, Independence, and Fletcher C. Speed, Kansas City, Mo., assignors to Remington Arms Company, Inc., Bridgeport, Conn., a corporation of Delaware

Application November 13, 1943, Serial No. 510,164
2 Claims. (Cl. 209—91)

1. A machine for gauging and assorting articles comprising a movable gauge member; means for moving said gauge member; carrier means constructed and arranged to move articles to be gauged in proximity to said gauge member, said gauge member being constructed and arranged to strike the upper rear edges only of articles exceeding a predetermined length and to eject said articles from said carrier means in a direction transverse to their direction of movement when supported on the carrier; movable means adjacent said carrier to separate the articles on said carrier so as to deliver them to said gauging member in successive order; brake means arranged to control the movement of the article separating means; and means to guide articles on said carrier into engagement with the article separating means.



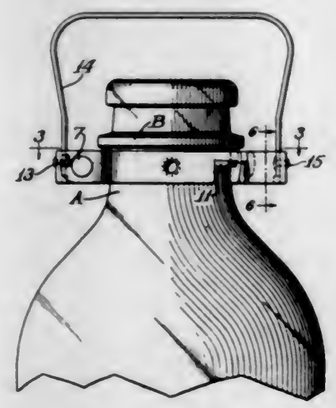
2,409,683

POLISH COMPOSITIONS

Benjamin Wilson Howk, John Richard Roland, and Harvey Herbert Hoehn, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application May 4, 1943, Serial No. 485,644
14 Claims. (Cl. 106—10)

4. A polish composition comprising a synthetic wax obtained by the interaction of ethylene with an organic compound represented by the formula ROR′ wherein R and R′ are free of olefinic unsaturation and are selected from substituents of group consisting of alkyl, aryl, aralkyl, alkaryl, acyl and the substituent



in which R″, R‴, and R⁗ are free of olefinic unsaturation and are selected from the group consisting of alkyl, aryl, aralkyl and alkaryl the R″ and R‴ group including hydrogen, the interaction being effected at a temperature between 50 and approximately 300° C. under pressures above 20 atmospheres and in the presence of a catalyst selected from the group consisting of peroxy catalysts and oxygen, there being present in the polish in parts by weight from 1 to 5 parts of said synthetic wax to from 5 to 1 parts of a soft wax.

2,409,684

BOTTLE CARRIER

Tazewell H. Jenkins, Chicago, Ill.

Application July 10, 1945, Serial No. 604,169
13 Claims. (Cl. 224—45)

1. A carrying device for a bottle having a neck provided with a collar, comprising a U-shaped member of resilient metal and a bar hinged at one end to one arm of the U so as to be capable of swinging from a vertical position down over the second arm, said bar having a part at its free end to hook over said second arm, the free ends of the arms of the U extending outwardly and then back parallel to said arms in the plane of the U, and a bail connected to the backturned parts of the arms of the U, the parts being so proportioned that when the bar is down the distance between the middle of the arm and the closed end of the U is less than the diameter of the collar.

2,409,685

ADDITION PRODUCTS OF HETEROCYCLIC ZINC MERCAPTIDES WITH ALKYLENE IMINES

Paul C. Jones, near Chagrin Falls, and Roger A. Mathes, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a corporation of New York

No Drawing. Application December 21, 1944, Serial No. 569,278
6 Claims. (Cl. 260—302)

1. The addition product of an alkylene imine having its imino nitrogen atom attached to two carbon atoms which are directly connected one to another, with a zinc salt of a heterocyclic nitrogen-containing mercaptan.

2,409,686

COMPOUNDED LUBRICATING OIL

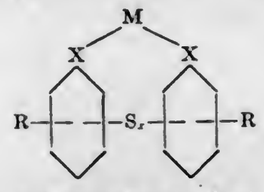
John G. McNab, Cranford, and Dilworth T. Rogers, Plainfield, N. J., assignors to Standard Oil Development Company, a corporation of Delaware

No Drawing. Application July 7, 1943, Serial No. 493,734
15 Claims. (Cl. 252—42.7)

1. A petroleum hydrocarbon material containing a small quantity, sufficient to stabilize said material of a reaction product of a sulfide of phosphorus with a compound of the formula

$$(RArX)_2M$$

where Ar is an aromatic nucleus, R is an alkyl radical having at least 5 carbon atoms, X is a member of the group consisting of oxygen and sulfur, and M is a divalent metal of group II of the periodic table and selected from the group consisting of calcium, barium, strontium, magnesium and zinc.



2,409,687

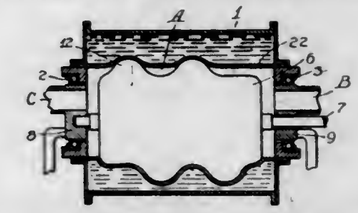
SULFUR AND METAL CONTAINING COMPOUND

Dilworth T. Rogers, Teaneck, and John G. McNab, Cranford, N. J., assignors to Standard Oil Development Company, a corporation of Delaware

No Drawing. Application August 1, 1944, Serial No. 547,640
2 Claims. (Cl. 260—125)

1. As a new composition of matter an oil-soluble sulfur containing product obtained by reacting elemental sulfur with a compound of the formula

where R is an alkyl radical of at least 5 carbon atoms, X is a member of the group consisting of oxygen and sulfur, M is a divalent metal of group II of the periodic table and selected from the group consisting of calcium, barium, strontium, magnesium, and zinc, and x is an integer from 1 to 4.



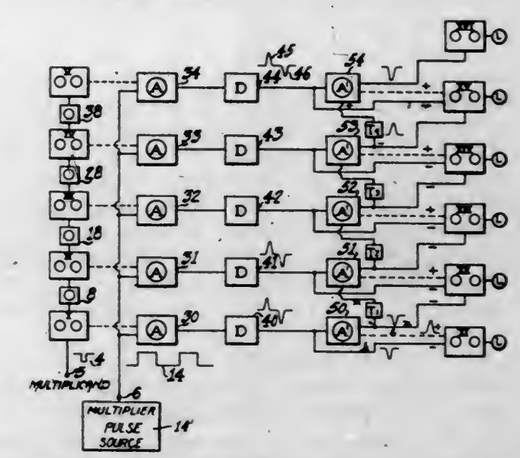
2,409,688

REVERSIBLE FLUID-OPERATED AND FLUID-OPERATING MECHANISM

René Joseph Louis Moineau, Paris, France

Application January 9, 1945, Serial No. 572,080
In France July 1, 1942
1 Claim. (Cl. 103—117)

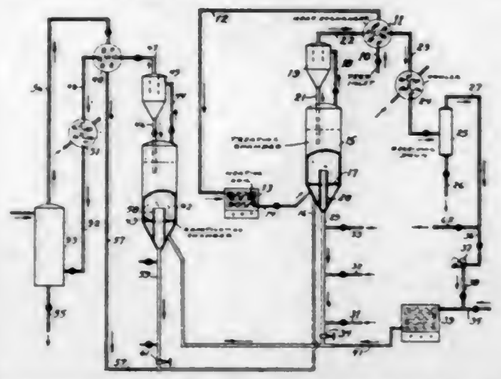
In a mechanism of the class referred to, a rotor having a helical projection, a receptacle enclosing said rotor and loosely rotatable about an eccentric axis, a flexible membrane coaxial with said receptacle and limiting therein an annular space and a central chamber, an inlet and an outlet respectively in communication with the opposite ends of said chamber, a body of liquid in said annular space adapted to be driven in



rotation by viscosity and forced by centrifugal force against the inner wall of said receptacle, the edges of said projection being adapted to depress said membrane outwardly and have a screw-like movement therein, thus forming at least one axially movable fluid-tight cell, said receptacle being adapted to be driven by friction of said membrane against said helical projection.

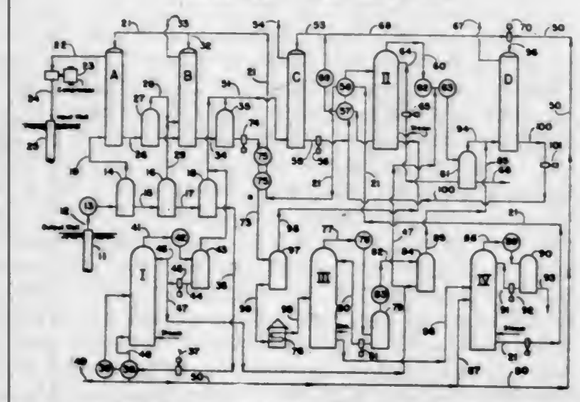
2,409,689

ELECTRONIC COMPUTING DEVICE



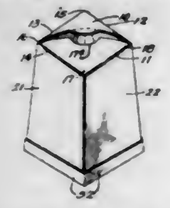
George A. Morton, Haddon Heights, and Leslie E. Flory, Oaklyn, N. J., assignors to Radio Corporation of America, a corporation of Delaware

Application November 2, 1942, Serial No. 464,292
8 Claims. (Cl. 235—61)



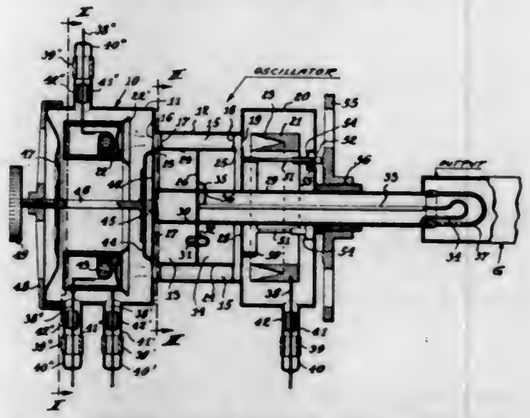
1. A binary multiplying device including a plurality of cascaded trigger circuits, means for polarizing said trigger circuits to represent a binary multiplicand, a source of pulses the number of which is representative of a multiplier, a plurality of blocking amplifiers, means responsive to predetermined polarization of said trigger circuits for unblocking predetermined ones of said amplifiers, means for applying said pulses to all of said amplifiers, means for differentiating the pulses derived from said unblocked amplifiers, a plurality of cascaded second trigger circuits, a plurality of transfer blocking amplifiers, means responsive to the polarization of each of said second trigger circuits for unblocking selectively a different one of said transfer amplifiers, means for applying said differentiated pulses to vary the polarization of said second trigger circuits to transfer said multiplicand thereto for each of said multiplier pulses, and means for applying said differentiated pulses to trigger said second trigger circuits in response to said selective unblocking of said transfer amplifiers for providing carryover binary numbers.

2,409,690
DESULPHURIZATION OF HYDROCARBON OILS
Edward W. S. Nicholson and Aaron K. Redcay, Baton Rouge, La., assignors to Standard Oil Development Company, a corporation of Delaware
Application December 10, 1943, Serial No. 513,680
6 Claims. (Cl. 196—24)



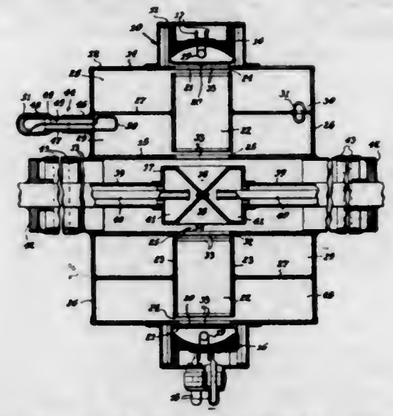
1. A process for removing sulfur compounds from low boiling hydrocarbon oils which comprises continuously passing a mixture of hydrocarbon oil vapors and hydrogen through a treating zone, contacting the oil vapors within the treating zone with a desulfurizing catalyst, maintaining the vapors in contact with the catalyst for a period and at a temperature sufficient materially to reduce the amount of sulfur compounds contained in said oil but insufficient to form substantial carbon deposits on the catalyst, thereafter removing the treated vapors from the treating zone, continuously removing catalytic material from the treating zone while said material contains a relatively low concentration of sulfur, passing the catalyst so removed through a reactivating zone, treating the catalyst within the reactivating zone with a gas consisting substantially exclusively of hydrogen in an amount and at temperature sufficient to remove the sulfur from said catalyst and returning the desulfurized catalyst to the treating zone.

2,409,691
METHOD FOR RECOVERING VOLATILE HYDROCARBONS FROM GASES
Frank G. Noble, Houston, Tex., assignor to Standard Oil Development Company, a corporation of Delaware
Application January 28, 1943, Serial No. 473,796
3 Claims. (Cl. 196—8)



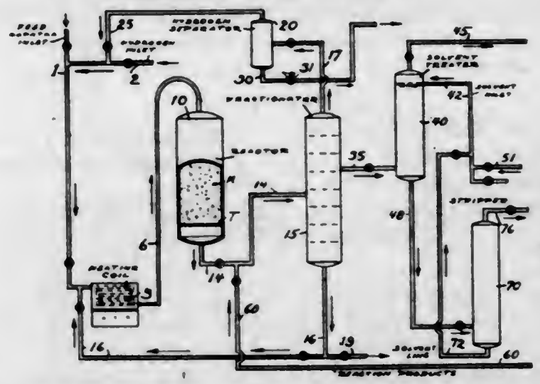
3. A method for recovering distillate from high pressure gas, comprising the steps of contacting said gas with lean heavy oil in an absorption zone to form a rich heavy oil, flashing vapors from said rich absorption oil, passing said vapors to a second absorption zone and contacting them with a lean light absorption oil to form a rich light absorption oil, heating said rich heavy absorption oil, passing said heated heavy absorption oil to a separating zone to separate a vaporous fraction and a liquid fraction, passing said liquid fraction to a distillation zone to separate absorbed constituents as overhead and a lean heavy absorption oil as bottoms, passing said rich light absorption oil to a second distillation zone and separating absorbed constituents as overhead and a lean light absorption oil as bottoms, and passing vapors from said separating zone to said second distillation zone to aid in stripping absorbed constituents from said light absorption oil.

2,409,692
CONTAINER
Curt E. Nyberg, Chicago, Ill., assignor to James F. Barnes, as trustee
Application March 25, 1944, Serial No. 528,099
6 Claims. (Cl. 229—51)



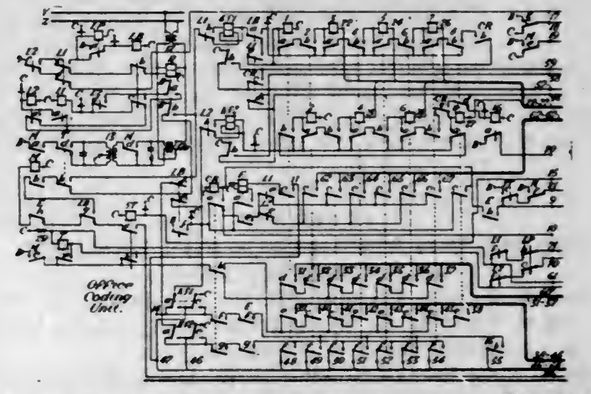
4. A container comprising a sheet of material having a central portion which forms a rectangular top wall, side portions of said sheet adjacent the edges of said central portion being disposed at right angles with said top wall to form the sides of said container, the portions of said sheet intermediate of said side portions being folded within the container, and a bottom wall of rectangular shape having depending edge portions and secured to said side walls, said top wall containing a weakened line extending between opposite corners thereof and adapted to rupture so as to open the container for emptying the same when said opposite corners are pressed toward each other.

2,409,693
ELECTRON DISCHARGE DEVICE
Ernest Carl Okress, Montclair, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application January 6, 1942, Serial No. 425,715
17 Claims. (Cl. 250—27.5)



1. An electron discharge device comprising hollow-body resonators, an envelope having a conductive part providing a field-free space enclosed thereby and said field free space surrounding said resonators peripherally, said resonators having constricted openings at ends of said field-free space, a cathode in said envelope opposite an end of said field-free space for directing an electron stream through said field-free space, and a collector opposed to the cathode at the other end of said field-free space.

2,409,694
ELECTRON DISCHARGE DEVICE
Alfred H. Laidig, Bloomfield, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application June 26, 1942, Serial No. 448,555
9 Claims. (Cl. 250—27.5)

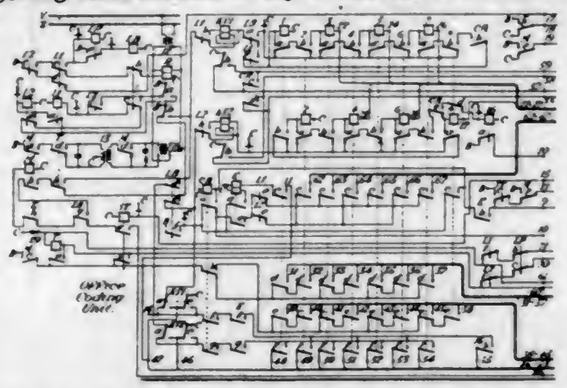


1. An electron discharge device comprising a cylindrical cathode, cylindrical and coaxial grids within and coaxial to the cathode, means between said grids for providing a field-free space therebetween, and said cathode being spaced radially outward from said means so the electrons from the cathode pass therethrough as a radially converging beam, and a collector coaxial within said grids for receiving said electrons.

2,409,695
METHOD FOR IMPROVING AVIATION FUELS
Kenneth C. Laughlin, Baton Rouge, La., assignor to Standard Oil Development Company, a corporation of Delaware
Application January 30, 1943, Serial No. 474,077
5 Claims. (Cl. 260—668)

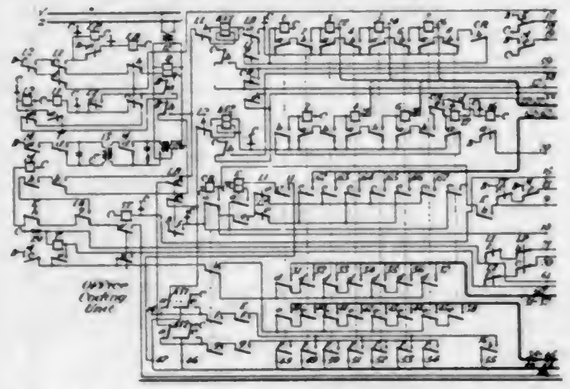
4. The method of increasing the aromaticity of a petroleum naphtha which comprises charging the feed naphtha to a first reaction zone where it contacts a molybdenum oxide-alumina catalyst at temperatures within the range of from about 850°–1100° F., simultaneously charging a hydrogen-containing gas to the reaction zone, maintaining a pressure within the reaction zone of at least about 100 pounds per square inch, permitting the reactants to remain in the reaction zone for a sufficient period of time to effect the desired conversion, withdrawing the reaction products containing aromatics and paraffins, subjecting the said products to a further treatment in a second reaction zone maintained at a temperature within the range of from about 850°–1050° F. in the presence of a promoted chromia-alumina catalyst, maintaining a pressure in the said second reaction zone substantially lower than that in the first reaction zone, permitting the reactants to remain in the reaction zone for a sufficient period of time to convert paraffins into aromatics and recovering from said second reaction zone a quantity of naphtha substantially enriched in aromatic hydrocarbons.

2,409,696
REMOTE CONTROL SYSTEM
Lloyd V. Lewis, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application March 6, 1943, Serial No. 478,252
12 Claims. (Cl. 177—353)



4. In a remote control system, an office and a station connected by two line wires, a line relay of the stick polar type connected across said line wires at the office and also at said station, a code transmitter at the office and at the station each effective when initiated to deliver to the line wires a series of inductively generated impulses of alternately opposite polarity to operate the line relays, said codes being characterized by pauses following certain of the impulses during which the line relays are held locally in their last operated positions, and means for discontinuing the delivery of impulses by each code transmitter during any pause in its operation when transmitting a code if the associated line relay is operated during said pause by an impulse received from said line wires.

2,409,697
TRANSMITTING APPARATUS FOR REMOTE CONTROL SYSTEMS
Lloyd V. Lewis, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Original application March 6, 1943, Serial No. 478,252. Divided and this application August 12, 1944, Serial No. 549,276
14 Claims. (Cl. 177—353)

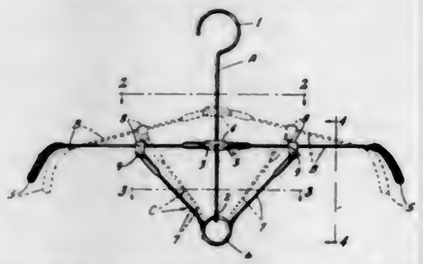


1. A code transmitter for generating different multiple element codes comprising a master relay and a transmitter relay, a group of pilot relays including one for each element in a group of selecting elements in each code, a plurality of sets of contacts including one set for each of the possible combinations of said pilot relays in their operated and released positions, circuits closed in response to the momentary operation of any set of contacts for energizing each pilot relay occupying an operated position in the combination

identifying said set of contacts, a circuit controlled by all of the pilot relays which is closed only when each occupies its energized or released position as required for said combination for energizing said master relay when said combination

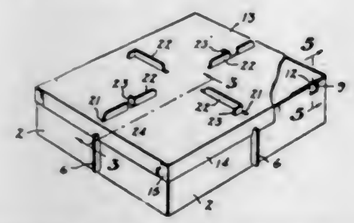
is set up, means controlled by said master relay when energized for setting said transmitter relay into operation to generate a code in which the character of each selecting element is controlled in accordance with the position of the pilot relay for that element, and circuit means effective to prevent any change in the combination of pilot relays set up during the transmission of said code.

2,409,698
SELECTING APPARATUS FOR REMOTE-CONTROL SYSTEMS
Lloyd V. Lewis, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Original application March 6, 1943, Serial No. 478,252. Divided and this application August 12, 1944, Serial No. 549,277
17 Claims. (Cl. 177—353)



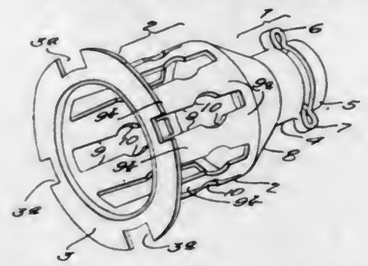
5. In a code receiver responsive to codes of time spaced impulses, a two position line relay operable to opposite positions in response to the successive impulses of the code, a register relay for each position of said line relay, timing means for each register relay controlled by the line relay for operating such register relay to a normal or reverse position in accordance with the length of time the line relay remains in the corresponding position, means for maintaining each register relay in its last operated position while the other register relay is subject to operation by its timing means, and a series of control circuits adapted to be closed one at a time in order as the successive impulses of the code are received, each including a contact closed in response to the corresponding operation of the line relay and a normal or reverse contact of that register relay the position of which indicates the time interval following the next preceding operation of the line relay.

2,409,699
PREPARATION OF CYANOMETHYL DIALKYL ORTHOFORMATES
Donald J. Loder and William F. Gresham, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application September 7, 1944, Serial No. 553,108
5 Claims. (Cl. 260—464)



4. A cyanomethyl dialkyl orthoformate.

2,409,700
SKIRT HANGER
Edmond W. Loselle, Wyandotte, Mich.
Application March 30, 1945, Serial No. 585,632
2 Claims. (Cl. 223—95)



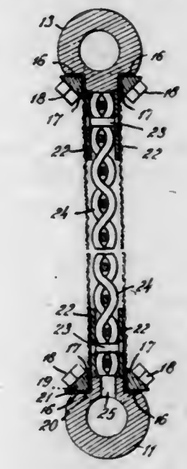
1. A garment hanger comprising a suspension member, a member slidable on said suspension member, a pair of outstanding hanger arms disposed on opposite sides of said suspension member and pivotally connected at their inner ends to the slidable member for movement therewith and vertical swinging movement relative thereto, and a supporting member for said hanger arms comprising a single torsion spring secured to said suspension member below said slidable member and having two upwardly diverging arms extending one from each end of said spring and pivotally connected one to each hanger arm for normally holding the same in a substantially horizontal position, whereby said hanger arms are inclined downwardly and outwardly when said slidable member is pulled upwardly on said suspension member and a winding action is imparted to said spring which tends to unwind and restore said hanger arms to horizontal position when the upward pull on said slidable member is released.

2,409,701
CHICK BOX
Gaylord Loth, Sandusky, Ohio, assignor to The Hinde & Dauch Paper Company, Sandusky, Ohio, a corporation of Ohio
Application July 19, 1944, Serial No. 545,636
2 Claims. (Cl. 229—15)

1. A shipping box having a body portion comprising a rectangular bottom and side walls integral with the bottom and hinged to the side edges thereof, said walls having slots intermediate their ends extending upwardly from their bottom edges and terminating short of their top edges, crossing interlocking partition members having end portions fitting in said slots and projecting past the outer faces of the side walls and end edge portions engaging the interiors of the side walls above the slots, said projecting portions having slots in the top edges thereof adjacent the outer faces of the side walls, a cover having marginal depending flanges telescopically engaging the outer faces of the side walls and extending into the slots in the top edges of the projecting portions of said partitions.

2,409,702
FASTENER
Richard W. Luce, Southport, Conn.
Application June 19, 1942, Serial No. 447,732
3 Claims. (Cl. 85—40)

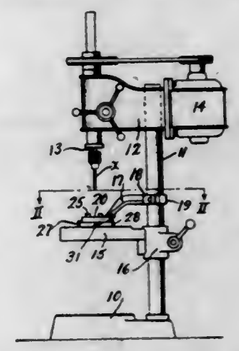
1. A crimp fastener adapted to be crimped in an opening therefor in a plyable structural element and be secured therein against relative rotative and axial movement with respect thereto, the crimp fastener comprising in combination an internally threaded fastener element, a collapsible, substantially cylindrical barrel united at one end by a continuous portion to the fastener element, and an outwardly extending flange at the opposite end, the barrel being of greater internal diameter than the fastener element and including a plurality of bendable strips of substantially uniform thickness extending substantially parallel to the axis of the fastener element and of substantially the full length of the barrel, each strip being of varying resistance to bending throughout its length, whereby upon being compressed axially, the strips expand in the opening and bend in a predetermined manner.



2,409,703
PREPARATION OF LAMINATING FABRIC
Arthur Lyem, Cumberland, Md., assignor to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application September 3, 1943, Serial No. 501,150
6 Claims. (Cl. 8—131)

1. Process for the preparation of a laminating fabric, which comprises applying to a fabric containing yarns of a thermoplastic material having a basis of an organic derivative of cellulose and non-thermoplastic yarns, an aqueous dispersion of triethyl citrate, whereby a major proportion of the triethyl citrate absorbed is absorbed by the thermoplastic yarns and only a minor proportion by the non-thermoplastic yarns.

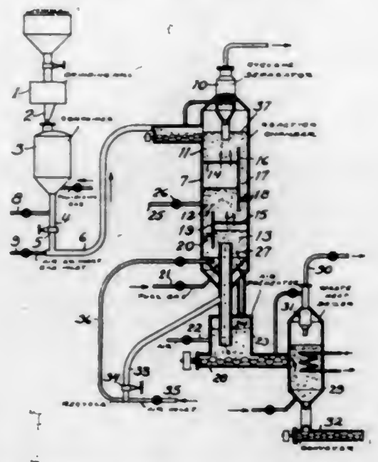
2,409,704
PRODUCTION OF LAMINATING FABRICS
Arthur Lyem, Cumberland, Md., assignor to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application January 18, 1944, Serial No. 518,721
8 Claims. (Cl. 8—131)



1. Process for the preparation of a laminating fabric, which comprises applying to a fabric containing yarns having a basis of a thermoplastic organic derivative of cellulose and yarns having a basis of a non-thermoplastic material, a plasticizing mixture containing a plasticizer for said thermoplastic organic derivative of cellulose, alcohol and from 5 to 10% by weight of the plasticizing mixture of water.

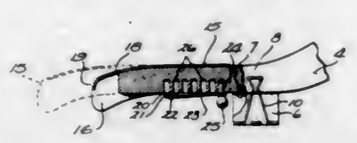
2,409,705
FILTER LEAF
Fredrick E. Reinhardt, Bellflower, Calif., assignor to Richfield Oil Corporation, Los Angeles, Calif., a corporation of Delaware
Application September 19, 1945, Serial No. 617,290
1 Claim. (Cl. 210—195)

In a filter leaf for discontinuous, stationary leaf type filters comprising a frame carrying two fine mesh wire screens constituting the filtering medium and a coarse-mesh wire separator screen mediate the fine-mesh wire screens, parallel grooves around the inside of the frame, locking elements having surfaces complementary with respect to the grooves and co-acting therewith to secure the fine-mesh wire screens to the frame, parallel plates around the inside of the frame between the grooves, and means joining the plates and passing through the coarse-mesh wire screen to secure it to the frame.



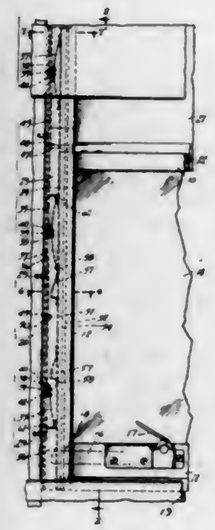
2,409,706
ATTACHMENT FOR DRILL PRESSES OR THE LIKE
Joseph L. Reppa, Chicago, Ill.
Application September 22, 1944, Serial No. 555,211
6 Claims. (Cl. 77—63)

5. A work holding attachment for a drill press or the like having a work supporting table, comprising an arm having clamping means at one end for adjustable clamping to the drill press above the supporting table and having a head at



the other end overlying the supporting table, means carried by said head for engaging the opposite sides of a workpiece on said table in holding engagement, means for providing a stop to engage an end of the workpiece on the supporting table, said last means comprising a rod mounted for axial and rotative movement in said arm and having its outer end reversely bent to provide a foot to engage the adjacent end of the workpiece which is supported on said table and underneath said head, rotative movement of said rod in said arm permitting vertical adjustment of its foot with respect to the height of the workpiece, and means for securing said rod in adjusted position in said arm.

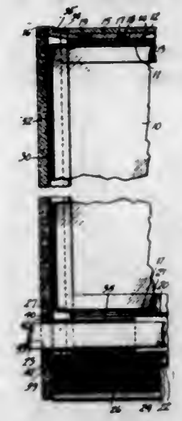
2,409,707
CEMENT MANUFACTURE
Bruno E. Roetheli, Cranford, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application January 29, 1943, Serial No. 474,008
7 Claims. (Cl. 106—100)



1. In the manufacture of cement, the improvements which comprise reducing the lime and clay materials used in the manufacture of cement to a fineness so that at least 90% will pass through a 100 mesh sieve, fluidizing the fine powder by contacting with continuously flowing gas and progressively raising the temperature of the fluidized powder by passing a heating gas in countercurrent flow to said material at reduced velocity adjusted to maintain a dense turbulent body of said solid materials to first drive off the moisture, second the carbon dioxide and third, to clinker the finely divided material.

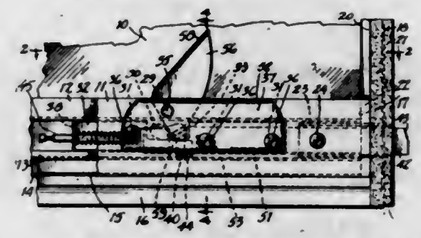
2,409,708
COAT HANGER
Charles L. Rothweiler, Milwaukee, Wis.
Application July 20, 1944, Serial No. 545,796
2 Claims. (Cl. 223—90)

2. The combination of a rigid coat hanger having central arm portions of rectangular cross section, said hanger having its central portion provided with a suspension hook and having its arms provided with sockets in their under surfaces, channel-shaped sheet metal extension elements each covering the top and sides of the outer end of one of the arms in sliding fit relation thereto and having the outer end of its top downwardly curved, said extension elements being each provided with a cross plate connecting the lower edges of its side walls in proximity to the under surface of the end portion of its associated arm, a flat spring having one end secured to said plate and the other end provided with a stud engageable in any socket with which it is brought in registry, and a depending knob on the free end portion of the spring to facilitate manual retraction of the stud from an engaged socket, whereby each extension element may be instantly adjusted longitudinally of the rigid coat hanger in conformity with the width of a garment suspended from the hanger.



2,409,709
BUS OR CAR WINDOW CONSTRUCTION
Joseph Schunk, Union, N. J., assignor to The National Lock Washer Company, Newark, N. J., a corporation of New Jersey
Application June 9, 1944, Serial No. 539,533
6 Claims. (Cl. 189—73)

1. In a window construction, a sash guide channel including inner and outer leg portions and a base portion, a rack strip member disposed in said guide channel outwardly of its base portion, pressure spring means carried by said base portion and exerting outward pressure on said rack strip, and stop means carried by said rack strip disposed vertically above and directly engaged with the upper side of said spring means whereby said spring means receives vertical thrust on said rack strip.

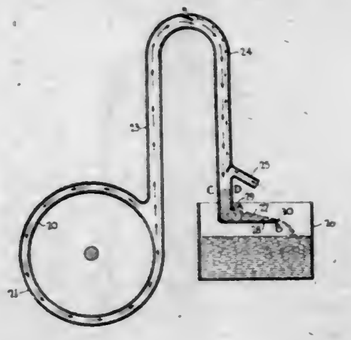


2,409,710
BUS OR CAR WINDOW CONSTRUCTION
Joseph Schunk, Union, N. J., assignor to The National Lock Washer Company, Newark, N. J., a corporation of New Jersey
Application June 23, 1944, Serial No. 541,812
8 Claims. (Cl. 189—76)

1. In a window sash assembly, a top rail having a sash glass receiving channel in its under side, a bottom rail having a sash glass receiving channel in its upper side, a pair of side straps having sash glass receiving channels in their inner sides, a rectangular sash glass engaged at its four marginal edges in said channels of said top and bottom rails and said side straps, vertically engageable interlocking hook and slot connection means cooperating between the ends of one of said rails and the adjacent ends of said side straps permitting relative inward and outward swinging movement of said side straps relatively to the ends of the other of said rails, and laterally en-

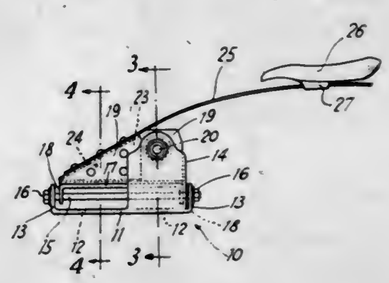
gageable lug and passage connection means cooperating between said other of said rails and the adjacent ends of said side straps engageable and disengageable through said inward and outward swinging movement of said side straps.

2,409,711
SASH LOCK FOR BUS OR CAR WINDOW CONSTRUCTION
Joseph Schunk, Union, N. J., assignor to The National Lock Washer Company, Newark, N. J., a corporation of New Jersey
Application June 23, 1944, Serial No. 541,813
3 Claims. (Cl. 292—173)



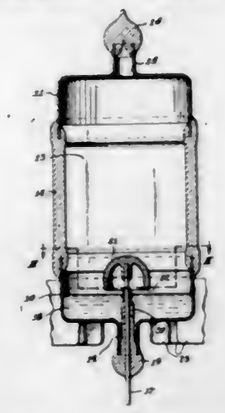
1. In a sash lock window construction, a rail having inner and outer side walls and a longitudinally extending bolt passage, said inner wall of said rail having a slot, a lock bolt disposed in said passage and projected from one end, a lock case member engaged upon the outer side of said inner wall, attaching means securing said case to said inner wall terminating between said case and the inner side of said bolt, and an operating lever pivotally mounted in said case having an actuating lug extended through said slot into engagement with said bolt.

2,409,712
CHEMICAL PROCESS AND PRODUCTS
Carl E. Schweitzer, Newport, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application February 3, 1944, Serial No. 520,932
12 Claims. (Cl. 260—453)



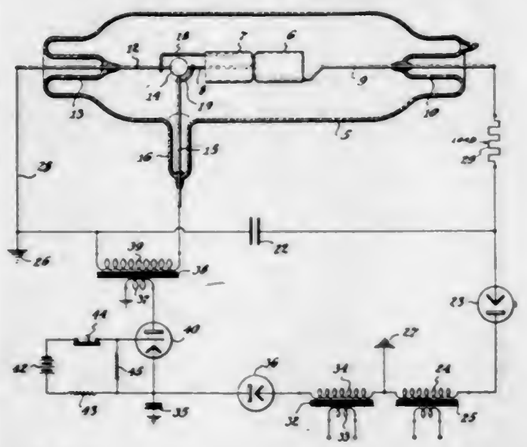
1. In a process for preparing alkyl isocyanates the steps which comprise heating an N-alkyl carbamic alkyl ester to a pyrolysis temperature of about 135° to 500° C. and immediately separating the resulting alkyl isocyanate from the pyrolysis products before the said products have had time to reunite to form the N-alkyl carbamic alkyl ester.

2,409,713
SEPARATION OF LIQUIDS FROM SOLIDS
Laurence P. Sharples, Ardmore, Pa., assignor to The Sharples Corporation, Philadelphia, Pa., a corporation of Delaware
Application August 19, 1942, Serial No. 455,288
5 Claims. (Cl. 210—68)



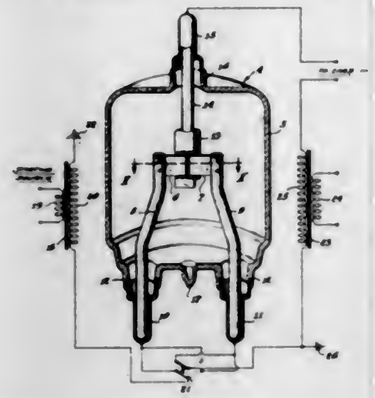
5. In an apparatus for separating liquid from solids, the combination comprising means for feeding a mixture of liquid and solids to a centrifugal rotor having a perforated wall and a circumferential edge, means for rotating said rotor to remove liquid from said solids while said solids pass along said wall to discharge over said edge, a collecting ring annularly positioned relative to said rotor, for receiving solids discharged from said edge, and having a circumferential surface sufficiently close to said edge to assemble solids discharged over said edge and against said collecting ring into a confined stream moving under the force of their rotational momentum, and means operatively connected to said collecting ring for discharging and directing said confined stream upwardly while said solids still have substantial momentum remaining.

2,409,714
SEAT
Florian P. Silhan, Marion, Kans.
Application August 17, 1944, Serial No. 549,829
1 Claim. (Cl. 155—121)



A seat comprising a base having upturned tongues at the front and rear ends thereof, a pin supported in said tongues, said base having upturned ears on the lateral edges thereof, a rocker mounted on and extending upward from said pin, a frame member mounted on said rocker and having its upper wall sloping upward in a rearward direction, an elongated strip having one end secured to said upper wall and extending rearward and having a seat mounted thereon distant from said upper wall, resilient means mounted between said rocker and said ears, a bolt supported in said ears and passing loosely through said rocker, said resilient means comprising coiled springs surrounding said bolt.

2,409,715
ELECTRIC ARC DEVICE
Charles M. Slack, Glen Ridge, and Edward G. F. Arnott, Upper Montclair, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application January 27, 1942, Serial No. 428,352
11 Claims. (Cl. 250—27.5)

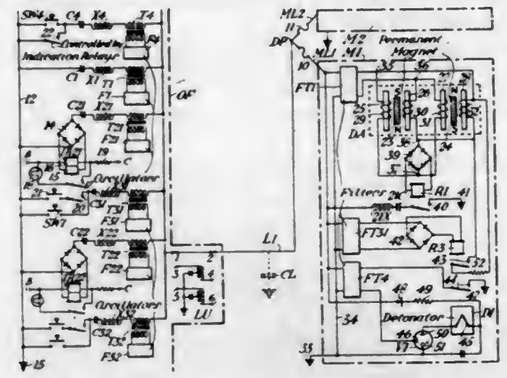


1. An electric arc device comprising an envelope having an anode and cathode, said cathode providing a pool, an ignitor electrode protruding through the pool, and a shield around said electrode, said shield having a lower edge parallel to the pool surface in spaced proximity to an underlying portion of said pool surface thereby forming a gap the length whereof parallels the pool surface and the width whereof is normal to the pool surface said lower edge of said shield constituting a limitation to exposure of the electrode thereunder.

2,409,716
HIGH-VOLTAGE DISCHARGE DEVICE
Charles M. Slack, Glen Ridge, Louis F. Ehrke, Newark, and Clarence E. Dawley, Bloomfield, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application September 27, 1941, Serial No. 412,566
8 Claims. (Cl. 315—326)

6. A field emission arc discharge device comprising an envelope, an anode in said envelope, and a cathode disposed adjacent said anode, said cathode comprising a pair of closely spaced elements for causing an arc discharge upon the application of a suitable potential across said elements, and said arc discharge forming an electron-emitting source for supporting a thermionic discharge between said cathode and anode substantially independent of any action due to residual gas or vapor in said device.

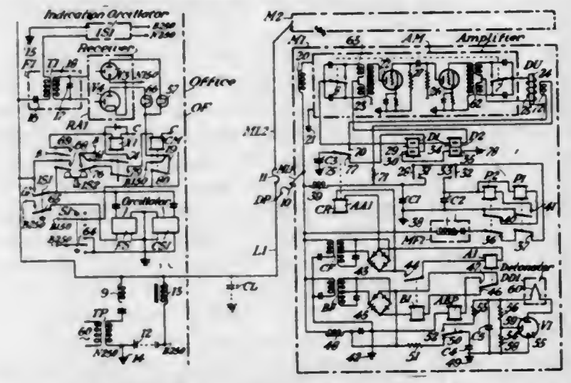
2,409,717
FIELD EMISSION ARC DISCHARGE TUBE
Charles M. Slack, Glen Ridge, and Andrew Pfeiffer and Clarence E. Dawley, Bloomfield, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application September 26, 1942, Serial No. 459,774
7 Claims. (Cl. 250—27.5)



1. A discharge device wherein operation is initiated by field emission of electrons comprising a pair of oppositely disposed spaced electrodes between which a field emission arc discharge occurs upon the application of a potential thereto, and an anode positioned on each side of said oppositely disposed electrodes and overlapping the space therebetween for supporting an electron discharge with one of the electrodes of said pair immediately following initiation of the field emission arc discharge between said pair of electrodes.

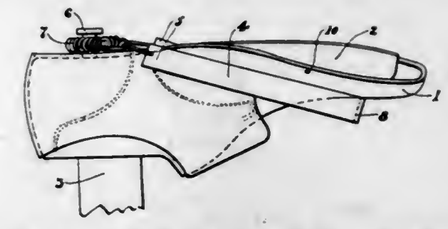
2,409,718
COMPOSITION FOR CLEANING DENTURES
Foster Dee Snell, New York, and Kurt W. Haeseler, Forest Hills, N. Y., assignors to Foster D. Snell, Inc., a corporation of New York
No Drawing. Application November 13, 1941, Serial No. 419,028
2 Claims. (Cl. 252—106)

1. A denture cleaning composition comprising a dry free flowing powder of the following composition: sodium salt of 2,2' dihydroxy 3,5,6-3',5',6' hexachlorodiphenylmethane 0.5–2 parts, sodium perborate 5–10 parts, tetrasodium pyrophosphate 20–70 parts, sodium lauryl sulfo-acetate 1.5–5 parts, tricalcium phosphate 2–3 parts, and sodium chloride as diluent to make 100 parts total, all proportions being by weight.



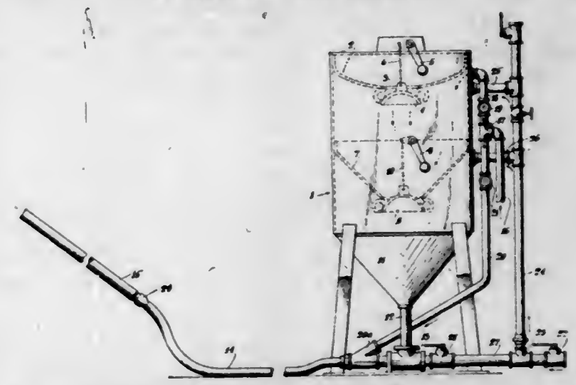
2,409,719
APPARATUS FOR SELECTIVE CONTROL AND INDICATION SYSTEMS
Andrew J. Sorensen, Edgewood, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application October 27, 1943, Serial No. 507,877
4 Claims. (Cl. 177—353)

2. In a control and indication system, the combination comprising, a first and a second location, a line circuit including at least one metallic conductor extending between said locations; an oscillator, a filter and a relay at said first location; said oscillator to supply current of a preselected frequency and connected to said line circuit through said filter and a winding of said relay; said filter to tune the circuit formed by said oscillator, filter, relay winding and distributed capacitance of said line circuit with respect to ground to resonance at said preselected frequency to energize said relay by the line charging current supplied by said oscillator, a shunt circuit including capacitance and inductance at said second location, and means including a normally



open contact to at times connect said shunt circuit across said line circuit to detune the line circuit to reduce said charging current for operating said relay by the variation thus created in its energization.

2,409,720
SELECTIVE CONTROL AND INDICATION SYSTEM
Willard P. Place, Penn Township, Allegheny County, and Alfred B. Miller, Edgewood, Pa., assignors to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application November 4, 1943, Serial No. 508,948
13 Claims. (Cl. 177—353)

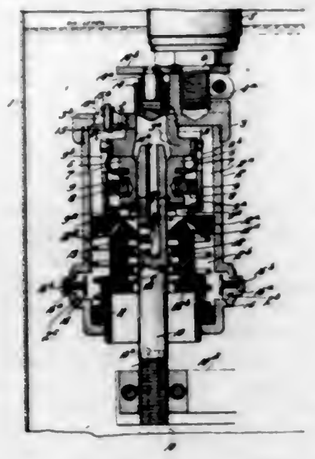


1. In combination, an office, an electric equipment connected to said office by a line circuit, an office indication oscillator of a preselected frequency connected to said line circuit to supply a line charging current of a given normal value, two indication relays at said equipment, means including a magnetic responsive unit connected to said relays to operate one relay in response to a first condition of a magnetic field and to operate the other relay in response to a second condition of a magnetic field, a selector circuit including a filter tuned to resonance at said preselected frequency and governed by said indication relays to be connected across said line circuit when either one of said relays is operated to vary the value of the current supplied by said indication oscillator to said line circuit, means controlled jointly by said relays when both relays are operated sequentially to disconnect said selector circuit to restore the current supplied by said oscillator to its normal value, and office indicating means coupled to said oscillator and governed by the indication current thus supplied by it to the line circuit.

2,409,721
DEVICE FOR CONFORMING A SHOE UPPER TO THE SHAPE OF A LAST
Maurice Spack, Newton Center, Mass.
Application March 29, 1945, Serial No. 585,427
3 Claims. (Cl. 12—107)

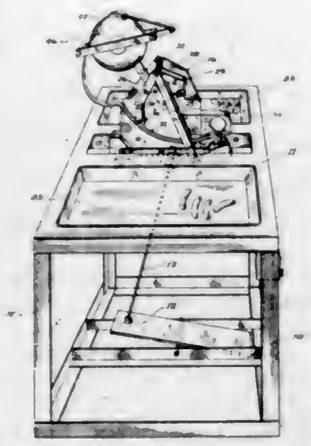
1. A device for shaping shoe uppers comprising a last having its bottom face at the heel portion offset from the bottom face at the toe portion, a strap-like element of flexible material having the form of an elongated closed loop adapted to embrace the toe portion of the last and hold the upper conformed to the last, some portion at least of said strap-like element being elastic, and means to anchor said strap-like element to the bottom of the heel portion of the last, whereby the side portions of the closed loop strap-like element extend from the bottom of the heel portion of the last to the sides of the fore part portion and thus hold the upper snugly against the sides of the last at the shank thereof.

2,409,722
SAND BLASTING APPARATUS
William Stark and Alphonsus P. Gately, Wilmington, Calif., assignors to Todd Shipyards Corporation, New York, N. Y., a corporation of New York
Application January 16, 1945, Serial No. 573,034
4 Claims. (Cl. 51—8)



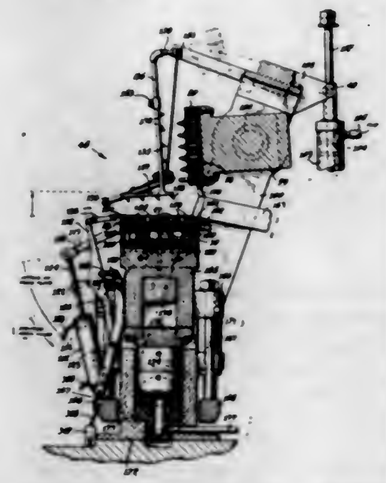
4. In a sand blasting apparatus, a supply tank containing abradant mixture including a liquid and having at its outlet an ejector connected with a source of air under pressure to expel the abradant from the tank, a fitting connected with the ejector and to which is connected a source of liquid for admixture with the abradant, a hose connected to the outlet of said fitting and having at its terminal end a nozzle comprised of a length of pipe having a uniform bore.

2,409,723
OIL CIRCUIT BREAKER
Fred M. Terry, Jackson Heights, N. Y., assignor to Realty and Industrial Corporation, a corporation of New Jersey
Application December 23, 1943, Serial No. 515,333
5 Claims. (Cl. 200—150)



1. An oil circuit breaker comprising a stationary contact, a movable contact, an enclosing cas-

ing, a differential piston within the casing forming an oil chamber at one end of the casing and an arcing chamber at the other end of the casing, said piston having a central opening forming a throat through which the movable contact passes to engage the stationary contact, said pis-

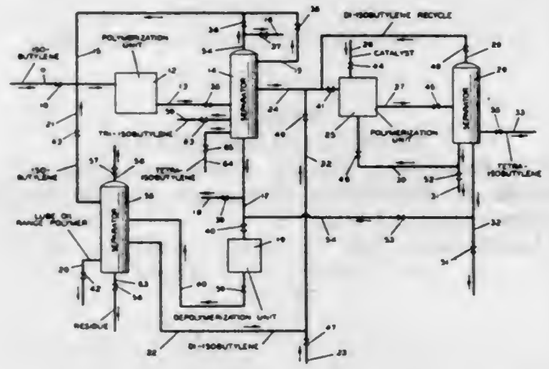


ton also having an opening for the passage of oil from the oil chamber to the arcing chamber against the arc at said throat, said opening being directed towards said stationary contact, and said piston being movable in the direction of the movable contact in its opening movement by the pressure in the casing.

2,409,724
BANDING MACHINE
Charles T. Walter and Lowell R. Newton, Chicago, Ill., assignors to Industrial Patents Corporation, Chicago, Ill., a corporation of Delaware
Application December 15, 1941, Serial No. 422,973
14 Claims. (Cl. 216—29)

1. A machine for banding an article with a label, having means to deliver a strip of labels including means for pulling the label strip to tension the end label of the strip around the article with the ends of the label overlapped, means to time said means to deliver such that the strip is fed forwardly as the banded article is being withdrawn from the machine, and means operative after said label has been tensioned around the article to sever the end label from the strip and affix it to the article by joining the overlapped ends.

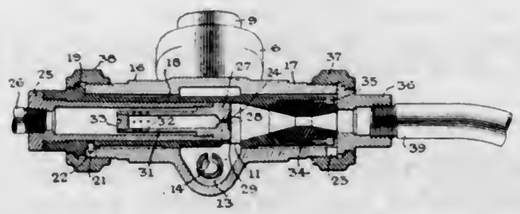
2,409,725
AUTOMATIC MOLDING OF PLASTICS
James B. Whitmore, Bloomfield, William Makenny, Mountain View, and Frank A. Newcombe, Nutley, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 4, 1941, Serial No. 386,790
8 Claims. (Cl. 18—16)



8. Apparatus for molding plastic material comprising a hopper for distributing pellets thereof, a loading carriage comprising upper and lower plates, said upper plate having a plurality of apertures to receive said pellets, said lower plate being similarly apertured, so that in one relative position it supports and in another it releases pellets in said upper plate apertures, means for operating said hopper to automatically deliver pellets simultaneously in all apertures of the upper plate when the lower plate is in supporting position, a molding press formed with upper and lower mold elements corresponding in number and arrangement with the pellet-holding apertures of said upper plate, means in each of said lower mold elements which are engaged by the articles being formed, means for automatically moving said carriage from beneath said hopper to above said lower mold elements and depositing said pellets simultaneously in all of said lower mold elements, means to bring said mold elements together to compress said pellets and then separate said elements after a predetermined time interval, means to automatically lift said molded articles from said lower mold elements by raising said article-engaged means, means to then lower said means, article-supporting means, means to move said supporting means under all of said lifted articles to hold the same after the article-engaged means descend to normal position, and means for delivering a blast of air to remove said articles from said supporting means.

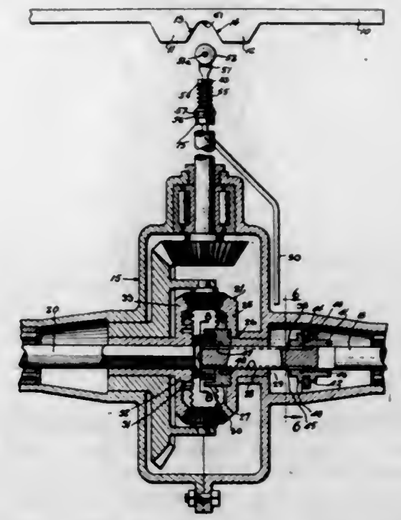
2,409,726
LUBRICANT COMPOSITION
Carl Winning, Westfield, and John G. McNab, Cranford, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application May 28, 1941, Serial No. 395,614
10 Claims. (Cl. 252—32.7)

1. A machinery lubricant suitable for use at high temperatures comprising a major proportion of a mineral oil base stock, a minor proportion, sufficient to impart substantial detergent properties to said lubricant, of a metal salt of a poly-



basic inorganic acid which contains at least one oil-solubilizing organic group, and a minor proportion, sufficient to inhibit varnish formation, of a higher alcohol.

2,409,727
PRODUCTION OF OLEFIN POLYMERS
Grant C. Bailey, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
Application January 30, 1942, Serial No. 428,966
5 Claims. (Cl. 260—683.15)

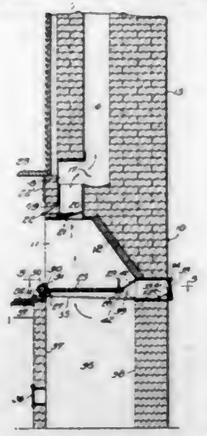


4. A process for the production of tetra-isobutylene by polymerization of di-isobutylene without the formation of substantial amounts of tri-isobutylene, which comprises subjecting di-isobutylene in the liquid phase to the action of phosphorus pentoxide at a temperature within the range of approximately 0° C. to approximately 100° C.

2,409,728
SANDER
Wayne A. Baldwin, Watertown, N. Y., assignor to The New York Air Brake Company, a corporation of New Jersey
Application May 15, 1944, Serial No. 535,681
2 Claims. (Cl. 291—11)

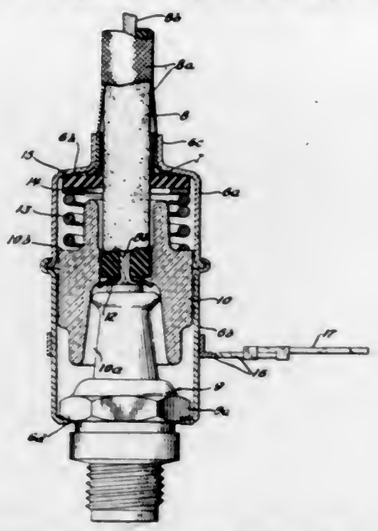
1. In a sand trap, the combination of a body having a sand-inlet connection, a sand-retaining chamber to which said connection leads and an open-ended transverse passage intersecting said chamber; an ejector assembly insertable into said passage in relatively reverse positions from respective ends thereof, said assembly comprising a jet nozzle with air supply connections, and a Venturi throat of rubber-like material and a sustaining sleeve serving to position said nozzle and throat in fixed coactive relation and so that the end of the throat is exposed at the end of the sleeve; a sand-discharge connection; and means operable interchangeably to connect the air supply end of the assembly to the body, and to connect the sand discharge connection to the body and seal it against the exposed end of the Venturi throat.

2,409,729
DIFFERENTIAL LOCKING MEANS
Edward T. Barron, Minneapolis, Minn.
Application August 19, 1944, Serial No. 550,285
6 Claims. (Cl. 74—316)



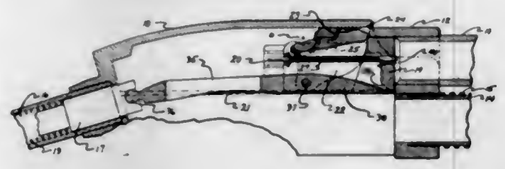
1. In an automobile, a device for connecting the rear axles together for simultaneous rotation, comprising a front wheel spindle connecting rod having a notch provided with cam surfaces intermediate the ends of said rod, a shiftable rod having a roller positioned adjacent the notch and adapted to be moved into the notch when said rod is shifted toward the connecting rod, a clutch element fixed to one rear axle, a second clutch element rotatable with the other axle and slidable thereon, means moving the slidable clutch elements into operative engagement with the first clutch element for connecting the axles together, means operatively connecting the moving means with the shiftable rod, and manual means for forcing the shiftable rod towards the connecting rod and the roller into the notch so that the moving means will bring the clutch elements together, reciprocation of the connecting rod when the automobile is steered to the right or left causing the roller to ride on a cam surface and force the shiftable rod and roller sufficiently away from the connecting rod to cause disengagement of the clutch elements.

2,409,730
LOCOMOTIVE UNDERFRAME
Martin P. Blomberg, Hinsdale, Ill., and Olaf J. Stampen, Arlington, Va., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application December 13, 1943, Serial No. 514,070
16 Claims. (Cl. 105—172)



4. In an underframe structure, the combination of a plurality of horizontally extending base plates having their contacting edge portions welded together, transversely extending end members welded to some of said base plates, and coupler pockets welded to and supported solely from said base plates and end members.

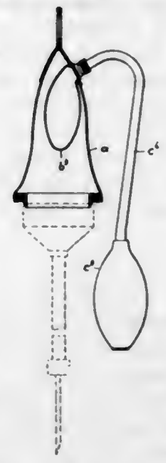
2,409,731
FIREPLACE
George Noel Bolinger, Shelbyville, Ill.
Application February 25, 1944, Serial No. 523,869
6 Claims. (Cl. 126—120)



1. A fireplace construction comprising a wall structure having an external side and an inside and being provided with a fireplace opening having an open mouth extending through such inside of the wall structure, a substantially horizontal grate arranged in said fireplace opening in a plane close to the level of the bottom of the mouth of said fireplace opening, said wall structure having a draft opening therethrough communicating with said fireplace opening and extending through the external side of said wall structure, and a draft control plate arranged between said draft control opening and the adjacent edge of said grate and mounted to swing on a horizontal pivot to control the relative flow of air through said draft opening above and below said grate.

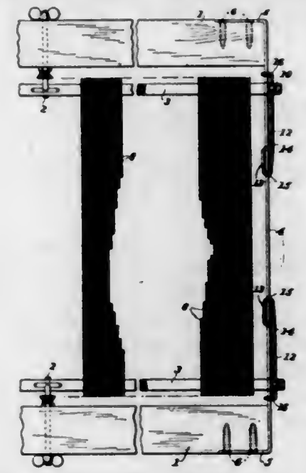
2,409,732
SCREENING DEVICE FOR SPARK PLUGS
Donald Bennion Browne, Harpenden, Frederick William Clarke, Totternhoe, and Rex Henry George Painter, Dunstable, England, assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application October 11, 1943, Serial No. 505,764
In Great Britain October 30, 1942
7 Claims. (Cl. 123—169)

1. A screening device for spark plugs wherein the screen (or a part thereof) has a means for effecting its quick attachment to or detachment from a spark plug (or to or from a part of the screen temporarily non-detachably associated with a spark plug) and wherein there is disposed within the screen (or the detachable part thereof) an insulator which is capable of movement relatively to the screen (or detachable part thereof) and which is adapted partially to envelop a spark plug and to which insulator the conductor lead may be anchored and wherein spring means is interposed between the insulator and the screen (or the detachable part of the screen with which the insulator is associated) said spring, when the device is in use on a spark plug, serving inter alia to ensure the attachment of the screen (or of the detachable part thereof) to a spark plug (or to the part of the screen temporarily non-detachably associated with the spark plug) and to secure an efficient electrical connection between the conductor lead and a spark plug.



2,409,733
REPEATING FIREARM
Val A. Browning, Ogden, Utah, assignor to J. M. & M. S. Browning Company, Ogden, Utah, a corporation of Utah
Application July 18, 1945, Serial No. 605,774
10 Claims. (Cl. 42—4)

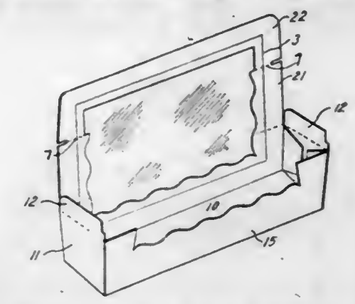
1. In a recoil-operated firearm of the character described, a receiver, a barrel having a barrel extension member mounted for reciprocation in the receiver and provided with a locking shoulder, a breech block member carried by said receiver and mounted for reciprocation therein, a locking block movably carried by said breech block member and having a shoulder arranged to engage said first-mentioned shoulder when the breech block member is locked to the barrel extension, an inertia member mounted for reciprocation at the rear end of the receiver, a link pivotally connected to said locking block and inertia member, and interengaging means between the link and one of said members for moving the locking block towards unlocked position and imparting added velocity to the link and inertia member upon recoil movement of the barrel extension.



2,409,734
INSTRUMENT FOR BLOOD TRANSFUSION
Rudolf Bucher, Basel, Switzerland, assignor to the Swiss firm of G. Laubscher & Co., Basel, Switzerland
Application September 4, 1942, Serial No. 457,340
In Switzerland September 20, 1941
2 Claims. (Cl. 128—214)

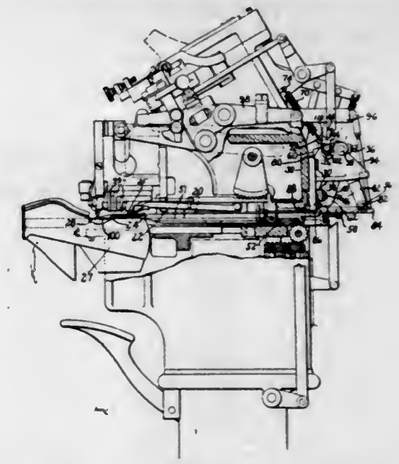
1. An instrument for the transfusion of liquids, such as blood plasma, whole blood and serum, comprising a primary sealed rubber bag having a mouth, a flanged threaded bushing fitted in said mouth, a secondary sealed rubber bag so associated with the primary bag as to contract the volume of the latter when inflated, means for inflating said secondary bag, said bushing being splayed out to form a seat, a nut screwed on said bushing, a ring clamped together with the peripheral edge of the bag mouth intermediate the bushing flange and said nut, said ring having diametrically opposed bails, a combination filter and outlet nipple having a seat matching the bushing seat to cooperate therewith, a screw cap engageable over said nipple and threadable to said bushing, and means for conducting the

liquid from said bag and nipple to the transfusion point.



2,409,735
HEDDLE BAR LOCK
David Edward Buice, Sr., Ellenwood, Ga.
Application April 30, 1945, Serial No. 591,007
4 Claims. (Cl. 139—92)

1. A heddle bar locking structure comprising a pin adapted to movably extend through the end opening in a heddle bar, said pin being provided with an aperture in one end thereof, and an element for securing said pin against movement out of said bar-end openings comprising a spring wire element including a substantially straight portion adapted to extend through the aperture in the pin, one end of the wire element being angled to releasably engage the harness end of a heddle frame and the opposite end of the wire element being adapted to be secured to said harness end.

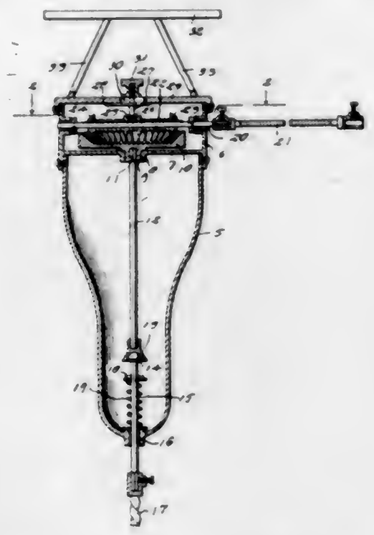


2,409,736
PAPER DISPLAY CARTON WITH TRANSPARENT WINDOW
Joseph D. Calmi, Everett, Mass.
Application September 29, 1944, Serial No. 556,356
1 Claim. (Cl. 206—44)

A blank assembly for a carton, comprising a bottom, end walls, end wall extensions having lock notches cut therein, front and rear walls, said front wall having a cut out portion, glue flaps crease-hinged to the ends of the front and rear walls, a cover crease-hinged to the rear wall, a tuck element crease-hinged to the cover having a locking slot at each end thereof; a window-opening extending through portions of the rear

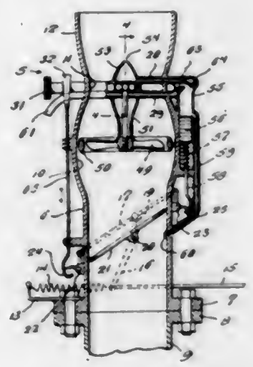
wall, the cover, and the tuck element, and a sheet of flexible, transparent material covering said window-opening.

2,409,737
CHIP EJECTOR FOR HEEL SEAT FITTING MACHINES
Thomas Baggott Clarke and Frederick William Henry Williams, Leicester, England, assignors to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application March 8, 1945, Serial No. 581,585
In Great Britain June 6, 1944
7 Claims. (Cl. 12—31.5)



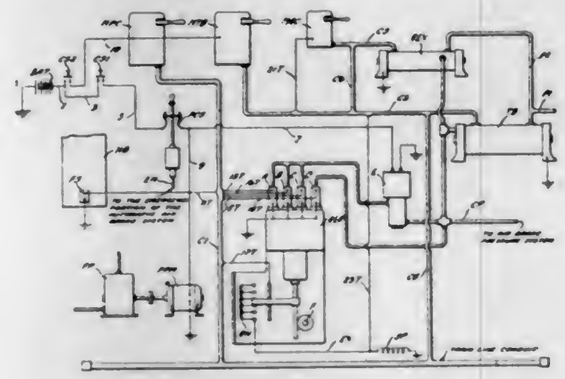
1. In a heel seat fitting machine, a movable spring-energized actuator having a fixed driving stroke, a reciprocatory ejector bar movable to remove a chip from the machine, positive driving means between the actuator and the ejector bar, mechanism comprising a cam for rendering said driving means inoperative to cause chip ejecting movement of said bar to cease, and means for setting said cam in different adjusted positions in order to cause the actuator to be disconnected from the bar at different portions of the driving stroke of the actuator.

2,409,738
REVERSING MECHANISM FOR POWER OPERATED DRILLS
Clarence L. Conner, McFarland, Calif.
Application January 19, 1945, Serial No. 573,497
2 Claims. (Cl. 74—378)



1. In a power operated drill, a housing, a driven shaft journaled therein and having a ring gear keyed to one of its ends and disposed in the housing, a driving shaft journaled in the housing at a right angle to the driven shaft, a sleeve slidably keyed to the driving shaft and having bevel gears on the ends thereof spaced apart a distance less than the diameter of the toothed portion of the

ring gear, said bevel gears being disposed for movement selectively into and out of meshing engagement with the ring gear, and actuating means rotatably connected to the sleeve and slid-

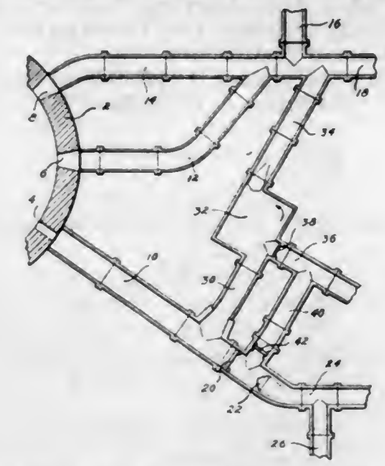


ably connected to the housing for slidably moving the sleeve relatively to the driving shaft to move the bevel gears selectively into and out of meshing engagement with the ring gear.

2,409,739
CARBURETOR
Severin F. Czerner, Kings Mill, Tex.
Application July 31, 1944, Serial No. 547,354
1 Claim. (Cl. 261—34)

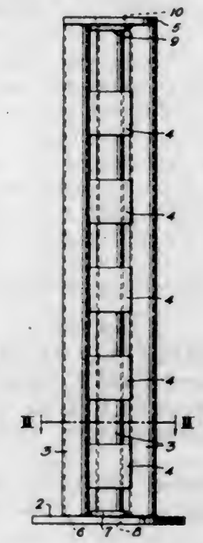
An accelerator pump for carburetors of a type including a tubular body having a throttle valve therein and also having a fuel pump provided with a discharge nozzle and a fuel supply line for the fuel pump, a pump cylinder carried exteriorly of said body, a vertically movable piston within said cylinder, said fuel supply line opening into said cylinder above said piston, a fuel supply connection extending laterally from said nozzle to the outer side of said body and opening into said cylinder above said piston, a normally open check valve in the cylinder connected end of said fuel supply line and adapted to close during upward movement of said piston, a normally closed check valve in the cylinder connected end of said fuel supply connection and adapted to open during the upward movement of said piston, a priming fuel supply connection extending from said cylinder above said piston and opening into said body at a point between said throttle valve and the manifold connected end of said body, said priming fuel supply connection being in open communication with said cylinder when said piston is normally disposed, said throttle valve being adapted to have a limited opening movement when subjected to the initial suction from within the manifold, and connecting means between said throttle valve and said piston for actuating the latter to close the priming fuel supply connection when the limit of the initial opening movement of the throttle valve is reached.

2,409,740
LOCOMOTIVE CONTROL SYSTEM
Richard M. Dilworth, Hinsdale, Torsten O. Lilquist, Clarendon Hills, and Donald H. Queeney, Naperville, Ill., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application September 6, 1943, Serial No. 501,404
6 Claims. (Cl. 105—35)



1. A control system for a locomotive including an automatic air brake system, a generating electric traction system comprising a power plant and a plurality of traction motors, means for electrically connecting said motors in forward and reverse driving and braking circuit relations with said power plant, output regulating means for said power plant, and automatic control means for said output regulating means acting in response to an emergency application of said air brakes to automatically prevent operation of said power plant at other than a minimum value of output sufficient to cause said motors, when connected in braking circuit relation with the power plant, to serve only as brakes.

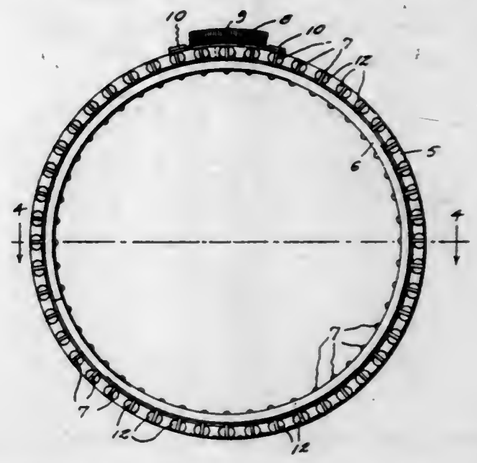
2,409,741
SETTLING BASIN FOR BLAST FURNACE CINDER RUNNERS
Herman F. Dobscha, Pittsburgh, Pa., assignor to Carnegie-Illinois Steel Corporation, a corporation of New Jersey
Application July 19, 1945, Serial No. 606,011
11 Claims. (Cl. 266—38)



1. In the combination of a blast furnace having a cinder runner, the improvement which comprises a settling basin connected at one end thereof to the cinder runner, said settling basin having a width substantially greater than the width of the cinder runner feeding the basin, a second cinder delivery runner connected to the opposite end of the settling basin from the first cinder runner, said second cinder runner being of a width substantially less than that of the settling basin, the first and second cinder runners at their points of connections to the settling basin being substantially parallel and offset relative to each other

a substantial distance so that the areas of flow of cinder into and out of the settling basin pro-

jected within the basin are spaced from each other at all points.



2,409,742
COIL SUPPORTING ARBOR
James W. Dougherty, McKeesport, Pa., assignor to The American Steel and Wire Company of New Jersey, a corporation of New Jersey
Application September 8, 1943, Serial No. 501,580
5 Claims. (Cl. 263—47)

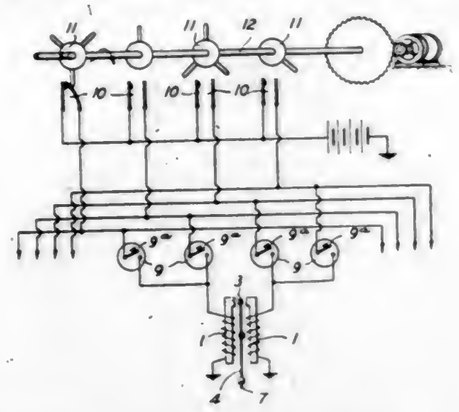
5. A coil supporting arbor comprising a base on which the coils are supported, a plurality of spaced apart tubes welded to said base inwardly of the periphery thereof and rising therefrom, said tubes being positioned to form an equilateral triangle, said base having openings therein between the tubes, a plurality of intermediate reinforcements at spaced elevations welded to said tubes, and a plate welded to the top of the tubes to hold them in spaced relationship, each of said base and top plate having a central opening therein.

2,409,743
HAND LOOM
Monte K. Durrin, Little Rock, Ark.
Application November 15, 1944, Serial No. 563,511
1 Claim. (Cl. 28—15)

A hand loom comprising an outer frame, an inner frame, said inner frame being provided with a multiplicity of outstanding work holding pins, the outer frame being provided with a multiplicity of notches for receiving the outer ends of said pins to guard against work thread catching thereon, the outer frame being split and a resilient connector between the ends of said outer frame,

said resilient connector including a ridged guide, said guide having one edge notched to coincide with the notches of the adjacent edge of the outer frame.

2,409,744
NECKTIE
Robert E. Edmonson, Beaumont, Tex.
Application December 2, 1943, Serial No. 512,626
3 Claims. (Cl. 2—148)

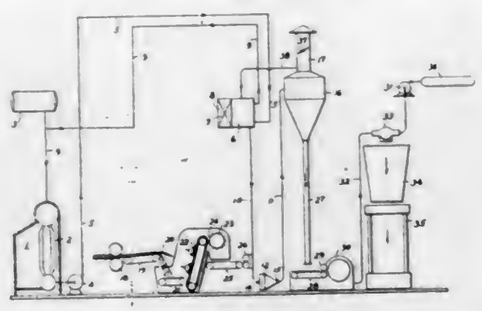


1. A tie of the four-in-hand type having a knot-forming part, a slip end about which the knot is tied and an intermediate neck-encircling part with laterally spaced strips of frictional surface stiffening material positioned on the exterior of the back face of the knot-forming part and extending toward the end of said part beyond the portion actually involved in tying the knot.

2,409,745
RECORDING APPARATUS
Gustaf Göte Albin Ericsson, Lund, Sweden, assignor to A.-B. Ljussignaler, Lund, Sweden, a corporation of Sweden
Application September 15, 1942, Serial No. 458,412
In Sweden June 10, 1939
2 Claims. (Cl. 234—1.5)

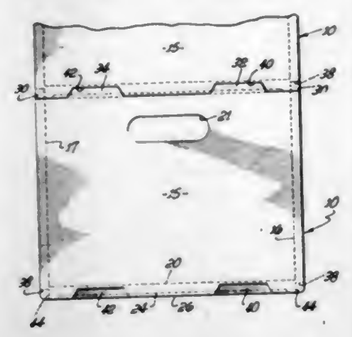
1. A recording system of the character described, comprising a stylus for recording on a travelling strip, an electromagnet for operating said stylus, a pair of machine controlled switches connected in parallel in the circuit of said electromagnet, and a corresponding number of cam controlled impulse contacts connected in series each with one of said machine controlled switches in the circuit of said electromagnet, each cam

control comprising a different number of lobes, the lobes of the different cams for the different



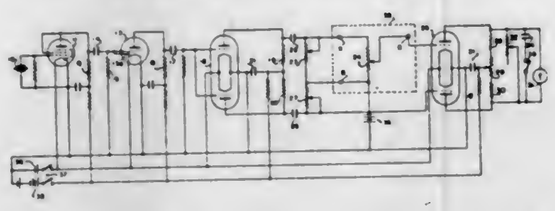
impulse contacts being out of phase with one another.

2,409,746
MOTOR FUELS
Theodore W. Evans, Oakland, and Alfred G. Cattaneo, Berkeley, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application July 31, 1940, Serial No. 348,838
4 Claims. (Cl. 44—56)



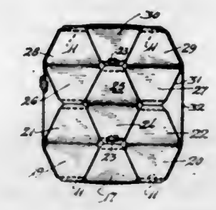
4. An improved motor fuel for supercharged spark ignition engines comprising a mixture of methyl tertiary butyl ether and gasoline hydrocarbons containing a substantial amount of hydrocarbons selected from the group consisting of iso-octane, neohexane, triptane, and mixtures thereof.

2,409,747
DRYING STAPLE FIBERS
Herman C. R. Folmer, Swarthmore, Pa., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
Application January 19, 1944, Serial No. 518,803
2 Claims. (Cl. 34—12)



1. Method of handling moisture-laden artificial fibers which comprises subjecting the fibers in the form of a web to a disintegrating operation to loosen the fibers, opening the loosened fibers, continuously projecting the opened fibers into a current of hot air, throwing the fibers suspended in the air current upwardly along an unimpeded substantially vertical path to dry the fibers while permitting uniform free shrinkage thereof, continuously separating the dried fibers from the air after they have been in contact therewith for a period of time not longer than about five seconds, and collecting all of the separated fibers to prevent commingling thereof with moisture-laden fibers.

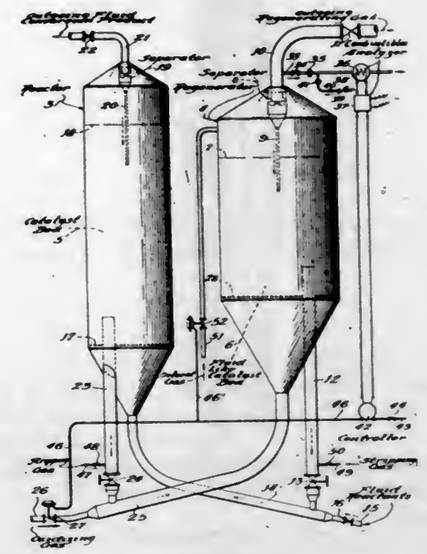
2,409,748
PLASTIC MILK CARTON CASE
Louis C. Folst, Los Angeles, Calif., assignor to Edgewick Investment Co., Los Angeles, Calif., a corporation of California
Application October 2, 1944, Serial No. 556,689
1 Claim. (Cl. 220—97)



A smooth, unitary, splinterless case for waxed paper, milk cartons and the like comprising: unitary side walls, end walls and bottom, the bottom being reticulated and raised above the level of the bottom edges of the side and end walls; the upper edge of each of said walls being provided with a pair of spaced, upwardly extending projections integral with the walls, each of said projections having an outer face flush with the outer surface of the wall, with two end faces sloping inwardly toward the top, and an inclined face sloping outwardly and upwardly from the inner surface of the wall; the bottom edge of each of said walls being provided with a pair of upwardly extending recesses spaced to receive projections of a case upon which the instant case is stacked, the recesses being open to the outside faces of the walls and adapted thereby to furnish auxiliary hand holds, the end walls of each recess being inclined to guidingly receive and center the projections of a case upon which the case is stacked.

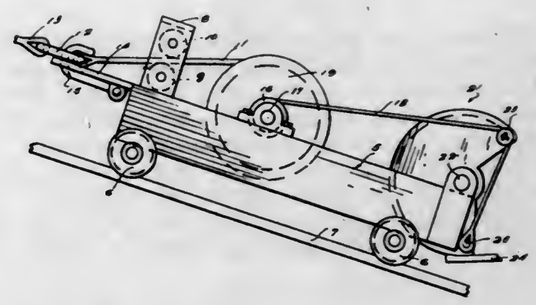
2,409,749
INDICATING SYSTEM
John H. Foulger and Paul E. Smith, Jr., Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application November 20, 1943, Serial No. 511,030
9 Claims. (Cl. 128—2.06)

1. A cardiometer for indicating the relative content of a predetermined characteristic in two predetermined frequency spectrums of heart sounds one of which is substantially contained within the other comprising, means for deriving and translating a first electrical signal corresponding to the content of one of said spectrums of heart sounds, means including a series condenser and a shunt resistor for deriving and translating a second electrical signal corresponding to the content of the other of said spectrums of heart sounds, means coupled to said means for deriving and translating said first signal for deriving a third signal varying in accordance with the content of said predetermined characteristic in said first electrical signal, means coupled to said means for deriving and translating said second signal for deriving a fourth signal varying in accordance with the content of said predetermined characteristic in said second electrical signal, and means differentially responsive to said third and fourth signals for indicating said relative content.



2,409,750
BUNDLE AND METHOD OF PRODUCING THE SAME
Jenness B. Frear, Evanston, Ill., assignor to Signode Steel Strapping Company, Chicago, Ill., a corporation of Delaware
Application July 29, 1944, Serial No. 547,229
4 Claims. (Cl. 206—65)

1. In a bundle, the combination of two upwardly tapered ingots arranged in base to base relationship to each other, two other upwardly tapered ingots also arranged in base to base relationship to each other and positioned in spaced relation to said first named ingots at one side thereof, said ingots being provided with aligned transverse notches thereacross at intermediate points thereon, a flexible binder in the form of a loop extending about said ingots and engaging said notches, two other upwardly tapered ingots interposed between said first named ingots and said second named ingots outside of said binder and having transverse notches in their top faces engaging said binder, said third mentioned ingots serving when pressed forcibly toward each other to tighten the binder strongly in interlaced position with respect to the several ingots, and means comprising a second binder extending about said first named binder and about the several ingots for holding said third named ingots pressed inwardly in tightening relationship to said first named binder.

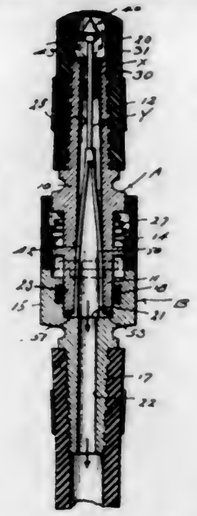


2,409,751
CATALYTIC CONVERSION OF HYDROCARBONS
Clarence G. Gerhold, Chicago, Ill., and John E. Burgess, Sweeney, Tex., assignors to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application December 22, 1943, Serial No. 515,266
8 Claims. (Cl. 196—52)

1. In a process wherein a bed of subdivided solid material susceptible to damage at high temperature is contacted in a confined zone with oxidizing gas to burn combustibles from the bed and resulting gaseous products, including any incompletely oxidized combustibles and unconsumed free oxygen, are discharged from the bed and from said zone through a region within the latter containing solid particles and in which the solid particle concentration is insufficient to effect the rapid dispersion of heat developed therein, the method of preventing the development of a temperature within said region which would cause damage to the solid material which comprises removing from said region a sample stream of said gaseous products and subjecting the same to combustion outside said region, diluting the mixture existing in said region with a sufficient

quantity of non-combustible gas to render it non-flammable therein, and controlling the extent of such dilution in response and in direct relation to the temperature rise resulting from the combustion of said sample stream.

2,409,752
LOAD PICKUP HAULING AND DUMPING CONVEYANCE
Percy E. Goodwin, Salmon, Idaho
Application June 9, 1945, Serial No. 598,434
3 Claims. (Cl. 214—130)



1. In a waste ore handling conveyance of the class described, a substantially U-shaped frame, supporting and maneuvering wheels thereon, a toothed scooping and loading style bucket pivotally mounted between the rear ends of the side members of said frame, a drum rotatably mounted between said side members, cables windable on said drum and having their free ends connected with the end portions of said bucket, and further cable means for simultaneously maneuvering said conveyance and controlling said drum.

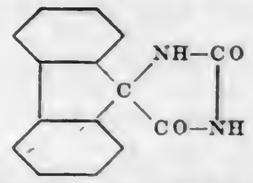
2,409,753
VALVE FOR HOSE COUPLINGS
John H. Harrison, Palos Verdes Estates, and Harold E. Byers, Los Angeles, Calif.
Application April 26, 1944, Serial No. 532,762
4 Claims. (Cl. 284—19)

4. A valve member of the character described including, a stem, a valve head on one end of the

stem, and an extension on the other end of the stem, the extension including resilient divergent

legs and outwardly projecting feet on the outer ends of the legs.

2,409,754



METHOD FOR OBTAINING HYDANTOINS

Henry R. Henze, Austin, Tex., assignor to Parke, Davis & Company, Detroit, Mich., a corporation of Michigan

No Drawing. Application September 9, 1940, Serial No. 356,107

14 Claims. (Cl. 260—309.5)

3. Diphenylene hydantoin of the formula:

4. Process for the preparation of diphenylene hydantoin which comprises reacting fluorenone, a cyanide soluble in water, and a reagent derived from the system NH_3—CO_2—Aq capable of regenerating all of these components under the conditions of reaction, in the presence of an organic solvent at least partially miscible with water, acidifying the reaction mixture, and separating the diphenylene hydantoin thus produced.

2,409,755

METHOD FOR OBTAINING 5,5-DIARYL-HYDANTOINS

Henry R. Henze, Austin, Tex., assignor to Parke, Davis & Company, Detroit, Mich., a corporation of Michigan

No Drawing. Original application September 9, 1940, Serial No. 356,107. Divided and this application May 11, 1944, Serial No. 535,211

10 Claims. (Cl. 260—309.5)

1. Process for the preparation of a diaryl hydantoin which comprises heating together at temperatures above 90° C. and for a time, at least a few hours, permitting accumulation of appreciable reaction product, a diaryl ketone, a water-soluble inorganic cyanide, and a reagent derived from the system NH_3—CO_2—Aq capable of regenerating all of these latter components under the conditions of the reaction, in the presence of a lower aliphatic amide, acidifying the reaction mixture, and separating the diaryl hydantoin thus produced.

2,409,756

METHOD FOR OBTAINING 5,5-DIARYL-HYDANTOINS

Henry R. Henze, Austin, Tex., assignor to Parke, Davis & Company, Detroit, Mich., a corporation of Michigan

No Drawing. Original application September 9, 1940, Serial No. 356,107. Divided and this application May 11, 1944, Serial No. 535,212

13 Claims. (Cl. 260—309.5)

1. Process for the preparation of a diaryl hydantoin which comprises heating together at temperatures above 50° C. and for a time, at least a few hours, permitting accumulation of appreciable reaction product, a diaryl ketone, a water-soluble inorganic cyanide, and a reagent derived from the system NH_3—CO_2—Aq capable of regenerating all of these latter components under the conditions of the reaction, in the presence of a glycol, acidifying the reaction mixture, and separating the diaryl hydantoin thus produced.

2,409,757

CLUTCH

Frank L. Hetzel, Hermosa Beach, and Volney E. Carstedt, Los Angeles, Calif.

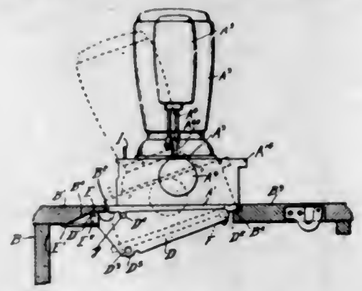
Application June 24, 1944, Serial No. 541,886

3 Claims. (Cl. 192—105)

1. A clutch as disclosed comprising a clutch member to be secured on a rotatable shaft, a second clutch member to be turnably mounted on said shaft, a clutch ring mounted to move laterally in said first clutch member, an actuating coil spring in said first clutch member arranged in ring formation and to be expanded by centrifugal force upon rotation of said first clutch member above a predetermined speed, and a cam in said first clutch member to be engaged by said spring when expanded to cause said spring to engage and move said clutch ring forwardly into frictional contact with said second clutch member to clutch said second clutch member to said first clutch member, an auxiliary spring in said first clutch member arranged in ring formation surrounding said actuating spring in its ring formation and constructed and arranged to be contracted between said actuating spring and said clutch ring to force said clutch ring into frictional contact with said second clutch member to clutch said clutch members together, when said second clutch member is rotated below said predetermined speed, and said auxiliary spring being constructed and arranged to be expanded by centrifugal force out of effective frictional contact with said clutch ring when either of said clutch members is rotated above said predetermined speed.

2,409,758

CONVERTIBLE SEWING AND DARNING MACHINE



Richard K. Hohmann, Jamaica, N. Y., and Earl D. Boisselier, Glen Ellyn, Ill., assignors to Sears, Roebuck and Co., Chicago, Ill., a corporation of New York

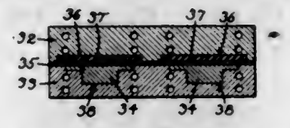
Application February 25, 1943, Serial No. 477,042

5 Claims. (Cl. 112—260)

1. A drophead sewing machine comprising in

combination, a table formed with an opening, a sewing machine frame including work supporting means, means for adjusting said frame at will into an idle position in which it is wholly below said opening, a low working position in which the frame extends through said opening and has the upper portion of its supporting means substantially flush with the top of the table and an elevated working position in which the top of said work supporting means is substantially above the table level, and a part hinged

to said table to turn into and out of a normal position in which it is within said opening and forms an extension of the portion of the table at one side of said opening, said frame comprising one portion having a flat under surface which overlaps and rests upon said part when the latter and said frame are in their respective normal and low working positions and comprising a second portion having a flat under surface which overlaps and rests upon said part when the latter and said frame are in their respective normal and elevated working positions.



2,409,759

DIRECT BONDING OF RUBBER TO METAL

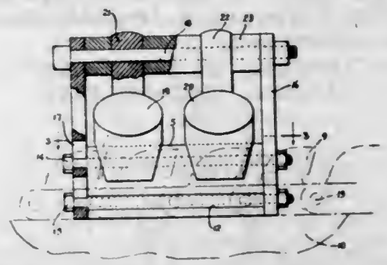
Oakley W. Hosking, Monroe, N. Y., assignor to Composite Rubber Products Corporation, Bridgeport, Conn., a corporation of Connecticut

Application September 13, 1941, Serial No. 410,696

17 Claims. (Cl. 154—130)

1. The art of bonding a completely cured metal-adherent rubber composition directly to a cuprous alloy article of the class consisting of brass and bronze articles, comprising the steps of providing said cuprous alloy article with a clean, continuously smooth polished surface; bringing an untreated surface of the cured rubber composition into direct contact with said polished cuprous alloy surface; maintaining sufficient pressure at the rubber-metal interface to insure intimate contact between the rubber and the cuprous alloy; and applying sufficient heat to cause the rubber to adhere to said alloy surface.

2,409,760



SAW SET

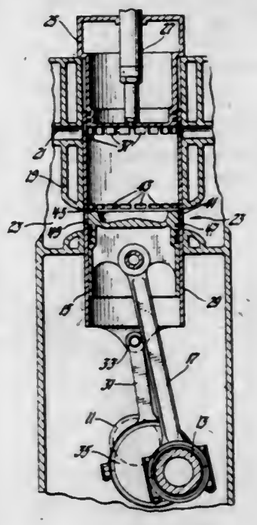
Edwin Franklin Huffsmith, Cook, Wash.

Application June 19, 1945, Serial No. 600,287

3 Claims. (Cl. 76—65)

1. A saw set comprising an anvil adapted for holding against either side of a saw and having oppositely inclined anvil faces for oppositely setting the teeth at the respective sides of a saw, a pair of arms rising from the anvil in spaced relation to each other, a shaft supported at the upper ends of the arms, and a pair of hammers swingably mounted on said shaft for striking the

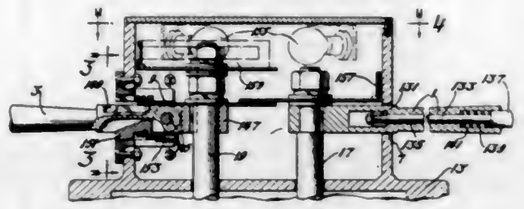
teeth of the saw, said hammers having striking faces inclined in the plane of the respective anvil faces.



2,409,761

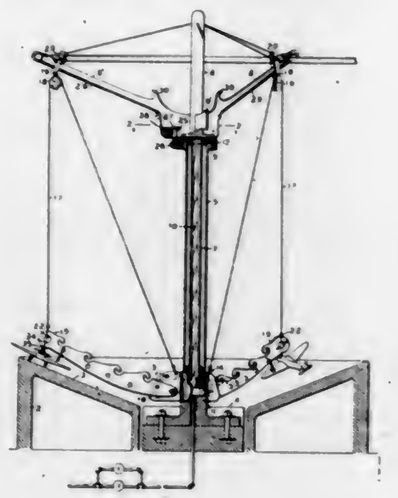
SLEEVE VALVE ENGINE

Kenneth L. Hulsing, Plymouth, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware



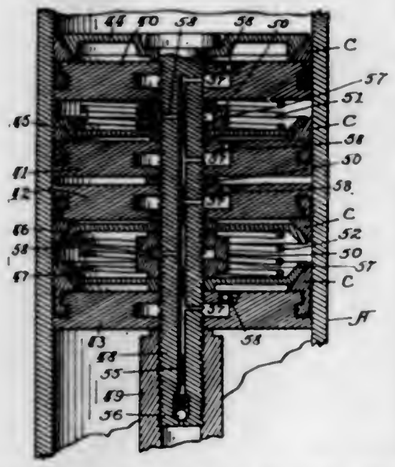
Application February 24, 1945, Serial No. 579,607

11 Claims. (Cl. 123—65)



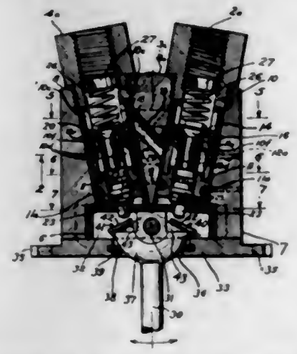
5. In an internal combustion engine having a cylinder, a piston, a sleeve valve therebetween, a crankshaft having unequally eccentric and angular related throws, connecting rods between said throws and said piston and said sleeve respectively, exhaust ports in said cylinder wall and sleeve, said ports adapted to register in response to sleeve movement, intake port means in said cylinder wall, a primary intake port in said sleeve adapted to register with the cylinder inlet in response to movement of said sleeve, the relative movements of the sleeve and piston being such that only after the registration of the said inlet ports does piston move to uncover said primary sleeve inlet port, second port means in said sleeve adapted to register with the cylinder inlet substantially simultaneously with the opening of the primary port by the piston whereby an enlarged opening to inlet gases is provided, there being a land between said primary and second port means to delay the time of opening of said primary and second ports, third port means in said sleeve adapted to register with the cylinder inlet and to be rendered effective by the piston near its position of bottom dead center, there being a second land between said primary port and third port, said second land adapted to close the passage from the cylinder inlet before the piston moves sufficiently to close said passage.

2,409,762
CONTROLLER MECHANISM
Russel G. Janes, La Grange, Ill., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application November 20, 1942, Serial No. 466,387
5 Claims. (Cl. 74—483)



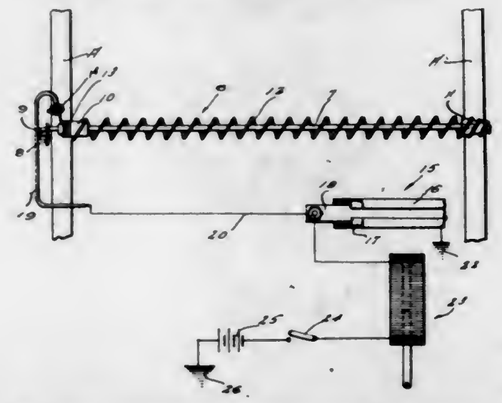
1. A controller of the type described comprising a controller housing, a plurality of control shafts supported for movement in said housing, locking means moveably mounted on said housing and biased for locking engagement with certain of said control shafts, and a control lever adapted to be slideably mounted on one of said control shafts to engage and move said locking means to the unlocked position.

2,409,763
AIRCRAFT LAUNCHING MEANS
Andrew Vernon Janiewski, Sebring, Fla.
Application May 7, 1945, Serial No. 592,471
4 Claims. (Cl. 244—63)



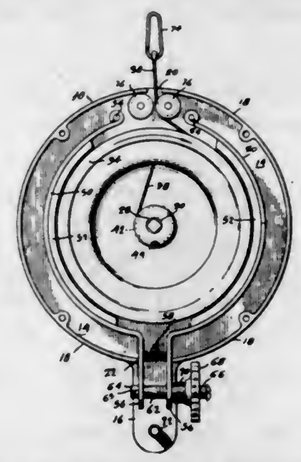
1. A launching mechanism for an aircraft, comprising a substantially circular shaped bowl-like banking causeway for a whirling take-off by the craft when in contact therewith, an upstanding columnar standard at the center of the causeway, a superstructure carried by the standard and adapted for vertical and rotary movements above the said causeway, loading means rotatably mounted on the standard and underslung to the superstructure, radial load hanging arms adjustable angularly with respect to the causeway and pivotally connected to said loading means, radially disposed means flexibly connecting the arms and superstructure together, and traveling means on the superstructure and operatively connected with the flexible means, whereby under centrifugal action of the traveling means the load hanging arms are automatically angularly regulated about their pivotal connections during vertical and rotary movements of said superstructure.

2,409,764
PISTON RING
Sellers E. Jessup, Los Angeles, Calif.
Application November 15, 1944, Serial No. 563,523
8 Claims. (Cl. 809—4)



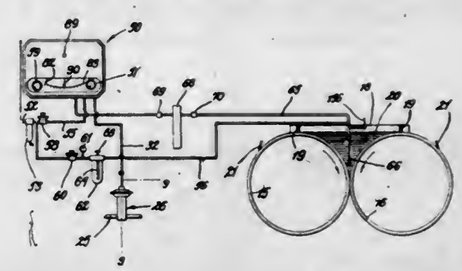
7. A piston ring assembly for use between the inner wall of a cylinder and the outer surface of a cooperating piston, comprising, a series of piston sections secured together to produce a composite piston, each section, comprising, a piston body, an expansible piston ring having interlocking connection on an end of said body and an annular inwardly beveled surface, and a flexible expander having its body mounted upon said end of said piston and provided with a peripheral bevel corresponding with and engaging the beveled surface of said ring to expand the ring into tight working connection with the inner wall of said cylinder by the pressure of fluid in the cylinder.

2,409,765
HYDRAULIC SELECTOR VALVE
Ottmar A. Kehle, West Los Angeles, Calif., assignor to Adel Precision Products Corp., a corporation of California
Application May 4, 1943, Serial No. 485,674
1 Claim. (Cl. 137—144)



In a structure of the kind described, a support, a valve operating lever, a pivot connecting an end portion of said lever with said support for rocking movement in relation thereto, said end portion of said lever having a head which provides two oppositely projecting extensions, one at each side of said pivot, a pair of flattened side arms at each side of said pivot having aligned apertures through which said pivot passes, an elongated valve operating plate secured to edge portions of each of said pairs of flattened arms, said valve operating plates being positioned at opposite sides of said pivot in a parallel spaced apart relation to each other, and positioned to be supported by the aforesaid extensions of the lever head, a valve body mounted on the aforesaid support, and a plurality of valves mounted in said body, said valves having operating stems a plurality of which are positioned for being acted upon in an endwise manner by a face portion of each of said plates when said lever is rocked.

2,409,766
METAL TYPE STOP MOTION ATTACHMENT FOR LOOMS
Jonas F. Koskela, Maynard, Mass.
Application May 28, 1945, Serial No. 596,197
4 Claims. (Cl. 139—337)

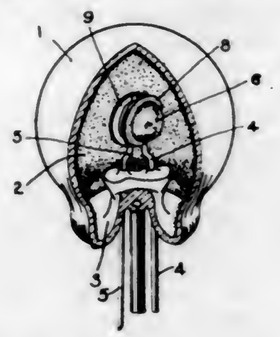


1. An attachment of the class described comprising a longitudinally coiled circuit make and break wire adapted to underlie a bank of overhead harness wires, and an adapter and supporting element for attaching said wire to a predetermined part of the loom frame.

2,409,767
FIRE ESCAPE
Edwin C. Larson, San Francisco, Calif.
Application August 30, 1945, Serial No. 613,521
1 Claim. (Cl. 254—154)

A portable fire escape comprising a housing formed of a flat back circular plate having a depending tab; a circular front flat plate having a centrally disposed depression therein and a depending tab on the lower edge arranged in spaced parallel relation with the tab of the back plate; semicircular spacers mounted between said plates and having their opposite ends arranged in spaced parallel relation with the ends of the opposite spacer to form top and bottom openings in said housing; a shaft rotatably mounted in the centers of said plates and having its ends extended exteriorly of said plates, one end of said shaft being squared and extended into the recess of said front plate; a folded crank mounted upon said squared end and normally lying within said recess; a reel rigidly mounted upon said shaft and within said housing and having a hub with an annular groove; a flexible cable wound upon said reel and having its inner end fixed within said annular groove and having its outer end extended through the top opening of said housing; a pair of arcuate braking elements pivotally suspended within said housing and substantially enclosing the periphery of said reel and having spaced parallel extensions extended through the bottom opening of said housing; spring means interposed between said parallel extension and arranged to normally prevent engaging relation of said braking elements with the periphery of said reel; means for moving said braking elements against the tension of said spring means and into engaging relation with the periphery of said reel in varying degrees of pressure; and a stirrup mounted between the depending tabs of said front and back plates.

2,409,768
LIQUID LEVEL CONTROL
Charles O. Lavett, Kenmore, and Henry F. Kerker, Buffalo, N. Y., assignors, by mesne assignments, to Blaw-Knox Company, Pittsburgh, Pa., a corporation of New Jersey
Application December 18, 1944, Serial No. 568,662
7 Claims. (Cl. 159—11)

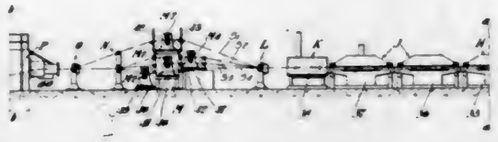


1. A liquid level control for a body of liquid subject to diminution, comprising means for supplying a stream of feed liquid to said body, a valve controlling the flow of feed liquid through said supplying means, means forming a chamber immersed in said body and having an opening in its underside, means for supplying a gas capable of absorbing moisture to said chamber under sufficient pressure to continuously pass through said opening and to bubble up through said body, means for humidifying the gas so supplied to said chamber, and means responsive to the changes in pressure in said gas and controlling said valve to control the flow of feed liquid therethrough.

2,409,769
FLUORESCENT GLOW LAMP
William E. Leyshon, Danvers, Mass., assignor to Sylvania Electric Products Inc., Salem, Mass., a corporation of Massachusetts
Application July 28, 1944, Serial No. 547,008
1 Claim. (Cl. 176—122)

A negative discharge type glow lamp comprising a glass envelope having a base portion, an inert gas atmosphere in said envelope a coating of fluorenscent material on the inner wall of said envelope, a pair of hemispherical electrodes having their concaved faces facing and spaced a short distance apart, lead wires connected to said electrodes and extending through said base portion, said lead wires supporting said electrodes with the plane of their peripheral edges extending to-

ward said base portion, and each lead wire to which each electrode is connected extending completely across the concave face of the hemispherical electrode and connected thereto at two dia-



metrically opposite points on the peripheral edge of said hemispherical electrode, and an electron emissive coating on the outer surface of said electrodes.

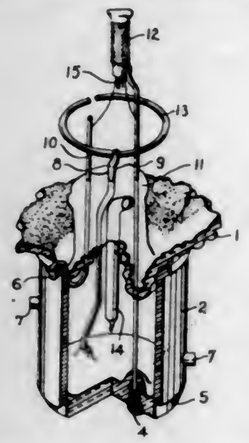
2,409,770

APPARATUS FOR CONTINUOUSLY PROCESSING METAL STRIPS

Frank W. Lorig, Lakewood, Louis L. Miller, Garfield Heights, and Frank E. Robinson, Shaker Heights, Ohio, assignors to The American Steel and Wire Company of New Jersey, a corporation of New Jersey

Application April 15, 1941, Serial No. 388,708
4 Claims. (Cl. 271—2.3)

1. In apparatus for continuously treating metal strips, wherein a plurality of strips are passed simultaneously through a train of treating instrumentalities, the combination which comprises a plurality of stands of rolls including driven pinch rolls, each strip being passed over its respective roll in a path which is laterally displaced from the paths of travel of the remaining strips of the plurality, the said stands of pinch rolls receiving the strips from a supplying station and delivering the strips in horizontal noncoplanar relation, instrumentalities for restoring the strips to substantially horizontal coplanar relation, a stand of master rolls for receiving the strips, means for driving the master rolls at a continuously constant speed for giving constant speed of travel to all strips, means for synchronizing the master rolls and the driven pinch rolls, and control means for the driven pinch rolls for correcting any asynchronous condition between the driven pinch roils and the master rolls.



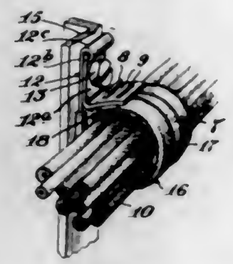
2,409,771

ELECTRICAL DISCHARGE DEVICE

Erwin F. Lowry, Swampscott, and Fielding P. Rogers, Danvers, Mass., assignors to Sylvania Electric Products Inc., Salem, Mass., a corporation of Massachusetts

Application July 8, 1943, Serial No. 493,934
1 Claim. (Cl. 176—122)

A low voltage direct current gaseous discharge lamp comprising a bulbous envelope having an ionizable atmosphere therein for enclosing its elements, a hollow cylindrical cathode centrally and vertically positioned within said envelope and having its upper end closed, a lead wire extending outside of said envelope and connecting with and supporting said cathode, a heater having its coils within and electrically insulated from said cathode having one of its terminals connected to the cathode, an anode comprising an elongated loop of wire, substantially circular in form, disposed concentric with said cathode, in a plane perpendicular thereto but substantially therebelow, the diameter of said anode being con-



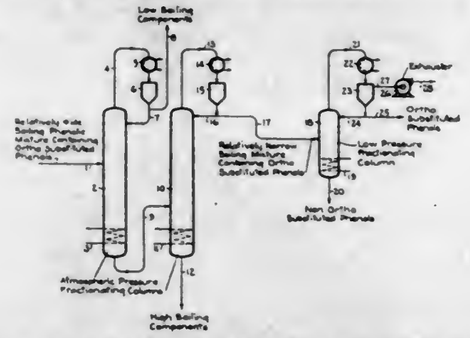
siderably smaller than the greatest diameter of the bulbous envelope and smaller than the diameter of the neck of the bulbous envelope, a second lead wire extending to the outside of said envelope connected with and acting to support said anode and a third lead wire connected to the other terminal of said heater and extending outside of said envelope whereby said heater coil and the arc between the anode and cathode may be supplied by the same or by separate sources of energy.

2,409,772

ADJUSTABLE HARNESS CLIP

Charles Lund, Burbank, Calif., assignor to Adel Precision Products Corp., a corporation of California

Application May 13, 1944, Serial No. 535,534
2 Claims. (Cl. 248—74)



1. In a clip for supporting wires or a conduit, a spring metal strap formed into a normally open loop having its free ends spaced apart whereby wires or a conduit may be mounted therein, fastening elements on said ends of the loop for detachably connecting said ends together to close the loop, and an inverted V-shaped ear formed integral with the loop and rendering the same deformable, said ear having openings in the opposed legs thereof for reception of a screw threaded fastening for securing the ear to a support and being deformed so that the legs move into substantial parallelism and thereby constrict and clamp the loop around the wires or conduit when the fastening is tightened to complete the installation of the clip.

2,409,773

TWO-STAGE DISTILLATION OF ORTHO-SUBSTITUTED RING COMPOUNDS

Daniel B. Luten, Jr., and Aldo De Benedictis, Berkeley, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware

Application May 29, 1941, Serial No. 395,784
8 Claims. (Cl. 202—40)

1. In a process for separating an ortho substituted conjugated ring compound from other substituted conjugated ring compounds in an associated mixture thereof having a relatively wide boiling range, said ortho compound and at least some of said other compounds having substantially identical boiling points at a given pressure and having a nucleus selected from the group consisting of benzene, pyridine, naphthalene, and quinoline and containing a single polar group selected from the class consisting of —NH_2, —COOH, —OH, and =N—, the ortho positions to said polar group in said ortho compound being occupied by at least one non-polar hydrocarbon radical, while said other compounds are differently substituted, the steps comprising: fractionally distilling said mixture under said given pressure to produce a fraction having a relatively narrow boiling range at said given pressure, said fraction containing at least a portion of said ortho and said some of said other compounds of substantially identical boiling points at said given pressure; and further fractionally distilling said fraction under a pressure substantially increased above said given pressure to produce an overhead and a bottom product, one of which is rich in said ortho-substituted compound and the other is rich in said some of said other compounds.

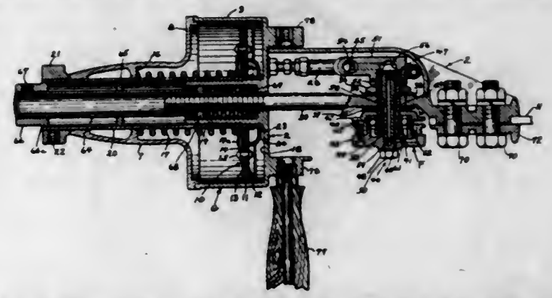
2,409,774

DRIER METAL SALT AND PROCESS OF MAKING IT

Gerry P. Mack, Jackson Heights, N. Y., and Charles A. Klebsattel, South Orange, N. J., assignors to Advance Solvents & Chemical Corporation, New York, N. Y., a corporation of New York

No Drawing. Application October 8, 1942, Serial No. 461,352
6 Claims. (Cl. 260—435)

1. As a new product, a complex salt of naphthenic acid and a dialkyl, monoacid orthophosphate having at least four carbon atoms in each alkyl radical with a polyvalent metal selected from the group consisting of lead, manganese, zinc and cobalt.



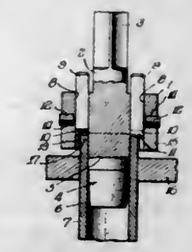
2,409,775

CHAIN-SAW MACHINE

Arthur William Mall, Flossmoor, and Walter L. Gorden, Chicago, Ill.

Application March 24, 1942, Serial No. 436,014
7 Claims. (Cl. 143—32)

1. A chain saw machine comprising a power unit, a chain guiding plate extending therefrom, a cutting chain, a combination chain lubricating and chain tensioning device secured to the end of the guiding plate opposite the power unit, said device including a lubricant chamber, a sleeve portion extending from one end wall of said chamber, a second sleeve screw-threadedly engaging said sleeve portion so as to be adjustable



relative thereto, said second sleeve being rotatably supported within said device, a third sleeve disposed within the second sleeve so as to be rotatable and slidable relative thereto, a plunger within said lubricant chamber, said second sleeve serving to retract said plunger for refilling the lubricant chamber and said third sleeve serving to adjust the tension of the cutting chain.

2,409,776

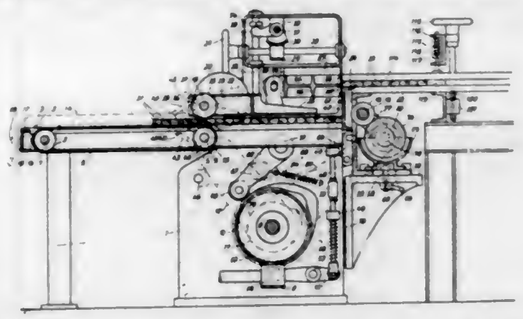
JIG FOR TRIMMING BOILER TUBES

John A. Maples, Sturgeon Bay, Wis., assignor to Leathem D. Smith Shipbuilding Co., Sturgeon Bay, Wis., a corporation of Wisconsin

Application October 18, 1943, Serial No. 506,715
3 Claims. (Cl. 29—105)

1. A jig for trimming the end of a boiler tube projecting through a boiler plate comprising a cylindrical casting having upper and lower end faces and having a coaxial arbor extending from the lower end face, said arbor having a substantially smaller diameter than the lower face and a slightly smaller diameter than the inside diameter of the boiler tube to be trimmed, an annular recess in the lower end face adjacent the arbor resultantly forming a downwardly directed annular flange therearound, a socket in the casting parallel with the jig axis and opening into the recess, and a cutter adjustably mounted in said socket.

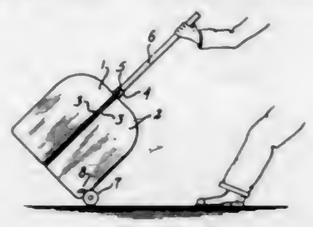
2,409,777



MACHINE FOR GLUING LATHS TOGETHER

Gottfried Maurer, Zurich, Switzerland, assignor to Wilhelm Fischer-Sueffert, Basel, Switzerland

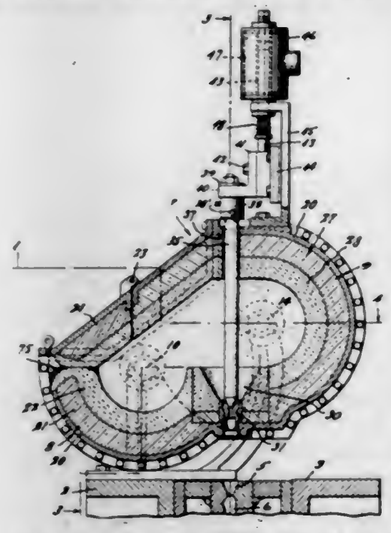
Application July 31, 1943, Serial No. 496,919
In Germany March 17, 1938
5 Claims. (Cl. 144—279)



1. In a machine for gluing together laths, a supporting table for the laths, conveying elements for yieldably advancing the laths on said supporting table, a second table for gluing the laths together, lying out of the plane of said supporting table, a back wall adjustable in the direction of

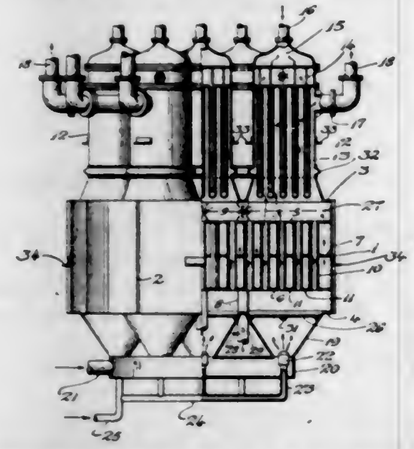
movement of said conveying elements, a transporting device between said supporting table and said back wall, for moving the laths conveyed by said conveying elements to a position at the front of said second table, means for moving the laths

from the transporting device on to the second table, and a glue applying device on said back wall for supplying the laths with glue during movement of said laths by said transporting device.



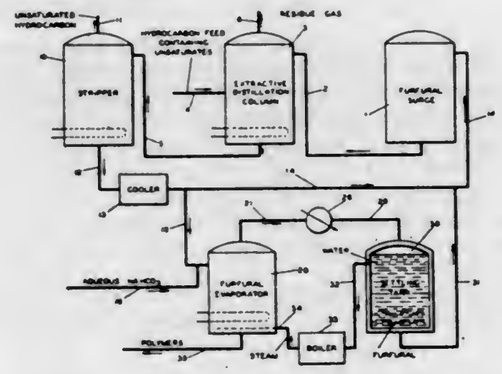
2,409,778
YARD REFUSE COLLECTOR
Charles L. McCaffrey, Nashville, Tenn., assignor of one-half to Arthur J. Kirby, Nashville, Tenn.
Application July 13, 1945, Serial No. 604,963
3 Claims. (Cl. 214—65.4)

1. A gatherer comprising a receptacle having companion sections open at their inner sides, frames about the open inner sides of said sections, sockets extending upwardly from said frames in side-by-side relation to each other, handles having lower ends fitting into said sockets, a pin passing through the sockets and lower ends of said handles to pivotally mount the sections and secure the handles in the sockets, axles carried by opposite sides of one section at the rear end thereof and projecting rearwardly from the said section, and wheels carried by said axles in position to make contact with the ground when the receptacle is tilted rearwardly and allow the closed receptacle to be pushed from one place to another.



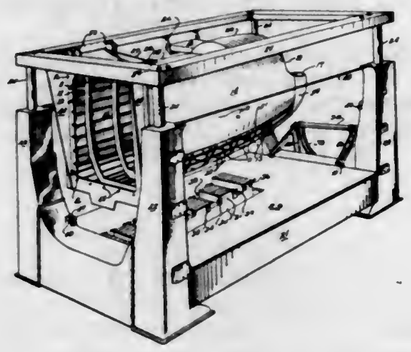
2,409,779
APPARATUS FOR INTRODUCING MOLTEN MATERIAL INTO MOLDS
Henry E. McWane and Hugh K. McGavock, Lynchburg, Va.; said McGavock assignor to said McWane
Application October 2, 1942, Serial No. 460,566
3 Claims. (Cl. 22—79)

1. The combination with a separable mold for producing castings, said mold having a stationary part and a movable part cooperating therewith to provide a casting cavity, of a ladle comprising a charging bowl, a filling bowl communicating therewith and arranged at substantially right angles thereto, a metering cup communicating with the filling bowl and adapted to hold a quantity of metal either equal to or slightly more than the metal necessary for a single casting, means carried by the stationary mold part to mount the ladle thereon for independent tilting movement about the respective axes of said bowls, means carried by the movable mold part and operatively connected with the ladle to tilt the same about the axis of the filling bowl whereby molten



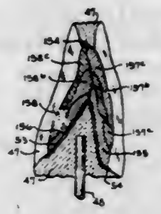
metal in the charging bowl will flow therefrom into the filling bowl to fill the metering cup, a nozzle communicating with the filling cup for discharging metal therefrom into the casting cavity, stopper means for controlling the flow of metal from said cup, and additional means for tilting the ladle about the axis of the charging bowl for discharging residue metal therefrom.

2,409,780
REACTOR
Lev A. Mekler, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application February 11, 1942, Serial No. 430,507
4 Claims. (Cl. 23—288)



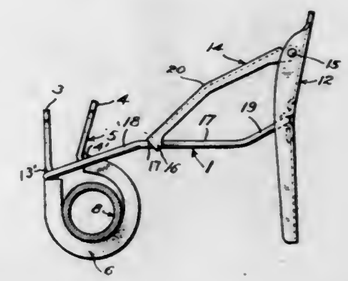
1. A reaction vessel of the class described comprising, in combination, a vertically disposed outer shell of tubular form provided with relatively flat top and bottom heads, relatively flat tube sheets transversely disposed in spaced apart relation within said shell and secured thereto, a plurality of vertically disposed tubular members extending between and secured to said tube sheets, some of said tubular members extending between and being secured to said heads and other of said tubular members terminating short of said heads, the shorter tubes being open at their opposite ends, to spaces provided between the shorter tubes and top and bottom heads, whereby to establish communication through the shorter tubes between said spaces, and said tube sheets being provided with openings therethrough between the tubes.

2,409,781
REDUCING CORROSION AND POLYMERIZATION OF FURFURAL IN EXTRACTIVE DISTILLATION PLANTS
Valentine Mertz, Dallas, Tex., assignor to Phillips Petroleum Company, a corporation of Delaware
Application August 6, 1945, Serial No. 609,208
7 Claims. (Cl. 196—13)



1. In the art of extractive distillation the improvement which consists of preventing corrosion of equipment and polymerization of furfural used as selective solvent by adding an alkaline material, selected from a group composed of the bicarbonates of the alkali metals, at a controlled rate and continuously to such furfural used as selective solvent and maintaining the acidity of said furfural in the range of pH 4.0 to pH 5.2.

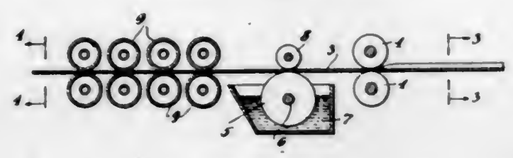
2,409,782
CONSTRUCTING TUBULAR FUSELAGES
Logan C. Miller, Ann Arbor, and George E. Scarlett, Detroit, Mich., assignors to Ford Motor Company, Dearborn, Mich., a corporation of Delaware
Application April 12, 1944, Serial No. 530,598
10 Claims. (Cl. 29—286)



1. In an apparatus for assembling substantially tubular airframe fuselage components from bulkheads and longerons and exterior skin panels, comprising, a base, vertical columns associated with said base, a frame supported by said vertical columns, means to elevate said frame with respect to said columns and said base, means on said frame to engage elements adjacent one surface of the component to be assembled therein, and readily releasable means on said base to secure other elements of said component adjacent the opposite surface of said component.

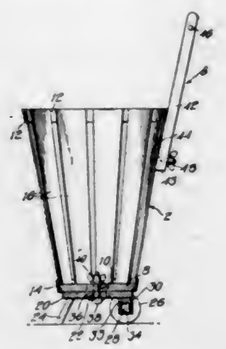
2,409,783
PROCESS FOR FORMING ARTIFICIAL TEETH
Moskos S. Moskey, Lakewood, Ohio
Original application March 20, 1942, Serial No. 435,516. Divided and this application July 27, 1944, Serial No. 546,843
6 Claims. (Cl. 18—55.1)

6. The method of forming an artificial tooth, comprising, first, forming a separable three-piece mould of the tooth to be formed, the first piece of the mould having the impression of the labial portion, the second piece having the impression of the lingual portion and the middle piece having the impression of the medial portion of the tooth; second, coating the lingual and labial surfaces of the labial and lingual portion of the mold pieces with a thin transparent resin; third, assembling the second and middle pieces of the mould and roughly packing therein the material forming the labial portion of the tooth; fourth, assembling the first and middle pieces of the mould and roughly packing therein and on the aforesaid material other material forming the lingual portion of the tooth; fifth, assembling the first, second and middle pieces of the mould and then moulding and setting the complete tooth therein of the aforesaid roughly packed material.



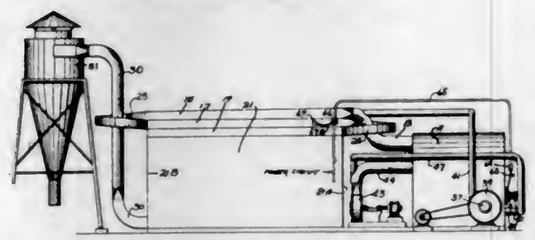
2,409,784
TOOL FOR INSTALLING CONDUIT CLIPS
Eugene M. Morehouse, Tujunga, Calif., assignor to Adel Precision Products Corp., a corporation of California
Application September 20, 1943, Serial No. 503,123
3 Claims. (Cl. 81—3)

3. In a tool for installing a band-like conduit embracing and supporting clip having a pair of opposed ends adapted to be forced together to clamp the clip on a conduit and position said ends for application thereto of means for securing them together, a pair of opposed arms spaced apart and adapted to be positioned opposite corresponding edges of said ends of the clip, jaw means extending between said arms at certain corresponding ends thereof for engaging the outer face of one of the ends of the clip, an operating lever, means pivotally connecting the other ends of said arms to said lever to afford a fulcrum therefor, and an elongated member including a jaw portion which is slidably supported over said



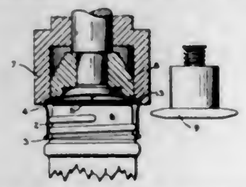
arms for movement into and out of engagement with the outer face of the other of the ends of said clip, said member having through it an opening adjacent to its said jaw portion to permit access therethrough to the ends of the clip when the tool is positioned in front of said ends when clamping the clip on a conduit.

2,409,785
METHOD OF PRODUCING BALSA SLICES
David Newmark and William Kramer, New York, N. Y.
Application January 7, 1944, Serial No. 517,456
1 Claim. (Cl. 117—4)



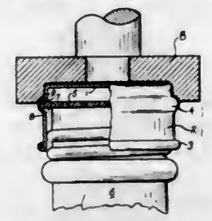
The method of producing thin, straight, flat slices of balsa wood having smooth, satin-like surfaces, for use in the manufacture of toy and model articles, which consists in cutting said slices from a dry block of balsa by vertical knife action, whereby each slice acquires a concavo-convex contour whereof the convex side has crevices developed therein, and then progressively subjecting each slice, while continually moving, to the following steps: first passing each slice between rollers to straighten it, then passing each slice with its creviced side over an adhesive gathering roller, and finally passing each slice between heated pressure rollers.

2,409,786
TRUNDLE BASKET
Chester H. Norton, Katonah, N. Y.
Application September 12, 1944, Serial No. 553,707
3 Claims. (Cl. 280—51)



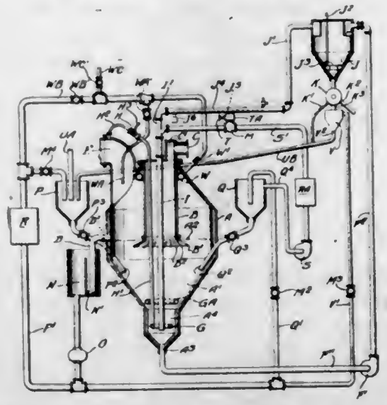
1. A detachable truck for market baskets of the type having a base with a central aperture comprising a flat member having a bolt receiving central aperture for alinement with the central aperture in the base of the basket, an axle housing secured to the under side of said base member having a generally square cross-sectional passage therethrough, a two-piece wooden axle rotatably mounted in said passage, a wooden wheel frozen to an end of each axle piece, a pair of legs secured to the under side of said flat member, vertically disposed nails having their points above the upper surface of said flat member, and means for forcing said nails into the base of a basket, said means comprising a bolt passing through the said apertures and a nut threaded thereon.

2,409,787
DEHYDRATOR
Wilburn W. O'Neal and Robert D. Williams, Memphis, Tenn.
Application January 17, 1942, Serial No. 427,103
8 Claims. (Cl. 263—43)



1. In a dehydrating apparatus, the combination of a pressure sealed furnace and a drying chamber having an elongated passageway for air and materials leading thereinto and therethrough; a fuel burner for said furnace, means for feeding fuel to said burner and for establishing a maximum rate of said feed, means for introducing into said furnace under pressure material-traversing-and-drying air to be heated, and for delivering additional combustion air under like pressure to said burner, an air flue connecting said furnace and said passageway for delivering heated traversing-and-drying air under said pressure from said furnace through said chamber passageway, blower means including a discharge pipe leading into said air flue, for feeding material under traversing air pressure into said air flue, said material having moisture to be removed therefrom, said material and moisture being brought to the boiling point of said moisture by said heated air during traverse of a minor portion of said passageway and control means, in said passageway subsequent to the point of introduction of said material and substantially at the point where the boiling point of said moisture is reached, for regulating said rate of fuel feed below said maximum feed, whereby the conditions which effect drying are set up between the air currents and the materials as they are fed thereinto, and regulation is effected in accordance with the conditions thus set up, substantially at the beginning of the drying cycle.

2,409,788
METHOD FOR APPLYING CLOSURES TO CONTAINERS
Andrew G. Osborne, New Kensington, Pa., assignor to Aluminum Company of America, Pittsburgh, Pa., a corporation of Pennsylvania
Application October 21, 1942, Serial No. 462,826
3 Claims. (Cl. 226—87)

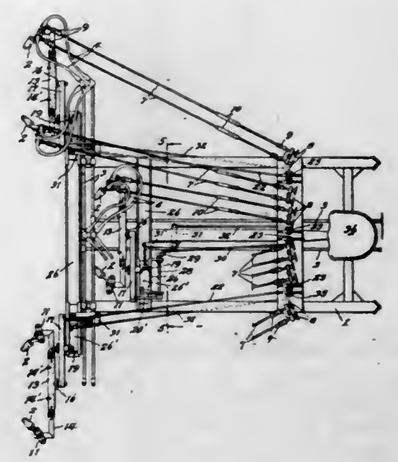


3. In a method of sealing containers having a side sealing surface with a skirted metallic closure blank having an annular bulge formed between said skirt and the closed end of said blank, and having an oversize liner disposed therein, the steps comprising pressing the overhanging margin of said liner into engagement with said side sealing surface by bending a portion of said blank in contact with said margin downward past the container mouth, and simultaneously therewith reforming said bulge into an annular rib adjacent to the margin of said liner.

2,409,789
METHOD OF SEALING CONTAINERS
Andrew G. Osborne, New Kensington, Pa., assignor to Aluminum Company of America, Pittsburgh, Pa., a corporation of Pennsylvania
Application September 21, 1943, Serial No. 503,185
6 Claims. (Cl. 226—84)

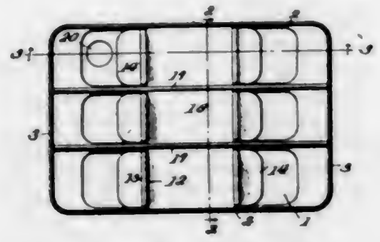
1. In the art of sealing containers having a side sealing surface with a blank having a top portion, a depending skirt, an inwardly extending annular shoulder in said skirt in spaced relation to said top portion, and a liner of greater diameter than the outside diameter of the mouth of the container to be sealed disposed within said skirt below said shoulder, the steps comprising placing said blank over the mouth of said container, applying a pressure means to said blank axially of the container reforming the margin of said liner around the upper part of the container finish and into sealing engagement with said side sealing surface independently of pressure of said top portion against said liner by pressing said shoulder by direct downward pressure against said margin at least until the shoulder passes below the container mouth.

2,409,790
APPARATUS FOR THE PRODUCTION OF AMMONIUM SULPHATE
Carl Otto, Manhasset, N. Y., assignor to Fuel Refining Corporation, New York, N. Y., a corporation of Delaware
Application March 8, 1944, Serial No. 525,544
2 Claims. (Cl. 23—273)



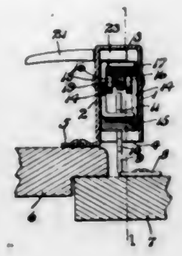
1. Apparatus for producing sulfate of ammonia by scrubbing contact of distillation gas with sulfuric acid liquor, comprising in combination a saturator having a hopper bottom portion, the walls of said hopper bottom portion being prolonged in a lower section thereof to form a space therein inclosed by substantially vertical walls, an overflow outlet above said hopper portion, a bottom outlet from said hopper bottom and said lower section space, a crystal separator, conduit means including pumping means providing passage from said bottom outlet to said separator, a receiver, conduit means from said overflow outlet to said receiver, return conduit means from said separator having a discharge end into said lower section space and conduit means providing passage from said receiver to said lower section space.

2,409,791
CROQUIGNOLE IRON
Jessie Pope, Ecorse, Mich.
Application February 12, 1945, Serial No. 577,379
1 Claim. (Cl. 219—24)



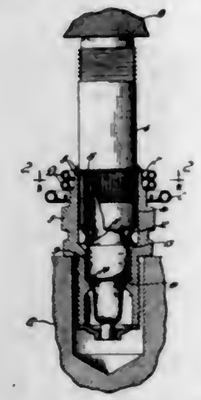
A croquignole or curling iron comprising a pair of crossed jaw members mounted upon a pivot and having oppositely extending handle portions, one of said crossed jaw members being hollow and provided with an enlarged pear-shaped handle at its opposite end adapted to fit the palm of a hand, the other crossed jaw member being arcuate shaped in cross section and adapted to overlie the full length of the surface of the said hollow member and to extend forwardly thereof in spaced relation beyond the end of the same a considerable distance, the spacing between the jaw members being so tapered as to produce parallelism when the jaws are closed upon a strand or curl of hair of average size, an insulating handle of a similar diameter throughout its length at the opposite end of the arcuate member adapted to be grasped by the fingers of a hand, an electric heating element in said hollow member, and an electric conductor cable extending through said enlarged pear-shaped handle connected with said heating element.

2,409,792
WEED BURNER
William C. Prewitt, Palm Beach County, Fla., assignor to United States Sugar Corporation, Clewiston, Fla., a corporation of Delaware
Application October 26, 1943, Serial No. 507,688
12 Claims. (Cl. 126—271.2)



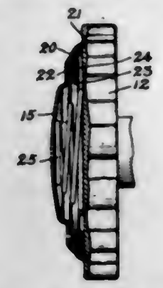
1. In a weed burning mechanism the combination including a portable chassis, a plurality of flame generators, means for supporting said generators in pairs on said chassis, means including controls on said chassis for supplying fuel to said generators, and means including controls on said chassis for positioning said generators in pairs relative to said chassis along two paths at right angles to each other, all of said controls being positioned for manipulation at a central control point.

2,409,793
METAL CONTAINER
William F. Punte, Passaic, N. J., assignor to Continental Can Company, Inc., New York, N. Y., a corporation of New York
Application August 9, 1944, Serial No. 548,663
1 Claim. (Cl. 220—22)



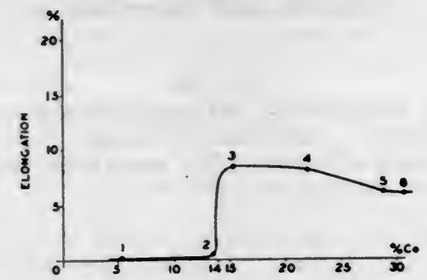
A metal container for packaging a plurality of articles comprising a body portion, a closure therefor, and a single-piece metal bottom member fitting within said body portion, said bottom member being folded longitudinally to form double wall partitions extending continuously from one end thereof to the other, said bottom portion between said partitions having U-shaped cuts with the legs thereof extending longitudinally and the cut portion folded back upon itself so as to provide transverse double wall partitions disposed between the side walls of the container and the longitudinal partitions so as to divide the body portion of the container into separate article holding pockets.

2,409,794
CUPBOARD CATCH
Herbert Quigley and Herman Ter Meer, Grand Rapids, Mich., assignors to National Brass Company, Grand Rapids, Mich., a corporation of Michigan
Application October 21, 1944, Serial No. 559,816
4 Claims. (Cl. 292—52)



1. A latch construction comprising, a housing having an opening at one side at which side a keeper is adapted to enter said housing, a pair of jaw members pivotally mounted to turn about a common axis within said housing, said axis being substantially parallel to the plane of said opening, said jaw members each having a jaw at one end thereof adapted to engage a keeper at opposite sides thereof, spring means acting on said jaw members to normally move the jaws toward each other, each of said jaw members at the end thereof opposite where the jaws are located having a laterally extended tail-piece, and manually operable means extending through a side of the housing and pivotally mounted thereon for engaging said tail-pieces on operation of said means to swing said jaw members to move the jaws away from each other.

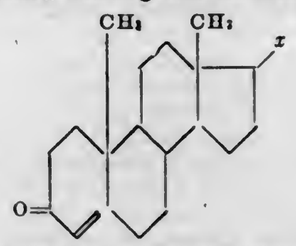
2,409,795
SPARK PLUG
Hector Rabezzana, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application April 17, 1944, Serial No. 531,401
9 Claims. (Cl. 123—169)



1. A spark plug which includes a metal shell, a metal shield telescoped within the shell, spaced circumferentially extending projections on one of the mentioned members at a distance from an end of the shell which space substantially uniformly from the shell both circumferentially and lengthwise a portion of the shield near the mentioned end of the shell, and bonding metal in the space between the shell and the mentioned portion of the shield.

2,409,796
INDICATING MEANS FOR VALVES
Herbert M. Reeves, Kankakee, Ill., assignor to Florence Stove Company, Gardner, Mass., a corporation of Massachusetts
Application March 11, 1944, Serial No. 526,071
1 Claim. (Cl. 116—125)

The combination with a rotatable valve member, a handle fast on said member for manually rotating the same, adjustable means for indicating the angular position of said handle with respect to a stationary panel located adjacent said handle, said indicating means comprising a generally circular sheet metal dial having its central portion pressed outwardly to define an upright shoulder extending around and spaced inwardly from the peripheral edge portion of the dial, an annular sheet metal member secured to said handle at its outer peripheral edge, a flange formed around the inner peripheral edge of said member and turned inwardly toward and spaced from the adjacent face of said handle, said flange being dimensioned to slidably receive the shouldered portion of said dial and to form an abutment for the peripheral edge portion of the dial, a marker on said dial, and a spring interposed between the central portion of said dial and the adjacent face of said handle, said spring normally acting to hold the peripheral edge portion of said dial in frictional engagement with the flange of said annular member and thereby maintain the dial in a fixed position relative to the handle while yielding under pressure to permit rotation of the dial relative to the handle for adjusting the position of said marker with respect to the stationary panel.

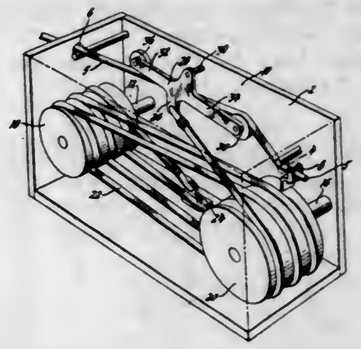


2,409,797
MACHINABLE ALLOY FOR HIGH TEMPERATURE USE
Nils Gösta Rehnqvist, Hallstahammar, Sweden, assignor to Aktiebolaget Kanthal, Hallstahammar, Sweden, a corporation of Sweden
Application May 31, 1944, Serial No. 538,114
In Sweden June 8, 1943
7 Claims. (Cl. 75—124)

1. A fire resistant machinable alloy having a high electric resistance of substantially the following composition: chromium from about 10 per cent to 30 per cent, aluminum from about 2 to 9 per cent, carbon from about 0.01 to 0.35 per cent, cobalt from about 14 to 30 per cent, the balance of said composition being substantially all iron.

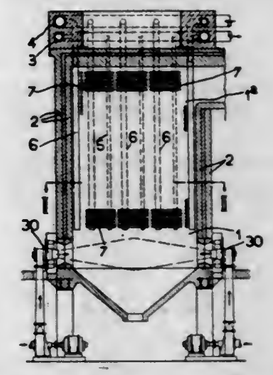
2,409,798
COMPOUNDS OF THE CYCLOPENTANOPOLYHYDROPHENANTHRENE SERIES AND PROCESS OF MAKING SAME
Tadeus Reichstein, Basel, Switzerland
No Drawing. Application March 20, 1942, Serial No. 435,570. In Switzerland March 21, 1941
5 Claims. (Cl. 260—397.3)

4. A compound having the structural formula:



wherein the C ring contains a carbon-to-carbon double bond, one of such carbons being the 9 carbon, and wherein x is a member selected from the group consisting of —$COCH_2Oacyl$, —$COCH_3$, and —$COCH_2OH$.

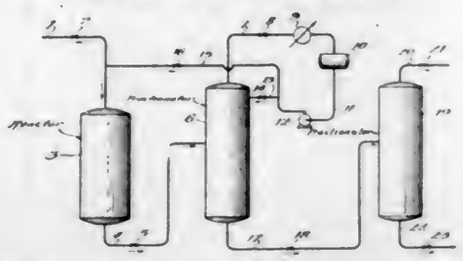
2,409,799
LUBRICANT
Edward N. Roberts, Hammond, Ind., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana
No Drawing. Application December 31, 1943, Serial No. 516,529
16 Claims. (Cl. 252—32.7)



1. A lubricant composition containing an oil and in combination from about 0.001% to about 5% of a polyamino poly-aryl methane and from about 0.001% to about 10% of a neutralized phosphorus- and sulfur-containing reaction product of a phosphorus sulfide and a hydrocarbon.

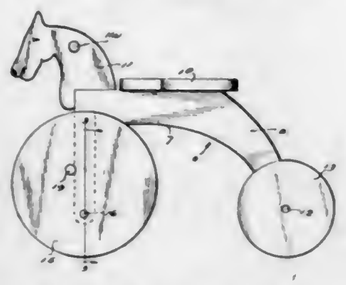
2,409,800
TEMPERATURE CHANGE COMPENSATING MEANS
Stuart Rockafellow, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application July 24, 1944, Serial No. 546,417
5 Claims. (Cl. 74—501)

1. In tensioning means for a cable, a casing supported on said cable, a lever pivotally mounted on said casing and having arms extending along the cable length in opposite directions and on opposite sides and means carried by said casing and connected to the lever for rotating the same about its pivot, said means being formed of material having a different coefficient of expansion than that of the cable so that upon temperature changes the lever will assume different relative positions and tension the cable.



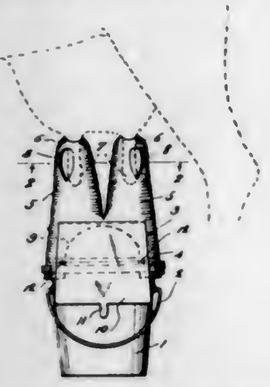
2,409,801
HIGH-TEMPERATURE GAS HEATER
Rudolf Ruegg, Zurich, Switzerland, assignor to Aktiengesellschaft Fuer Technische Studien, Zurich, Switzerland, a corporation of Switzerland
Application February 15, 1944, Serial No. 522,470
In Switzerland March 29, 1943
7 Claims. (Cl. 126—109)

1. A gas heater for operation at high temperatures, comprising in combination, means enclosing a combustion chamber; at least one burner for causing combustion therein; means including at least one distributor duct having a supply connection for gas to be heated, and at least one collector duct having a discharge connection for heated gas, said distributor and collector ducts being located above the combustion chamber; pairs of tubes, respective tubes of each pair communicating with and being pendant from the distributor duct and the collector duct, said tubes extending into the combustion chamber and overlying the side walls thereof; and a plurality of tubes smaller and shorter than the pendant tubes and connected in parallel with each other between the tubes of each pendant pair, said small



tubes extending inward from and being curved to overlie the pendant tubes and substantially mask the same from radiant heat from said combustion means.

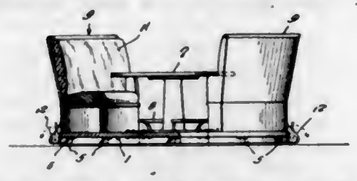
2,409,802
PRODUCTION OF ETHYLBENZENE
Louis Schmerling, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application July 24, 1942, Serial No. 452,250
2 Claims. (Cl. 260—671)



1. A process for the production of monoethylbenzene which comprises reacting benzene, ethyl alcohol and ethylene at a temperature of from about 500° F. to about 750° F. under a pressure of from about 200 pounds to about 1200 pounds per square inch in the presence of a solid prosphoric acid catlayst in a reaction zone, said reaction comprising dehydration of the ethyl alcohol to water and ethylene and alkylation of the benzene by ethylene, separating the reaction products into alkylated benzene and unreacted ethylene and benzene, recovering said alkylated benzene, cooling said unreacted ethylene and benzene under a pressure of from about 200 pounds to about 1200 pounds per square inch in order to dissolve said unreacted ethylene in said benzene, recycling said benzene and dissolved ethylene to the reaction zone for further conversion therein, and maintaining in said reaction zone from 2 to 20 molecular proportions of benzene to one molecular proportion of ethyl alcohol and ethylene.

2,409,803
ROCKING TOY
Rudolph G. Schneider, Houston, Tex., assignor to American Furniture & Toy Company, Houston, Tex.
Application September 2, 1944, Serial No. 552,515
1 Claim. (Cl. 280—1.19)

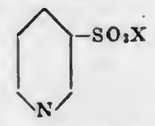
An all wood wheeled toy of a non-steerable rocking type adapted to move back and forth in a straight path comprising a front standard having rigid handle means connected with its upper end portion, a pair of complemental, opposed frame members having frontal horizontal portions secured at their outer ends to the upper end portion of said standard and having rear, downturned and diverging opposite end portions, a seat board secured to the upper edges of the horizontal portions of said frame members, a front wheel assembly comprising a relatively short, horizontal axle extending through and beyond a bearing formed in the lower end of said standard, relatively large wheels in parallelism on opposite sides of said standard, the outer ends of said axle being eccentrically and rigidly connected to said wheels at predetermined points, and relatively small hub collars fixedly secured to the axle-end and inner surfaces of the respective wheels, said hub collars riding in limited movable contact with adjacent opposite faces of said standard, and a rear wheel assembly comprising a longer axle having small wheels secured to its outer ends, said axle having its end portions extending through bearing holes in the terminals of said frame members, and small hub collars secured to the inner faces of said last-named wheels and riding in limited contact with adjacent surfaces of said frame members.



2,409,804
MILK PAIL ATTACHMENT
Archie C. Schwenker, Lincoln, Nebr.
Application June 4, 1945, Serial No. 597,452
4 Claims. (Cl. 31—51)

1. A sanitary cover for a milk pail comprising a body of flexible sheet material open at its bottom and having its upper portion formed with conical extensions formed at their upper ends with openings for receiving teats of a cow being milked, the said extensions having side portions thereof formed with hand holes located near upper ends of said extensions and extending vertically and tapered towards their lower ends, said body being of a diameter adapting its lower end to fit about the upper portion of a milk pail and having its lower portion formed at one side with a pouring opening, an apron for normally closing the pouring opening secured across its upper end to the body above the pouring opening, said apron being of a length adapting its lower portion to overlap a portion of a milk pail below the pouring opening and having its lower end provided with a tab constituting a finger hold for lifting the apron to a raised position out of blocking relation to the pouring opening, and a strap for encircling the lower portion of the body and binding the same to a pail.

2,409,805
DINING BOOTH
John C. Shikles, St. Louis, Mo.
Application June 26, 1945, Serial No. 601,687
6 Claims. (Cl. 155—123)

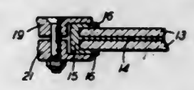


1. A dining booth comprising a platform, a table mounted centrally of said platform, said table being smaller in size but generally similar in shape to said platform, and a pair of benches mounted oppositely on said platform, said benches following the peripheral contour of said platform at their outer sides and following the contour of said table at their inner sides, each

bench comprising a seat portion and a back rest portion, said benches being spaced at their ends to form entrance passageways into the booth.

2,409,806
SYNTHESIS OF NICOTINIC COMPOUNDS
William Shive, Urbana, Ill., and Richard A. Glenn, Mount Lebanon, Pa., assignors to Pittsburgh Coke & Chemical Company, a corporation of Pennsylvania
No Drawing. Application December 8, 1941, Serial No. 422,187
5 Claims. (Cl. 260—296)

1. The process of producing 3 cyano pyridine by heating a mixture of potassium cyanide and sodium cyanide with a pyridine sulfonic acid salt of the following formula



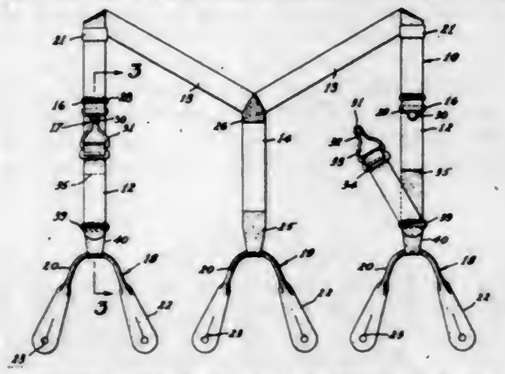
X being selected from the group consisting of alkali metals and alkaline earth metals and recovering the 3 cyano pyridine thus formed.

2,409,807
MINING APPARATUS
Leon E. Simmons, Claremont, N. H., assignor to Joy Manufacturing Company, a corporation of Pennsylvania
Continuation of application Serial No. 414,722, October 13, 1941. This application December 23, 1943, Serial No. 515,440
9 Claims. (Cl. 262—28)

8. A mining apparatus comprising, in combination, a mining machine of the kind slidable directly on the floor of a mine during the kerf cutting operation and having a projecting kerf cutter and flexible feeding means including a flexible feeding element attachable to an anchor in the mine for feeding the machine over the mine floor, and a transport truck for the machine comprising a portable base having traction means for propelling the apparatus during transport of the mining machine about the mine, said truck having a machine-receiving-and-guiding frame mounted on said base for adjustment into different elevated positions, and being tiltable on said base irrespective of its elevated position into a position wherein its outer end engages the mine floor, said mining machine when the flexible feeding element of said feeding means is attached to the truck being slidable from the mine floor along said tilted guiding frame onto said truck base, and elevating means for said receiving-and-guiding frame including elevating devices disposed on said base beneath said frame and operatively connected to said frame, and a power device attached to said base and to which said flexible feeding element of said feeding means of the mining machine is operatively connectable and which is operatable by said flexible feeding element to supply operating power to said elevating devices to cause the latter to elevate said receiving-and-guiding frame.

2,409,808
GLAZING UNIT
Charles E. Sowle, Van Nuys, Calif., assignor to Lockheed Aircraft Corporation, Burbank, Calif.
Application February 19, 1942, Serial No. 431,491
8 Claims. (Cl. 189—64)

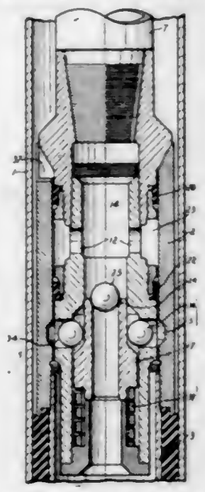
7. A laminated transparent closure comprising: two panes of transparent material of substantially the same surface area; a layer of transparent plastic material disposed between said panes and bonding the same together; and plastic means bonded to the outer surfaces of said panes adjacent the marginal edges thereof to provide adhering gasket means extending completely around said closure at the margins only of both outer sides thereof, said last-mentioned plastic means being flat and sufficiently thick and wide enough to serve as a leakproof gasket when a clamping force is applied thereto.



2,409,809
CURING BUTADIENE-STYRENE SYNTHETIC RUBBER
Lawrence R. Sperberg, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
No Drawing. Application December 11, 1943, Serial No. 513,989
3 Claims. (Cl. 260—79)

2. The process of making cured butadiene-styrene synthetic rubber articles exhibiting superior properties upon aging which comprises forming said article from a composition comprising raw butadiene-styrene synthetic rubber, carbon black, from 0.5 to 0.75 part of sulfur per 100 parts of said raw butadiene-styrene synthetic rubber, and an accelerator is amount sufficient to permit development of maximum flex life before aging in a curing time substantially equivalent to 30 minutes at 280 F., and curing said article for a period of time equivalent to at least 75 minutes at 280 F., the flex life before aging thereby being markedly reduced but the flex life on accelerated aging being markedly increased.

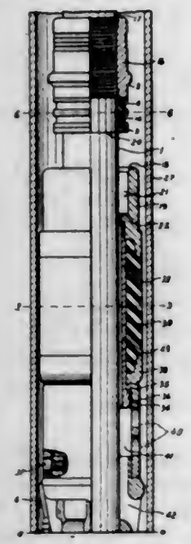
2,409,810
SUSPENDERS
Edward Stempel, Los Angeles, Calif.
Application February 1, 1946, Serial No. 644,865
4 Claims. (Cl. 2—325)



1. A pair of suspenders comprising a pair of shoulder strap members, a garment attaching means for each and a second strap member intermediate each of the shoulder strap members and garment attaching means, said shoulder strap members each comprising a loop of adjustable length and said second strap members each comprising an individual strap forming a loop of fixed length, the lower end of each said last loop having a sliding engagement with the respective garment attaching means, an element

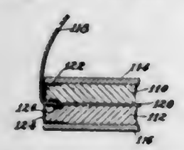
on one end of each second individual strap having an engagement with the lower end of the respective shoulder strap, and a fastener comprising one

part adjacent one end of the second strap and another part adjacent the other end of the second strap having a releasable engagement with the first part.



2,409,811
SETTING AND RELEASING TOOL
Raymond G. Taylor, Jr., and Donald B. Hooser, Dallas, Tex., assignors to The Guiberson Corporation, Dallas, Tex., a corporation of Delaware
Application April 4, 1941, Serial No. 386,808
8 Claims. (Cl. 166—10)

1. In a setting and releasing tool adapted to lower a member to be set into a well and to release the same, a body having radially extending channels therein, balls in said channels and adapted to be projected into a recess in the member to be set so as to lock the tool to the member to be set, a piston to hold the balls in the recess when the piston is in one position and to release the balls so as to allow the balls to move out of locking engagement with the member to be set when the piston is in another position, a spring acting on said piston to move it in one direction and the piston being movable in the other direction by fluid pressure.

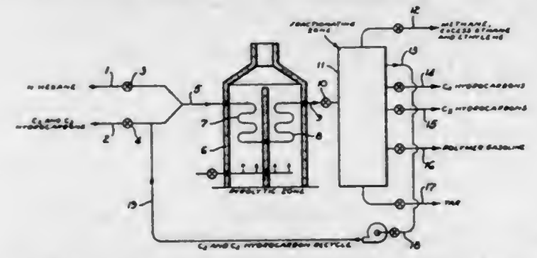


2,409,812
CONTROL HEAD PACKER
Raymond G. Taylor, Jr., and Donald B. Hooser, Dallas, Tex., assignors to The Guiberson Corporation, Dallas, Tex., a corporation of Delaware
Application December 31, 1941, Serial No. 425,080
4 Claims. (Cl. 166—12)

1. In combination with a tubing, a mandrel connected in the tubing, a casing packing element, a sleeve slidable on the mandrel and forming a part of a setting means for the casing packing element, and a recovery ring detachably se-

cured to the mandrel and adapted to engage a shoulder on the sleeve when the mandrel is raised while the packing element is in set position.

2,409,813
REVERSIBLE SHOE
Arthur G. Timson, Haverhill, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application August 5, 1944, Serial No. 548,197
1 Claim. (Cl. 36—2.5)

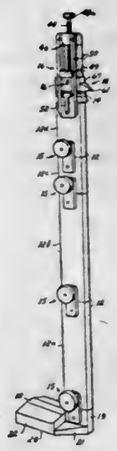


A platform shoe comprising two platform soles corresponding to each other in size, shape and structural characteristics, the soles being in superimposed relation with their edges in alinement, a sole-shaped stay piece secured between the platform soles, an upper having its bottom margin secured to the margin of the stay piece, a wrapper strip covering the margin of one of the platform soles and having one of its margins secured to the margin of the stay piece, and a second wrapper strip covering the other platform sole and having one of its margins secured to the margin of the stay piece.

2,409,814
PHOTOGRAPH HOLDER
Frank J. Vargish, New York, N. Y.
Application December 8, 1944, Serial No. 567,243
5 Claims. (Cl. 40—152.1)

5. A holder for display purposes comprising a sheet of resilient, wholly transparent material folded upon itself to form a front panel, a back panel and a foot portion, the entire area of said front and back panels being uninterrupted and available for display purposes, said front and back panels being joined along one edge by a resilient connection which maintains said panels spaced from one another at the point of connection and for a portion of their length, and urges the portions adjacent the edges opposite said connection into resilient engagement with one another so as to frictionally engage a sheet of display material therebetween, said foot portion being joined to one of said panels by a springy curved portion and angularly disposed with respect thereto to support said holder in an easel-like manner, the side edges of said foot portion being cut away to allow support for the holder in an easel-like manner when resting on its side.

2,409,815
MANUFACTURE OF OLEFINS
Clare Kenneth Viland, Martinez, and Herschel Y. Hyde, Associated, Calif., assignors to Tide Water Associated Oil Company, San Francisco, Calif., a corporation of Delaware
Application January 25, 1943, Serial No. 473,456
8 Claims. (Cl. 260—683)



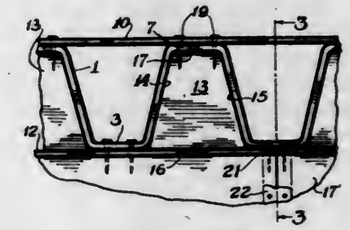
1. The process of producing a mixture of C_5 hydrocarbons containing a high proportion of amylenes which comprises: subjecting a hydrocarbon fraction consisting essentially of normal hexane to a temperature in the range of 1000° F. to 1300° F. while in the presence of added amounts of hydrocarbons from the group consisting of ethane, ethylene, propane, and propylene and in the substantial absence of other added hydrocarbons; fractionally distilling the resulting products; and separating therefrom a mixture of C_5 hydrocarbons; the molal ratio of normal hexane to C_2 and C_3 hydrocarbons subjected to the reaction being between about 1:1 and about 1:7.

2,409,816
SUGAR SYRUP AND PROCESS
Daniel V. Wadsworth, Manhasset, N. Y., and Mary F. Hughes, Jersey City, N. J., assignors to Refined Syrups & Sugars, Inc., Yonkers, N. Y., a corporation of New York
No Drawing. Application July 2, 1945, Serial No. 602,918
10 Claims. (Cl. 99—142)

1. A stabilizing addition agent for inhibiting the crystallizing tendency of a sucrose-rich syrup, comprising: a sterile *Leuconostoc mesenteroides* culture liquor product having a solid content of approximately 50% dextran, 36% levulose, 6% dextrose, 2% sucrose and 6% non-sugars.

2,409,817
GAUGE
George D. Webber, Lakewood, Ohio
Application January 10, 1945, Serial No. 572,109
22 Claims. (Cl. 33—168)

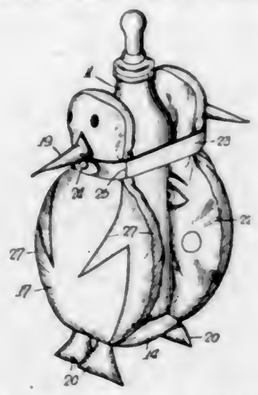
1. A gauge comprising a pair of gauge blocks each provided with a gauging face surface and arranged with said surfaces in mutual contact, tension means secured to one of said blocks against movement toward the other of said blocks, means defining a curved surface on said other of said blocks which is concave in a direction away from said gauging surfaces, wedging means rotatably mounted by said tension means and having a convexedly curved surface substantially complementary to said concave surface, said curved surfaces normally being lightly in con-



tact with each other or immediately adjacent to each other, and one of said curved surfaces being eccentric with respect to the axis of rotation of the wedging means so that said curved surfaces are forced tightly against each other upon rotation of said wedging means, thereby detachably to hold said gauging face surfaces in mutual contact.

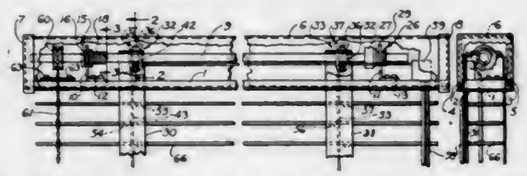
2,409,818
BRUSH AND ART OF COMMUTATION
Hugh H. Wikle, Cleveland Heights, Ohio, assignor to Superior Carbon Products, Inc., Cleveland, Ohio, a corporation of Ohio
No Drawing. Application November 4, 1942, Serial No. 464,531
11 Claims. (Cl. 171—325)

1. A brush comprising graphite, shellac and about 5% to 15% sulphur.



2,409,819
PLYWOOD STRUCTURE
Winfred E. Wilson, Los Angeles, Calif., assignor of one-half to Nina Mae Wilson
Application November 18, 1944, Serial No. 564,147
2 Claims. (Cl. 20—2)

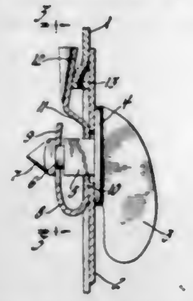
2. A built-up structure formed in the main of plywood, including a thin flexible plywood strip, blocks mounted on a surface of said strip, upright panels secured to said strip and supporting the same, a cellular structure interposed between said blocks, a panel transversely spanning the cellular structure and secured thereto, and means for securing said panel and the cellular structure to the said blocks.



2,409,820
BOTTLE COVER
Benno Zimmern, New York, N. Y.
Application June 3, 1944, Serial No. 538,620
2 Claims. (Cl. 215—12)

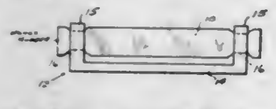
1. A nursing bottle holder comprising two padded sections, each having top, bottom and lateral edges constituting the periphery thereof, each of said sections having front and back portions joined together at said periphery; flexible hinge means joining said bottom edges of said two sections with the remainder of said edges free whereby one of said two sections may be rotated through an arc of approximately 360° about the flexible hinge means to expose either the front or back portions of the sections; securing means comprising a tape attached only to a

lateral edge of one of said sections adjacent to the top edge thereof, said tape having a length to encircle said sections with a nursing bottle positioned therebetween, and means detachably securing the ends of said tape together.



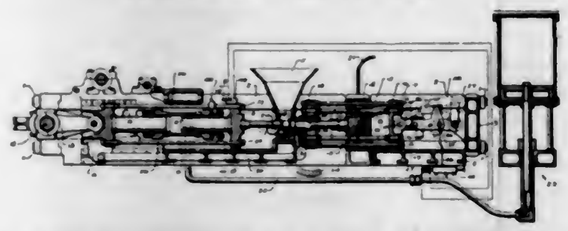
2,409,821
VENETIAN BLIND
Max W. Albrecht, Chicago, Ill.
Application March 5, 1945, Serial No. 581,067
9 Claims. (Cl. 160—34)

9. A Venetian blind comprising a fixed upper supporting bar for the blind provided with holes for the passage of the upper ends of slat supporting tapes therethrough, flanged portions extending outwardly from the sides of said bar adjacent the bottom thereof, an operating mechanism for the Venetian blind mounted on the top of said bar and a housing seated on the said flanged portions enclosing the top and sides of said operating mechanism whereby when said blind is placed in wall brackets the operating mechanism is entirely enclosed.



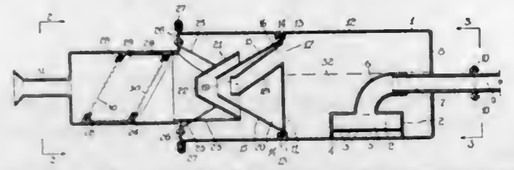
2,409,822
DOOR CATCH
Everett W. Allen, Birmingham, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application September 13, 1945, Serial No. 616,025
6 Claims. (Cl. 292—241)

1. A rotatable spring latch of the character described, including a handle having a bearing shoulder to contact the outer face of a panel and a squared shank projecting therefrom through and for rotation in an opening in the panel, said shank terminating in a pointed camming tip and having an annular retaining groove adjacent said camming tip, a J-shaped spring, the longer leg of which is arranged to contact the inner face of said panel with a squared opening to fit non-rotatably the said squared shank for rotation therewith and terminates in an inwardly offset portion releasably engageable upon shank rota-



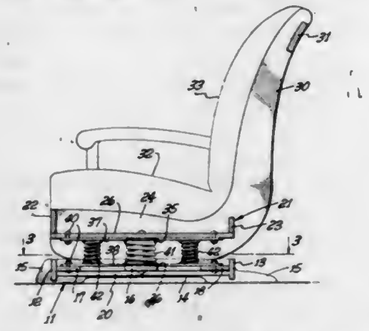
tion with a cooperating seat on a part with which said panel cooperates and the shorter leg of which spring has an opening normally non-axially related to the first mentioned opening to receive the camming tip end of the shank and enable reception and retention of the shorter leg within said annular groove, with the spring loop under sufficient compression to resist displacement and prevent rattles.

2,409,823
EYELASH BUFFER
Clara J. Altman, Detroit, Mich.
Application January 1, 1945, Serial No. 570,900
1 Claim. (Cl. 15—244)



An eyelash buffer comprising a sponge rubber bar and a holder therefor, the bar being elongated and formed with several flat sides and a plurality of longitudinally extending sharp edges, the holder being in the form of a long base formed with transversely extending rings at its ends detachably receiving and gripping the ends of the bar, whereby only the ends of the bar are engaged by the holder, so as to leave several of said edges and said sides of the bar completely exposed and free of the holder.

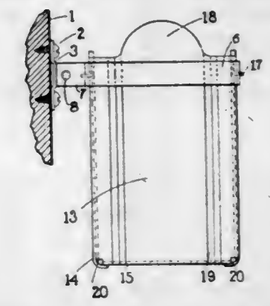
2,409,824
PRESS
James P. Barbour, Philadelphia, Pa., assignor to The Baldwin Locomotive Works, a corporation of Pennsylvania
Application July 22, 1941, Serial No. 403,495
8 Claims. (Cl. 78—0.5)



1. The combination in a press comprising opposed working members between which a work-piece is engaged, power means for effecting relative working movement between said members to form the work-piece, means for normally ejecting the work-piece, means rendered operative by said power means automatically in response to an accumulation of material between said opposed working members upon failure of the formed work-piece to be normally ejected, and means controlled by said responsive means for automatically effecting ejection of said additional material upon occurrence of its accumulation.

2,409,825
PROCESS FOR PURIFYING EXHAUST GASES
Bernardo Baringoltz, Pedermar, Argentina
Application December 8, 1942, Serial No. 468,243
1 Claim. (Cl. 23—2)

A process for purifying the exhaust gases from internal combustion engines, which comprises first treating said gases with an agent consisting of the following components in approximately the stated proportions: 20% potassium chlorate, 20% manganese oxide, 20% iron oxide, 20% copper oxide, and 20% calcium carbide, so as to transform the carbon monoxide present in the exhaust gases into carbon dioxide, and immediately thereafter treating said gases with an absorbing agent consisting of the following components in approximately the stated proportions: 50% calcium oxide, 20% iron sulphate, and 30% caustic soda.



2,409,826
CHAIR
Samuel S. Bernstein, Los Angeles, Calif.
Application May 29, 1944, Serial No. 537,769
2 Claims. (Cl. 155—54)

1. A chair comprising: a stationary base frame, a chair frame superimposed over the base frame, a seat on said chair frame, and means for yieldably supporting the chair frame on the base frame, said means comprising solely a plurality of coiled compression springs extending vertically between said frames, said springs being arranged with one of the springs centrally disposed between said frames; the remainder of said springs being spaced apart from the central spring; and means for securing the ends of the springs to said frames, the centrally disposed spring being relatively stronger than the other springs.

2,409,827
HOLDING DEVICE
William Blankner, Lakewood, Ohio
Application March 1, 1944, Serial No. 524,541
6 Claims. (Cl. 45—28)

3. A holding device comprising a loop shaped supporting frame, two sheet metal shells, each consisting of an integral piece of metal bent to form a back, two sides and a bottom, and trunnions consisting of lugs struck out from one

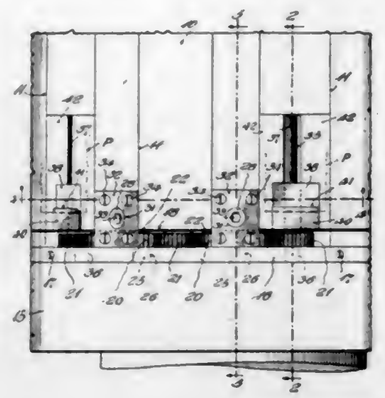
of the shells near the free edges of its sides and above its center of gravity projecting through perforations in the other shell and into openings in the frame.

2,409,828
AMINOMETHYL AMIDOTHIAZOLES
Louis H. Bock, Huntingdon Valley, Pa., Howard C. E. Johnson, New York, N. Y., and Leonard J. Armstrong, Philadelphia, Pa., assignors to Rohm & Haas Company, Philadelphia, Pa.
No Drawing. Application May 14, 1945, Serial No. 593,777
16 Claims. (Cl. 260—302)

1. A condensation product of a 2-carboxylic amidothiazole having a hydrogen atom on the carbon atom in beta position to the ring nitrogen atom and at least one mol each of formaldehyde and a strongly basic, non-aromatic amine having at least one reactive hydrogen atom on the amino nitrogen atom thereof.

2,409,829
ALKYLENE-BIS-UREAS
William Robert Boon, Blackley, Manchester, England, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application April 4, 1944, Serial No. 529,525
6 Claims. (Cl. 260—553)

1. Alkylene bis-ureas having the structural formula:



$$X—CO—NR—(CH_2)_n—NR'—CO—X$$

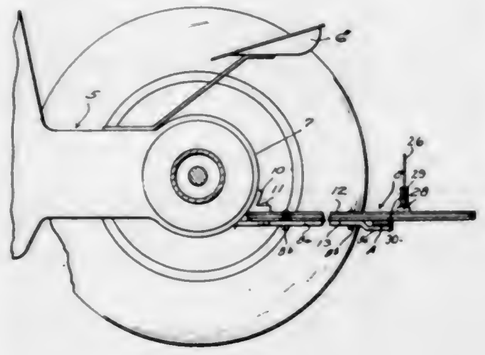
wherein n is any integer from 2 to 6 inclusive, R and R' represent alkyl groups containing together not more than 8 carbon atoms and X represents the imino radical of a secondary amine being a member of the group consisting of dialkyl amines, alkoxy-substituted dialkyl amines, and unsubstituted heterocyclic compounds having an NH group in the ring.

2,409,830
PRINTING PLATE CLAMPING MECHANISM
Albert Braunworth, Queens Village, N. Y., assignor to R. Hoe & Co., Inc., New York, N. Y., a corporation of New York
Application February 16, 1943, Serial No. 476,109
3 Claims. (Cl. 101—378)

1. In a printing cylinder adapted to support relatively rigid printing plates and having an annular bearer recessed in the cylinder at each end thereof, an arcuate plate recessed in the cylinder against the inner side of each bearer, a bearing plate recessed in the cylinder immediately adjacent an arcuate plate, a plurality of movable clips adapted to engage an edge of a printing plate

which is supported on the cylinder, a plurality of clip rods each threadedly engaging a clip and disposed in axial relation to the cylinder and rotatably supported in bearing apertures formed in the arcuate plates, a gear rigidly secured to each clip rod, a drive gear operably connected with the said clip rod gears and having axially alined inner and outer stud shafts rotatably received in cylin-

drical bearing apertures formed in the printing cylinder and the bearing plate respectively and disposed in radial alinement relative to the printing cylinder, the outer stud shaft having a tool-receiving socket formed therein at the cylinder surface whereby a tool may be inserted into the socket to rotate the gears and clip rods to thereby move the clips axially along the clip rods towards or away from the printing plate.



2,409,831

AUTOMATIC HITCH

Carl Brodale, Humboldt, Iowa

Application August 3, 1944, Serial No. 547,832

1 Claim. (Cl. 280—33.15)

A hitch comprising a tractor attached drawbar and a draft vehicle attached tongue, said tongue having an upstanding frame thereon adapted to be engaged by the drawbar, said drawbar consisting of a bifurcated member adapted to receive the frame of the tongue, and an elongated latch member endwise slidable in said drawbar across the bifurcated portion of the drawbar to prevent displacement of the frame, said drawbar consisting of upper and lower plates between which the latch member is slidable, a rocker mounted between the plates, a pull line for the rocker, one end of the rocker being engageable with the latch member for sliding the said latch member with respect to the bifurcated portion of the drawbar.

2,409,832

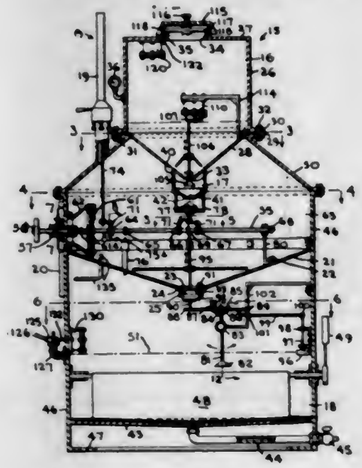
ARYL-DICYANDIAMIDE PRODUCTION

Wallace Broadbent and Francis Leslie Rose, Blackley, Manchester, England, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain

No Drawing. Application May 25, 1945, Serial No. 595,891. In Great Britain May 10, 1944

6 Claims. (Cl. 260—551)

1. A process for producing an aryl-dicyandiamide, which comprises reacting the corresponding aryl-azo-dicyandiamide with a strong mineral acid in a liquid medium consisting of water and a water-soluble organic liquid.



2,409,833

ACETYLENE GENERATOR

Willie D. Burch, Oklahoma City, Okla., assignor of one-half to Forrest Parrott, Oklahoma City, Okla.

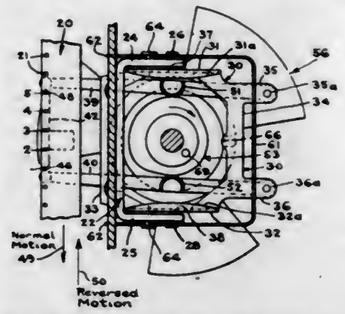
Application June 26, 1944, Serial No. 542,140

12 Claims. (Cl. 48—53.3)

1. In an acetylene generator, a housing provided with a carbide hopper and a water reservoir, a measuring receptacle below said hopper, communicating therewith and provided with a valve seat at its lower end; a valve for said seat, having a depending stem; a control rod slidably carried substantially horizontally by said housing, with one end exteriorly thereof, the other end interiorly thereof, and the vertical axis of said stem intersecting said rod; an inverted, substantially L-shaped lever pivotally carried by said housing, with the free end of the normally horizontal arm of said lever below and closely adjacent the lower end of said stem, and the normally vertical arm of said lever straddling said rod; and an abutment on said rod contacting said normally vertical arm.

2,409,834

TAPE MOVING MECHANISM



Roy A. Clapp, Minneapolis, Minn.

Application July 19, 1944, Serial No. 545,626

11 Claims. (Cl. 88—18.4)

1. An apparatus for moving an indicia carrying uniformly perforated tape endwise by a periodic step-by-step motion comprising a guideway for maintaining said tape approximately straight throughout a portion of its path of movement, a shaft rotatably mounted and positioned alongside the guideway and perpendicular to the plane thereof, a generally rectangular open-centered frame circumscribing the shaft, pivotal mounting means for said frame, the axis of said pivotal mounting being approximately parallel to the tape

in said guideway with the axis thereof intersecting said shaft, a pair of levers pivotally mounted on the frame on the side opposite the guideways, said levers being approximately parallel to the frame and tape and positioned transversely with reference to the tape one above and the other below the shaft, a link connecting the levers together at a point overlying the tape, said link having a claw thereon positioned in alignment with the perforations of the tape and compound cam

means on said shaft located generally in the open center of the frame, said cam having a cam surface coacting with the levers for moving them about their pivotal mountings on the frame and another cam surface for moving the frame upon its pivotal mounting means all in timed relation for guiding said tip into registry with a tape perforation, then longitudinally of the tape axis for movement of the tape longitudinally, then out of registry with said tape and thence back to starting position while out of registry with said tape.

2,409,835

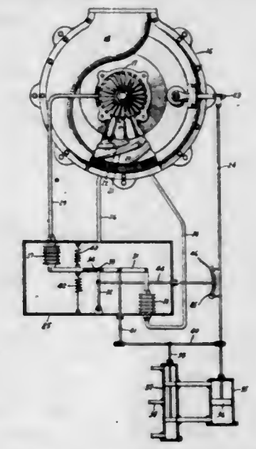
PROCESS FOR PRODUCING PURE SELENIUM

Charles W. Clark, Westmount, Quebec, and Eugene M. Elkin, Montreal, Quebec, Canada, and George R. Waitkins, Flemington, N. J., assignors to Canadian Copper Refiners Limited, Montreal East, Quebec, Canada, a corporation of Canada

Application October 25, 1945, Serial No. 624,506

14 Claims. (Cl. 23—209)

8. The process of making elemental selenium of high purity, which comprises introducing selenium dioxide in finely sub-divided form into a reaction chamber, introducing at least a stoichiometric amount of ammonia into said reaction chamber, maintaining said reaction chamber at a temperature at least as high as the sublimation temperature of selenium dioxide and thereby causing substantially solely a gaseous phase reaction between the selenium dioxide and the ammonia, and thereafter selectively condensing substantially pure elemental selenium out of the other gaseous materials present in a temperature range substantially above the boiling point of any of such other materials.



2,409,836

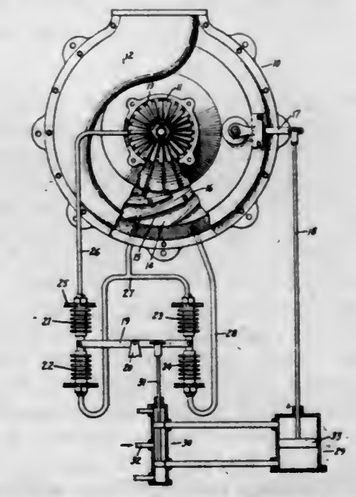
CENTRIFUGAL TYPE COMPRESSOR

Everett L. Coe, Marblehead, Mass., assignor to General Electric Company, a corporation of New York

Application April 21, 1944, Serial No. 532,047

6 Claims. (Cl. 230—114)

1. Centrifugal type compressor having an impeller and a variable vane diffuser, and a control mechanism for positioning the diffuser vanes including means responsive to the ratio of the static pressure rise across the impeller to the static pressure rise across the diffuser to maintain said pressure ratio constant over a wide operating range, and other means to modify automatically the action of the first mentioned means to increase said ratio as the compressor nears the limits of its operating range.

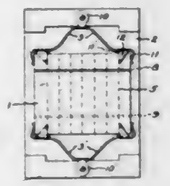


2,409,837

CENTRIFUGAL TYPE COMPRESSOR

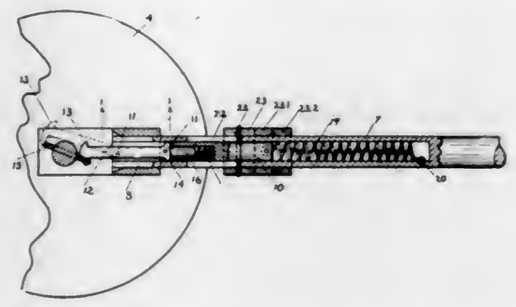
Joseph S. Alford, Nahant, Mass., assignor to General Electric Company, a corporation of New York

Application April 21, 1944, Serial No. 532,107



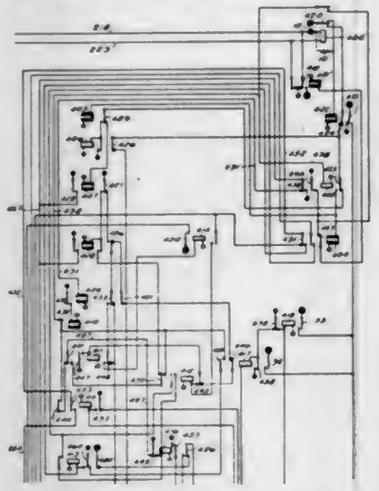
3 Claims. (Cl. 230—114)

1. Centrifugal type compressor having an impeller and a variable vane diffuser for receiving



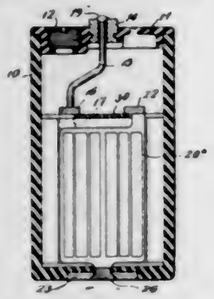
medium discharged from the impeller, motor means for varying the position of the diffuser, and a mechanism for controlling the last named means including a first device responsive to static pressure rise across the impeller and a second device responsive to static pressure rise across the diffuser.

2,409,838
CRYSTAL MOUNTING
Jay J. Cress, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application February 13, 1945, Serial No. 577,694
11 Claims. (Cl. 171—327)



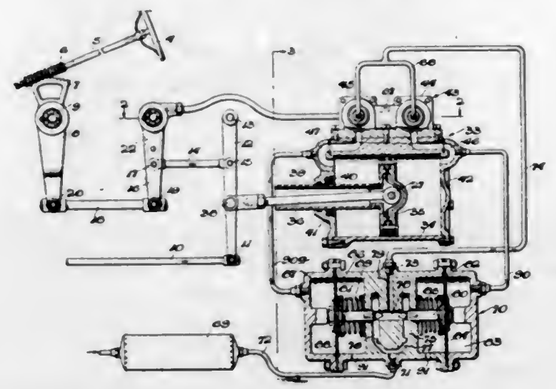
1. In combination, a substantially rectangular piezoelectric plate arranged for shear vibration about a nodal plane parallel to its major faces with a coupled flexure vibration about nodal planes perpendicular to said major faces, and means for mounting said plate comprising a plurality of fingers embracing each corner of said plate and arranged to engage said plate along its edges and upon said major faces only at the edges of said nodal planes.

2,409,839
TOY
Harry J. Criner, Davenport, Iowa, assignor of one-half to A. G. Bush, Davenport, Iowa
Application July 28, 1945, Serial No. 607,594
14 Claims. (Cl. 46—114)



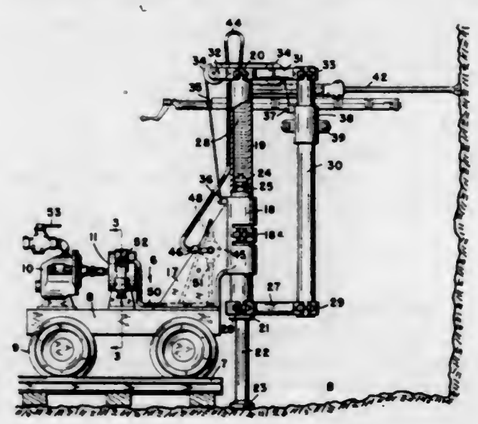
1. A toy comprising a frame, a shaft revolvably mounted on the frame, a pair of spaced supporting wheels united to the shaft, a retractor united to and rotating with the shaft and having an arm projecting radially therefrom, a hollow arm or barrel having one end secured to the frame and the other end extending outwardly therefrom, a plunger slidingly mounted in the arm or barrel, a bar having one end pivoted to one end of the plunger and its opposite end provided with a projection or catch arranged to be engaged and drawn backward by the rotating retractor to a predetermined point and then automatically released from the retractor, a spring mounted in the hollow arm or barrel arranged to exert tension forwardly upon the plunger and to drive it forwardly when the bar is released from the retractor, and means to rotate the shaft.

2,409,840
CONTROL SYSTEM
Willard A. Derr and Maurice E. Reagan, Wilkinsburg, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application July 7, 1944, Serial No. 543,837
13 Claims. (Cl. 177—353)



10. A ground detection system for a supervisory control system having supervisory control equipment with separate sources at remote and control stations connected by a single supervisory control channel under the control of impulse relays at each of the stations comprising, ground detection means connected to the source of the remote station operable in response to a ground condition, supervisory means normally controlled by the ground detection means for providing an indication at the control station of a ground condition, and means associated with the supervisory means for preventing the ground detection means from effecting operation of the supervisory means in response to a ground condition at the other station while the channel operatively connects the equipment at both stations.

2,409,841
STORAGE BATTERY
William F. Donkin, Cleveland Heights, Ohio, assignor to Willard Storage Battery Company, Cleveland, Ohio, a corporation of West Virginia
Application June 7, 1943, Serial No. 489,900
5 Claims. (Cl. 136—6)

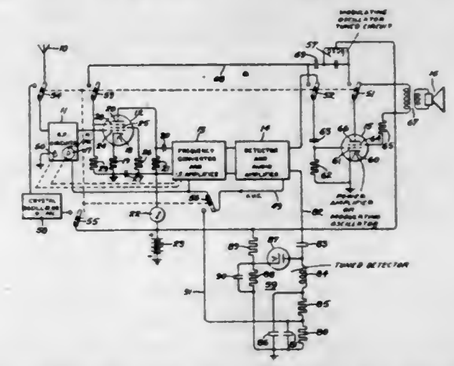


1. In a storage battery, a container, groups of positive and negative plates arranged substantially in parallelism in the container, the plates of both groups having at their upper ends lugs to which straps are connected, a terminal at the top of the battery, a connector connected to the strap connecting the plates of one polarity and to the terminal at the top of the battery, one of the plates of the opposite polarity having a bottom lug, and a bottom terminal connected to said bottom lug.

2,409,842
FLUID PRESSURE CONTROL MECHANISM
Wilfred A. Eaton, Elyria, Ohio, assignor to Bendix-Westinghouse Automotive Air Brake Company, Elyria, Ohio, a corporation of Delaware
Application July 5, 1944, Serial No. 543,564
13 Claims. (Cl. 121—41)

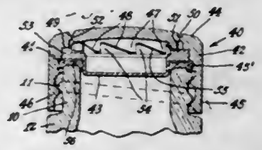
1. Mechanism for controlling the supply of fluid pressure from a source to a double acting fluid motor of the type having a pair of control valves and a control element for operating said valves to alternately supply fluid pressure to one end or the other end of said motor, said mechanism including a pair of connections each adapted to connect the source with both valves, and means responsive to the pressure in one end of the motor for closing one of said connections and responsive to the pressure in the other end of the motor for closing the other of said connections when said pressures reach predetermined values.

2,409,843
ADJUSTABLE DRILL MOUNTING
Albert Feucht, Garfield Heights, Ohio, assignor to The Cleveland Pneumatic Tool Company, Cleveland, Ohio, a corporation of Ohio
Application July 9, 1945, Serial No. 603,884
4 Claims. (Cl. 255—51)



1. In mechanism of the character described, a post adapted to bear against the ground, a unit mounted to travel vertically on said post, a pulley on the upper end of said unit, a slide, a drill carried thereby, said unit comprising a guide track for said slide, and a cable running over said pulley, one end of said cable being fixed and the other being attached to said slide, whereby a given travel of said unit produces double that travel of said slide and drill.

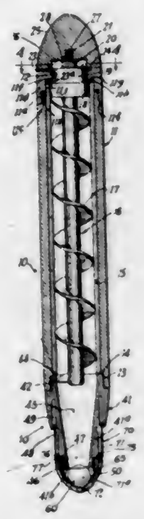
2,409,844
BASIC CAST REFRACTORY
Theodore Estes Field, Louisville, Ky., assignor to Corhart Refractories Company, Louisville, Ky., a corporation of Delaware
No Drawing. Application January 29, 1942, Serial No. 428,795
7 Claims. (Cl. 106—57)



1. A heat cast refractory consisting essentially of zirconia, magnesia, alumina and silica and in which the zirconia is not less than 15% and the silica is not less than 11% and the mols of magnesia are substantially equal to the mols of alumina plus twice the mols of silica.

2,409,845
CALIBRATING DEVICE
Paul C. Gardiner, Scotia, and John E. Maynard, Schenectady, N. Y., assignors to General Electric Company, a corporation of New York
Application November 24, 1941, Serial No. 420,230
3 Claims. (Cl. 250—20)

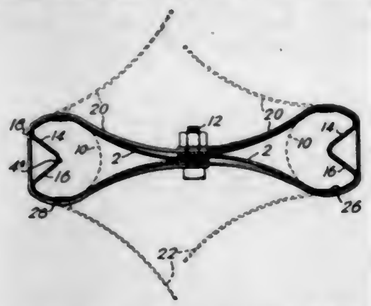
1. In combination, apparatus for translating an ultra high frequency wave having side bands within a predetermined frequency range, said apparatus including a variably tuned circuit, means for calibrating the variable tuning of said circuit, said apparatus having a pass band substantially wider than said predetermined frequency range to allow for drift in frequency of said pass band or of said wave so as to maintain translation of said wave during such drift, means for impressing a standard frequency wave on said apparatus and for producing side bands associated with said wave and spaced apart by an amount comparable to the pass band of said apparatus, and means for indicating the amount of said side bands transmitted through said apparatus whereby said calibrating means may be adjusted to produce a characteristic amount of said side bands in the output of said apparatus when said standard frequency is centered in said pass band.



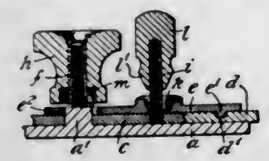
2,409,846
BOTTLE CLOSURE
Edgeworth Greene, Montclair, N. J., assignor to Inter-Seal Corporation, Spring Lake, N. J., a corporation of Delaware
Application November 13, 1942, Serial No. 465,418
7 Claims. (Cl. 215—22)

3. A closure for sealing an opening through the neck of a container, which comprises the combination of an outer cap member adapted to

receive the end of said neck and having means engageable beneath external means on the neck, upon rotational movement of said cap member, to hold the cap member in place on the neck, an inner member within the cap member and of greater overall diameter than the neck opening, and gasket means between the inner member and the end of the neck, the gasket means being capable of resisting slippage on the neck when under pressure, said inner member being constructed and arranged to rotate with the cap member to be brought into sealing engagement with the gasket means, said cap and inner members having cooperating integral parts having opposed surfaces so constructed and positioned that, upon rotation of the cap member, they engage positively and cause the inner member to rotate with the cap member, the cap member being simultaneously urged by said external means to force the inner member against the gasket means to apply pressure thereto, said cooperating integral parts also having other opposed surfaces, at least one of said other opposed surfaces of at least one of the parts being inclined in such direction and at such an angle that upon counter-rotation of the cap member said other opposed surfaces engage and slide relative to one another and cause the part on the cap member to move angularly and outwardly relative to the part on the inner member and the parts simultaneously to apply force to the cap member tending to move it away from the inner member against the resistance offered by said external means on the neck.



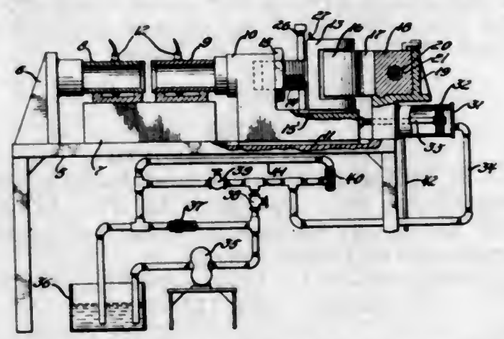
2,409,847
FOUNTAIN PEN
Jon Gregg, New Hope, Pa.
Application October 10, 1944, Serial No. 557,957
14 Claims. (Cl. 120—43)



1. A writing instrument comprising a barrel, a worm within the barrel, said writing instrument having a nib, and a paste-like writing substance within the barrel adapted to be pressed towards the nib upon turning the worm within the barrel.

2,409,848
TWIN TUBE MINE CLEARING SNAKE
Gerald G. Greulich, Mount Lebanon, Pa., assignor to Carnegie-Illinois Steel Corporation, a corporation of New Jersey
Application March 10, 1943, Serial No. 478,712
10 Claims. (Cl. 102—22)

4. An elongated mine clearing snake comprising two tubes, one on each side of the longitudinal axis of the snake arranged in side by side relationship, means for fastening the tubes together at their adjacent surfaces, an explosive charge in each of said tubes, each charge having an outwardly facing V-groove in its surface remote from the longitudinal axis of the snake, the center lines of the grooves being substantially in the same horizontal plane, and a spring shoe attached to the leading end of said snake extending from the bottom to a point above the top thereof.



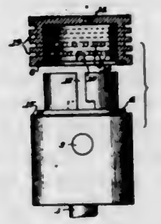
2,409,849
BEVEL PROTRACTOR
Vernon Henry Grey, Coventry, England
Application August 23, 1944, Serial No. 550,719
In Great Britain February 27, 1943
3 Claims. (Cl. 33—102)

3. In a protractor or like measuring instrument, means for locking an adjustable blade to a calibrated dial plate, comprising in combination a circular head, a locking plate slidably mounted in said dial plate having a rib therein which is adapted to engage a groove in said adjustable blade, an elongated hole in said locking plate which is adapted to engage a boss on said circular head which carries a locking means for said calibrated dial plate, an upstanding stud in said calibrated dial plate, a coned hole in said locking plate through which said upstanding stud passes, a sleeve nut having a coned end mounted upon said upstanding stud so that on the coned end of the sleeved nut being screwed down into the coned hole in the locking plate the rib therein draws the adjustable blade into intimate contact with the calibrated dial plate and locks same thereto in its adjusted position.

2,409,850
HYDRAULIC FEED MEANS
James W. Hackett, Newark, Ohio, and Kenneth L. G. Copping, Detroit, Mich., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application March 1, 1944, Serial No. 524,548
3 Claims. (Cl. 219—4)

1. Electric welding mechanism comprising means for supporting work pieces and for supplying electric current thereto, means arranged to move said work pieces toward each other at a relatively slow rate during a burn-off period, said moving means comprising a hydraulic cylinder and piston, and means to supply fluid to said cylinder at a predetermined rate and pressure, additional moving means adapted and arranged to move said work pieces toward each other at a relatively rapid rate during a push-up period, said additional means comprising an electric motor, and control means for said motor ar-

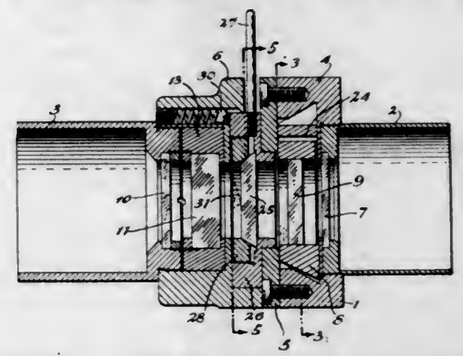
ranged to be actuated by said first moving means after a predetermined extent of movement thereof.



2,409,851
PERYLENE DERIVATIVES
Norman Hulton Haddock, Blackley, Manchester, England, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application March 2, 1942, Serial No. 433,103. In Great Britain March 12, 1941
10 Claims. (Cl. 260—281)

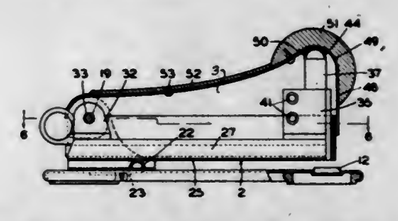
1. A compound of the general formula

X—R—Q—R'—X'



wherein Q is the radical of perylene-3,4,9,10-tetracarboxy-diimide, R, R' represent phenylene radicals selected from the group consisting of phenylene, alkyl phenylenes having not more than 4 carbon atoms in the side chain, and alkoxyphenylenes having not more than 4 carbon atoms in the side chain, said radicals R and R' being attached to the radical Q through the N-atoms of the imide groupings, while X, X' designate radicals which are reducible by alkali-metal sulfides in alkaline medium to mercaptan radicals whereby the entire compound becomes applicable to textile fiber as a sulfur dye.

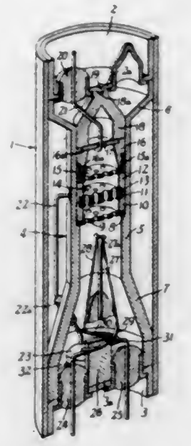
2,409,852
PISTON FOR INTERNAL-COMBUSTION ENGINES
John L. Harrah, Akron, Ohio
Application March 19, 1945, Serial No. 583,545
4 Claims. (Cl. 309—14)



1. In a piston, a hollow cylindrical body, open at both axial ends, the lower portion of said body forming a skirt, wrist pin bearings in said body positioned immediately above said skirt; the upper portion of said body of smaller diameter to form an upward presented, stepped, shoulder, with an upward, projecting hollow neck; and a co-axially arranged reduced portion; said hollow neck having complemental L shaped apertures; a cylindrical top portion provided with ring mounting grooves; said ring section having a top wall and a side wall enclosing a downwardly presented cavity; the lower edge of said wall being stepped to fit on said shoulder; said ring section provided with complemental ribs which project inward from the side wall thereof for interlocking connections with said L shaped apertures on said reduced portion by a rotary movement of said section; inserts positioned through suitable bores in said top wall snugly received in said L shaped apertures in skirt section; said inserts securely held in position with application of lock-thread set-screws firmly screwed into suitable tapped bores in piston top.

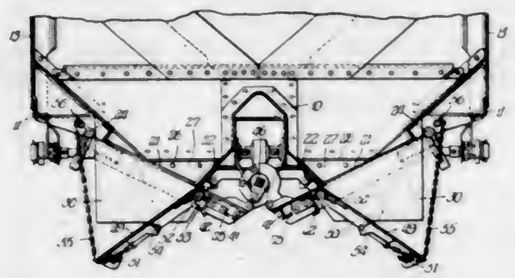
2,409,853
OPTICAL INSTRUMENT FOR EXAMINING POLARIZED LIGHT
Paul C. Heijn, Buffalo, N. Y., assignor, by mesne assignments, to American Optical Company, Southbridge, Mass., a voluntary association
Application January 21, 1943, Serial No. 473,086
3 Claims. (Cl. 88—14)

1. In an instrument for use in examining polarized light, the combination of a plane-parallel plate of quartz and two quartz wedges disposed in series along the optical axis of the instrument for modifying light passing along said axis, the optical axes of said wedges being parallel with each other and perpendicular to the optical axis of said plate, said wedges being of minute angle, means for effecting relative movement between the wedges in the direction of variation in thickness to alter the length of the optical path through said wedges along the axis of the instrument, and means for effecting relative rotation between said wedges about the optical axis of the instrument through 180°.



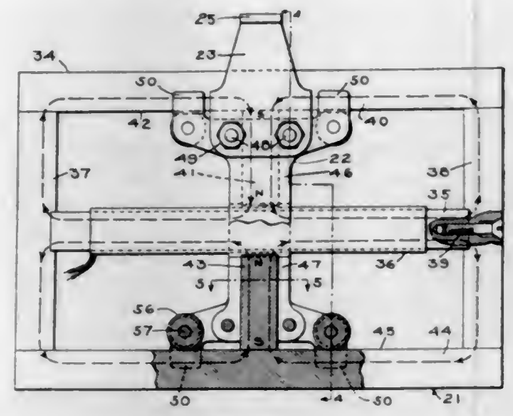
2,409,854
STAPLING MACHINE
Harold S. Heller, Cleveland Heights, Ohio
Application June 25, 1942, Serial No. 448,359
7 Claims. (Cl. 1—3)

1. Stapling apparatus, comprising a channel shaped magazine member having two nesting channel shaped members nested therein and secured thereto and forming guiding means for a staple gang, one of the channel members of the guiding means having its flanges provided near one end with pivot ears and near the other end with supporting plates, a hollow guide supported upon and between said plates, a driving plunger slidable in said guide, and a channel shaped operating member pivoted to said pivot ears and



with the magazine member forming a housing enclosing said guiding means, said operating member engaging the plunger to operate the same.

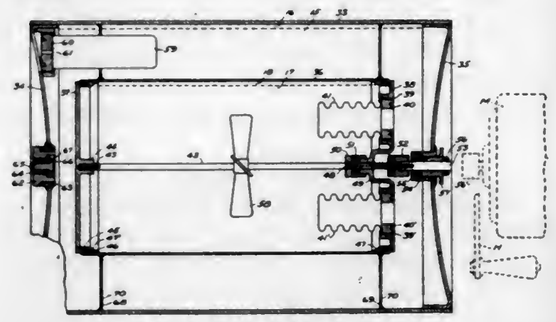
2,409,855
GASEOUS DISCHARGE TUBE
Curtis Hillyer, Jr., and Henry Blackstone, Richmond Hill, N. Y.
Original application September 7, 1940, Serial No. 355,708. Divided and this application March 6, 1941, Serial No. 381,951
12 Claims. (Cl. 250—27.5)



10. An electric discharge device comprising, in combination, a cylinder closed at both ends by headers hermetically sealed thereto, a shock resistant support disposed within said cylinder between said headers, disc-like anode and grid elements carried by said support in spaced relation, means for insulating said elements from one another, a cathode filament in said cylinder, and a shock resistant support carried by one of said headers for supporting said filament.

2,409,856
CAR CONSTRUCTION
David Hindahl, Chicago, Ill.
Application December 16, 1944, Serial No. 568,416
5 Claims. (Cl. 105—281)

1. A car of the character described having a plurality of longitudinally disposed hoppers, said hoppers having longitudinally extending discharge openings, downwardly extending aprons at the ends of the discharge openings, a door construction for each said opening, the door construction comprising a main door and a secondary door, the main door being pivotally supported by the car and the secondary door being pivotally supported by the main door, the secondary door extending the full distance between the inner faces of the aprons and the main door having frame members located beyond the outer faces of the aprons, the downwardly extending aprons extending downwardly below the level of the doors when the doors are in the closed position and serving when the doors are opened to limit endwise flow of material from the doors.

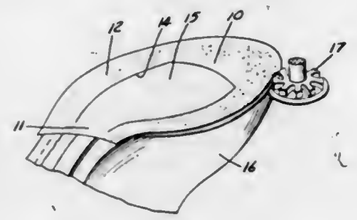


2,409,857
LINEAR GENERATOR
Claude M. Hines, Pittsburgh, and John W. Rush, Wilkinsburg, Pa., assignors to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application April 15, 1944, Serial No. 531,278
4 Claims. (Cl. 171—209)

1. An apparatus adapted to be associated with a linearly movable element of a machine for providing an electrical characteristic corresponding to the speed of movement of the element, said apparatus comprising a closed ferromagnetic core having three parallel-extending legs in spaced relation, a winding carried on the central one of said three legs, a carriage member associated with said core adapted to be moved by the linear movement of the movable element in a straight line parallel to the said legs, a pair of permanent magnets of the bar type carried by said carriage member in substantially perpendicular relation to the said legs, said magnets being effective to provide shiftable magnetic flux linked to said coil and effective upon the movement of the carriage member to cause induction of an electrical characteristic in said winding corresponding substantially to the speed of movement of the carriage member.

2,409,858
NONLEAK LIQUID EXPLOSIVE FILLER SYSTEM FOR AMMUNITION
Nevil Monroe Hopkins, New York, N. Y., Raymonde B. Hopkins, executrix of said Nevil Monroe Hopkins, deceased, assignor, by mesne assignments, to Raymonde Briggs Hopkins, Samuel Lloyd, and Murray T. Quigg, as trustees
Application July 31, 1942, Serial No. 453,084
5 Claims. (Cl. 102—57)

1. An explosive filler system for a unit of ammunition, comprising a bi-compartment receptacle, a liquid combustible fluid in one of the compartments, a vapor space between the said liquid combustible fluid and a wall of its compartment, liquid nitrogen tetra-oxide in the other compartment, a vapor space between the said liquid nitrogen tetra-oxide and a wall of its compartment, the one vapor space being equal to the other vapor space, said receptacle comprising a yieldable wall section disposed between the two compartments to transmit the hydrostatic pressure of the liquid nitrogen tetra-oxide to the liquid combustible fluid, means to open one of the compartments



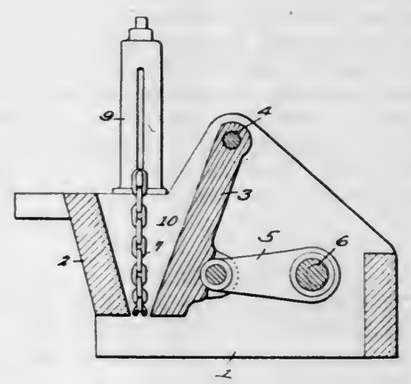
and to bring about the admixture of the liquid combustible fluid and the liquid nitrogen tetra-oxide, and means to detonate the mixture.

2,409,859
2-ETHYLHEXYL FLUOROACETATE
John L. Horsfall, New York, N. Y., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application December 29, 1944, Serial No. 570,457
1 Claim. (Cl. 260—487)

2-ethylhexyl fluoroacetate.

2,409,860
SHOEMAKING
Richard A. Huebel, Abington, Mass.
Application May 18, 1945, Serial No. 594,381
4 Claims. (Cl. 12—142)

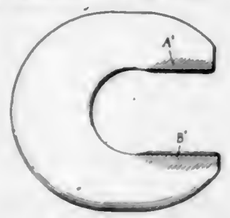
1. The shoemaking process which includes the steps of cutting out a platform blank to fit the fore-part of a shoe, defining a window in the blank while leaving its shank edge intact, attaching the blank to the bottom of a lasted shoe, trimming and setting the edge of the platform in conformity to the contour of the shoe, removing the defined portion from the platform to form a window and at the same time removing a segment of its ball edge, and then cementing a cushion over the window, filling the space thus provided in its ball edge.



2,409,861
PROCESS AND AGENTS FOR THE RECOVERY OF MAGNESIUM IONS FROM BRINE
Melvin J. Hunter and William C. Bauman, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Michigan
No Drawing. Application February 2, 1942, Serial No. 429,303
5 Claims. (Cl. 23—50)

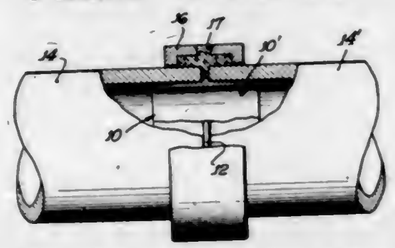
2. In a method for recovering magnesium ions in relatively concentrated form from a brine containing between 0.01 and 0.8 gram atomic weight per liter of the same and at least an equimolecular proportion of an alkali metal salt, the steps of passing the brine over an alkali metal salt of a carboxylated resin whereby the latter absorbs magnesium ions from the brine, thereafter passing an at least 1-normal aqueous hydrohalic acid solution over the resin to displace the absorbed magnesium ions and form a magnesium halide solution of higher magnesium ion content than that of the initial brine, and subsequently treating the resin with an aqueous alkali metal hydroxide solution which contains an alkali metal halide in a concentration of at least 0.5 normal, to again form the alkali metal salt of the resin.

2,409,862
PRODUCTION OF CHLORINE DIOXIDE
Willis S. Hutchinson, St. Paul, Minn., assignor to The Mathieson Alkali Works, Inc., New York, N. Y., a corporation of Virginia
No Drawing. Application July 12, 1944, Serial No. 544,644
6 Claims. (Cl. 23—152)



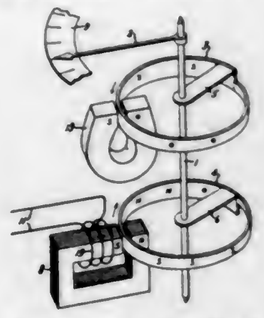
5. In the generation of chlorine dioxide by reacting hydrochloric acid with a chlorine-containing compound of the class consisting of the chlorites and chlorates of the alkali and alkaline earth metals, the improvement which comprises reacting the hydrochloric acid, in gaseous form and in admixture with an inert diluent gas, with the chlorine-containing compound in solid form.

2,409,863
MATERIAL CLEARING ATTACHMENT FOR JAW CRUSHING MACHINES
Albert Fillmore Hyde, New York, N. Y.
Application April 26, 1945, Serial No. 590,490
1 Claim. (Cl. 241—265)



The combination with opposed crushing jaws, one of said jaws being movable toward and from the other jaw, said jaws cooperating to provide a throat for the reception of material to be crushed therebetween, of a flexible device anchored at one end above and at one side of the throat, said device having a loop depending between the jaws at a plane parallel with the axis of movement of the movable jaw, and a lifting device connected to the other end of the device constituting means for raising and lowering the loop relative to the jaws between which it is suspended, said loop being normally extended from one side to the other of the throat.

2,409,864
GAUGE
Robert J. A. Ingouf and Joseph Hilliard Lewis, Kingsport, Tenn., assignors to Blue Ridge Glass Corporation, Kingsport, Tenn., a corporation of New York
Application May 20, 1943, Serial No. 487,772
2 Claims. (Cl. 33—168)

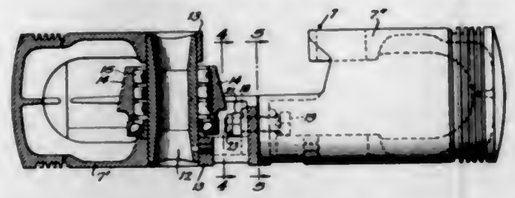


1. A gauge of glass having portions thereof tempered and having those portions thereof adjacent to control points untempered.

2,409,865
PIPE JOINING DEVICE
Howard W. Jewell, Los Angeles, Calif.
Application November 30, 1943, Serial No. 512,332
6 Claims. (Cl. 285—113)

1. A pipe joint comprising two plain end pipe sections of substantially uniform inside diameter in axial alignment, a hollow sleeve comprising a material rapidly disintegrable by action of liquid having a beaded and thickened mid-portion with said bead extending partway between and separating the ends of the pipes, ends on the sleeve tapered inwardly from the bead to a position spaced from the inside wall of the pipe and adapted to entrap liquid between the sleeve and pipe wall to promote distintegration of the sleeve, and a layer of sealing cement surrounding the ends of the pipe adjacent the joint and extending between the abutted ends of the pipe to a position initially in contact with the bead on the sleeve.

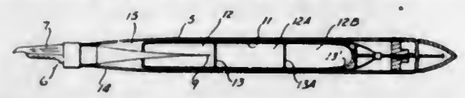
2,409,866
DIRECT-CURRENT RATIO MEASURING ELECTRICAL INSTRUMENT
Richard G. Jewell, Swampscott, Mass., assignor to General Electric Company, a corporation of New York
Application June 16, 1944, Serial No. 540,584
10 Claims. (Cl. 171—95)



3. In an instrument, a movable armature member consisting of a circular band of thin permanent magnetic material polarized radially through its thin dimension and pivoted for rotation about its center, said band varying in width in an axial direction, and a stationary unidirectional flux magnet having a radial flux air gap through which said band may pass when the armature is rotated.

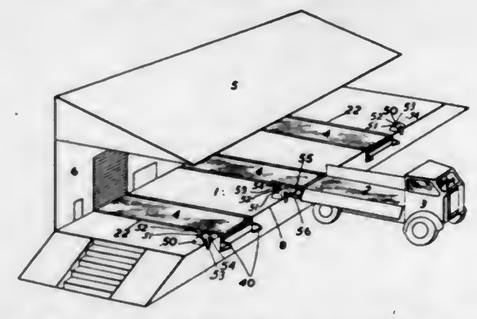
2,409,867
HAIRPIN STAND
Walter Wilburn Jones, El Paso, Tex.
Application August 2, 1945, Serial No. 608,458
2 Claims. (Cl. 211—13)

2. In a hair pin stand, in combination, a base, a sleeve, a second sleeve bifurcated at an extremity, positioned within said first-mentioned sleeve, resilient means, including a spring positioned between the bifurcations of said second-mentioned sleeve to retain said second sleeve in adjusted position within said first-mentioned sleeve, a tray secured to the top of said second-mentioned sleeve and a magnet secured to said tray.



2,409,868
PISTON ASSEMBLY
Charles N. Kahl, Jacksonville, Ill., assignor of one-half to Lee A. Sullivan, Jacksonville, Ill.
Application January 29, 1944, Serial No. 520,172
2 Claims. (Cl. 309—4)

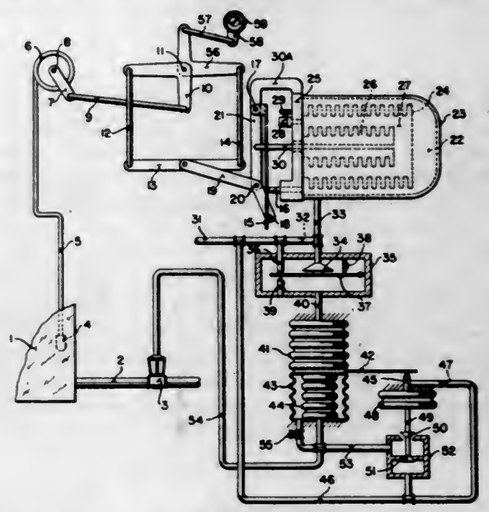
1. In a double-headed split piston having two separable sections, means for securing said sections together in end-to-end relationship and in axial alinement with each other, and yielding means carried by said securing means whereby said individual sections are arranged to expand and contract axially with respect to each other, under varying conditions.



2,409,869
FOUNTAIN PEN
Joseph J. Kelley, St. Louis, Mo.
Application November 14, 1944, Serial No. 563,354
6 Claims. (Cl. 120—42)

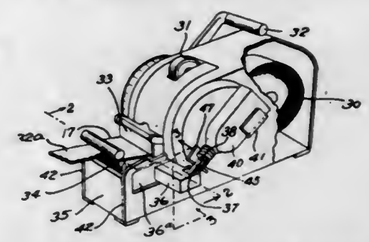
1. A fountain pen comprising a barrel having a pen point member and a feeder plug at its lower end, a collapsible ink-containing cartridge movable longitudinally of and removably positioned in the barrel, said cartridge being divided into a longitudinal series of substantially similar non-communicating ink compartments by equally spaced readily puncturable transverse partitions, said cartridge being shorter than the barrel and having a readily puncturable lower end, an upwardly projecting pointed puncturing member of considerably greater length than each cartridge

compartment carried by the feeder plug, and manually operable means carried by the upper end of the barrel and engageable with the upper end of the cartridge for forcing the latter downwardly to first puncture the lower end of the cartridge and then successively collapse the emptied portions of the cartridge and puncture the succeeding partitions as the supply of ink in the successive cartridge compartments is needed.



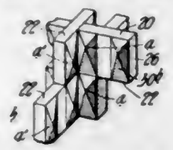
2,409,870
APPARATUS FOR LOADING AND UNLOADING MOVING FLOOR VEHICLES
James Aitken Kinnaird, Braiswick, near Colchester, England, assignor to Bromilow and Edwards Limited, Bolton, England
Application March 29, 1944, Serial No. 528,584
In Great Britain July 14, 1943
1 Claim. (Cl. 214—38)

Apparatus for loading and unloading vehicles, comprising the combination with a vehicle having a moving floor conveyor of the type referred to including conveyor winding drums at each end of the conveyor belt and intermediate rows of supporting rollers, of a loading platform having a similar conveyor with which the vehicle conveyor is adapted to be aligned, wherein the adjacent end drums of the two conveyors are positioned below and inwardly of their respective end conveyor supporting rollers so that the full run of both conveyors is horizontal, one forming a straight continuation of the other with a minimum gap therebetween.



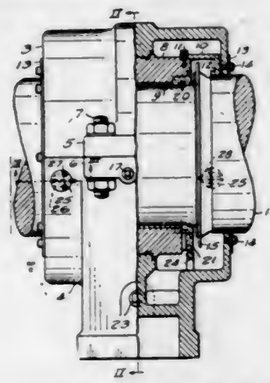
2,409,871
AIR CONTROL INSTRUMENT
Anker E. Krogh, Mount Airy, Pa., assignor to The Brown Instrument Company, Philadelphia, Pa., a corporation of Pennsylvania
Application October 13, 1939, Serial No. 299,287
20 Claims. (Cl. 121—41)

9. In a control apparatus for establishing a pneumatic control pressure, in combination, responsive means continuously and proportionately responsive to the value of a variable, valve means for controlling the supply of air to establish said pressure, first pneumatic motor means mechanically connected to said valve means and having a relatively small ratio of effective movement to pressure change, and immediately, continuously, and proportionately responsive to the control pressure and in accordance with such response and in conjunction with said responsive means operating said valve means in accordance with a relatively narrow proportioning band, second pneumatic motor means mechanically connected to said valve means and having a relatively larger ratio of effective movement to pressure change, and continuously proportionately responsive in the same sense through resistance and capacity



to said control pressure and in accordance with such response and in conjunction with said responsive means operating said valve means in accordance with a relatively wide proportioning band, whereby said valve means is immediately and continuously responsive to the combined action of said responsive means and said first and second pneumatic motor means to change quantitatively said control pressure in proportion to changes in the value of said variable and to the rate of change of the value of said variable.

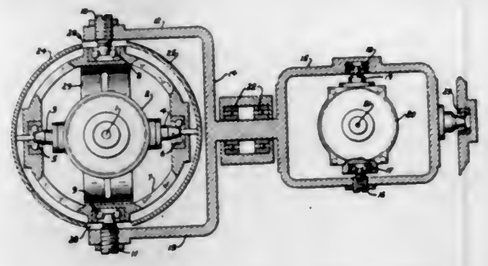
2,409,872
TAPE SERVING MACHINE
Theodore H. Krueger, Stratford, Conn., assignor to Better Packages Incorporated, a corporation of New York
Application December 7, 1944, Serial No. 567,051
5 Claims. (Cl. 91—38)



1. In a tape moistening machine having a frame including side walls, moistening and delivering means between said side walls, said moistening means including a tank having a capillary moisture applying element therein, the upper end of which extends above the surface of the liquid in said tank and is normally in the path of travel of the tape, means outside the side walls of said frame for maintaining a constant level of liquid in the tank, including an auxiliary cup outside of the wall of the frame, a supporting bracket mounted on said wall behind and above said auxiliary cup, a bottle overturned in said auxiliary cup and resting in said bracket in slanting position, and a connection from said cup to said tank.

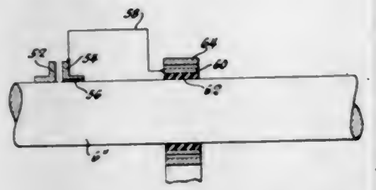
2,409,873
HEAT EXCHANGE
Howard Y. Lankford, Gary, Ind., assignor to Carnegie-Illinois Steel Corporation, a corporation of New Jersey
Application June 6, 1945, Serial No. 597,922
8 Claims. (Cl. 263—51)

5. A heat exchanger including checkerwork comprising a multiplicity of substantially identical bricks of generally rectangular prismatic form laid up basket weave fashion, with end faces of certain of the bricks abutting side faces of other bricks disposed perpendicular thereto, all of said bricks having flat top, bottom, and end faces, the top and bottom faces being horizontal and the end faces being vertical, the side faces of all said bricks having shallow pyramidal projections which thus extend into the flues defined collectively by the bricks, said pyramidal projections being effective to create a turbulence of air or gas passed through said flues.



2,409,874
BEARING CONSTRUCTION
Gerhard P. Lessmann, Wilkinsburg, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application July 28, 1943, Serial No. 496,403
6 Claims. (Cl. 308—36.5)

3. In combination, a rotatable shaft, a bearing for said shaft, means for supplying oil to said bearing, a radial flange on the shaft for throwing off oil escaping from the bearing, and an oil wiper mounted adjacent said flange at the side thereof away from the bearing, said oil wiper engaging the radial surface of the flange at the periphery thereof to wipe off any oil which travels over the flange without being thrown off, the area of contact between the oil wiper and said radial surface being small compared to the area of the radial surface.



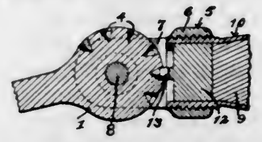
2,409,875
GYRO ASSEMBLY
Boyd G. Martin, Shaker Heights, Ohio, assignor, by mesne assignments, to Jack & Heintz Precision Industries, Inc., Cleveland, Ohio, a corporation of Delaware
Application July 26, 1944, Serial No. 546,649
6 Claims. (Cl. 74—5)

1. In a gyroscopic assembly employing a main rotor, an inner gimbal, a second gimbal for supporting said inner gimbal about an axis at right angles to said rotor spin axis, a third gimbal for supporting said second gimbal about an axis at right angles to that of said inner gimbal and said rotor spin axis, means for pivotally suspending said third gimbal about an axis in alignment with said inner gimbal axis and at right angles to that

of said second gimbal and the spin axis of said rotor, gyroscopic means including an auxiliary gyro rotor with an inner and outer gimbal the latter of which is rigid with said third gimbal for stabilizing said third gimbal and maintaining the same normal to said main rotor spin axis.

2,409,876
SHAFT TORSION MEASURING MEANS
Edward J. Martin, Pleasant Ridge, Mich., Carl E. Grinstead, West Hartford, Conn., and Robert N. Frawley, Detroit, Mich., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application March 7, 1942, Serial No. 433,820
5 Claims. (Cl. 73—68)

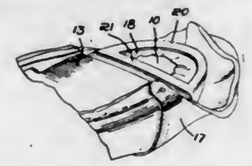
1. In measuring means for use on a rotatable member, capacitance means mounted on said rotatable member whose value will be altered upon a variation in the physical condition of said member, a circular ring mounted on the rotatable member but electrically insulated therefrom, connected to said capacitance means, a stationary ring concentrically mounted around the circular ring but spaced therefrom, electrical measuring means connected to said stationary ring whereby changes in the capacitance of the first-named means will be transmitted to the measuring means through the capacity of the condenser formed of the two concentric members.



2,409,877
LUBRICATING OIL
Robert L. May, Chicago, Ill., assignor to Sinclair Refining Company, New York, N. Y., a corporation of Maine
No Drawing. Application July 15, 1944, Serial No. 545,193
4 Claims. (Cl. 252—46.7)

1. A lubricating oil composition comprising a major proportion of a petroleum lubricating oil and a minor proportion, effective to retard oxidation of the oil, of an inhibitor resulting from the reaction of an alkylated phenol with the condensation product of turpentine and phosphorus pentasulfide, the alkyl group of the alkylated phenol being a saturated aliphatic radical.

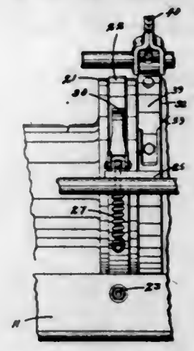
2,409,878
LUBRICATING OIL
Robert L. May, Chicago, Ill., assignor to Sinclair Refining Company, New York, N. Y., a corporation of Maine
No Drawing. Application July 15, 1944, Serial No. 545,195
5 Claims. (Cl. 252—32.7)



1. A lubricating oil composition comprising a major proportion of a petroleum lubricating oil and a minor proportion, effective to retard oxidation of the oil, of the reaction product of zinc oxide and an organic compound resulting from the reaction of an alkylated phenol with the condensation product of turpentine and phosphorus pentasulfide, the alkyl group of the alkylated phenol being a saturated aliphatic radical.

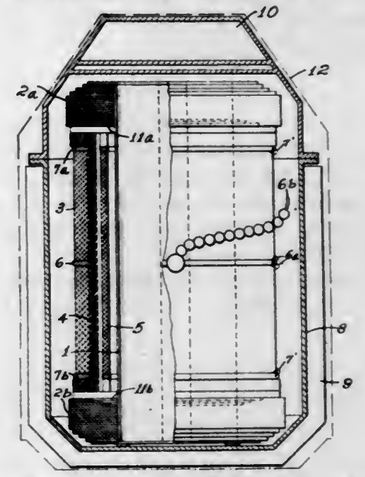
2,409,879
ADJUSTABLE TOOL HANDLE FASTENING
Thomas J. McIntosh, Westville, S. C., assignor of one-half to Edgar D. Moore, Charlotte, N. C.
Application February 28, 1946, Serial No. 650,861
3 Claims. (Cl. 306—12)

1. In a device of the class described, the combination of a tool provided with a disc-head, said disc-head provided with a plurality of sockets in its periphery, a socket device provided with clamping jaws, said jaws being against the sides of said disc-head only, fastening means extending through said jaws and disc-head, said socket device provided with an internally threaded sleeve, a handle provided with a fixed spur, and said handle normally threaded into said sleeve with said spur extending into one of said sockets of the disc-head.



2,409,880
SHOEMAKING
Harry G. McMurray, Wakefield, Mass.
Application December 9, 1944, Serial No. 567,403
6 Claims. (Cl. 36—77)

6. A safety shoe including in its structure an insole comprising two superposed sections, a metal box toe having a base flange interleaved between the two sections, and spurs at opposite sides of said flange clenched in the outer of said insole sections.

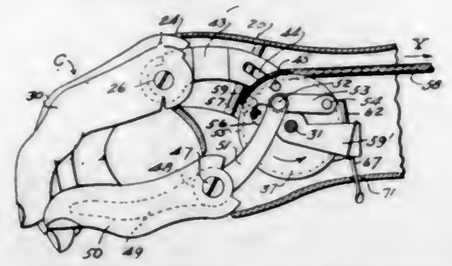


2,409,881
SNUBBER FOR HOISTS
Andrew Meyer, Cleveland Heights, Ohio, assignor to The Cleveland Pneumatic Tool Company, Cleveland, Ohio, a corporation of Ohio
Application August 5, 1943, Serial No. 497,425
8 Claims. (Cl. 192—4)

1. In apparatus of the character described, a pair of adjacent rotatable drums, a friction device associated with one of said drums and adapted to be applied thereto to retard rotation of said one drum, said friction device when set to grip its drum being capable of limited movement with said one drum, and a friction device associated with the second drum to retard rotation thereof

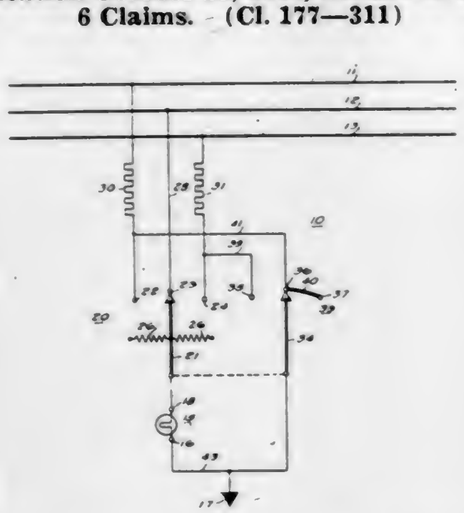
and adapted to be released in response to said limited movement of the first friction device.

2,409,882
ELECTRICAL TRANSFORMER
August Meyerhans, Rieden, near Baden, Switzerland, assignor to Aktiengesellschaft Brown, Boveri & Cie, Baden, Switzerland, a joint-stock company
Application January 26, 1942, Serial No. 428,288
In Switzerland November 23, 1940
3 Claims. (Cl. 175—356)



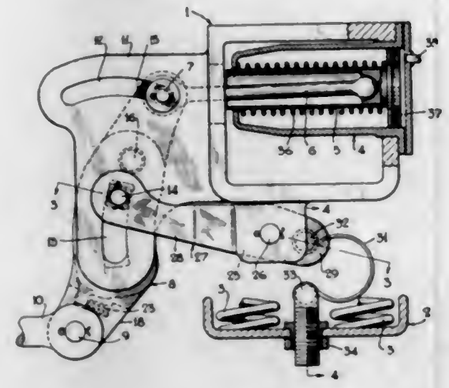
1. A travelling transformer for railroad cars, particularly for very large power outputs and very high voltages comprising an iron core consisting of radially laminated columns and transversely laminated yokes, and primary and secondary windings on the columns, wherein the primary winding surrounds the secondary winding and comprises two axially arranged sections, a central guard ring located between said primary winding sections and two end guard rings contacting the opposite ends of said primary winding sections, the central guard ring serving as the high voltage connection to the primary winding and the end guard rings serving as neutral point connections for the primary winding.

2,409,883
RESINOUS DIBASIC CARBOXYLIC ACID SALTS OF A GUANIDINE AS MOTHPROOFERS
Vartkes Migrdichian, Greenwich, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application February 3, 1940, Serial No. 317,173
13 Claims. (Cl. 167—37)



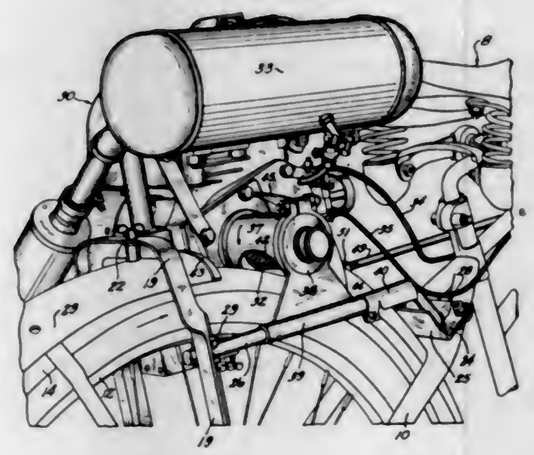
1. A mothproofing composition containing a dixylyl guanidine sebacate, the salt having resinous properties.

2,409,884
ARTIFICIAL ARM AND HAND
Delbert Clark Mollenhour, Mentone, Ind., assignor to Franklin I. Saemann, New York, N. Y.
Application April 4, 1945, Serial No. 586,505
8 Claims. (Cl. 3—12)



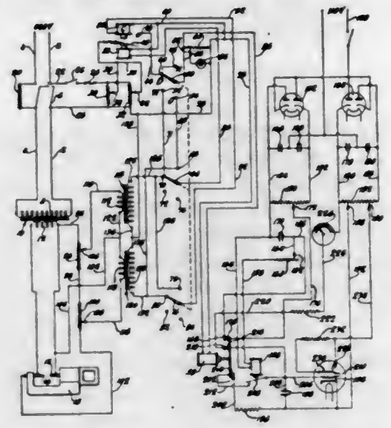
1. In an artificial limb, a hand member having a hollow body, a finger portion and a thrumb portion, at least one of said portions being pivoted to the body to bias toward and from the other, spring actuated means in the body urging said pivotal portion to bias away from the other, said spring actuated means including a rotatable disc having a peripheral groove, a ball engageable in said groove, and a ball guide holding said ball and inclined to lie closer to the disc periphery at one end than at the other, the closer end of the guide being spaced from the disc a distance less than the diameter of the ball.

2,409,885
GROUND DETECTOR
Emil Monori and Conrad B. Myhre, Wilkinsburg, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application October 25, 1944, Serial No. 560,335
6 Claims. (Cl. 177—311)



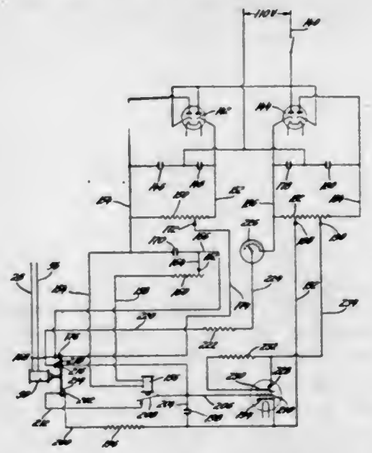
1. In a ground detector system for a 3-wire electrical system having a neutral conductor, a lamp having one terminal grounded, impedance means connected to each of the other conductors, circuit means including a switch normally connecting the other terminal to the neutral conductor and selectively operable to connect it to the impedance means of either of the other conductors, and circuit means including control means normally connecting the grounded terminal of the lamp to one of the other conductors and connecting one of the impedance means to ground, said control means being operable in accordance with operation of said switch to connect said other terminal to the impedance means of a different one of the other conductors.

2,409,886
VARIABLE LOAD BRAKE
Emil G. Mueller, Wilkinsburg, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application April 12, 1945, Serial No. 587,886
10 Claims. (Cl. 188—195)



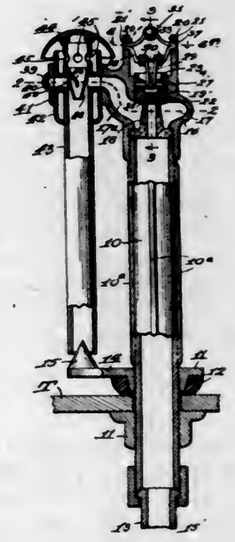
1. In a variable power mechanism, in combination, a lever for transmitting power comprising two parts capable of pivotal movement relative to each other when power is applied to the lever, a fulcrum for said lever shiftable longitudinally of said parts to different positions to vary the power ratio of the lever, means operative to apply power to said lever, the parts of said lever responding to the power applied to said lever as an incident to the operation of said means to engage and hold said fulcrum in any position to which it has been shifted, said fulcrum when engaged by said parts rigidly connecting the parts together.

2,409,887
MOTOR BICYCLE
George F. Murphy, Milwaukee, Wis.
Application December 29, 1943, Serial No. 516,045
5 Claims. (Cl. 180—33)



1. In a motor bicycle having a frame and having a tire-equipped rear driving wheel, a motor driven tire-engaging friction pulley, and slidable means supporting said pulley on the frame for movement in a direction extending longitudinally of the bicycle, said slidable means being so located that the pulley is directed into driving engagement with the tire at a location forwardly of and below the uppermost portion of said tire so that the rotation of the pulley constantly urges said pulley into tighter engagement with the tire during normal operation.

2,409,888
TIMING DEVICE
Jack Ogden, Huntington Woods, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application September 21, 1940, Serial No. 357,794
11 Claims. (Cl. 219—4)

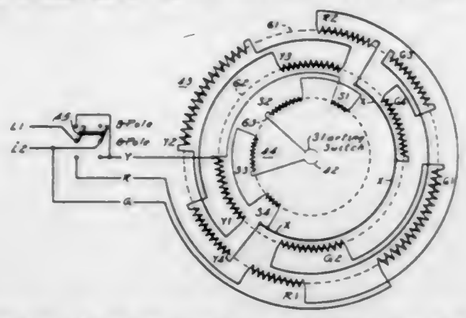


5. In a system for measuring various time intervals in a complete machine cycle, some of the periods being duplicates as far as machine conditions are concerned but appearing at different times in the complete cycle, indicating means, switching means for controlling the energization of said indicating means, control means connected to the machine for actuating the switching means and a second control means superimposed upon the first and energized at desired intervals to cause deenergization of the main control means during duplicate condition periods when measuring the time of one of these.

2,409,889
TIMING DEVICE
Jack Ogden, Huntington Woods, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Original application September 21, 1940, Serial No. 357,794. Divided and this application September 22, 1945, Serial No. 617,991
7 Claims. (Cl. 161—15)

1. In a timing device, a cathode ray tube having a target and control electrode, a condenser connected to said control electrode whereby the charge thereon will alter the pattern on the target, a source of voltage connected to the condenser, a variable resistance connected between the source and the condenser, switching means to control the circuit whereby the condenser is periodically charged and discharged and the pattern on the target is simultaneously varied as the switching means is operated, and automatically operated delay means connected into said circuit to prevent immediate discharge of the condenser upon deenergization of the switching means.

2,409,890
ANTISIPHON BALL COCK VALVE
Jesse C. Owens, Los Angeles, Calif.
Application August 6, 1943, Serial No. 497,602
4 Claims. (Cl. 137—104)



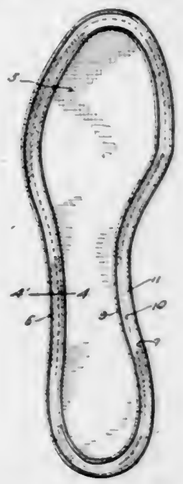
1. The combination with a fluid tank supply pipe, a valve housing mounted thereupon, said housing having primary and secondary chambers and float controlled valvular means for controlling the flow of water from said supply pipe, a short tubular member passing vertically through the secondary chamber in said housing, a tube secured to and passing axially through said short tubular member and depending a substantial distance therefrom, the upper portion of said second mentioned tube being spaced apart from said short tube, radial ducts establishing communication between the secondary chamber and the duct through said second mentioned tube, there being ports providing communication between said radial ducts and the chamber within the lower portion of said short tubular member, and there being ports formed through the wall of the second mentioned tube for establishing communication between the duct through said tube and the chamber in the first mentioned tube above said radial ducts.

2,409,891
VARIABLE-SPEED MOTOR
Lewis C. Packer, Longmeadow, Mass., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application December 9, 1942. Serial No. 468,339
2 Claims. (Cl. 172—278)

2. A self-starting, single-phase, plural-pole-number induction motor, having a stator member having a main winding and a starting winding, and having a rotor member having a secondary winding of a type suitable for a plurality of different pole-numbers, the main winding having a plurality of winding-groups connected together internally of the machine and having a plurality of terminal-leads, the winding-groups being such that the pole-number is changed by changing the manner in which the terminal-leads are connected in a single-phase circuit, externally of the machine, the main winding having

a plurality of circuits including one particular main-winding circuit which is in use in both pole-number connections, but with a reversal of current-flow in that particular main-winding circuit when the connections are changed from one pole-number to the other, the starting winding having such flux-distribution wave-form as to

be capable of effectively operating to start the motor at either pole-number without any change in the starting-winding flux-distribution wave-form, and internal circuit-connections for connecting said starting winding in parallel-circuit relation to that particular main-winding circuit.



2,409,892

SHOE BINDING FOR PLATFORM SOLES

Harry Pecker, Lynn, Mass.

Application December 30, 1944, Serial No. 570,571

2 Claims. (Cl. 36—22)

1. As a new article of manufacture, a binding strip adapted to cover the raw unfinished edge of the platform of a shoe comprising a fabric tape, a finish coat on the fabric tape of a width sufficient to completely cover the edge and to lap over the adjacent margins of the upper and lower surfaces of the shoe platform, an area of uncoated tape along each side edge of the finish coat and a layer of the finish coal along each margin of the tape adjacent the uncoated portion whereby fraying of the side edges of the tape will be restrained.

2,409,893

SEMICONDUCTING COMPOSITION

Wesley W. Pendleton and Leslie E. Frost, Pittsburgh, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

No Drawing. Application April 30, 1945, Serial No. 591,234

7 Claims. (Cl. 201—76)

1. A composition of matter comprising as essential ingredients, in combination, 5 to 18 parts by weight of finely divided natural anthracite coal having more than about 1% and less than 10% volatile matter, from 2 to 15 parts by weight of gum arabic, from about 5 to 25 parts by weight of a monohydric alcohol having from 1 to 4 carbon atoms, ammonia in an amount of the order of ½ of 1% to enable a good suspension to be produced and from 55 to 70 parts of water, the whole forming a suspension.

2,409,894

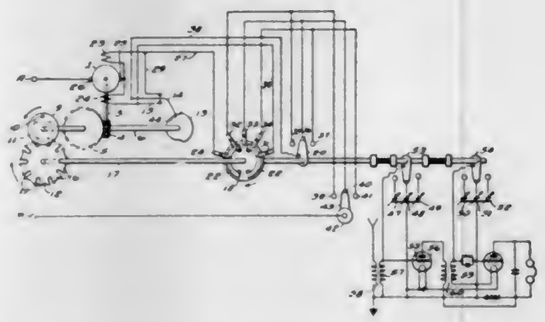
STABILIZED FABRIC AND METHOD OF MAKING THE SAME

Edward C. Pfeffer, Jr., and John A. Tweed, Troy, and Jack Jarmak, White Plains, N. Y., assignors to Cluett, Peabody & Co., Inc., Troy, N. Y., a corporation of New York

No Drawing. Application August 25, 1944, Serial No. 551,250

3 Claims. (Cl. 28—72)

1. Method of preparing a stabilized fabric suitable for shirting and launderable dress goods and having substantially the appearance, feel and draping qualities of shirting and the like fabrics composed of pure spun rayon, which comprises interweaving filling yarns consisting of pure spun rayon with warp yarns consisting of a blend of from 40% to 60% rayon staple and from 60% to 40% cotton staple, thereafter subjecting the woven fabric to an aqueous finishing treatment, and subsequently subjecting the treated fabric to warp-wise compressive shrinkage, thereby stabilizing it in respect to progressive laundry shrinkage.



2,409,895

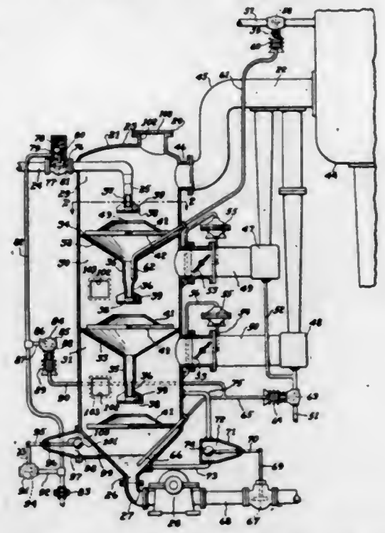
ELECTRICAL POSITIONING SYSTEM

George H. Phelps, Catonsville, Md., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application February 5, 1943, Serial No. 474,829

6 Claims. (Cl. 172—239)

1. In an electrical positioning system, switching means adapted to be positioned in definite steps over a series of contacts, a motor for driving said means, an energizing circuit for said motor including a current source and a circuit control switch in series therewith operated in conjunction with the positioning of said means, said circuit control switch determining also the direction of rotation of said motor, a selector switch adapted to be placed at a remote point for selecting at will the positioning of said switching means to any one of the number of said series of contacts, said selector switch completing the energizing circuit through said control switch to said motor and a hold-over switch maintaining said energizing circuit closed until the positioning of said switching means is fully completed and after said control switch reaches its open circuit position.



2,409,896

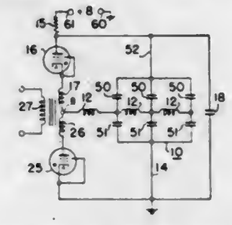
COOLING APPARATUS

John F. Plummer, Jr., Phillipsburg, N. J., assignor to Ingersoll-Rand Company, New York, N. Y., a corporation of New Jersey

Application July 8, 1944, Serial No. 543,983

7 Claims. (Cl. 62—152)

1. In apparatus for cooling a liquid by evaporation, comprising a casing having a cooling chamber and a discharge opening, means for creating a sufficiently low pressure in the chamber to cause the liberation of vapor from the liquid, conduit means for introducing liquid into the chamber, and deflector means lying across the outlet end of the conduit means in spaced relation therewith to cause the liquid to flow through the chamber in the form of a sheet, a divider to cause the formation of an opening in such sheet of liquid for the passage of vapor from one side to another of the sheet.



2,409,897

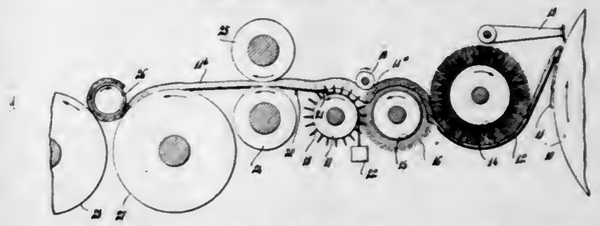
HIGH-FREQUENCY PULSE GENERATOR

John A. Rado, Little Neck, N. Y., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill., a corporation of Illinois

Application February 27, 1945, Serial No. 579,955

2 Claims. (Cl. 260—27)

1. A high-frequency pulse generator comprising, means for supplying a unidirectional potential to said generator having one terminal connected to a common terminal of said generator maintained at a fixed reference potential and having a second terminal by-passed for alternating currents to said common terminal, an energy-storage device including a transmission-line section having an input terminal and having shunt-connected condensers half of which are connected between said second terminal of said potential supplying means and said input terminal while the remaining half thereof are connected between said common terminal and said input terminal, means for effectively connecting said input terminal to said second terminal of said potential supplying means to provide a charging circuit for establishing a predetermined charge on said energy-storage device in a time interval which is short with reference to the minimum period of the generated pulses, means for effectively connecting said input terminal to said common terminal to provide a discharging circuit for said energy-storage device which is electrically equivalent to said charging circuit, means coupled to said charging and discharging circuits for deriving an output pulse of a given polarity and amplitude in response to the charging of said energy-storage device and for deriving an output pulse of the same polarity and approximately the same amplitude in response to the discharging of said energy-storage device, and means for controlling said charging and discharging circuits alternately to charge and discharge said energy-storage device so as to generate output pulses of said given polarity and amplitude and occurring in a predetermined time sequence.



2,409,898

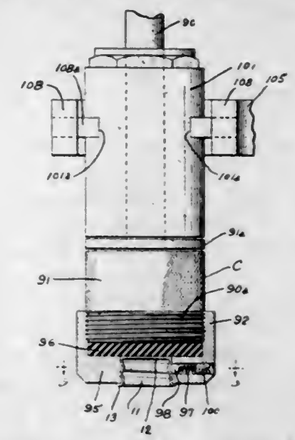
MACHINE FOR FORMING HEAVY SLIVER LAP

Thomas S. Ramsdell, Housatonic, Mass.

Application August 10, 1943, Serial No. 498,129

6 Claims. (Cl. 19—155)

1. A machine for forming a heavy sliver lap which comprises means for removing an ordinary web from a card doffer, movable condensing means having a surface covered with impaling pins, a rotatable member having a peripheral surface adapted to engage the surface of the web and a supporting sheet over which the web is movable by the rotatable member for feeding the web after its removal from the card doffer to the condensing means at a rate faster than the movement of the condensing means, so that the web will accumulate and build up in thickness thereon, and means for stripping the condensed, built up sliver lap from the condensing means.

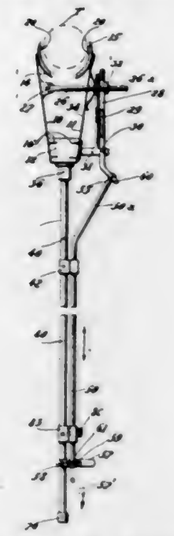


2,409,899

CAP CHUCK

Manuel S. Resina, Brooklyn, N. Y.

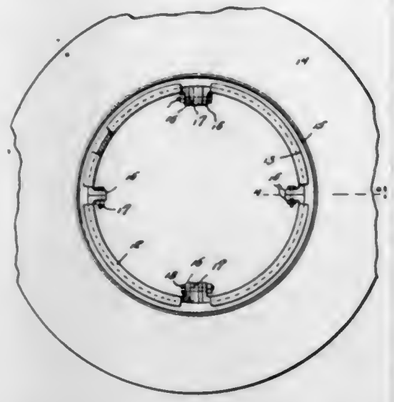
Application June 8, 1944, Serial No. 539,260



11 Claims. (Cl. 226—88)

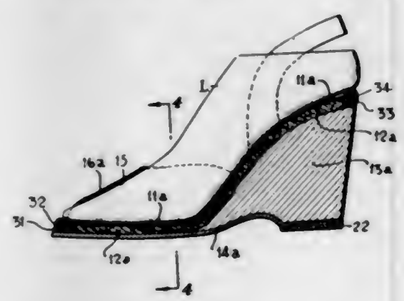
1. In a machine of the character described, a rotating cap applying chuck, said chuck having

an aperture formed in the base thereof, said chuck having a pluralty of radiating bores formed in the wall surrounding the aperture, said bores terminating at the face of said aperture, rollable cap gripping means located within said bores and means within said bores for resiliently projecting said cap gripping means into said aperture.



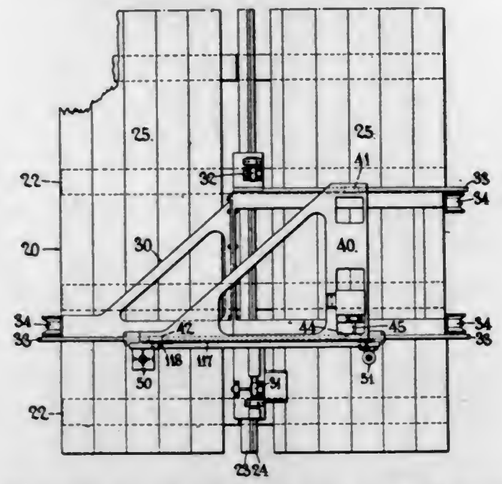
2,409,900
FLUORESCENT LIGHTING FIXTURE SERVICING IMPLEMENT
Robert T. Riker and Joseph H. Molat, Brooklyn, N. Y.
Application January 24, 1945, Serial No. 574,304
6 Claims. (Cl. 294—20)

1. A fluorescent lighting fixture servicing implement comprising a first spring arm and a second spring arm constituting a pair of substantially vertically disposed spring arms normally spaced apart, a relatively long handle, a support for said arms disposed at one end of said handle so that the upper ends thereof will be free, an arcuate jaw member fixed to said free end of each spring arm, said jaw members being in opposed relationship and adapted to clamp and hold between them the elongated glass tube of said fluorescent lighting fixture when said spring arms are urged towards each other, and means for causing said spring arms to move toward each other, said last named means comprising a substantially horizontally disposed rod member having one end thereof pivotally mounted on said first arm and the opposite end passing freely through an opening in said second arm, an abutment on said rod member, adjacent the free end thereof, an extending bracket portion on said support, a substantially vertically disposed rigid member pivotally mounted at the lower end thereof on said bracket and having an opening adjacent the upper free end thereof through which said horizontal rod member freely passes, said upper free end of said rigid member being disposed between said second arm and said abutment, so that pivotal movement of said rigid member in a direction toward said abutment will cause the resilient movement of said first arm toward said second arm.



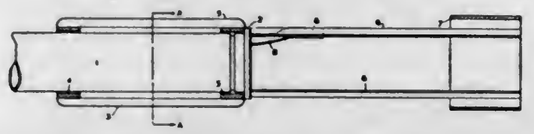
2,409,901
SEPARABLE RIM
Lyman B. Russell, Jr., Edinburg, Tex.
Application March 24, 1944, Serial No. 527,943
2 Claims. (Cl. 152—405)

1. A separable tire rim comprising a continuous annularly extending rim section, a plurality of transversely split rim segments, said continuous annular section and said transversely split rim segments cooperating to form a complete tire rim, cooperatively opposed annularly extending radially inwardly projecting flanges on the abutting edges of said continuous annular section and transversely split rim segments, means detachably connecting the opposed flanges to each other, cooperatively opposed and abutting transverse radially inwardly projecting flanges on the



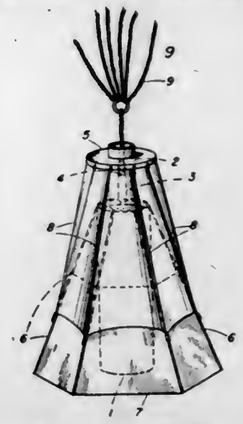
adjacent edges of said transversely split rim segments, means detachably connecting the respective cooperatively opposed and abutting transverse flanges together, and separate detachable spacing members interposed between at least one pair of said transverse rim segment flanges, said detachable spacing members being releasably held as interposed between said last-named flanges by the same means which connect the flanges detachably together.

2,409,902
SHOE
Theodore Saval, Sierra Madre, Calif.
Application June 1, 1943, Serial No. 489,263
3 Claims. (Cl. 36—19.5)



1. An open shoe comprising, a lined upper in which the lining is unattached to the covering in the insole region and the covering is formed with an integral marginal extension depending below the adjacent edge of said lining to form an edge covering for a pad, a sock lining insole secured to said upper lining, a strip extending from said insole along the space where said upper is open to form an auxiliary pad cover for the edge portion not covered by the outer material of the upper, a cushioning pad placed against the lower surface of said insole, the free edges of said outer material of the upper end of said strip being turned in and attached to the lower surface of said pad, a heel secured to the heel portion of said pad and turned in edges, and an outsole secured to the toe portion of said pad and turned in edges.

2,409,903
MACHINE FOR SHAPING STOCK
Arthur A. Schwartz, Buffalo, N. Y., assignor to Bell Aircraft Corporation, Buffalo, N. Y.
Application February 6, 1941, Serial No. 377,640
4 Claims. (Cl. 90—13.2)



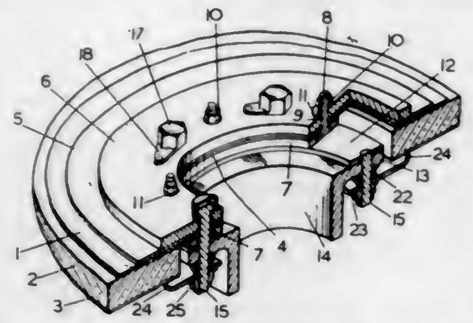
1. A duplicating shaping tool including a templet and stock piece supporting platform, a carriage movable relative to said platform and mounting a shaping control tracer in registry with the contours of templet means to be traced, work shaping means mounted upon said carriage in fixed relation therefrom and adapted to duplicate contours of said templet when traced by said tracer, carriage movement control means comprising a lever mounted upon said carriage adapted to be manually urged in the desired direction of carriage movement for partially providing movement thereof relative to said platform, power supply means operatively coupled with said carriage for assisting movement of said carriage relative to said platform, said power supply means being controlled by movements of said control lever relative to said carriage under forces applied manually thereto to complement said manually applied carriage moving forces, and control means operatively associated with said tracer and said power supply means for interrupting operation of the latter whenever said manually directed forces tend to move said carriage in such manner that said tracer bears normally against templet contoured portions.

2,409,904
ROCKET
Conrad David Schermuly, Alfred James Schermuly, and Charles Schermuly, Parkgate, Newdigate, England, assignors to The Schermuly Pistol Rocket Apparatus Limited, Parkgate, Newdigate, Surrey, England, a British company
Application June 13, 1944, Serial No. 540,093
In Great Britain May 11, 1943
1 Claim. (Cl. 102—50)

A rocket comprising a casing, two bands slidable on said casing, two rods secured to said bands and holding them in spaced relation, a stop formed by a flange at the rear end of said casing to limit rearward sliding movement of said bands, bars secured to and extending rearwardly of said bands, a larger band, of greater diameter than said stop, secured to the rear ends of said bars, and a locking strip secured to one of said bars and adapted to ride over and drop behind said stop.

2,409,905
ILLUMINATING FLARE
Conrad David Schermuly, Alfred James Schermuly, and Charles Schermuly, Parkgate, Newdigate, England, assignors to The Schermuly Pistol Rocket Apparatus Limited, Parkgate, Newdigate, England
Application June 20, 1944, Serial No. 541,174
In Great Britain November 27, 1942
3 Claims. (Cl. 102—35)

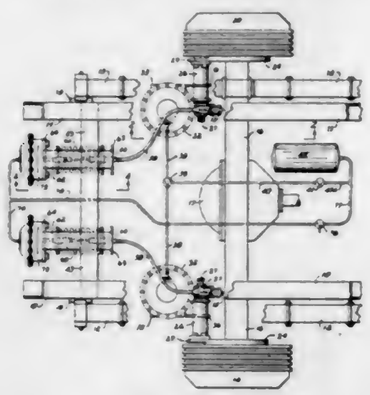
1. A parachute-supported flare candle comprising a casing having an extension thereon, a plate movably mounted on said extension, means arranged to be operated by the opening of a parachute to raise said plate on said extension, a set of ribs hinged at one end to the upper end of said casing, a second set of ribs having each rib hinged at one end to the edge of said plate and at the other end to a rib of said first set intermediate the ends thereof and opaque material on each set of ribs to provide a screen for said flare candle when said ribs are raised upon the raising of said plate.



2,409,906
SYNTHETIC RESIN
Milton J. Scott, Springfield, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application March 16, 1943, Serial No. 479,360
27 Claims. (Cl. 260—42)

7. A composition of matter comprising the heat reaction product of ingredients comprising an aminotriazine-aldehyde addition product and a primary mono-amino-diphenyl free from aldehyde-reactive substituents, the molecular proportions of the amino-diphenyl being at least equal to the molecular proportions of the aminotriazine but not exceeding the molecular proportions of aldehyde used to form said addition product.

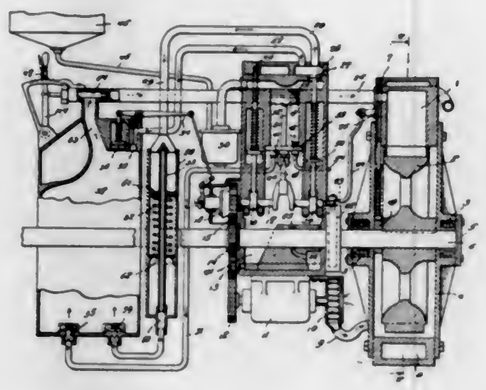
2,409,907
MEANS FOR SECURING FITTINGS TO CONTAINERS
Leonard Shakesby and Charles Andrew Roy Sutherland, Wolverhampton, and Sydney Hartley Smith, Manchester, England, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain
Application April 7, 1943, Serial No. 482,218
In Great Britain March 5, 1942
12 Claims. (Cl. 285—25)



1. Means for securing filler caps and like fittings to a fluid container having a filling aper-

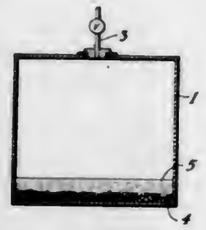
ture, comprising an inner annular member and an outer annular member between which an edge of the apertured container material is held; an apertured filler fitting registering with the container filling aperture and having a flange disposed in alignment with said outer annular member; bolts securing said annular members and

said filler fitting flange together and passing through oversize holes in said inner annular member to permit movement of the bolt shanks for ready engagement into the apertures in the component parts during assembly; and means to engage said bolts and limit rotary and longitudinal bolt movement.



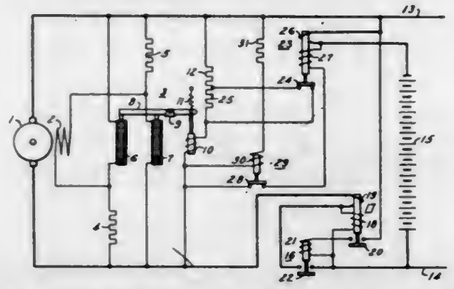
2,409,908
SAFETY MECHANISM FOR BRAKES
Isaac W. Simpkins, Charlotte, N. C.
Application August 6, 1945, Serial No. 609,138
2 Claims. (Cl. 188—152)

1. In a vehicle having a pair of wheels equipped with conventional brakes having a brake lever and a diaphragm housing and piston connected to the lever and having a source of fluid under pressure for admission to the diaphragm housing for moving the lever to apply the brakes, a second lever connected to the first lever and having a cable extending therefrom, a compression spring secured to the cable and normally tending to move the brake lever to apply the brakes, a connection between the spring and the source of compressed fluid for normally holding the spring against actuation of the second lever as long as a predetermined pressure is present in the source of compressed fluid.



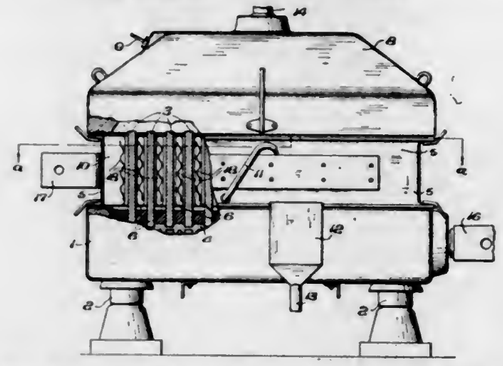
2,409,909
INTERNAL-COMBUSTION TURBINE
Fred J. Smith and Joseph Isaac, Sault Sainte Marie, Mich.
Application May 29, 1945, Serial No. 596,454
4 Claims. (Cl. 60—41)

1. A turbine comprising a housing, a turbine wheel rotatably mounted within said housing, a fluid nozzle positioned adjacent the periphery of said wheel, a firing chamber in said housing communicating with said nozzle, a compression tank, means actuated by said wheel for forcing air and combustible liquid fuel into said compression tank, and conduit means for admitting the



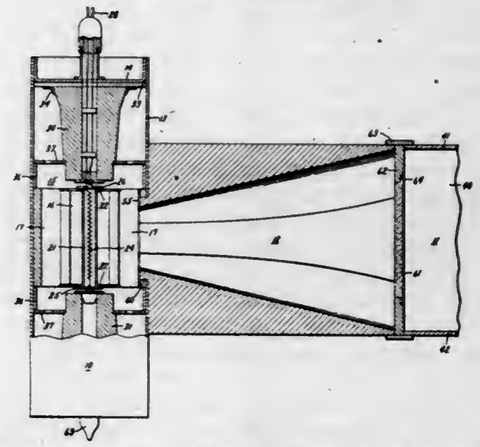
mixture of air and fuel into said firing chamber, said means for forcing air and fuel into said compression tank having a clutch means in association therewith adapted to disengage said wheel from said forcing means responsive to an increase in pressure in said compression tank above a predetermined value.

2,409,910
METHOD OF FILLING CONTAINERS WITH RESINOUS FOAM
Kenneth E. Stober, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a corporation of Michigan
Application November 29, 1944, Serial No. 565,762
7 Claims. (Cl. 18—48)



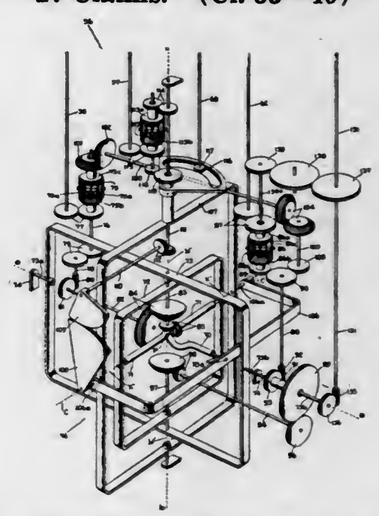
1. In a method of filling a container with a cellular mass of a solid vinyl aromatic resin, the steps of introducing into the container a granular vinyl aromatic resin in amount corresponding to the resin content of the cellular mass with which the container is to be filled, thereafter introducing into the container a normally gaseous agent capable of being dissolved by the resin to swell the latter to a gel, said agent being introduced at superatmospheric pressure and in an amount sufficient to form a gel of the resin which is capable of flowing and from which such agent can be vaporized substantially completely upon release of the pressure with resultant swelling and cooling of the resin to form a cellular mass, maintaining the mixture within the container at superatmospheric pressure until such gel is formed, and thereafter venting vapors from an upper section of the container to cause formation of the cellular mass of the vinyl aromatic resin within the container.

2,409,911
CONTROL SYSTEM
Robert M. Strong, Wilkinsburg, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application March 23, 1945, Serial No. 584,365
8 Claims. (Cl. 320—22)



1. A battery-charging system comprising a variable-voltage source of direct current, voltage-regulating means for said source, means for connecting a battery to said source, relay means for controlling said voltage-regulating means to change the voltage applied to the battery, and means independent of the charging current flowing to the battery for effecting operation of said relay means to cause a relatively high voltage to be applied to the battery for charging, said relay means being adapted to effect a reduction in the voltage applied to the battery in response to decrease in the battery-charging current below a predetermined value.

2,409,912
ELECTROLYTIC ALKALI CHLORINE DIAPHRAGM CELL
Kenneth E. Stuart, Niagara Falls, N. Y., assignor to Hooker Electrochemical Company, Niagara Falls, N. Y., a corporation of New York
Application May 28, 1942, Serial No. 444,770
4 Claims. (Cl. 204—266)



2. An electrolytic alkali-chlorine cell cathode structure comprising a liquid-retaining wall carrying the cell current and a thin, elongated, hollow foraminous cathodic electrode projecting therefrom and cooperating with a pair of electrically interconnected anodic electrodes on each side thereof; said cathodic electrode having a top wall and flat, parallel, spaced side walls, of woven wire screen, in edgewise electrical communication with said retaining wall, the wires of the screen composing said side walls communicating with said retaining wall by pressure contact with intermediate wires welded thereto; in combination with means serving as a supplementary unipolar cathodic electrode acting through the meshes of said side walls, comprising an electrically continuous metal plate, between said side walls, butted against, welded to and projecting from said retaining wall.

2,409,913
WAVE GUIDE STRUCTURE
Lewi Tonks, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application February 14, 1944, Serial No. 522,241
13 Claims. (Cl. 178—44)

1. A wave guide of the hollow pipe type defined by a block of metal provided with a tapered longitudinal opening, every cross section of said opening taken at longitudinally positioned points thereof comprising a narrowed central portion and being dimensioned so that a uniform wave guide of said cross section would afford the same cut-off frequency to electromagnetic waves.

2,409,914
SYSTEM AND APPARATUS FOR GUNFIRE CONTROL
Frank E. Valentine and Walter F. Skillin, Schenectady, N. Y., assignors to General Electric Company, a corporation of New York
Application March 20, 1935, Serial No. 12,006
17 Claims. (Cl. 33—49)

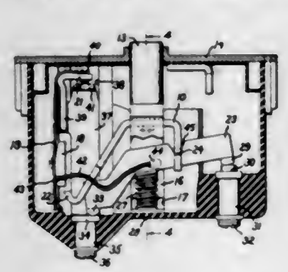
1. Gun directing apparatus for a gun supported on a mount whose angular position varies comprising a member adjustable about a set of train and elevation axes, means for adjusting said member about said axes in accordance with the calculated adjustments to be applied to said gun in train and elevation respectively reckoned with reference to a set of planes fixed with reference to the earth, means for inclining the positions of said axes with reference to said mount in accordance with the inclination of the trunnions of said gun due to inclination of said mount so as to cause said member to assume a position with reference to mutually normal planes fixed relatively to the mount corresponding to the po-

sition said gun assumes with reference to said set of planes fixed with reference to the earth when said calculated adjustments are applied to it and said mount is inclined, and means for measuring the angular movement of said member with reference to said mutually normal planes.

14. Gun directing apparatus for a real gun mounted on ship board comprising a sighting device, means mounting said sighting device for adjustment on elevation and train axes angularly fixed with reference to said ship, a control member, a driving connection between said control member and said sighting device including a differential device, a mimic gun, means mounting said mimic gun for adjustment on an elevation axis, means for adjusting said mimic gun on said axis to introduce the calculated adjustment to be applied to said real gun in elevation measured with reference to the true horizontal, means continuously inclining said axis with relation to a set of planes fixed with reference to said ship in accordance with the angular movement of the trunnions of the real gun in the vertical plane through them as the angular position of said ship varies, and a driving connection between said mimic gun and said differential device arranged so that the positions assumed by said mimic gun with relation to said fixed planes when adjusted on its axis in elevation to introduce said calculated adjustment and when said axis is inclined in accordance with said angular movement of said trunnions of the real gun are applied to said sighting device through said differential device.

2,409,915
PROCESS FOR PREPARING RUBBERLIKE MATERIALS
Byron M. Vanderbilt, Cranford, and Ralph F. Howe, Elizabeth, N. J., assignors, by mesne assignments, to Jasco, Incorporated, a corporation of Louisiana
No Drawing. Application November 30, 1940, Serial No. 368,106
1 Claim. (Cl. 260—84.5)

In an emulsion polymerization process for the polymerization of a mixture of butadiene and acrylonitrile in the ratio of about three parts by weight of butadiene for each part by weight of acrylonitrile, the steps in combination of mixing the mixture of butadiene and acrylonitrile with water in the presence of an emulsifying agent comprising a water soluble soap and a peroxide polymerization catalyst, agitating the material to maintain the mixture in emulsion in the water, setting the temperature of the mixture at approximately 25° C., holding the temperature at approximately 25° C. for a time interval of approximately four hours, then raising the temperature to approximately 30° C. for a further time interval of approximately eight hours, then raising the temperature to approximately 40° C. for a further time interval, maintaining the pH value of the material within the range between 8.1 and 8.8 during the entire polymerization reaction, cooling the material at the end of the polymerization, and separating the polymer from unpolymerized olefinic material.



2,409,916
FIREARM CLEANING ROD CENTRALIZER
Charles W. Varcoe, Bethel, Conn.
Application September 14, 1943, Serial No. 502,270
1 Claim. (Cl. 15—104.165)

A cleaning device for firearms including a cleaning rod of sufficiently smaller diameter than the bore of the barrel so as to be spaced from it on all sides when in the bore, a swab on said rod for cleaning the bore of the barrel, a hand grip on the rod for moving the swab through the bore, a guiding and centralizing member for said rod provided with a longitudinal straight passage circular in cross section and substantially the diameter of the rod in which the rod has a sliding guiding fit, and said member including a body portion providing a hand grip and provided with a

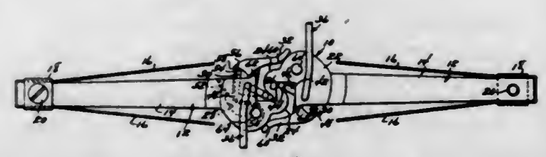
cone shaped recess in one end communicating with said passage and adapted to receive the end of the barrel, and said recess being of larger diameter than the barrel at its larger end and smaller than the barrel at its smaller end so that the end of the barrel engages the inclined side walls of the recess intermediate its ends to center the said passage and rod in alignment with the bore to prevent rubbing of the rod on the surface of the bore during the cleaning operation.

2,409,917
CIRCUIT BREAKER
Fred G. von Hoorn, Nichols, Conn., assignor to General Electric Company, a corporation of New York
Application February 26, 1943, Serial No. 477,222
11 Claims. (Cl. 200—116)

2. A circuit breaker comprising an operating member, supporting means for said operating member mounting said operating member for movement in a predetermined direction, a switch member extending across said direction of movement, pivot supporting means on said operating member for pivotally supporting said switch member on said operating member at a point intermediate the ends of said switch member, a stop on said operating member for a first end of said switch member, said stop being spaced from said pivot transversely of said movement, a spring bearing on said switch member at a point between said pivot and said stop for biasing said switch member into engagement with said stop and for biasing said switch member and operating member to an open circuit position, a stationary contact in position to be engaged by the other end of said switch member when said operating member is moved toward a predetermined closed circuit position to compress said spring, said switch member thereafter upon continued movement of said operating member to said closed circuit position pivoting on said contact and said pivot so that said first end is moved away from said stop against the force applied by said spring, and means for engaging and holding said operating member in said closed circuit position against the force of said spring.

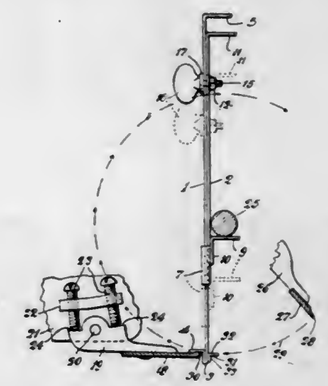
9. A circuit breaker comprising a pair of stationary contacts, movably mounted switch contact means, means biasing said switch contact means in disengaged relation with said stationary contacts, said switch contact means being movable into engagement with said stationary contacts to form a circuit between them, current responsive means for holding said switch contact means in a predetermined position in engagement with only one of said stationary contacts, and electric connections including said current responsive means in an electric circuit through said switch contact means.

2,409,918
TWISTER TRAVELER
Philip C. Wentworth, Providence, R. I., assignor to National Ring Traveler Company, Pawtucket, R. I., a corporation of Rhode Island
Application December 13, 1945, Serial No. 634,732
11 Claims. (Cl. 57—120)



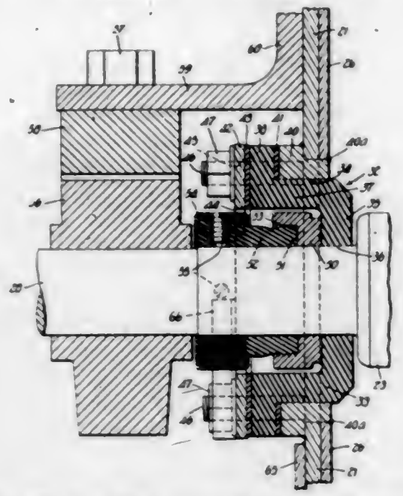
1. A double-oval twister traveler capable of operating in either direction on a vertical ring, said traveler being formed from a strip of material the ring-contacting face of which is comprised by two spaced parallel oval shaped sections extending longitudinally of the traveler.

2,409,919
LOW DENSITY GRANULAR OR POWDER EXPLOSIVES AND THEIR MANUFACTURE
John Whetstone, West Kilbride, Scotland, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application September 19, 1942, Serial No. 458,993. In Great Britain September 15, 1941
9 Claims. (Cl. 52—21)



1. A process for the manufacture of low density blasting explosives which comprises emulsifying a molten easily fusible organic explosive with the assistance of an emulsifying agent in an aqueous medium that comprises a saturated solution of ammonium nitrate carrying solid ammonium nitrate in suspension and is free from readily hydratable salts, this medium being adapted to yield a pourable emulsion at the emulsification temperature, congealing and granulating the resulting aqueous emulsion and drying the resulting granules at a temperature insufficient to cause them to soften.

2,409,920
AUTOMATIC SCALE MODEL COUPLER
August R. Wicher, Chicago, Ill.
Application January 7, 1944, Serial No. 517,463
3 Claims. (Cl. 213—105)



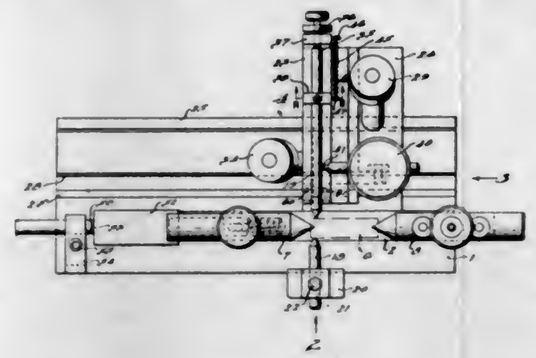
1. A coupler of the type described, comprising two pivotally mounted coupler heads, each terminating in a coupling hook engageable with the other coupling hook, camming faces on the respective heads, tensioning members pivotally connected with each head and engaging the camming face on the other head to hold said coupling hooks in connecting engagement, and means including portions constituting pivots for the respective tensioning members pivotally connected with each head and having a part lying between the two jaws to pry the same apart when either or both are pivoted in a predetermined direction.

2,409,921
GAUGING MEANS FOR LAWN MOWERS
Frank D. Wulff, Chicago, Ill.
Application November 23, 1944, Serial No. 564,836
3 Claims. (Cl. 33—181)

1. A gauging means for a lawn mower which has a frame carrying a relatively adjustable stationary blade and a rotary blade rotatable on a shaft carried by said frame; said gauging means comprising two relatively flat and elongated members assembled in face-to-face relation for longitudinal sliding movement with respect to each other, one of said members having a laterally-extending toe adjacent the lower end thereof with a flat lower surface adapted to be placed on the upper surface of the stationary blade of the mower and having a laterally-extending finger piece at the upper end thereof; the other of said members being of lesser length than said first mentioned member and having a laterally extending toe adjacent the lower end thereof disposed at that side of the assembled members opposite that from which the toe on the first-mentioned member extends, said toe of the second-mentioned member having a flat upper surface adapted to be placed beneath the shaft of the rotary blade of the mower, and said second-mentioned member having a laterally-extending finger piece at the upper end thereof and disposed at the same side of said member as the laterally extending toe thereof; one of said members having relatively short laterally-extending, reversely curved guide flanges along the side edges thereof engaging the side edges of the other member to maintain the members in assembled relation and to permit longitudinal sliding movement of said members with respect to each other; and clamping means connected to said members for holding them in adjusted relation, said clamping means comprising a threaded part fixed to one of said members, a clamping element threaded into said part and extending through an elongated slot provided in the other of said members and also having a clamping head for clamping engagement with said last-mentioned member.

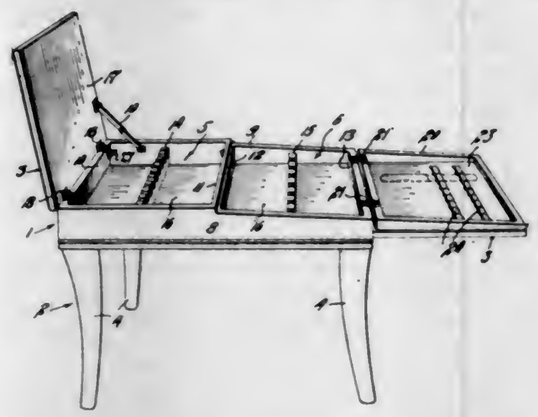
2,409,922
SHAFT BEARING SEAL
Erich R. Zademach, Elizabeth, and William W. Clarke, Summit, N. J., assignors to Metalwash Machinery Company, Newark, N. J., a copartnership
Application August 18, 1942, Serial No. 455,179
7 Claims. (Cl. 286—11)

1. A shaft sealing construction comprising a wall provided with a corrosion-resistant inner surface and having a shaft opening, a mounting ring of corrosion-resisting material sealed in the opening and extending throughout the bore of said opening and continuously joined to both the inner and outer surfaces of the wall, a rubber wall member extending across the opening and provided with a bore rotatably fitting the shaft, means for mounting the wall member on the wall to form a fluid-tight continuous connection with the mounting ring, and sealing means mounted on the shaft including a sealing member having an annular sealing face bearing slidably against the wall member to form a sealing joint and a fluid-tight connection between the sealing member and the shaft.



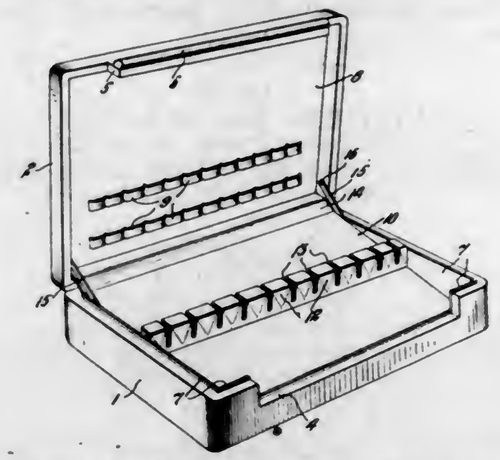
2,409,923
PROCESS OF FORMING IODINE IMAGES
Arthur Barnes, Waltham, and Helen P. Husek, Allston, Mass., assignors to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware
Application January 12, 1944, Serial No. 517,982
54 Claims. (Cl. 95—88)

1. The method of producing an iodine image, which comprises forming the image in silver in a permeable, relatively water-insoluble carrier, transforming said silver image to an image formed of a relatively water-insoluble oxidizing agent, and reacting said last-named image with an iodide in the presence of a solvent for said water-insoluble oxidizing agent which dissolves the latter and causes it to release iodine from the iodide whereby the iodine which is released replaces the oxidizing agent to form an image in iodine.



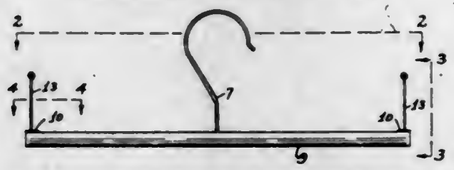
2,409,924
THREAD CHECKER
Russell E. Bauer, Detroit, Mich.
Application November 10, 1944, Serial No. 562,752
3 Claims. (Cl. 33—199)

3. A device for measuring and checking threaded workpieces comprising a base, a workpiece supporting member, center mounting members on said supporting member and adapted to mount a centered workpiece therebetween, means mounting said supporting member on said base for movement along and tilting movement transversely to the longitudinal axis of said workpiece, said last-named means including facing race-



ways formed on said supporting member and said base with ball members interposed therebetween, a pair of oppositely disposed thread contact members mounted on said base and positioned to engage the thread of the workpiece, means movably mounting one of said contact members, and indicator means mounted on said base and actuated by movement of said one of said contact members.

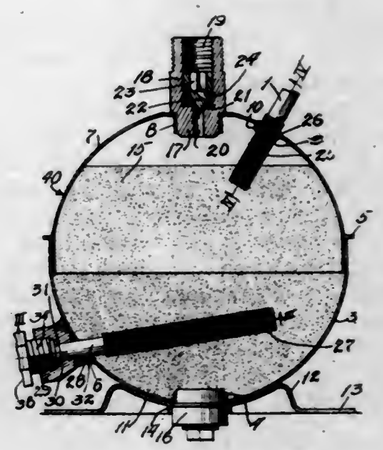
2,409,925
DISPLAY TABLE
Richard A. Bloom, Kenwood Station, N. Y., assignor to Oneida, Ltd., Oneida, N. Y., a corporation of New York
Application August 17, 1944, Serial No. 549,918
2 Claims. (Cl. 312—163)



1. An article of furniture for holding flatware and the like, comprising, in combination, a lower supporting means and an upper container part supported thereby at table height, the said upper part comprising adjacent compartments for display and storage of articles, hinged lids for said compartments providing when in closed position a flat horizontal upper table top surface for the article of furniture, and one of said compartments having walls divided along an outwardly and downwardly slanting plane of division with the upper portions of the walls attached to the lid so as to form upper and lower sub-compartments, hinged means joining the upper and lower portions of the outer wall of the last said compartment, whereby the last mentioned compartment when its lid is open forms together with the lid display compartments having outwardly and downwardly slanting walls.

2,409,926
DISPLAY CHEST
Richard A. Bloom, Kenwood Station, N. Y., assignor to Oneida Ltd., Oneida, N. Y., a corporation of New York
Application August 17, 1944, Serial No. 549,919
2 Claims. (Cl. 206—75)

1. A chest for flatware and the like comprising in combination, a body, a lid hingedly secured thereto and having article holding means on its inner surface, an article holding panel in said body and forming a floor therefor, fabric covering for said article holding means and for said panel and extending therebetween to connect the same, and means connecting said panel to said lid for raising the panel edge adjacent the lid hinge into position substantially level with said hinge and moving said panel into tilted position when said lid is open.



2,409,927
GARMENT HANGER
Otis C. Byrket, Richmond, Ind.
Application October 30, 1945, Serial No. 625,474
2 Claims. (Cl. 223—96)

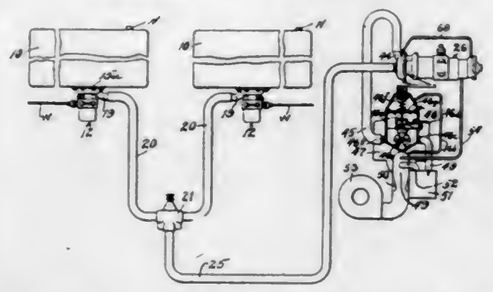
1. In a garment hanger in combination with a central supporting bar, a pair of rods lying on each side of and parallel with the supporting bar, a pair of guide members extending vertically on each end of the bar, a pair of leaf springs having openings therein through which the guide members extend, the ends of the leaf springs extending into slots in the ends of the rods for rigid attachment to the rods, the leaf springs being curved downwardly at their ends and having their central portions resting upon the upper face of the supporting bar, the length of the leaf springs being sufficient to hold the rods out of normal contact with the bars.

2,409,928
COMBINATION RECEIVER AND DEHYDRATOR
Martin T. Cahenzli, Jr., Chicago, Ill., assignor to The Harry Alter Company, Chicago, Ill., a corporation of Illinois
Application November 18, 1943, Serial No. 510,731
7 Claims. (Cl. 62—115)

2. In a vapor compression type of refrigerating system a combination refrigerant receiver and dehydrator unit connectable in the refrigerant line of the system, said unit comprising a housing, an air purge means on said housing, means for filling the housing, a refrigerant dehydrating compound in said housing filling the major portion thereof, tube members projecting into the

housing to permit a flow of refrigerant through the housing and through the compound therein to dehydrate the refrigerant, and screens on said tube members within the housing of a mesh permitting the refrigerant to pass therethrough but preventing entrance of the compound into the refrigerant line of the system.

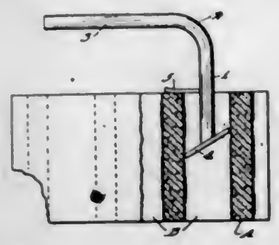
2,409,929
APPLIANCE
Harold Cohen, Elizabeth, N. J.
Application January 23, 1945, Serial No. 574,092
3 Claims. (Cl. 248—230)



1. An appliance for detachably supporting a standard for turning movement on parts of a fixed structure, said appliance comprising a bearing sleeve adapted to loosely surround the standard, a fixed jaw on the sleeve, a hinged jaw on said fixed jaw cooperating with the latter to engage one of said parts of the fixed structure, means to secure the hinged jaw to the sleeve in functioning position, and means on the fixed jaw to engage other parts of said fixed structure to prevent the appliance from turning with respect to said structure.

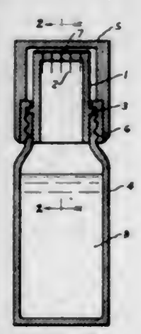
2,409,930
TREATMENT OF PRIMARY OLEORESIN ACIDS
Richard F. B. Cox, Wilmington, Del., assignor to Hercules Powder Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application February 16, 1943, Serial No. 476,091
9 Claims. (Cl. 260—101)

1. A method for the preparation of acidic compositions which comprises subjecting a material consisting substantially entirely of primary oleoresin acids containing levopimaric acid, in solution in a volatile solvent selected from the group consisting of paraffin hydrocarbons and cycloparaffin hydrocarbons, to reaction with maleic anhydride at a temperature between about 0° C. and 80° C., to cause the formation of a precipitated crystalline maleic anhydride-resin acid adduct, separating the crystalline precipitate from the solution, extracting the solution with dilute aqueous alkali to remove any residual maleic anhydride and compounds thereof, and recovering a resinous material from the residual solution.



2,409,931
FUEL SYSTEM
Russell R. Curtis, Dayton, Ohio, assignor to Curtis Pump Company, Dayton, Ohio, a corporation of Ohio
Application June 4, 1943, Serial No. 489,651
14 Claims. (Cl. 158—36.3)

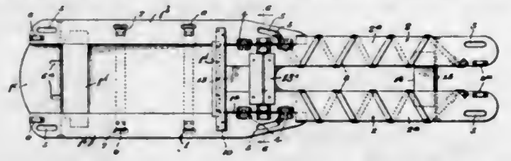
1. In a fuel system adapted for high altitude aircraft performance, an emergency electric motor-booster pump unit having a pump inlet and an outlet in constant communication with the inlet, a main fuel pump having an inlet communicating with the outlet of the emergency booster pump and having a by-pass therearound, an air supercharger, a carburetor receiving fuel from the main pump, an engine intake manifold receiving air and fuel from the supercharger and carburetor, said electric motor of the emergency booster pump unit having a shunt field, a centrifugal governor driven by said shunt field motor having contact points in the emergency electric motor circuit that are mounted for swinging radially outward under the influence of centrifugal force, a diaphragm exposed on one side to discharge pressure of said emergency booster pump and exposed on the other side to pressure in the intake engine manifold at the point where the fuel and air are mixed, means controlled by said diaphragm for regulating the radial position of one of said contact points, and a resistance circuit adapted to be placed in series with the shunt field of the electric motor driving the emergency booster pump whenever said contact points are separated whereby the field is weakened and the motor speed is increased.



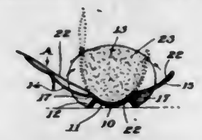
3. A pump and motor unit comprising an electric motor, a pump impeller driven by said electric motor, means defining a pumping chamber surrounding said impeller and having a central inlet and a peripheral outlet, a centrifugal governor driven by said electric motor including swingable contacts adapted to yield under centrifugal influence to control the speed of the motor, and means for automatically adjusting the contacts of said governor in accordance with the pump discharge pressure to control the speed of the motor for maintaining a constant pump discharge pressure.

2,409,932
BUILDING BLOCK LIFTER
Frank A. Dostal, New Ulm, Minn.
Application June 20, 1945, Serial No. 600,483
4 Claims. (Cl. 294—15)

1. In a lifting device for building blocks and the like, having vertical openings therein, a shank bent substantially at right angles to provide a handle portion, and an enlarged gripping plate fixed to the lower end of said shank and extending backwardly under said handle at an obtuse angle to said shank.



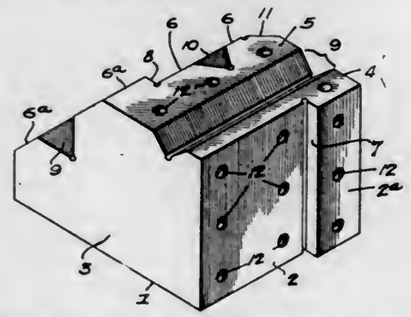
2,409,933
DISPENSING CONTAINER
Harry Fleisher and Jacob Homer, Staten Island, N. Y.
Application January 10, 1945, Serial No. 572,170
3 Claims. (Cl. 15—139)



1. A dispensing device for applying a fluid to work comprising a supply vessel and a closure for the latter; said closure comprising a longitudinally rounded shank portion, a transition portion and a laterally rounded ridge portion; said ridge portion being segmented into a plurality of tines normally closed together and adapted to be spread apart by flexing said tines in a direction substantially parallel to said ridge portion and thereby providing communication between said supply vessel and said work for enabling contents within the supply vessel to be discharged between said tines to said work.

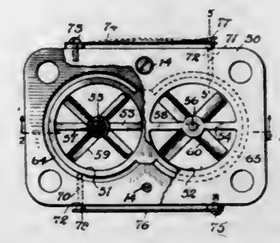
2,409,934
FOLDING STRETCHER
Claude C. Haggard and John B. Meehan, Medford, Oreg.
Application October 18, 1943, Serial No. 506,730
2 Claims. (Cl. 5—82)

1. A stretcher comprising a body section provided at its inner end with a recess, a leg section having its inner end reduced and extending into the recess of the body section, a pivot rod carried by said reduced portion intermediate its ends and mounted in bearings carried by the body section, the inner end of the main portion of the leg sections adapted to engage the inner end of the body section, and a latch connection between the inner reduced end of the leg section and the body section.



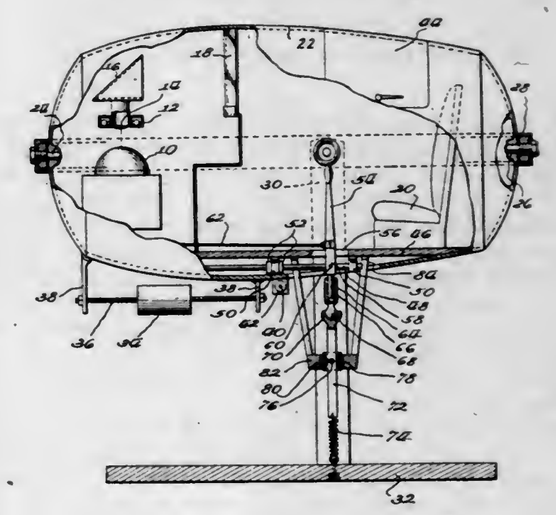
2,409,935
CIGARETTE MAKER
Arnie J. Hongo, McNeal, Ariz.
Application January 4, 1944, Serial No. 516,954
2 Claims. (Cl. 131—58)

1. A device of the kind described, comprising a trough-like base having legs extending the full length of the trough, end heads on the base, swingable compressing sections pivoted to the heads to be close to the trough formation of the base, and a swingable section carried by one of the first named sections.



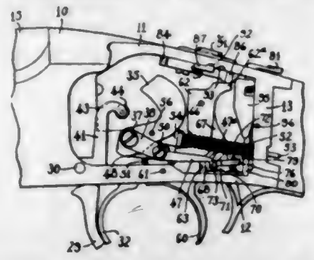
2,409,936
TOOLMAKER'S ANGLE BLOCK
Thomas E. V. Hunt, Norristown, Pa.
Application September 12, 1944, Serial No. 553,790
9 Claims. (Cl. 90—59)

1. An angle block provided with a true flat horizontal base surface, a true flat vertical front surface at 90° to said base surface, a top surface opposite said base surface, a true flat rear surface disposed at an angle of less than 90° with respect to said base surface and extending from said top surface substantially to said base surface, a right angle shoulder on and projecting vertically from said angular rear surface adjacent one side edge thereof, and a complementary rear angular surface parallel to the first said rear surface and extending laterally from said shoulder to said side edge.



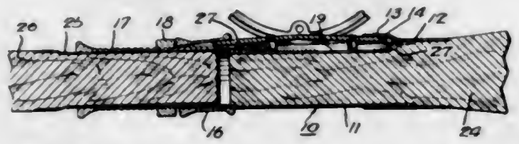
2,409,937
CARBURETOR ATTACHMENT
Job Hutchinson, Great Neck, N. Y.
Application December 12, 1944, Serial No. 567,870
2 Claims. (Cl. 48—180)

1. A carburetor attachment for insertion between the carburetor and the intake manifold of an internal combustion engine, said attachment having a passage through which the explosive mixture from the carburetor passes to the manifold, an air distribution chamber surrounding said passage and communicating therewith, a pair of oppositely situated passages which provide communication between said distribution chamber and the atmosphere, a pair of thermostatically controlled valves on said pair of passages which open at a predetermined temperature to permit



an auxiliary supply of air to be drawn into said first passage through said pair of passages and said distribution chamber, and a freely rotating fan in said first passage which mixes the auxiliary supply of air with the explosive mixture, each of said thermostatically controlled valves comprising a bi-metallic strip having thermostatic properties, affixed at one end to said attachment and having a plug affixed to its free end registering with the particular passage which the valve controls.

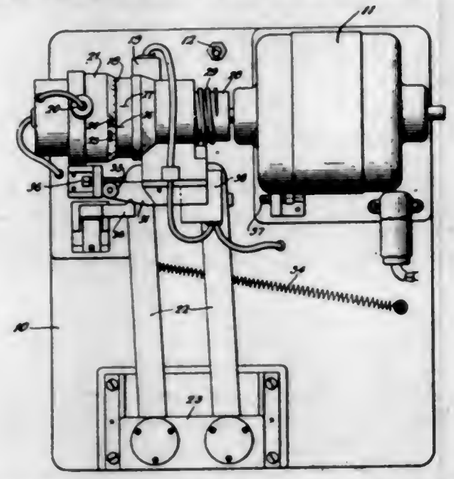
2,409,938
PILOT TRAINER
William H. Hutter, Chicago, Ill.
Application July 24, 1942, Serial No. 452,139
3 Claims. (Cl. 35—12)



1. An apparatus for creating the illusion of flying which comprises means to present a view to an operator and for moving the view under the influence of movement of airplane controls in the same manner that a view moves when seen from a conventional airplane, and means for preventing the operator from gaining the impression that the controls are reversed, the last said means comprising a pilot seat movable about at least one axis, and means to cause movement of said pilot seat about said axis under the influence of the operation of the controls when said controls are operated to cause movement of said view about the same axis.

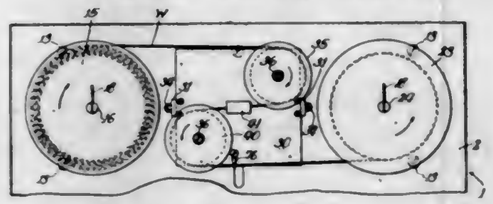
2,409,939
MULTIPLE BARREL GUN
Robert L. Jenkinson, Teaneck, N. J., assignor to The Marlin Firearms Company, New Haven, Conn., a corporation of Connecticut
Application August 2, 1944, Serial No. 547,768
6 Claims. (Cl. 42—42)

1. In a multiple barrel firearm, a pair of hammers, a sear controlling each hammer, a single trigger for operating the sears, connecting means between said trigger and sears including a sear actuator suspended from the upper portion of the trigger and a selector movably associated with the lower end of said actuator, said selector standing forwardly of said actuator and being movable into position to engage either of said sears selectively, and one sear being engageable by the actuator when the selector is in position to engage the other sear.



2,409,940
ROD TO REEL CONNECTION
Paul Kay, Philadelphia, Pa., assignor to Ocean City Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania
Application March 28, 1945, Serial No. 585,235
12 Claims. (Cl. 43—22)

11. A reel seat to reel connection for fishing rods comprising a reel seat including a sleeve to fit the rod butt having a fixed socket adjacent one end thereof adapted to receive one end of the attaching tang of a fishing reel and adjacent its other end an adjustable ring forming a socket to receive the other end of said tang, said sleeve between said sockets having its smooth surface interrupted by a single longitudinal groove of considerable depth, said groove being disposed medially of the fixed socket and extending from a point adjacent the mouth of the fixed socket for a substantial distance toward the last named end of the sleeve, and a reel tang for engagement with said seat comprising an elongate strip of greater width than said groove adapted at its ends for engagement in said sockets and having a medial key to engage in said groove.

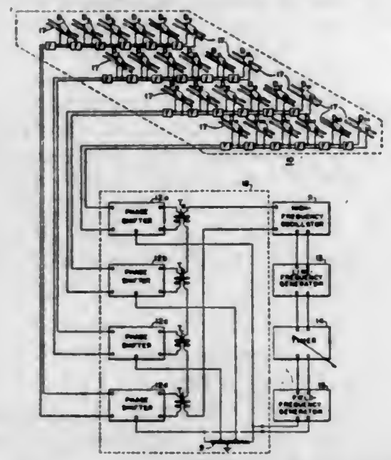


2,409,941
INTERVAL CONTROL MECHANISM
Earle L. Kent, Elkhart, Ind., assignor to C. G. Conn, Ltd., Elkhart, Ind., a corporation of Indiana
Application January 5, 1944, Serial No. 517,025
7 Claims. (Cl. 200—33)

1. Interval control mechanism comprising a rotatable contact drum having adjacent conducting and insulating portions joined along helical lines, a carriage movable axially of the drum, means to move the carriage at a substantially constant rate, a pair of spaced brushes on the carriage engageable with the drum, and means mounting one of the brushes on the carriage for adjustment about the drum axis along

helical lines having the same axial pitch as the first named helical lines to vary the helical distance around the drum surface between the brushes.

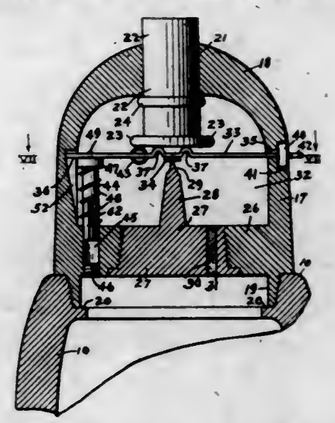
2,409,942
WINDING DEVICE
William G. Knapp, Evanston, Ill., assignor to Charles P. Peirce, Evanston, Ill.
Application December 8, 1943, Serial No. 513,341
7 Claims. (Cl. 179—100.2)



1. In a device of the class described, the combination of a pair of spools spaced apart and mounted for rotation about parallel axes, a magnet box between said pair of spools and fixed against movement in a plane transverse of the axes of said spools, oscillating guide means for guiding wire from one spool to the other and through said magnet box, said guide means including means operative to maintain said wire in a fixed definite path for passage through said magnet box regardless of the amount of wire on either of said spools, and means for oscillating said guide means.

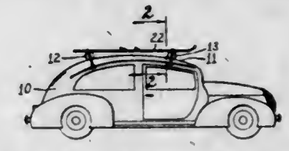
2,409,943
VENETIAN BLIND
Doin Kwon, Honolulu, Territory of Hawaii
Application June 28, 1944, Serial No. 542,527
2 Claims. (Cl. 160—167)

1. In a Venetian blind having a base bar, front and rear top bars, front and rear tapes extending between the top bars and the base bar, narrow web strips secured to the front and rear tapes in vertical spaced relation to each other, slats disposed one above another and resting on said strips and a head bar, front and rear lines extending along the head bar with inner portions extending downwardly and secured to the front and rear top bars and outer portions extending downwardly at an end of the head bar, and a member to prevent tangling of the front lines with the rear lines having a shank suspended from the head bar and a cross head at the lower end of the shank formed with eyes through which the front and rear lines pass.



2,409,944
SYSTEM FOR SPACE-SCANNING WITH A RADIATED BEAM OF WAVE SIGNALS
Arthur V. Loughren, Great Neck, N. Y., assignor by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill., a corporation of Illinois
Original application May 26, 1941, Serial No. 395,172. Divided and this application November 12, 1941, Serial No. 418,712
10 Claims. (Cl. 250—11)

1. A system for scanning a predetermined space with a radiated beam comprising, a radiating system including a plurality of signal radiators geometrically spaced in one dimension, means including a plurality of electrical delay networks for electrically spacing said signal radiators in said one dimension, a source of high-frequency wave signals, means for individually applying wave signals from said source to said signal radiators for directive radiation effectively in the form of a sharply-concentrated beam, and means for varying the frequency of said wave signals effectively to vary the relative phase of said signals as applied to said signal radiators, thereby to vary the direction of transmission of said radiated beam.

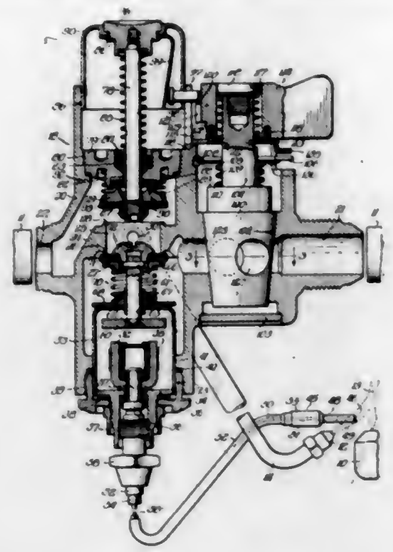


2,409,945
AMMUNITION
William J. Lowes, Chicago, Ill., assignor to Harris Trust and Savings Bank, Chicago, Ill., a corporation of Illinois, as trustee
Application June 25, 1943, Serial No. 492,257
6 Claims. (Cl. 102—64)

1. In a shell of the type described, a grenade body containing explosive material, a nose frame secured to said body, a fuse connection between the interior of said body and said nose frame, an impact member mounted in the end of said frame to project therefrom for axial inward movement upon impact, said impact element containing an explosive and having a firing cap therefor, a firing pin in said frame in the path of said element, a safety bar extending into said frame from the exterior thereof to be normally disposed between said firing cap and pin to prevent engagement thereof, a spring tending to swing said bar laterally out of its normal position, a safety latch normally engaged by the inner end of said safety bar to hold said bar in normal position against

the force of said spring, means whereby said bar upon outward manual movement thereof will be released from said safety latch for swing by said spring out of its normal position, whereby, when said shell is thrown and said impact member is impacted, said firing cap may come into engagement with said firing pin for explosion of said impact member and ignition of said fuse connection and the explosive material in said grenade body.

2,409,946
LUGGAGE CARRIER
Douglas W. MacLeod, Ansonia, Conn.
Application November 7, 1945, Serial No. 627,223
4 Claims. (Cl. 224—29)

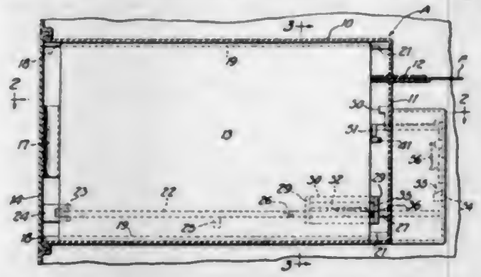


1. In a carrier for skis or like articles, a pair of inflatable elongated tubular members, means for detachably securing said members to the top of a car in spaced relation with the lower surfaces of said members resting on the upper surface of the top, and article-securing means on the upper surfaces of said tubular members, said means comprising a plurality of upstanding elements secured to the upper surfaces of said members in spaced relation.

2,409,947
COMBINED THERMOELECTRIC SAFETY SHUTOFF DEVICE AND COCK
Harold A. Mantz, Milwaukee, Wis., assignor to Milwaukee Gas Specialty Company, Milwaukee, Wis., a corporation of Wisconsin
Application October 29, 1942, Serial No. 463,793
20 Claims. (Cl. 137—144)

5. In combination, valve means for controlling a supply of fuel, a movable armature operable to control said valve means, an electromagnet for said armature, means for resetting said armature with respect to said electromagnet, flow interrupter means operable to shut off the supply of fuel during the resetting operation, a controlling

member having a plurality of different positions, means for preventing resetting said armature except when said controlling member is in a predetermined one of its position, and cooperating means on the resetting means and controlling member and operable to hold said flow interrupter means in shut-off position following resetting of the armature and until said controlling member is moved out of said predetermined position.



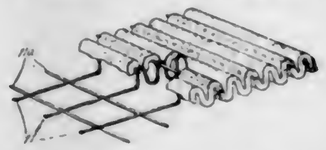
12. In combination, a valve cock mounted for turning movement, a reset member mounted for rectilinear movement, a spring-pressed latch pin carried by said reset member, a handle for said valve cock, and a flange on said handle and cooperable with said latch pin to prevent resetting movement of said reset means, said flange having a slot through which said latch pin is adapted to pass for resetting movement of said reset means when said valve cock is in a predetermined position.

2,409,948
POLYMERIC MATERIALS
Elmore Louis Martin, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application March 1, 1945, Serial No. 580,491
6 Claims. (Cl. 260—86)

1. A composition of matter comprising the copolymerization product of a mixture of a perhaloethylene containing at least two fluorine atoms, vinyl fluoride, and a hydrogen-containing halogenated ethylene other than vinyl fluoride, said mixture containing each of said perhaloethylene, vinyl fluoride and hydrogen-containing halogenated ethylene other than vinyl fluoride in an amount of at least 5% by weight, the halogen contained in said perhaloethylene and in said hydrogen-containing halogenated ethylene being selected from the group consisting of chlorine, bromine, and fluorine.

2,409,949
CAMERA FILM BOX
John W. McCutcheon, Bronx 53, N. Y.
Application October 3, 1945, Serial No. 620,059
7 Claims. (Cl. 164—47)

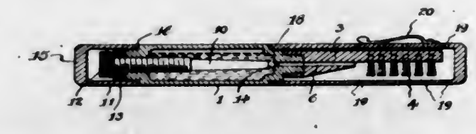
1. A strip depository comprising a casing open at its front having a strip inlet in its rear wall, a hinged door at the open front of said casing, a strip receiving box slidable into and out of said casing, said box having a strip inlet in registration with the strip inlet in said casing, knife means within said box for cutting a strip of material at the strip inlet thereof, catch means act-



ing to hold the knife means in a set position for operation, and means operable upon the initial opening movement of the door for releasing the catch means to enable functioning of the knife means.

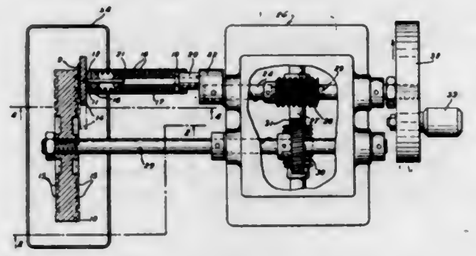
2,409,950
NONAQUEOUS GEL
Hughan C. Meyer, Jr., Philadelphia, Pa., assignor to Foote Mineral Company, Philadelphia, Pa., a corporation of Pennsylvania
No Drawing. Application August 1, 1944, Serial No. 547,632
16 Claims. (Cl. 252—40)

16. A non-aqueous gel comprising oleaginous material, a soap of a long chain carboxylic acid in an amount to substantially thicken said oleaginous material and to convert it into a gel, and an alkaline earth metal salt of a saturated cyclic hydrocarbon carboxylic acid in an amount from .001% to about 5.0% reducing the tendency of the gel to bleed.



2,409,951
INSULATING BAT
Julian H. Nootens, Chicago, Ill., assignor to United States Gypsum Company, Chicago, Ill., a corporation of Illinois
Application May 7, 1942, Serial No. 442,095
1 Claim. (Cl. 154—44)

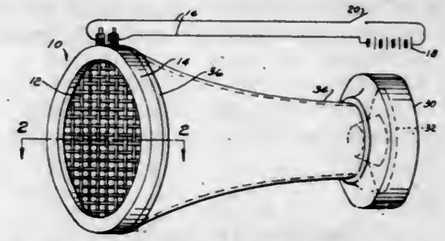
An insulating member formed with corrugated convolutions to permit extensibility thereof throughout the limits imposed by the longitudinal stretched-out length thereof on one hand and the telescoped longitudinal dimension thereof on the other, and having foraminous reinforcing means incorporated therein, the transverse members of said reinforcing means being longer than the width of the insulating member and being of springable material to permit their being bent and sprung into engagement to support said insulating member between two boundary members.



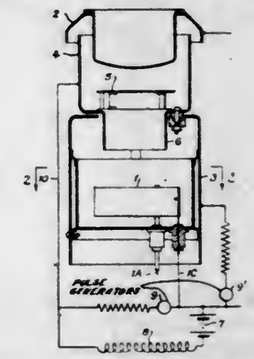
2,409,952
FOUNTAIN BRUSH
Clarence A. Notman, Detroit, Mich., assignor of one-half to Charles Bowles, Detroit, Mich.
Application December 17, 1942, Serial No. 469,314
2 Claims. (Cl. 15—138)

1. A fountain brush for liquid substance comprising, a brush head, a hollow handle therefor constituting a reservoir, an elongated capillary passageway leading from one end of the reservoir to a point adjacent the brush head, a displacement member mounted in the wall at the opposite end of the reservoir for movement lengthwise in the wall so that it may be advanced into and retracted from the reservoir to ensmall and enlarge the reservoir respectively, the end of the displacement member having a valve formation thereon for seating and closing the reservoir end of the passageway, whereby upon retraction of the displacement member, the pas-

sageway is opened and the reservoir is enlarged so that atmospheric air enters the same through the passageway, the brush adapted to be positioned so that the substance gravitates to the end of the reservoir having the passageway, the capillary passageway offering such restriction that the liquid substance will not normally flow therethrough, whereby upon advancement of the displacement member into the reservoir, some of the substance is ejected through the passageway by the pressure caused by the ensmalling of the reservoir.



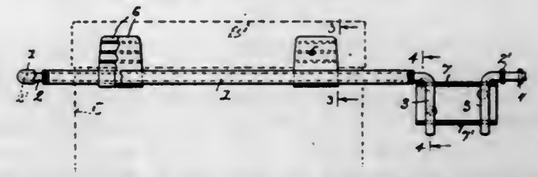
2,409,953
MATERIAL TREATING APPARATUS
Robert Pash, Roselle, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application October 13, 1943, Serial No. 506,052
3 Claims. (Cl. 51—133)



3. In an apparatus for precision lapping and having a lapping disk and means to press an article to be lapped against the disk, a low speed shaft to both support and drive the disk in rotation, a high speed shaft side by side with and parallel to the low speed shaft to support and drive the article pressing means in rotary motion eccentric to the rotation of the disk, an intermediate shaft transverse to and spaced from both said shafts, a worm on the high speed shaft, a gear on the intermediate shaft engaged by the worm, a second worm on the intermediate shaft, a second gear on the low speed shaft engaged by the worm on the intermediate shaft, and means to drive the high speed shaft.

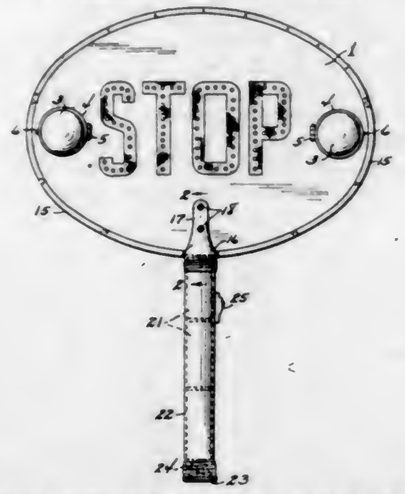
2,409,954
HEATING ATTACHMENT FOR HORNS
Otto H. Pearson, Salt Lake City, Utah
Application February 10, 1945, Serial No. 577,221
6 Claims. (Cl. 219—19)

4. The combination with a horn having a vibrator in its throat and a sound amplifying mouth portion; of an electrical resistance screen grid mounted across said mouth portion for warming the air and melting the snow entering said mouth portion; insulating means for supporting said screen grid on said horn; and means for conducting current to said screen grid.



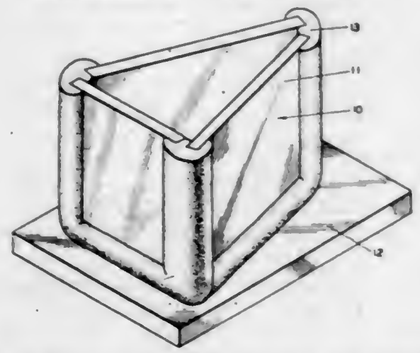
2,409,955
GAS-FILLED ELECTRIC RECTIFIER
Henry Thomas Ramsay, Hatch End, England, assignor to The General Electric Company Limited, London, England
Application March 13, 1943, Serial No. 479,121
In Great Britain March 13, 1942
6 Claims. (Cl. 315—340)

1. An electrical circuit arrangement comprising a thermionic gas-filled rectifier having a thermionic cathode, an anode, a shield consisting of one or more parts interposed between said cathode and said anode so as to provide a labyrinth capable of rendering the starting of a discharge between said cathode and said anode substantially independent of the potential difference between said cathode and said anode and an auxiliary starting electrode separate from said cathode and said anode, means for periodically rendering said auxiliary electrode positive with respect to said cathode so as to produce between said cathode and said auxiliary electrode an ionforming discharge capable of enabling the main discharge between said cathode and said anode to start, and means for producing by a preliminary discharge ionization in the neighbourhood of said cathode during the period immediately preceding such application to said auxiliary electrode of the voltage that starts the main discharge.



2,409,956
GARMENT HANGER
Erich F. Ramstack and Christ R. Clafendetcher, Milwaukee, Wis.
Application February 9, 1945, Serial No. 577,114
1 Claim. (Cl. 223—96)

A garment hanger comprising a one-piece rigid loop having front and rear stretches, a gravity controlled rigid gripping jaw pivoted to the rear

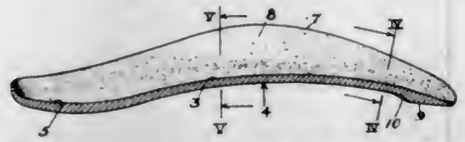


loop stretch, the same being slightly spaced from the front stretch of said loop, and complementary pairs of resilient toothed plates secured to the front stretch of said loop and pivoted jaw member, the said plates being extended a predetermined distance above the associated pivoted jaw and front stretch of the loop, forming a gravity controlled squeezing grip upon a garment.

2,409,957
SIGNAL FLASH
Howard Reynolds, Springfield, Ohio
Application September 15, 1944, Serial No. 554,265
2 Claims. (Cl. 177—329)

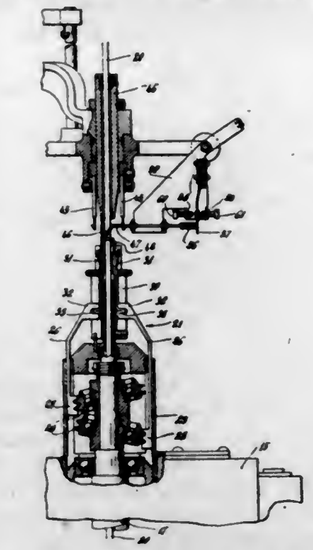
1. A signal comprising a sign board, electrically energized signaling means carried by said sign board near opposite ends thereof, warning indicia an said sign board between the electrically energized signaling means including light reflecting members, a handle for said sign board consisting of a battery casing, and wiring for the electrically energized signaling means for transmitting current thereto from a battery in said casing.

2,409,958
METHOD OF MOLDING PRISMS
Howard G. Rogers, Wellesley Hills, Mass., and Dexter P. Cooper, Jr., Washington, D. C., assignors to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware
Application April 16, 1943, Serial No. 483,308
13 Claims. (Cl. 18—58)



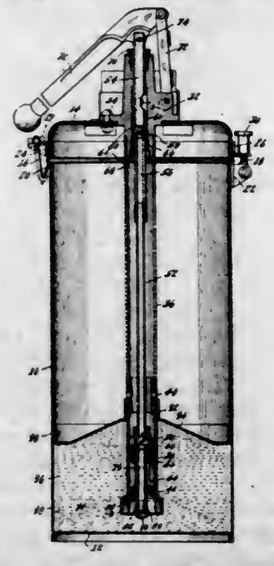
1. The method of fabricating an optical element which comprises rigidly securing together a plurality of mold parts to form a mold having the contour of said element, said parts being spaced from one another so as to permit movement thereof toward one another upon removal of the securing means, introducing a flowable polymerizable mass into said mold, which mass, in its hardened, partially polymerized condition, adheres to said mold and which is adapted, upon substantially complete polymerization, to form a transparent, inherently rigid mass, advancing the polymerization of said flowable mass to produce a hard partially polymerized material to which the mold parts adhere, releasing the mold parts from one another without affecting the engagement between said parts and the surfaces of the hardened product defined by said parts, and advancing the polymerization of said mass to substantial completion to produce a transparent, inherently rigid mass with said parts attached to the molded product.

2,409,959
METHOD OF FORMING IMAGES OF DICHROIC MATERIALS
William H. Ryan, Cambridge, Arthur Barnes, Waltham, and Helen P. Husek, Allston, Mass., assignors to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware
Application May 17, 1944, Serial No. 536,030
28 Claims. (Cl. 95—5)



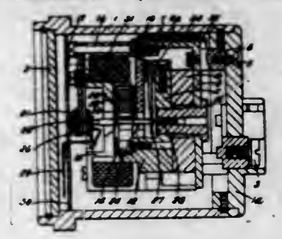
1. The method of producing a dichroic image, which comprises photo-exposing a silver halide suspension to produce a latent image, developing said latent image to form an image comprising a water-insoluble oxidizing agent having an oxidation potential sufficiently high to release iodine from an iodide, reacting the image comprising said oxidizing agent with an iodide in the presence of a solvent for said oxidizing agent which dissolves the latter and causes it to release iodine from the iodide, and having present at some stage during the release of said iodine, in a position to receive said iodine, a layer of molecularly oriented high polymer which forms a dichroic sorption complex with iodine.

2,409,960
ARCH SUPPORT
William M. Scholl, Chicago, Ill.
Application April 10, 1944, Serial No. 530,297
1 Claim. (Cl. 36—71)



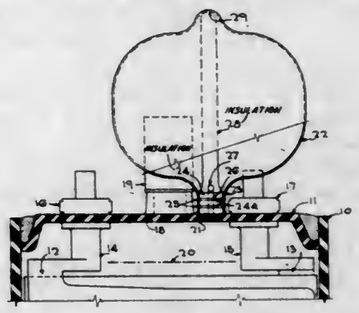
An arch support comprising a relatively rigid member of hard plastic material shaped to support the inner and outer longitudinal arches of a human foot and to define a heel seat portion, an integral upstanding margin on said member extending around all but the anterior edge thereof, said anterior edge being directed by the bottom of said heel seat portion into end edge contact with the insole of an article of footwear adapted to receive the member, and a transverse reinforcement on the underside of the anterior margin of the member increasing in thickness rearwardly from said anterior edge and terminating adjacent the portion where said insole rises rapidly to the heel of said article of footwear for tending to fill the gap that would otherwise occur at the forward end of the member, said member when pressured sufficiently by the human foot being deflected to contact more of the reinforcement with the insole for camming said anterior edge forwardly and upwardly to pass smoothly over the insole.

2,409,961
FAULT DETECTOR AND AUTOMATIC STOP DEVICE FOR TEXTILE MACHINES
De Hart G. Scrantom, Maplewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application August 26, 1944, Serial No. 551,336
11 Claims. (Cl. 66—166)



1. In a machine of the types indicated, means for combining a plurality of strands to form a covering over a traveling core which moves out of its normal path of travel when a defect occurs in the covering, and machine stopping means operated by the core when a defect occurs in the covering.

2,409,962
PUMP FOR LUBRICANTS AND THE LIKE
Spicer D. Shearman, Bryan, Ohio, assignor to The Aro Equipment Corporation, Bryan, Ohio, a corporation of Ohio
Application May 23, 1945, Serial No. 595,419
6 Claims. (Cl. 103—5)

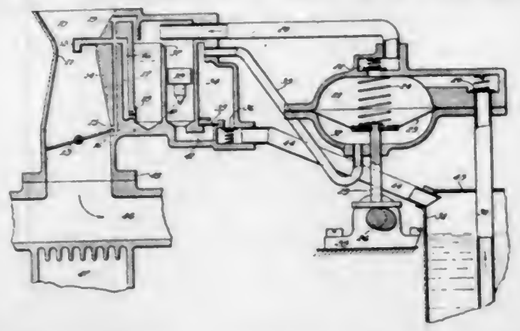


1. In a pump for lubricant and the like, a primer cylinder, a primer piston movable therein, a pump cylinder carried by said primer piston, a pump plunger carried by said primer cylinder, said pump cylinder being movable onto and off of said pump plunger, said primer cylinder and pump cylinder communicating freely with each other when the pump cylinder is off the pump plunger, an outlet check valve carried by said pump cylinder, and a tubular piston rod connected therewith for operating said primer piston and pump cylinder and for receiving the lubricant from said check valve and discharging it to a discharge port of the pump.

2,409,963
MOVING-COIL ELECTRICAL INSTRUMENT
Stanley James Smith, London, England, assignor to Simmonds Aerocessories Limited, London W. C. 2, England
Application February 17, 1944, Serial No. 522,832
In Great Britain March 5, 1943
8 Claims. (Cl. 171—95)

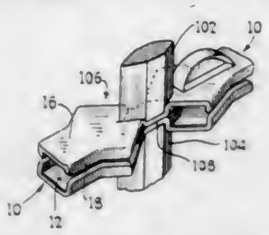
7. A moving coil electrical instrument comprising a permanent magnet establishing a magnetic field across two air gaps, a single coil having two sides each of which moves in one of said air gaps, and an electro-magnet for setting up a resultant magnet field in one only of said air gaps to control the total flux density therein.

2,409,964
STORAGE BATTERY
William Wharton Smith, Philadelphia, Pa., assignor to The Electric Storage Battery Company, a corporation of New Jersey
Application February 26, 1943, Serial No. 477,218
8 Claims. (Cl. 136—179)



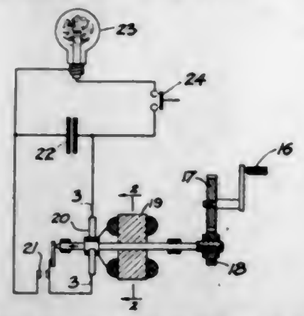
8. In combination a storage battery cell assembled in a hermetically sealed container, a non-spill vent plug for said cell embodying a valve automatically closed by tilting of the battery to a predetermined angle from the vertical, and means for relieving the pressure produced in the interior of said cell when said valve of said non-spill vent plug is closed, said means comprising a reservoir bounded by flexible resilient walls and supported externally to the cell, and a duct for connecting the interior of said reservoir with the interior of said cell.

2,409,965
FUEL PUMP
Stanley M. Udale, Detroit, Mich., assignor to George M. Holley and Earl Holley
Application April 10, 1944, Serial No. 530,417
1 Claim. (Cl. 158—36.3)



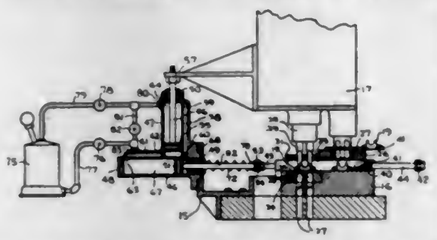
A pumping system for the constant level fuel supply chamber of a carburetor connected to an internal combustion engine, an air-vented tank, a fuel supply pipe forming an outlet from said

tank and an inlet to said constant level supply chamber, a pump connected to said pipe adapted to pump fuel from said tank to said constant level fuel supply chamber, a second chamber connected to said fuel supply chamber at the upper end thereof, a float in said second chamber, an outlet from the lower portions of said second chamber, a valve carried by the float and adapted to close said outlet when said second chamber is empty, an outlet pipe from said second chamber connected to said outlet and leading to said tank, a



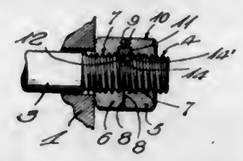
non-return valve in said pipe, an air chamber associated with said outlet pipe and located on the discharge side of said non-return valve, a second non-return valve in the bottom of said air chamber adapted to permit fuel to flow to said outlet pipe out of said air chamber, means integral with said pump and connected with the upper portion of said air chamber for causing air to pulsate into and out of said air chamber whereby fuel is first drawn into said air chamber, past said first non-return valve and is then forced out, past said second non-return valve.

2,409,966
BLANK FOR USE IN THE MANUFACTURE OF SLIDERS FOR SLIDE FASTENERS
Maurice Voity, Bayside, and George A. Griffiths, Kew Gardens, N. Y., assignors to Universal Slide Fastener Co., Inc., Long Island City, N. Y., a corporation of New York
Original application January 14, 1942, Serial No. 426,694, now Patent No. 2,384,144, dated September 4, 1945. Divided and this application June 1, 1945, Serial No. 597,110
2 Claims. (Cl. 29—190)



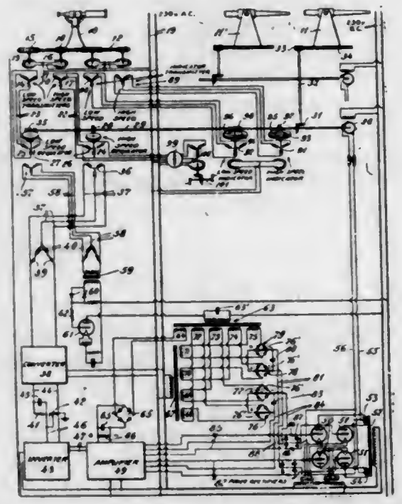
1. A slider blank comprising two pairs of spaced parallel completely fashioned slider wings, each wing having a plane body portion with rails running along its lateral edges and extending away from the plane of said body portion, and each wing having an attaching portion raised above said body portion and extending in the same direction as said rails, each attaching portion lying immediately adjacent and being integrally connected to the other attaching portion of the same pair, the attaching portions of one of said pairs being integrally connected to the attaching portions of the other of said pairs, the wings and attaching portions being in alignment and the rails being opposed.

2,409,967
MEANS TO IGNITE PHOTOGRAPHIC FLASH LAMPS
Louis Weisglass, New York, N. Y., assignor to Simmon Brothers, Inc., Long Island City, N. Y., a corporation of New York
Original application April 14, 1943, Serial No. 482,999. Divided and this application December 6, 1943, Serial No. 513,082
2 Claims. (Cl. 67—31)



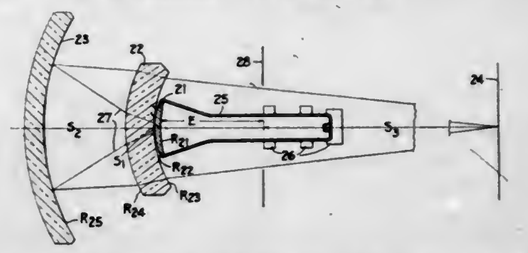
1. The portable combination of a photographic flash lamp consisting of a light transmitting vessel containing a filament and a plurality of components adapted to combine chemically upon heating of said filament, an induction type generator for electric energy, a condenser for storing said energy, and indirect means to ignite said lamp by discharging said stored energy into said vessel to heat said filament to initiate chemical combination of said components.

2,409,968
MACHINE FOR OPERATING ON MATERIALS
Louis A. Welsch, St. Paul, Minn., assignor to American Hoist & Derrick Co., St. Paul, Minn., a corporation of Delaware
Application August 24, 1945, Serial No. 612,510
5 Claims. (Cl. 164—117)



1. In combination, a structure including a first and a second cylinder arranged at angular relation to each other, a first piston in said first cylinder, a second piston in said second cylinder, a first space in said first cylinder at one side of said first piston, a first space in said second cylinder at one side of said second piston, a first connecting passageway between said first spaces of said first and second cylinders, a second space in said first cylinder at the opposite side of said first piston, a second space in said second cylinder at the opposite side of said second piston, a second connecting passageway between said second spaces of said first and second cylinders, a pump for delivering hydraulic fluid to all of said spaces and connecting passageways, an inlet to said pump leading from said first space in said first cylinder, a first valve in said inlet, a connection from said second space of said second cylinder leading to a portion of said inlet between said first space in said first cylinder and said first valve, a second valve in said connection, an outlet from said pump leading to a portion of said connection between said second valve and said second space in said second cylinder, and a third valve in said outlet.

2,409,969
NUT LOCK
William R. Williams, Dunsmuir, Calif.
Application December 15, 1942, Serial No. 469,102
3 Claims. (Cl. 151—15)



1. The combination with a bolt having a threaded portion, nut means in threaded engagement with the bolt and having a groove partially intersected by a portion of the bolt, a combined cutter and key means, said cutter means adapted after said nut means is in tightened position to cut away the intersecting portion of the bolt to complete the groove through said bolt and form a transverse channel therein by providing shoulders extending below the thread to abut opposite sides of said cutter means to brace the same and prevent stripping of said thread and upon completion of said cutting operation to constitute a key extending through said groove and lockable therein, whereby loss of said key and movement of said nut means relative to said bolt by reason of vibration is prevented.

2,409,970
ELECTRICAL POSITION CONTROL SYSTEM
George Agins, Brooklyn, N. Y., assignor to Arma Engineering Co., Inc., Brooklyn, N. Y., a corporation of New York
Application May 9, 1936, Serial No. 78,944
15 Claims. (Cl. 172—239)

1. In a control system for positioning a controlled object in accordance with a controlling object, the combination of a driving motor for the controlled object, means responsive to predetermined positional disagreement between said objects for developing a voltage proportional to the degree of such disagreement, means for applying said voltage to the driving motor for actuating it to move the controlled object into positional agreement with the controlling object, second means responsive to a positional disagreement between said objects in excess of the said predetermined disagreement for nullifying said voltage and impressing on said voltage-applying means a different voltage to move the controlled object to the said predetermined positional disagreement for assumption of control by said first responsive means, and means directly responsive to the rate of change of either of said voltages for modifying the same to effect damping of the movement of the controlled object.

2,409,971
CATADIOPTRIC TELEVISION PROJECTOR
Harold F. Bennett, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application June 19, 1945, Serial No. 600,364
8 Claims. (Cl. 88—57)

1. A catadioptric objective for use at finite conjugates comprising in optical alignment a concave spherical reflecting surface whose radius of curvature is between 2F and 3.5F where F is the focal length of the objective, a positive meniscus lens element concave in the same direction as the reflecting surface and whose concave surface substantially coincides with the short conjugate surface whereby the long conjugate surface is a plane, and at least one meniscus correcting component whose front and back surfaces are approximately concentric with the spherical reflecting surface whereby the spherical aberration is considerably less than that of an uncorrected spherical mirror of like focal length.

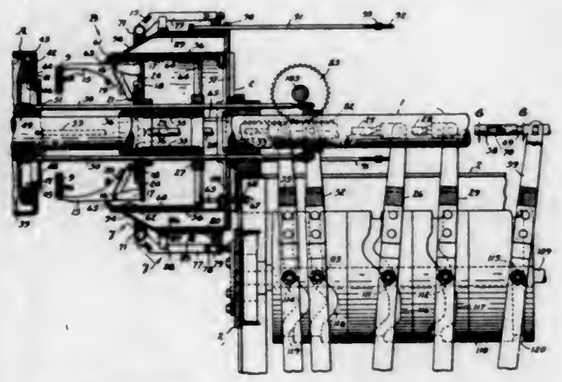
2,409,972
VIBRATOR LEVER FOR PATTERN MECHANISM
William A. Blanchard, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a corporation of Massachusetts
Application September 8, 1945, Serial No. 615,123
10 Claims. (Cl. 139—77)

10. In a vibrator lever for a loom pattern mechanism, a bearing member at one end of the lever, a pattern chain run member, elongated tie rods extending lengthwise of the lever, one of said tie rods extending along the top of the lever and secured to the bearing member, the remainder of said tie rods extending along the bottom of the lever and secured to said bearing and chain run members, and reinforcing wire means of sinuous form extending between the top tie rod and the remainder of said tie rods and secured to at least one of said tie rods.

2,409,973
LEVER FOR LOOM PATTERN MECHANISM
William A. Blanchard, Millbury, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a corporation of Massachusetts
Application June 6, 1946, Serial No. 674,810
7 Claims. (Cl. 139—77)

1. In a loom pattern mechanism vibrator lever, a pair of vertically spaced tie rods extending

lengthwise of the lever, a heel pin bearing secured to said tie rods adjacent one end of the lever, a lock knife lug secured to said tie rods



adjacent the other end of the lever, a pattern chain run on the lower tie rod, and a reinforcing wire of sinuous form extending between and secured to said tie rods.

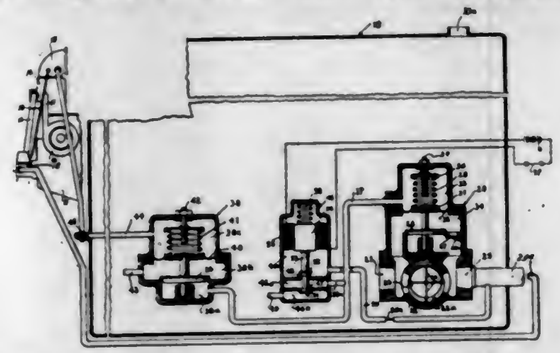
2,409,974

TIRE BUILDING MACHINE

Walter J. Breth and Robert M. Wormald, Akron, Ohio, assignors to The General Tire and Rubber Company, Akron, Ohio, a corporation of Ohio

Application August 6, 1942, Serial No. 453,806
26 Claims. (Cl. 154—10)

6. In apparatus for building pneumatic tire casings, an annular form having an opening in the end thereof and a circular shoulder surrounding said opening, a substantially annular folder and means for supporting and actuating the folder to move over the form, while embracing the latter, in an axial direction toward said end and then over the shoulder to fold the marginal edge portion of ply material on the form radially inward and provide a ply flange extending radially across said opening, and means for placing a circular bead against that portion of the ply flange overlying the shoulder, said first named means being arranged to support the folder in position to engage the ply flange radially inward of the shoulder during placing of the bead to restrain outward turning of the ply flange.



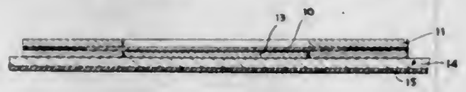
2,409,975

PUMP PRESSURE CONTROL SYSTEM

Russell R. Curtis, Dayton, Ohio, assignor to Curtis Pump Company, Dayton, Ohio, a corporation of Ohio

Application March 6, 1943, Serial No. 478,213
10 Claims. (Cl. 103—42)

1. Apparatus for maintaining selected pump pressure differentials which comprises a pump having a fluid intake and a fluid discharge side, a relief valve for relieving fluid from the discharge to the intake side of the pump, spring biased diaphragm means urging the valve toward closed position for maintaining a selected pump discharge pressure, a positively operated valve for selectively subjecting said diaphragm means to pump discharge pressure to increase the relief valve closing force exerted by said means and create a different pump discharge pressure differential, and a second relief valve cooperating



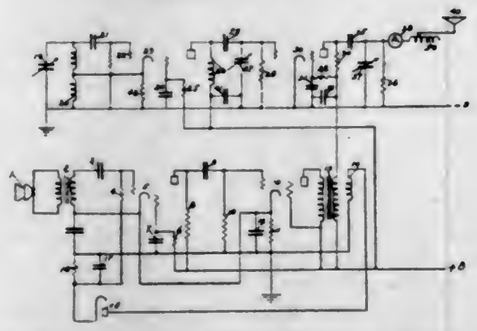
with said positively operating valve for limiting said effect.

2,409,976

MASKING COLOR TRANSPARENCIES IN MOUNTS

David Dean, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey

Application July 13, 1945, Serial No. 604,761
3 Claims. (Cl. 95—2)



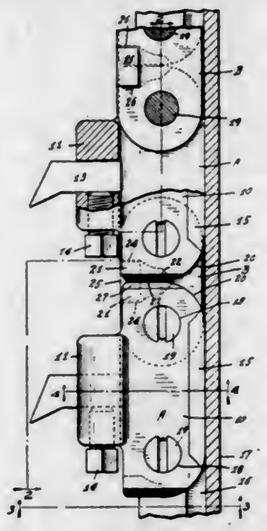
1. The method of masking a multi-color transparency secured in a mount having a central opening through which the transparency may be viewed, the edges of the mount projecting beyond and above the transparency, which comprises providing a transparent, rigid patch of substantially the exact size as the opening in said mount, one side of said patch being in contact with a light-sensitive layer, registering said patch in the opening in said mount with the sensitive side outermost, exposing said light-sensitive layer through said transparency, and thereafter forming a masking image therein and exposing the combination of transparency and masking image onto a print material.

2,409,977

MEANS FOR SUPPRESSION OF NOISE IN COMMUNICATION SYSTEMS

Sidney T. Fisher, Toronto, Ontario, Canada, assignor to Rogers Majestic Corporation, Dover, Del., a corporation of Delaware

Application June 14, 1944, Serial No. 540,238
In Canada November 9, 1943
3 Claims. (Cl. 179—1)



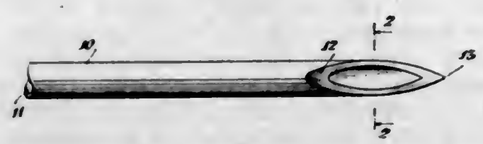
1. Means for the suppression of noise in communication systems, comprising a microphone, means connected with said microphone for amplifying the electrical impulses set up in said microphone, means for splitting the output from said amplifier, a rectifier interposed in one branch of said split circuit, a volume expansion amplifier connecting both branches of said split circuit, means for transmitting said rectified and amplified impulses, and means for receiving said transmitting impulses.

2,409,978

MINING MACHINE CHAIN

Frank L. Fulke, Terre Haute, Ind., assignor to Frank Prox Company, Inc., Terre Haute, Ind., a corporation of Indiana

Application June 7, 1943, Serial No. 489,938
8 Claims. (Cl. 74—250)



1. In a cutter chain, a bit link having spaced side plates connected centrally at their upper edges by an integral bit-supporting bridge, said side plates at each end beyond said bridge being perforated with aligned journal pin openings, and a connecting link fitting between said side plates and swiveling upon journal pins mounted in said journal pin openings of two adjacent bit links, said side plates at each opposite end beyond said head being formed at the outer portion of their inside faces with recesses defining abutment surfaces and said connecting links being formed centrally of the outer portions of their sides with projecting shoulders defining abutment surfaces cooperating with said first-mentioned abutment surfaces, to prevent reverse bend of any of said links.

2,409,979

HYPODERMIC NEEDLE

Ralph L. Huber, Seattle, Wash.

Application March 14, 1946, Serial No. 654,373
4 Claims. (Cl. 128—221)

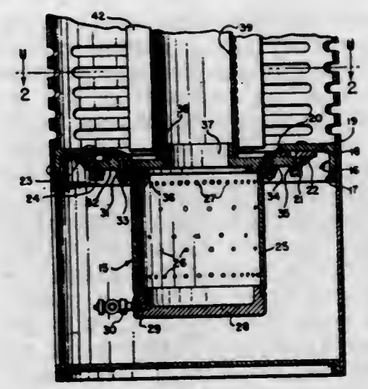
1. A hypodermic needle comprising a tubular body having an end portion comprising a surface in which an aperture defining the end of the tube bore is formed, said surface being substantially flat, with the inner edge thereof extending in a plane substantially tangential to the curved outer surface of the tube, in substantial alignment with the straight longitudinal edge of the tube and in substantial parallelism with the longitudinal axis of the same and with no portion of the surface projecting substantially beyond said plane, a tissue-piercing point at the outer end of said surface, a transversely curved wall also forming a part of said end portion, said end wall being of diminishing area in the direction of said point and in the opposite direction merging—free from any "heel"—into the curved outer tube surface, said wall extending from one to the other side edge of said flat surface, the face of said flat surface adjacent its edges being beveled from said piercing point to the zone of maximum tube diameter, to provide cutting edges diverging from said piercing point whereby, upon bringing said piercing point into contact with tissue and thereupon exerting a continuing axial thrust in the direction of said point, a piercing of the tissue will initially occur, a cutting of the tissue by such edges solely in lateral and outward directions to define a substantially straight slit will thereupon follow, and simultaneously with the formation of such slit the tissue contacted by the curved outer wall will be retracted to dilate the orifice formed by said piercing point to an area not substantially in excess of that of said tubular body.

2,409,980

COMPOSITION FOR DISCHARGE PRINTING

Edgar C. Jensen, Rochester, Herbert G. Scull, New York, and James G. McNally, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey

No Drawing. Application August 28, 1943, Serial No. 500,410
9 Claims. (Cl. 8—64)

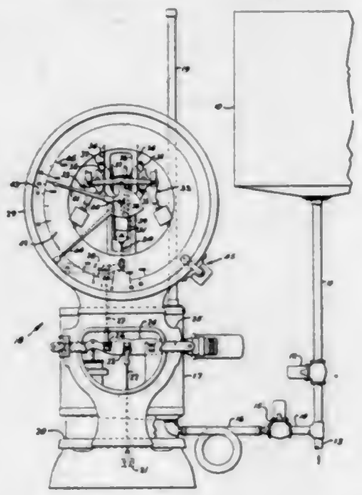


1. A composition for discharge printing comprising a formaldehyde metal sulfoxylate and a substance selected from the group consisting of salicylic acid and its salts.

2,409,981

SPACE HEATER

Allen P. Livar, Dayton, Ohio, assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware

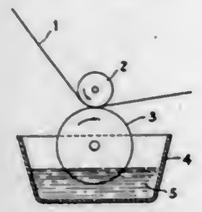


Application January 18, 1943, Serial No. 472,672
2 Claims. (Cl. 126—94)

1. A space heater comprising an elongated cylindrical casing having a continuous sheet metal wall provided at its upper end portion with a heated air outlet and with an air inlet at a location spaced upwardly from its lower extremity, a flange extending inwardly from said sheet metal

wall at a location between said air inlet and said lower extremity of said casing, a substantially cylindrical fluid fuel burning pot disposed centrally of said casing and suspended from said flange in the space between the latter and said lower extremity and including a flame plate at its upper end having a circular flame outlet opening and a surrounding tubular boss extending upwardly therefrom, said flame plate having a marginal portion extending laterally beyond the side wall of said pot and beneath the innermost portions of said flange and having an upstanding ridge engageable with an edge portion of said flange for piloting said flame plate into a predetermined position with respect to the latter, a cylindrical sheet metal tubular member telescoping said tubular boss and extending upwardly substantially centrally of said casing and through the upper extremity of the latter, and a plurality of heat transfer vanes secured to and extending along the outer surface of said tubular member at the lower end portion thereof.

2,409,982
LIQUID METERING APPARATUS
Ralph B. Longmate, Detroit, Mich., assignor to Toledo Scale Company, Toledo, Ohio, a corporation of New Jersey
Application December 13, 1943, Serial No. 514,006
8 Claims. (Cl. 73—113)



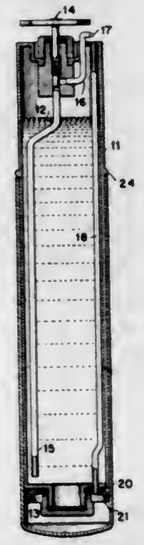
1. In a device for measuring the rate of flow of liquid, in combination, a supply tank in which a supply of liquid is maintained, a weigh tank, a weighing scale for supporting the weigh tank, piping from the supply tank to a liquid receiving system, a branch pipe to said weigh tank, an electrically controlled normally open valve in the pipe to each tank, said weigh tank being filled from said supply tank when both valves are open, an electrical control system including an interval timer, manually operable means to condition the electrical control system to cause said valve in the pipe from the supply tank to interrupt the flow of liquid from said supply tank, means actuated by the scale to start the timer when the weight of liquid in said weigh tank reaches a predetermined amount, and means actuated by the timer to cause said valves to interrupt the flow from the weigh tank and re-establish flow from the supply tank, said manually operable means being adapted upon return to normal position to cause said electrical control to open said valves and allow flow to the weigh tank in preparation for a succeeding test.

2,409,983
ELECTRODEPOSITION OF INDIUM
William M. Martz, Indianapolis, Ind., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
No Drawing. Application June 22, 1942, Serial No. 448,003
21 Claims. (Cl. 204—46)

1. A process for the electrodeposition of indium which comprises passing electric current through an electrolyte composed essentially of an aqueous acid solution containing at least one compound of the class of compounds consisting of indium fluoborate, indium fluosilicate, and indium fluoride.

2,409,984
METHOD OF TREATING WATER RESISTANT PAPER
Wendell H. McDowell, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application May 15, 1945, Serial No. 593,829
6 Claims. (Cl. 117—62)

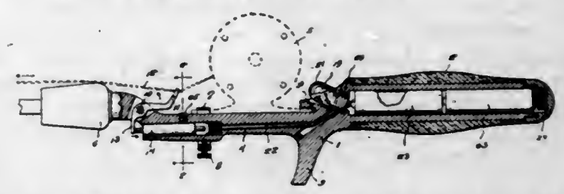
1. A method of treating the surface of paper containing a melt coating of a cellulose ester and a plasticizer to inhibit tackiness when contacted with a hot surface which comprises contacting at least one surface of paper melt coated with a mixture of a cellulose ester and a plasticizer with only sufficient alcohol of 1–4 carbon atoms to wet the same, and evaporating the alcohol from that surface.



2,409,985
COATING COMPOSITIONS FOR MOISTURE-PROOFING BY HOT MELT COATING
Martin Salo, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application March 18, 1944, Serial No. 527,153
8 Claims. (Cl. 260—16)

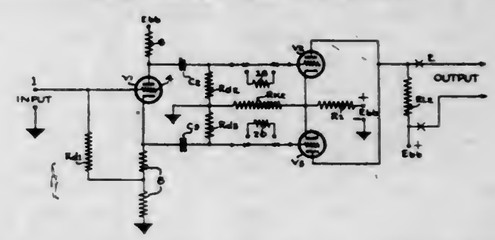
3. A non-blocking melt-coating composition adapted to give coatings of low moisture vapor permeability, essentially consisting of at least 40% of a heat-stable butyric acid ester of cellulose having a butyryl content of at least 42% and a total acyl content of at least 50%, a cuprammonium viscosity of less than 10 centipoises, a viscosity in 10% acetone solution of 25° C. of 10–200 centipoises and not more than 2 hydroxyl groups per 24 cellulose carbon atoms, sufficient di-2-ethyl hexyl phthalate within the range of 10–40% to impart good fluidity at 150–200° C., ½–7% of wax, and sufficient of a blending agent to render the wax permanently compatible with the composition, said blending agent selected from the group consisting of the pentaerythritol esters of rosin having a melting point of approximately 110° C. and acid numbers of 19 maximum, and the rosin-maleic acid-glycerol resins having a melting range of 130–140° C., and acid numbers of 15 maximum.

2,409,986
COATING COMPOSITIONS FOR MOISTURE-PROOFING BY HOT MELT COATING
Martin Salo, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application March 18, 1944, Serial No. 527,154
7 Claims. (Cl. 260—16)



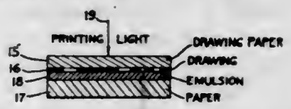
5. A non-blocking melt-coating composition adapted to give coatings of low moisture vapor permeability, essentially consisting of at least 40% of a heat-stable butyric acid ester of cellulose having a butyryl content of at least 46% and a total of acyl content of at least 50%, a cuprammonium viscosity of less than 10 centipoises, a viscosity in 10% acetone solution of 25° C. of 10–200 centipoises and not more than 2 hydroxyl groups per 24 cellulose carbon atoms, sufficient unmodified castor oil within the range of 10–40% to impart good fluidity to the composition at 150–200° C., ½–7% of wax, and sufficient of a blending agent to render the wax permanently compatible with the composition, said blending agent being selected from the group consisting of the pentaerythritol esters of rosin having a melting point of approximately 110° C., and acid numbers of 19 maximum, and the rosin-maleic acid-glycerol resins having a melting range of 130–140° C. and acid numbers of 15 maximum.

2,409,987
MICROSPRAY DEVICE
Herman O. Schroeder and Arthur W. Lindquist, Orlando, Fla., assignors to United States of America, as represented by Claude R. Wickard, Secretary of Agriculture, and his successors in office
Application July 12, 1944, Serial No. 544,619
1 Claim. (Cl. 299—88)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



A device of the character described comprising a cylindrical container, said container having an aperture at one end for introducing a liquid therein to be dispersed, an air pump valve about said aperture, a cap for closing said aperture and holding said valve in position, a shell reciprocally mounted on said container over said valve to pump air, an air conduit having one end in said shell and the other end on the exterior of the container, and tubular means between said exterior end and the inside of the container.

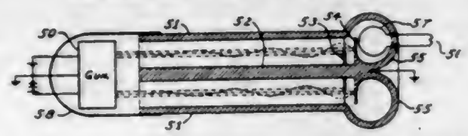
2,409,988
FISHING ROD INDICATOR
George R. Schwebs, Cleveland, Ohio
Application June 8, 1945, Serial No. 598,238
6 Claims. (Cl. 43—17)



1. In a fishing rod handle, a forward portion, an intermediate portion and a rearward portion, said intermediate portion being offset with respect to said forward portion and said rearward portion, a lever member pivotally mounted on said intermediate portion, said lever member being provided with a rearwardly extending arm adapted to slidably engage the fishing line and deviate it downwardly, and signal means on said handle adapted to be energized responsive to upward movement of said rearwardly extending arm caused by a pull on said line.

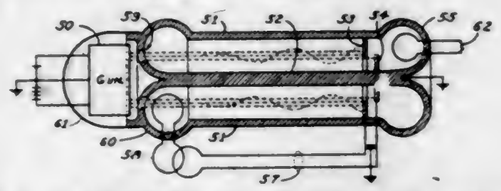
2,409,989
SIGNALING SYSTEM
Eugene R. Shenk, Brooklyn, and James E. Smith, Jackson Heights, N. Y., assignors to Radio Corporation of America, a corporation of Delaware
Application July 15, 1944, Serial No. 545,060
8 Claims. (Cl. 178—88)

1. In a signaling system in combination, a source of keyed currents, a multiphase rectifier system, a phase splitting device coupling said source to said multiphase rectifier system for applying the keyed currents thereto, a load impedance coupled to the output of said rectifier system means for biasing said rectifier system so that the same responds only to multiphase currents which exceed a selected minimum intensity and are less than a selected maximum intensity, series capacity and resistance connected in shunt to said load impedance and an output circuit connected across said capacity.



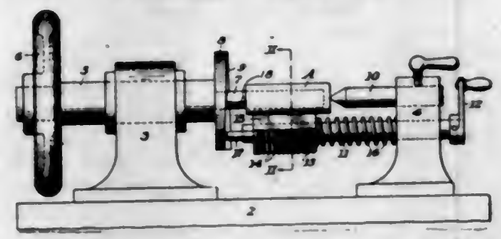
2,409,990
TRACING CLOTH
Cyril J. Staud, Rochester, N. Y.
Original application September 16, 1943, Serial No. 502,591. Divided and this application October 28, 1944, Serial No. 560,873
9 Claims. (Cl. 95—5)

1. The process of forming a positive photographic print on a material which is sensitive to only one region of the visible spectrum, comprising, providing a printing member having an emulsion which is sensitive to said one region and at least to another region and having an anti-hala-



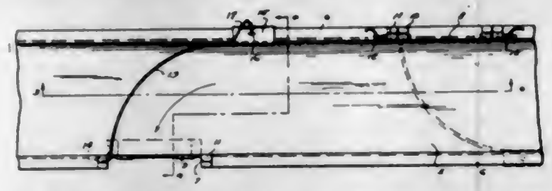
tion layer which is transparent to light rays of said one region but which will absorb light rays from said other region to prevent halation of said emulsion, exposing said emulsion to a negative by means of a light containing light rays of said other region to form a positive image on said emulsion, developing and fixing said positive image, and printing said positive image onto said material by exposing the image to light rays of said one region which are freely transmitted by said anti-halation layer to produce a positive image on said material.

2,409,991
STANDING WAVE COUPLER
Howard M. Strobel, Allegany, N. Y.
Application April 12, 1941, Serial No. 388,279
4 Claims. (Cl. 250—36)



1. In a high-frequency generating system including a section of a coaxial transmission line and high velocity charged particles, said coaxial transmission line being adapted to set up an electromagnetic standing wave having an electrostatic field component transverse to the annular space within said coaxial line when energized by a high-frequency source, means for terminating one end of said transmission line with a resonanting chamber, means for energizing said transmission line with high-frequency energy, means for maintaining a low pressure region within said coaxial transmission line, means for directing a stream of said high velocity charged particles into said coaxial transmission line and in the field of said standing wave, whereby charged particles of the stream are deflected by fields of the standing wave, and means for collecting high-frequency energy from the deflected stream of charged particles.

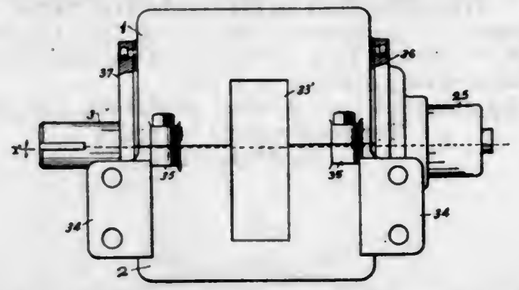
2,409,992
TRAVELING WAVE COUPLER
Howard M. Strobel, Allegany, N. Y.
Application April 12, 1941, Serial No. 388,280
5 Claims. (Cl. 250—36)



1. In a high-frequency generating system including a section of a coaxial transmission line and high velocity charged particles moving in a low pressure region, said coaxial transmission line being adapted to guide an electromagnetic traveling wave along a given path, means for energizing said section of said coaxial transmission line from a high-frequency energizing source to form a traveling wave having a transverse electrostatic field component along said path, means for maintaining a low pressure region along said path, means for directing said high velocity charged particles along said path and in the field of said electromagnetic wave, whereby charged particles of the stream are deflected by fields of the traveling wave, and means for collecting high-frequency energy from the deflected stream of charged particles.

2,409,993
MACHINE FOR THREADING COIL FORMS
Semon H. Stupakoff, Latrobe, Pa., assignor to Stupakoff Ceramic & Manufacturing Co., Latrobe, Pa., a corporation of Pennsylvania
Application April 3, 1943, Serial No. 481,705
7 Claims. (Cl. 10—1)

3. A threading tool of the class described comprising a shaft having a work-holding mandrel thereon, means for turning the shaft, a cam on the shaft having a helical face, a thread-forming comb supported in work-engaging position alongside the mandrel, said comb having a series of thread-forming teeth thereon corresponding in number and spacing to the number of threads to be formed on the work piece and to the pitch of such threads, and means on the comb engaging the cam for moving the comb axially with reference to the mandrel when the shaft is rotated, the helical face on the cam being equal to the pitch of a single thread.

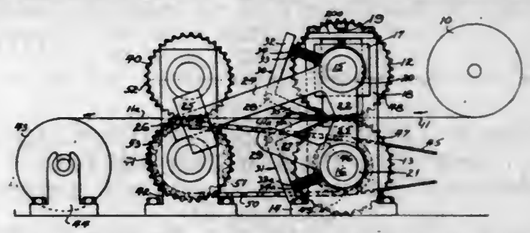


2,409,994
LOADING PAN
Patrick F. Toohey, Burgettstown, Pa., assignor of one-half to Mike Robb, Slovan, Pa.; Catherine Toohey administratrix of said Patrick F. Toohey, deceased
Application May 23, 1945, Serial No. 595,326
2 Claims. (Cl. 198—220)

1. A loading pan of the class described having an opening in a side thereof, a door adapted for closing the opening, a baffle extending transversely in the pan and curved in a forward direction, a flange at one end of the baffle adapted for engaging the outer side of the pan at the rear edge of the opening to prevent longitudinal and lateral movement of the baffle in one direction, and means at the other end of the baffle for attaching to the pan to prevent longitudinal and lateral movement of the baffle in an opposite direction.

2,409,995
HYDRAULIC CLUTCH
Henry Earl Morton, Muskegon, Mich.
Application April 5, 1944, Serial No. 529,561
2 Claims. (Cl. 192—58)

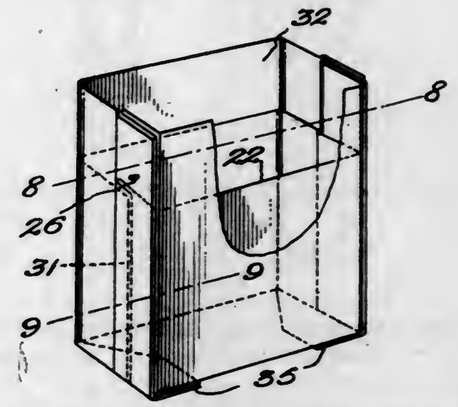
1. In a hydraulic clutch; the combination with a clutch housing having a bore at each of its ends; a roller bearing mounted in each of said bores and carrying a drive flange comprising two dissimilar portions fastened together in face to face relation to each other, with one portion of the drive flange having a recess with a cam ring fastened therein and having at its opposite sides at its inner periphery a pair of opposed inclined cam portions; a driven shaft extending longitudinally through the clutch housing and drive flange portions and carried by ball bearings mounted in a hub of each drive flange portion; a clutch block carrier carried by the said shaft between the two portions of the drive flange portions and having a plurality of radially extending slots, each having a clutch block slidable outwardly therein by oil under pressure conducted to the said slots



by ports extending radially from a port extending axially of the shaft from one end thereof, and closed at one end by a nozzle extending into the bore for conducting oil under pressure to the said bore and having an annular flange engaging a thrust bearing carried by an inwardly flanged sleeve secured to the said shaft for retaining the nozzle in the shaft against pressure of oil within the shaft.

2,409,996
ETHYLENE POLYMERIZATION
Milton J. Roedel, Talleyville, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application May 27, 1944, Serial No. 537,737
6 Claims. (Cl. 260—94)

1. In a process involving the polymerization of ethylene at a temperature between 100 and 400° C. and a pressure between 400 and 3000 atmospheres, the step which comprises conducting the polymerization in the presence of from about 0.0005 to 2% of an alkyl hydroperoxide based on the total weight of monomers charged into the reactor.

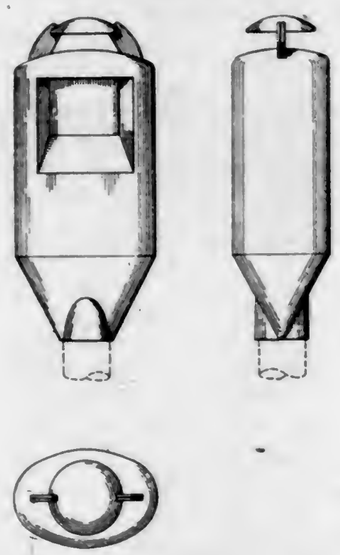


2,409,997
CREPING MACHINE
Louis A. Straubel, Sr., Green Bay, Wis., assignor to James W. Straubel, trustee, Green Bay, Wis.
Application November 24, 1944, Serial No. 564,916
9 Claims. (Cl. 154—30)

1. In a creping machine, a pair of cooperating rolls for the passage into the bite therebetween of a web to be creped, coacting members, pivotally mounted about the axes of said rolls, creping plates supported from said members for providing a gap adjacent to the bite of said rolls of adjustable width for receiving said web after the same

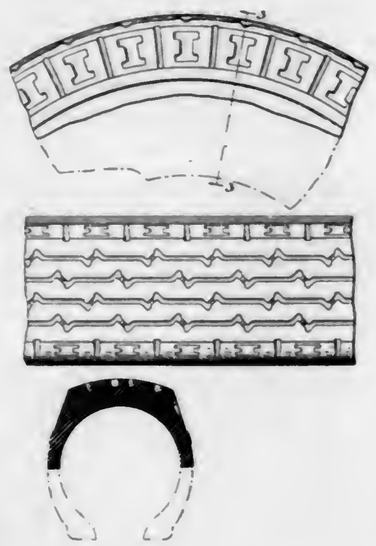
is creped in said nip, and means tending to urge said plates toward each other to resrict the width of said gap to effect an accumulation of said creped web within said gap.

2,409,998
FLUID-TIGHT PACKAGE
Harry F. Waters, New York, N. Y.
Original application April 27, 1940, Serial No. 331,907. Divided and this application December 4, 1941, Serial No. 421,583
4 Claims. (Cl. 229—55)



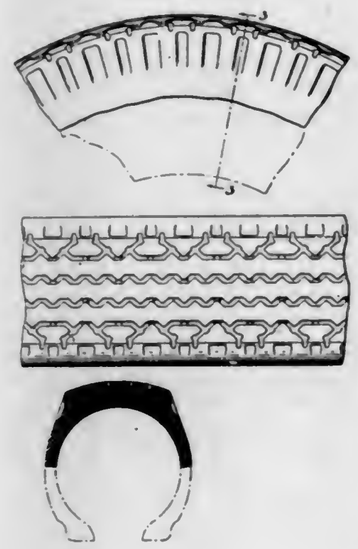
1. A composite strip for the continuous production of puncture-proof fluid-tight packages which comprises in combination a strip of flexible material fusible on at least one face thereof, and a plurality of puncture-resistant flexible cushioning members spacedly secured to the fusible face of said strip, said strip being adapted to be separated into unit lengths for the formation of individual packages, each of said unit lengths including at least one cushioning member arranged in such position as to cover the portions which in the finished package will be in direct contact with the packed material and to leave uncovered the portions which are to be heat-sealed during forming and after the filling of said package.

DESIGNS



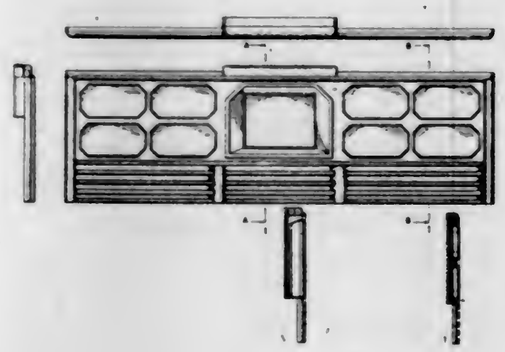
OCTOBER 22, 1946

145,765
DESIGN FOR A RADIO LOUD SPEAKER HOUSING OR SIMILAR ARTICLE
Arthur F. Adams and Nathaniel S. Barger, Chicago, Ill.
Application October 15, 1945, Serial No. 122,850
Term of patent 3½ years
(Cl. D26—14)



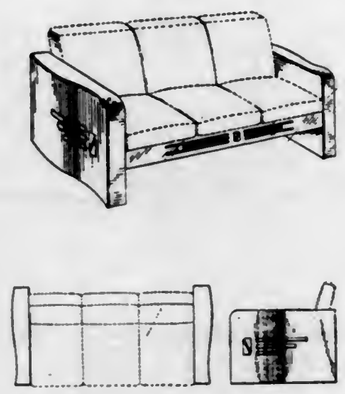
The ornamental design for a radio loud speaker housing or similar article, as shown and described.

145,766
DESIGN FOR A PNEUMATIC TIRE
George W. Anderson, Akron, Ohio, assignor to The General Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Application July 9, 1945, Serial No. 120,579
Term of patent 14 years
(Cl. D90—20)



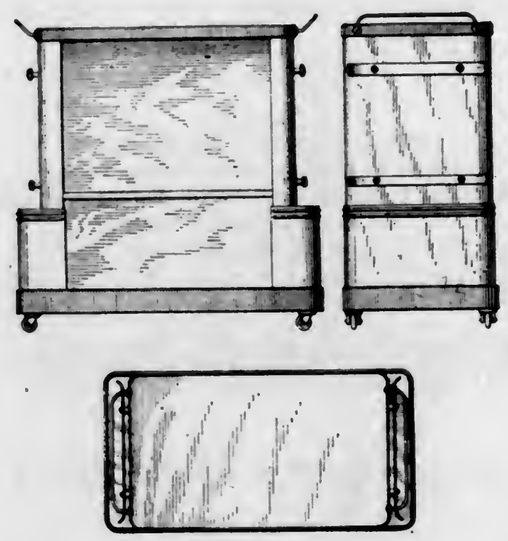
The ornamental design for a pneumatic tire, as shown and described.

145,767
DESIGN FOR A PNEUMATIC TIRE
George W. Anderson, Akron, Ohio, assignor to The General Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Application July 9, 1945, Serial No. 120,580
Term of patent 14 years
(Cl. D90—20)



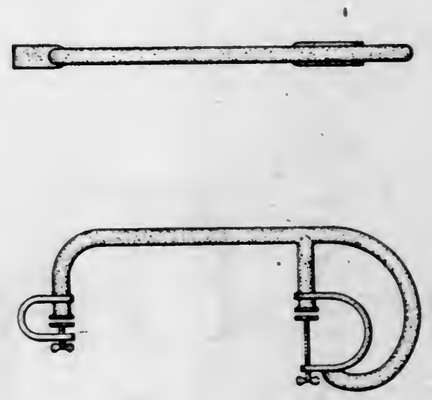
The ornamental design for a pneumatic tire, as shown and described.

145,768
DESIGN FOR A DISPLAY DEVICE
Charles T. Andrews, Toronto, Ontario, Canada, assignor to Multiple Displays, Inc., New York, N. Y., a corporation of New York
Application December 4, 1945, Serial No. 124,338
Term of patent 3½ years
(Cl. D80—9)



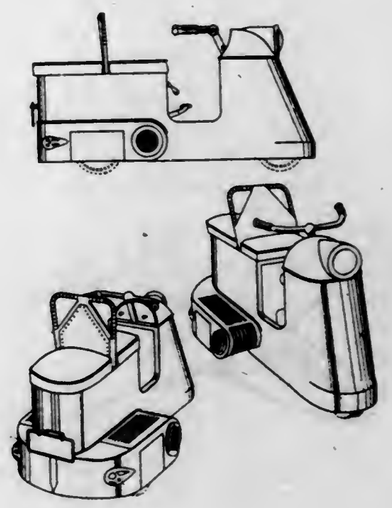
The ornamental design for a display device, as shown.

145,769
DESIGN FOR A GLIDER
Peter V. Armstrong, Warren, Ohio, assignor to Federal Machine and Welder Company, Warren, Ohio, a corporation of Ohio
Application December 13, 1945, Serial No. 124,669
Term of patent 7 years
(Cl. D15—11)



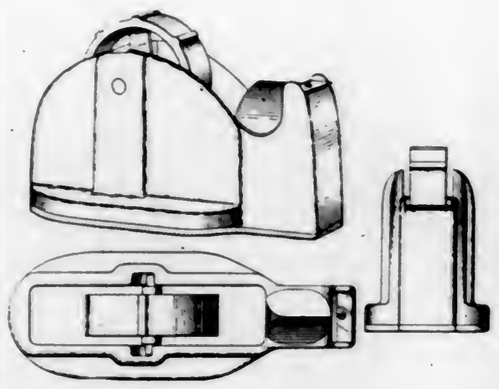
The ornamental design for a glider, substantially as shown and described.

145,770
DESIGN FOR A TOOL CARRIER
Francis Lawrence Ayres, Chicago, Ill., assignor to Stewart-Warner Corporation, Chicago, Ill., a corporation of Virginia
Application October 8, 1945, Serial No. 122,639
Term of patent 14 years
(Cl. D33—19)



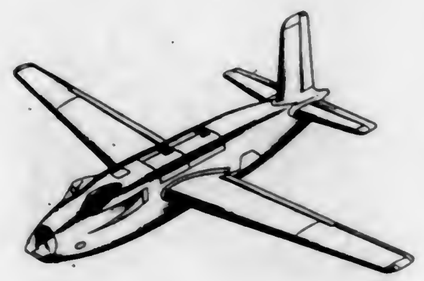
The ornamental design for a tool carrier, substantially as shown and described.

145,771
DESIGN FOR A BAR RAIL FIXTURE
George Bassett, Los Angeles, Calif.
Application December 17, 1945, Serial No. 124,793
Term of patent 14 years
(Cl. D80—2)

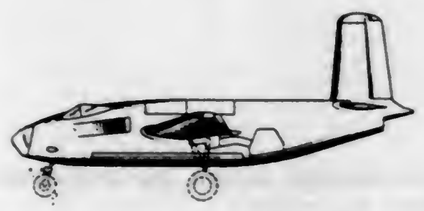


The ornamental design for a bar rail fixture, as shown.

145,772
DESIGN FOR A MOTORCYCLE
Frank Brogan, Cincinnati, Ohio
Application December 3, 1945, Serial No. 124,275
Term of patent 14 years
(Cl. D90—8)

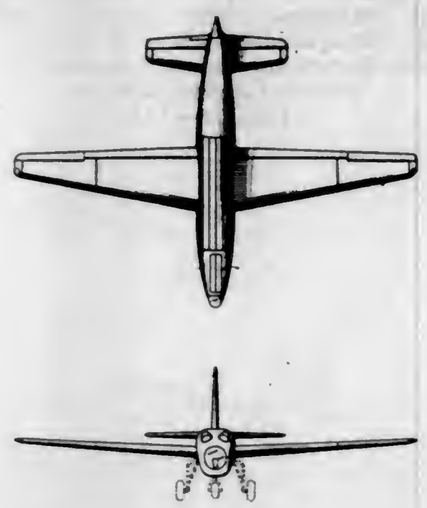


The ornamental design for a motorcycle, as shown and described.

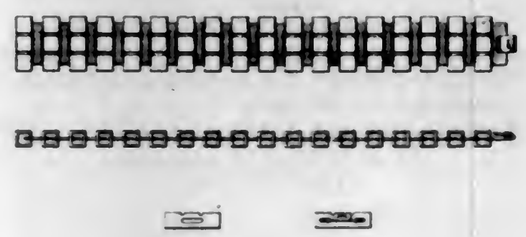


145,773
DESIGN FOR AN ADHESIVE TAPE DISPENSER
Benjamin Bronfman, Lynbrook, N. Y., assignor to The Cofax Corporation, a corporation of New York
Application July 27, 1946, Serial No. 132,019
Term of patent 14 years
(Cl. D74—1)

The ornamental design for an adhesive tape dispenser, as shown.

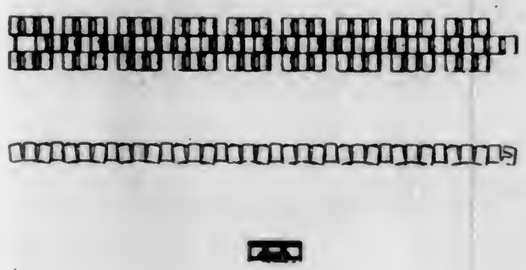


145,774
DESIGN FOR AN AIRPLANE
Edward F. Burton, Los Angeles, Calif., assignor to Douglas Aircraft Company, Inc., Santa Monica, Calif.
Application March 23, 1945, Serial No. 118,657
Term of patent 7 years
(Cl. D71—1)

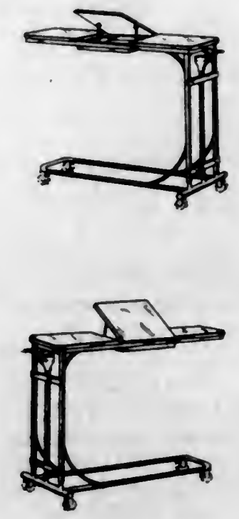


The ornamental design for an airplane, substantially as shown and described.

145,774—Continued

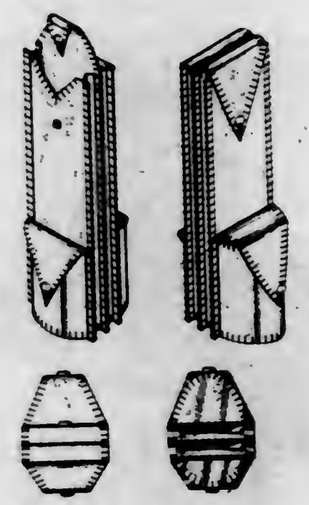


145,775
DESIGN FOR A BRACELET
Cecil F. Carter, New York, N. Y.
Application February 14, 1946, Serial No. 126,550
Term of patent 7 years
(Cl. D45—4)



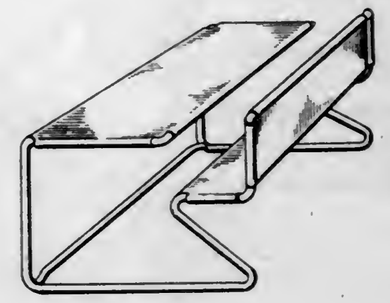
The ornamental design for a bracelet, substantially as shown.

145,776
DESIGN FOR A BRACELET
Cecil F. Carter, New York, N. Y.
Application February 14, 1946, Serial No. 126,551
Term of patent 7 years
(Cl. D45—4)



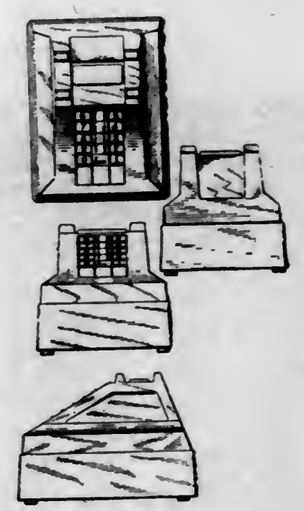
The ornamental design for a bracelet, substantially as shown.

145,777
DESIGN FOR AN OVERBED TABLE
Josiah S. Clachko, Ridgefield Park, N. J., assignor to S. Blickman, Inc., Weehawken, N. J., a corporation of New York
Application June 27, 1945, Serial No. 120,367
Term of patent 7 years
(Cl. D33—14)



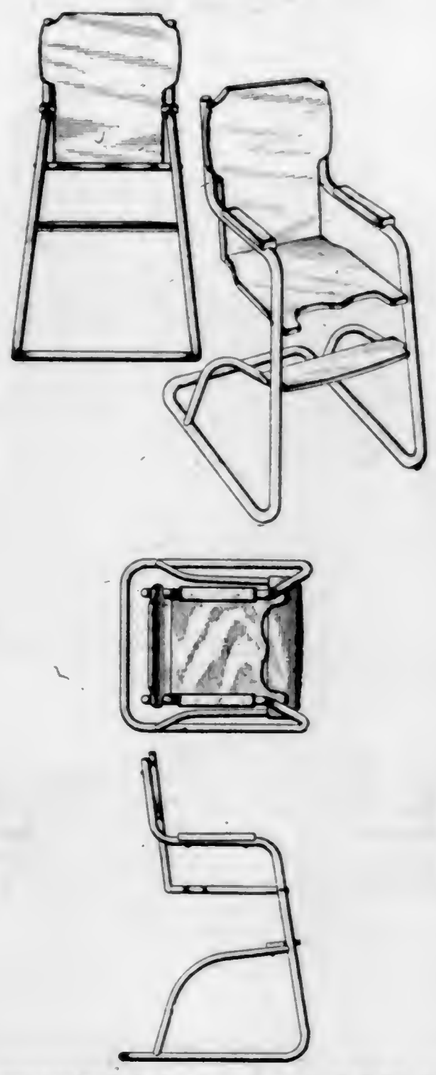
The ornamental design for an overbed table, as shown.

145,778
DESIGN FOR A PEN AND PENCIL CASE
Josephine A. Commander, Washington, D. C.
Application November 16, 1945, Serial No. 123,827
Term of patent 3½ years
(Cl. D74—21)



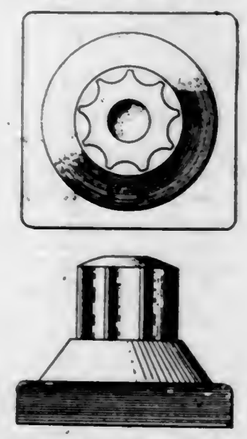
The ornamental design for a pen and pencil case, as shown.

145,779
DESIGN FOR A COMBINED TABLE AND CHAIR
Charles S. Davis, Brooklyn, N. Y.
Application December 11, 1945, Serial No. 124,635
Term of patent 14 years
(Cl. D33—14)



The ornamental design for a combined table and chair, substantially as shown.

145,780
DESIGN FOR A TELEPHONE DESK STAND
Gerald Deakin, New York, N. Y., assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application August 3, 1945, Serial No. 121,185
Term of patent 14 years
(Cl. D26—14)

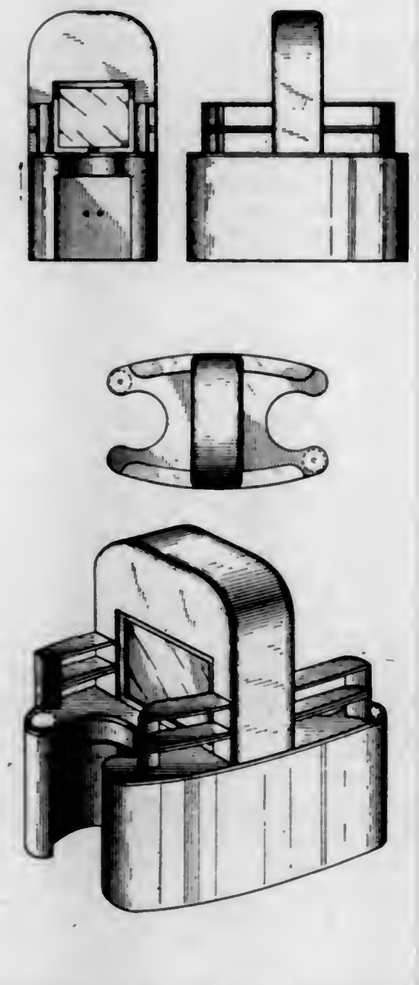


The ornamental design for a telephone desk stand, as shown.

145,781
DESIGN FOR A CHILD'S CHAIR
Frederick L. Duer, Chicago, Ill.
Application January 16, 1946, Serial No. 125,587
Term of patent 14 years
(Cl. D15—1)

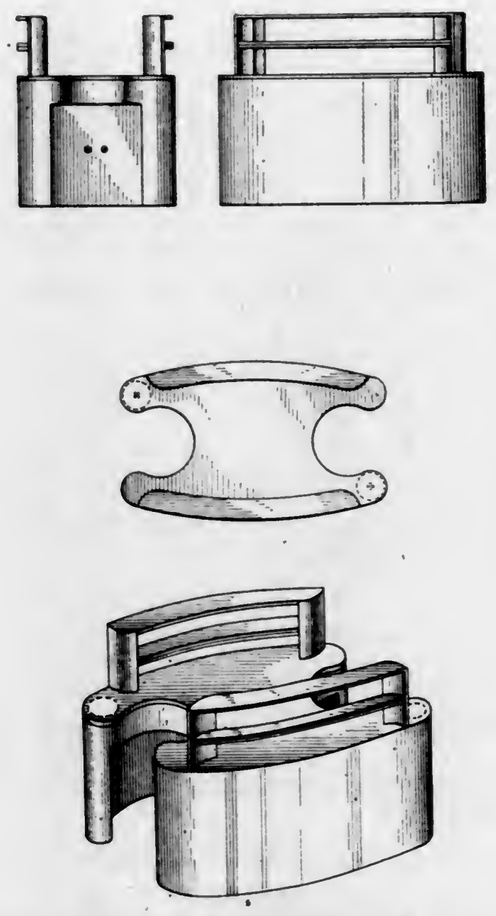
The ornamental design for a child's chair, as shown.

145,782
DESIGN FOR A NIGHT LIGHT
James P. Endsley, Sunnyvale, Calif.
Application October 22, 1945, Serial No. 123,083
Term of patent 7 years
(Cl. D48—20)



The ornamental design for a night light, as shown and described.

145,783
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Jacques Bernas, New York, N. Y.
Application January 26, 1946, Serial No. 125,994
Term of patent 14 years
(Cl. D45—4)



The ornamental design for a bracelet or similar article, substantially as shown and described.

145,784
DESIGN FOR A LABORATORY WORKBENCH
Johan Bjorksten, Chicago, Ill.
Application September 4, 1945, Serial No. 121,834
Term of patent 14 years
(Cl. D80—11)

The ornamental design for a laboratory workbench, substantially as shown and described.

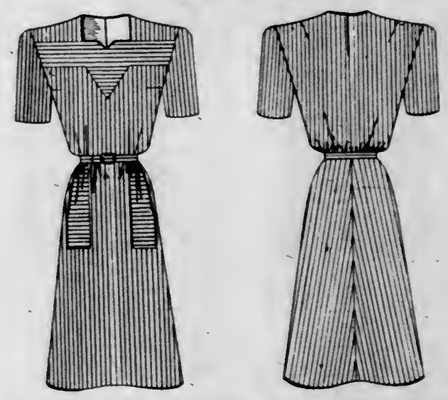
145,785
DESIGN FOR A LABORATORY WORKBENCH
Johan Bjorksten, Chicago, Ill.
Application September 4, 1945, Serial No. 121,835
Term of patent 14 years
(Cl. D80—11)

The ornamental design for a laboratory workbench, substantially as shown and described.

145,786
DESIGN FOR A POLO SHIRT OR SIMILAR ARTICLE
Dorthi Engleman, New York, N. Y., assignor to Carl Gutmann & Co., Inc., New York, N. Y.
Application April 12, 1946, Serial No. 128,497
Term of patent 14 years
(Cl. D3—4)

The ornamental design for a polo shirt or similar article, substantially as shown and described.

145,787
DESIGN FOR A SWEATER
Peter Freund, Jr., North Bergen, N. J.
Application April 27, 1946, Serial No. 129,024
Term of patent 3½ years
(Cl. D3—5)

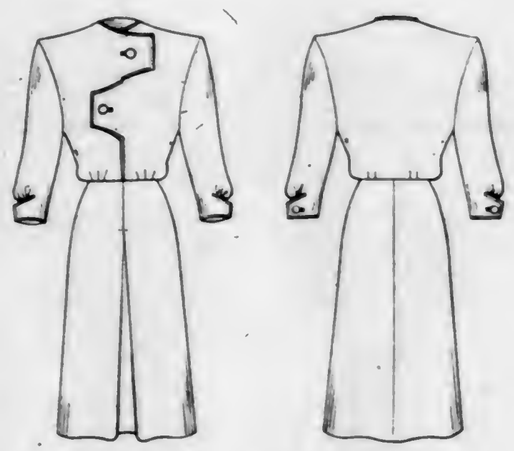


The ornamental design for a sweater, substantially as shown and described.

145,788
DESIGN FOR A CHAIR
Walter S. Gass, Seward, Nebr.
Application January 12, 1946, Serial No. 125,496
Term of patent 14 years
(Cl. D15—1)

The ornamental design for a chair, substantially as shown.

145,789
DESIGN FOR A DRESS
Zelma Golden, New York, N. Y.
Application March 25, 1946, Serial No. 127,898
Term of patent 3½ years
(Cl. D3—26)



The ornamental design for a dress, substantially as shown.

145,790
DESIGN FOR A DRESS
Zelma Golden, New York, N. Y.
Application July 23, 1946, Serial No. 131,830
Term of patent 3½ years
(Cl. D3—26)

The ornamental design for a dress, substantially as shown.

145,791
DESIGN FOR A DRESS
Zelma Golden, New York, N. Y.
Application July 23, 1946, Serial No. 131,833
Term of patent 3½ years
(Cl. D3—26)

The ornamental design for a dress, substantially as shown.

145,792
DESIGN FOR A DRESS
Zelma Golden, New York, N. Y.
Application July 23, 1946, Serial No. 131,838
Term of patent 3½ years
(Cl. D3—26)

The ornamental design for a dress, substantially as shown.

145,793
DESIGN FOR A DRESS
Zelma Golden, New York, N. Y.
Application July 23, 1946, Serial No. 131,839
Term of patent 3½ years
(Cl. D3—26)

The ornamental design for a dress, substantially as shown.

145,794
DESIGN FOR A DRESS
Zelma Golden, New York, N. Y.
Application July 23, 1946, Serial No. 131,840
Term of patent 3½ years
(Cl. D3—26)

The ornamental design for a dress, substantially as shown.

145,795
DESIGN FOR A DRESS
Zelma Golden, New York, N. Y.
Application July 23, 1946, Serial No. 131,841
Term of patent 3½ years
(Cl. D3—26)

The ornamental design for a dress, substantially as shown.

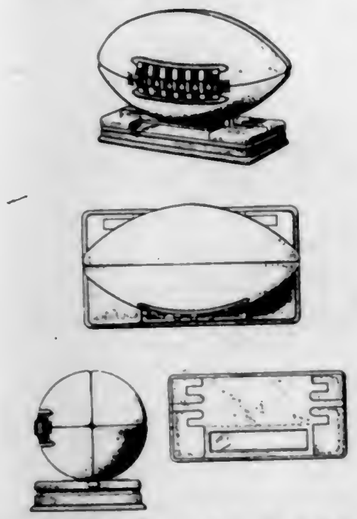
145,796
DESIGN FOR A DRESS
Zelma Golden, New York, N. Y.
Application July 23, 1946, Serial No. 131,846
Term of patent 3½ years
(Cl. D3—26)

The ornamental design for a dress, substantially as shown.

145,797
DESIGN FOR A DRESS
Zelma Golden, New York, N. Y.
Application July 23, 1946, Serial No. 131,847
Term of patent 3½ years
(Cl. D3—26)

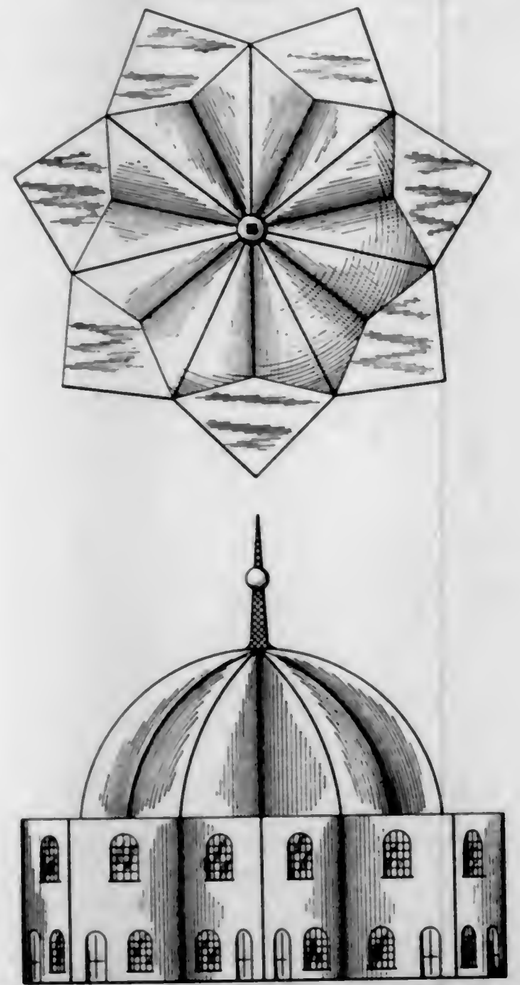
The ornamental design for a dress, substantially as shown.

145,798
DESIGN FOR A DRESS
David M. Goodstein, New York, N. Y.
Application July 23, 1946, Serial No. 131,826
Term of patent 3½ years
(Cl. D3—26)



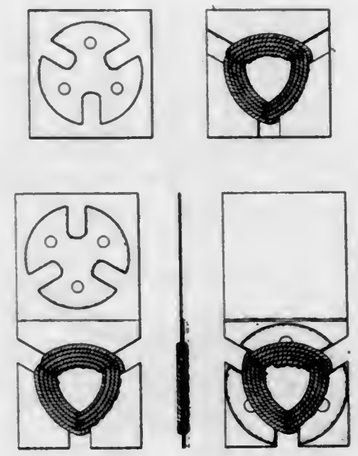
The ornamental design for a dress, substantially as shown.

145,799
DESIGN FOR A DRESS
David M. Goodstein, New York, N. Y.
Application July 23, 1946, Serial No. 131,827
Term of patent 3½ years
(Cl. D3—26)



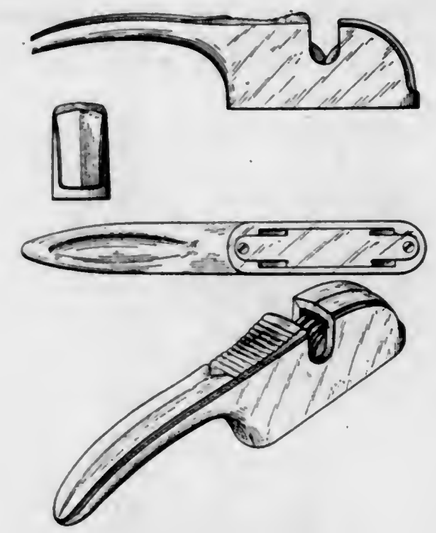
The ornamental design for a dress, substantially as shown.

145,800
DESIGN FOR A RADIO CABINET
Walter J. House, Jr., Dallas, Tex.
Application May 17, 1945, Serial No. 119,593
Term of patent 7 years
(Cl. D56—4)



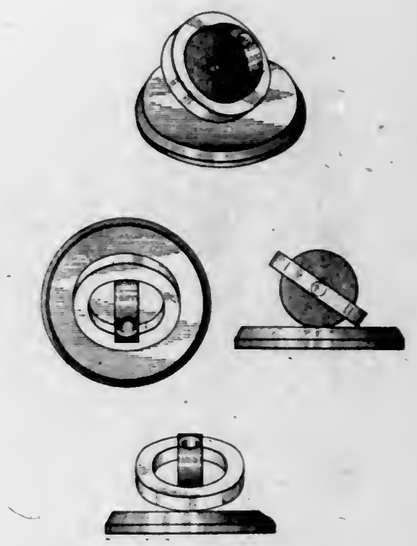
The ornamental design for a radio cabinet, as shown.

145,801
DESIGN FOR A BUILDING
Harold Paul Hummel, Mount Carmel, Pa.
Application November 27, 1945, Serial No. 124,095
Term of patent 14 years
(Cl. D13—1)



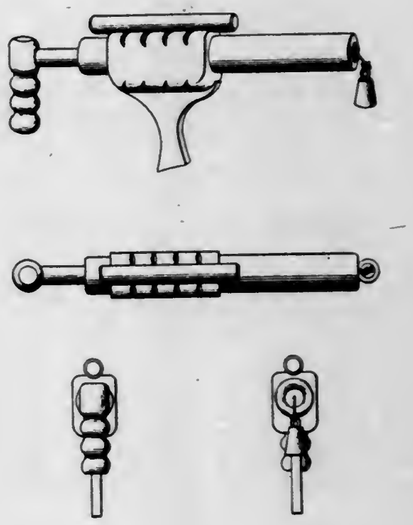
The ornamental design for a building, as shown and described.

145,802
DESIGN FOR A SAMPLE DISPLAY DEVICE FOR TWINE AND THE LIKE
Edward H. Jackson, Jr., Reading, Pa., assignor to The Thomas Jackson and Son Co., Reading, Pa., a corporation of Pennsylvania
Application November 20, 1945, Serial No. 123,939
Term of patent 14 years
(Cl. D80—5)



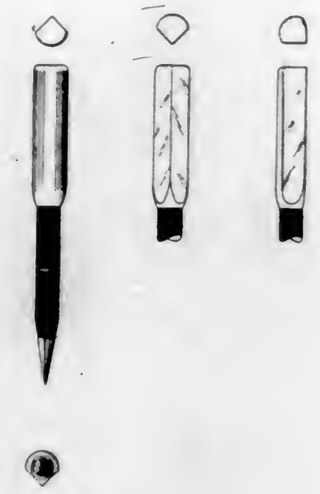
The ornamental design for a sample display device for twine and the like, as shown.

145,803
DESIGN FOR A KNIFE SHARPENER
George M. Jones, Jenkintown Manor, Pa.
Application October 3, 1945, Serial No. 122,490
Term of patent 14 years
(Cl. D37—1)



The ornamental design for a knife sharpener, as shown.

145,804
DESIGN FOR A PEN DESK STAND
Benjamin W. Hanle, Elizabeth, N. J., assignor to Eagle Pencil Company, a corporation of Delaware
Application July 20, 1946, Serial No. 131,758
Term of patent 14 years
(Cl. D74—1)

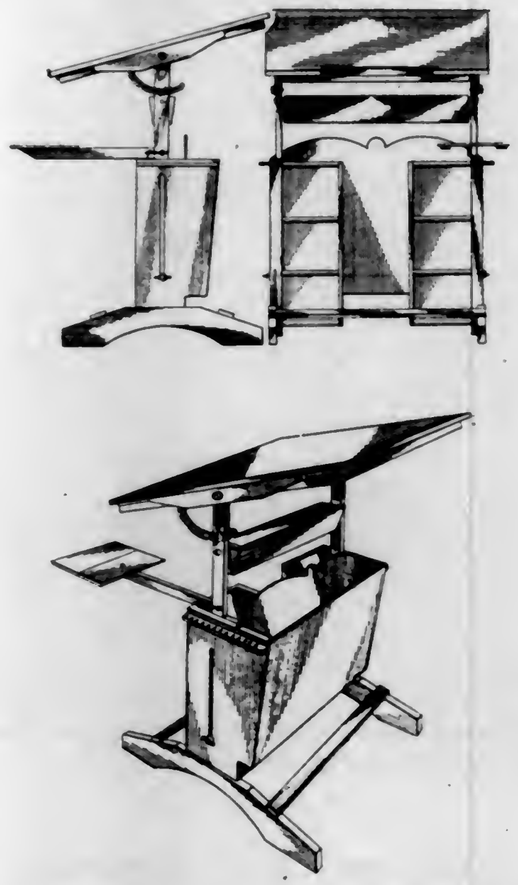


The ornamental design for a pen desk stand, substantially as shown.

145,805
DESIGN FOR A TOY GUN
Wallace C. Hooper, Los Angeles, Calif.
Application August 20, 1945, Serial No. 121,509
Term of patent 3½ years
(Cl. D34—15)

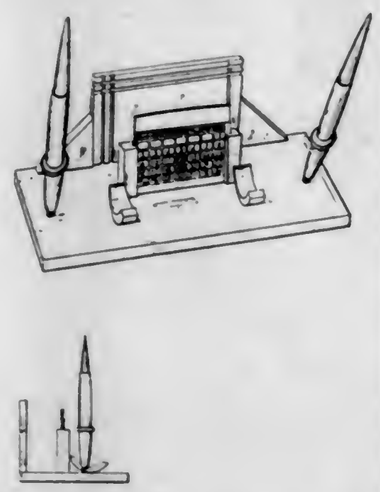
The ornamental design for a toy gun, as shown and described.

145,806
DESIGN FOR A MECHANICAL PENCIL
Max Kahn, New York, N. Y.
Application June 1, 1946, Serial No. 130,317
Term of patent 7 years
(Cl. D74—24)



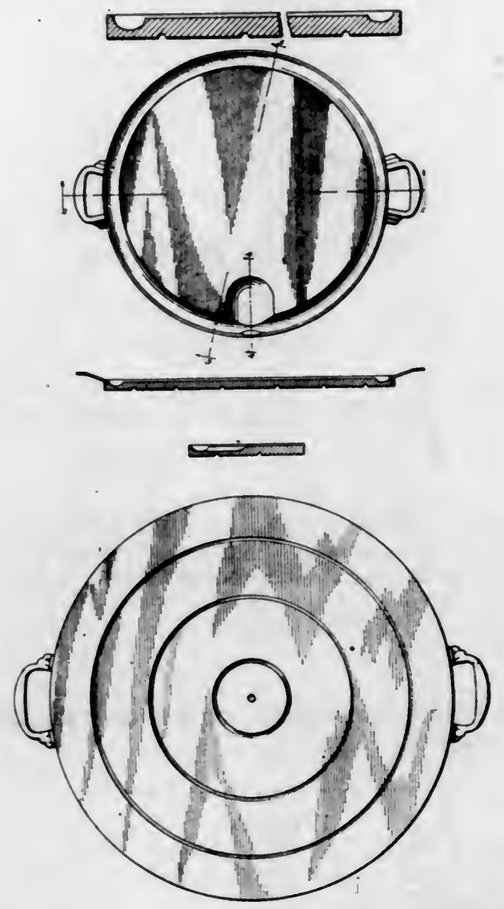
The ornamental design for a mechanical pencil, substantially as shown.

145,807
DESIGN FOR A DRESS
H. Thomas Langbert, New York, N. Y.
Application June 14, 1946, Serial No. 130,694
Term of patent 7 years
(Cl. D3—26)



The ornamental design for a dress, substantially as shown.

145,808
DESIGN FOR A DRAFTING TABLE
Louis La Pidus, Brooklyn, N. Y.
Application January 15, 1946, Serial No. 125,567
Term of patent 14 years
(Cl. D33—14)



The ornamental design for a drafting table, as shown.

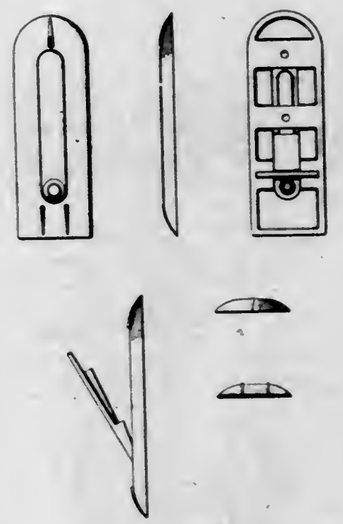
145,809
DESIGN FOR A COMBINATION DESK UNIT
Max J. Lewis, Forest Hills, N. Y.
Application June 17, 1946, Serial No. 130,811
Term of patent 3½ years
(Cl. D74—1)

The ornamental design for a combination desk unit, substantially as shown and described.

145,810
DESIGN FOR A GRILL
Morgan J. Lewis, Philadelphia, Pa.
Application November 27, 1945, Serial No. 124,116
Term of patent 14 years
(Cl. D44—1)

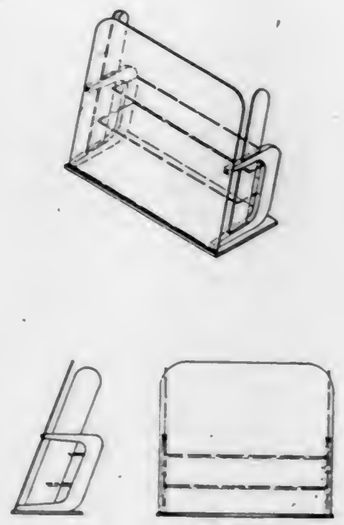
The ornamental design for a grill, as shown.

145,811
DESIGN FOR A COMBINED BROOCH AND COSMETIC CONTAINER
Noreen Linduska, Cicero, Ill.
Application December 27, 1945, Serial No. 125,066
Term of patent 7 years
(Cl. D86—10)



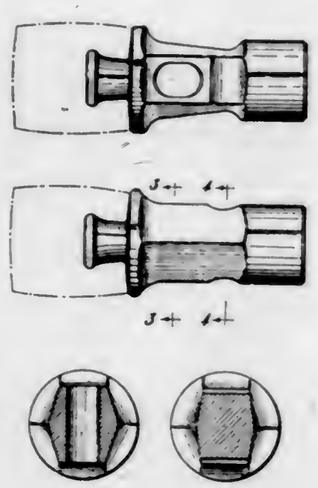
The ornamental design for a combined brooch and cosmetic container, substantially as shown.

145,812
DESIGN FOR A COOKIE CUTTER
Marcia M. Meyers, Poplar Grove, Ill.
Application December 6, 1945, Serial No. 124,406
Term of patent 14 years
(Cl. 44—29)



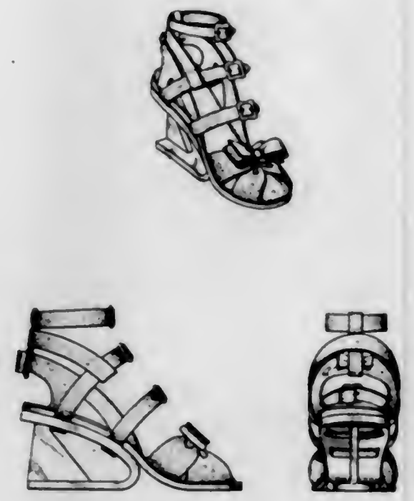
The ornamental design for a cookie cutter, as shown.

145,813
DESIGN FOR A GARMENT HOOK
Harold A. Marsh, Chestnut Hill, Mass.
Application March 11, 1946, Serial No. 127,342
Term of patent 3½ years
(Cl. D17—9)



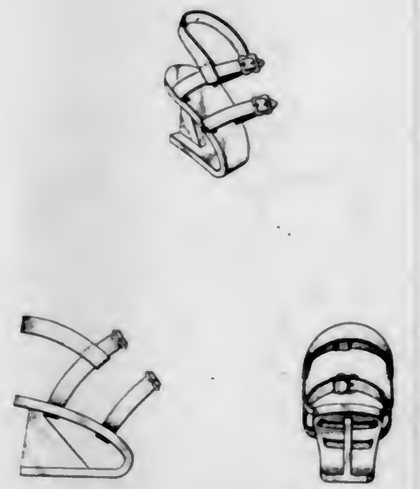
The ornamental design for a garment hook or the like, as shown.

145,814
DESIGN FOR A MERCHANDISE DISPLAY STAND
Simon Malkin, New York, N. Y., assignor to United Cigar-Whelan Stores Corporation, a corporation of Delaware
Application December 19, 1945, Serial No. 124,862
Term of patent 14 years
(Cl. D80—9)



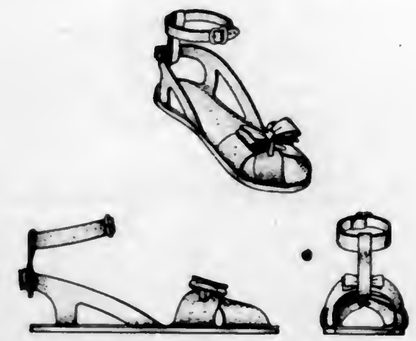
The ornamental design for a merchandise display stand, as shown.

145,815
DESIGN FOR A HAMMER HEAD
Bernard L. McClure, Norwalk, Ohio
Application August 27, 1945, Serial No. 121,673
Term of patent 14 years
(Cl. D93—4)



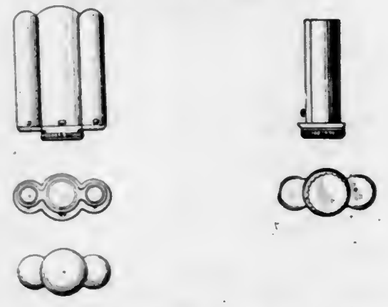
The ornamental design for a hammer head, substantially as shown and described.

145,816
DESIGN FOR A SHOE
Edna S. Payne, New York, N. Y.
Application April 18, 1946, Serial No. 128,736
Term of patent 7 years
(Cl. D7—7)



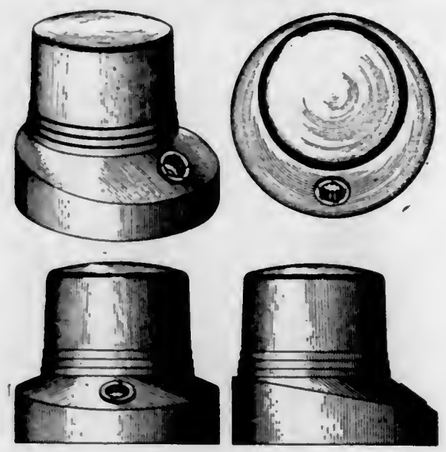
The ornamental design for a shoe, substantially as shown.

145,817
DESIGN FOR A COMBINED HEEL AND COUNTER UNIT FOR A SHOE OR SIMILAR ARTICLE
Edna S. Payne, New York, N. Y.
Application April 18, 1946, Serial No. 128,737
Term of patent 7 years
(Cl. D7—5)



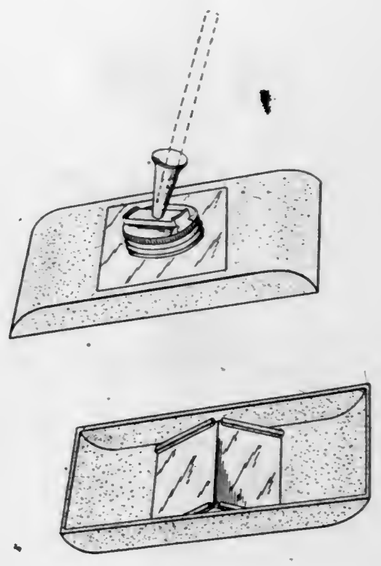
The ornamental design for a combined heel and counter unit for a shoe or similar article, substantially as shown.

145,818
DESIGN FOR A SANDAL
Edna S. Payne, New York, N. Y.
Application April 18, 1946, Serial No. 128,738
Term of patent 7 years
(Cl. D7—7)



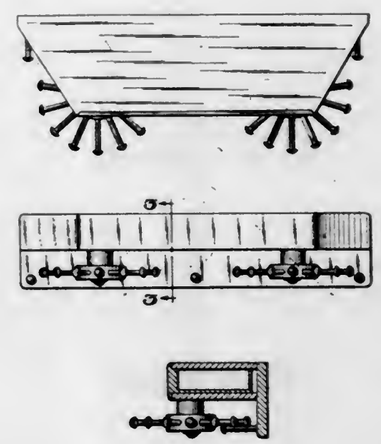
The ornamental design for a sandal, substantially as shown.

145,819
DESIGN FOR A COSMETIC CONTAINER
Marguerite H. Ramsey, Brooklyn, N. Y.
Application January 15, 1946, Serial No. 125,572
Term of patent 3½ years
(Cl. D86—10)



The ornamental design for a cosmetic container, as shown and described.

145,820
DESIGN FOR A RESERVOIR DESK STAND
Jean O. Reinecke, Oak Park, Ill., assignor to W. A. Sheaffer Pen Company, Fort Madison, Iowa, a corporation of Delaware
Application April 3, 1946, Serial No. 128,233
Term of patent 14 years
(Cl. D74—1)

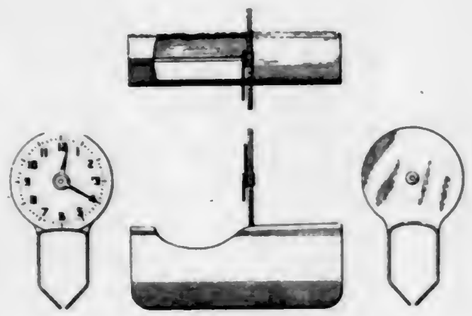


The ornamental design for a reservoir desk stand, substantially as shown.

145,821
DESIGN FOR A COMBINATION DESK UNIT
Theodore Roffey, Toronto, Ontario, Canada
Application April 1, 1946, Serial No. 128,135
In Canada March 12, 1946
Term of patent 3½ years
(Cl. D74—1)

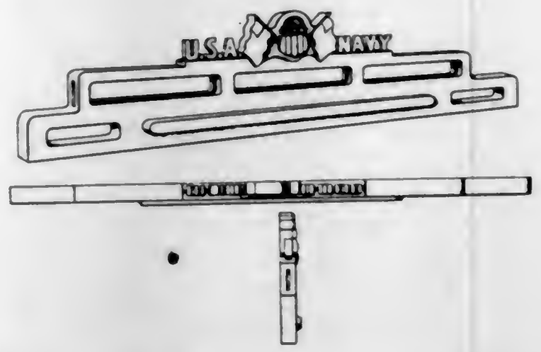
The ornamental design for a combination desk unit, as shown and described.

145,822
DESIGN FOR A COMBINED TIE RACK AND DRAWER
Richard Benjamin Rubin, Newton Center, Mass.
Application March 14, 1946, Serial No. 127,521
Term of patent 14 years
(Cl. D33—8)



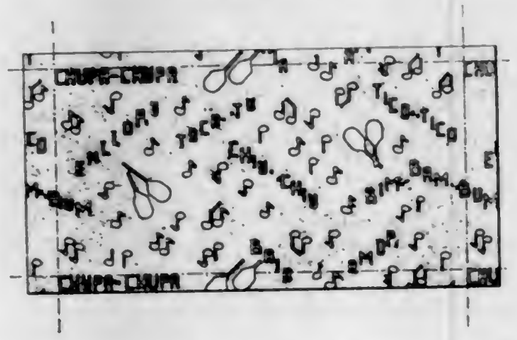
The ornamental design for a combined tie rack and drawer, substantially as shown.

145,823
DESIGN FOR A WATCHCASE
Joseph Shemanski, Los Angeles, Calif.
Application March 29, 1946, Serial No. 128,075
Term of patent 3½ years
(Cl. D42—8)



The ornamental design for a watchcase, as shown.

145,824
DESIGN FOR A TIMING INDICATOR FOR PROCESSING DENTAL PLASTICS
Earl D. Stiles, West Sand Lake, N. Y.
Application March 21, 1946, Serial No. 127,759
Term of patent 3½ years
(Cl. D42—7)

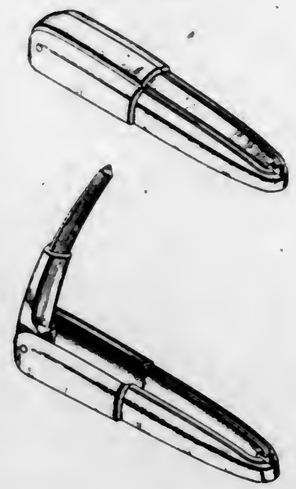


The ornamental design for a timing indicator for processing dental plastics, as shown.

145,825
DESIGN FOR AN INSIGNIA EXHIBITOR
Roy E. Tilford, Garland, Tex.
Application December 3, 1945, Serial No. 124,274
Term of patent 3½ years
(Cl. D80—9)

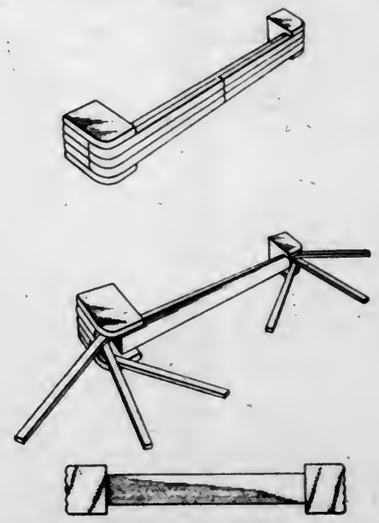
The ornamental design for an insignia exhibitor, as shown.

145,826
DESIGN FOR A FABRIC OR SIMILAR ARTICLE
Frank G. Ullmann, New York, N. Y.
Application February 28, 1946, Serial No. 126,984
Term of patent 3½ years
(Cl. D92—1)



The ornamental design for a fabric or similar article, as shown and described.

145,827
DESIGN FOR A DRESS
Joset Walker, New York, N. Y.
Application March 25, 1946, Serial No. 127,907
Term of patent 3½ years
(Cl. D3—26)



The ornamental design for a dress, substantially as shown.

145,828
DESIGN FOR A DESK WRITING UNIT
Percival White, Long Ridge, N. Y.
Application June 30, 1944, Serial No. 114,274
Term of patent 3½ years
(Cl. D74—1)

The ornamental design for a desk writing unit, substantially as shown.

145,829
DESIGN FOR A TOWEL RACK
Frank J. Whitman, Los Angeles, Calif.
Application September 20, 1945, Serial No. 122,199
Term of patent 3½ years
(Cl. D33—16)

The ornamental design for a towel rack, substantially as shown.

Heijn, Paul C.

American Steel and Wire Company of New Jersey, The, assignee: *See*—
Dougherty, James W.
Lorig, Frank W., Miller, and Robinson.

American Telephone and Telegraph Company, assignee: *See*—
King, Robert W.

American Viscose Corporation, assignee: *See*—
Folmer, Herman C. R.

Amrein, Werner: *See*—
Fischer, Friedrich, and Amrein.

Anderson, Alva E., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Ultra high frequency detector. 2,409,608; Oct. 22.

Anderson, James L., Closter, N. J., assignor to Air Reduction Company, Incorporated, New York, N. Y. Billet scarfing method and apparatus. 2,409,654; Oct. 22.

Anderson, Ted R., Puunene, Maui, Hawaii. Internal-combustion engine. 2,409,609; Oct. 22.

Annen, James E., assignor to Sutherland Paper Company, Kalamazoo, Mich. Paper bottles and the like, and manufacture. 2,409,655; Oct. 22.

Arma Engineering Co., Inc., assignee: *See*—
Agins, George.

Armstrong, Leonard J.: *See*—
Bock, L. H., Johnson, and Armstrong.

Arnott, Edward G. F.: *See*—
Slack, Charles M., and Arnott.

Aro Equipment Corporation, The, assignee: *See*—
Fitch, Clifford E.
Shearman, Spicer D.

Austin, Harold S., Dallas, Tex. Hypodermic syringe. 2,409,656; Oct. 22.

Bach, Henry M., Lawrence, assignor to Premier Crystal Laboratories, Inc., New York, N. Y. Multiple crystal holder. 2,409,607; Oct. 22.

Bailey, Grant C., Bartlesville, Okla., assignor to Phillips Petroleum Company. Production of olefin polymers. 2,490,727; Oct. 22.

Baldwin Locomotive Works, The, assignee: *See*—
Barbour, James P.

Baldwin, Wayne A., Watertown, N. Y., assignor to The New York Air Brake Company. Sander. 2,490,728; Oct. 22.

Barber-Colman Company, assignee: *See*—
Marcellus, Brooks.

Barbour, James P., Philadelphia, Pa., assignor to The Baldwin Locomotive Works. Press. 2,409,824; Oct. 22.

Baringoltz, Bernardo, Pedermar, Argentina. Purifying exhaust gases. 2,409,825; Oct. 22.

Barnes, Arthur: *See*—
Ryan, William H., Barnes, and Husek.

Barnes, Arthur, Waltham, and H. P. Husek, Allston, assignors to Polaroid Corporation, Cambridge, Mass. Forming iodine images. 2,409,923; Oct. 22.

Barnes, James F., trustee: *See*—
Nyberg, Curt E.

Barron, Edward T., Minneapolis, Minn. Differential locking means. 2,409,729; Oct. 22.

Bauer, Russell E., Detroit, Mich. Thread checker. 2,409,924; Oct. 22.

Bauman, William C.: *See*—
Hunter, Melvin J., and Bauman.

Bell Aircraft Corporation, assignee: *See*—
Schwartz, Arthur A.

Bell Telephone Laboratories, Incorporated, assignee: *See*—
Anderson, Alva E.
Elliott, Stanley J., Hovgaard, Mallina, and Thomas.
Fritschi, Walter W.
Little, John B.
Samuel, Arthur L.

Bemis Bro. Bag Co., assignee: *See*—
Geimer, William J., and Linda.

Bendix-Westinghouse Automotive Air Brake Company, assignee: *See*—
Eaton, Wilfred A.

Bennett, Harold F., assignor to Eastman Kodak Company, Rochester, N. Y. Catadioptric television projector. 2,409,971; Oct. 22.

Bernstein, Samuel S., Los Angeles, Calif. Chair. 2,409,826; Oct. 22.

Better Packages Incorporated, assignee: *See*—
Krueger, Theodore H.

Birdsall, Edwin H., Golden, Colo., assignor to Remington Arms Company, Inc., Bridgeport, Conn. Apparatus for feeding and delivering ammunition blanks. 2,409,657; Oct. 22.

Bixby, William H., assignor to D. R. Middleton and S. M. Hanley, doing business as Power Equipment Company, Detroit, Mich. Voltage regulation. 2,409,610; Oct. 22.

Blackstone, Henry: *See*—
Hillyer, Curtis, Jr., and Blackstone.

Blanchard, William A., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Vibrator lever for pattern mechanism. 2,409,972; Oct. 22.

Blanchard, William A., Millbury, assignor to Crompton & Knowles Loom Works, Worcester, Mass. Lever for loom pattern mechanism. 2,409,973; Oct. 22.

Blankner, William, Lakewood, Ohio. Holding device. 2,409,827; Oct. 22.

Blaw-Knox Company, assignee: *See*—
Lavett, Charles O., and Kerker.

Blomberg, Martin P., Hinsdale, Ill., and O. J. Stampen, Arlington, Va., assignors to General Motors Corporation, Detroit, Mich. Locomotive underframe. 2,409,730; Oct. 22.

Bloom, Richard A., Kenwood Station, assignor to Oneida, Ltd., Oneida, N. Y. Display table. 2,409,925; Oct. 22.

Bloom, Richard A., Kenwood Station, assignor to Oneida, Ltd., Oneida, N. Y. Display chest. 2,409,926; Oct. 22.

Blue Ridge Glass Corporation, assignee: *See*—
Ingouf, Robert J. A., and Lewis.

Bock, Louis H., Huntingdon Valley, Pa., H. C. E. Johnson, New York, N. Y., and L. J. Armstrong, assignors to Rohm & Haas Company, Philadelphia, Pa. Aminomethyl amidothiazoles. 2,409,828; Oct. 22.

Bodine, Albert G., Los Angeles, Calif. Charge forming method and apparatus for internal-combustion engines. 2,409,611; Oct. 22.

Boisselier, Earl D.: *See*—
Hohmann, Richard K., and Boisselier.

Bolinger, George N., Shelbyville, Ill. Fireplace. 2,409,731; Oct. 22.

Book, Charles R., assignor to The Eyelet Specialty Company, Waterbury, Conn. Cosmetic container. 2,409,658; Oct. 22.

Boon, William R., Blackley, Manchester, England, assignor to Imperial Chemical Industries Limited. Alkylene-bis-ureas. 2,409,829; Oct. 22.

Bowles, Charles, assignee: *See*—
Notman, Clarence A.

Braddon, Frederick D., Babylon, assignor to Sperry Gyroscope Company, Inc., Brooklyn, N. Y. Gyro vertical. 2,409,659; Oct. 22.

Braunworth, Albert, Queens Village, assignor to R. Hoe & Co., Inc., New York, N. Y. Printing plate clamping mechanism. 2,409,830; Oct. 22.

Breth, Walter J., and R. M. Wormald, assignors to The General Tire and Rubber Company, Akron, Ohio. Tire building machine. 2,409,974; Oct. 22.

Briggs, Walter S., Needham, Mass. Mop yarn and mop made therefrom. 2,409,660; Oct. 22.

Broadbent, Wallace, and F. L. Rose, Blackley, Manchester, England, assignors to Imperial Chemical Industries Limited. Aryl-dicyandiamide production. 2,409,832; Oct. 22.

Brodale, Carl, Humboldt, Iowa. Automatic hitch. 2,409,831; Oct. 22.

Bromilow and Edwards Limited, assignee: *See*—
Kinnaird, James A.

Brooker, Leslie G. S., and R. H. Sprague, assignors to Eastman Kodak Company, Rochester, N. Y. Pyrrole dyes. 2,409,612; Oct. 22.

Brooks, Walter C., Wethersfield, Conn. Wrench holder. 2,409,613; Oct. 22.

Brown Instrument Company, The, assignee: *See*—
Krogh, Anker E.

Browne, Donald B., Harpenden, F. W. Clarke, Totternhoe, and R. H. G. Painter, Dunstable, England, assignors to General Motors Corporation, Detroit, Mich. Screening device for spark plugs. 2,409,732; Oct. 22.

Browning, J. M. & M. S., Company, assignee: *See*—
Browning, Val A.

Browning, Val A., Ogden, Utah, assignor to J. M. & M. S. Browning Company. Repeating firearm. 2,409,733; Oct. 22.

Bruner, Walter M.: *See*—
Gresham, William F., and Bruner.

Bucher, Rudolf, assignor to the Swiss firm of G. Laubscher & Co., Basel, Switzerland. Instrument for blood transfusion. 2,409,734; Oct. 22.

Buice, David E., Sr., Ellenwood, Ga. Heddle bar lock. 2,409,735; Oct. 22.

Burch, Willie D., assignor of one-half to F. Parrott, Oklahoma City, Okla. Acetylene generator. 2,409,833; Oct. 22.

Burgess, John E.: *See*—
Gerhold, Clarence G., and Burgess.

Bush, A. G., assignee: *See*—
Criner, Harry J.

Byers, Harold E.: *See*—
Harrison, John H., and Byers.

Byrket, Otis C., Richmond, Ind. Garment hanger. 2,409,927; Oct. 22.

Cahenzli, Martin T., Jr., assignor to The Harry Alter Company, Chicago, Ill. Combination receiver and dehydrator. 2,409,928; Oct. 22.

Caimi, Joseph D., Everett, Mass. Paper display carton with transparent window. 2,409,736; Oct. 22.

Canadian Copper Refiners Limited, assignee: *See*—
Clark, Charles W., Elkin, and Waltkins.

Canal National Bank of Portland, The, trustee: *See*—
Sawyer, Edward E.

Carnegie-Illinois Steel Corporation, assignee: *See*—
Dobscha, Herman F.
Greulich, Gerald G.
Lankford, Howard Y.

Carstedt, Volney E.: *See*—
Hetzel, Frank L., and Carstedt.

Carter, Franklyn Y., Detroit, Mich., assignor to Detroit Lubricator Company. Refrigerant distributing means. 2,409,661; Oct. 22.

Cattaneo, Alfred G.: *See*—
Evans, Theodore W., and Cattaneo.

Celanese Corporation of America, assignee: *See*—
Lyem, Arthur.

Christensen, Edward C., Denmark, Wis. Towing pole. 2,409,662; Oct. 22.

Christiansen, Walter G., Glen Ridge, and S. E. Harris, Nutley, N. J., assignors to E. R. Squibb & Sons, New York, N. Y. Amino alcohol esters of alkyl-substituted alkoxy benzoic acids. 2,409,663; Oct. 22.

Chrysler Corporation, assignee: *See*—
Livar, Allen P.

Clafendetcher, Christ R.: *See*—
Ramstack, Erich F., and Clafendetcher.

Clapp, Roy A., Minneapolis, Minn. Tape moving mechanism. 2,409,834; Oct. 22.

Clark, Charles W., Westmount, E. M. Elkin, Montreal, Quebec, Canada, and G. R. Waltkins, Flemington, N. J., assignors to Canadian Copper Refiners Limited, Montreal East, Quebec, Canada. Producing pure selenium. 2,409,835; Oct. 22.

Clarke, Frederick W.: *See*—
Browne, Donald B., Clarke, and Painter.

Clarke, Thomas B., and F. W. H. Williams, Leicester, England, assignors to United Shoe Machinery Corporation, Flemington, N. J. Chip ejector for heel seat fitting machines. 2,409,737; Oct. 22.

Clarke, William W.: *See*—
Zademach, Erich R., and Clarke.

Cleveland Pneumatic Tool Company, The, assignee: *See*—
Feucht, Albert.
Meyer, Andrew.

Clifford, David G., Palo Alto, Calif., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Electrode support. 2,409,664; Oct. 22.

Cluett, Peabody & Co., Inc., assignee: *See*—
Pfeffer, Edward C., Jr., Tweed, and Jarmak.

Coe, Everett L., Marblehead, Mass., assignor to General Electric Company. Centrifugal type compressor. 2,409,836; Oct. 22.

Cohen, Harold, Elizabeth, N. J. Appliance. 2,409,929; Oct. 22.

Cole, Allen T., and J. B. Duke, Lakeland, Fla., and L. L. McMurray, Lovingston, Va., assignors to Minerals Separation North American Corporation, New York, N. Y. Purification of industrial sands. 2,409,665; Oct. 22.

Collins, Robert A., Brunswick, Ga., assignor to Hercules Powder Company, Wilmington, Del. Refining sulphate turpentine. 2,409,614; Oct. 22.

Comey, Fred H., assignor to The General Tire & Rubber Company, Akron, Ohio. Bead clamp for pneumatic tires. 2,409,666; Oct. 22.

Composite Rubber Products Corporation, assignee: *See*—
Hoskins, Oakley W.

Conn, C. G., Ltd., assignee: *See*—
Kent, Earle L.

Conner, Clarence L., McFarland, Calif. Reversing mechanism for power operated drills. 2,409,738; Oct. 22.

Continental Can Company, Inc., assignee: *See*—
Punte, William F.

Cooper, Dexter P., Jr.: *See*—
Roger, Howard G., and Cooper.

Copping, Kenneth L. G.: *See*—
Hackett, James W., and Copping.

Corhart Refractories Company, assignee: *See*—
Field, Theodore E.

Cox, Richard F. B., assignor to Hercules Powder Company, Wilmington, Del. Treatment of primary oleoresin acids. 2,409,930; Oct. 22.

Cress, Jay J., Schenectady, N. Y., assignor to General Electric Company. Crystal mounting. 2,409,838; Oct. 22.

Criner, Harry J., assignor of one-half to A. G. Bush, Davenport, Iowa. Toy. 2,409,839; Oct. 22.

Crompton & Knowles Loom Works, assignee: *See*—
Blanchard, William A.

Curtis Pump Company, assignee: *See*—
Curtis, Russell R.

Curtis, Russell R., assignor to Curtis Pump Company, Dayton, Ohio. Fuel system. 2,409,931; Oct. 22.

Curtis, Russell R., assignor to Curtis Pump Company, Dayton, Ohio. Pump pressure control system. 2,409,975; Oct. 22.

Czerner, Severin F., Kings Mill, Tex. Carburetor. 2,409,739; Oct. 22.

Dailey, Hampton J., Bloomfield, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Electron discharge device. 2,409,667; Oct. 22.

Dailey, Hampton J., Bloomfield, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Heat transfer assembly. 2,409,668; Oct. 22.

Daniel, Thomas A., Downers Grove, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Method of and apparatus for soldering. 2,409,615; Oct. 22.

Dawley, Clarence E.: *See*—
Slack, Charles M., Ehrke, and Dawley.
Slack, Charles M., Pfeiffer, and Dawley.

Dean, David, assignor to Eastman Kodak Company, Rochester, N. Y. Masking color transparencies in mounts. 2,409,976; Oct. 22.

De Benedictis, Aldo: *See*—
Luten, Daniel B., Jr.

De Bruin, Milton H., Washington, D. C., and E. F. Flock, Chevy Chase, Md. Unitary boring and countersinking tool. 2,409,616; Oct. 22.

Derr, Willard A., and M. E. Reagan, Wilkinsburg, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Control system. 2,409,840; Oct. 22.

Detroit Lubricator Company, assignee: *See*—
Carter, Franklyn Y.

Dietert, Harry W., Detroit, Mich. Dilatometer structure. 2,409,669; Oct. 22.

Dilworth, Richard M., Hinsdale, T. O. Lilliquist, Clarendon Hills, and D. H. Queeney, Naperville, Ill., assignors to General Motors Corporation, Detroit, Mich. Locomotive control system. 2,409,740; Oct. 22.

Dobscha, Herman F., Pittsburgh, Pa., assignor to Carnegie-Illinois Steel Corporation. Settling basin for blast furnace cinder runners. 2,409,741; Oct. 22.

Donkin, William F., Cleveland Heights, assignor to Willard Storage Battery Company, Cleveland, Ohio. Storage battery. 2,409,841; Oct. 22.

Dostal, Frank A., New Ulm, Minn. Building block lifter. 2,409,932; Oct. 22.

Dougherty, James W., McKeesport, Pa., assignor to The American Steel and Wire Company of New Jersey. Coil supporting arbor. 2,409,742; Oct. 22.

Dow Chemical Company, The, assignee: *See*—
Hunter, Melvin J., and Bauman.
Stober, Kenneth E.

Downing Box Company, assignee: *See*—
Glascoff, Walter G., Jr., and Evert.

Duke, James B.: *See*—
Cole, Allen T., Duke, and McMurray.

Du Pont, E. I., de Nemours & Company, assignee: *See*—
Fouiger, John H., and Smith.
Gresham, William F.
Gresham, William F., and Bruner.
Hamblet, Clement H.
Hanford, William E., and Roland.
Howk, Benjamin W., Roland, and Hoehn.
Loder, Donald J., and Gresham.
Martin, Elmore L.
Roedel, Milton J.
Schweitzer, Carl E.

Durrin, Monte K., Little Rock, Ark. Hand loom. 2,409,743: Oct. 22.

Eastman Kodak Company, assignee: *See*—
Bennett, Harold F.
Brooker, Leslie G. S., and Sprague.
Dean, David.
Jensen, Edgar C., Scull, and McNally.
McDowell, Wendell H.
Salo, Martin.

Eaton, Wilfred A., assignor to Bendix-Westinghouse Automotive Air Brake Company, Elyria, Ohio. Fluid pressure control mechanism. 2,409,842; Oct. 22.

Edgewick Investment Co., assignee: *See*—
Folst, Louis C.

Edmonson, Robert E., Beaumont, Tex. Necktie. 2,409,744; Oct. 22.

Ehrke, Louis F.: *See*—
Slack, Charles M., Ehrke, and Dawley.

Electric Storage Battery Company, The, assignee: *See*—
Smith, William W.

Elkin, Eugene M.: *See*—
Clark, Charles W., Elkin, and Waitkins.

Elliott, Stanley J., Forest Hills, N. Y., O. M. Hovgaard, Murray Hill, N. J., R. F. Mallina, Hastings-on-Hudson, and F. M. Thomas, Jackson Heights, assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Signal distributor. 2,409,617; Oct. 22.

Ericsson, Gustaf G. A., assignor to A.-B. Ljussignaler, Lund, Sweden. Recording apparatus. 2,409,745; Oct. 22.

Evans, Harold W., Wilkes-Barre, Pa. Gun mount. 2,409,618; Oct. 22.

Evans, Theodore W., Oakland, and A. G. Cattaneo, Berkeley, assignors to Shell Development Company, San Francisco, Calif. Motor fuels. 2,409,746; Oct. 22.

Evert, Charles W.: *See*—
Glascoff, Walter G., Jr., and Evert.

Ewaldson, Waldemar C., Millington, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Strand forming apparatus. 2,409,670; Oct. 22.

Eyelet Specialty Company, The, assignee: *See*—
Book, Charles R.

Faust, Jacob, Belleville, N. J., assignor to L. Sonnenborn Sons, Inc. Substantially oil soluble polyalkyl aromatic sulfonates. 2,409,671; Oct. 22.

Feucht, Albert, Garfield Heights, assignor to The Cleveland Pneumatic Tool Company, Cleveland, Ohio. Adjustable drill mounting. 2,409,843; Oct. 22.

Field, Theodore E., assignor to Cohart Refractories Company, Louisville, Ky. Basic cast refractory. 2,409,844; Oct. 22.

Flock, Ernest F.: *See*—
DeBruin, Milton H., and Flock.

Fischer, Friedrich, Zurich, and W. Amrein, Rumlang, Switzerland. Appliance for measuring the velocity of projectiles. 2,409,672; Oct. 22.

Fischer-Sueffert, Wilhelm, assignee: *See*—
Maurer, Gottfried.

Fisher, Sidney T., Toronto, Ontario, Canada, assignor to Rogers Majestic Corporation, Dover, Del. Suppression of noise in communication systems. 2,409,977; Oct. 22.

Fitch, Clifford E., assignor to The Aro Equipment Corporation, Bryan, Ohio. Lever gun. 2,409,619; Oct. 22.

Fleisher, Harry, and J. Homer, Staten Island, N. Y. Dispensing container. 2,409,933; Oct. 22.

Florence Stove Company, assignee: *See*—
Reeves, Herbert M.

Flory, Leslie E.: *See*—
Morton, George A., and Flory.

Folmer, Herman C. R., Swarthmore, Pa., assignor to American Viscose Corporation, Wilmington, Del. Drying staple fibers. 2,409,747: Oct. 22.

Folst, Louis C., assignor to Edgewick Investment Co., Los Angeles, Calif. Plastic milk carton case. 2,409,748; Oct. 22.

Foote Mineral Company, assignee: *See*—
Meyer, Hughan C., Jr.

Ford Motor Company, assignee: *See*—
Miller, Logan C., and Scarlett.

Foster Wheeler Corporation, assignee: *See*—
Haase, Robert W.

Foulger, John H., and P. E. Smith, Jr., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Indicating system. 2,409,749; Oct. 22.

Frawley, Robert N.: *See*—
Martin, Edward J., Grinstead, and Frawley.

Frear, Jenness B., Evanston, assignor to Signode Steel Strapping Company, Chicago, Ill. Bundle and producing the same. 2,409,750; Oct. 22.

Fritschi, Walter W., Manhasset, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Oscillation generator. 2,409,620; Oct. 22.

Frost, Leslie E.: *See*—
Pendleton, Wesley W., and Frost.

Fuel Refining Corporation, assignee: *See*—
Otto, Carl.

Fulke, Frank L., assignor to Frank Prox Company, Inc., Terre Haute, Ind. Mining machine chain. 2,409,978; Oct. 22.

Gardiner, Paul C., Scotia, and J. E. Maynard, Schenectady, N. Y., assignors to General Electric Company. Calibrating device. 2,409,845; Oct. 22.

Gately, Alphonsus P.: *See*—
Stark, William, and Gately.

Geimer, William J., and F. R. Linda, assignors to Bemis Bro. Bag Co., Minneapolis, Minn. Closing bag tube ends. 2,409,621; Oct. 22.

General Electric Company, assignee: *See*—
Alford, Joseph S.
Coe, Everett L.
Cress, Jay J.
Gardiner, Paul C., and Maynard.
Jewell, Richard G.
Moles, Frank J.
Tonks, Lewi.
Valentine, Frank E., and Skillin.
Von Hoorn, Fred G.

General Electric Company Limited, The, assignee: *See*—
Ramsay, Henry T.

General Motors Corporation, assignee: *See*—
Allen, Everett W.
Blomberg, Martin P., and Stampen.
Browne, Donald B., Clarke, and Painter.
Dilworth, Richard M., Liliquist, and Queeney.
Hackett, James W., and Copping.
Hulsing, Kenneth L.
Janes, Russell G.
Martin, Edward J., Grinstead, and Frawley.
Martz, William M.
Ogden, Jack.
Rabezzana, Hector.
Rockafellow, Stuart.

General Tire and Rubber Company, The, assignee: *See*—
Breth, Walter J., and Wormald.
Comey, Fred H.

Gerhold, Clarence G., Chicago, Ill., and J. E. Burgess, Sweeney, Tex., assignors to Universal Oil Products Company, Chicago, Ill. Catalytic conversion of hydrocarbons. 2,409,751; Oct. 22.

Glascoff, Walter G., Jr., and C. W. Evert, assignors to Downing Box Company, Milwaukee, Wis. Fiberboard container having reinforced ends and integral hinged closure. 2,409,673; Oct. 22.

Glenn, Richard A.: *See*—
Shive, William, and Glenn.

Goodrich, B. F., Company, The, assignee: *See*—
Jones, Paul C., and Mathes.

Goodwin, Percy E., Salmon, Idaho. Load pickup hauling and dumping conveyance. 2,409,752; Oct. 22.

Gorden, Walter L.: *See*—
Mall, Arthur W., and Gorden.

Gottfried, Louis, Bronx, N. Y. Baby chair. 2,409,622; Oct. 22.

Grant, Harry C., Jr., New York, N. Y., assignor to Specialties Development Corporation, Bloomfield, N. J. Gun charger. 2,409,623; Oct. 22.

Granville, Bernard, Los Angeles, Calif. Apparatus for extracting water from atmospheric air. 2,409,624; Oct. 22.

Graybeal, Joseph W., Midland, Tex., assignor to Standard Oil Development Company. Determining permeability of subsurface formations. 2,409,674; Oct. 22.

Greene, Edgeworth, Montclair, assignor to Inter-Seal Corporation, Spring Lake, N. J. Bottle closure. 2,409,846; Oct. 22.

Gregg, Jon, New Hope, Pa. Fountain pen. 2,409,847; Oct. 22.

Gresham, William F.: *See*—
Loder, Donald J., and Gresham.

Gresham, William F., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparation of polyaminoacetals. 2,409,675; Oct. 22.

Gresham, William F., and W. M. Bruner, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparation of indole. 2,409,676; Oct. 22.

Greulich, Gerald G., Mount Lebanon, Pa., assignor to Carnegie-Illinois Steel Corporation. Twin tube mine clearing snake. 2,409,848; Oct. 22.

Grey, Vernon H., Coventry, England. Bevel protractor. 2,409,849; Oct. 22.

Griffiths, George A.: *See*—
Voity, Maurice, and Griffiths.

Grinstead, Carl E.: *See*—
Martin, Edward J., Grinstead, and Frawley.

Grotenhouse, James T., Orange City, Iowa. Oil burner. 2,409,677; Oct. 22.

Guiberson Corporation, The, assignee: *See*—
Taylor, Raymond G., Jr., and Hooser.

Haase, Robert W., Westfield, N. J., assignor to Foster Wheeler Corporation, New York, N. Y. Separator. 2,409,625; Oct. 22.

Haeseler, Kurt W.: *See*—
Snell, Foster De, and Haeseler.

Hackett, James W., Newark, Ohio, and K. L. G. Copping, assignors to General Motors Corporation, Detroit, Mich. Hydraulic feed means. 2,409,850; Oct. 22.

Haddock, Norman H., Blackley, Manchester, England, assignor to Imperial Chemical Industries Limited. Perylene derivatives. 2,409,851; Oct. 22.

Haggard, Claude C., and J. B. Meehan, Medford, Oreg. Folding stretcher. 2,409,934; Oct. 22.

Hamblet, Clement H., Gordon Heights, assignor to E. I. du Pont de Nemours & Company. Preparation of soaps. 2,409,678; Oct. 22.

Hammer, Samuel E.: *See*—
Harrington, Michael J., and Hammer.

Hanford, William E., Wilmington, and J. R. Roland, McDaniel Heights, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Polymers of ethylene and halovinyl compounds and their preparation. 2,409,679; Oct. 22.

Hanley, Stanley M., assignee, et al: *See*—
Bixby, William H.

Hanson, Gerald N.: *See*—
Van Auken, Howard C., and Hanson.

Harrah, John L., Akron, Ohio. Piston for internal-combustion engines. 2,409,852; Oct. 22.

Harrington, Michael J., Cleveland, Ohio, and S. E. Hammer, Eagleville, Pa. Bag opening and filling apparatus. 2,409,626; Oct. 22.

Harris, Sidney E.: *See*—
Christiansen, Walter G., and Harris.

Harris Trust and Savings Bank, assignee: *See*—
Lowes, William J.

Harrison, John H., Palos Verdes Estates, and H. E. Byers, Los Angeles, Calif. Valve for hose couplings. 2,409,753; Oct. 22.

Hazeltine Research, Inc., assignee: *See*—
Loughren, Arthur V.
Rado, John A.

Heeter, Colonel C., Butler, Pa. Lathe chuck. 2,409,680; Oct. 22.

Heijn, Paul C., Buffalo, N. Y., assignor, by mesne assignments, to American Optical Company, Southbridge, Mass. Optical instrument for examining polarized light. 2,409,853; Oct. 22.

Helgeson, Sten, Renville, Minn. Wrench. 2,409,627; Oct. 22.

Heller, Harold S., Cleveland Heights, Ohio. Stapling machine. 2,409,854; Oct. 22.

Henze, Henry R., Austin, Tex., assignor to Parke, Davis & Company, Detroit, Mich. Obtaining hydantoins. 2,409,754; Oct. 22.

Henze, Henry R., Austin, Tex., assignor to Parke, Davis & Company, Detroit, Mich. Obtaining 5,5-diarylhydantoins. 2,409,755; Oct. 22.

Henze, Henry R., Austin, Tex., assignor to Parke, Davis & Company, Detroit, Mich. Obtaining 5,5-diarylhydantoins. 2,409,756; Oct. 22.

Hercules Powder Company, assignee: *See*—
Collins, Robert A.
Cox, Richard F. B.

Heritage, Clark C., assignor to Wood Conversion Company, Cloquet, Minn. Manufacture of coated board. 2,409,628; Oct. 22.

Heritage, Clark C., assignor to Wood Conversion Company, Cloquet, Minn. Manufacture of coated board. 2,409,629; Oct. 22.

Heritage, Clark C., and H. E. Walter, assignors to Wood Conversion Company, Cloquet, Minn. Making a coated vegetable-fiber board. 2,409,630; Oct. 22.

Hetzel, Frank L., Hermosa Beach, and V. E. Carstedt, Los Angeles, Calif. Clutch. 2,409,757; Oct. 22.

Hill, Ralph M., Mountainside, and C. H. Watkins, Cranford, N. J., assignors to Standard Oil Development Company. Chemical process. 2,409,681; Oct. 22.

Hillyer, Curtis, Jr., and H. Blackstone, Richmond Hill, N. Y. Gaseous discharge tube. 2,409,855; Oct. 22.

Hindahl, David, Chicago, Ill. Car construction. 2,409,856; Oct. 22.

Hinde & Dauch Paper Company, The, assignee: *See*—
Loth, Gaylord.

Hines, Claude M., Pittsburgh, and J. W. Rush, Wilkinsburg, assignors to The Westinghouse Air Brake Company, Wilmerding, Pa. Linear generator. 2,409,857; Oct. 22.

Hoe, R., & Co., Inc., assignee: *See*—
Braunworth, Albert.

Hoehn, Harvey H.: *See*—
Howk, Benjamin W., Roland, and Hoehn.

Hohmann, Richard K., Jamaica, N. Y., and E. D. Boisselier, Glen Ellyn, assignors to Sears, Roebuck and Co., Chicago, Ill. Convertible sewing and darning machine. 2,409,758; Oct. 22.

Holley, Earl, assignee, et al.: *See*—
Udale, Stanley M.

Holley, George M., assignee, et al.: *See*—
Udale, Stanley M.

Homer, Jacob: *See*—
Fleisher, Harry, and Homer.

Hongo, Arnie J., McNeal, Ariz. Cigarette maker. 2,409,935; Oct. 22.

Hooker Electrochemical Company, assignee: *See*—
Stuart, Kenneth E.

Hooser, Donald B.: *See*—
Taylor, Raymond G., Jr., and Hooser.

Hopkins, Nevil M., deceased, New York, N. Y.; R. B. Hopkins, executrix, assignor, by mesne assignments, to R. B. Hopkins, S. Lloyd, and M. T. Quigg, as trustees. Nonleak liquid explosive filler system for ammunition. 2,409,858; Oct. 22.

Hopkins, Raymonde B., executrix: *See*—
Hopkins, Nevil M.

Hopkins, Raymonde B., trustee, assignee: *See*—
Hopkins, Nevil M.

Horsfall, John L., assignor to American Cyanamid Company, New York, N. Y. 2-ethylhexyl fluoroacetate. 2,409,859; Oct. 22.

Horton, Lucien B., Independence, and F. C. Speed, Kansas City, Mo., assignors to Remington Arms Company, Inc., Bridgeport, Conn. Gauging and assorting apparatus. 2,409,682; Oct. 22.

Hosking, Oakley W., Monroe, N. Y., assignor to Composite Rubber Products Corporation, Bridgeport, Conn. Direct bonding of rubber to metal. 2,409,759; Oct. 22.

Hovgaard, Ole M.: *See*—
Elliott, Stanley J., Hovgaard, Mallina, and Thomas.

Howe, Ralph F.: *See*—
Vanderbilt, Byron M., and Howe.

Howk, Benjamin W., J. R. Roland, and H. H. Hoehn, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Polish compositions. 2,409,683; Oct. 22.

Huber, Ralph L., Seattle, Wash. Hypodermic needle. 2,409,979; Oct. 22.

Huebel, Richard A., Abington, Mass. Shoemaking. 2,409,860; Oct. 22.

Huffsmith, Edwin F., Cook, Wash. Saw set. 2,409,760; Oct. 22.

Hughes, Mary F.: *See*—
Wadsworth, Daniel V., and Hughes.

Hulsing, Kenneth L., Plymouth, assignor to General Motors Corporation, Detroit, Mich. Sleeve valve engine. 2,409,761; Oct. 22.

Hunt, Thomas E. V., Norristown, Pa. Toolmaker's angle block. 2,409,936; Oct. 22.

Hunter, Melvin J., and W. C. Bauman, assignors to The Dow Chemical Company, Midland, Mich. Process and agents for the recovery of magnesium ions from brine. 2,409,861; Oct. 22.

Husek, Helen P.: *See*—
Barnes, Arthur, and Husek.
Ryan, William H., Barnes, and Husek.

Hutchinson, Job, Great Neck, N. Y. Carburetor attachment. 2,409,937; Oct. 22.

Hutchinson, Willis S., St. Paul, Minn., assignor to The Mathieson Alkali Works, Inc., New York, N. Y. Production of chlorine dioxide. 2,409,862; Oct. 22.

Hutter, William H., Chicago, Ill. Pilot trainer. 2,409,938; Oct. 22.

Hyde, Albert F., New York, N. Y. Material clearing attachment for jaw crushing machines. 2,409,863; Oct. 22.

Hyde, Herschel Y.: *See*—
Viland, Clare K., and Hyde.

Imperial Chemical Industries Limited, assignee: *See*—
Boon, William R.
Broadbent, W., and Rose.
Haddock, Norman H.
Shakesby, Leonard, Sutherland, and Smith.
Whetstone, John.

Industrial Patents Corporation, assignee: *See*—
Walter, Charles T., and Newton.

Ingersoll-Rand Company, assignee: *See*—
Plummer, John F., Jr.

Ingouf, Robert J. A., and J. H. Lewis, assignors to Blue Ridge Glass Corporation, Kingsport, Tenn. Gauge. 2,409,864; Oct. 22.

Inter-Seal Corporation, assignee: *See*—
Greene, Edgeworth.

Isaac, Joseph: *See*—
Smith, Fred J., and Isaac.

Jack & Heintz Precision Industries, Inc., assignee: *See*—
Martin, Boyd G.

Janes, Russell G., La Grange, Ill., assignor to General Motors Corporation, Detroit, Mich. Controller mechanism. 2,409,762; Oct. 22.

Janiewski, Andrew V., Sebring, Fla. Aircraft launching means. 2,409,763; Oct. 22.

Jarmak, Jack: *See*—
Pfeffer, Edward C., Jr., Tweed, and Jarmak.

Jascoe, Incorporated, assignee: *See*—
Vanderbilt, Bryon M., and Howe.

Jenkins, Tazewell H., Chicago, Ill. Bottle carrier. 2,409,684; Oct. 22.

Jenkinson, Robert L., Teaneck, N. J., assignor to The Marlin Firearms Company, New Haven, Conn. Multiple barrel gun. 2,409,939; Oct. 22.

Jensen, Edgar C., Rochester, H. G. Scull, New York, and J. G. McNally, Rochester, N. Y., assignors to Eastman Kodak Company. Composition for discharge printing. 2,409,980; Oct. 22.

Jessup, Sellers E., Los Angeles, Calif. Piston ring. 2,409,764; Oct. 22.

Jewell, Howard W., Los Angeles, Calif., Pipe joining device. 2,409,865; Oct. 22.

Jewell, Richard G., Swampscott, Mass., assignor to General Electric Company. Direct-current ratio measuring electrical instrument. 2,409,866; Oct. 22.

Johnson, Howard C. E.: *See*—
Bock, L. H., Johnson, and Armstrong.

Jones, Lyman L., Seattle, Wash., assignor to American Can Company, New York, N. Y. Can making machine. 2,409,631; Oct. 22.

Jones, Paul C., near Chagrin Falls, and R. A. Mathes, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y. Addition products of heterocyclic zinc mercaptides with alkylene imines. 2,409,685; Oct. 22.

Jones, Walter W., El Paso, Tex. Hairpin stand. 2,409,867; Oct. 22.

Joy Manufacturing Company, assignee: *See*—
Simmons, Leon E.

Kahl, Charles N., assignor of one-half to L. A. Sullivan, Jacksonville, Ill. Piston assembly. 2,409,868; Oct. 22.

Kay, Paul, assignor to Ocean City Manufacturing Company, Philadelphia, Pa. Rod to reel connection. 2,409,940; Oct. 22.

Kehle, Ottmar A., West Los Angeles, Calif., assignor to Adel Precision Products Corp. Hydraulic selector valve. 2,409,765; Oct. 22.

Kelley, Joseph J., St. Louis, Mo. Fountain pen. 2,409,869; Oct. 22.

Kent, Earle L., assignor to C. G. Conn, Ltd., Elkhart, Ind. Interval control mechanism. 2,409,941; Oct. 22.

Kerker, Henry F.: *See*—
Lavett, Charles O., and Kerker.

King, Robert W., Short Hills, N. J., assignor to American Telephone and Telegraph Company. Guiding means for self-propelled torpedoes. 2,409,632; Oct. 22.

Kinnaird, James A., Braiswick, near Colchester, assignor to Bromilow and Edwards Limited, Bolton, England. Apparatus for loading and unloading moving floor vehicles. 2,409,870; Oct. 22.

Kirby, Arthur J., assignee: *See*—
McCaffrey, Charles L.

Klebsattel, Charles A.: *See*—
Mack, Gerry P., and Klebsattel.

Knapp, William G., assignor to C. P. Peirce, Evanston, Ill. Winding device. 2,409,942; Oct. 22.

Koskela, Jonas F., Maynard, Mass. Metal type stop motion attachment for looms. 2,409,766; Oct. 22.

Kramer, William: *See*—
Newmark, David, and Kramer.

Krogh, Anker E., Mount Airy, assignor to The Brown Instrument Company, Philadelphia, Pa. Air control instrument. 2,409,871; Oct. 22.

Kropa, Edward L., Old Greenwich, Conn., assignor to American Cyanamid Company, New York, N. Y. Polymers of unsaturated compounds and producing same. 2,409,633; Oct. 22.

Krueger, Theodore H., Stratford, Conn., assignor to Better Packages Incorporated. Tape serving machine. 2,409,872; Oct. 22.

Kwon, Doin, Honolulu, Hawaii. Venetian blind. 2,409,943; Oct. 22.

Laidig, Alfred H., Bloomfield, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Electron discharge device. 2,409,694; Oct. 22.

Lane, Arthur W., Freeport, assignor to Sperry Gyroscope Company, Brooklyn, N. Y. Gyroscopic controlling means. 2,409,634; Oct. 22.

Langner, Lawrence, New York, N. Y., assignor to the Government of the United States of America, as represented by the Secretary of War and his successors in office. Mine destroyer. 2,409,635; Oct. 22.

Lankford, Howard Y., Gary, Ind., assignor to Carnegie-Illinois Steel Corporation. Heat exchange. 2,409,873; Oct. 22.

Larson, Edwin C., San Francisco, Calif. Fire escape. 2,409,767; Oct. 22.

Laubscher, G., & Co., Swiss firm of, assignee: *See*—
Bucher, Rudolf.

Laughlin, Kenneth C., Baton Rouge, La., assignor to Standard Oil Development Company. Improving aviation fuels. 2,409,695; Oct. 22.

Lavett, Charles O., Kenmore, and H. F. Kerker, Buffalo, N. Y., assignors, by mesne assignments, to Blaw-Knox Company, Pittsburgh, Pa. Liquid level control. 2,409,768; Oct. 22.

Lessmann, Gerhard P., Wilkinsburg, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Bearing construction. 2,409,874; Oct. 22.

Lewis, Joseph H.: *See*—
Ingouf, Robert J. A., and Lewis.

Lewis, Lloyd V., Pittsburgh, assignor to The Union Switch & Signal Company, Swissvale, Pa. Remote control system. 2,409,696; Oct. 22.

Lewis, Lloyd V., Pittsburgh, assignor to The Union Switch & Signal Company, Swissvale, Pa. Transmitting apparatus for remote control systems. 2,409,697; Oct. 22.

Lewis, Lloyd V., Pittsburgh, assignor to The Union Switch & Signal Company, Swissvale, Pa. Selecting apparatus for remote-control systems. 2,409,698; Oct. 22.

Leyshon, William E., Danvers, assignor to Sylvania Electric Products Inc., Salem, Mass. Fluorescent glow lamp. 2,409,769; Oct. 22.

Lillquist, Torsten O.: *See*—
Dilworth, Richard M., Lillquist, and Queeney.

Linda, Frank R.: *See*—
Geimer, William J., and Linda.

Lindquist, Arthur W., assignee: *See*—
Schroeder, Herman O., and Lindquist.

Little, John B., Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Welding machine. 2,409,636; Oct. 22.

Livar, Allen P., Dayton, Ohio, assignor to Chrysler Corporation, Highland Park, Mich. Space heater. 2,409,981; Oct. 22.

Ljussignaler, A.-B., assignee: *See*—
Ericsson, Gustaf G. A.

Lloyd, Samuel, trustee, assignee: *See*—
Hopkins, Nevil M.

Lockheed Aircraft corporation, assignee: *See*—
Sowle, Charles E.

Loder, Donald J., and W. F. Gresham, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparation of cyanomethyl dialkyl orthoformates. 2,409,699; Oct. 22.

Longmate, Ralph B., Detroit, Mich., assignor to Toledo Scale Company, Toledo, Ohio. Liquid metering apparatus. 2,409,982; Oct. 22.

Lorig, Frank W., Lakewood, L. L. Miller, Garfield Heights, and F. E. Robinson, Shaker Heights, Ohio, assignors to The American Steel and Wire Company of New Jersey. Apparatus for continuously processing metal strips. 2,409,770; Oct. 22.

Loselle, Edmond W., Wyandotte, Mich. Skirt hanger. 2,409,700; Oct. 22.

Loth, Gaylord, assignor to The Hinde & Dauch Paper Company, Sandusky, Ohio. Chick box. 2,409,701; Oct. 22.

Loughren, Arthur V., Great Neck, N. Y., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill. System for space-scanning with a radiated beam of wave signals. 2,409,944; Oct. 22.

Lowes, William J., assignor to Harris Trust and Savings Bank, Chicago, Ill. Ammunition. 2,409,945; Oct. 22.

Lowry, Edwin F., Swampscott, and F. P. Rogers, Danvers, assignors to Sylvania Electric Products Inc., Salem, Mass. Electrical discharge device. 2,409,771; Oct. 22.

Luce, Richard W., Southport, Conn. Fastener. 2,409,702; Oct. 22.

Lucht, Victor F., Washington, D. C. Muzzle closing mechanism. 2,409,637; Oct. 22.

Lund, Charles, Burbank, Calif., assignor to Adel Precision Products Corp. Adjustable harness clip. 2,409,772; Oct. 22.

Luten, Daniel B., Jr., and A. De Benedictis, Berkeley, assignors to Shell Development Company, San Francisco, Calif. Two-stage distillation of ortho-substituted ring compounds. 2,409,773; Oct. 22.

Lyem, Arthur, Cumberland, Md., assignor to Celanese Corporation of America. Preparation of laminating fabric. 2,409,703; Oct. 22.

Lyem, Arthur, Cumberland, Md., assignor to Celanese Corporation of America. Production of laminating fabrics. 2,409,704; Oct. 22.

Lyon, Bruce K., Grant, Nebr., assignor to Oliver Iron and Steel Corporation, Pittsburgh, Pa. Insert bolt. 2,409,638; Oct. 22.

Mack, Gerry P., Jackson Heights, N. Y., and C. A. Klebsattel, South Orange, N. J., assignors to Advance Solvents & Chemical Corporation, New York, N. Y. Drier metal salt and making it. 2,409,774; Oct. 22.

MacLeod, Douglas W., Ansonia, Conn. Luggage carrier. 2,409,946; Oct. 22.

Makenny, William: *See*—
Whitmore, James B., Makenny, and Newcombe.

Mall, Arthur W., Flossmoor, and W. L. Gorden, Chicago, Ill. Chain-saw machine. 2,409,775; Oct. 22.

Mallina, Rudolph F.: *See*—
Elliott, Stanley J., Hovgaard, Mallina, and Thomas.

Mantz, Harold A., assignor to Milwaukee Gas Specialty Company, Milwaukee, Wis. Combined thermoelectric safety shutoff device and cock. 2,409,947; Oct. 22.

Maples, John A., assignor to Leathem D. Smith Shipbuilding Co., Sturgeon Bay, Wis. Jig for trimming boiler tubes. 2,409,776; Oct. 22.

Marcellus, Brooks, assignor to Barber Colman Company, Rockford, Ill. Bobbin winding machine. 2,409,639; Oct. 22.

Marlin Firearms Company, The, assignee: *See*—
Jenkinson, Robert L.

Martin, Boyd G., Shaker Heights, assignor, by mesne assignments, to Jack & Heintz Precision Industries, Inc., Cleveland, Ohio. Gyro assembly. 2,409,875; Oct. 22.

Martin, Edward J., Pleasant Ridge, Mich., C. E. Grinstead, West Hartford, Conn., and R. N. Frawley, assignors to General Motors Corporation, Detroit, Mich. Shaft torsion measuring means. 2,409,876; Oct. 22.

Martin, Elmore L., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Polymeric materials 2,409,948; Oct. 22.

Martz, William M., Indianapolis, Ind., assignor to General Motors Corporation, Detroit, Mich. Electrodeposition of indium. 2,409,983; Oct. 22.

Mathes, Roger A.: *See*—
Jones, Paul C., and Mathes.

Mathieson Alkali Works, Inc., The, assignee: *See*—
Hutchinson, Willis S.

Maurer, Gottfried, Zurich, assignor to Wilhelm Fischer-Sueffert, Basel, Switzerland. Machine for gluing laths together. 2,409,777; Oct. 22.

May, Robert L., Chicago, Ill., assignor to Sinclair Refining Company, New York, N. Y. Lubricating oil. 2,409,877; Oct. 22.

May, Robert L., Chicago, Ill., assignor to Sinclair Refining Company, New York, N. Y. Lubricating oil. 2,409,878; Oct. 22.

Maynard, John E.: *See*—
Gardiner, Paul C., and Maynard.

McCaffrey, Charles L., assignor of one-half to A. J. Kirby, Nashville, Tenn. Yard refuse collector. 2,409,778; Oct. 22.

McCutcheon, John W., Bronx, N. Y. Camera film box. 2,409,949; Oct. 22.

McDowell, Wendell H., assignor to Eastman Kodak Company, Rochester, N. Y. Treating water resistant paper. 2,409,984; Oct. 22.

McGavock, Hugh K.: *See*—
McWane, Henry E., and McGavock.

McIntosh, Thomas J., Westville, S. C., assignor of one-half to E. D. Moore, Charlotte, N. C. Adjustable tool handle fastening. 2,409,879; Oct. 22.

McMurray, Harry G., Wakefield, Mass. Shoemaking. 2,409,880; Oct. 22.

McMurray, Lynn L.: *See*—
Cole, Allen T., Duke, and McMurray.

McNab, John G.: *See*—
Rogers, Dilworth T., and McNab.
Winning, Carl, and McNab.

McNab, John G., Cranford, and D. T. Rogers, Plainfield, N. J., assignors to Standard Oil Development Company. Compounded lubricating oil. 2,409,686; Oct. 22.

McNally, James G.: *See*—
Jensen, Edgar C., Scull, and McNally.

McWane, Henry E., and H. K. McGavock, Lynchburg, Va.; said McGavock assignor to said McWane. Apparatus for introducing molten material into molds. 2,409,779; Oct. 22.

Meehan, John B.: *See*—
Haggard, Claude C., and Meehan.

Mekler, Lev A., assignor to Universal Oil Products Company, Chicago, Ill. Reactor. 2,409,780; Oct. 22.

Mertz, Valentine, Dallas, Tex., assignor to Phillips Petroleum Company. Reducing corrosion and polymerization of furfural in extractive distillation plants. 2,409,781; Oct. 22.

Metalwash Machinery Company, assignee: *See*—
Zademach, Erich R., and Clarke.

Meyer, Andrew, Cleveland Heights, assignor to The Cleveland Pneumatic Tool Company, Cleveland, Ohio. Snubber for hoists. 2,409,881; Oct. 22.

Meyer, Hughan C., Jr., assignor to Foote Mineral Company, Philadelphia, Pa. Non-aqueous gel. 2,409,950; Oct. 22.

Meyerhans, August, Rieden, near Baden, assignor to Aktiengesellschaft Brown, Boveri & Cie, Baden, Switzerland. Electrical transformer. 2,409,882; Oct. 22.

Middleton, Donald R., assignee, et al.: *See*—
Bixby, William H.

Migrdichian, Vartkes, Greenwich, Conn., assignor to American Cyanamid Company, New York, N. Y. Resinous dibasic carboxylic acid salts of a guanidine as mothproofers. 2,409,883; Oct. 22.

Miller, Alfred B.: *See*—
Place, Willard P., and Miller.

Miller, Logan C., Ann Arbor, and G. E. Scarlett, Detroit, assignors to Ford Motor Company, Dearborn, Mich. Constructing tubular fuselages. 2,409,782; Oct. 22.

Miller, Louis L.: *See*—
Lorig, Frank W., Miller, and Robinson.

Milwaukee Gas Specialty Company, assignee: *See*—
Mantz, Harold A.

Minerals Separation North American Corporation, assignee: *See*—
Cole, A. T., Duke, and McMurray.

Moineau, René J. L., Paris, France. Reversible fluid-operated and fluid-operating mechanism. 2,409,688; Oct. 22.

Molat, Joseph H.: *See*—
Riker, Robert T., and Molat.

Moles, Frank J., Schenectady, N. Y., assignor to General Electric Company. Power cable for high-frequency oscillators. 2,409,640; Oct. 22.

Mollenhour, Delbert C., Mentone, Ind., assignor to F. I. Saemann, New York, N. Y. Artificial arm and hand. 2,409,884; Oct. 22.

Monori, Emil, and C. B. Myhre, Wilkinsburg, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Ground detector. 2,409,885; Oct. 22.

Monsanto Chemical Company, assignee: *See*—
Scott, Milton J.

Moore, Edgar D.: *See*—
McIntosh, Thomas J.

Morehouse, Eugene M., Tujunga, Calif., assignor to Adel Precision Products Corp. Tool for installing conduit clips. 2,409,784; Oct. 22.

Morton, George A., Haddon Heights, and L. E. Flory, Oaklyn, N. J., assignors to Radio Corporation of America. Electronic computing device. 2,409,689; Oct. 22.

Morton, Henry E., Muskegon, Mich. Hydraulic clutch. 2,409,995; Oct. 22.

Moskey, Moskos S., Lakewood, Ohio. Forming artificial teeth. 2,409,783; Oct. 22.

Mueller, Emil G., Wilkinsburg, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Variable load brake. 2,409,886; Oct. 22.

Murphy, George F., Milwaukee, Wis. Motor bicycle. 2,409,887; Oct. 22.

Myhre, Conrad B.: *See*—
Monori, Emil, and Myhre.

National Brass Company, assignee: *See*—
Quigley, Herbert, and Ter Meer.

National Lock Washer Company, The, assignee: *See*—
Schunk, Joseph.

National Ring Traveler Company, assignee: *See*—
Wentworth, Philip C.

Newcombe, Frank A.: *See*—
Whitmore, James B., Makenny, and Newcombe.

Newmark, David, and W. Kramer, New York, N. Y. Producing balsa slices. 2,409,785; Oct. 22.

Newton, Lowell R.: *See*—
Walter, Charles T.

New York Air Brake Company, The, assignee: *See*—
Baldwin, Wayne A.

Nicholson, Edward W. S., and A. K. Redcay, Baton Rouge, La., assignors to Standard Oil Development Company. Desulphurization of hydrocarbon oils. 2,409,690; Oct. 22.

Noble, Frank G., Houston, Tex., assignor to Standard Oil Development Company. Recovering volatile hydrocarbons from gases. 2,409,691; Oct. 22.

Nootens, Julian H., Chicago, Ill., assignor to United States Gypsum Company. Insulating bat. 2,409,951; Oct. 22.

Norton, Chester H., Katonah, N. Y. Trundle basket. 2,409,786; Oct. 22.

Notman, Clarence A., assignor of one-half to C. Bowles, Detroit, Mich. Fountain brush. 2,409,952; Oct. 22.

Nyberg, Curt E., Chicago, Ill., assignor to J. F. Barnes, as trustee. Container. 2,409,692; Oct. 22.

Ocean City Manufacturing Company, assignee: *See*—
Kay, Paul.

Ogden, Jack, Huntington Woods, assignor to General Motors Corporation, Detroit, Mich. Timing device. 2,409,888; Oct. 22.

Ogden, Jack, Huntington Woods, assignor to General Motors Corporation, Detroit, Mich. Timing device. 2,409,889; Oct. 22.

Okress, Ernest C., Montclair, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Electron discharge device. 2,409,693; Oct. 22.

Oliver Iron and Steel Corporation, assignee: *See*—
Lyon, Bruce K.

O'Neal, Wilburn W., and R. D. Williams, Memphis, Tenn. Dehydrator. 2,409,787; Oct. 22.

Oneida, Ltd., assignee: *See*—
Bloom, Richard A.

O'Quinn, Wilbur D., Wilmington, N. C. Ventilating attachment for welders' helmets. 2,409,641; Oct. 22.

Osborne, Andrew G., New Kensington, assignor to Aluminum Company of America, Pittsburgh, Pa. Applying closures to containers. 2,409,788; Oct. 22.

Osborne, Andrew G., New Kensington, assignor to Aluminum Company of America, Pittsburgh, Pa. Sealing containers. 2,409,789; Oct. 22.

Otto, Carl, Manhasset, assignor to Fuel Refining Corporation, New York, N. Y. Apparatus for the production of ammonium sulphate. 2,409,790; Oct. 22.

Owens, Jesse C., Los Angeles, Calif. Antisiphon ball cock valve. 2,409,890; Oct. 22.

Packer, Lewis C., Longmeadow, Mass., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Variable-speed motor. 2,409,891; Oct. 22.

Painter, Rex H. G.: *See*—
Browne, Donald B., Clarke, and Painter.

Parke, Davis & Company, assignee: *See*—
Henze, Henry R.

Parrott, Forrest, assignee: *See*—
Burch, Willie D.

Pash, Robert, Roselle, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Material treating apparatus. 2,409,953; Oct. 22.

Pearson, Otto H., Salt Lake City, Utah. Heating attachment for horns. 2,409,954; Oct. 22.

Pecker, Harry, Lynn, Mass. Shoe binding for platform soles. 2,409,892; Oct. 22.

Peirce, Charles P., assignee: *See*—
Knapp, William G.

Pendleton, Wesley W., and L. E. Frost, Pittsburgh, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Semiconducting composition. 2,409,893; Oct. 22.

Pfeffer, Edward C., Jr., and J. A. Tweed, Troy, and J. Jarmak, White Plains, assignors to Cluett, Peabody & Co., Inc., Troy, N. Y. Stabilized fabric and making the same. 2,409,894; Oct. 22.

Pfeiffer, Andrew: *See*—
Slack, Charles M., Pfeiffer, and Dawley.

Phelps, George H., Catonsville, Md., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Electrical positioning system. 2,409,895; Oct. 22.

Phillips Petroleum Company, assignee: *See*—
Bailey, Grant C.
Mertz, Valentine.
Sperberg, Lawrence R.

Pittsburgh Coke & Chemical Company, assignee: *See*—
Shive, William, and Glenn.

Place, Willard P., Penn Township, Allegheny County, and A. B. Miller, Edgewood, assignors to The Union Switch & Signal Company, Swissvale, Pa. Selective control and indication system. 2,409,720; Oct. 22.

Plummer, John F., Jr., Phillipsburg, N. J., assignor to Ingersoll-Rand Company, New York, N. Y. Cooling apparatus. 2,409,896; Oct. 22.

Polaroid Corporation, assignee: *See*—
Barnes, Arthur, and Husek.
Rogers, Howard G., and Cooper.
Ryan, William H., Barnes, and Husek.

Pope, Jessie, Ecorse, Mich. Croquignole iron. 2,409,791; Oct. 22.

Power Equipment Company, assignee: *See*—
Bixby, William H., and Middleton.

Premier Crystal Laboratories, Inc., assignee: *See*—
Bach, Henry M.

Prewitt, William C., Palm Beach County, assignor to United States Sugar Corporation, Clewiston, Fla. Weed burner. 2,409,792; Oct. 22.

Prox, Frank, Company, Inc., assignee: *See*—
Fulke, Frank L.

Punte, William F., Passaic, N. J., assignor to Continental Can Company, Inc., New York, N. Y. Metal container. 2,409,793; Oct. 22.

Queeney, Donald H.: *See*—
Dilworth, Richard M., Lillquist, and Queeney.

Quigg, Murray T., trustee, assignee: *See*—
Hopkins, Nevil M.

Quigley, Herbert, and H. Ter Meer, assignors to National Brass Company, Grand Rapids, Mich. Cupboard catch. 2,409,794; Oct. 22.

Rabezzana, Hector, Flint, assignor to General Motors Corporation, Detroit, Mich. Spark plug. 2,409,795; Oct. 22.

Radio Corporation of America, assignee: *See*—
Morton, George A., and Flory.
Shenk, Eugene R., and Smith.

Rado, John A., Little Neck, N. Y., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill. High-frequency pulse generator. 2,409,897; Oct. 22.

Ramsay, Henry T., Hatch End, assignor to The General Electric Company Limited, London, England. Gas-filled electric rectifier. 2,409,955; Oct. 22.

Ramsdell, Thomas S., Housatonic, Mass. Machine for forming heavy sliver lap. 2,409,898; Oct. 22.

Ramstack, Erich F., and C. R. Clafendetcher, Milwaukee, Wis. Garment hanger. 2,409,956; Oct. 22.

Reagan, Maurice E.: *See*—
Derr, Willard A., and Reagan.

Realty and Industrial Corporation, assignee: *See*—
Terry, Fred M.

Redcay, Aaron K.: *See*—
Nicholson, Edward W. S., and Redcay.

Reeves, Herbert M., Kankakee, Ill., assignor to Florence Stove Company, Gardner, Mass. Indicating means for valves. 2,409,796; Oct. 22.

Refined Syrups & Sugars, Inc., assignee: *See*—
Wadsworth, Daniel V., and Hughes.

Rehnqvist, Nils G., assignor to Aktiebolaget Kanthal, Hallstahammar, Sweden. Machinable alloy for high temperature use. 2,409,797; Oct. 22.

Reichstein, Tadeus, Basel, Switzerland. Compounds of the cyclopentanopolyhydrophenanthrene series and making same. 2,409,798; Oct. 22.

Reinhardt, Fredrick E., Bellflower, assignor to Richfield Oil Corporation, Los Angeles, Calif. Filter leaf. 2,409,705; Oct. 22.

Remington Arms Company, Inc., assignee: *See*—
Birdsall, Edwin H.
Horton, Lucien B., and Speed.

Reppa, Joseph L., Chicago, Ill. Attachment for drill presses or the like. 2,409,706; Oct. 22.

Resina, Manuel S., Brooklyn, N. Y. Cap chuck. 2,409,899; Oct. 22.

Reynolds, Howard, Springfield, Ohio. Signal flash. 2,409,957; Oct. 22.

Richfield Oil Corporation, assignee: *See*—
Reinhardt, Fredrick E.

Riker, Robert T., and J. H. Molat, Brooklyn, N. Y. Fluorescent lighting fixture servicing implement. 2,409,900; Oct. 22.

Robb, Mike, assignee: *See*—
Toohey, Patrick F.

Roberts, Edward N., Hammond, Ind., assignor to Standard Oil Company, Chicago, Ill. Lubricant. 2,409,799; Oct. 22.

Robinson, Charles A., Salem, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Lasting machine. 2,409,642; Oct. 22.

Robinson, Charles A., Salem, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Shoe machine. 2,409,643; Oct. 22.

Robinson, Frank E.: *See*—
Lorig, Frank W., Miller, and Robinson.

Rockafellow, Stuart, Flint, assignor to General Motors Corporation, Detroit, Mich. Temperature change compensating means. 2,409,800; Oct. 22.

Roedel, Milton J., Talleyville, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Ethylene polymerization. 2,409,996; Oct. 22.

Roethell, Bruno E., Cranford, N. J., assignor to Standard Oil Development Company. Cement manufacture. 2,409,707; Oct. 22.

Rogers, Dilworth T.: *See*—
McNab, John G., and Rogers.

Rogers, Dilworth T., Teaneck, and J. G. McNab, Cranford, N. J., assignors to Standard Oil Development Company. Sulfur and metal containing compound. 2,409,687; Oct. 22.

Rogers, Fielding P.: *See*—
Lowry, Edwin F., and Rogers.

Rogers, Howard G., Wellesley Hills, Mass., and D. P. Cooper, Jr., Washington, D. C., assignors to Polaroid Corporation, Cambridge, Mass. Method of molding prisms. 2,409,958; Oct. 22.

Rogers Majestic Corporation, assignee: *See*—
Fisher, Sidney T.

Rohm & Haas Company, assignee: *See*—
Bock, Louis H., Johnson, and Armstrong.

Roland, John R.: *See*—
Hanford, William E., and Roland.
Howk, Benjamin W., Roland, and Hoehn.

Rose, Francis L.: *See*—
Broadbent, W., and Rose.

Rothweiler, Charles L., Milwaukee, Wis. Coat hanger. 2,409,708; Oct. 22.

Ruegg, Rudolf, assignor to Aktiengesellschaft Fuer Technische Studien, Zurich, Switzerland. High-temperature gas heater. 2,409,801; Oct. 22.

Rush, John W.: *See*—
Hines, Claude M., and Rush.

Russell, Lyman B., Jr., Edinburg, Tex. Separable rim. 2,409,901; Oct. 22.

Ryan, William H., Cambridge, A. Barnes, Waltham, and H. P. Husek, Allston, assignors to Polaroid Corporation, Cambridge, Mass. Method of forming images of dichroic materials. 2,409,959; Oct. 22.

Saemann, Franklin L., assignee: *See*—
Mollenhour, Delbert C.

Salo, Martin, assignor to Eastman Kodak Company, Rochester, N. Y. Coating compositions for moisture-proofing by hot melt coating. 2,409,985; Oct. 22.

Salo, Martin, assignor to Eastman Kodak Company, Rochester, N. Y. Coating compositions for moisture-proofing by hot melt coating. 2,409,986; Oct. 22.

Samuel, Arthur L., Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Electron discharge apparatus. 2,409,644; Oct. 22.

Saval, Theodore, Sierra Madre, Calif. Shoe. 2,409,902; Oct. 22.

Sawyer, Edward E., Waterville, assignor, by mesne assignments, to The Canal National Bank of Portland, Portland, Maine. Resin-fiber article and making the same. 2,409,645; Oct. 22.

Scarlett, George E.: *See*—
Miller, Logan C., and Scarlett.

Schermuly, Alfred J.: *See*—
Schermuly, Conrad D., A. J., and C.

Schermuly, Charles: *See*—
Schermuly, Conrad D., A. J., and C.

Schermuly, Conrad D., A. J., and C., Parkgate, Newdigate, assignors to The Schermuly Pistol Rocket Apparatus Limited, Parkgate, Newdigate, Surrey, England. Rocket. 2,409,904; Oct. 22.

Schermuly, Conrad D., A. J., and C., assignors to The Schermuly Pistol Rocket Apparatus Limited, Parkgate, Newdigate, England. Illuminating flare. 2,409,905; Oct. 22.

Schermuly Pistol Rocket Apparatus Limited, The, assignee: *See*—
Schermuly, Conrad D., A. J., and C.

Schmerling, Louis, assignor to Universal Oil Products Company, Chicago, Ill. Production of ethylbenzene. 2,409,802; Oct. 22.

Schneider, Rudolph G., assignod to American Furniture & Toy Company, Houston, Tex. Rocking toy. 2,409,803; Oct. 22.

Scholl, William M., Chicago, Ill. Arch support. 2,409,960; Oct. 22.

Schroeder, Herman O., and A. W. Lindquist, Orlando, Fla., assignors to United States of America, as represented by Claude R. Wickard, Secretary of Agriculture, and his successors in office. Microspray device. 2,409,987; Oct. 22.

Schunk, Joseph, Union, assignor to The National Lock Washer Company, Newark, N. J. Bus or car window construction. 2,409,709; Oct. 22.

Schunk, Joseph, Union, assignor to The National Lock Washer Company, Newark, N. J. Bus or car window construction. 2,409,710; Oct. 22.

Schunk, Joseph, Union, assignor to The National Lock Washer Company, Newark, N. J. Sash lock for bus or car window construction. 2,409,711; Oct. 22.

Schwartz, Arthur A., Buffalo, N. Y., assignor to Bell Aircraft Corporation. Machine for shaping stock. 2,409,903; Oct. 22.

Schwebs, George R., Cleveland, Ohio. Fishing rod indicator. 2,409,988; Oct. 22.

Schweitzer, Carl E., Newport, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Chemical process and products. 2,409,712; Oct. 22.

Schwenker, Archie C., Lincoln, Nebr. Milk pail attachment. 2,409,804; Oct. 22.

Scott, Milton J., Springfield, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo. Synthetic resin. 2,409,906; Oct. 22.

Scrantom, De Hart G., Maplewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Fault detector and automatic stop device for textile machines. 2,409,961; Oct. 22.

Scull, Herbert G.: *See*—
Jensen, Edgar C., Scull, and McNally.

Seaman, Harry J., Milwaukee, Wis. Mixing machine. 2,409,646; Oct. 22.

Sears, Roebuck and Co., assignee: *See*—
Hohmann, Richard K., and Boisselier.

Shakesby, Leonard, and C. A. R. Sutherland, Wolverhampton, and S. H. Smith, Manchester, England, assignors to Imperial Chemical Industries Limited. Securing fittings to containers. 2,409,907; Oct. 22.

Sharples Corporation, The, assignee: *See*—
Sharples, Laurence P.

Sharples, Laurence P., Ardmore, Pa., assignor to The Sharples Corporation, Philadelphia, Pa. Separation of liquids from solids. 2,409,713; Oct. 22.

Shearman, Spicer D., assignor to The Aro Equipment Corporation, Bryan, Ohio. Pumps for lubricants and the like. 2,409,962; Oct. 22.

Shell Development Company, assignee: *See*—
Evans, Theodore W., and Cattaneo.
Luten, Daniel B., Jr., and Benedictis.

Shenk, Eugene R., Brooklyn, and J. E. Smith, Jackson Heights, N. Y., assignor to Radio Corporation of America. Signaling system. 2,409,989; Oct. 22.

Shikles, John C., St. Louis, Mo. Dining booth. 2,409,805; Oct. 22.

Shive, William, Urbana, Ill., and R. A. Glenn, Mount Lebanon, Pa., assignors to Pittsburgh Coke & Chemical Company. Synthesis of nicotinic compounds. 2,409,806; Oct. 22.

Signode Steel Strapping Company, assignee: *See*—
Frear, Jenness B.

Silhan, Florian P., Marion, Kans. Seat. 2,409,714; Oct. 22.

Simmon Brothers, Inc., assignee: *See*—
Weisglass, Louis.

Simmonds Aerocessories Limited, assignee: *See*—
Smith, Stanley J.

Simmons, Leon E., Claremont, N. H., assignor to Joy Manufacturing Company. Mining apparatus. 2,409,807; Oct. 22.

Simpkins, Isaac W., Charlotte, N. C. Safety mechanism for brakes. 2,409,908; Oct. 22.

Sinclair Refining Company, assignee: *See*—
May, Robert L.

Skillin, Walter F.: *See*—
Valentine, Frank E., and Skillin.

Slack, Charles M., Glen Ridge, and E. G. F. Arnott, Upper Montclair, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Electric arc device. 2,409,715; Oct. 22.

Slack, Charles M., Glen Ridge, L. F. Ehrke, Newark, and C. E. Dawley, Bloomfield, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. High-voltage discharge device. 2,409,716; Oct. 22.

Slack, Charles M., Glen Ridge, and A. Pfeiffer and C. E. Dawley, Bloomfield, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Field emission arc discharge tube. 2,409,717; Oct. 22.

Smith, Fred J., and J. Isaac, Sault Ste. Marie, Mich. Internal-combustion turbine. 2,409,909; Oct. 22.

Smith, James E., assignee: *See*—
Shenk, Eugene R., and Smith.

Smith, Leathem D., Shipbuilding Co., assignee: *See*—
Maples, John A.

Smith, Paul E., Jr.: *See*—
Foulger, John H., and Smith.

Smith, Stanley J., assignor to Simmonds Aerocessories Limited, London, W. C. 2, England. Moving-coil electrical instrument. 2,409,963; Oct. 22.

Smith, Sydney H.: *See*—
Shakesby, Leonard, Sutherland, and Smith.

Smith, William W., Philadelphia, Pa., assignor to The Electric Storage Battery Company. Storage battery. 2,409,964; Oct. 22.

Snell, Foster D., Inc., assignee: *See*—
Snell, Foster D., and Haeseler.

Snell, Foster D., New York, and K. W. Haeseler, Forest Hills, N. Y., assignors to Foster D. Snell, Inc. Composition for cleaning dentures. 2,409,718; Oct. 22.

Sonnenborn, L., Sons, Inc., assignee: *See*—
Faust, Jacob.

Sorensen, Andrew J., Edgewood, assignor to The Union Switch & Signal Company, Swissvale, Pa. Apparatus for selective control and indication systems. 2,409,719; Oct. 22.

Sowle, Charles E., Van Nuys, assignor to Lockheed Aircraft Corporation, Burbank, Calif. Glazing unit. 2,409,808; Oct. 22.

Spack, Maurice, Newton Center, Mass. Device for conforming a shoe upper to the shape of a last. 2,409,721; Oct. 22.

Specialties Development Corporation, assignee: *See*—
Grant, Harry C., Jr.
Stroop, John H.

Speed, Fletcher C.: *See*—
Horton, Lucien B., and Speed.

Sperberg, Lawrence R., Bartlesville, Okla., assignor to Phillips Petroleum Company. Curing butadiene-styrene synthetic rubber. 2,409,809; Oct. 22.

Sperry Gyroscope Company, Inc., assignee: *See*—
Braddon, Frederick D.
Lane, Arthur W.
Van Auken, Howard C., and Hanson.

Sprague, Robert H.: *See*—
Brooker, Leslie G. S., and Sprague.

Squibb, E. R., & Sons, assignee: *See*—
Christiansen, Walter G., and Harris.

Stampen, Olaf J.: *See*—
Blomberg, Martin P., and Stampen.

Standard Oil Company, assignee: *See*—
Roberts, Edward N.

Standard Oil Development Company, assignee: *See*—
Graybeal, Joseph W.
Hill, Ralph M., and Watkins.
Laughlin, Kenneth C.
McNab, John G., and Rogers.
Nicholson, Edward W. S., and Redcay.
Noble, Frank G.
Roetheli, Bruno E.
Rogers, Dilworth T., and McNab.
Vanderbilt, Byron M., and Howe.
Winning, Carl, and McNab.

Stark, William, and A. P. Gately, Wilmington, Calif., assignors to Todd Shipyards Corporation, New York, N. Y. Sand blasting apparatus. 2,409,722; Oct. 22.

Staud, Cyril J., Rochester, N. Y. Tracing cloth. 2,409,990; Oct. 22.

Stempel, Edward, Los Angeles, Calif. Suspenders. 2,409,810; Oct. 22.

Stober, Kenneth E., Midland, Mich., assignor to The Dow Chemical Company. Filling containers with resinous foam. 2,409,910; Oct. 22.

Straubel, James W., trustee, assignee: *See*—
Straubel, Louis A., Sr.

Straubel, Louis A., Sr., assignor to J. W. Straubel, trustee, Green Bay, Wis. Creping machine. 2,409,997; Oct. 22.

Strobel, Howard M., Allegany, N. Y. Standing wave coupler. 2,409,991; Oct. 22.

Strobel, Howard M., Allegany, N. Y. Traveling wave coupler. 2,409,992; Oct. 22.

Strong, Robert M., Wilkinsburg, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Control system. 2,409,911; Oct. 22.

Stroop, John H., New York, N. Y., assignor to Specialties Development Corporation, Bloomfield, N. J. Discharge device. 2,409,647; Oct. 22.

Stuart, Kenneth E., Niagara Falls, N. Y., assignor to Hooker Electrochemical Company, Niagara Falls, N. Y. Electrolytic alkali chlorine diaphragm cell. 2,409,912; Oct. 22.

Stupakoff Ceramic & Manufacturing Co., assignee: *See*—
Stupakoff, Semon H.

Stupakoff, Semon H., assignor to Stupakoff Ceramic & Manufacturing Co., Latrobe, Pa. Machine for threading coil forms. 2,409,993; Oct. 22.

Sullivan, Lee A., assignee: *See*—
Kahl, Charles N.

Superior Carbon Products Co., Inc., assignee: *See*—
Wikle, Hugh H.

Sutherland, Charles A. R.: *See*—
Shakesby, Leonard, Sutherland, and Smith.

Sutherland Paper Company, assignee: *See*—
Annen, James E.

Sylvania Electric Products Inc., assignee: *See*—
Leyshon, William E.
Lowry, Edwin F., and Rogers.
Taylor, Raymond G., Jr., and D. B. Hooser, assignors to The Guiberson Corporation, Dallas, Tex. Setting and releasing tool. 2,409,811; Oct. 22.
Taylor, Raymond G., Jr., and D. B. Hooser, assignors to The Guiberson Corporation, Dallas, Tex. Control head packer. 2,409,812; Oct. 22.
Ter Meer, Herman: *See*—
Quigley, Herbert, and Ter Meer.
Terry, Fred M., Jackson Heights, N. Y., assignor to Realty and Industrial Corporation. Oil circuit breaker. 2,409,723; Oct. 22.
Thomas, Frank M.: *See*—
Elliott, Stanley J., Hovgaard, Mallina and Thomas.
Tide Water Associated Oil Company, assignee: *See*—
Viland, Clare K., and Hyde.
Timson, Arthur G., Haverhill, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Reversible shoe. 2,409,813; Oct. 22.
Todd Shipyards Corporation, assignee: *See*—
Stark, William, and Gately.
Toledo Scale Company, assignee: *See*—
Longmate, Ralph B.
Tonks, Lewi, Schenectady, N. Y., assignor to General Electric Company. Wave guide structure. 2,409,913; Oct. 22.
Toohey, Catherine, administratrix: *See*—
Toohey, Patrick F.
Toohey, Patrick F., deceased, Burgettstown, assignor of one-half to M. Robb, Slovan, Pa.; C. Toohey, administratrix. Loading pan. 2,409,994; Oct. 22.
Tweed, John A.: *See*—
Pfeffer, Edward C., Jr., Tweed, and Jarmak.
Udale, Stanley M., Detroit, Mich., assignor to G. M. Holley and E. Holley. Fuel pump. 2,409,965; Oct. 22.
Union Switch & Signal Company, The, assignee: *See*—
Lewis, Lloyd V.
Pince, Willard P., and Miller.
Sorensen, Andrew J.
United Shoe Machinery Corporation, assignee: *See*—
Clarke, Thomas B., and Williams.
Robinson, Charles A.
Timson, Arthur G.
United States Gypsum Company, assignee: *See*—
Nootens, Julian H.
United States Sugar Corporation, assignee: *See*—
Prewitt, William C.
Universal Oil Products Company, assignee: *See*—
Gerhold, Clarence G., and Burgess.
Mekler, Lev A.
Schmerling, Louis.
Universal Slide Fastener Co., Inc., assignee: *See*—
Voity, Maurice, and Griffiths.
Valentine, Frank E., and W. F. Skillin, Schenectady, N. Y., assignors to General Electric Company. System and apparatus for gunfire control. 2,409,914; Oct. 22.
Van Auken, Howard C., Bloomfield, and G. N. Hanson, Allendale, N. J., assignors to Sperry Gyroscope Company, Inc., Brooklyn, N. Y. Bomb sight. 2,409,648; Oct. 22.
Vanderbilt, Byron M., Cranford, and R. F. Howe, Elizabeth, N. J., assignors to Jascoe, Incorporated. Preparing rubberlike materials. 2,409,915; Oct. 22.
Von Hoorn, Fred G., Nichols, Conn., assignor to General Electric Company. Circuit breaker. 2,409,917; Oct. 22.
Varcoe, Charles W., Bethel, Conn. Firearm cleaning rod centralizer. 2,409,916; Oct. 22.
Vargish, Frank J., New York, N. Y. Photograph holder. 2,409,814; Oct. 22.
Viland, Clare K., Martinez, and H. Y. Hyde, Associated, assignors to Tide Water Associated Oil Company, San Francisco, Calif. Manufacture of olefins. 2,409,815; Oct. 22.
Voity, Maurice, Bayside, and G. A. Griffiths, Kew Gardens, assignors to Universal Slide Fastener Co., Inc., Long Island City, N. Y. Blank for use in the manufacture of sliders for slide fasteners. 2,409,966; Oct. 22.
Wadsworth, Daniel V., Manhasset, N. Y., and M. F. Hughes, Jersey City, N. J., assignors to Refined Syrups & Sugars, Inc., Yonkers, N. Y. Sugar syrup and process. 2,409,816; Oct. 22.
Waitkins, George R.: *See*—
Clark, Charles W., Elkin, and Waitkins.
Walter, Charles T., and L. R. Newton, assignors to Industrial Patents Corporation, Chicago, Ill. Banding machine. 2,409,724; Oct. 22.
Walter, Henry E.: *See*—
Heritage, Clark C., and Walter.
War, United States of America, as represented by Secretary of, assignee: *See*—
Langner, Lawrence.
Waters, Harry F., New York, N. Y. Fluid-tight package. 2,410,998; Oct. 22.
Watkins, Charles H.: *See*—
Hill, Ralph M., and Watkins.
Webber, George D., Lakewood, Ohio. Gauge. 2,409,817; Oct. 22.
Weisglass, Louis, New York, assignor to Simmon Brothers, Inc., Long Island City, N. Y. Means to ignite photographic flash. 2,409,967; Oct. 22.
Wells, David E., San Leandro, Calif. Ball forming mill. 2,409,649; Oct. 22.
Welsch, Louis A., assignor to American Hoist & Derrick Co., St. Paul, Minn. Machine for operating on materials. 2,409,968; Oct. 22.
Wentworth, Philip C., Providence, R. I., assignor to National Ring Traveler Company, Pawtucket, R. I. Twister traveler. 2,409,918; Oct. 22.
Western Electric Company, Incorporated, assignee: *See*—
Daniel, Thomas A.
Ewaldson, Waldemar C.
Pash, Robert.
Scrantom, De Hart G.
Westinghouse Air Brake Company, The, assignee: *See*—
Hines, Claude M., and Rush.
Mueller, Emil G.
Westinghouse Electric Corporation, assignee: *See*—
Clifford, David G.
Dailey, Hampton J.
Derr, Willard A., and Reagan.
Laidig, Alfred H.
Lessman, Gerhard P.
Monori, Emil, and Myhre.
Okress, Ernest C.
Packer, Lewis C.
Pendleton, Wesley W., and Frost.
Phelps, George H.
Slack, Charles M., and Arnott.
Slack, Charles M., Ehrke, and Dawley.
Slack, Charles M., Pfeiffer, and Dawley.
Strong, Robert M.
Whitmore, James B., Makenny, and Newcombe.
Whetstone, John, West Kilbride, Scotland, assignor to Imperial Chemical Industries Limited. Low density granular or powder explosives and their manufacture. 2,409,919; Oct. 22.
Whitmore, James B., Bloomfield, W. Makenny, Mountain View, and F. A. Newcombe, Nutley, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Automatic molding of plastics. 2,409,725; Oct. 22.
Wicher, August R., Chicago, Ill. Automatic scale model coupler. 2,409,920; Oct. 22.
Wiggins, Earl B., deceased, by I. L. Wiggins, executrix, Los Angeles, Calif. Coupling. 2,409,650; Oct. 22.
Wiggins, Irene L., executrix: *See*—
Wiggins, Earl B.
Wikle, Hugh H., Cleveland Heights, assignor to Superior Carbon Products, Inc., Cleveland, Ohio. Brush and art of commutation. 2,409,818; Oct. 22.
Willard Storage Battery Company, assignee: *See*—
Donkin, William F.
Williams, Frederick W. H.: *See*—
Clarke, Thomas B., and Williams.
Williams, Merle R., San Antonio, Tex. Apparatus for unbelting ammunition. 2,409,6[illegible]ct. 22.
Williams, Robert D.: *See*—
O'Neal, Wilburn W., and Wi[illegible]
Williams, William R., Dunsmu[illegible] Calif. Nut lock. 2,409,969; Oct. 22.
Wilson, Nina M., assignee: *See*—
Wilson, Winfred E.
Wilson, Winfred E., Los Angeles, Calif., assignor of one-half to N. M. Wilson. Plywood structure. 2,409,819; Oct. 22.
Winning, Carl, Westfield, and J. G. McNab, Cranford, N. J., assignors to Standard Oil Development Company. Lubricant composition. 2,409,726; Oct. 22.
Wood Conversion Company, assignee: *See*—
Heritage, Clark C.
Heritage, Clark C., and Walter.
Workman, Ernest R., Goshen, Ind. Banding machine. 2,409,652; Oct. 22.
Wormald, Robert M.: *See*—
Breth, Walter J., and Wormald.
Wulff, Frank D., Chicago, Ill. Gauging means for lawn mowers. 2,409,921; Oct. 22.
Zademach, Erich R., Elizabeth, and W. W. Clarke, Summit, assignors to Metalwash Machinery Company, Newark, N. J. Shaft bearing seal. 2,409,922; Oct. 22.
Zimmern, Benno, New York, N. Y. Bottle cover. 2,409,820; Oct. 22.

LIST OF PLANT INVENTIONS

Rose plant. H. C. Swim. 713; Oct. 22.

LIST OF DESIGN INVENTIONS

Airplane. E. F. Burton. 145,774; Oct. 22.
Bracelet. C. F. Carter. 145,775–6; Oct. 22.
Bracelet or similar article. J. Bernas. 145,783; Oct. 22.
Brooch and cosmetic container, Combined. N. Linduska. 145,811; Oct. 22.
Building. H. P. Hummel. 145,801; Oct. 22.
Carrier, Tool. F. L. Ayres. 145,770; Oct. 22.
Case, Pen and pencil. J. A. Commander. 145,778; Oct. 22.
Chair. W. S. Gass. 145,788; Oct. 22.
Chair, Child's. F. L. Duer. 145,781; Oct. 22.
Container, Cosmetic. M. H. Ramsey. 145,819; Oct. 22.
Cutter, Cookie. M. M. Myers. 145,812; Oct. 22.
Desk unit, Combination. M. J. Lewis. 145,809; Oct. 22.
Desk unit, Combination. T. Roffey. 145,821; Oct. 22.
Dispenser, Adhesive tape. B. Bronfman. 145,773; Oct. 22.
Display device. C. T. Andrews. 145,768; Oct. 22.
Display device for twine and the like, Sample. E. H. Jackson, Jr. 145,802; Oct. 22.
Display stand, Merchandise. S. Malkin. 145,814; Oct. 22.
Dress. Z. Golden. 145,789–97; Oct. 22.
Dress. D. M. Goodstein. 145,798–9; Oct. 22.
Dress. H. T. Langbert. 145,807; Oct. 22.
Dress. J. Walker. 145,827; Oct. 22.
Exhibitor, Insignia. R. E. Tilford. 145,825; Oct. 22.
Fabric or similar article. F. G. Ullmann. 145,826; Oct. 22.
Fixture, Bar rail. G. Bassett. 145,771; Oct. 22.
Glider. P. V. Armstrong. 145,769; Oct. 22.
Grill. M. J. Lewis. 145,810; Oct. 22.
Hammer head. B. L. McClure. 145,815; Oct. 22.
Heel and counter unit for a shoe or similar article, Combined. E. S. Payne. 145,817; Oct. 22.
Hook, Garment. H. A. Marsh. 145,813; Oct. 22.
Indicator for processing dental plastics, Timing. E. D. Stiles. 145,824; Oct. 22.
Light, Night. J. P. Endsley. 145,782; Oct. 22.
Motorcycle. F. Brogan. 145,772; Oct. 22.
Pencil, Mechanical. M. Kahn. 145,806; Oct. 22.
Rack and drawer, Combined tie. R. B. Rubin. 145,822; Oct. 22.
Rack, Towel. F. J. Whitman. 145,829; Oct. 22.
Radio cabinet. W. J. House, Jr. 145,800; Oct. 22.
Radio loud speaker housing or similar article. A. F. Adams and N. S. Barger. 145,765; Oct. 22.
Sandal. E. S. Payne. 145,818; Oct. 22.
Sharpener, Knife. G. M. Jones. 145,803; Oct. 22.
Shirt or similar article, Polo. D. Engleman. 145,786; Oct. 22.
Shoe. E. S. Payne. 145,816; Oct. 22.
Stand, Pen desk. B. W. Hanle. 145,804; Oct. 22.
Stand, Reservoir desk. J. O. Reinecke. 145,820; Oct. 22.
Stand, Telephone desk. G. Deakin. 145,780; Oct. 22.
Sweater. P. Freund, Jr. 145,787; Oct. 22.
Table and chair, Combined. C. S. Davis. 145,779; Oct. 22.
Table, Drafting. L. La Pidus. 145,808; Oct. 22.
Table, Overbed. J. S. Clachko. 145,777; Oct. 22.
Tire, Pneumatic. G. W. Anderson. 145,766–7; Oct. 22.
Toy gun. W. C. Hooper. 145,805; Oct. 22.
Watchcase. J. Shemanski. 145,823; Oct. 22.
Workbench, Laboratory. J. Bjorksten. 145,784–5; Oct. 22.
Writing unit, Desk. P. White. 145,828; Oct. 22.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 22D DAY OF OCTOBER, 1946

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Acetylene generator. W. D. Burch. 2,409,833; Oct. 22.
Acid salts of a guanidine as mothproofers, Resinous dibasic carboxylic. V. Migrdichian. 2,409,883; Oct. 22.
Adjustable drill mounting. A. Feucht. 2,409,843; Oct. 22.
Adjustable harness clip. C. Lund. 2,409,772; Oct. 22.
Agents for the recovery of magnesium ions from brine, Process and. M. J. Hunter and W. C. Bauman. 2,409,861; Oct. 22.
Air control instrument. A. E. Krogh. 2,409,871; Oct. 22.
Aircraft launching means. A. V. Janiewski. 2,409,763; Oct. 22.
Alkali chlorine diaphragm, Electrolytic. K. E. Stuart. 2,409,912; Oct. 22.
Alkylene-bis-ureas. W. R. Boon. 2,409,829; Oct. 22.
Alloy for high temperature use, Machineable. N. G. Rehnqvist. 2,409,797; Oct. 22.
Aminomethyl amidothiazoles. L. H. Bock, H. C. E. Johnson, and L. J. Armstrong. 2,409,828; Oct. 22.
Ammunition. W. J. Lowes. 2,409,945; Oct. 22.
Antisiphon ball cock valve. J. C. Owens. 2,409,890; Oct. 22.
Apparatus for continuously processing metal strips. F. W. Lorig, L. L. Miller, and F. E. Robinson. 2,409,770; Oct. 22.
Apparatus for feeding and delivering ammunition blanks. E. H. Birdsall. 2,409,657; Oct. 22.
Apparatus for introducing molten material into molds. H. E. McWane and H. K. McGavock. 2,409,779; Oct. 22.
Apparatus for loading and unloading moving floor vehicles. J. A. Kinnaird. 2,409,870; Oct. 22.
Apparatus for selective control and indication systems. A. J. Sorensen. 2,409,719; Oct. 22.
Apparatus for the production of ammonium sulphate. C. Otto. 2,409,790; Oct. 22.
Apparatus for unbelting ammunition. M. R. Williams. 2,409,651; Oct. 22.
Appliance. H. Cohen. 2,409,929; Oct. 22.
Appliance for measuring the velocity of projectiles. F. Fischer and W. Amrein. 2,409,672; Oct. 22.
Arbor, Coil supporting. J. W. Dougherty. 2,409,742; Oct. 22.
Arch support. W. M. Scholl. 2,409,960; Oct. 22.
Arm and hand, Artificial. D. C. Mollenhour. 2,409,884; Oct. 22.
Aryl-dicyandiamide production. W. Broadbent and F. L. Rose. 2,409,832; Oct. 22.
Attachment for drill presses or the like. J. L. Reppa. 2,409,706; Oct. 22.
Attachment for looms, Metal type stop motion. J. F. Koskela. 2,409,766; Oct. 22.
Baby chair. L. Gottfried. 2,409,622; Oct. 22.
Bag tube ends, Closing. W. J. Geimer and F. R. Linda. 2,409,621; Oct. 22.
Ball forming mill. D. E. Wells. 2,409,649; Oct. 22.
Balsa slices, Producing. D. Newmark and W. Kramer. 2,409,785; Oct. 22.
Banding machine. C. T. Walter and L. R. Newton. 2,409,724; Oct. 22.
Banding machine. E. R. Workman. 2,409,652; Oct. 22.
Basin for blast furnace cinder runners, Settling. H. F. Dobscha. 2,409,741; Oct. 22.
Basket, Trundle. C. H. Norton. 2,409,786; Oct. 22.
Bat, Insulating. J. H. Nootens. 2,409,951; Oct. 22.
Battery, Storage. W. W. Smith. 2,409,964; Oct. 22.
Bearing construction. G. P. Lessmann. 2,409,874; Oct. 22.
Bicycle, Motor. G. F. Murphy. 2,409,887; Oct. 22.
Billet scarfing method and apparatus. J. L. Anderson. 2,409,654; Oct. 22.
Binding for platform soles, Shoe. H. Pecker. 2,409,892; Oct. 22.
Blanks for use in the manufacture of sliders for slide fasteners. M. Voity and G. A. Griffiths. 2,409,966; Oct. 22.
Blasting apparatus, Sand. W. Stark and A. P. Gately. 2,409,722; Oct. 22.
Blind, Venetian. M. W. Albrecht. 2,409,821; Oct. 22.
Block: *See*—
  Toolmaker's angle block.
Bobbin winding machine. B. Marcellus. 2,409,639; Oct. 22.
Bolt, Insert. B. K. Lyon. 2,409,638; Oct. 22.
Bomb sight. H. C. Van Auken and G. N. Hanson. 2,409,648; Oct. 22.
Bonding of rubber to metal, Direct. O. W. Hosking. 2,409,759; Oct. 22.
Booth, Dining. J. C. Shikles. 2,409,805; Oct. 22.
Bottle carrier. T. H. Jenkins. 2,409,684; Oct. 22.
Bottle cover. B. Zimmern. 2,409,820; Oct. 22.
Bottles and the like, and manufacture, Paper. J. E. Annen. 2,409,655; Oct. 22.
Box: *See*—
  Camera film box. Chick box.
Brake: *See*—
  Variable load brake.
Brush and art of commutation. H. H. Wikle. 2,409,818; Oct. 22.
Brush, Fountain. C. A. Notman. 2,409,952; Oct. 22.
Buffer, Eyelash. C. J. Altman. 2,409,823; Oct. 22.
Building block lifter. F. A. Dostal. 2,409,932; Oct. 22.
Building machine, Tire. W. J. Breth and R. M. Wormal. 2,409,974; Oct. 22.
Bundle and producing the same. J. B. Frear. 2,409,750; Oct. 22.
Burner: *See*—
  Oil burner. Weed burner.
Butadiene-styrene synthetic rubber, Curing. L. R. Sperberg. 2,409,809; Oct. 22.
Cable for high-frequency oscillators, Power. F. J. Moles. 2,409,640; Oct. 22.
Calibrating device. P. C. Gardiner and J. E. Maynard. 2,409,845; Oct. 22.
Camera film box. J. W. McCutcheon. 2,409,949; Oct. 22.
Can making machine. L. L. Jones. 2,409,631; Oct. 22.
Carburetor. S. F. Czerner. 2,409,739; Oct. 22.
Carburetor attachment. J. Hutchinson. 2,409,937; Oct. 22.
Car construction. D. Hindahl. 2,409,856; Oct. 22.
Carrier: *See*—
  Bottle carrier. Luggage carrier.
Carton with transparent window, Paper display. J. D. Calmi. 2,409,736; Oct. 22.
Case: *See*—
  Plastic milk carton case.
Catch, Cupboard. H. Quigley and H. Ter Meer. 2,409,794; Oct. 22.
Catch, Door. E. W. Allen. 2,409,822; Oct. 22.
Cement manufacture. B. E. Roetheli. 2,409,707; Oct. 22.
Chain: *See*—
  Mining machine chain.
Chain-saw machine. A. W. Mall and W. L. Gorden. 2,409,775; Oct. 22.
Chair: *See*—
  Baby chair.
Chair. S. S. Bernstein. 2,409,826; Oct. 22.
Checker, Thread. R. E. Bauer. 2,409,924; Oct. 22.
Chemical process. R. M. Hill and C. H. Watkins. 2,409,681; Oct. 22.
Chemical process and products. C. E. Schweitzer. 2,409,712; Oct. 22.
Chest, Display. R. A. Bloom. 2,409,926; Oct. 22.
Chick box. G. Loth. 2,409,701; Oct. 22.
Chlorine dioxide, Production of. W. S. Hutchinson. 2,409,862; Oct. 22.
Chuck, Cap. M. S. Resina. 2,409,899; Oct. 22.
Chuck, Lathe. C. C. Heeter. 2,409,680; Oct. 22.
Cigarette maker. A. J. Hongo. 2,409,935; Oct. 22.
Circuit breaker, Oil. F. M. Terry. 2,409,723; Oct. 22.
Circuit breaker. F. G. Von Hoorn. 2,409,917; Oct. 22.
Clamp for pneumatic tires, Bead. F. H. Comey. 2,409,666; Oct. 22.
Clearing attachment for jaw crushing machines, Material. A. F. Hyde. 2,409,863; Oct. 22.
Clip: *See*—
  Adjustable harness clip.
Closure, Bottle. E. Greene. 2,409,846; Oct. 22.
Closures to containers, Applying. A. G. Osborne. 2,409,788; Oct. 22.
Cloth, Tracing. C. J. Staud. 2,409,990; Oct. 22.
Clutch: *See*—
  Hydraulic clutch.
Clutch. F. L. Hetzel and V. E. Carstedt. 2,409,757; Oct. 22.
Coat hanger. C. L. Rothweiler. 2,409,708; Oct. 22.
Coated board, Manufacture of. C. C. Heritage. 2,409,628–9; Oct. 22.
Coated vegetable-fiber board, Making a. C. C. Heritage and H. B. Walter. 2,409,630; Oct. 22.
Coating compositions for moisture-proofing by hot melt coating. M. Salo. 2,409,985–6; Oct. 22.
Communication systems, Suppression of noise in. S. T. Fisher. 2,409,977; Oct. 22.
Composition for cleaning dentures. F. D. Snell and K. W. Haeseler. 2,409,718; Oct. 22.
Composition for discharge printing. E. C. Jensen, H. G. Scull, and J. G. McNally. 2,409,980; Oct. 22.

Compressor, Centrifugal type. J. S. Alford. 2,409,837; Oct. 22.
Compressor, Centrifugal type. E. L. Coe. 2,409,836; Oct. 22.
Container: *See*—
  Cosmetic container. Metal container.
  Dispensing container.
Container. C. E. Nyberg. 2,409,692; Oct. 22.
Container having reinforced ends and integral hinged closure, Fiberboard. W. G. Glascoff, Jr., and C. W. Evert. 2,409,673; Oct. 22.
Container with resinous foam, Filling. K. E. Stober. 2,409,910; Oct. 22.
Containers, Sealing. A. G. Osborne. 2,409,789; Oct. 22.
Control and indication system, Selective. W. P. Place and A. B. Miller. 2,409,720; Oct. 22.
Control mechanism, Fluid pressure. W. A. Eaton. 2,409,842; Oct. 22.
Control mechanism, Interval. E. L. Kent. 2,409,941; Oct. 22.
Control system. W. A. Derr and M. E. Reagan. 2,409,840; Oct. 22.
Control system. R. M. Strong. 2,409,911; Oct. 22.
Control system, Electrical position. G. Agins. 2,409,970; Oct. 22.
Control system, Locomotive. R. M. Dilworth, T. O. Lillquist, and D. H. Queeney. 2,409,740; Oct. 22.
Control system, Pump pressure. R. R. Curtis. 2,409,975; Oct. 22.
Controller mechanism. R. G. Janes. 2,409,762; Oct. 22.
Conveyance, Load pick-up hauling and dumping. P. E. Goodwin. 2,409,752; Oct. 22.
Cooling apparatus. J. F. Plummer, Jr. 2,409,896; Oct. 22.
Cosmetic container. C. R. Book. 2,409,658; Oct. 22.
Coupler, Automatic scale model. A. R. Wicher. 2,409,920; Oct. 22.
Coupler, Standing wave. H. M. Strobel. 2,409,991; Oct. 22.
Coupler, Traveling wave. H. M. Strobel. 2,409,992; Oct. 22.
Coupling. E. B. Wiggins. 2,409,650; Oct. 22.
Cover: *See*—
  Bottle cover.
Creping machine. L. A. Straubel, Sr. 2,409,997; Oct. 22.
Croquignole iron. J. Pope. 2,409,791; Oct. 22.
Crystal mounting. J. J. Cress. 2,409,838; Oct. 22.
Cyanomethyl dialkyl orthoformates, Preparation of. D. J. Loder and W. F. Gresham. 2,409,699; Oct. 22.
Cyclopentanopolyhydrophenanthrene series and making same, Compounds of the. T. Reichstein. 2,409,798; Oct. 22.
Dehydrator. W. W. O'Neal and R. D. Williams. 2,409,787; Oct. 22.
Detector and automatic stop device for textile machines, Fault. D. G. Scrantom. 2,409,961; Oct. 22.
Detector, Ground. E. Monori and C. B. Myhre. 2,409,885; Oct. 22.
Device for conforming a shoe upper to the shape of a last. M. Spack. 2,409,721; Oct. 22.
Differential locking means. E. T. Barron. 2,409,729; Oct. 22.
Dilatometer structure. H. W. Dietert. 2,409,669; Oct. 22.
Discharge device, High-voltage. C. M. Slack, L. F. Ehrke, and C. E. Dawley. 2,409,716; Oct. 22.
Discharge device. J. H. Stroop. 2,409,647; Oct. 22.
Dispensing container. H. Fleisher and J. Homer. 2,409,933; Oct. 22.
Display table. R. A. Bloom. 2,409,925; Oct. 22.
Distributor, Signal. S. J. Elliott, O. M. Hovgaard, R. F. Mallina, and F. M. Thomas. 2,409,617; Oct. 22.
Dyes, Pyrrole. L. G. S. Brooker and R. H. Sprague. 2,409,612; Oct. 22.
Ejector for heel seat fitting machines, Chip. T. B. Clarke and F. W. H. Williams. 2,409,737; Oct. 22.
Electric arc device. C. M. Slack and E. G. F. Arnott. 2,409,715; Oct. 22.
Electrical discharge device. E. F. Lowry and F. P. Rogers. 2,409,771; Oct. 22.
Electrical instrument, Direct current ratio measuring. R. G. Jewell. 2,409,866; Oct. 22.
Electrode support. D. G. Clifford. 2,409,664; Oct. 22.
Electron discharge apparatus. A. L. Samuel. 2,409,644; Oct. 22.
Electron discharge device. H. J. Dailey. 2,409,667; Oct. 22.
Electron discharge device. A. H. Laidig. 2,409,694; Oct. 22.
Electronic computing device. G. A. Morton and L. E. Flory. 2,409,689; Oct. 22.
Electron discharge device. E. C. Okress. 2,409,693; Oct. 22.
Engine: *See*—
  Internal-combustion engine. Sleeve valve engine.
Esters of alkyl-substituted alkoxy benzoid acids, Amino alcohol. W. G. Christiansen and S. E. Harris. 2,409,663; Oct. 22.
Ethylbenzene, Production of. L. Schmerling. 2,409,802; Oct. 22.
Ethylene polymerization. M. J. Roedel. 2,409,996; Oct. 22.
Explosives and their manufacture, Low density granular or powder. J. Whetstone. 2,409,919; Oct. 22.
Fabric and making the same, Stabilized. E. C. Pfeffet, Jr., J. A. Tweed, and J. Jarmak. 2,409,894; Oct. 22.
Fabrics, Production of laminating. A. Lyem. 2,409,704; Oct. 22.
Fastener. R. W. Luce. 2,409,702; Oct. 22.
Fibers, Drying staple. H. C. R. Folmer. 2,409,747; Oct. 22.
Feed means, Hydraulic. J. W. Hackett and K. L. G. Copping. 2,409,850; Oct. 22.
Field emission arc discharge tube. C. M. Slack, A. Pfeiffer, and C. E. Dawley. 2,409,717; Oct. 22.
Filler system for ammunition, Nonleak liquid explosive. N. M. Hopkins. 2,409,858; Oct. 22.
Firearm, Repeating. V. A. Browning. 2,409,733; Oct. 22.
Fire escape. E. C. Larson. 2,409,767; Oct. 22.
Fireplace. G. N. Bolinger. 2,409,731; Oct. 22.
Fishing rod indicator. G. R. Schwebs. 2,409,988; Oct. 22.
Fittings to containers, Securing. L. Shakesby, C. A. R. Sutherland and S. H. Smith. 2,409,907; Oct. 22.
5,5-diaryl hydantoins, Obtaining. H. R. Henze. 2,409,755–6; Oct. 22.
Flare, Illuminating. C. D., A. J., and C. Schermuly. 2,409,905; Oct. 22.
Flash lamps, Means to ignite photographic. L. Weisglass. 2,409,967; Oct. 22.
Fluorescent glow lamp. W. E. Leyshon. 2,409,769; Oct. 22.
Fuel pump. S. M. Udale. 2,409,965; Oct. 22.
Fuel system. R. R. Curtis. 2,409,931; Oct. 22.
Fuels, Improving aviation. K. C. Laughlin. 2,409,695; Oct. 22.
Fuels, Motor. T. W. Evans and A. G. Cattaneo. 2,409,746; Oct. 22.
Furfural in extractive distillation plants, Reducing corrosion and polymerization. V. Mertz. 2,409,781; Oct. 22.
Fuselages, Constructing tubular. L. C. Miller and G. E. Scarlett. 2,409,782; Oct. 22.
Garment hanger. O. C. Byrket. 2,409,927; Oct. 22.
Garment hanger. E. F. Ramstack and C. R. Clafendetcher. 2,409,956; Oct. 22.
Gaseous discharge tube. C. Hillyer, Jr., and H. Blackstone. 2,409,855; Oct. 22.
Gases, Purifying exhaust. B. Baringoltz. 2,409,825; Oct. 22.
Gauge. R. J. A. Ingouf and J. H. Lewis. 2,409,864; Oct. 22.
Gauge. G. D. Webber. 2,409,817; Oct. 22.
Gauging and assorting apparatus. L. B. Horton and F. C. Speed. 2,409,682; Oct. 22.
Gauging means for lawn mowers. F. D. Wulff. 2,409,924; Oct. 22.
Gel, Non-aqueous. H. C. Meyer, Jr. 2,409,950; Oct. 22.
Generator: *See*—
  Acetylene generator. Linear generator.
  High frequency pulse generator. Oscillation generator.
Glazing unit. C. E. Sowle. 2,409,808; Oct. 22.
Gun charger. H. C. Grant, Jr. 2,409,623; Oct. 22.
Gun, Lever. C. E. Fitch. 2,409,619; Oct. 22.
Gun mount. H. W. Evans. 2,409,618; Oct. 22.
Gunfire control, System and apparatus for. F. E. Valentine and W. F. Skillin. 2,409,914; Oct. 22.
Gun, Multiple barrel. R. L. Jenkinson. 2,409,939; Oct. 22.
Gyro assembly. B. G. Martin. 2,409,875; Oct. 22.
Gyro vertical. F. D. Braddon. 2,409,659; Oct. 22.
Gyroscopic controlling means. A. W. Lane. 2,409,634; Oct. 22.
Hairpin stand. W. W. Jones. 2,409,867; Oct. 22.
Hand loom. M. K. Durrin. 2,409,743; Oct. 22.
Handle fastening, Adjustable tool. T. J. McIntosh. 2,409,879; Oct. 22.
Hanger: *See*—

Piston for internal-combustion engines. J. L. Harrah. 2,409,852; Oct. 22.
Piston ring. S. E. Jessup. 2,409,764; Oct. 22.
Plastic milk carton case. L. C. Folst. 2,409,748; Oct. 22.
Plastics, Automatic molding of. J. B. Whitmore, W. Makenny, and F. A. Newcombe. 2,409,725; Oct. 22.
Plug: *See*—
Spark plug.
Plywood structure. W. E. Wilson. 2,409,819; Oct. 22.
Pole, Towing. E. C. Christensen. 2,409,662; Oct. 22.
Polish compositions. B. W. Howk, J. R. Roland, and H. H. Hoehn. 2,409,683; Oct. 22.
Polyaminoacetals, Preparation of. W. F. Gresham. 2,409,675; Oct. 22.
Polymeric materials. E. L. Martin. 2,409,948; Oct. 22.
Polymers of ethylene and halovinyl compounds and their preparation. W. E. Hanford and J. R. Roland. 2,409,679; Oct. 22.
Polymers of unsaturated compounds and producing same. E. L. Kropa. 2,409,633; Oct. 22.
Positioning system, Electrical. G. H. Phelps. 2,409,895; Oct. 22.
Preparation of laminating fabric. A. Lyem. 2,409,703; Oct. 22.
Press. J. P. Barbour. 2,409,824; Oct. 22.
Printing plate clamping mechanism. A. Braunworth. 2,409,830; Oct. 22.
Prisms, Molding. H. G. Rogers and D. P. Cooper, Jr. 2,409,958; Oct. 22.
Projector, Catadioptric television. H. F. Bennett. 2,409,971; Oct. 22.
Protractor, Bevel. V. H. Grey. 2,409,849; Oct. 22.
Pump: *See*—
Fuel pump.
Pumps for lubricants and the like. S. D. Shearman. 2,409,962; Oct. 22.
Reactor. L. A. Mekler. 2,409,780; Oct. 22.
Receiver and dehydrator, Combination. M. T. Cahenzli, Jr. 2,409,928; Oct. 22.
Recording apparatus. G. G. A. Ericsson. 2,409,745; Oct. 22.
Rectifier, Gas-filled electric. H. T. Ramsay. 2,409,955; Oct. 22.
Refractory, Basic cast, T. E. Field. 2,409,844; Oct. 22.
Refrigerant distributing means. F. Y. Carter. 2,409,661; Oct. 22.
Remote control system. L. V. Lewis. 2,409,696; Oct. 22.
Resin-fiber article and making the same. E. E. Sawyer. 2,409,645; Oct. 22.
Resin, Synthetic. M. J. Scott. 2,409,906; Oct. 22.
Reversible fluid-operated and fluid-operating mechanism. R. J. L. Moineau. 2,409,688; Oct. 22.
Reversing mechanism for power operated drills. C. L. Conner. 2,409,738; Oct. 22.
Rim, Separable. L. B. Russell, Jr. 2,409,901; Oct. 22.
Ring: *See*—
Piston ring.
Rocket. C. D., A. J., and C. Schermuly. 2,409,904; Oct. 22.
Rod centralizer, Firearm cleaning. C. W. Varcoe. 2,409,916; Oct. 22.
Rod to reel connection. P. Kay. 2,409,940; Oct. 22.
Rubberlike materials, Preparing. B. M. Vanderbilt and R. F. Howe. 2,409,915; Oct. 22.
Safety mechanism for brakes. I. W. Simpkins. 2,409,908; Oct. 22.

Salt and making it, Drier metal. G. P. Mack and C. A. Klebsattel. 2,409,774; Oct. 22.
Sander. W. A. Baldwin. 2,409,728; Oct. 22.
Sands, Purification of industrial. A. T. Cole and J. B. Duke, and L. L. McMurray. 2,409,665; Oct. 22.
Saw set. E. F. Huffsmith. 2,409,760; Oct. 22.
Screening device for spark plugs. D. B. Browne, F. W. Clarke and R. H. G. Painter. 2,409,732; Oct. 22.
Seal, Shaft bearing. E. R. Zademach and W. W. Clarke. 2,409,922; Oct. 22.
Seat. F. P. Silhan. 2,409,714; Oct. 22.
Selecting apparatus for remote-control systems. L. V. Lewis. 2,409,698; Oct. 22.
Selenium, Producing pure. C. W. Clark, E. M. Elkin, and G. R. Waitkins. 2,409,835; Oct. 22.
Semiconducting composition. W. W. Pendleton and L. E. Frost. 2,409,893; Oct. 22.
Separator. R. W. Haase. 2,409,625; Oct. 22.
Setting and releasing tool. R. G. Taylor, Jr., and D. B. Hooser. 2,409,811; Oct. 22.
Sewing and darning machine, Convertible. R. K. Hohmann and E. D. Boisselier. 2,409,758; Oct. 22.
Shaft torsion measuring means. E. J. Martin, C. E. Grinstead, and R. N. Frawley. 2,409,876; Oct. 22.
Shoe. T. Saval. 2,409,902; Oct. 22.
Shoe machine. C. A. Robinson. 2,409,643; Oct. 22.
Shoemaking. R. A. Huebel. 2,409,860; Oct. 22.
Shoemaking. H. G. McMurray. 2,409,880; Oct. 22.
Shoe, Reversible. A. G. Timson. 2,409,813; Oct. 22.
Shutoff device and cock, Combined thermoelectric safety. H. A. Mantz. 2,409,947; Oct. 22.
Signal flash. H. Reynolds. 2,409,957; Oct. 22.
Signaling system. E. R. Shenk and J. E. Smith. 2,409,989; Oct. 22.
Skirt hanger. E. W. Loselle. 2,409,700; Oct. 22.
Sleeve valve engine. K. L. Hulsing. 2,409,761; Oct. 22.
Snubber for hoists. A. Meyer. 2,409,881; Oct. 22.
Soaps, Preparation of. C. H. Hamblet. 2,409,678; Oct. 22.
Soldering, Method of and apparatus for. T. A. Daniel. 2,409,615; Oct. 22.
Space heater. A. P. Livar. 2,409,981; Oct. 22.
Spark plug. H. Rabezzana. 2,409,795; Oct. 22.
Stand: *See*—
Hairpin stand.
Stapling machine. H. S. Heller. 2,409,854; Oct. 22.
Storage battery. W. F. Donkin. 2,409,841; Oct. 22.
Strand forming apparatus. W. C. Ewaldson. 2,409,670; Oct. 22.
Stretcher, Folding. C. C. Haggard and J. B. Meehan. 2,409,934; Oct. 22.
Subsurface formations, Determining permeability of. J. W. Graybeal. 2,409,674; Oct. 22.
Sulfonates, Substantially oil soluble poly alkyl aromatic. J. Faust. 2,409,671; Oct. 22.
Sulfur and metal containing compound. D. T. Rogers and J. G. McNab. 2,409,687; Oct. 22.
Sulphate, Turpentine, Refining. R. A. Collins. 2,409,614; Oct. 22.
Support: *See*—
Arch support. Electrode support.
Suspenders. E. Stempel. 2,409,810; Oct. 22.
Syringe, Hypodermic. H. S. Austin. 2,409,656; Oct. 22.
Syrup and process, Sugar. D. V. Wadsworth and M. F. Hughes. 2,409,816; Oct. 22.
System for space-scanning with a radiated beam of wave signal. A. V. Loughren. 2,409,944; Oct. 22.
Table: *See*—
Display table.
Tape moving mechanism. R. A. Clapp. 2,409,834; Oct. 22.
Tape serving machine. T. H. Krueger. 2,409,872; Oct. 22.
Teeth, Forming artificial. M. S. Moskey. 2,409,783; Oct. 22.
Temperature change compensating means. S. Rockafellow. 2,409,800; Oct. 22.
Timing device. J. Ogden. 2,409,888–9; Oct. 22.
Tool: *See*—
Setting and releasing tool.
Unitary boring and countersinking tool.
Tool for installing conduit clips. E. M. Morehouse. 2,409,784; Oct. 22.
Toolmaker's angle block. T. E. V. Hunt. 2,409,936; Oct. 22.
Torpedoes, Guiding means for self-propelled. R. W. King. 2,409,632; Oct. 22.
Toy. H. J. Criner. 2,409,839; Oct. 22.
Toy rocket gun. L. H. Amdur. 2,409,653; Oct. 22.
Toy, Rocking. R. G. Schneider. 2,409,803; Oct. 22.
Trainer, Pilot. W. H. Hutter. 2,409,938; Oct. 22.
Transformer, Electrical. A. Meyerhans. 2,409,882; Oct. 22.
Transmitting apparatus for remote control systems. L. V. Lewis. 2,409,697; Oct. 22.
Transparencies in mounts, Masking color. D. Dean. 2,409,976; Oct. 22.
Treating apparatus, Material. R. Pash. 2,409,953; Oct. 22.
Tube: *See*—
Field emission arc dis- Gaseous discharge tube.
charge tube.
Turbine, Internal-combustion. F. J. Smith and J. Isaac. 2,409,909; Oct. 22.
Twister traveler. P. C. Wentworth. 2,409,918; Oct. 22.
2-ethylhexyl fluoroacetate. J. L. Horsfall. 2,409,859; Oct. 22.
Ultra high frequency detector. A. E. Anderson. 2,409,608; Oct. 22.
Unitary boring and countersinking tool. M. H. De Bruin and E. F. Fiock. 2,409,616; Oct. 22.
Valve: *See*—
Antisiphon ball cock valve. Hydraulic selector valve.
Valve for hose couplings. J. H. Harrison and H. E. Byers. 2,409,753; Oct. 22.
Variable load brake. E. G. Mueller. 2,409,886; Oct. 22.
Variable-speed motor. L. C. Packer. 2,409,891; Oct. 22.
Venetian blind. D. Kwon. 2,409,943; Oct. 22.
Ventilating attachment for welders' helmets. W. D. O'Quinn. 2,409,641; Oct. 22.
Voltage regulation. W. H. Bixby. 2,409,610; Oct. 22.
Water from atmospheric air, Extracting. B. Granville. 2,409,624; Oct. 22.
Wave guide structure. L. Tonks. 2,409,913; Oct. 22.
Weed burner. W. C. Prewitt. 2,409,792; Oct. 22.
Welding machine. J. B. Little. 2,409,636; Oct. 22.
Winding device. W. G. Knapp. 2,409,942; Oct. 22.
Window construction, Bus or car. J. Schunk. 2,409,709–10; Oct. 22.
Wrench. S. Helgeson. 2,409,627; Oct. 22.
Wrench holder. W. C. Brooks. 2,409,613; Oct. 22.
Yard refuse collector. C. L. McCaffrey. 2,409,778; Oct. 22.
Zinc mercaptides with alkylene imines, Addition products of heterocyclic. P. C. Jones and R. A. Mathes. 2,409,685; Oct. 22.

CLASSIFICATION OF PATENTS

ISSUED OCTOBER 22, 1946

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number=class, second number=subclass, third number=patent number

U. S. GOVERNMENT PRINTING OFFICE: 1946

THE
OFFICIAL GAZETTE
OF THE
United States Patent Office

Vol. 591—No. 5 TUESDAY, OCTOBER 29, 1946 Price—$16 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $16.00 per annum, including annual index, $18.75; single numbers, 35 cents each.
PRINTED COPIES OF PATENTS are furnished by the Patent Office at 25 cents each; copies of TRADE-MARKS and DESIGNS at 10 cents each. Address orders to the Commissioner of Patents, Washington 25, D. C.
CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

Order No. 4095

U. S. Patent Office, *Washington, D. C., Sept. 11, 1946.*

The classification of merchandise under the act of May 4, 1906, is hereby amended as follows:

The title of Class 45 is changed from "Beverages, nonalcoholic," to *Soft Drinks and Carbonated Waters.*

CASPER W. OOMS,
Commissioner.

Disclaimers

1,732,949.—*John D. Pedersen,* Springfield, Mass. Cartridge Clip. Patent dated Oct. 22, 1929. Disclaimer filed Oct. 4, 1946, by the inventor.

Hereby enters this disclaimer to claim 5 of said patent.

2,203,280.—*Almon A. Heath,* Hawthorne, Calif. Stencil Film. Patent dated June 4, 1940. Disclaimer filed Oct. 7, 1946, by the inventor.

Hereby disclaims claims 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 12, 13, 15, 18, and 19 of said patent.

Adjudicated Patents

(C. C. A. N. Y.) Anderson patent, No. 2,197,089, for method and apparatus for making paper boxes, claims 15, 18, 24, and 34 *Held* invalid. *Bergstein* v. *Lowman Folding Box Corp.,* 156 F.(2d) 609; 70 USPQ 267.

(D. C. Wis.) Tower patent, No. 2,273,766, for a water hammer arrester, claims 1 to 4 *Held* invalid. *Water Hammer Arrester Corp.* v. *Tower,* 66 F. Supp. 732; 70 USPQ 277.

(D. C. Del.) Partee patent, No. 2,276,253, for wood finishing, *Held* invalid. *White* v. *E. L. Bruce Co.,* 66 F. Supp. 652; 70 USPQ 304.

(D. C. Del.) Partee and Gray patent, No. 2,288,585, for finishing wood flooring, claims 1, 2, and 5 *Held* invalid, but infringed if valid. *Id.*

(D. C. Del.) Partee and Gray patent, No. 2,341,161, for finishing wood flooring, claims 1, 2, 5, 6, and 7 *Held* invalid, but infringed if valid. *Id.*

Amendments to Rules of U. S. Court of Customs and Patent Appeals

On October 4, 1946 the United States Court of Customs and Patent Appeals adopted certain amendments to its Rules. The amendments affecting appeals in patent cases are as follows:

PRINTING OF RECORD

In paragraph 1 of Rule XXVI, line 18, after the words *"And provided further,"* strike out the words

> That the court or any judge thereof may, upon motion, for good cause shown, extend the time for printing the record:

and insert in lieu thereof the words

> That the court or any judge thereof may, upon motion, for good cause shown, extend the time for printing the record and for the payment of the cost for such printing.

REPLY BRIEFS

At the end of Rule XXVII insert as a new paragraph the following:

> 9. Reply and supplemental briefs may not be filed except by leave of the court or any judge thereof, for good cause shown.

Note: The above amendments are to bring the rules into conformity with the practice of the court in these particulars.

ARTHUR B. SHELTON,
Clerk.

Condition of Applications Under Examination at Close of Business October 4, 1946

(Total number of applications awaiting action, excluding Trade-Mark Division, 125,106; Trade-Mark Division, 10,525. Oldest new case, February 28, 1945; oldest amended, April 16, 1945.)
(The dates given are 1945 except where † indicates 1946.)

	Divisions, Examiners, and Subjects of Inventions	Oldest new application and oldest action by applicant awaiting office action: New	Amended	No. of applications awaiting action
1.	GOLDBERG, A. J., Food Apparatus; Closure Operators; Fences; Gates; Planters; Plows; Harrows and Diggers; Plant Husbandry; Scattering Unloaders; Baths, Closets, Sinks, and Spittoons; Sewerage.	May 29	July 16	2289
2.	HERRMANN, D., Fishing, Trapping and Vermin Destroying; Bee Culture; Dairy; Animal Husbandry; Presses; Tobacco; Textile Wringers; Butchering.	June 18	June 18	2034
3.	SCHIMMEL, J., Metal Founding; Metallurgy; Metal Treatment; Compositions (part)	June 9	July 3	1961
4.	BISHOP, WALTER C., Conveyors; Hoists; Handling Apparatus; Excavating; Elevators; Fire Escapes; Ladders; Scaffolds; Package and Article Carriers; Pneumatic Dispatch; Store Service; Mining, Quarrying and Ice Harvesting.	Aug. 30	Aug. 24	2335
5.	ROBINSON, C. W., Glass; Harvesters; Music; Acoustics; Sound Recording; Knotters; Buckles, Buttons, Clasps.	Apr. 12	May 10	3509
6.	GENIESSE, E. W., Carbon Chemistry (part)	Oct. 22	Nov. 10	1735
7.	HANLIN, GEORGE, Optics, Photography	June 30	Nov. 8	1949
8.	IMUS, A. E., Furniture; Kitchen and Table Articles; Racks and Cabinets	July 7	July 30	3099
9.	BENSON, R. B., Pumps and Fans; Fluid and Fluid-Current Motors	Apr. 30	May 5	2131
10.	ANDRUS, L. M., Radiant Energy (part, e. g., Portable Radio Sets, Radio Accessories, Detectors, Oscillation Generators, Wave Meters, Tuners); Modulators.	July 27	July 27	1485
11.	BENHAM, E. V., Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whip Apparatus.	Feb. 11	Mar. 2	662
12.	SPINTMAN, S., Machine Elements (part); Engine Starters; Clutches and Power Stop Control	June 7	June 23	2443
13.	BEALL, T. E., Gear Cutting, Milling, Planing, Metal Working (part); Needle and Pin Making; Turning	June 13	June 28	1964
14.	FREEHOF, H. B., Metal Working (Bending; Sheet-Metal; Wire; Misc. Processes); Wire Fabrics; Farriery	Oct. 11	Sept. 21	1382
15.	HENKIN, B., Natural Resins, Rubber (part); Proteins, Carbohydrates and Derivatives; Heterocyclic Compounds (part); Plastics.	Sept. 20	Sept. 7	1188
16.	LOVEWELL, N. N., Telegraphy; Telephony	Sept. 27	Sept. 11	1203
17.	HABECKER, LEON B., Paper Manufactures; Printing; Type Casting; Sheet Material Associating or Folding; Sheet or Web Feeding; Type Setting.	Apr. 21	Apr. 21	1080
18.	KURZ, J. A., Motors, Expansible-Chamber Type; Power Plants; Speed Responsive Devices; Rotary Internal Combustion Engines.	June 29	July 6	1752
19.	PATRICK, P. L., Liquid and Gaseous Fuel Burners; Stoves and Furnaces	Oct. 25	Oct. 20	1518
20.	BROWN, L. M., Miscellaneous Hardware; Closure Fasteners; Locks; Undertaking; Bread, Pastry, and Confection Making; Laminated Fabrics (part); Bank Protection; Safes.	June 27	June 28	1756
21.	THOMPSON, T. J., Textiles	Feb. 1	Jan. 19	734
22.	CARPENTER, B. H., Aeronautics; Firearms; Ordnance	Aug. 27	Sept. 18	1839
23.	LEWIS, J. B., Cash Registers; Calculators (part)	Aug. 1	Aug. 6	227
24.	LUSBY, CHARLES, Apparel; Apparel Apparatus; Sewing Machines	Jan. 15	Feb. 5	1095
25.	BLAKELY, C. F., Classifying Solids; Centrifugal-Bowl Separators; Mills; Threshing; Vegetable and Meat Cutters and Comminutors; Distillation.	July 21	Sept. 1	1433

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

In re Falter

No. 5,171. Decided June 27, 1946

[—F.(2d)—; 70 USPQ 411]

Patentability—Manifolding Assembly.

Certain claims to a method of collating a manifolding assembly of superposed record sheets and to that manifolding assembly *Held* unpatentable over the prior art.

Appeal from the Patent Office. Affirmed.

Mr. Marston Allen for Falter.

Mr. W. W. Cochran (*Mr. H. S. Miller* of counsel) for the Commissioner of Patents.

Garrett, *P. J.:*

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming that of the Primary Examiner finally rejecting claims 13 to 15, inclusive, 25 and 29 of an application for a patent for a "Manifolding Assembly" as unpatentable over the patent to Mears, 1,042,707, October 29, 1912. Twenty-one claims were allowed.

The claims of the application fall into three groups: (1) to a stapling apparatus; (2) to a method of loose stapling; and (3) to a manifold assembly. All of the claims to the stapling apparatus were allowed; all but one of the claims to the method of loose stapling were allowed, and one relating to the manifold assembly was allowed. The rejected claims consist of method claim 25, and claims 13, 14, 15, and 29 for the manifold assembly. Claims 14, 15, and 25 are illustrative of the subject matter and read as follows:

14. A manifolding assembly for advancement past the recording position of a writing or imprinting machine including a plurality of superposed sheets and an oscillatory staple loosely connecting the sheets for to and fro swinging motion into different angular relation thereto, the legs of which are clenched in such relation to the head of the staple that they are of greater extent than the thickness of the assembly the construction and arrangement being such that the oscillatory adjustment of the staple relative to the sheets enables the formation of a compact packet for convenient passage through a writing or imprinting machine.

15. A manifolding assembly including a plurality of superposed sheets and a staple loosely interconnecting the sheets, the staple being capable of oscillatory motion into different positions inclined to the planes of the sheets enabling the staples to be deflected into acutely inclined relation with the planes of the sheets, whereby the sheets may be adjusted relative to each other and relative to the staple into echelon formation.

25. The herein described method of collating a manifolding assembly of superposed record sheets for passage through a writing or imprinting machine and past the recording position thereof, including loosely stapling an assembly of superposed sheets, by thrusting a staple through the sheet assembly, and clenching the legs of the staple in spaced relation with the head of the staple greater than the thickness of the sheet assembly to thereby enable oscillatory adjustment of the staple relative to the planes of the sheets and disposing the staple in a plane in acutely inclined relation with the sheets to facilitate its passage through a writing or imprinting apparatus.

The invention relates particularly to a method and means for loosely stapling sheets or strips of a manifolding assembly so that while fastened together the loose stapling permits the sheets or strips to shift one relative to the other.

The Mears patent relates to the stitching of leaves in signature form by means of staples, the legs of which are longer than the width of the signatures to be fastened. Its purpose is to so fasten the signatures that when a book is fully opened at any place it will remain in a flat position. The specification shows that each sheet is hinged by being flexed along a line near its rear edge, such hinging enabling the opened book to lie flat. The staples or stitches of wire are placed between the hinge line and the back edge of the assembly.

The Examiner pointed out that claims 13 and 14, providing for the assembly of sheets and staples, the legs of which are longer than the thickness of the sheets, were clearly met by the Mears structure, and the limitations in those claims that the staple be oscillatory into angular position with respect to the planes of the sheets and the shiftability of the sheets relative to one another along the legs of the staple were not considered by him to be patentable distinctions over the cited prior art. He further stated that the Mears assembly was capable of such movements.

With respect to claims 15 and 29, he held them to be fully met by the structure of the Mears patent for the stated reason that it showed a staple loosely connecting a plurality of sheets and capable of assuming an acute angular relation therewith.

He rejected method claim 25 for the reason that the oscillatory adjustment of the staple for feeding through the writing machine was a mere function of the assembly and further that the assembly of the Mears patent was capable of oscillatory movement.

In its decision the Board followed the reasoning of the Examiner.

It appears to us that any relative movement between the sheets and staples of appellant's assembly must of necessity be controlled by the relative length of the staple legs and the diameter of the holes in the sheets through which they extend.

That staples have been used in connection with the fastening of manifolding strips or sheets is acknowledged to be old in appellant's specification, wherein it is further stated that at least in one instance shifting of the sheets or strips has been attempted by means of preformed holes larger in diameter than the staple legs, which would permit relatively restricted longitudinal adjustment. He further states that the legs of his staples are manipulated during the stapling operation to enlarge the holes, resulting in lateral adjustment of the sheets as well.

In our opinion, the structure of the Mears assembly permits oscillatory movement between the sheets and the staples. Of course, such movement is not designed to be as free or extended as that of appellant's structure, but since it may be obtained we deem the structure to be sufficient in a patentable sense to justify the rejection of the claims. In the Mears assembly when the book is fully opened the legs of the staples are at an angle of less than 90° and, therefore, the requirement of an acute angle in such relationship is met.

For the reasons given the decision of the Board of Appeals is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

IN RE HONGER

No. 5,188. Decided June 11, 1946

[— F.(2d) —; 70 USPQ 224]

PATENTABILITY—SAFETY DEVICES FOR EXPLOSIVE PROJECTILES.

In appellant's application on safety devices for explosive projectiles, certain claims, including generic claims, *Held* patentable over the references of record; and accordingly *Held* that the rejection of other claims as drawn to a non-elected species could not be sustained.

APPEAL from the Patent Office. Reversed.

Mr. Irvin S. Thompson for Honger.

Mr. W. W. Cochran (*Mr. Howard S. Miller* of counsel) for the Commissioner of Patents.

HATFIELD, *J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the decision of the Primary Examiner rejecting all of the claims (Nos. 1 to 8, inclusive, and 10) in appellant's application for a patent for an alleged invention relating to safety devices for explosive projectiles to prevent premature ignition.

Claims 3 and 7 were rejected as being drawn to a non-elected species, no generic claim having been allowed. Accordingly, those claims are not before us for consideration on their merits.

Claim 1, which is a generic claim, is sufficiently illustrative of the appealed claims. It reads:

1. The combination, with a projectile fuse having a movable detonator member, of a movable locking member adapted to prevent actuation of said detonator member, a reversible horological escapement controlling the movement of said locking member, and a spring loaded bolt which normally prevents movement of said locking member from the locking position and is retracted against the action of its spring by the effect of inertia when the fuse is in flight, said locking member and said bolt having coacting cam surfaces with a mechanical advantage in favor of the bolt whereby said locking member is restored to the locking position by said bolt when said bolt, after partial retraction, is restored to normal position by its spring.

The references are: Varaud, 1,726,325, August 27, 1929; Birkigt, 2,116,820, May 10, 1938.

The apparatus here involved is a safety device for explosive projectiles and comprises means for preventing the striking pin from accidentally engaging the explosive charge before the projectile is fired. In the preferred form of the invention, the striker pin is mounted for movement axially of the projectile and is provided with a collar which is normally engaged by a radially movable locking member for restraining the pin against movement toward the charge. The spinning of the projectile, after firing, causes the locking member to move outwardly, due to centrifugal force, and release the pin which strikes the "detonating pellet" and causes the shell to explode. The locking member is connected with a reversible escapement mechanism which retards its movement so that the pin will be released at a predetermined time after firing.

Accidental movement of the locking member is prevented in appellant's structure by a bolt which is urged by a spring into a position in which it engages the locking member and blocks the movement thereof. When the projectile is fired, the inertia of the bolt causes a relative movement between the bolt and the locking member, resulting in the complete removal of the bolt from the path of the locking member. A latching means then prevents the return of the bolt to its original position. The engaging faces of the bolt and locking member are cammed at such an angle that if the bolt is accidentally displaced, as by a blow in handling the projectile, the return of the bolt, by its spring, to its normal position will also return the locking member to normal position if it has been displaced. Since the bolt and locking member are thus returned after each displacement, the striking pin cannot be released by the cumulative effect of a series of shocks.

Each of the claims presented here for consideration on the merits (Nos. 1, 2, 4, 5, 6, 8, and 10) is limited to the use of a reversible escapement and to an arrangement in which the bolt is operative to restore the locking member to locking position, and each was rejected by the tribunals of the Patent Office on the disclosure in the patent to Varaud in view of the disclosure in the patent to Birkigt.

Although Varaud's device is similar to that of appellant so far as the general arrangement of the striker pin, escapement locking member, and bolt is concerned, the patentee's escapement mechanism is not disclosed as being reversible and his device operates in such a manner that there is no reason for providing a reversible escapement mechanism. Furthermore, the patentee's bolt is positively held in a position in which it engages the locking member by a pin which must be manually removed before firing to permit the release of the bolt. The patentee obviously does not contemplate the possibility of accidental displacement, and does not provide means for returning the locking means to normal position by action of the bolt in the event of such displacement.

The patent to Birkigt also discloses a projectile in which the striker pin is held against movement by a locking member which is adapted to move, under the action of centrifugal force, when the projectile is fired. The locking member is normally restrained by a bolt which, as illustrated in the patentee's application, has a conical point which fits into a depression, "of corresponding shape," in the locking member. The bolt is urged into engagement with the locking member by a spring.

It was the position of the Primary Examiner and the Board of Appeals that no invention would be involved in replacing the bolt of the device disclosed by the patentee Varaud by a pointed, spring-urged bolt, such as is disclosed in the patent to Birkigt. However, the combination proposed by the tribunals of the Patent Office would not produce the structure called for by claims 1, 2, 4, 5, 6, 8, and 10.

There is no suggestion in either the patent to Varaud or the Birkigt patent of the reversible escapement which forms an element of each of the appealed claims. Furthermore, there is no reason why either of those patentees should employ such an escapement, since neither of them contemplates a reverse movement of the locking member. The reversible escapement feature would not, of course, be supplied by using Birkigt's bolt in Varaud's device.

Moreover, there is no suggestion in the Birkigt patent that the bolt is intended to return the locking member to its normal position if it is displaced. That function might possibly be performed if the shape of the bolt, the strength of the spring which acts on the bolt, and the resistance to the movement of the locking member were properly proportioned. On the other hand, those factors might easily be so proportioned that the bolt would be incapable of moving the locking member. The patentee Birkigt does not describe any movement of the locking member by the bolt but, on the contrary, describes the bolt as the "element for keeping the locking pin * * * in position." That language seems to negative the idea that the bolt ever moves the locking member.

The most that can properly be said of the Birkigt patent, so far as the issues here are concerned, is that it discloses a structure in which the parts might be so proportioned that the bolt would restore the locking device to its normal position. In the absence of any suggestion that such proportioning is desirable, the Birkigt disclosure is not a pertinent reference for claims calling for a structure in which the locking device is restored by the bolt. Accordingly, the proposed combination of the disclosures in the Varaud and Birkigt patents does not, in our opinion, form a proper basis for the rejection of claims 1, 2, 4, 5, 6, 8, and 10.

For the reasons stated, we are of opinion that the claims which are before us on their merits (Nos. 1, 2, 4, 5, 6, 8, and 10, of which Nos. 1, 4, 5, 8, and 10 are generic claims) are patentable over the references of record. Accordingly, the rejection of claims 3 and 7 on the ground that they are drawn to a non-elected species cannot be sustained.

The decision of the Board of Appeals is reversed.

Reversed.

GARRETT, *P. J.*, sat during the arguments of this case, but because of illness took no part in its consideration or in the decision.

Notices of Cancellation

U. S. PATENT OFFICE, *Richmond, Va., Oct. 2, 1946.*

Percival E. Falkingham, his assigns or legal representatives, take notice:

A cancellation proceeding has been instituted by this Office upon the application of The Procter & Gamble Company, Sixth and Main Streets, Cincinnati, Ohio, to effect the cancellation of trade-mark registration of Percival E. Falkingham, No. 267,841, dated March 4, 1930. The assignment records of this Office show a transfer of title to this registration to Evenod Perfumer, Inc., a corporation of New York, which has been substituted for said Falkingham to defend the registration concerned. The Patent Office having been unable to obtain service upon the said Evenod Perfumer, Inc., notice is hereby given that unless the assigns, legal representatives, or other person claiming an interest in the registration shall enter an appearance therein within thirty days from the first publication of this order the cancellation will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

LESLIE FRAZER,
First Assistant Commissioner.

U. S. PATENT OFFICE, *Richmond, Va., Oct. 2, 1946.*

Cameo Costume and Dress Company, its assigns or legal representatives, take notice:

A petition for cancellation having been filed in this Office by May McEwen Kaiser Company, Incorporated, South Main Street, Burlington, N. C., to effect the cancellation of trade-mark registration of Cameo Costume and Dress Company, 247–263 West 37th Street, New York, N. Y., No. 274,163, dated August 19, 1930, and the notice of such proceeding sent by registered mail to the said Cameo Costume and Dress Company at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Cameo Costume and Dress Company, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the cancellation will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

LESLIE FRAZER,

Pat. 2,333,784. IRONING BOARD. Patented Nov. 9, 1943. A folding ironing board which compactly fits into a carrying case when not in use. Ironing board is formed of three hinged panel sections. End sections may be swung upwardly and over center section for folding. When in use panel is supported by three legs. Adjustment for working height is provided. Each leg is composed of two detachable sections. (Owner) Florence E. M. Harris, 9224 Delmar St., Detroit 11, Mich. Groups 25—99; 35—81. Reg. No. 4,168.

Pat. 2,403,558. FOLDING CHAIR. Patented July 9, 1946. A folding chair similar to a camp stool has a canvas seat, seat supporting members and cross legs. Bars are provided at ends of supporting members to support arm rests. A back assembly is inserted in vertical slots in uprights of chair. By attaching rungs to ends of legs, rockers may be added. Inexpensive to manufacture, strong, light and easily folded when not in use. (Owner) Ralph T. Schoof, 1310 Ave. A, Dodge City, Kans. Group 25—11. Reg. No. 4,169.

Pat. 2,331,600. WINDSHIELD SHIELD. Patented Oct. 12, 1943. A detachable, form fitting cover for a windshield to prevent the accumulation of snow or sleet thereon. A cord extends through hem around article and tensioning means on lower corners are attached to door hinges. Attaching pins run through eyelets in top edge and fasten to vehicle body. Two light springs connect cord sections and securely hold cover to vehicle. Inexpensive to manufacture and easily and quickly attached or removed. (Owner) Arthur P. Dillow, 835 Herndon Court, Baltimore 25, Md. Groups 22—54; 26—39; 30—41. Reg. No. 4,170.

Pat. 2,338,316. INSULATING BUSHING FOR ELECTRICAL CONDUITS AND THE LIKE. Patented Jan. 4, 1944. Tubular body has outwardly extending annular flange at one end which is bent back on the body to form a ring. This space provides a channel to receive end of conduit. The bushing is applied to an electric conduit of the usual type, the end of which may be threaded to receive the bushing. It may be made of plastic, rubber or any insulating material. (Owner) Francis Allen Buzzell, 7835 Muskegon Ave., Chicago, Ill. Group 36—11—31. Reg. No. 4,171.

Pat. 2,399,507. COMBUSTION ENGINE. Patented Apr. 30, 1946. Two cycle internal combustion engine in which performance is obtained by two opposed working pistons in a common cylinder and a freely moving piston therebetween which forms a combustion chamber between itself and its related working pistons alternately. The structure provides efficient scavenging and fuel injection in synchronous timing with the movement of the pistons. The force of the two working pistons is transmitted to a single crankshaft. (Owner) Fernando G. Prieto, 409 South Bixel St., Los Angeles, Calif. Group 38—31. Reg. No. 4,172.

Pat. 2,245,127. MATCH HOLDER. Patented June 10, 1941. An H-shaped body has a row of matches integrally connected to each side of its central cross piece. A paper cover (upon which advertising may be printed) overlies the matches. Centrally located is a strip of abrasive material, adjacent to which are perforations so that the cover may be selectively torn off to expose matches at either end. Since the holder is relatively thin, it may be easily inserted into a package of cigarettes. (Owner) Donald A. Downing, Edina, Mo. Group 25—93. Reg. No. 4,173.

Pat. 2,400,451. FIRE TOOL. Patented May 14, 1946. A combination hoe, scraper, rake and spade suitable for extinguishing forest and ground fires. Half of blade forms a hoe and scraper, the other half a rake and is adjustable to various positions by fingers on body and blade which rests in grooves in handle. A sleeve slidable on handle slips over fingers and holds it firmly in grooves. (Owner) William J. Wilson, P. O. Box 544, Madera, Calif. Group 33—52. Reg. No. 4,174.

Pat. 2,062,931. RETRACTABLE AUXILIARY WHEEL. Patented Dec. 1, 1936. Auxiliary braking wheels journaled upon axles of motor vehicle increase braking action when stopping or slowing down but are inoperative at other times. The wheels do not interfere with normal driving. A fluid cylinder with a slidable piston is actuated by foot brake lever of vehicle and directs fluid through tubes to auxiliary wheel brakes. (Owner) Anthony C. Raffa, 918 West St. Joseph St., Perryville, Mo. Group 38—31. Reg. No. 4,175.

Pat. 2,395,596. TOBACCO PIPE. Patented Feb. 26, 1946. Stem may be easily cleaned without detaching from pipe. An aperture in back wall of bowl is aligned with bore in stem. A tube slidably fitted therein has a passageway communicating with bowl. For cleaning purposes, the tube is slid longitudinally until its inner end projects beyond the back of the bowl a sufficient distance to expose the passageway. Closed end of tube normally seals aperture in bowl. (Owner) Kurt Vonnegut, 1126 Hume Mansur Bldg., Indianapolis 4, Ind. Group 39—96. Reg. No. 4,176.

Pat. 2,401,318. TOILET KIT. Patented June 4, 1946. A pocket-size container made wholly of plastic has two compartments, one for powdered dentifrice and the other for storing a tooth brush, the handle of which is formed of two sections. Cover seals container and maintains contents in sanitary condition. Suitable registering vents in the cover and side of container allow brush to dry but exclude entry of foreign matter. (Owners) Guilford D. Robinson and Harold M. Robinson. Address correspondence to Guilford D. Robinson, Eden, Erie County, N. Y. Groups 34—54; 39—81; 40. Reg. No. 4,177.

Pat. 2,400,266. ANGLE IRON BRACE. Patented May 14, 1946. Provides a simplified brace, stamped from a single metallic strip, for reinforcing chairs, tables, or other furniture, at the inner or concealed corners without the use of screws or other fastening means. The angle iron has pointed prongs on the ends of the arms which are adapted to be driven into the wood. An auxiliary cross brace for stiffening the brace may be formed integrally therewith by cutting a tongue longitudinally from the center of the brace and bending it inwardly. (Owner) Ernest Soffer. Address correspondence to Ernest G. Montague, 500 Fifth Ave., New York 18, N. Y. Groups 25—14—19; 33—73. Reg. No. 4,178.

Pat. 2,400,655. GUIDE FOR PUBLIC SAFETY OF VEHICLES AND PEDESTRIANS. Patented May 21, 1946. Comprises two interconnected signals operated by push buttons to simultaneously flash a signal on the front and rear of a vehicle. The cover for each signal, which may have various color combinations and appropriate indicia, has a convex face and two pyramids extending vertically. When the word "pass" is flashed on either signal the word "caution" (in each pyramid) will appear on the other signal. Each signal may be seen from any point within an angle of 180°. The device may be easily installed by a layman. (Owner) John J. Saia, Woodstock, Md. Groups 36—62; 38—31. Reg. No. 4,179.

Pat. 2,224,384. TWEEZERS. Patented Dec. 10, 1940. For removing splinters, hair, etc. Short pencil-size instrument with a collar intermediate its ends has tweezers on one end and a curved prong on other end. Two elongated caps are slid on opposite ends so that their inner ends abut opposite sides of the collar, completely enclosing instrument. Caps contain antiseptic packing in which ends of tweezers and prong become embedded. (Owner) Curt Merki, 2037 S. E. Insley St., Portland 2, Oreg. Group 39—16—99. Reg. No. 4,180.

Pat. 2,400,371. SELF-ADAPTING AND ADJUSTING DEPTH GAUGE. Patented May 14, 1946. A cylindrical casing with calibrated scales has an indicator rod surrounded by a coiled spring slidable therein for measuring depth. The projecting end of rod is the same length as scaled slot in casing and the lower end rests against a collar. Whatever distance rod is forced into tube the slide travels the same distance in stationary gauge casing. (Owners) Woodrow W. Reeser and Lucille E. Reeser. Address correspondence to Woodrow W. Reeser, 334 Concord Ave., Elyria, Ohio. Groups 35—65; 38—31. Reg. No. 4,181.

Pat. 1,861,644. COMBINED WATCH AND VANITY CASE. Patented June 7, 1932. Wrist watch is hinged to top of vanity case and a mirror between prevents powder from sifting into watch. The stem of the watch is used as a handle for opening case. (Owner) George M. Roberts, 4177 Cadillac Ave., Detroit 14, Mich. Groups 34—51—61; 39—72. Reg. No. 4,182.

Pat. 2,400,659. SCAFFOLD LADDER. Patented May 21, 1946. Scaffold is formed by sliding an ordinary cross plank through two diverging ladders. A bar or second rung is mounted (in notches in the stiles of the ladders) a sufficient distance above each step to permit the plank to slide freely between step and bar. The plank may be placed through the ladders while they are close together or spaced

from each other; or they may be slid freely toward or away from each other after plank is in place. Moving the bottom ends only of the ladders from each other causes the step and bar to bind and hold plank securely in place. (Owner) Yvon St. Mars, 3226 Rushbrook St., Montreal 19, Canada. Group 25—99. Reg. No. 4,183.

Des. 127,570. DESIGN FOR A BROOCH. Patented June 3, 1941. (Owner) Paul J. Kordish, 277 Helen Ave., Mansfield, Ohio. Groups 34—51; 39—71. Reg. No. 4,184.

Des. 144,860. DESIGN FOR A FINGER RING. Patented May 28, 1946. Groups 34—51; 39—71. Reg. No. 4,185.

Des. 144,861. DESIGN FOR A FINGER RING. Patented May 28, 1946. Groups 34—51; 39—71. Reg. No. 4,186.

The two patents listed above relate to ornamental designs for finger rings. (Owner) Arthur Marcus, 10 West 47th St., New York, N. Y.

Des. 144,866. DESIGN FOR A PEN AND PENCIL HOLDER. Patented May 28, 1946. (Owner) Edwin C. Moe, 2407 Creston Place, Lansing, Mich. Group 39—51—52. Reg. No. 4,187.

Pat. 2,362,499. IMPACT WRENCH. Patented Nov. 14, 1944. Group 35—41. Reg. No. 4,188.

Pat. 2,399,251. IMPACT WRENCH. Patented Apr. 30, 1946. Group 35—41. Reg. No. 4,189.

The two patents listed above were granted under the act of March 3, 1883, as amended April 30, 1928, and relate to electric or compressed air powered impact wrenches used to impart blows to a nut in such a way as to turn or rotate the nut for tightening or loosening purposes. The wrench described in Pat. 2,362,499 may be used manually or as a power tool, at will. Different sized nuts may be handled by one wrench. (Owner) Carl W. Porter, 409 Tennessee Ave., Alexandria, Va.

Pat. 2,286,665. HOT AIR FURNACE. Patented June 16, 1942. Air is drawn into furnace through a grille at top which divides it into fine streams. Passing around zigzag tubes the air is uniformly heated before being drawn from furnace by a fan and supplied to rooms to be heated. Formed of few parts and inexpensive to manufacture. (Owner) Clifford Blair, 216 South 4th St., Ironton, Ohio. Group 33—62. Reg. No. 4,190.

Pat. 2,401,887. MAGNETIC CHUCK ATTACHMENT PLATE. Patented June 11, 1946. Device is in the form of a composite plate for use on the face of a magnetic chuck for holding very small ferrous and other magnetic metallic parts to be machined. Comprises a number of spaced non-magnetic strips with a number of tapered ferrous metal segments between with top and bottom surfaces at right angles to plane of central magnetic strip. (Owner) Frank Sheppard, 5651 Waverly St., Montreal, Canada. Group 35—43. Reg. No. 4,191.

Pat. 1,966,612. DOOR LOCKING DEVICE. Patented July 17, 1934. This door locking device consists of a locking arm mounted on the inner face of a door. It is adapted to be raised and held latched when in an inoperative position or lowered to securely lock and brace door. A channel or floor track is provided so that the door may be held slightly ajar and locked in position to prevent intruders from entering. (Owner) Samuel E. Cochran, 1309 East Armour Blvd., Kansas City 3, Mo. Group 38—98. Reg. No. 4,192.

Pat. 2,399,824. ADJUSTABLE JIG AND HOLDER. Patented May 7, 1946. The main purpose of this device is to eliminate the necessity of preparing a separate jig for each article upon which work is to be done. Hydraulically controlled needles contact the object permitting the jig to adapt itself to the contour of the object enabling easy duplication. The jig consists of an upper and lower hollow body or wheel upon which are mounted a number of hollow tubular holders in which needles are slidably retained. Each of the bodies contains a valve carrying spider. In adjusting the needles the valves are opened until the needles contact the object at which time the valves are closed and the needles thus fixed. The jig described may be made part of a machine, bench or drill vice, etc. (Owner) Irving L. Pressman, P. O. Box 627, Lancaster, Calif. Group 35—43. Reg. No. 4,193.

Pat. 2,381,416. AGE HARDENABLE CHROMIUM-NICKEL STAINLESS STEEL. Patented Aug. 7, 1945. Group 33—12. Reg. No. 4,194.

Pat. 2,397,997. PROVIDING INHERENTLY AGING CHROMIUM-NICKEL STAINLESS STEEL WITH DIFFERENT TEMPERS. Patented Apr. 9, 1946. Group 33—12. Reg. No. 4,195.

These two inventions disclose methods of controlling the temper of chromium-nickel stainless steel. In addition to the usual carbon, the steel contains at least one of the stronger-than-chromium carbon formers (titanium, columbium, tantalum) with its components that are ferrite formers, proportioned to those that are austenite formers. A stress-laden ferrite is produced at low temperatures when the steel cools to room temperature from temperatures where the steel is completely austenitic. One method comprises heating the steel to about 1300° F. to give it a higher unaged and lower aged temper, to about 1400° F. to give it a medium temper, and to 1600° F. to give it a lower unaged and higher aged temper, followed by cooling the steel to provide it with a stress-laden ferrite structure rendering it age hardening. (Owners) Ernest H. Wyche and Raymond Smith. Address correspondence to Ernest H. Wyche, 1874 Niagara Ave., Niagara Falls, N. Y.

Pat. 2,397,682. JAR LIFTING DEVICE. Patented Apr. 2, 1946. A device for gripping and lifting a jar from a cooker without the hands coming in contact with excessive heat. Consists of an open wire loop, with extensions. A follower moves along extensions by means of a slidable rod movable through guide loop for varying size of loop to engage and disengage jar top. (Co-owner) Charles E. Neils, 204 West Baltimore Ave., Larkspur, Calif. Groups 33—12; 34—41. Reg. No. 4,196.

Pat. 2,402,868. PACKING FOR PIPE JOINTS. Patented June 25, 1946. A multiple safety seal for coupling different adjacent pipe sections together is formed by two semi-circular sections which are fitted around the pipe and bolted together edgewise. The central openings of the sections are grooved to receive beads formed on the pipe wall. A tight seal is formed by bolting the two sections together slightly out of register. The flat faces of the sections are each provided with a pair of separate channels which are filled with flax or any other packing material to provide an absolute seal against loss of fluids. (Owner) Frank W. Boyle, 9515 Baltimore Ave., Berwyn, Md. Group 32—93. Reg. No. 4,197.

Pat. 2,401,750. MULTIPLE PURPOSE POCKET ACCESSORY. Patented June 11, 1946. Back of comb is constructed so that it forms a cylindrical open ended sheath which acts as the holder for a fountain pen or mechanical pencil. The sheath is provided with a clip. (Owner) Henry F. Dye, P. O. Box 412, Micanopy, Fla. Groups 30—32; 39—51. Reg. No. 4,198.

BULLETIN OF DECISIONS OF PATENT OFFICE ON TRADE-MARKS

RENDERED DURING SEPTEMBER, 1946

EX PARTE UNITED-CARR FASTENER CORPORATION, Serial No. 477,082.

In a decision rendered September 3, 1946 (169 Ms. Dec. 136, 70 USPQ 536), *First Assistant Commissioner Frazer* affirmed the action of the Examiner of Trade-Marks refusing to register to United-Carr Fastener Corporation, of Cambridge, Mass., a mark comprising applicant's previously registered trade-mark "Dot," and the notation "Cable-Loc Fastener" for resilient band type and clip type supporting fasteners for holding conduits such as wires, rods, pipes and the like and fastener mounting devices, variously applied to articles of manufacture in the industrial arts, the word "Fastener" being disclaimed, in the absence of a disclaimer of the words "Cable-Loc," which the Examiner held to be descriptive of applicant's goods.

After noting that at the hearing on appeal applicant expressed its willingness to disclaim the word "Cable," it was held that nevertheless, as used in the mark, "Loc" obviously means "lock"; and that word would appear to be descriptive of any fastening device.

In response to applicant's citation of several registrations of marks in which this same word occurs without disclaimer, it was held that most of them are distinguishable and as to the others, the right of registration in the instant case may not be determined by the actions had in those cases.

EX PARTE IMPERIAL PRODUCTS, INC., Serial No. 481,580.

In a decision rendered September 3, 1946 (169 Ms. Dec. 136, 70 USPQ 536), *First Assistant Commissioner Frazer* affirmed the action of the Examiner of Trade-Marks refusing to register under the act of 1905 to Imperial Products, Inc., of Cincinnati, Ohio, the notation "Magi Clutch," for window shades on the ground that it includes a descriptive word, "Clutch," which applicant has refused to disclaim.

After noting that in its brief, however, applicant omits the space between the two words and asserts that the mark "MagiClutch" is an arbitrary single word trade-mark so that applicant thus argues its case on the theory that it is absolutely improper to require a disclaimer of a portion of an entire word, it was held that the point may be conceded, but it is purely academic since not only are the words spaced apart on the drawing, but the initial letter of "Clutch" is approximately twice the size of the other letters of the mark which serves to emphasize the separate entity of this word.

AIRADIO, INCORPORATED, *v.* AIRDAR CORPORATION, Opposition No. 23,254.

In a decision rendered September 5, 1946 (169 Ms. Dec. 137, 70 USPQ 537), *First Assistant Commissioner Frazer* affirmed the action of the Examiner of Trade-Marks dismissing the opposition of Airadio, Incorporated, of Stamford, Conn., to the application of Airdar Corporation, of Wilmington, Del., for registration of the word "Airdar" as a trade-mark for electrical control instruments for control of operation, flight and movement of aircraft, watercraft, land vehicles, and aviation ground equipment, namely, radio and signaling instruments. Opposer relied upon its alleged prior use of the word "Airadio" as a trade-mark for goods that are in part substantially identical with applicant's goods.

It was held that opposer has failed to prove trade-mark use of the single word "Airadio," which is the only use pleaded in the notice of opposition notwithstanding "Airadio" has been directly affixed to its merchandise since it clearly appears from the entire record that opposer has used "Airadio" only as a part of its corporate name, "Airadio, Incorporated."

Notwithstanding that opposer has failed to prove trade-mark use, it was held that it does not follow that all of its testimony should therefore be stricken as not pertinent to any issue in the case; the motion to strike was directed broadly to all testimony and exhibits filed by opposer; since some of the evidence is pertinent, albeit inconsistent, it would have been manifestly improper to grant the motion.

Assuming arguendo, however, that trade-mark use has been established, it was held that the opposition was properly dismissed since as applied to merchandise of the character here involved the word "air" is descriptive and not subject to exclusive appropriation; and opposer's mark being an obvious contraction of the words "air radio" is likewise descriptive; while applicant's mark on the other hand, is essentially arbitrary for although it includes the word "air," the unitary term "Airdar" is meaningless so that the two marks are not confusable, notwithstanding that they bear some slight similarity in appearance and in sound.

After noting that conceding that "Airadio" means "air radio," in response to opposer's argument that confusion is likely to occur because in ordering applicant's products buyers will never call for "Airdar" but for "Airdarradio" and then the syllable "dar" will be swallowed, it was held that "radio" is not a part of applicant's mark; and its indicated use by purchasers would be as the generic name of

the goods which opposer can scarcely hope to prevent by the simple expedient of incorporating that name in its own mark.

EX PARTE HOOD REFINING COMPANY, Serial No. 453,719.

In a decision rendered September 9, 1946 (169 Ms. Dec. 142, 70 USPQ 537), *First Assistant Commissioner Frazer* affirmed the action of the Examiner of Trade-Marks refusing to register to Hood Refining Company, of Greensburg, Pa., under the act of February 20, 1905, a mark comprising the word "Gibraltar" and the representation of a hand pressing a piston into a cylinder, for lubricating compounds, particularly heat resistant carbon preventative oils, on the ground that the word "Gibraltar" dominates the mark and is merely geographical.

After noting that applicant stresses the design features of its mark complaining that they were seemingly ignored by the Examiner although it is thoroughly established in the law that a trade-mark is an entirety and cannot be dissected into its component parts, it was held that the Examiner has analyzed the mark and determined quite properly that the word "Gibraltar" is its dominant portion; but in so doing is not chargeable with dissecting the mark nor with ignoring its pictorial parts.

In response to applicant's argument that the word "Gibraltar" in addition to being the name of a rock in the southern portion of Spain, has an arbitrary or fanciful meaning as applied to the goods in question denoting power and strength and after noting that applicant concedes that this additional meaning is secondary, it was held that manifestly the additional meaning is incidental to the geographical significance of the word and the language of the statute leaves no room for exception, but forbids registration of all primarily geographical terms including those with alternative meanings.

E. H. SCOTT RADIO LABORATORIES, INC., *v.* PHILHARMONIC RADIO CORPORATION, Opposition No. 23,783.

In a decision rendered September 9, 1946 (169 Ms. Dec. 139, 70 USPQ 539), *First Assistant Commissioner Frazer* affirmed the action of the Examiner of Interferences dismissing the opposition of E. H. Scott Radio Laboratories, Inc., of Chicago, Ill., to the application of Philharmonic Radio Corporation, of New York, N. Y., for registration of the word "Philharmonic" as a trade-mark for radio-receiving apparatus, radio-television receiving apparatus, combination radio receiving-electric phonograph apparatus, electric phonograph recording and reproducing apparatus and parts thereof, but reversed the action of the Examiner of Interferences who had adjudged that applicant is entitled to the registration for which it has made application.

This mark has been in use by applicant and its predecessors in interest since February 1938. The application was filed April 12, 1944. The same mark was adopted by opposer in 1937 for radio receiving sets which it continued to sell for approximately five years. In April 1942 the manufacture of such merchandise for civilian use was suspended by Government orders so that both parties to this proceeding discontinued the sale of radio receiving sets, and devoted their activities to the production of military equipment. At the time of final hearing before the Examiner of Interferences, the suspension order was still in force and neither party has resumed civilian sales.

After noting that applicant appears to have affixed its mark to goods manufactured for the Government which were doubtless of the same descriptive properties as those listed in the application, it was held that neither that circumstance nor the fact that opposer failed to do likewise is of any importance; opposer was not furnishing the Government with "Philharmonic" radios; also it is immaterial that opposer ceased the use of its mark in advertising since it would seem futile to have advertised a product that opposer was not permitted to sell.

It was held that since opposer owned the trade-mark "Philharmonic" at the time the application was filed, applicant was not then entitled to the proposed registration and the application must therefore be rejected.

It was held that the Examiner of Interferences rightly ruled that on the basis of the evidence before him he could not have held that opposer would be damaged by such registration and that unless he resumes use of the mark, obviously it will not be damaged; and in the event use is resumed, the question of abandonment should be left open for consideration in any possible future proceeding between the parties growing out of events occurring subsequent to the date of the application here involved.

It was held that insofar as it adjudges applicant entitled to the registration applied for, the decision of the Examiner of Interferences is reversed without prejudice to applicant's right to file a new application if it so desires; and insofar as it dismisses the opposition, the decision is affirmed without prejudice to opposer's right to oppose such new application if filed.

EX PARTE KOPS BROTHERS, INC., Serial No. 440,725.

In a decision rendered September 11, 1946 (169 Ms. Dec. 145, 70 USPQ 541), *First Assistant Commissioner Frazer* affirmed the action of the Examiner of Trade-Marks refusing to register to Kops Brothers, Inc., of New York, N. Y., an alleged trade-mark under the provisions of the act of March 19, 1920. Applicant's mark is the notation "Adjustable Waist," appropriated to foundation garments, including girdles and combination girdles and brassières. Registration was refused on the ground that these words serve merely to indicate the type of construction of applicant's garments and therefore are devoid of trade-mark significance.

After noting that in an effort to prove that the mark has actually acquired trade-mark significance, applicant filed the affidavits of its sales manager, two department store corset buyers, and a so-called investigator, it was held, however, that all that is established by these affidavits is that since no other manufacturer sells similar garments and applicant's labels always bear it registered trade-mark "Nemo," dealers and purchasers have come to associate "Adjustable Waist" products with the owner of the "Nemo" mark.

It was held that while descriptiveness is not a bar to registration under the 1920 act, nevertheless, it is necessary that marks so registered must function also as trade-marks while here an "adjustable waist" foundation garment would be an "adjustable waist" foundation garment whether produced by applicant or by one of its competitors; and applicant's mark merely informs purchasers that the garment to which the mark is affixed is of that character.

MARY MUFFET, INC., *v.* NANCY ANN DRESSED DOLLS, Opposition No. 23,466.

In a decision rendered September 11, 1946 (169 Ms. Dec. 144, 70 USPQ 540), *First Assistant Commissioner Frazer* affirmed the action of the Examiner of Interferences dismissing the opposition of Mary Muffet, Inc., of St. Louis, Mo., to the application of Nancy Ann Dressed Dolls, of San Francisco, Calif., for registration of the notation "Little Miss Muffet" as a trade-mark for dressed dolls. One ground of opposition is that applicant's mark constitutes an appropriation of opposer's corporate name. A second ground of opposition is that applicant's mark is confusingly similar to opposer's regitsered trade-mark and appropriated to merchandise of the same descriptive properties. The registered mark comprises the notation "I am a Mary Muffet," in association with the representation of a spider in a web, and a picture characterized by opposer as that of a doll and by the applicant as that of a little girl in a hoop skirt.

With respect to the first ground of opposition, it was held that opposer's name, however, is not "Little Miss Muffet" nor is it "Miss Muffet" or "Muffet"; and while "Mary Muffet" might have been either of the three, adoption of her complete name did not give opposer a monopoly of her surname in other combinations; to conflict with opposer's name, within the meaning of the Trade-Mark Act, applicant's mark would have to include the word "Mary."

With respect to the second ground of opposition, it was held that whether the picture of the registered mark be a girl or a doll, the mark is as a whole highly suggestive of the Mother Goose character of applicant's mark and that the two marks would thus be confusable if used on the same class of goods; however, opposer's mark is registered for ladies' dresses which it appears from the testimony are never worn by ladies younger than thirteen years.

It was further held that no article of wearing apparel for women or girls has the same descriptive properties as dolls, whether dressed or undressed so that these two kinds of merchandise are so widely unrelated that they could be sold under identical trade-marks without any reasonable likelihood of confusion and the marks here in question are far from identical.

It was further held that other points are argued in the briefs which need not be discussed here, except to say that if it were material the First Assistant Commissioner would be inclined to agree with the Examiner of Interferences that applicant has established priority of use.

BOND ELECTRIC CORPORATION *v.* ARTHUR W. FRUH, Opposition No. 23,199.

In a decision rendered September 12, 1946 (169 Ms. Dec. 146, 70 USPQ 542) *First Assistant Commissioner Frazer* affirmed the action of the Examiner of Trade-Marks dismissing the opposition of Bond Electric Corporation, of New Haven, Conn., to the application of Arthur W. Fruh, of Chicago, Ill., for registration of the word "Ace" as a trade-mark for electric burglar alarm control boxes and cabinets, gong housings and gongs, horn alarm box assemblies, auxiliary electric bells, and bell housings; all used in connection with burglar alarms. The opposition was predicated upon opposer's alleged ownership of this same word, in association with a representation of the ace of spades, previously registered as a trade-mark for flashlights and flashlight cases, and previously used by opposer as a trade-mark for flashlight batteries.

After noting that opposer appears to have abandoned its contention that flashlights and their cases have the same descriptive properties as applicant's goods; and that the Examiner of Interferences refused to consider flashlight batteries because opposer was not using its mark in connection therewith when the notice of opposition was filed, in response to opposer's argument that its nonuse of the mark was compulsory, and may not properly be said to have worked an abandonment, or to indicate an intent to abandon, it was held that for the purpose of this proceeding the point may be conceded, but becomes immaterial because of the view taken of the case.

It was held that flashlight batteries, like flashlights, differ from applicant's goods in their descriptive properties, so that the opposition was properly dismissed.

TINNERMAN PRODUCTS, INC., *v.* SPEED PRODUCTS COMPANY, Opposition No. 22,844.

In a decision rendered September 13, 1946 (169 Ms. Dec. 148, 70 USPQ 543), *Commissioner Ooms* denied a petition of the party Speed Products Inc., of Cleveland, Ohio, whose application to register is involved in a trade-mark opposition proceeding in-

stituted on the notice of opposition filed by Tinnerman Products Company, of Long Island City, N. Y., that the Commissioner of Patents review the decision of the First Assistant Commissioner on appeal from the Examiner of Interferences.

After noting that one of the duties assigned to the First Assistant Commissioner, in accordance with the statutory provision, is the hearing and disposal of appeals in trade-mark cases, pursuant to the further statutory provision that such appeals may be taken "to the Commissioner in person," it was held that the decisions of the First Assistant Commissioner thus become the decisions of the Commissioner; and if erroneous a remedy is provided by appeal to the United States Court of Customs and Patent Appeals, or by action under 4915 R. S., by any party who "is dissatisfied with the decision of the Commissioner of Patents;" neither the statute nor the rules of practice contemplate a second appeal within the Patent Office.

THE GREAT ATLANTIC & PACIFIC TEA COMPANY *v.* WASON BROS. CO., Opposition No. 23,686.

In a decision rendered September 16, 1946 (169 Ms. Dec. 149, 70 USPQ 545), *First Assistant Commissioner Frazer* affirmed the action of the Examiner of Interferences sustaining the opposition of The Great Atlantic and Pacific Tea Company, of New York, N. Y., to the application of Wason Bros. Co., of Seattle, Wash., for registration of the notation "Mello-X" as a trade-mark for imitation extracts and flavors for food flavoring, the word "Mello" being disclaimed as descriptive, and the mark having been used since July, 1943. One of the trade-marks relied upon by opposer is the word "Mello," registered July 8, 1924, and renewed, for canned fruits of all kinds.

It was held that since applicant's goods and those set forth in the registration are such as may be sold in the same stores to the same class of purchasers, and may be sold in part for the same general purpose, they are of the same descriptive properties, and that being true, concurrent use of the two marks would be reasonably likely to result in confusion, for applicant has appropriated opposer's entire mark as a part of its own.

After noting that applicant's extracts are not now sold in chain stores like those managed by opposer, it was held that this is a mere trade practice subject to change.

In response to applicant's argument that the mere placing of any descriptive word ahead of a letter of the alphabet, even though that descriptive word be a predominating part of another mark, should be the right of any registrant and not the basis on which prohibition of registration of the mark in its entirety should be predicated, it was held that the correct rule, which furnishes a complete answer to applicant's argument is that we must look to the mark as a whole, regardless of descriptive portions, and determine whether or not the use of the whole mark in the same field in which the mark of another is used would be likely to cause confusion.

It was further held that not only was the opposition properly sustained, but that applicant's mark is nonregistrable as presented, regardless of opposer's rights, since it is so completely dominated by the word "Mello" that in disclaiming that word applicant has in effect disclaimed the entire mark.

KRAFT CHEESE COMPANY OF WISCONSIN *v.* THE FISHER DAIRY AND CHEESE CO., Opposition No. 23,756.

In a decision rendered September 16, 1946 (169 Ms. Dec. 151, 70 USPQ 544) *First Assistant Commissioner Frazer* reversed the action of the Examiner of Interferences and thereby sustained the opposition of Kraft Cheese Company of Wisconsin, of Green Bay, Wis., and Chicago, Ill., to the application of The Fisher Dairy and Cheese Co., of Wapakoneta, Ohio, for registration of the notation "Eat-ette" as a trade-mark for processed cheeses. Since applicant took no testimony there is no proof of use of this mark prior to the filing date of the application, namely, July 13, 1944. In the notice of opposition opposer pleaded its ownership of three registrations of marks for various cheese products, including "Pabst-ett," registered September 7, 1926, and "Munst-ett," registered April 19, 1938.

It was held that one of the pleaded registrations was properly refused consideration by the Examiner of Interferences because not proved, and that a fourth mark referred to in the testimony was properly disregarded by the Examiner because not pleaded.

After noting that applicant questions the sufficiency of opposer's proofs with respect to its ownership of the "Pabst-ett" and "Munst-ett" registrations and its use of the registered marks, it was held that such ownership was established by the introduction of certain copies of various assignments as recorded in the Patent Office, the decisions cited by applicant in support of a contrary view having been overruled by necessary implication; and since the registrations were both effected under the act of February 20, 1905, opposer's nonuse of the marks, even if conceded, would be immaterial to issues here presented.

After noting that the Examiner, citing dictionary definitions of the suffix "-ette," concluded therefore that no one may preempt the field with respect to marks incorporating such a commonly used suffix, it was held that as applied to cheese, "ett" and "ette" are purely arbitrary terms, which are subject to exclusive appropriation; and in applicant's mark there is nothing else that is capable of trade-mark significance, for certainly the word "eat" could not serve to denote the origin of a food product; so that applicant has thus appropriated a prominent portion of opposer's marks as the dominant part of its own, and by setting it off with a hyphen has enhanced the resulting similarity.

EX PARTE AMERICAN TAR COMPANY, Serial No. 451,997.

In a decision rendered September 17, 1946 (— Ms. Dec. —, — USPQ —), *First Assistant Commissioner Frazer* denied a petition for rehearing in the application of American Tar Company, of Spokane, Wash., and reconsideration of the decision rendered August 13, 1946 (590 O. G. 533, 70 USPQ 453).

After noting that the brief in support of the petition is devoted almost exclusively to a discussion of alleged inconsistencies between the Assistant Commissioner's position in the opposition proceeding referred to in the decision and the First Assistant Commissioner's decision in another case and further noting that applicant's case was not decided by the First Assistant Commissioner, it was held it is not the function of the First Assistant Commissioner to revise the rulings of an Assistant Commissioner or to pass upon their accuracy; if the decision was erroneous, applicant's remedy was by appeal.

NATIONAL MILLING AND CHEMICAL CO., INC., *v.* ROHM & HAAS COMPANY, Opposition No. 23,798.

In a decision rendered September 20, 1946 (169 Ms. Dec. 152, 70 USPQ —) *First Assistant Commissioner Frazer* affirmed the action of the Examiner of Interferences sustaining the opposition of National Milling and Chemical Co., Inc., of Philadelphia, Pa., to the application of Rohm & Haas Company, also of Philadelphia, Pa., for registration of the word "Triton" as a trade-mark for materials and preparations in the form of liquids, pastes, and/or powders containing synthetic organic chemicals, for use in cleansing, scouring, laundering, degreasing, deterging, and removing soil. The opposition was sustained in view of opposer's ownership of a prior registration of the notation "Tritex Crystals" for alkali for general cleansing purposes, the descriptive word "Crystals" being disclaimed.

After noting that with the notice of appeal from the Examiner's decision, applicant submitted an amendment to its application whereby it seeks to change the description of the merchandise, so that applicant thus argues the appeal on the theory that the amended description of goods clearly distinguishes and differentiates applicant's goods from an alkali for general cleansing purposes, the goods for which opposer's mark is registered, it was held that the goods remain in the same as when the application was filed; as stated by applicant in its amendment before the Examiner of Trade-Marks, they are used for cleaning purposes generally; and since opposer objects to the proposed amendment, its entry is refused.

It was held that although it is true that applicant's products are neither alkaline nor crystalline, and that they differ specifically from opposer's product in many other particulars, they are nonetheless merchandise of the same descriptive properties within the meaning of the Trade-Mark Act.

It was further held that as applied to such merchandise the marks of the parties are confusingly similar.

After noting that applicant properly insists that the two marks should be viewed in their entirety, in response to applicant's argument that the disclaimed word "Crystals" in opposer's mark must be considered in determining the question of confusing similarity, it was held that it is clear in the instant case that opposer's mark is dominated by the word "Tritex"; indeed, the disclaimed word "Crystals" is so purely descriptive of opposer's goods as to be incapable of trade-mark significance.

EX PARTE WELLS LAMONT SMITH CORPORATION, Serial No. 453,971.

In a decision rendered September 25, 1946 (169 Ms. Dec. 159, — USPQ —), *First Assistant Commissioner Frazer* affirmed the action of the Examiner of Trade-Marks refusing to register to Wells Lamont Smith Corporation, of Chicago, Ill., the words "One Buck" in association with the picture of a buck deer, as a trade-mark for work gloves, but disapproved the Examiner's requirement for a disclaimer of the words "One Buck".

It was held that in Americanese "one buck" denotes "one dollar" practically to the exclusion of all other meanings and as applied to a pair of work gloves, the term could indicate nothing else than price so that the term is thus manifestly descriptive of applicant's goods.

In response to applicant's argument that because the words and the picture are equivalents, the mark as a whole signifies a male deer, it was held that it is doubtful that purchasers would take the trouble to describe the picture in ordering applicant's gloves, but rather the goods would probably be advertised and called for merely as "One Buck" work gloves, which expression applicant's competitors have an equal right to use.

It was held that a disclaimer would not render the mark registrable since it is clearly dominated by the words and a composite mark that is dominated by nonregistrable matter may not be registered under the Trade-Mark Act of 1905 merely because such matter is disclaimed.

In response to applicant's citation of an old registration of a mark somewhat similar to its own as a precedent supporting applicant's contention that the words "One Buck" are not descriptive of the goods, it was held that the propriety of that registration need not be discussed other than to say that while such inconsistencies are regrettable, nothing is thereby added to the registrability of applicant's mark.

EX PARTE SELAS CORPORATION OF AMERICA, Serial No. 473,261.

In a decision rendered September 25, 1946 (169 Ms. Dec. 157, — USPQ —), *First Assistant Commissioner Frazer* remanded to the Examiner of

Trade-Marks the application of Selas Corporation of America, of Philadelphia, Pa., for consideration of affidavits filed after appeal from the Examiner's decision and restored jurisdiction to the Examiner for the purpose of taking such further action as he may deem appropriate.

After noting that the affidavits were filed in an attempt to refute the Examiner's ruling that the trade-mark it seeks to register is descriptive of the goods to which appropriated and that at the hearing on appeal it was suggested that the Examiner's position might have resulted from a misconception of the mechanical structure and operation of applicant's device, it was held that if so, applicant should have made an effort to remedy such misconception, which it apparently failed to do; in any event, evidence of this character should be evaluated by the Examiner in the first instance, rather than by the Commissioner on appeal.

WHITEHALL PHARMACAL COMPANY *v.* LEDERLE LABORATORIES, INC., Opposition No. 23,774.

In a decision rendered September 25, 1946 (169 Ms. Dec. 169, — USPQ —), *First Assistant Commissioner Frazer* affirmed the action of the Examiner of Interferences sustaining the opposition of Whitehall Pharmacal Company, of Jersey City, N. J., to the application of Lederle Laboratories, Inc., of New York, N. Y., for registration of the word "Synbefax" as a trade-mark for a vitamin preparation, the mark having been used since February 8, 1944. Opposer relies upon its ownership of the trade-mark "Benefax," registered December 23, 1941, for a medicinal preparation for use as a supplement to the diet to provide additional supplies of vitamins.

It was held that the goods of the parties are virtually identical and that opposer's mark was prior in use.

After noting that applicant limits its argument on appeal to the question of confusing similarity of the marks, it was held that the Examiner of Interferences rightly ruled that concurrent use of the marks would likely give rise to confusion due to the similarity of sound and appearance.

In response to applicant's suggestion that the marks are different in significance, it was held that significance of marks is not the only factor to be considered, for appearance and sound are equally important; moreover, the differences suggested by applicant would not be recognized in the market place.

In response to applicant's complaint that the Examiner did not attempt to reconcile or distinguish the holdings in some nineteen cases which are cited in its brief, it was held that prior decisions, except as to statements of law, have but little bearing on the issues presented in trade-mark opposition cases, because of differences in facts.

CLARENCE M. HYLAND *v.* GIVAUDAN-DELAWANNA, INC., Opposition No. 24,403.

In a decision rendered September 25, 1946 (169 Ms. Dec. 159, — USPQ —) *First Assistant Commissioner Frazer* on a petition by the party Givaudan-Delawanna, Inc., of New York, N. Y., whose application to register a trade-mark is involved in an opposition proceeding instituted on a notice of opposition filed by Clarence M. Hyland, doing business as Hyland Laboratories, of Los Angeles, Calif., reversed the action of the Examiner of Interferences who had denied applicant's motion to dismiss the opposition. The opposition was verified on the 13th day of June 1945 and was lodged in the Patent Office on June 25.

After noting that Mr. Hyland testified as a witness in his own behalf and stated that Hyland Laboratories was incorporated on June 21, 1945, and that thereupon the entire business was transferred to the newly organized corporation which took over everything including the trade-marks and good will, it was held that it thus conclusively appears that Mr. Hyland had divested himself of all legal interest in the subject matter of this proceeding at the time his notice of opposition was filed so that the opposition should have been dismissed since Rule 56(*c*) of the Rules of Civil Procedure expressly provides that judgment on motion shall be rendered forthwith when it appears that there is no genuine issue as to any material fact and that the moving party is entitled to a judgment as a matter of law; for although opposer's attorney may give notice on the record that the name of the opposer shall be changed to Hyland Laboratories, a California corporation, successor to Clarence M. Hyland, nevertheless the corporation had not opposed and the mere substitution of its name for that of the individual did not serve to supply the missing allegations of the notice that would be necessary to support a judgment in its favor.

EX PARTE ALBERT HOCHBERG COMPANY, INC., Serial No. 459,368.

In a decision rendered September 27, 1946 (169 Ms. Dec. 160, — USPQ —), *First Assistant Commissioner Frazer* affirmed the action of the Examiner of Trade-Marks refusing to register to Albert Hochberg Company, Inc., of New Bergen, N. J., under the provisions of the act of March 19, 1920, a trade-mark appropriated to women's dresses, the mark consisting of the words or name "Tommie Austin" in association with the pictorial representation of a five pointed star across which is printed the word "Casual," in view of a reference registration of the single word "Tommy," likewise for women's dresses.

It was held that the Examiner rightly ruled that applicant's mark is clearly dominated by the name "Tommie Austin," and that although the spelling of the given name differs in the two marks, the pronunciation is the same and, in effect, applicant's mark incorporates the registered trade-mark in its entirety.

In response to applicant's argument that the registration is invalid because it was effected under the act of February 20, 1905, and the name "Tommy" is not distinctively displayed, it was held that "Tommy" is not a surname; and it is common practice to register Christian names; moreover, the principle is well established that the validity of registrations under the act of 1905 may not be collaterally attacked.

EX PARTE THE MILLER SHOE COMPANY, Serial No. 469,689.

In a decision rendered September 27, 1946 (169 Ms. Dec. 163, — USPQ —), *First Assistant Commissioner Frazer* reversed the action of the Examiner of Trade-Marks who had refused to register to The Miller Shoe Company, of Cincinnati, Ohio, under the act of February 20, 1905, a composite mark on the ground that it is predominantly descriptive of the goods to which appropriated, namely, shoes made of leather, and leather and fabric combinations.

After noting that the portion of the mark held to be descriptive is "Barefoot Freedom," it was held that the mark is highly suggestive, but since such freedom is literally impossible unless the shoes be first removed, its assertion is nothing more than an exaggerated boast that would deceive no one, the suggestion being too fantastic to be taken seriously by purchasers so that the words in question are not objectionably descriptive.

After noting that the mark also includes the word "shoes," which applicant has agreed to disclaim, it was held that before the application is passed for publication such disclaimer will be required.

THE ZERO COMPANY *v.* NATIONAL GYPSUM COMPANY, Oppositions No. 23,345, No. 23,346, and No. 23,347.

In a single decision rendered September 27, 1946 (169 Ms. Dec. 161, — USPQ —), *First Assistant Commissioner Frazer* affirmed in each of three cases the action of the Examiner of Interferences dismissing the opposition of The Zero Company, of Lockland, Ohio, to three applications of National Gypsum Company, of Buffalo, N. Y., to register trade-marks for rock wool, each of the marks sought to be registered consisting in or being dominated by the word "Zerocel." Opposer's position on appeal was that applicant's mark constitutes a complete appropriation of its firm name.

It was held that the marks applicant seeks to register include opposer's name only as a component part of the compound word "Zerocel"; this word is not opposer's name; nor may it be said to have a dominant portion.

After noting that opposer urges that the three applications should be rejected ex parte for reasons presented by petition before the appeals were taken, which petitions were denied, it was held that opposer's only legal interest in these cases relates to the inter partes questions raised by the pleadings, and as to those questions it has its remedy by appeal to the Commissioner; otherwise, it has no more right to be heard than would a mere stranger to the proceedings.

EX PARTE HOCKWALD CHEMICAL COMPANY, Serial No. 467,847.

In a decision rendered September 30, 1946 (169 Ms. Dec. 166, — USPQ —), *First Assistant Commissioner Frazer* affirmed the action of the Examiner of Trade-Marks rejecting the application of Hockwald Chemical Company, of San Francisco, Calif., for registration of the words "Trade Winds" as a trade-mark for talcum powder, after-shaving lotion, hair oil and hair shampoo and lotion in view of a prior registration consisting of the notation "South Wind" appropriated to face powder.

After noting that the goods of the registration are in part substantially identical with applicant's goods, it was held that hence the only question for determination is whether or not the two marks are confusingly similar.

After noting that applicant correctly insists that the marks have different meanings, it was held that since those meanings are not suggestive of the goods, it seems that sound and appearance, rather than significance, are here the controlling factors and that in those respects, applicant's mark and the registered mark are so nearly alike that they could not be used concurrently upon goods of the character in question without reasonable likelihood of confusion.

EX PARTE THE DILL MANUFACTURING COMPANY, Serial No. 470,177.

In a decision rendered September 30, 1946 (169 Ms. Dec. 163, — USPQ —), *First Assistant Commissioner Frazer* affirmed the action of the Examiner of Trade-Marks refusing registration to The Dill Manufacturing Company, of Cleveland, Ohio, of the notation "Lok-Skru," on the ground that it is descriptive of applicant's goods; and objected to applicant's designation of its goods as rivets.

It was held that it seems entirely clear that the term "Lok-Skru" is descriptive of applicant's fastener, the parts of which screw together to lock certain plates tightly in juxtaposition.

It was further held that if applicant's fastener, as it is designated on the labels, is a rivet, it is of a specific kind, which fact should be recognized by applicant in the particular description of goods, so that Examiner's suggestion that "two-part threaded blind rivets" would be an acceptable description is a reasonable suggestion; if the present description of the goods were accepted, the public would naturally assume that applicant's product was an ordinary rivet and that is not the fact.

ANTHONY P. HAYES *v.* OXFORD DRESS COMPANY, Cancellation No. 4482.

In a decision rendered September 30, 1946 (169 Ms. Dec. 164, — USPQ —), *First Assistant Commissioner Frazer* affirmed the action of the Examiner of Interferences sustaining the petition of Anthony P. Hayes, of Inglewood, Calif., to cancel trade-mark registration No. 393,613, issued February 17, 1942, under the provisions of the act of March 19, 1920, to Oxford Dress Company, of Boston, Mass. Respondent's mark is the notation "Toni Tailored Juniors," the goods for which it is registered being women's, misses' and juniors' dresses, the application for its registration having been filed January 27, 1941.

After noting that the case was submitted on stipulated facts, one of which is that since January 13, 1932, petitioner has been continuously using to date, and is continuing to use, the word "Toni" as a trade-mark for women's hats of his manufacture and further noting that petitioner also pleads and proved his ownership of a registration of the word "Toni" as a trade-mark for hats intended for the use of women, issued September 3, 1935, under the act of February 20, 1905, it was held that it is clear beyond argument that the goods of the parties possess the same descriptive properties.

It was further held that it is equally clear that respondent's mark includes the complete mark of petitioner as its dominant feature for "Toni" is the only word in respondent's mark that is capable of trade-mark significance, so that as the two marks are thus confusingly similar, it follows that the registrant was not entitled to the exclusive use of the mark at or since the date of his application for registration thereof and that if petitioner is injured thereby, the Commissioner shall cancel the registration.

It was held that since petitioner's mark is registered under the act of 1905 and is stipulated to have been in use when the petition to cancel was filed, injury must be presumed.

In response to respondent's argument that petitioner's registration is for various reasons invalid, it was held that its validity is not open to attack in this proceeding; moreover, petitioner's established use of his mark is probably sufficient regardless of his registration.

Erratum

In GENERAL MOTORS CORPORATION *v.* THE B. A. WESCHE ELECTRIC COMPANY, Opposition No. 23,307, 590 O. G. 534, second column, line 25, after "embraces" should be inserted *merchandise of the same class as.*

TRADE-MARKS

OFFICIAL GAZETTE, OCTOBER 29, 1946

[VOL. 591. No. 5]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1

RAW OR PARTLY PREPARED MATERIALS

Ser. No. 496,673. TRUAX-TRAER COAL COMPANY, Chicago, Ill. Filed Feb. 15, 1946.

The drawing is lined for the colors silver and red. The words "Truax" and "Traer" are disclaimed apart from the mark.

FOR COAL.

Claims use since Oct. 1, 1945.

Ser. No. 498,991. GLOBE LEATHER CORPORATION, New York, N. Y. Filed Mar. 26, 1946.

FOR LEATHER.

Claims use since February 1946.

CLASS 2

RECEPTACLES

Ser. No. 472,458. INLAND CONTAINER CORPORATION, Indianapolis, Ind. Filed July 21, 1944.

The words "Container" and "All-Weather" are disclaimed separate and apart from the mark.

FOR CORRUGATED PAPERBOARD BOXES SUITABLE FOR DOMESTIC AND EXPORT SHIPMENTS.

Claims use since Aug. 12, 1942.

Ser. No. 502,915. NORTHWEST METAL PRODUCTS, INC., Seattle, Wash. Filed May 28, 1946.

The representation of the Indian whose head constitutes the mark is entirely fanciful.

FOR GARBAGE CANS, GARBAGE PAILS, WATER PAILS, OIL CANS, COAL HODS, SPRINKLER CANS, KITCHEN STEP-ON CANS, AND FIRE BUCKETS.

Claims use since January 1920.

Ser. No. 505,320. STAPLING MACHINES CO., Wilmington, Del., and Rockaway, N. J. Filed July 9, 1946.

SPARTAN

FOR SHIPPING CONTAINERS, SUCH CONTAINERS BEING OF BOX OR CRATE CONSTRUCTION HAVING WALLS OR SIDES COMPRISING WOOD OR ITS EQUIVALENT FOR FRUITS AND VEGETABLES.
Claims use since July 5, 1946.

CLASS 3

BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS

Ser. No. 493,790. MAGID HANDBAGS, New York, N. Y. Filed Dec. 22, 1945.

PLASTICOOL

FOR HANDBAGS.
Claims use since Dec. 1, 1944.

Ser. No. 493,862. GEORGE WENGER, New York, N. Y. Filed Dec. 22, 1945.

LONGTRIP

FOR TRAVELLING CASES.
Claims use since Dec. 1, 1944.

Ser. No. 502,360. THE WILSON MANUFACTURING CO., INC., Boston, Mass. Filed May 17, 1946.

ESCORT

FOR COIN PURSES AND COMBINATION BILLFOLDS AND COIN PURSES.
Claims use since September 1945.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 477,704. KATZ DRUG COMPANY, doing business as Colonial Laboratories, Kansas City, Mo. Filed Dec. 18, 1944.

Stylis

FOR DETERGENT PREPARATION FOR USE IN BATHING AND WASHING PARTS OF THE HUMAN BODY.
Claims use since 1939.

Ser. No. 483,703. TROJAN PRODUCTS & MFG. CO., Chicago, Ill., assignor to The Diversey Corporation, Chicago, Ill., a corporation of Illinois. Filed May 23, 1945.

TROJAN

FOR HAND SOAP, POLISH (HAVING WATER SOFTENING PROPERTIES) FOR REFINISHING AND CLEANSING METAL, WOOD AND OTHER SURFACES, METAL POLISH, CARPET AND UPHOLSTERY SHAMPOO IN LIQUID FORM AND HAVING SAPONACEOUS PROPERTIES, DISHWASHING COMPOUND, PORCELAIN AND ENAMEL CLEANING PREPARATION HAVING ABRASIVE AND SAPONACEOUS PROPERTIES.
Claims use on hand soap, polish for refinishing metal, wood and other surfaces, metal polish, dishwashing compound and porcelain and enamel cleaning preparation having abrasive and saponaceous properties since October 1923; and on carpet and upholstery shampoo in liquid form and having saponaceous properties since January 1930.

Ser. No. 493,984. JOHN T. STANLEY CO., INC., New York, N. Y. Filed Dec. 28, 1945.

PROTOL

FOR WETTING AGENT AND CLEANSER, PARTICULARLY USEFUL IN CLEANING BUSES AND TRUCKS.
Claims use since June 11, 1945.

Ser. No. 495,591. COLGATE-PALMOLIVE-PEET COMPANY, Jersey City, N. J. Filed Jan. 29, 1946.

POTSAN
PANSEN

FOR HOUSEHOLD CLEANSER.
Claims use since Jan. 25, 1946.

Ser. No. 495,592. COLGATE-PALMOLIVE-PEET COMPANY, Jersey City, N. J. Filed Jan. 29, 1946.

AJAX

FOR SOAP AND HOUSEHOLD CLEANSER.
Claims use since 1904 on soap; and since Jan. 22, 1946, on cleanser.

Ser. No. 495,911. SAPONIFIED PRODUCTS COMPANY, INC., Oakland, Calif. Filed Feb. 2, 1946.

WILLIWAW

FOR PREPARATION FOR CLEANING AND PROTECTING THE SKIN.
Claims use since July 1945.

Ser. No. 496,357. ZITOMER CHEMISTS, INC., New York, N. Y. Filed Feb. 9, 1946.

REJAY

FOR SOAP.
Claims use since January 1936.

Ser. No. 497,780. THE CARBORUNDUM COMPANY, Niagara Falls, N. Y. Filed Mar. 7, 1946.

FOR SHEET MATERIAL COATED WITH ABRASIVE GRAIN.
Claims use since May 30, 1945.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 475,916. LYSTAD & REDICK, East Grand Forks, Minn., and Devils Lake, N. Dak., assignors to Lystad & Redick, Inc., East Grand Forks, Minn. Filed Oct. 31, 1944.

STERISOL

FOR CHEMICAL DISINFECTANT, DEODORANT, AND GERMICIDAL MATERIAL OF GENERAL UTILITY, AND PARTICULARLY ADOPTED FOR SANATIZING EQUIPMENT IN TAVERNS, CAFES, CREAMERIES, AND SCHOOLS, BUT NOT LIMITED THERETO.
Claims use since Mar. 21, 1942.

Ser. No. 477,547. M. DE TUVACHÉ, New York, N. Y., assignor to Tuvaché Co., New York, N. Y., a firm composed of Howard and Bernadine Angus. Filed Dec. 14, 1944.

COSSACK

FOR COLOGNE, HAIR LOTION, AND TOILET WATER.
Claims use since Dec. 15, 1938.

Ser. No. 484,984. L. SONNEBORN SONS, INC., New York, N. Y. Filed June 23, 1945.

PENETRALENE

FOR SURFACE ACTIVE LIQUID COMPOSITION USED AS AN ASSISTANT IN DYEING OF TEXTILE FABRICS.
Claims use since January 1917.

Ser. No. 488,919. OSCAR C. OLIN, doing business as Olin Products Co., Hartsdale, N. Y. Filed Sept. 24, 1945.

Pritti

FOR DEPILATORIES, DEODORANT AND ANTI-PERSPIRANT, ADAPTED FOR PERSONAL USE AND COSMETIC CREAMS.
Claims use since Aug. 1, 1945.

Ser. No. 489,178. CHARLES A. JENSEN, doing business as Midland Manufacturing Co., Buffalo, N. Y. Filed Sept. 29, 1945.

Miracle

FOR PENETRATING OIL NOT IN THE NATURE OF A LUBRICANT AND USED TO RELEASE AND REMOVE CORROSION ON NUTS, BOLTS, PIPE JOINTS, ETC.
Claims use since Sept. 8, 1945.

Ser. No. 491,652. MAN OF MANHATTAN, INC., New York, N. Y. Filed Nov. 15, 1945.

Applicant disclaims the right to the term "Gentleman" apart from the mark.

Lord Oxford

FOR CIGAR AND CIGARETTE LIGHTERS EMPLOYING A COMBUSTIBLE FUEL.
Claims use since June 27, 1945.

425,072. (CLASS 39. CLOTHING.) JORDAN MARSH COMPANY, Boston, Mass. Filed Dec. 6, 1945. Serial No. 492,777.

MUIR-SPUN

FOR WOMEN'S AND CHILDREN'S COATS, SUITS, SOCKS, AND SWEATERS.
Claims use since May 18, 1945.

425,073. (CLASS 48. MALT BEVERAGES AND LIQUORS.) BREWERS SCIENTIFIC LABORATORIES, Rahway, N. J. Filed Dec. 21, 1945. Serial No. 493,647.

BREWERS SCIENTIFIC LABORATORIES

FOR CHEMICAL SUBSTANCE OF VEGETABLE ORIGIN USED EXCLUSIVELY IN THE CLARIFICATION OF BEER AND ALE; A COMPOUND FOR THE CHILL-PROOFING OF BEERS AND ALES; A CONCENTRATED COMPOUND OF HYDROLYZED SOLUBLE PROTEINS AND AMINO ACIDS FOR PRODUCING FOAM STABILITY AND BODY IN THE BREWING OF BEERS AND ALES; A SOLUBLE COMPOUND FOR USE IN THE BREWING OF BEERS AND ALES FOR OVERCOMING STARCH AND PROTEIN TURBIDITIES THEREIN; A HIGHLY SOLUBLE COMPOUND FOR IMPROVING YEAST SETTLEMENT IN THE BREWING OF BEERS AND ALES AND FOR HARDENING THE WATER USED IN SUCH BREWING, AND FOR IMPROVING THE STABILITY AND PALATABILITY IN THE FINISHED BEERS AND ALES; A COMPOUND FOR USE IN THE BREWING OF BEERS AND ALES FOR INCREASING EXTRACT YIELDS, AND FOR SHORTENING THE CONVERSION PERIODS, FOR PREVENTING STARCH AND PROTEIN TURBIDITIES, FOR REDUCING CHILL-PROOFING CONSUMPTION, FOR INCREASING THE SHELF-LIFE OF BREWS, AND FOR RENDERING THE FINISHED BEERS AND ALES CLEAR AND BRILLIANT; A COMPOUND OF CEREAL ENZYMES OF STRONG PROTEIN-DISSOLVING POWERS FOR USE IN THE BREWING OF BEERS AND ALES, AND FOR PERMANENTLY INSURING BRILLIANCY AND CHILL-PROOFING THEREOF; AN INHIBITOR COMPOUND FOR USE IN BEERS, ALES, AND YEASTS FOR RETARDING THE GROWTH OF BACTERIA, MOLD, AND FUNGI.

Claims use on a chemical substance of vegetable origin used exclusively in the clarification of beer and ale, since Dec. 1, 1931; on a compound for the chill-proofing of beers and ales, since December 1934; on a concentrated compound of hydrolyzed soluble proteins and amino acids for producing foam stability and body in the brewing of beers and ales, since July 25, 1936; on a soluble compound for use in the brewing of beers and ales for overcoming starch and protein turbidities therein, since Jan. 2, 1940; on a highly soluble compound for improving yeast settlement in the brewing of beers and ales and for hardening the water used in such brewing, and for improving the stability and palatability in the finished beers and ales, since Jan. 2, 1940; on a compound for use in the brewing of beers and ales for increasing extract yields, for shortening the conversion periods, for preventing starch and protein turbidities, for reducing chill-proofing consumption, for increasing the shelf-life of brews, and for rendering the finished beers and ales clear and brilliant, since Jan. 2, 1941; on a compound of cereal enzymes of strong protein-dissolving powers for use in the brewing of beers and ales, and for permanently insuring brilliancy and chill-proofing thereof, since July 2, 1941; and on an inhibitor compound for use in beers, ales, and yeasts for retarding the growth of bacteria, mold, and fungi, since July 5, 1943.

425,074. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS, AND SUBSTITUTES THEREFOR.) JOHN WALTHER FABRICS, INC., New York, N. Y. Filed Dec. 21, 1945. Serial No. 493,705.

AMERICA'S SMARTEST
WOOLENS

FOR WOOLEN AND WORSTED FABRICS IN THE PIECE.
Claims use since Jan. 1, 1938.

425,075. (CLASS 43. THREAD AND YARN.) DAVID FINKELSTEIN, doing business as Reliable Yarn & Trimming Co., Brooklyn, N. Y. Filed Dec. 22, 1945. Serial No. 493,827.

FOR COTTON, SILK, RAYON, AND WOOL YARNS.
Claims use since Oct. 1, 1944.

425,076. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE PY-MAK COMPANY, Dallas, Tex. Filed Dec. 27, 1945. Serial No. 493,931.

Py-Mak

FOR PIE FILLING.
Claims use since Oct. 5, 1944.

425,077. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JEAN DESPREZ, Paris, France. Filed Dec. 29, 1945. Serial No. 494,041.

Jean Desprez
PARIS

FOR PERFUMES AND ROUGES.
Claims use since November 1944.

425,078. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) M. J. HOLLOWAY & CO., Chicago, Ill. Filed Jan. 18, 1946. Serial No. 494,972.

Ko-Ko-Mo

FOR CANDY.
Claims use since Apr. 16, 1932.

425,079. (CLASS 39. CLOTHING.) WALTER P. HARRIS, doing business as Walter P. Harris & Co., New York, N. Y. Filed Jan. 24, 1946. Serial No. 495,293.

Knitrue

FOR HOSIERY.
Claims use since July 1910.

425,080. (CLASS 12. CONSTRUCTION MATERIALS.) CALIFORNIA STUCCO COMPANY, Los Angeles, Calif. Filed Jan. 22, 1946. Serial No. 495,353.

Tile
-Seal

FOR PREPARED TILE GROUT.
Claims use since Aug. 13, 1937.

425,081. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) HAROLD F. JENKINS, Elmira, N. Y. Filed Jan. 25, 1946. Serial No. 495,390.

WORLD
IN
COLOR
PRODUCTIONS

FOR MOTION PICTURE TRAVEL FILMS.
Claims use since February 1941.

425,082. (CLASS 39. CLOTHING.) DINNY & ROBBINS INC., New York, N. Y. Filed Feb. 1, 1946. Serial No. 495,795.

FOR LEATHER SHOES.
Claims use since Dec. 2, 1935.

425,083. (CLASS 39. CLOTHING.) KNITTED SALES COMPANY, New York, N. Y. Filed Jan. 26, 1946. Serial No. 495,931.

BOB-GLEN

FOR KNITTED SPORTSWEAR—NAMELY, MEN'S, WOMEN'S, AND BOYS' SWEATERS.
Claims use since Feb. 1, 1942.

Registered Nov. 16, 1926. LUDWIG SCHERK, doing business as Parfümerie Scherk, Berlin, Germany. Renewed Nov. 16, 1946, to Ludwig Scherk, Inc., Brooklyn, N. Y., a corporation of New York. Class 6.

220,858. **NUTTY NICK.** CANDY. Registered Nov. 16, 1926. SCHUTTER-JOHNSON CANDY COMPANY. Renewed Nov. 16, 1946, to The Universal Match Corporation, doing business as Schutter Candy Division, Chicago, Ill., a corporation of Delaware. Class 46.

220,876. **BRIZA.** CERTAIN NAMED COSMETICS AND TOILET PREPARATIONS; ESSENTIAL OILS USED IN THE MANUFACTURE OF PERFUMES; DISINFECTANTS, INCENSE, STARCHES AND STARCH PREPARATIONS FOR LAUNDRY USES, RUST PREVENTIVES, DYES, AND PREPARATIONS FOR BLEACHING. Registered Nov. 16, 1926. LUDWIG SCHERK, doing business as Parfümerie Scherk, Berlin, Germany. Renewed Nov. 16, 1946, to Ludwig Scherk, Inc., Brooklyn, N. Y., a corporation of New York. Class 6.

220,881. **ASCO.** CERTAIN NAMED STEEL BOXES AND CASES AND STEEL TILLS AND TRAYS. Registered Nov. 16 1926. ART STEEL CO. INC., New York, N. Y., a corporation of New York. Renewed Nov. 16, 1946. Class 2.

220,902. **SANTOCHLOR.** INSECTICIDES. Registered Nov. 16, 1926. MONSANTO CHEMICAL WORKS. Renewed Nov. 16, 1946, to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware. Class 6.

220,903. **PARIS.** CANNED VEGETABLES. Registered Nov. 16, 1926. BURNHAM & MORRILL COMPANY, Portland, Maine, a corporation of Maine. Renewed Nov. 16, 1946. Class 46.

220,905. **"SCARBORO BEACH" AND DRAWING.** CANNED CLAMS, CLAM CHOWDER, AND CLAM BOUILLON. Registered Nov. 16, 1926. BURNHAM & MORRILL COMPANY, Portland, Maine, a corporation of Maine. Renewed Nov. 16, 1946. Class 46.

220,929. **PAN-DAN-LID.** HARVEST, OUTING, AND SPORT HATS FOR MEN, WOMEN, AND CHILDREN. Registered Nov. 16, 1926. SUPERIOR HAT CO., St. Louis, Mo., a corporation of Missouri. Renewed Nov. 16, 1946. Class 39.

220,939. **POWHATAN.** CANNED FRUITS AND VEGETABLES. Registered Nov. 16, 1926. HENRY PORTERFIELD TAYLOR, JR. Renewed Nov. 16, 1946, to Taylor & Sledd, Inc., Richmond, Va., a corporation of Virginia. Class 46.

220,940. **MATTAPONI.** CANNED FRUITS AND VEGETABLES. Registered Nov. 16, 1926. HENRY PORTERFIELD TAYLOR, JR., Richmond, Va. Renewed Nov. 16, 1946, to Taylor & Caldwell, Inc., Walkerton, Va., a corporation of Virginia. Class 46.

220,983. **CELANOL.** YARNS AND THREADS OF CERTAIN NAMED MATERIALS. Registered Nov. 23, 1926. THE AMERICAN CELLULOSE & CHEMICAL MANUFACTURING COMPANY LTD. Renewed Nov. 23, 1946, to Celanese Corporation of America, New York, N. Y., a corporation of Delaware. Class 43.

220,986. **ANTINEA.** PILE-FABRIC PIECE GOODS. Registered Nov. 23, 1926. J. B. MARTIN COMPANY, Norwich, Conn., a corporation of Delaware. Renewed Nov. 23, 1946. Class 42.

221,007. **"GOODWILL SAVINGS BANK" AND DRAWING.** SHOES, SLIPPERS, AND BOOTS MADE OF CERTAIN MATERIALS FOR MEN, WOMEN, OR CHILDREN. Registered Nov. 23, 1926. ARTHUR A. WILLIAMS, doing business as Goodwill Shoe Company. Renewed Nov. 23, 1946, to Goodwill Shoe Company, Holliston, Mass., a corporation of Massachusetts. Class 39.

221,042. **"CHALLENGE" AND DESIGN.** BUTTER, EGGS, AND CHEESE. Registered Nov. 23, 1926. CHALLENGE CREAM & BUTTER ASSOCIATION, Los Angeles, Calif., a corporation of California. Renewed Nov. 23, 1946. Class 46.

221,046. **GOLDENCROM.** FULL GRAINED AND BUFFED SOLE LEATHER. Registered Nov. 23, 1926. ALPENA LEATHER CORPORATION, Buffalo, N. Y. Renewed Nov. 23, 1946, to J. Greenebaum Tanning Co., Chicago, Ill., a corporation of Illinois. Class 1.

221,068. **TOBACCO-TAINER.** TOBACCO POUCHES. Registered Nov. 23, 1926. BUXTON, INCORPORATED, Springfield, Mass., a corporation of Massachusetts. Renewed Nov. 23, 1946. Class 8.

221,077. **"STEER" AND DRAWING.** COTTONSEED MEAL, AND COTTONSEED HULLS. Registered Nov. 23, 1926. TEXARKANA COTTON OIL CO., Texarkana, Ark., a corporation of Louisiana. Renewed Nov. 23, 1946. Class 46.

221,113. **LAKME.** PILE-FABRIC PIECE GOODS. Registered Nov. 23, 1926. J. B. MARTIN COMPANY, Norwich, Conn., a corporation of Delaware. Renewed Nov. 23, 1946. Class 42.

221,122. **LA SOIRÉE.** TALCUM POWDER, FACE POWDER, BATH SALTS, SACHET, TOOTH POWDER, ALMOND MEAL, HEADACHE COLOGNE, SMELLING SALTS, VANISHING CREAM, COLD CREAM, TOOTH PASTE, PERFUME, LIP ROUGE, BATH POWDER, TOILET CERATE, TOILET WATER, AND SKIN AND TISSUE CREAM. Registered Nov. 23, 1926. RICHARD HUDNUT, New York, N. Y., a corporation of New York. Renewed Nov. 23, 1946. Class 6.

221,123. **DINORAH.** PILE-FABRIC PIECE GOODS. Registered Nov. 23, 1926. J. B. MARTIN COMPANY, Norwich, Conn., a corporation of Delaware. Renewed Nov. 23, 1946. Class 42.

221,180. **INTENSO-WITE.** SEMIPASTE PAINT. Registered Nov. 23, 1926. PATEK BROTHERS, INC., Milwaukee, Wis., a corporation of Wisconsin. Renewed Nov. 23, 1946. Class 16.

221,185. **MAT-TEX.** PLASTIC OIL PAINT. Registered Nov. 23, 1926. PATEK BROTHERS, INC., Milwaukee, Wis., a corporation of Wisconsin. Renewed Nov. 23, 1946. Class 16.

221,212. **BLACK STAR.** COAL. Registered Nov. 23, 1926. BLACK STAR COAL COMPANY. Renewed Nov. 23, 1946, to Black Star Coal Corporation, Louisville, Ky., a corporation of Delaware. Class 1.

221,217. **"REGOLAC".** CERTAIN PAINTS AND PAINTERS' MATERIALS. Registered Nov. 23, 1926. TITANINE, INC., Union, N. J., a corporation of New York. Renewed Nov. 23, 1946. Class 16.

221,245. **"PYROSAN" AND DESIGN.** TABLETS FOR THE RELIEF OF INDIGESTION. Registered Nov. 23, 1926. K. A. HUGHES COMPANY, Boston, Mass., a corporation of Maine. Renewed Nov. 23, 1946. Class 6.

221,247. **CELANOL.** MEN'S HALF HOSE. Registered Nov. 23, 1926. THE AMERICAN CELLULOSE & CHEMICAL MANUFACTURING COMPANY LTD. Renewed Nov. 23, 1946, to Celanese Corporation of America, New York, N. Y., a corporation of Delaware. Class 39.

221,254. **HOFF-LITE.** DRY, PASTE, AND READY-MIXED PAINTS AND VARNISHES. Registered Nov. 23, 1926. THE HOFFMAN WALL PAPER CO., INC., doing business as Hoff-Lite Paint Works, Hartford, Conn., a corporation of Connecticut. Renewed Nov. 23, 1946. Class 16.

221,261. **CHOCOLATE FONDEES.** CANDY. Registered Nov. 23, 1926. HUYLER'S, New York, N. Y. Renewed Nov. 23, 1946, to Huyler's, Long Island City, New York, a corporation of New York. Class 46.

221,262. **MATTVAR.** VARNISH. Registered Nov. 23, 1926. PATEK BROTHERS, INC., Milwaukee, Wis., a corporation of Wisconsin. Renewed Nov. 23, 1946. Class 16.

221,265. **PAT-LAC.** LACQUERS. Registered Nov. 23, 1926. PATEK BROTHERS, INC., Milwaukee, Wis., a corporation of Wisconsin. Renewed Nov. 23, 1946. Class 16.

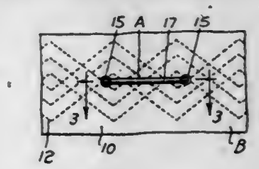
REISSUES

OCTOBER 29, 1946

22,806

WITHDRAWN

22,807



FLEXIBLE MATTRESS HANDLE

Michael Bechik, St. Paul, Minn.

Original No. 2,248,328, dated July 8, 1941, Serial No. 274,586, May 19, 1939. Application for reissue October 15, 1941, Serial No. 415,849

6 Claims. (Cl. 16—125)

1. A mattress handle comprising a resilient reinforcing bar designed to overlie the inner surface of a mattress wall, a pair of grommets extending through said bar and said mattress wall to hold said bar to said mattress wall, a flexible handle cord stretched taut by the resilience of said bar overlying the outer surface of the mattress wall between said openings and having ends extending through said openings, and anchoring means on

the ends of said flexible handle of elongated form capable of passing through said grommets longitudinally but too long to pass through said grommets transversely.

PLANT PATENTS

GRANTED OCTOBER 29, 1946

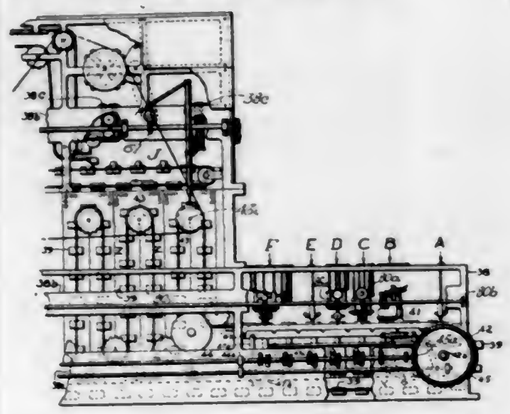
Owing to the fact that almost all of the illustrations of the plant patents are in colors, it is not practicable to print a cut of the drawing.

714

CHRYSANTHEMUM PLANT

Emil Prushek, Berrien Springs, Mich., assignor to C. J. Dunn, Benton Harbor, Mich.

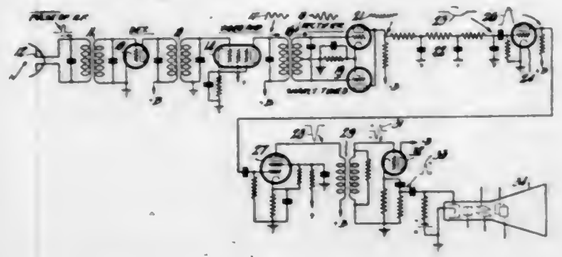
Application November 26, 1945, Serial No. 630,750



1 Claim. (Cl. 47—60)

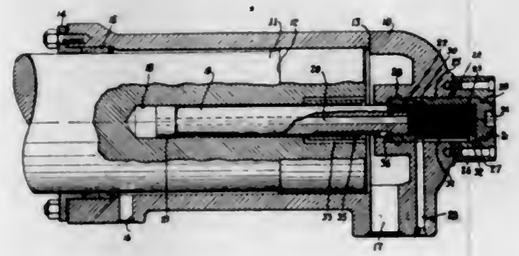
A new and distinct variety of chrysanthemum plant, characterized by its abundance of soft, Deep Mallow colored blossoms of pompon form; the uniformity and permanence of its color; its double, compact petalage; its long, sturdy flower and leaf stalks; its compact cushion-type of bush form; vigorous and hardy plant growth; its progressive succession of bush-covering blooms; and its resistance to disease and weather conditions, substantially as shown and described.

PATENTS



GRANTED OCTOBER 29, 1946

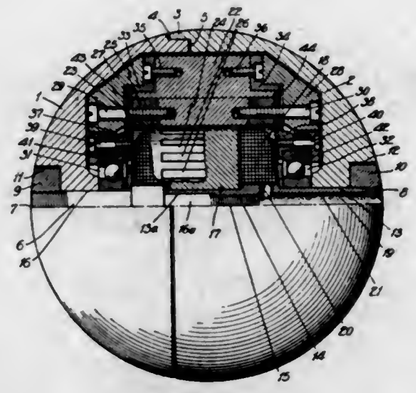
2,409,999
APPARATUS FOR PRODUCING POTTERY WARE
William J. Miller, Pittsburgh, Pa., assignor to Miller Pottery Engineering Company, Swissvale, Pa., a corporation of Pennsylvania
Original application March 29, 1935, Serial No. 13,683. Divided and this application August 18, 1945, Serial No. 611,367
30 Claims. (Cl. 25—22)



1. Apparatus for manufacturing dinnerware and the like, comprising a support for carrying molds through a fabricating zone, means for forming ware on said molds in said zone, and a mold conveyor formed for depositing empty molds directly on said support and removing loaded molds directly therefrom and carrying them away.

2,410,000
PULSE SELECTIVITY SYSTEM
Earl I. Anderson, Manhasset, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application November 18, 1943, Serial No. 510,776
5 Claims. (Cl. 250—20)

1. In a receiver for receiving pulses of energy which are of short duration compared with the period between successive pulses, a detector for converting said received pulses to video frequency electrical pulses, a circuit that is tuned to a frequency that is high as compared with the repetition frequency of said video frequency pulses, means for applying said video frequency pulses to said tuned circuit, means for rectifying and integrating the resulting damped sine waves appearing across said tuned circuit whereby broad pulses are obtained, means for amplifying said broad pulses, and means for obtaining from each broad pulse a narrow pulse corresponding to the pulse applied to said tuned circuit.



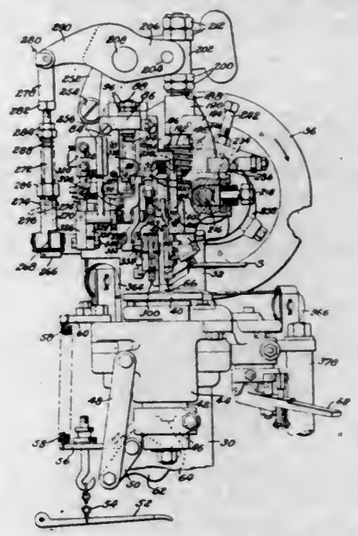
2,410,001
BOOSTER RAM CONSTRUCTION
Bernard D. Ashbaugh, Mount Gilead, Ohio, assignor to H-P-M Development Corporation, Wilmington, Del., a corporation of Delaware
Application June 16, 1944, Serial No. 540,703
1 Claim. (Cl. 60—97)

In combination, in a fluid operable motor, a cylinder, a main plunger reciprocably mounted therein and having a fluid operable advancing area, a bore in said plunger, an auxiliary plunger extending into said bore, a bore extending through said auxiliary plunger, an externally threaded end on said plunger, a sleeve rotatably mounted in said cylinder and having its bore threaded for engaging the threaded end of said plunger, means for preventing rotation of said plunger while permitting the axial movement thereof, means for permitting rotation of said sleeve while preventing axial movement thereof, said sleeve being completely within the confines of said cylinder and having its outer end closed, a shaped recess in said outer end, an aperture in the end of said cylinder adjacent said recess through which access may be had to the latter for adjusting said sleeve, a first inlet portion in said cylinder in continuous fluid communication with the advancing area of said main plunger, a second inlet port in said cylinder, channel means continuously connecting said second inlet port with the chamber defined by said auxiliary plunger and the bore in said main plunger, said channel means including an annular external groove in said sleeve in communication with said second inlet port, a port extending through the peripheral wall of said sleeve and in continuous communication with said bore in said auxiliary plunger, a groove in said sleeve connecting said last mentioned port with said annular external groove, and means operable in response to a predetermined advancing movement of said main plunger relative to said auxiliary plunger for effecting fluid communication between said chamber and said advancing area of said main plunger.

2,410,002
GYROSCOPE
Adolf Bach, Berlin-Spandau, Germany; vested in the Alien Property Custodian
Application May 7, 1941, Serial No. 392,246
In Germany July 31, 1939
8 Claims. (Cl. 172—36)

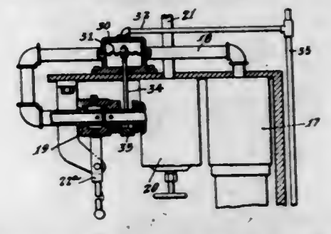
1. A gyroscopic element, particularly for gyro indicators for aircraft or watercraft, comprising a gyro rotor, a spherical casing enclosing said rotor, said casing being composed of a plurality of spherical sections, and a bracing member located entirely within and extending diametrically

through the space enclosed by the casing periphery, said sections being secured to said bracing member, and said bracing member forming also an axle for said gyro rotor.



2,410,003
SPIRAL CUTTER FOR ROTARY PLOWS
John Peter Bagan, Portland, Oreg., assignor of one-third to Anthony R. Wanezek, Marshfield, Oreg.
Original application April 29, 1940, Serial No. 332,220. Divided and this application February 14, 1944, Serial No. 522,320
3 Claims. (Cl. 97—41)

1. In a rotary spiral plow adapted for tractor operation comprising a frame, wheel supports for the frame, a spiral cutter mounted for rotation on a substantially horizontal axis on said frame, means for coupling said frame to a tractor to propel the same and means for coupling said spiral cutter to a power take off of said tractor to rotate the same, said cutter comprising a straight unitary axial member and two helicoidal blade members of substantially equal and opposite pitch and length mounted substantially end to end on said axial member, each of said blade members comprising an inner right helicoidal portion and an outer oblique helicoidal portion extending outwardly from the outer edge of said inner right helicoidal portion, said portions being of substantially the same uniform thickness and each surface of each blade member being substantially continuous.

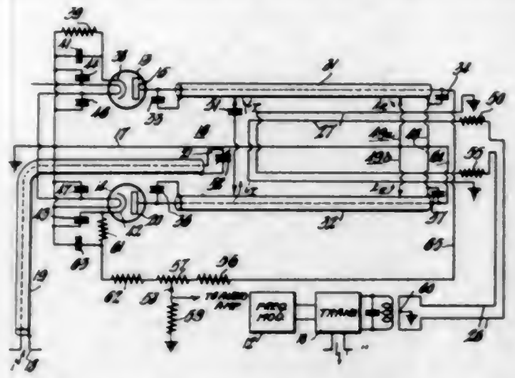


2,410,004
INSOLE MACHINE
Frederic E. Bertrand, Lynn, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application January 15, 1945, Serial No. 572,890
53 Claims. (Cl. 12—17)

1. In a machine for applying ribbed strips to insoles, means for supporting and feeding the insole, means including a guide for feeding the

strip, and means carried by the guide for slashing the strip.

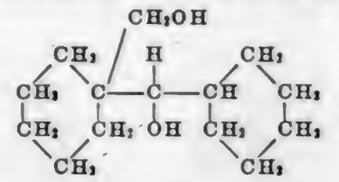
2,410,005
FLAME HEATING APPARATUS
James O. Bishop, Torrance, and Lloyd L. Babcock, Compton, Calif., assignors to The National Supply Company, Pittsburgh, Pa., a corporation of Pennsylvania
Original application August 3, 1940, Serial No. 350,196. Divided and this application March 6, 1943, Serial No. 478,256
5 Claims. (Cl. 158—27.4)



1. In a device of the class described, the combination of a torch having a first passageway for combustible gas and a second passageway for the circulation of a coolant, means including a valve for selectively admitting combustible gas to said first passageway, means for actuating the valve to open position, a conduit for delivering a coolant under pressure to said second passageway, and means including a diaphragm actuated by pressure in said conduit adapted to hold the valve actuating means from operation of the valve toward open position until the pressure in said conduit reaches a predetermined value.

2,410,006
BALANCED DETECTOR FOR ALTIMETERS
Daniel Blitz, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application May 30, 1944, Serial No. 538,052
5 Claims. (Cl. 250—27)

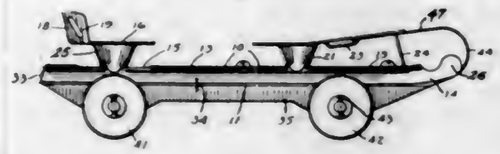
1. In combination, a balanced circuit comprising a tuned line, a two-wire line for supplying signal from a signal source to said tuned line, said two-wire line being grounded adjacent to said signal source at substantially the electrical midpoint of said two-wire line, and means for coupling said two-wire line to said tuned line, said means comprising a double inductive loop coupled to said tuned line, said double loop having two sides that are adjacent to the two con-



ductors, respectively, of said tuned line, the midpoint of said double loop being grounded whereby each side of said double loop includes conductors

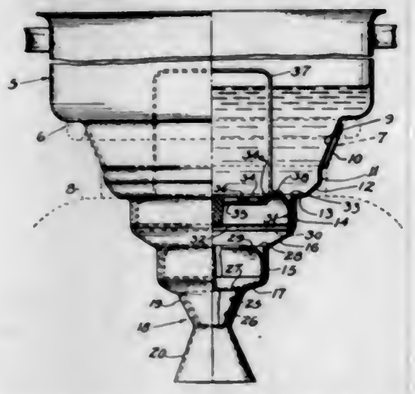
that carry the current flow of each of the conductors of said two-wire line so that any coupling due to unequal current flow in opposite sides of said two-wire line is balanced out.

2,410,007
1-METHYLOLCYCLOHEXYL-CYCLOHEXYL-CARBINOL
Joseph E. Bludworth and Donald P. Easter, Cumberland, Md., assignors to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application January 22, 1944, Serial No. 519,352
1 Claim. (Cl. 260—617)



1-methylolcyclohexyl-cyclohexyl-carbinol:

2,410,008
CHEMICAL COMPOUNDS
Joseph E. Bludworth and Donald P. Easter, Cumberland, Md., assignors to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application January 22, 1944, Serial No. 519,353
1 Claim. (Cl. 260—475)

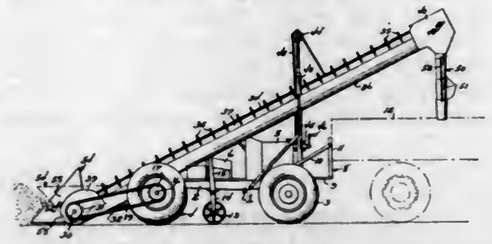


Di-β-hexahydrobenzyloxyethyl-phthalate.

2,410,009
ROLLER SKATE STRUCTURE
Stanley W. Blumm, Marathon, N. Y.
Application July 26, 1945, Serial No. 607,183
7 Claims. (Cl. 280—7.13)

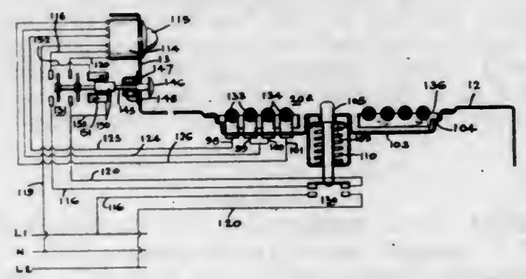
1. A convertible ice and roller skate assembly embodying mated components of which one such comprises a unitary chassis provided with a pair of laterally spaced roller carrying axles that are bridged by a saddle ridge member, and the other component comprises a semitubular runner mounting a heel and a sole plate thereon and further includes bifurcated parallel blade edges lying wholly above the respective axle centers and between which said runner is longitudinally socketed to nest said ridge therein when assembled in superimposed relationship, and means for severably coupling said nested components.

2,410,010
MILK STRAINER
David O. Brant, Beverly Hills, Calif.
Application November 15, 1943, Serial No. 510,359
12 Claims. (Cl. 210—159)



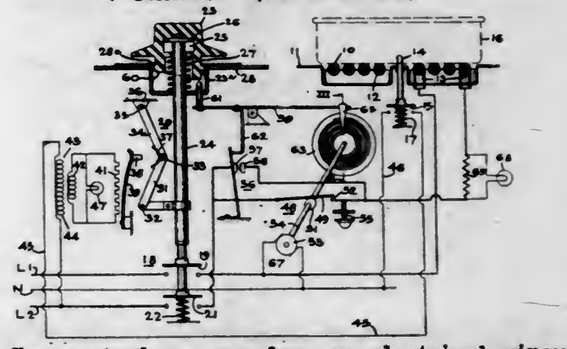
7. In a strainer, a tank having a stepped formation decreasing its internal diameter by downward stages, a strainer fabric of sheet material overlying one of the steps of said stepped formation together with the space therewithin, a strainer fabric retaining member having a spacious milk-admission opening in its top and carrying a baffle plate supported by said ring between said opening and said strainer fabric to deflect the milk horizontally as it passes from said opening to said fabric, a venturi milk outlet spout carried by the lower end portion of said tank, and said tank having a ledge-forming step intermediate said venturi spout and the step which supports said strainer fabric, a strainer cloth supported by said intermediate step, and a retainer member for said cloth in an overlying relation thereto.

2,410,011
RAIL TRUCK
Robert J. Burrows and Alfred O. Williams, Battle Creek, Mich., assignors to Clark Equipment Company, Buchanan, Mich., a corporation of Michigan
Application December 11, 1944, Serial No. 567,618
10 Claims. (Cl. 105—182)



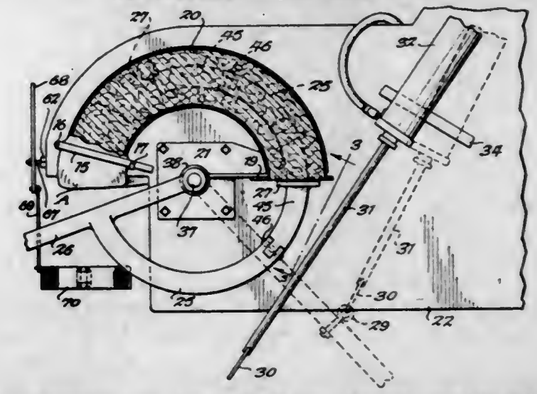
1. In a rail truck, a truck frame including longitudinally extending side frame members rigidly spaced apart by intermediate transverse cross members, truck axles including axle housings extending transversely beneath opposite ends of said side frame members and having spring brackets on opposite sides of the axis thereof at each end of said housings, vertical spring means between the ends of said members and the outside brackets of each of said housings, and longitudinally extending spring means between the inside brackets of each of said housings and the midportions of said side frame members.

2,410,012
PORTABLE GRAIN ELEVATOR
John A. Churchman, Guymon, Tex.
Application July 12, 1945, Serial No. 604,555
6 Claims. (Cl. 198—7)



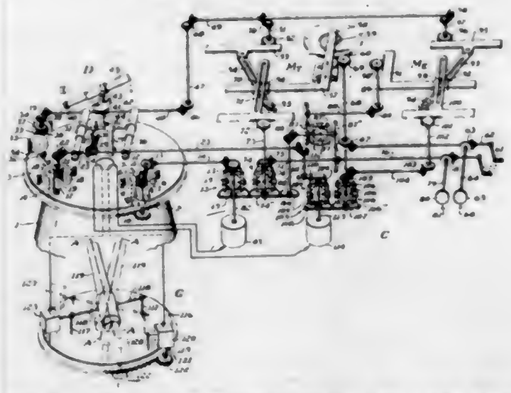
1. A grain elevator and loader, comprising a frame adapted to be detachably connected with a powered vehicle, a shaft journalled in the frame and having a driving connection with the powered vehicle, an endless conveyor belt connected with the shaft, a tube about the belt and formed with a boot at the end connected with the shaft, said belt and tube pivotally supported to be raised and lowered, a spiral grain moving auger on the shaft serving the conveyor belt, a hopper about the shaft adjustably connected at one end to the boot of the tube and supported by the frame at the other end, an adjustable down spout on the upper end of the tube, and a shaft like extension having a spiral grain moving auger and universally and detachably connected with the first shaft.

2,410,013
HEATING APPARATUS
Earl K. Clark, Mansfield, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application May 15, 1942, Serial No. 443,032
1 Claim. (Cl. 219—20)



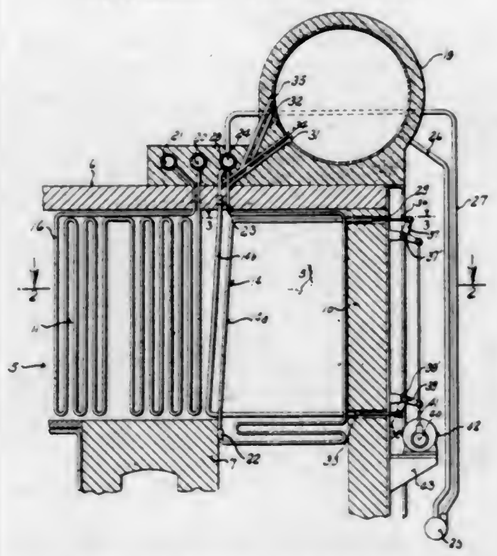
The combination with an electrical heating unit adapted to supply heat to a cooking utensil or the like and a source of power for said heating unit, of a switch for connecting said heating unit to said power source, said switch being biased to open position, means for moving said switch to closed position, electro-magnetic means for holding said switch in closed position, a circuit connecting said electro-magnetic means to said power source for energizing the same, said circuit being so arranged that it is open at all times that said switch is open, a second switch connected in said circuit, said second switch being moved to closed position by placing a cooking utensil or the like on said heating element, thereby completing the circuit from said power source to said electro-magnetic means and making the same effective to hold said first switch in closed position when moved to such position, said second switch being biased so as to move to open-circuit position when there is no cooking utensil or the like on said heating unit thereby opening the circuit from said power source to said electro-magnetic means and rendering said electro-magnetic means ineffective to hold said first switch in closed position when there is no cooking utensil or the like on said heating unit.

2,410,014
HEATING APPARATUS
Earl K. Clark, Mansfield, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application May 15, 1942, Serial No. 443,033
7 Claims. (Cl. 219—20)



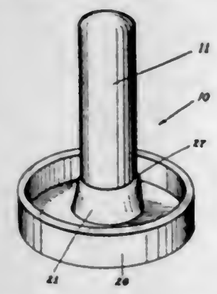
1. In control means for an electrical circuit including an electric heater arranged for the heating of a cooking vessel or the like, and adjustable means connected in the circuit for varying the rate of energization of the heater, the combination of a line switch arranged in the circuit and movable manually from an open position to a closed position, switching means arranged in the circuit for energizing said heater at its maximum rate irrespective of the adjustment of said adjustable means, a time-controlled device adjustable to various stations for determining the period of time that said switching means is effective to energize the heater, and a common actuator for the line switch and for adjusting said time-controlled device.

2,410,015
APPARATUS FOR FILLING LIFE PRESERVERS AND THE LIKE
James A. Cook, Buffalo, N. Y., assignor to Birma Manufacturing Company, Inc., Buffalo, N. Y.
Application January 5, 1944, Serial No. 517,075
13 Claims. (Cl. 226—19)



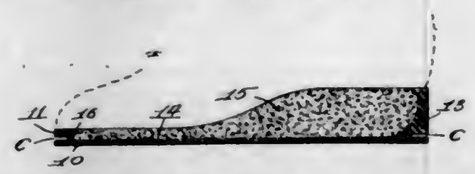
1. Apparatus for packing loose material into substantially circular open ended casings, including a tube open at both ends and having a curvature corresponding to that of the casing and which may be inserted into a casing to be filled, a ram having a curvature corresponding to that of the tube, means for producing relative movement of said ram and tube in a curved path to cause relative movement of said ram into and out of said tube to compact loose material inserted into the tube and to discharge the compacted material from the tube into the casing.

2,410,016
METHOD OF AND APPARATUS FOR GUNFIRE CONTROL
Raymond E. Crooke, New York, N. Y., assignor to Ford Instrument Company, Inc., Long Island City, N. Y., a corporation of New York
Application June 10, 1932, Serial No. 616,401
Renewed June 12, 1934
7 Claims. (Cl. 89—41)



1. The method of correcting for the effect of trunnion tilt of a gun mounted on an angularly movable platform which consists in determining the correction for the gun for a selected value of cross-level other than zero, setting the gun with respect to the platform in accordance with the determined correction and firing the gun when the movement of the platform brings the gun into a vertical plane bearing a predetermined relation to the target at which the gun is aimed.

2,410,017
FLUID COOLED DAMPER
David Dalin, Sodertalje, Sweden
Application August 14, 1943, Serial No. 498,697
In Sweden September 16, 1941
10 Claims. (Cl. 122—480)



7. In a heat exchange apparatus: cooperating walls defining a gas pass; a heat exchanger positioned to be influenced by the flow of gases through the gas pass; a bank of fluid cooled tubes collectively constituting a barrier across the gas pass of an effectiveness depending upon the spacing of the tubes; certain of said tubes having their ends at one side of the gas pass free and other tubes having their ends at the opposite side of the gas pass free so that an opposite flexing force applied on said free ends of the tubes results in varying the spacing between the tubes substantially uniformly for their entire length; looped coils connected to pairs of adjacent free ends of said tubes and extending substantially at right angles to said bank of tubes, the loops of said looped coils entering cavities in an adjacent wall of the gas pass so as to be spaced from the direct influence of the gases flowing through the gas pass; and means on the exterior of said last named wall and connected to said loops for simultaneously applying opposite forces thereon to flex the tubes connected thereto in opposite directions.

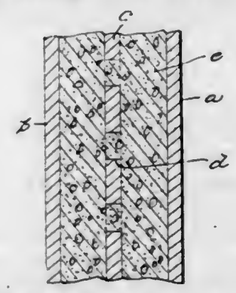
2,410,018
CROCHET BALL HOLDER
James M. D'Arcy, Brooklyn, N. Y.
Application May 19, 1945, Serial No. 594,723
3 Claims. (Cl. 242—130)

1. A crochet ball holder of the character described, comprising a revolvable member for receiving a crochet ball, a pin embedded in the central portion thereof the opposite end of which is pointed and extends beyond the end of said revolvable member, a circular channel in said revolvable member, a base having a channel adapted to loosely receive the lower portion of said revolvable member, a circular recess with a conical base to receive the pointed end of said pin, a hollow member firmly embedded in said circular recess, said hollow member having a triangular opening at the top thereof to maintain said pin in vertical position, the upper portion of said hollow member adapted to loosely fit within said circular channel without preventing said revolvable member from turning.

2,410,019
SHOE SOLE AND HEEL CONSTRUCTION
John H. Davis, Los Angeles, Calif.
Application December 6, 1944, Serial No. 566,829
2 Claims. (Cl. 36—28)

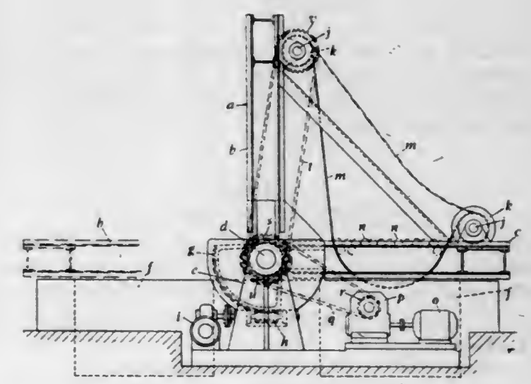
1. In a shoe sole and heel structure, the combination with a one piece body of flexible resilient material comprising, an outsole, midsole and heel, the height of said heel being substantially greater than the combined heights of said outsole and midsole, said heel and midsole being recessed so as to provide a continuous upstanding marginal wall, there being a continuous groove formed between the marginal portions of said outsole and midsole and an inwardly presented flange on the upper portion of said marginal wall, of a homogeneous filler body of light weight granular material completely filling said recess with the upper faces of said upstanding wall, and flange lying flush with the upper face of said filler body.

2,410,020
MANUFACTURE OF WORSTED ROVING
Rene J. de Lathauwer, Hawthorne, N. J.
Application March 15, 1944, Serial No. 526,580
2 Claims. (Cl. 19—130)



1. The method of drawing wool fibers to produce a roving in condition for spinning into worsted yarn which consists in subjecting each of at least two slivers comprising such fibers, and while continuously advancing such sliver, first to simultaneous drawing and slip-draft combing such as by gilling and thereafter to simultaneous drawing and slip-draft combing such as by the use of porcupine rolls of which the former combing is more strenuous than the latter and meanwhile maintaining the intake speed of the second drawing substantially equal to the output speed of the first drawing, thereupon condensing and packaging the thus-treated sliver, and thereafter combining said thus-treated slivers to form a doubled sliver and subjecting such doubled sliver, while continuously advancing the same, first to simultaneous drawing and slip-draft combing and thereafter to simultaneous drawing and slip-draft combing of which the former combing is more strenuous than the latter and meanwhile maintaining the input speed of the second drawing substantially equal to the output speed of the first drawing of such doubled sliver, and finally condensing the thus-treated doubled sliver.

2,410,021
FLOTATION PROCESS
Fred D. De Vaney, Hibbing, Minn., assignor to Erie Mining Company, Hibbing, Minn., a corporation of Minnesota
No Drawing. Application April 26, 1944, Serial No. 532,867
10 Claims. (Cl. 209—166)



1. In the process of beneficiating silicious iron ore by cationically froth-floating the silicious gangue particles from the iron mineral particles of an aqueous pulp of such an ore by the use of a higher molecular weight aliphatic amine collector and a frother, the step of accelerating the rate of flotation of the silicious gangue particles which consists in incorporating a relatively very small amount of sodium sulfide into the pulp prior to the froth flotation step.

2,410,022
ARMOR
Charles Joseph Dumais, Woonsocket, R. I.
Application August 5, 1942, Serial No. 453,744
1 Claim. (Cl. 109—83)

In an armored tank structure, a body comprising an outside wall, an inside wall, a plane surfaced intermediate wall interposed between the inner and outer walls and in equidistantly spaced relation therewith, and a concretious deposit in the spaces between the walls, said intermediate wall being formed with openings so that the concretious deposit can connect between the spaces before hardening.

2,410,023
APPARATUS FOR DIPPING TUBES, BARS, AND THE LIKE
David William Thomas Evans, Sutton Coldfield, England, assignor to T. I. (Group Services) Limited, Birmingham, England
Application August 16, 1943, Serial No. 498,831
In Great Britain September 1, 1942
2 Claims. (Cl. 51—163)

1. Apparatus of the type specified for dipping tubes, bars or like articles, and having in combination a flexible carrier for the articles to be treated, a framework on which the carrier is mounted to provide an open bight for accommodating the articles to be treated, movable means through which at least one end of the carrier is supported on the framework and by which the said end can be moved relatively to the other end of the carrier for varying the depth of the bight to elevate or lower the articles, and means whereby the framework is pivotally supported so that it can be swung into different positions for transporting the articles from one position to another.

2,410,024
PRODUCTION OF ISOBUTANE AND THE LIKE HYDROCARBONS
Eric William Musther Fawcett and John Henry Beynon, Sunbury-on-Thames, England, assignors to Anglo-Iranian Oil Company Limited, London, England, a British joint-stock corporation
No Drawing. Application October 8, 1941, Serial No. 414,138. In Great Britain October 2, 1940
5 Claims. (Cl. 260—683.5)

2. A process for the catalytic conversion of normal aliphatic hydrocarbons into substantial proportions of the corresponding branched chain hydrocarbons comprising dissolving an aliphatic hydrocarbon feedstock and aluminium halide catalyst in tetrachloroethane, and reacting the solution at an elevated temperature and under such pressure as is necessary to maintain the solution in the liquid phase, to form the desired branched chain hydrocarbons.

2,410,025

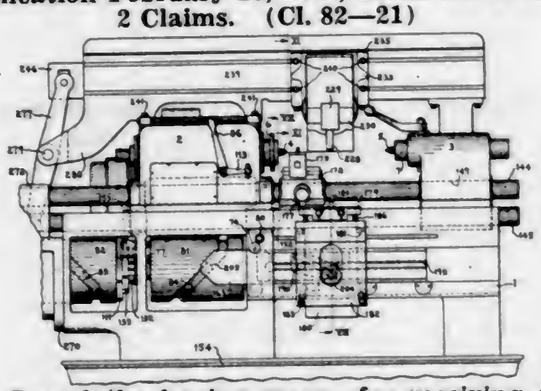
PRODUCTION OF COLORED PHOTOGRAPHIC PICTURES

Béla Gáspár, Hollywood, Calif., assignor to Chromogen, Incorporated, a corporation of Nevada

No Drawing. Continuation of application Serial No. 412,341, September 25, 1941, which is a division of application Serial No. 179,591, December 13, 1937. This application February 7, 1944, Serial No. 521,439. In Great Britain December 14, 1936

24 Claims. (Cl. 95—6)

20. In a process of producing a dyestuff image from a silver image and a uniformly distributed azo-dyestuff in a photographic emulsion, the step of treating said azo-dyestuff in the presence of said silver image with a substance capable of selectively destroying said azo-dyestuff by reduction in the presence of a photographic silver image, said treatment being carried out in the presence of a small amount of an organic compound capable of accelerating the selective dye destructive action of said substance, said compound being selected from the group consisting of diphenylmethane derivatives and triphenylmethane derivatives.



2,410,026

AUTOMATIC LATHE

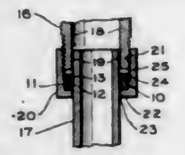
William F. Groene, Cincinnati, and Harry C. Kemper, Goshen Township, Clermont County, Ohio, assignors to The R. K. Le Blond Machine Tool Company, Cincinnati, Ohio, a corporation of Delaware

Application February 10, 1943, Serial No. 475,342

2 Claims. (Cl. 82—21)

1. In a lathe having means for receiving and rotating a work piece about a first axis, a bar journaled for rotation on a second axis parallel to said first axis, a tool holder adjustably secured to said bar and adapted to hold a tool in cutting engagement with a work piece in said lathe, plate means guided for translation on said lathe in a direction spaced from and angularly related to said second axis, a form bar adjustably mounted on said plate means, to contact and pivot said holder about the axis of said bar, a cam slide means on said lathe, translatable parallel to said axes, and a connection between said slide means and plate means, said connection including a cam pivoted on one said means and a pin on the other of said means adapted to coact with said cam to variably transmit motion from said slide means to said plate means.

2,410,027



NONSLIP JOINT SPLIT RING UNION DEVICE

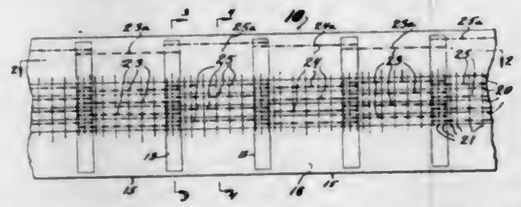
Joseph R. Guildford, Buffalo, N. Y.

Application March 20, 1944, Serial No. 527,169

6 Claims. (Cl. 285—123)

1. A non-slip joint union device for gripping plain tubing in a union connection comprising an annular ring split in part axially and provided with a tooth for projecting into the exterior wall of said tubing said tooth extending interiorly of the inner circumference of said annular said slit portion of the annular ring being provided with

cuneated abutting portions for slidable engagement and adapted to urge said tooth into the said tubing when said cuneated slidable engagement portions are compressed together within said union connection.



2,410,028

TEXTILE WEBBING

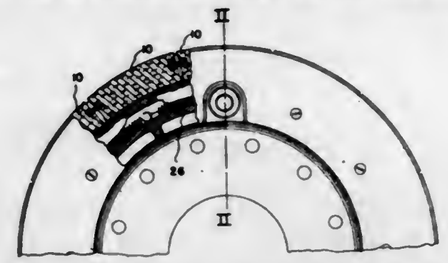
James A. Hendley, Middletown, Conn., assignor to The Russell Manufacturing Company, Middletown, Conn., a corporation of Connecticut

Application August 22, 1945, Serial No. 612,089

5 Claims. (Cl. 139—390)

2. A textile webbing including: a longitudinally-successive series of pockets in longitudinally-over-lapping relation; each pocket having two side-walls, two end-walls, and a bottom; the respective opposite side-walls of said pockets forming parts of two continuous side-strips of woven fabric formed of interwoven warp strands and weft strands and said side-strips being arranged in face-to-face relation with one edge of one side-strip secured substantially throughout its length to the adjacent edge of the other side-strip to form the bottom for each of said pockets; and the end-walls being formed of interwoven warp strands and weft strands each having one end interwoven with one side-strip, and having the other end interwoven with the other side-strip at a location longitudinally displaced from the interwoven location of its first-mentioned end, to thus produce said overlapping relation; the warp strands of said side-strips including three sets of warp strands, each of which said three sets of warp strands is interwoven with weft strands of one of said side-strips, then extends along one of said end-walls from one to the other of said side-strips, then is interwoven with weft strands of the other of said side-strips, then originally crossed over back to said one side-strip, and so one, said three sets of warp strands respectively successively extending along each three successive end-walls.

2,410,029



BRAKE BLOCK GUARD

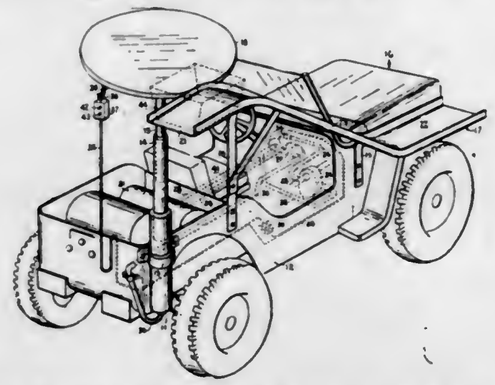
Charles Hollerith, Jackson, Mich., assignor, by mesne assignments, to The B. F. Goodrich Company, Akron, Ohio, a corporation of New York

Application April 2, 1945, Serial No. 586,220

1 Claim. (Cl. 188—152)

A radial brake comprising an annular frame having an outer relatively wide channel, segmental arcuate brake blocks supported in said outer channel for radial movement, an inner relatively narrow channel, a sealing ring disposed in said inner channel to form an annular chamber with the walls thereof, adapted to be radially expanded to actuate said brake blocks, guard and thrust members disposed in said narrow channel and corresponding in width thereto, said members each having an upright flange at one end adapted

to be received between opposed ends of adjacent brake blocks, the overall length of said members being in excess of that of the brake blocks in order to overlap the parting lines between adjacent brake blocks, means to retract said brake blocks, and structure defining said inner channel against which said brake blocks are retracted by said means.



2,410,030

VEHICLE MOUNTED FRUIT PICKER

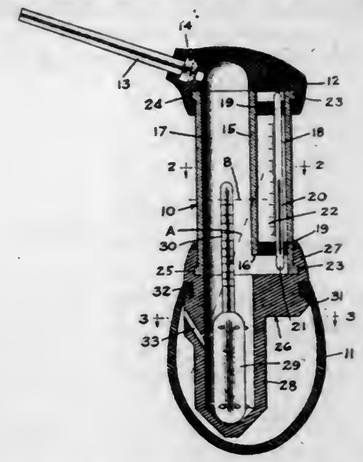
Paul P. Horni, Newark, N. J.

Application April 7, 1945, Serial No. 587,066

6 Claims. (Cl. 304—9)

1. In a vehicle mounted fruit picker in which a self-propelled vehicle provided with a frame has an operable elevator supported thereon surmounted by a platform, control means for operating the elevator to raise and lower the platform at will, and means comprising a support for a fruit receptacle or basket, the combination of features which consists in having the fruit receptacle support rigidly secured to one side of the frame so as to support said receptacle independently of said elevator platform, and having the elevator secured upon the same side of said frame in effective position to dispose the platform of said elevator adjacent to at least one side portion of said fruit receptacle support and allow said platform to at least approach the level of the latter during raising and lowering thereof.

2,410,031



THERMOHYDROMETER

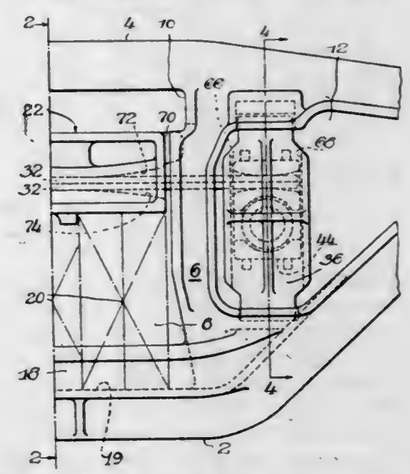
Arnold Z. Hoyer, Conshohocken, Pa., assignor, by mesne assignments, to Kimble Glass Company, Vineland, N. J., a corporation of Delaware

Application November 17, 1944, Serial No. 563,950

6 Claims. (Cl. 73—33)

1. A thermohydrometer comprising a barrel, a collapsible bulb, a nozzle, said bulb and said nozzle being carried by and in communication with opposite ends of said barrel, a member having a well therein for retaining liquid to be tested, and a float comprising a buoyant body portion and a graduated stem, said buoyant portion being po-

sitioned in and guided by said well, said well being disposed within said bulb and communicating with said barrel, said nozzle being uppermost when the thermohydrometer is positioned for reading of said stem.



2,410,032

TRUCK

Harold C. Keysor, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a corporation of New Jersey

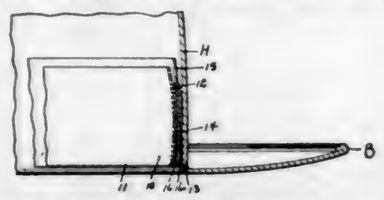
Application May 15, 1944, Serial No. 535,616

29 Claims. (Cl. 105—197)

13. In a railway car truck, a side frame, a friction device mounted thereon, a bolster resiliently supported from said frame, and an operative connection between said bolster and said device comprising a leaf spring assembly associated therewith, said device comprising spaced friction panels on said frame, friction elements resiliently urged into engagement with respective panels, and means on said elements interlocked with said assembly.

2,410,033

HAT CONSTRUCTION



Ernest J. King, New York, N. Y.

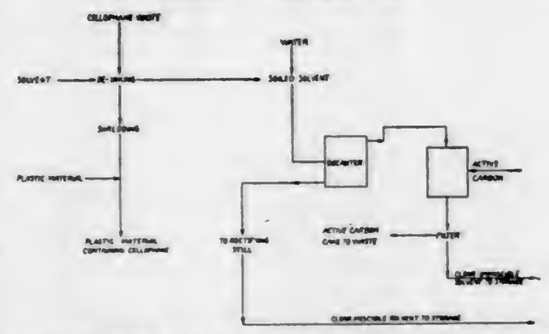
Application June 6, 1944, Serial No. 538,997

7 Claims. (Cl. 2—181)

2. A hat construction comprising a hat body, a sweat-band, first liner means connected by a row of stitching to said hat body, second liner means connected by a row of stitching to said sweat-band, said rows of stitching being disposed

adjacent to the bottom edges of said liners and being susbtantially in alignment, a central liner disposed between said first and second liner means and separating said rows of stitching, said first and second liner means and said central liner being of a thermoplastic material, the bottom of said central liner being connected to the bot-

tom edges of said first and second liner means, at least a portion of said connection extending below said rows of stitching, said connection comprising a thermoplastic bond whereby the bottom edges of said first and second liner means and the bottom of said central liner are rendered integral.



2,410,034

METHOD OF RECLAIMING SOILED SOLVENT BY DISTILLATION AND ADSORPTION

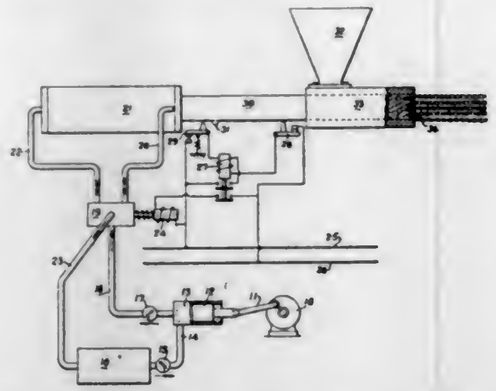
Enrique L. Luàces, Dayton, Ohio, assignor to Chemical Developments Corporation, Dayton, Ohio, a corporation of Ohio

Original application March 1, 1943, Serial No. 477,683. Divided and this application October 16, 1943, Serial No. 506,502

3 Claims. (Cl. 202—60)

1. The method of reclaiming soiled solvent containing water-insoluble coloring matter and said solvent consisting of 20 to 50% hydrocarbons and the balance being selected from the group consisting of ketones, esters, alcohols, and mixtures thereof, said method consisting in adding to the mixture of solvents a quantity of water whereby separation into two layers is brought about, the top layer containing the coloring matter and the bottom layer containing the added water, separating the top layer and the bottom layer, adding to the top layer active carbon, agitating the mixture of active carbon and top layer material, removing the active carbon therefrom to obtain top layer material free from coloring matter, and de-watering the bottom layer by distillation to obtain bottom layer material free from water.

2,410,035



EXTRUSION APPARATUS

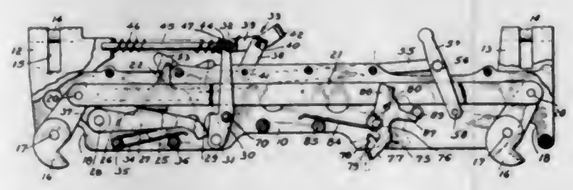
Enrique L. Luàces, Dayton, Ohio, assignor to Chemical Developments Corporation, Dayton, Ohio, a corporation of Ohio

Original applications May 26, 1943, Serial No. 488,533, and December 13, 1943, Serial No. 514,036. Divided and this application July 19, 1944, Serial No. 545,617

4 Claims. (Cl. 18—12)

4. In apparatus for extruding a rod having alternate areas of greater and lesser diameters, the combination of an extrusion chamber, an extrusion die in said chamber, hopper means in association with said chamber, a piston movable within said chamber, a pressure cylinder in association with said chamber, a piston movable within said chamber, a pressure cylinder in association with said piston, a source of pressure

fluid, means for controlling the flow of fluid under pressure into and out of said cylinder, said controlling means being automatically operated by the movement of said piston, means for delivering fluid under pressure to said cylinder, means for providing intermittent fluid flow during each stroke of said pistons, and means for receiving fluid discharged from said cylinder.



2,410,036

BOMB RELEASING SHACKLE

Roscoe I. Markey, East Orange, N. J., assignor to Pollak Manufacturing Company, Arlington, N. J., a corporation of New Jersey

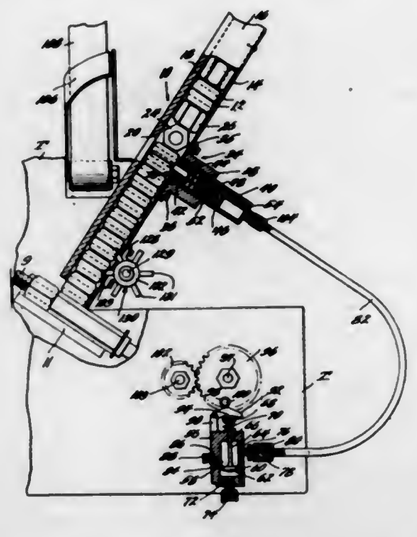
Application May 8, 1940, Serial No. 333,921

20 Claims. (Cl. 89—1.5)

1. A bomb releasing shackle having in combination, a supporting frame, bomb carrying hooks pivoted in said frame, a tie rod connecting said hooks so that they will operate simultaneously, a tooth fixed on said tie rod, a tumbler pivoted in said frame and engaging said tooth so as to prevent movement of said tie rod and its hooks, releasable locking means for holding said tumbler in engagement with said tooth, means for positively holding said releasable locking means in its locked position so that it is impossible to drop a bomb inadvertently, means for positioning said holding means to permit of the releasable locking means being operated, and electrically operated means for operating said releasable locking means so as to drop the bomb.

20. An aircraft apparatus for an aerial bomb having a relatively movable arming means, said apparatus including: means to releasably support said bomb; a first control means movable through a range including a normal position, a firing position preparatory to operating said support means to release the bomb, and an emergency position to operate said support means to release said bomb; means to engage said arming means, said engagement means being normally

yieldable to release in response to pressure from the arming means; means responsive to said first control means to preclude yielding of said yieldable engagement means when said first control means is in said firing position; a second control means operatively connected to said support means to release said bomb when the first control is in firing position; and means responsive to said first control means to prevent release of the bomb by said support means when said first control means is in said normal position.



2,410,037

ARTICLE REJECTING MECHANISM

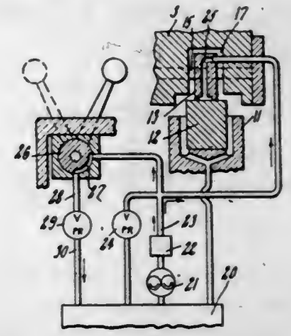
Gail C. Abbott, South Whitley, Ind., assignor to Grip Nut Company, South Whitley, Ind., a corporation of Illinois

Application February 2, 1945, Serial No. 575,871

9 Claims. (Cl. 10—162)

1. Mechanism for conveying a line of apertured nut blanks to a tapper comprising a chute having an opening in a wall thereof, a cylinder attached to said chute with its bore coaxial with said opening, a reciprocatory plunger in said cylinder mounted so that its outer end is adapted to move transversely of said bore and in and out of said chute through said opening, means urging the plunger to a retracted position with its end outside of said chute, means for supplying compressed air to the cylinder to project said plunger end into said chute into the path of said nut blanks for ejecting blanks positioned in said chute with their apertures normal to the axis of said opening and said plunger, and means for controlling admission of air to said cylinder so as to effect ejecting operation of the plunger only during intervals when movement of said blanks along said chute is arrested.

2,410,038



GRINDING MACHINE

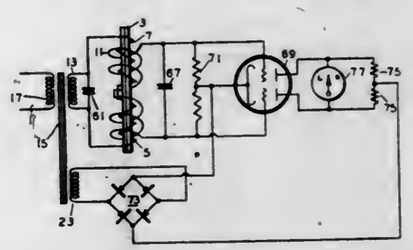
Merton H. Arms and Leon J. Barnard, Springfield, Vt., assignors to Bryant Chucking Grinder Company, Springfield, Vt., a corporation of Vermont

Application September 21, 1945, Serial No. 617,740

2 Claims. (Cl. 51—2)

1. In a grinding machine, a carriage, spaced ways for supporting said carriage for sliding motion, said machine having a work support and a grinding wheel support, one of said supports being carried by said carriage and movable by the sliding of said carriage to cause a grinding wheel on said grinding wheel support to traverse work on said work support, a pair of sources of lubricant under two different pressures, and means for se-

lectively introducing such lubricant from either of said sources between said carriage and one of said ways to cause, by change from one to the other pressure, change in relative positions of said wheel and work laterally of the direction of sliding motion of said carriage.



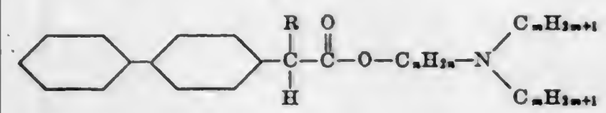
2,410,039

MAGNETIC FIELD RESPONSIVE DEVICE

Lennox F. Beach, Merrick, N. Y., assignor to The Purves Corporation, Springfield, Mass., a corporation of Massachusetts

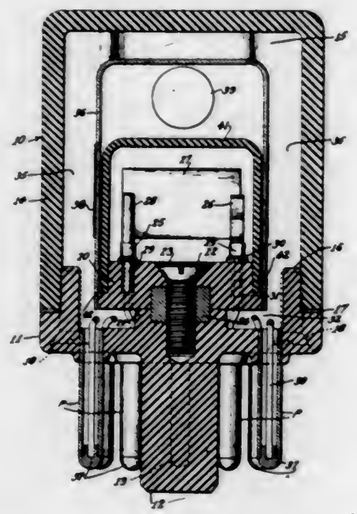
Application July 31, 1941, Serial No. 404,809

13 Claims. (Cl. 175—183)



3. A magnetic field responsive device comprising a core of magnetic, permeable material, means including a source of periodically varying electrical energy for producing periodically varying fluxes in a zone of said core and in opposed bucking relationship, a pick-up coil associated with said zone of the core and symmetrically positioned with respect to said fluxes, means for indicating the output from said coil, and phase-sensitive means connected with said energy source for supplying a unidirectional current from said coil-output to said indicating means.

8. In a device sensitive to an external, unidirectional magnetic field for supplying a signal voltage output dependent in magnitude upon the direction of said field relative thereto, a core of permeable magnetic material, means including a source of periodically varying electrical energy for producing periodically varying fluxes in a zone of said core and in opposed bucking relationship, a pick-up coil associated with said core in said zone thereof and positioned in symmetrical relation to said bucking fluxes, interaction between said device and said external field producing a periodically varying voltage in said pick-up coil, and means for rectifying the output of said coil, said rectifying means being connected to and controlled by said energy source whereby to render the polarity sense of the rectified coil output dependent upon the phase relationship of the coil output with respect to said energy source.

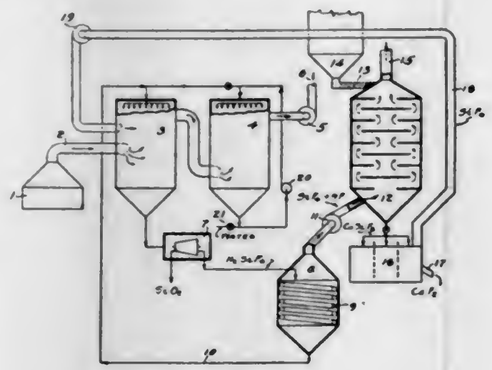


2,410,040
BASIC ALKYL ESTERS AND THEIR SALTS
Frederick F. Blicke, Washtenaw County, Mich., assignor to Regents of the University of Michigan, Ann Arbor, Mich., a corporation of Michigan
No Drawing. Application February 26, 1944, Serial No. 524,083
6 Claims. (Cl. 260—469)

1. A compound selected from the group consisting of (*a*) basic-alkyl esters of the formula

wherein R is selected from the group consisting of hydrogen and hydrocarbon radicals, *n* is an integer from 2 to 4, inclusive, and *m* is an integer from 1 to 4, inclusive, and (*b*) acid salts thereof.

2,410,041
PIEZOELECTRIC CRYSTAL CABINET
Samuel A. Bokovoy, Verona, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application April 1, 1943, Serial No. 481,427
7 Claims. (Cl. 171—327)

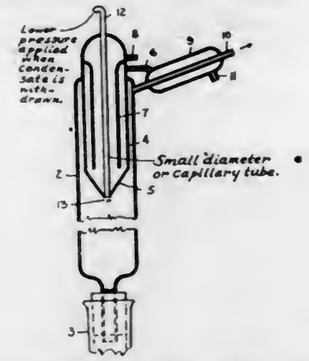


1. A temperature-controlled piezo-electric crystal mounting comprising a base, an outer housing mounted on the base, said base and housing being formed of thermal insulating material, a thermally conducting metal housing spaced from the outer housing, a heater and a heater-controlling thermostat mounted on the metal housing, and an inner housing enclosing the crystal supports located within and spaced from the metal housing.

2,410,042
PURIFICATION OF STYRENE AND ITS HOMOLOGUES
George R. Bond, Jr., Paulsboro, N. J., assignor to Houdry Process Corporation, Wilmington, Del., a corporation of Delaware
No Drawing. Application March 31, 1944, Serial No. 528,949
4 Claims. (Cl. 260—669)

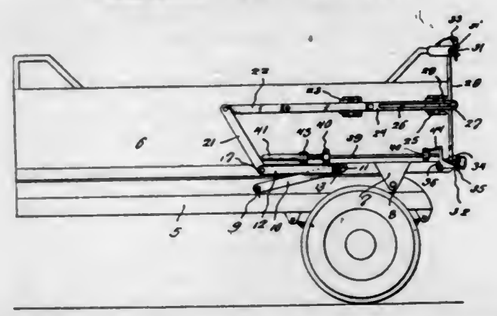
1. The method of purifying a hydrocarbon oil containing a styrene compound, which hydrocarbon oil was produced by cracking a gas oil, which comprises dissolving sulphur dioxide in the hydrocarbon oil, maintaining the oil with the sulphur dioxide dissolved therein at a temperature below 130° F. for at least 15 minutes in the absence of undissolved liquid phase sulphur dioxide, whereby reactive impurities are caused to react to form a high boiling reaction product and separating the reaction product and excess sulphur dioxide from the hydrocarbon oil.

2,410,043
PROCESS FOR MANUFACTURING CALCIUM FLUORIDE
Ernest J. Breton, Arlington, and William H. Waggaman, Alexandria, Va., assignors to the United States of America, as represented by the Secretary of the Interior
Application January 4, 1945, Serial No. 571,344
1 Claim. (Cl. 23—88)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



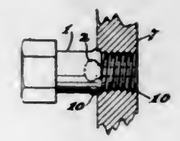
A cyclic process for producing calcium fluoride consisting in absorbing gases containing silicon tetrafluoride in water to produce hydrofluosilicic acid and silica; separating the acid solution from silica; continuously evolving gaseous fluorine compounds from said solution by means of heat and evaporation; recirculating the solution thus partially freed from fluorine in order to absorb additional quantities of silicon tetrafluoride; contacting the gases evolved from the heated solution with lime to form calcium fluosilicate; decomposing said calcium fluosilicate at elevated temperatures to produce molten calcium fluoride and silicon tetrafluoride; and reintroducing the evolved silicon tetrafluoride into the absorption stage to produce further quantities of calcium fluoride.

2,410,044
HYDROCARBON CATALYZING PROCESS
Robert E. Burk and Everett C. Hughes, Cleveland Heights, Ohio, assignors to The Standard Oil Company, Cleveland, Ohio, a corporation of Ohio
No Drawing. Application May 29, 1941, Serial No. 395,827
5 Claims. (Cl. 260—668)



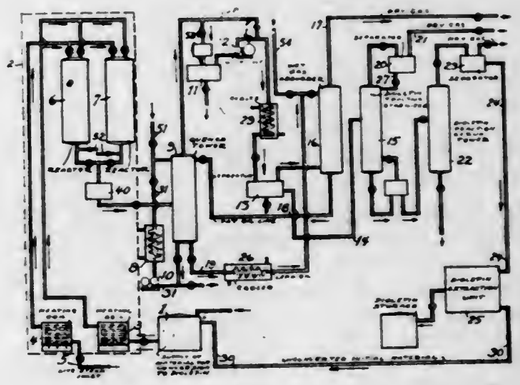
1. In a process of aromatizing, subjecting hydrogen and a hydrocarbon of four carbon atoms and a naphtha containing non-benzenoid hydrocarbons, at elevated pressure and a temperature of 800–1200° F., to the action of an oxide contact-mass formed from co-precipitation from dissolved salts of tin and aluminum and chromium, the tin in the contact-mass being 1–30 mol per cent.

2,410,045
LABORATORY FRACTIONATING COLUMN HEAD
Robert E. Burk, Cleveland Heights, and Thomas J. Walsh, Cleveland, Ohio, assignors to The Standard Oil Company, Cleveland, Ohio, a corporation of Ohio
Application December 24, 1942, Serial No. 470,104
3 Claims. (Cl. 257—28)



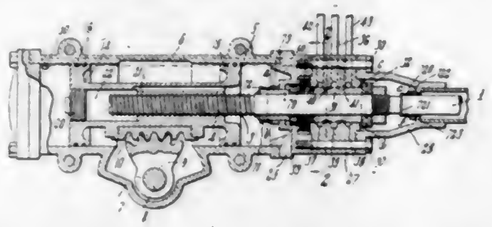
3. A fractionating column head, comprising a chamber, and a condenser including a closed condensing surface within said chamber, said condensing surface being tapered at the lower end at which end it has an opening, a capillary tube within said condenser and having its lower end communicating with and sealed to the walls defining said opening, said capillary tube having its upper end extending outside of said condenser to connect to a source of lowered pressure, and means by which a cooling medium may be brought into contact with said condensing surface for cooling the same.

2,410,046
TAIL GATE OPERATING MECHANISM FOR DUMP TRUCKS
Jake D. Burns, Richmond, Calif.
Application February 2, 1945, Serial No. 575,852
4 Claims. (Cl. 298—23)



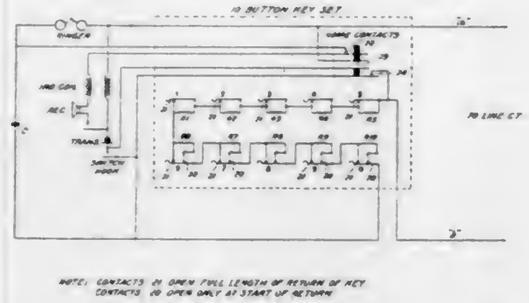
1. A tail gate opening and closing mechanism for dump truck bodies and comprising a tail gate pivoted at its upper and lower edges for selectively swinging upwardly or downwardly into open position, means for locking one of said edges against opening movement while the other of said edges is free, a rock shaft journaled transversely of the truck body, arms secured to the shaft and extending respectively upwardly and downwardly therefrom, a link connecting the lower arm to a stationary part of the truck for rotating the shaft upon a raising and lowering movement of the truck body, means connecting the upper arm to an intermediate part of the tail gate to open and close the latter upon operation of the shaft, a latch means for one edge of the tail gate, and means operated by one of said arms for releasing the latch means upon initial raising movement of the body.

2,410,047
METHOD OF EXPLOSIVELY BLASTING JOINTS
Lawton A. Burrows, Woodbury, N. J., and Walter E. Lawson, Westover Hills, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application January 9, 1942, Serial No. 426,150
3 Claims. (Cl. 218—29)



1. The method of explosively blasting a fluid-tight joint between a metal fastening element provided with a central axial cavity and another body provided with a recess to receive said metal fastening element, which method comprises inserting the hollow portion of said fastening element into the recess of said body, providing an explosive unit at least partly within said element cavity and at least partly within that portion of said element cavity which extends within said body recess, and expanding the walls of said cavity into contact relationship with the walls of said body recess, said explosive being characterized by a velocity of detonation of at least 1000 meters per second, at least a portion of said explosive unit being in contact with the atmosphere at the time of detonation to permit escape of explosion gases.

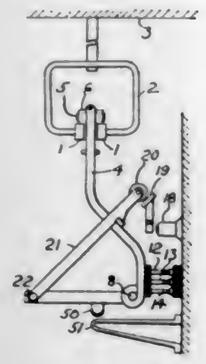
2,410,048
CHEMICAL PROCESS
Donald L. Campbell, Short Hills, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application June 13, 1942, Serial No. 446,871
8 Claims. (Cl. 260—680)



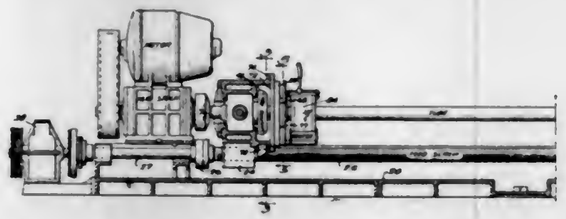
8. In the process for the production of diolefinic hydrocarbons by a high temperature reaction, the improvement which comprises contacting the hot gaseous reaction products first with water and then with a relatively cool liquid comprising a fat oil, separating the cooled gaseous reaction products from said oil, liquefying a fraction containing the bulk of the diolefinic compounds in said reaction products, separating uncondensed gases from said liquefied fraction, washing the uncondensed gases with an absorber oil to recover diolefinic compounds therefrom, using the fat oil obtained in the washing step as the fat oil for contacting said hot gaseous reaction products, thereby stripping said fat oil of absorbed diolefinic compounds and returning the stripped oil to the washing step.

2,410,049
POWER STEERING APPARATUS
Francis W. Davis, Belmont, Mass.
Application September 26, 1944, Serial No. 555,812
3 Claims. (Cl. 180—79.2)

1. A steering mechanism comprising a manually rotatable steering shaft having a threaded portion and mounted for limited axial motion, a fluid motor cylinder coaxial with said shaft, a piston slidable within said cylinder and having a threaded opening into mating relation to which said threaded portion extends, a steering part operatively connected to said piston to be moved by axial motion of said piston, a valve surrounding and controlled by axial motion of said shaft and controlling the supply of fluid within said cylinder on opposite ends of said piston, and means tending to center said shaft axially.



2,410,050
TELECOMMUNICATION SWITCHING SYSTEM
Gerald Deakin, New York, N. Y., assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application April 21, 1944, Serial No. 532,143
20 Claims. (Cl. 179—18)

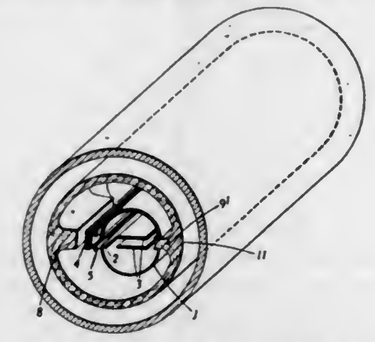


1. In a switching system, a controller having a plurality of operating positions, a source of current, a multi-electrode discharge device, means for establishing a connection between said controller and said device, a relay, means for operating said relay when potentials applied to two electrodes of said device bear a predetermined relationship to one-another, means including said connection for applying a different potential to one electrode in each position of the controller, means actuated by the controller for applying various potentials to the second electrode, and switching means variably operable under the control of said relay and the last-mentioned means.

2,410,051
CONVEYER SYSTEM CONTROL
Gerald Deakin, New York, N. Y., assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application November 16, 1944, Serial No. 563,756
16 Claims. (Cl. 214—60)

2. In a control circuit for causing the unloading of a conveyer at any one of a plurality of points on its traverse, in combination a potentiometer on the conveyer, a plurality of taps on said potentiometer, settable means for selecting one of said taps, a potentiometer at each unloading point, a variable contact on each said potentiometer, an impedance unit comprising two parallel branch circuits each including two oppositely poled unidirectional impedances, the impedances of one branch being reversely poled with respect to those in the other branch, whereby current flow in either direction through said unit causes the common terminal of the two impedances in one branch to have a relatively positive potential with respect to the corresponding point in the other branch, means to supply an operating voltage to said unloading point potentiometers, commutator means for supplying the same operating voltage to said conveyer potentiometers when the conveyer is at an unloading point, commutator means for supplying the potential from a selected tap point on said conveyer potentiometer to one terminal of said impedance unit, and means for supplying the potential from the variable contact of said unloading point potentiometer to the other terminal of said impedance unit.

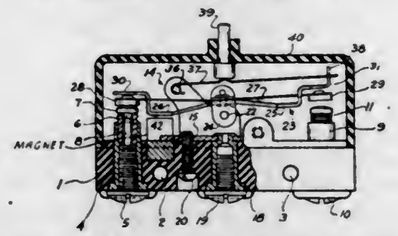
2,410,052
TUBE REDUCING MACHINE
Clarence L. Dewey, Elkhart, Ind., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application June 19, 1944, Serial No. 541,018
12 Claims. (Cl. 113—53)



1. In a tube reducing machine, the combination of a pressure roll and means for moving the same radially with respect to the axis of the tube, a heater located closely in advance of the roll and in position to permit the tube to pass relatively therethrough, a reenforcing heat resisting bushing positioned to closely surround the wall of the tube and located intermediate the heater and the roll to exteriorly reenforce the tube immediately in advance of the roll, means for mounting the heater, bushing and pressure roll as a unit and restraining the bushing from rotation, and means for relatively advancing said unit longitudinally of the tube and rotating the tube relatively to the agencies comprising said unit.

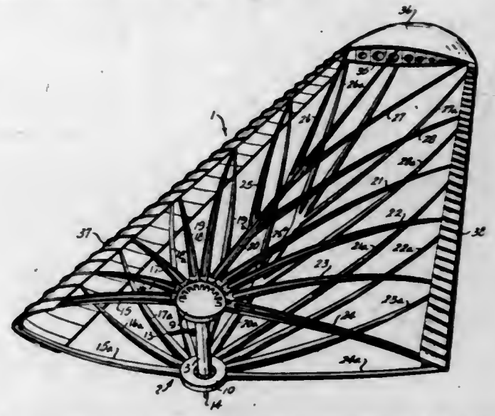
2,410,053
ADHESIVE AND ADHESIVE SHEET
Richard Gurley Drew, St. Paul, Minn., assignor to Minnesota Mining & Manufacturing Company, St. Paul, Minn., a corporation of Delaware
No Drawing. Application April 7, 1941, Serial No. 387,275
10 Claims. (Cl. 260—3)

1. An adhesive composition comprised of rubber, a thermo-softening rubber-compatible resin adapted to produce tack, and a minor proportion of an oil-soluble heat-advancing rubber-reactive phenol-aldehyde resin.



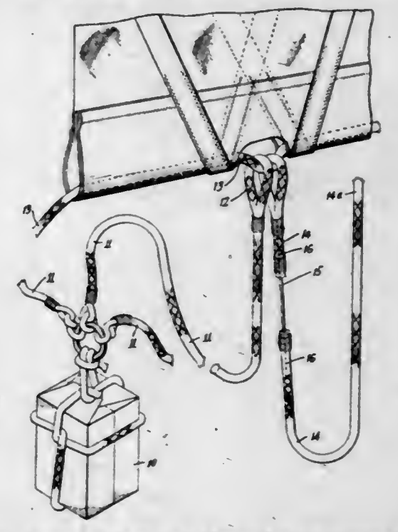
2,410,054
ELECTRON DISCHARGE APPARATUS
John Heaver Fremlin and Roger Norman Hall, London W. C. 2, England, assignors to Standard Telephones and Cables Limited, London, England, a British company
Application June 2, 1942, Serial No. 445,503
In Great Britain August 2, 1940
7 Claims. (Cl. 250—27.5)

1. Electron discharge apparatus of the electron



velocity modulated type comprising a tubular metallic member forming part of a vacuum-tight envelope, a resonator comprising a short length of coaxial line having diametric aligned apertures and disposed within said tubular metallic member, means for generating and directing a beam of electrons through said apertures also disposed within said tubular metallic member, and a pair of magnetic pole pieces disposed one at each end of the electron beam path having only a single gap therebetween, one of said pole pieces being mounted upon said tubular metallic member and the other of said pole pieces being mounted upon said resonator.

2,410,055
SNAP SWITCH
Paul G. Frerer, Milwaukee, Wis., assignor to Perfex Corporation, Milwaukee, Wis., a corporation of Wisconsin
Application July 28, 1944, Serial No. 547,020
11 Claims. (Cl. 200—67)



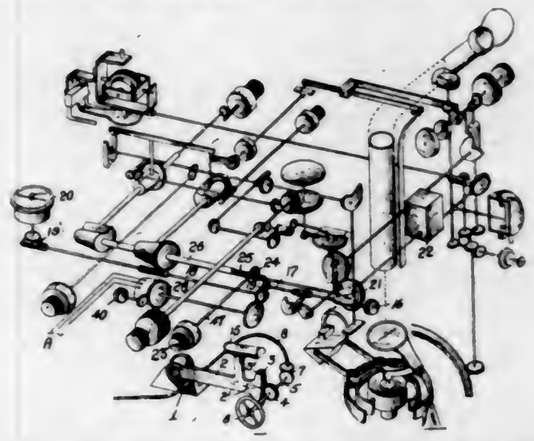
1. In a switch unit, a base, a switch arm on one side of the base and pivoted thereto, a movable contact operated by said switch arm, a stationary contact cooperating with said movable contact, adjusting means for the stationary contact, a terminal member having a screw hole for mounting a terminal screw on the other side of the base, the screw hole for the terminal screw being in alignment with the adjusting means for the stationary contact whereby the stationary contact may be adjusted by a tool inserted through said screw hole.

2,410,056
VARIABLE CAMBER WING
Jacque Fresco, Hollywood, Calif.
Application January 11, 1945, Serial No. 572,290
9 Claims. (Cl. 244—44)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. An airplane wing construction of double surface airfoil cross section comprising a central hub structure positioned in the plane and substantially at the point of maximum camber of the root chord, a plurality of sets of angularly disposed spars connected to said hub member and extending radially, one set lying in the upper boundary surface of the wing and the other set lying in the lower boundary surface of the wing, and means connecting the terminal end of each spar in one set to the terminal end of a respective spar in the other set to form related pairs and also connecting said pairs to each other, the terminal ends of said pairs of spars lying in the marginal boundaries of the wing between the tip and root chord sections.

2,410,057
PARACHUTE
Leonard P. Frieder, Rockville Centre, and Walter S. Finken, Brooklyn, N. Y.; said Finken assignor to said Frieder
Application August 20, 1943, Serial No. 499,306
6 Claims. (Cl. 244—149)

1. In an apparatus of the character described, a unit comprising a normally unopened parachute



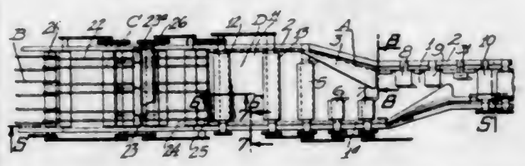
canopy and a load connected by shroud lines to the canopy, and a single static cord directly connecting one point only of the outer edge of the canopy to the airplane from which the unit is launched or dropped whereby the interior of the canopy is opened to air resistance, said cord constituting the only connection between the unit and the airplane at the time of launching and being so constructed that it will break under the strain applied by the opening of the canopy and weight of the load.

2,410,058

AUTOMATIC CLIMB AND GLIDE CONTROL FOR AIRCRAFT

Carl A. Frische, Leonia, and Gerald N. Hanson, Allendale, N. J., assignors to Sperry Gyroscope Company, Inc., Brooklyn, N. Y., a corporation of New York

Application April 25, 1939, Serial No. 269,838
12 Claims. (Cl. 244—76)



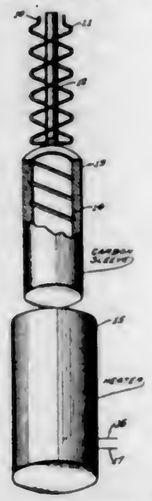
1. In an automatic pilot director for bombsights mounted on aircraft, the combination with a bombsight having means for altering the altitude setting, a variable speed device for controlling said means, means for causing change of altitude of the craft at a rate governed by the speed of said variable speed device, and adjustable means for governing the speed and direction of said device.

2,410,059

MEANS FOR FOLDING NEWSPAPERS AND THE LIKE

Kenneth C. Garrison, Norwalk, Calif.

Application April 1, 1942, Serial No. 437,233
2 Claims. (Cl. 270—93)



1. In a newspaper folding machine, a guiding means for guiding newspapers flatwise, a pair of successive folding devices at opposite sides of the guiding means for folding successively the edges of the newspaper at the opposite sides of the guiding means inwardly over the middle portion of the newspaper, rollers in association with the guiding means, rollers being located opposite the respective folding devices for feeding the separate newspapers successively through the folding devices with which the rollers are associated, the rollers opposite the second successive folding device being also arranged to crease the fold produced by the first folding device, and other rollers positioned progressively beyond and in substantial alignment with the second folding means for creasing the fold produced by the latter.

2,410,060

METHOD OF PRODUCING VACUUM TUBE ELECTRODES

Lynn C. Goodale, Newark, N. J., assignor to Federal Telephone and Radio Corporation, a corporation of Delaware

Application March 11, 1942, Serial No. 434,269
9 Claims. (Cl. 148—11.5)

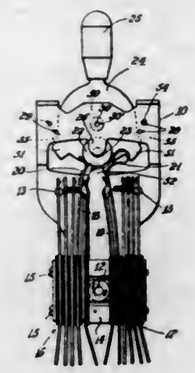
1. The method of producing spiral filamentary electrodes comprising forming a spiral of filament wire, screwing said spiral into a carbonaceous sleeve provided with a spiral groove to receive said filament spiral, and heating the assembled filament and sleeve to a temperature sufficiently high to set said spiral and thus remove internal stresses which might cause deformation of said filament, and to cause carburization of at least that portion of the filament which is in contact with the sleeve.

2,410,061

METHOD OF SEALING LEAD-IN CONDUCTORS

Lynn C. Goodale, Newark, N. J., assignor to Federal Telephone and Radio Corporation, a corporation of Delaware

Application May 27, 1942, Serial No. 444,664
5 Claims. (Cl. 49—81)



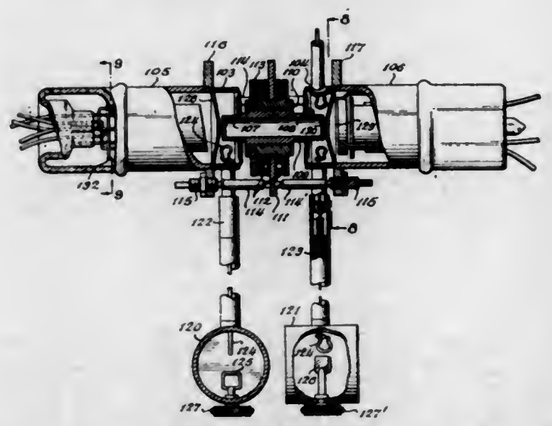
1. The method of sealing a lead-in conductor through a glass wall, comprising positioning a linear conductor having a glass bead sealed around it intermediate its ends, along the axis of an open tubular extension formed in the glass wall, so that a central portion of said tubular extension encircles a central portion of the bead, with an end portion of the extension projecting beyond the adjacent end portion of the bead, heating said tubular extension until said central portion thereof is fused to that of said bead, and continuing said heating until said end portion of said tubular extension falls inwardly on that of the bead sealing thereto and forming an annular trough of cusp shape contacting said conductor where said conductor emerges from the bead.

2,410,062

TELEPHONE KEY

Leslie B. Haigh, West Orange, and Franklin A. Stearn, Westfield, N. J., assignors to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware

Application May 6, 1944, Serial No. 534,420
2 Claims. (Cl. 179—176)



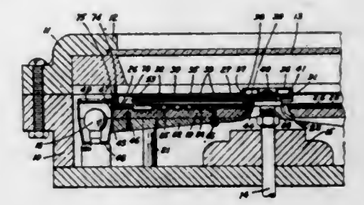
1. A switching key comprising a frame, a rotatable cam mounted upon a pivot in said frame, contact springs operable by said cam, a projection on the periphery of said cam, a plurality of pairs of oppositely disposed holes in said frame, said pairs of holes being located at different angular positions relative to the said pivot and at such radial distance from said pivot that said cam projection passes over each of said pairs of holes during rotation of said cam and a removable pin for insertion in any one of said pairs of holes for cooperation with said projection whereby the degree of rotation of said cam and the extent of throw of the key may be varied.

2,410,063

HIGH-FREQUENCY TUBE STRUCTURE AND APPARATUS

William W. Hansen, Garden City, Russell H. Varian, Wantagh, and Sigurd F. Varian, Garden City, N. Y., assignors to The Board of Trustees of The Leland Stanford Junior University, Stanford University, Calif.

Original application July 2, 1940, Serial No. 343,528. Divided and this application September 2, 1942, Serial No. 457,096
17 Claims. (Cl. 250—27.5)



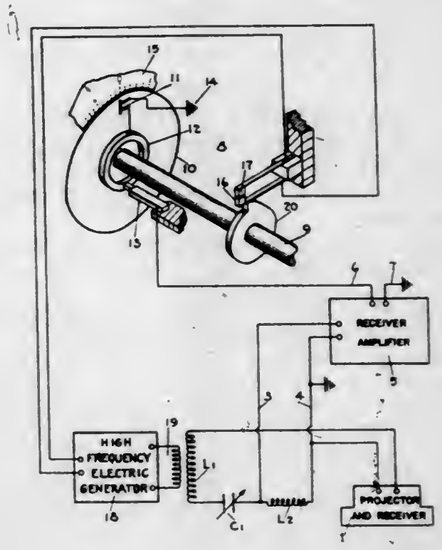
1. A cavity resonator having a substantially flat wall carrying an electron-permeable section, and a wall opposite said flat wall having a reentrant portion carrying a second electron-permeable section, said flat wall being slightly conical.

2,410,064

ILLUMINATED DIAL AND POINTER

George K. C. Hardesty, Seat Pleasant, Md.

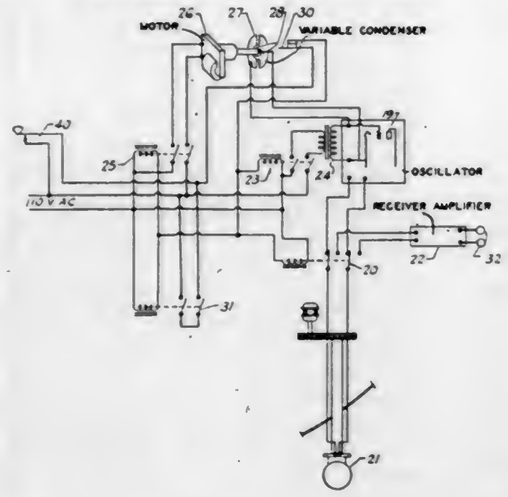
Application July 17, 1943, Serial No. 495,219
12 Claims. (Cl. 116—129)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. An illuminated pointer structure for use with a dial comprising, a pointer of transparent material having a hub portion, means for directing light into the hub portion from the rear of the dial, a substantially opaque light shield covering the front portion and not the rear of said hub, and a reflecting element situated between the shield and the hub and substantially wholly out of optical contact with the hub.

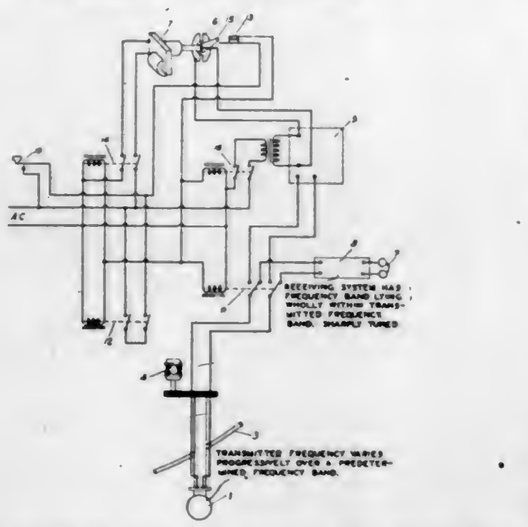
2,410,065

ELECTRICAL CIRCUITS



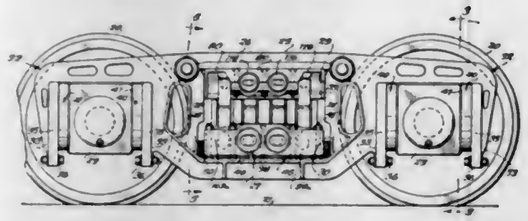
Bertram M. Harrison, Newton, Mass., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware

Application August 6, 1935, Serial No. 34,938
6 Claims. (Cl. 177—386)



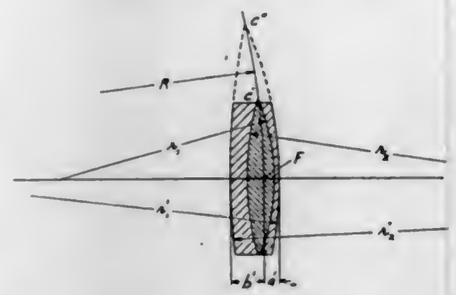
2. In a system for the transmission and reception of compressional waves, a series circuit including a coil of substantially negligible resistance adapted to have a high frequency current impressed upon the coil, a compressional wave transmitting and receiving device and separate capacities and inductances having substantially negligible resistance, forming a series circuit, the capacities and coil being balanced for the high frequency current impressed upon the coil, and an amplifying unit shunted across such inductances, the impedance of such inductances being substantially less than the impedance of the transmitting and receiving device.

2,410,066
SUBMARINE SIGNALING
Bertram M. Harrison, Newton Highlands, Mass., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware
Application November 11, 1937, Serial No. 174,081
15 Claims. (Cl. 177—386)



1. A method of sound ranging under water with the use of a high frequency beam projector which comprises sending out a signal of supersonic compressional waves varying progressively in frequency from the beginning to the end of the signal over a frequency range comparatively small with respect to the supersonic frequency and having a predetermined time length less than twice the time of travel of the waves from the projector to an object whose range is being determined and observing the echo reflected from the objects in the path of the beam.

2,410,067
SUBMARINE SIGNALING
Bertram M. Harrison, Newton Highlands, Mass., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware
Application September 23, 1938, Serial No. 231,390
6 Claims. (Cl. 177—386)



1. The method of sound ranging in water with the use of a high frequency beam projector and a high frequency receiving system which comprises transmitting a beam of supersonic compressional waves continuously varying in frequency between predetermined frequency limits, the said limits including the sensitive frequency band of the receiving system and observing the reflections from objects in the path of the emitted signal.

2,410,068
SPRING SUSPENSION FOR RAILROAD CARS
Albert F. Hickman, Eden, N. Y., assignor to Hickman Pneumatic Seat Co. Inc., Eden, N. Y., a corporation of New York
Application February 24, 1943, Serial No. 476,943
7 Claims. (Cl. 105—197)

5. In a spring suspension between a body supporting member and a wheel supported member of a railroad vehicle, a relatively light torsion rod journaled at one end on one of said members and anchored at its other end thereon, a relatively heavy torsion rod journaled at one end on the other of said members and anchored at its other end thereon, an arm fast to the journaled end of each of said torsion rods and projecting outwardly therefrom, and connecting means between the ends of said arms and interconnecting the same, said connecting means having an external face engaging an external face of the arm connected with said relatively light torsion rod, one of said engaging faces being cam shaped to shift, under increasing load, the line of engagement between said external engaging faces toward said light torsion rod to impose an increased proportion of the load on said heavy torsion rod.

2,410,069
OBJECTIVE FOR PROJECTION, PHOTOGRAPHY, TELEVISION, AND FOR TELESCOPE
Arthur J. Holman, East Orange, N. J.
Application October 30, 1940, Serial No. 363,463
4 Claims. (Cl. 88—57)

1. A triplet comprising a central crown element and a pair of flint elements, said crown element having the radii of curvature of its two refracting surfaces so related that said crown element meets the specification of being bent to radius R about a point **0** on the optical axis of said triplet, said pair of flint elements having the radii of curvature of its internal and external refracting surfaces so related that said pair of flint elements meets the specification of being bent also to said radius R about said point **0**.

2,410,070
CATALYTIC ALKYLATION PROCESS
Aaron W. Horton, Detroit, Mich., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
No Drawing. Application December 8, 1943, Serial No. 513,461
16 Claims. (Cl. 260—683.4)

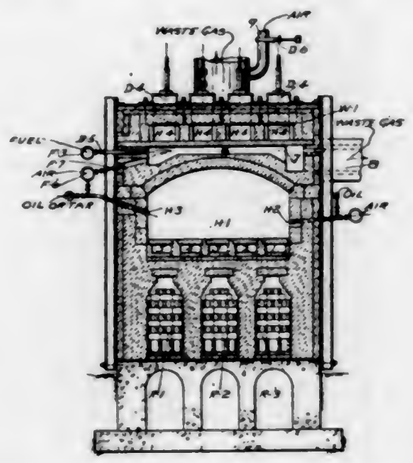
14. In a process of alkylating a paraffinic hydrocarbon with an olefinic hydrocarbon in a reaction zone under alkylating conditions and in the presence of catalytic material; the improvement which comprises contacting said paraffinic hydrocarbon and said olefinic hydrocarbon in gaseous phase and in a reaction zone under alkylating conditions, with a homogeneous gaseous phase alkylation catalyst consisting essentially of material selected from the group consisting of chlorine derivatives of hydrocarbons, bromine derivatives of hydrocarbons, chlorine and bromine, in the presence of oxygen, and maintaining said paraffinic hydrocarbon in excess over said olefinic hydrocarbon in said reaction zone so that alkylation is the principal reaction.

2,410,071
CATALYTIC ALKYLATION PROCESS
Aaron W. Horton, Detroit, Mich., and John W. Brooks, Wenonah, and Arlie A. O'Kelly, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
No Drawing. Application September 17, 1943, Serial No. 502,812
14 Claims. (Cl. 260—683.4)

14. The process of alkylating a paraffinic hydrocarbon with an olefinic hydrocarbon, which comprises contacting said paraffinic hydrocarbon and said olefinic hydrocarbon in a reaction zone under alkylating conditions, with an alkylation catalyst consisting essentially of a halogen selected from the group consisting of chlorine and bromine, and maintaining an excess of the paraffinic hydrocarbon over the olefinic hydrocarbon in said reaction zone so that alkylation is the principal reaction.

2,410,072
ALKYLATION OF ISOBUTANE WITH PROPYLENE
Aaron W. Horton, Detroit, Mich., and John W. Brooks, Wenonah, and Arlie A. O'Kelly, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
No Drawing. Application September 17, 1943, Serial No. 502,813
15 Claims. (Cl. 260—683.4)

1. The process of alkylating isobutane with propylene, which comprises contacting isobutane with propylene, in gaseous phase, in a reaction zone under alkylating conditions including a temperature varying between about 750° F. and about 850° F. and a pressure in excess of about 2500 pounds per square inch, with an alkylation catalyst consisting essentially of a halogenated hydrocarbon selected from the group consisting of chlorine derivatives of acyclic hydrocarbons and bromine derivatives of acyclic hydrocarbons, that forms with said isobutane and with said propylene, a single, homogeneous gaseous phase under said alkylating conditions, and maintaining the isobutane in excess over the propylene in said reaction zone so that alkylation is the principal reaction.



2,410,073
MANUFACTURE OF POLYESTERS
John B. Howard, Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
No Drawing. Application June 24, 1943, Serial No. 492,155
7 Claims. (Cl. 260—75)

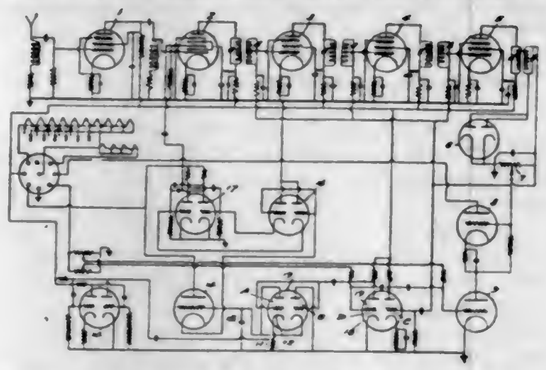
1. The method of forming polyesters of high molecular weight which comprises esterifying a reaction mixture consisting of dihydroxy alkanes and dicarboxy hydrocarbons having a lower vapor pressure than the dihydroxy alkanes, said dihydroxy alkanes being present in an excess of between about 5 mol per cent and about 50 mol per cent over the molar amount of dicarboxy hydrocarbons present, said dicarboxy hydrocarbons containing less olefinic unsaturation, as the sole non-benzenoid unsaturation, than will produce in the final polyester an average of 5 olefinic bonds per 400 atoms in the linear chains, calculated by assuming no cross-linking between molecules at unsaturated bonds, said esterification being carried out by heating said reaction mixture at a temperature between about 180° C. and about 250° C. in a closed vessel provided with a reflux condenser maintained at a temperature in the vicinity of 110° C. so as to permit escape of water vapor while returning vaporized dihydroxy alkane, said vessel and reflux condenser being so proportioned that an excess of dihydroxy alkane remains after substantially all of the carboxyl groups of the dicarboxy hydrocarbon have been esterified, continuously bubbling a dry, oxygen-free, inert gas through the reaction mixture during said esterification, continuing said esterification until substantially all of the carboxyl groups of the dicarboxy hydrocarbon have been esterified, subjecting the resulting product to a high vacuum while maintaining the reaction temperature of between about 180° C. and about 250° C. and continuing the bubbling of inert gas, so as to remove excess dihydroxy alkane and cause further molecular growth of the polyester by ester interchange, and continuing said reaction until the polyester has achieved a degree of condensation such that the number of ester groups in the polyester constitutes at least 98 per cent of the total number of ester, hydroxyl and carboxyl groups in said polyester.

2,410,074
APPARATUS FOR PYROLYTICALLY TREATING HYDROCARBONS
Charles H. Hughes, Glen Ridge, N. J., assignor to Hughes By-Product Coke Oven Corporation, New York, N. Y., a corporation of New York
Application November 18, 1943, Serial No. 510,760
7 Claims. (Cl. 196—104)

1. In a refractory cracking and coking oven of the broad rectangular sole-fired type having a sealable broad refractory coking oven of a long rectangular type being broader than it is high and adapted to receive carbonaceous material capable of evolving upon being heated volatile vapors including straight chain hydrocarbon vapors and a residue capable of being carbonized and coked, and a main heating system located under substantially the entire sole of said oven to effect a substantially uniform heating of substantially the entire sole whereby vapors are evolved from carbonaceous material in said oven and some heat is supplied to said cracking chamber, for pyrolytically treating carbonaceous material including fluid hydrocarbon masses such as petroleum, heavy oil, oil residue, tar, and the like to evolve vapors containing straight chain

hydrocarbons such as paraffin hydrocarbons and then cracking said straight chain hydrocarbons and converting them into aromatic hydrocarbons such as benzol, toluol and xylol while carbonizing the residue into good coke having acceptable qualities and properties, the improvement which comprises a refractory cracking chamber superimposed above and associated with said oven for cracking and heat treating said hydrocarbon vapors to effect pyrolysis therein and conversion of straight chain hydrocarbons into aromatic hydrocarbons, said cracking chamber being divided into a plurality of longitudinally extending zones by means of partitions extending longitudinally thereof, each of said partitions having a multiplicity of projections for producing turbulence in said hydrocarbon vapors, means

connecting said coking oven with said cracking chamber to conduct the volatile vapors including straight chain hydrocarbon vapors evolved in said coking oven to said cracking chamber, and an auxiliary heating system interposed between the top of said oven and the bottom of said cracking chamber for supplying the rest of the heat required in said chamber, said auxiliary heating system having independent control whereby the temperature in the cracking chamber may be independently controlled relative to that of the coking oven and desired aromatic temperatures may be maintained within said cracking chamber to effect the desired pyrolysis of vapors therein including the conversion of straight chain hydrocarbon vapors into aromatic hydrocarbon vapors.



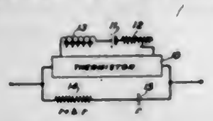
2,410,075

RAPID FREQUENCY CHANGE RADIO RECEIVER

James F. Hutchins and William K. White, Jr., San Antonio, Tex.

Application January 31, 1944, Serial No. 520,458
4 Claims. (Cl. 250—20)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a receiver for receiving radio signals which sweep rapidly over a band of different frequencies, a conventional super-heterodyne radio receiving circuit having a first detector and a second detector, a multi-vibrator oscillator connected to the first detector, a second multi-vibrator producing a near-sine wave voltage, means controlled by said voltage to affect the oscillator to cause the receiver to sweep over a band of frequencies, means associated with the second detector to operate only upon the reception of pulses of predetermined frequency and amplitude, and means affected by the operation of said last mentioned means to render the second multi-



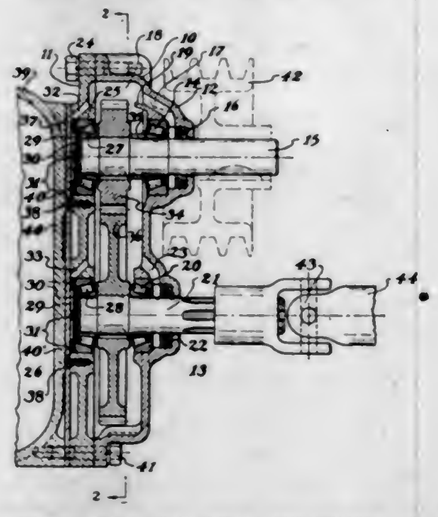
ti-vibrator ineffective and lock the oscillator at a definite frequency.

2,410,076

NEGATIVE IMPEDANCE CIRCUIT

Kenneth S. Johnson, South Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application March 5, 1943, Serial No. 478,113
8 Claims. (Cl. 178—44)



1. A circuit comprising a thermistor and a bias current supply circuit for causing said thermistor to develop an impedance effect having a negative resistance component and an inductive component, and a circuit connected in shunt relation to said thermistor and comprising positive resistance and capacitive reactance proportioned to substantially neutralize the inductive reactance of said thermistor impedance.

2,410,077

POWER TAKE-OFF UNIT

Beverly W. Keese, Oshkosh, Wis., assignor to The Timken-Detroit Axle Company, Detroit, Mich., a corporation of Ohio

Application February 16, 1944, Serial No. 522,641
10 Claims. (Cl. 74—11)

1. A power take-off unit including a housing structure comprising a body section and a cover section for the open side of said body section; power input and output shafts; anti-friction

bearings rotatively supporting said shafts in the body and cover sections of the housing; said cover section having bearing receiving openings therethrough; means in said housing for transmitting power from the input to the output shaft; means rigidly securing the housing sections in connected relation; and a shipping plate attached to and extending over the outer side face of the cover section to retain the anti-friction bearings in assembled relation with said housing cover section.

2,410,078

UNIFIED FIBROUS FABRIC

Waldo Kellgren, St. Paul, Minn., assignor to Minnesota Mining & Manufacturing Company, St. Paul, Minn., a corporation of Delaware

No Drawing. Application August 3, 1940, Serial No. 351,232
6 Claims. (Cl. 117—155)

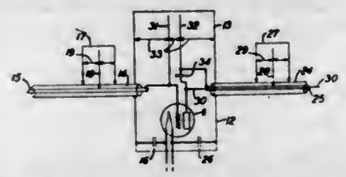
1. A flexible sheet comprising an initially porous fibrous fabric sized or impregnated by a highly cohesive composition essentially comprised of the in situ vulcanized fluxed blend of broken-down rubber, admixed compatible resin adapted to increase the cementing action upon the fibres of the fabric and present in the proportion of about 25 to 400 parts per 100 parts of rubber, and a self-vulcanizing organic accelerator of the thiuram polysulfide type and an activator therefor.

2,410,079

PRESSURE-SENSITIVE ADHESIVE

Waldo Kellgren, St. Paul, Minn., assignor to Minnesota Mining & Manufacturing Company, St. Paul, Minn., a corporation of Delaware

No Drawing. Application September 19, 1941, Serial No. 411,590
14 Claims. (Cl. 260—793)



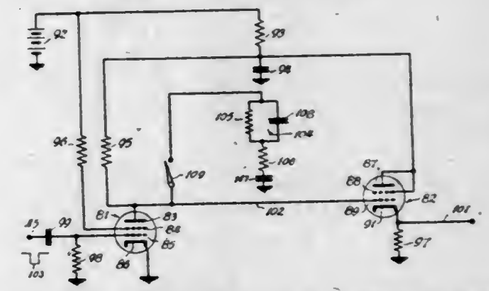
1. A method of transforming rubber to a normally and stably tacky and pressure-sensitive adhesive form usable as a coating for adhesive sheets or tapes, which comprises breaking down the rubber until it is in a pasty and sticky condition and afterwards vulcanizing the rubber until it is more cohesive than adhesive but still tacky, the vulcanizing being substantially completed at this stage such that after-vulcanization and tack loss will not occur.

2,410,080

HIGH-FREQUENCY APPARATUS

William M. Kellogg, Morristown, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application December 11, 1941, Serial No. 422,510
4 Claims. (Cl. 179—171)



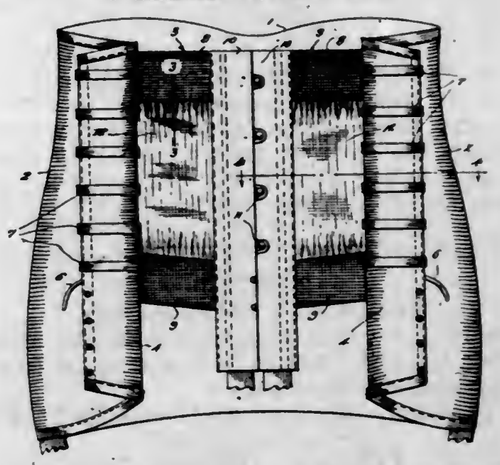
1. In a high frequency amplifier, a vacuum tube having a cathode, an anode and a control grid, a two-wire line, a shield surrounding said line and so spaced with respect thereto and to the spacing between the two wires of said line that each of said wires forms a substantially concentric line with said shield, means for connecting one set of terminals of said two-wire line to said anode and control grid, means for connecting the corresponding end of said shield to said cathode, and an adjustable device forming a short circuit at the other set of terminals of said two wires and a point on said shield spaced from said corresponding end thereof, the spacing of the wires of said two-wire line with respect to each other and to said shield being such that said adjustable device simultaneously controls the length of said substantially concentric lines to tune the grid and anode circuits to the operating frequency and the length of said two-wire line to prevent the generation of spurious oscillations.

2,410,081

ELECTRIC CIRCUIT

David E. Kenyon, Smithtown, N. Y., assignor to Sperry Gyroscope Company, Inc., a corporation of New York

Application October 22, 1943, Serial No. 507,234
9 Claims. (Cl. 178—44)

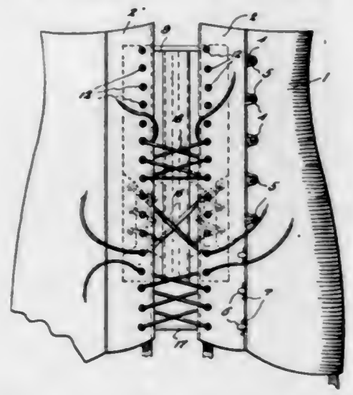


1. A circuit for providing a voltage having a square-root function with respect to time, comprising in combination: a source of potential having appreciable resistance; a series network comprising a resistance element, a capacitance element, and a shunt resistance-capacitance element, said network being connected across said source; and means adapted selectively to provide a relatively low-impedance path in shunt with said network; whereby said voltage is developed across said network upon removal of said path.

2,410,082

VENTILATED CORSET

Joseph J. Kispert, Branford, Conn.

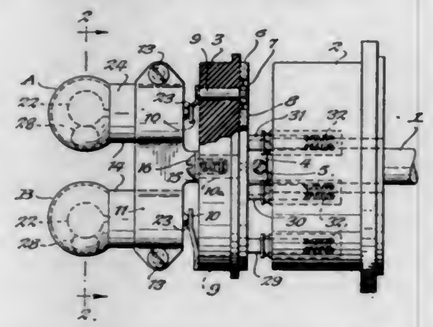


Application October 25, 1944, Serial No. 560,223
7 Claims. (Cl. 2—27)

1. A corset comprising a body open at the front and having closure portions and vest sections overlapped thereby, means for securing the closure portions together and stretched flat in compressing engagement with the vest sections, said vest sections each having horizontally extending upper and lower elastic strips secured at their rear ends, a vertical front strip secured along front ends of the upper and lower strips

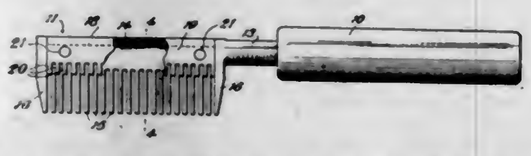
with its lower portion extending below the lower elastic strip, a sheet of extensible porous fabric secured along its margins to the upper and lower strips and to the vertical strip and the body and being extensible and contractable with the elastic upper and lower strips, and means for detachably connecting the vertical strips of the vest sections with each other.

2,410,083
CORSET
Joseph J. Kispert, Branford, Conn.
Original application May 15, 1944, Serial No. 535,688. Divided and this application April 27, 1945, Serial No. 590,576
5 Claims. (Cl. 2—27)



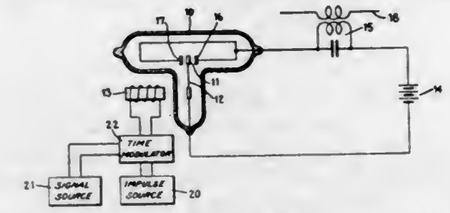
1. A garment comprising a body having a vest and closure portions overlying the vest when closed, said vest having side edges secured to the closure portions in spaced relation to inner and outer side edges thereof and provided with a vertically extending reinforcement midway its width, opposed strips sewed at side edges of said reinforcement and between the closure portions and side edges of the vest, said strips being spaced upwardly from the lower end of the vest and the vest having its lower end spaced upwardly from lower ends of the closure portions, eyelets carried by said strips and said closure portions, fasteners detachably connecting the inner side edges of one closure portion with said body, laces threaded upwardly back and forth through eyelets of said strips and then carried downwardly in diagonally crossed relation to each other to eyelets of the closure portions adjacent lower ends of the strips and threaded upwardly back and forth through eyelets of the closure portions, and other laces laced upwardly through eyelets in the closure portions between the first laces and upper and lower ends of the closure portions and releasably secured.

2,410,084
RECOVERY OF HEPARIN
Marvin H. Kuizenga, Kalamazoo, Mich., assignor to The Upjohn Company, Kalamazoo, Mich., a corporation of Michigan
No Drawing. Application December 9, 1943, Serial No. 513,623
3 Claims. (Cl. 195—7)



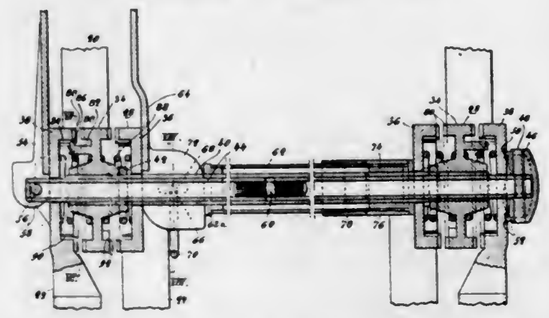
3. In a method for the recovery of heparin from animal tissue containing the same, the steps of finely subdividing the animal tissue, heating the subdivided tissue in mixture with water to between about 30° and 50° C., maintaining the mixture at between 20° and 25° C. until autolysis is substantially completed, extracting the mixture with dilute aqueous alkali and ammonium sulfate, acidifying the extract to precipitate crude heparin, washing the precipitated heparin with alcohol to remove fatty material, redissolving the solid residue in aqueous alkali, digesting this solution with trypsin, precipitating heparin from the digestion mixture, redissolving the precipitated heparin in dilute aqueous alkali, heating the solution to inactivate residual trypsin, precipitating heparin with alcohol, and separating and drying the heparin.

2,410,085
CIRCUIT CONTROLLER
Harry L. Lambert, Enfield, N. Y., assignor, by mesne assignments, to Walter J. Pickering, New York, N. Y.
Application June 26, 1943, Serial No. 492,395
13 Claims. (Cl. 200—80)



2. A circuit controller comprising a hollow housing having a closed chamber with a wall not wet by mercury, a rotatable element, a support carried by said element and mounting said housing eccentrically of the axis of rotation of said element for rotation with said element, said housing being separately rotatable, about its own axis, on said support, a body of mercury within and only partially filling said chamber, resting upon a side wall thereof and of a size to assume a curved form in which a substantial portion thereof is held away from and against spreading along said wall, solely by its surface tension opposing gravity, a conductor extending into said chamber and having therein a contact with an exposed surface area not wet by mercury, eccentric to said housing axis, and spaced from said chamber wall whereby when said housing is rotated with said element, said mercury will be confined by centrifugal forces, undivided and relatively immovable against the zone of said wall farthest from the axis of said element and electrically connected to and disconnected from said contact area as its shape is varied by the opposing centrifugal forces and surface tension, and a circuit connection to said mercury whereby the speed at which an electrical connection or disconnection is made between said contact area and said mercury may be varied by adjustment of said housing about its own axis on said support.

2,410,086
COMB
Charles Lewis, New York, N. Y.
Application October 20, 1944, Serial No. 559,528
3 Claims. (Cl. 132—14)

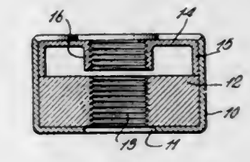


3. A comb comprising a main central member having a back portion with a row of substantially long teeth extending therefrom, said back portion being cut away between the end teeth thereof, a yoke resting in said cut away portion and secured to said back portion, said yoke forming a pair of auxiliary side members, each of said side members having a row of comparatively short teeth formed thereon, the ends of said short teeth terminating slightly beyond the bases of said long teeth and the short teeth being staggered in relation to the long teeth.

2,410,087
WAVE IMPULSE GENERATOR
Charles V. Litton, Redwood City, Calif., assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application February 25, 1942, Serial No. 432,226
5 Claims. (Cl. 250—17)

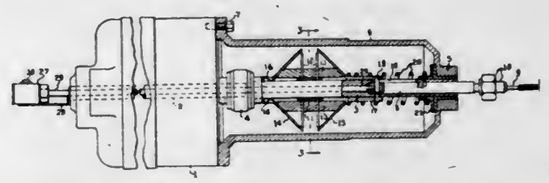
1. An impulse generator for generating short wave trains of high power comprising a source of direct current energy, an enclosed vibrator switch arrangement in series circuit with said source, electro-mechanical means for operating said switch arrangement to alternately make and break said series circuit to produce high current impulses, and a tuned circuit comprising a substantially closed resonant chamber forming at least part of the envelope of said enclosed switch and arranged in circuit with said switch for shock excitation by said impulses.

2,410,088
ADJUSTABLE CHAIR, BEDSTEAD, STRETCHER, OR THE LIKE
Carl Ernst Edvard Lundquist, Stockholm, Sweden
Application November 3, 1942, Serial No. 464,373
In Sweden November 14, 1941
11 Claims. (Cl. 287—101)



5. In a rotatable joint, three adjacent elements rotatable with respect to each other, shaft means including a plurality of telescoped shafts, at least one of said shafts extending axially through all of said elements, a first member carried by said shaft means and having axially displaceable surface, means responsive to axial displacement of said surface for locking the middle element to at least one of the outside elements, a second member carried by said shaft means and having axially displaceable surface, and means responsive to axial displacement of the surface on said second member for locking said middle element to at least the other outside element.

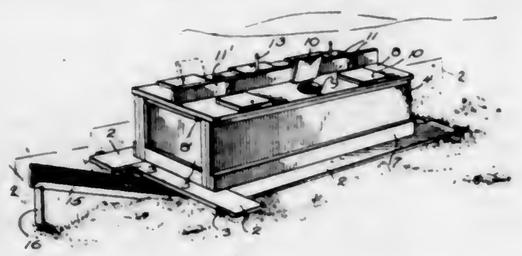
2,410,089
PRESSURE-SENSITIVE ADHESIVE TAPE
William E. Lundquist and Waldo Kellgren, St. Paul, Minn., assignors to Minnesota Mining & Manufacturing Company, St. Paul, Minn., a corporation of Delaware
No Drawing. Application August 17, 1944, Serial No. 549,963
8 Claims. (Cl. 117—122)



4. A pressure-sensitive adhesive tape having a unified paper backing member comprising a flexible porous paper impregnated and unified by a relatively non-tacky, non-hygroscopic copolymer of a vinyl ester and a neutral ester of an ethylene-alpha, beta-dicarboxylic acid in which at least about half of the carboxylic acid groups are esterified with a saturated beta-alkoxyethanol, said copolymer having a modulus of elasticity between 2½ and 25 megadynes per square centimeter.

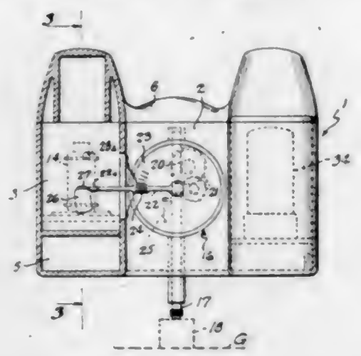
2,410,090
SELF-LOCKING NUT
Albert C. Lusher, deceased, late of Waterbury, Conn., by the Citizens and Manufacturers National Bank of Waterbury, administrator, Waterbury, Conn.
Application June 29, 1944, Serial No. 542,685
8 Claims. (Cl. 151—21)

1. A device of the character described comprising a permanently assembled entity consisting of a metal cup-shaped shell of polygonal cross-section having a central aperture in its bottom, an apertured threaded nut member in said shell and having plane end surfaces one of which engages the cup bottom, and a sheet metal inset of polygonal configuration having a right-angle flange the rim of which engages the remaining end surface of said nut member with the remainder of said inset spaced from said remaining end surface, said inset having a central tubular threaded portion with its threads out of phase with the threads of said nut member and said shell having bendable means for engagement with said inset to lock the inset and nut member in said cup.



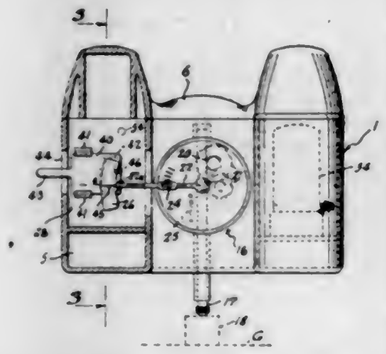
2,410,091
FEEDHEAD FOR ROTARY TOOLS
Edward J. Lynch, Detroit, Mich.
Application July 12, 1944, Serial No. 544,592
5 Claims. (Cl. 77—33)

1. In a feed head for rotary tools, the combination with a driven shaft and a tool holder slidable along and rotative with said shaft to feed a tool forwardly to a piece of work, a weight and means mounting it on the shaft for centrifugal outward actuation, a member slidable forwardly along the shaft responsive to outward actuation



of the weight, and a tool-feeding connection from said member to the tool holder, of a brake shoe fixed on the shaft, a non-rotative member forwardly of and opposed to the brake shoe, a spring compressed between the shoe and said slidable member, to yieldably resist forward movement of said member, and means yieldably exerting forward pressure on the shaft to frictionally apply the brake shoe to said opposed member.

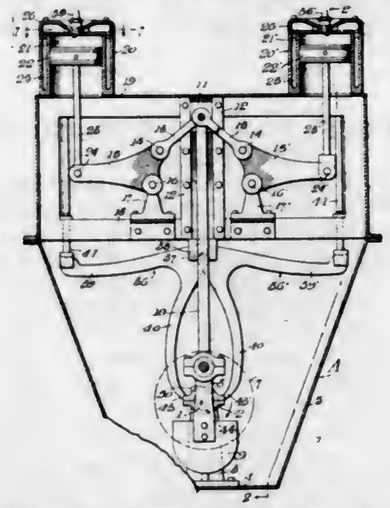
2,410,092
SANITARY FIELD LATRINE
Charles C. Martin, Savannah, Ga.
Application September 14, 1944, Serial No. 554,141
2 Claims. (Cl. 4—116)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A portable and knockdown field latrine including separate end walls and side walls of wood, latches connecting the adjacent ends of said walls, a seat board, apertures in said seat board and covers for said apertures said covers being hinged to the seat board, a supporting member in back of and spaced from the rear of said hinged covers, said supporting member being attached to and extending above and lengthwise from end to end of the seat board, seat engaging stops attached to and extending outwardly from the side of said supporting member, said seat engaging stops contacting and preventing said covers from remaining in a vertical position when they are raised, spindles extending upwardly from the top of said supporting member for holding a roll of paper, spaced cleats on the underside of the seat board at the ends and sides thereof to straddle and engage the upper edges of the side and end walls, and means for engaging one of the faces of each of the side and end walls at the bottom thereof to prevent bodily movement of the latrine in a horizontal direction.

2,410,093
GAUGING DEVICE
Eugene F. Martinec, Cleveland, Ohio
Application March 15, 1943, Serial No. 479,239
2 Claims. (Cl. 33—147)

1. A gauging device comprising a photocell element, means for connecting said element with an indicating means to be controlled thereby, a light element positioned to provide a light beam to the cell element, means between the light element and the cell element to control the light beam comprising a wall member and a movable control member over the wall member, one of said members having a narrow slot therein for the light beam and the other member having a slot of sufficient width so that the first slot is in alignment therewith both if the part being gauged is of the correct given size and at least one measuring unit different from the correct size, said indicating means being so connected with the cell element as to give an indication when said slots are in alignment, a mechanical gauging element including a movable member positioned to be affected by the element to be gauged, and an operative connection from the latter movable member to the control member to shift said control member to correspond with the size of the element being gauged.

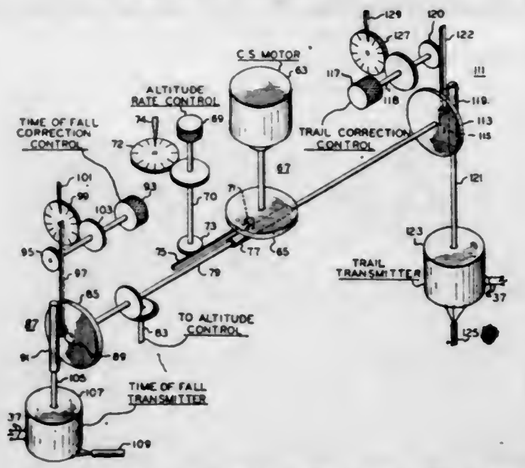


2,410,094
GAUGING DEVICE
Eugene F. Martinec, Cleveland, Ohio
Application March 17, 1943, Serial No. 479,430
10 Claims. (Cl. 33—147)

1. A gauging device comprising a photocell element, means for connecting said element with a device to be controlled, a light element positioned to provide a light beam to the cell element, a wall between the light and the cell provided with an opening for passage of the light beam, a shutter, means for adjustably mounting the shutter on the wall over said opening, said shutter being provided with a slot in alignment with the wall opening and inclined to the direction of movement of the shutter in adjusting it, a movable member including a portion movable over the slot and provided with an opening adapted to be brought into alignment with the slot, a gauging stem adapted to engage an element to be gauged, and an operative connection from the stem to the member.

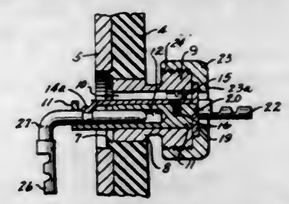
2,410,095
INTERNAL-COMBUSTION ENGINE
William H. McInturff, Warrington, Fla.
Application July 20, 1942, Serial No. 451,655
2 Claims. (Cl. 74—40)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A pair of members operable in a prearranged order, a rotary member, and means connected to be actuated by said pair of members and connected to drive said rotary member, said means including a driving rod connected to said rotary member, a pair of pivotally mounted bell crank levers operable in opposed and unopposed relation, links connecting said levers with said driving



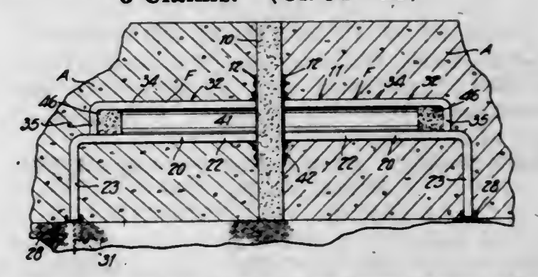
rod, and rods connecting said levers with said pair of members.

2,410,096
METHOD OF PREPARING HIGH MOLECULAR WEIGHT ALIPHATIC KETONES
Ronald E. Meyer and Ferdinand P. Otto, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
No Drawing. Application June 12, 1943, Serial No. 490,682
5 Claims. (Cl. 260—595)



1. The method of preparing dioleyl ketone from oleic acid which comprises heating said acid at an elevated temperature above about 300° C. and below the destructive distillation temperature of said acid in the presence of an active metal which reacts with water to produce nascent hydrogen at said temperature and in a non-oxidizing atmosphere of substantially only evolved gases with a positive pressure produced by substantially only said gases.

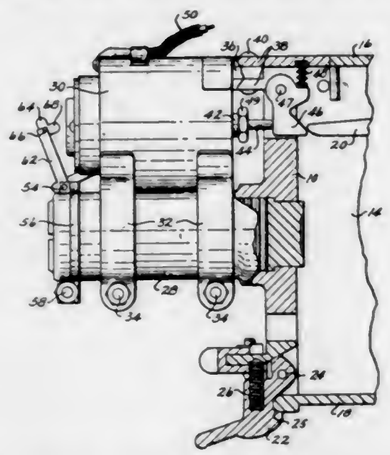
2,410,097
GLIDE ATTACHMENT FOR BOMB SIGHTS
Frederick W. Morgenthaler, Brooklyn, and John S. Garwood, New York, N. Y., assignors to Sperry Gyroscope Company, Inc., Brooklyn, N. Y., a corporation of New York
Application January 17, 1942, Serial No. 427,162
5 Claims. (Cl. 244—77)



1. An aircraft provided with an automatic pilot having an altitude control, a bombsight carried by the aircraft having control means, means for actuating the altitude control to change the altitude of the aircraft, and means responsive to the operation of the actuating means for continuously adjusting the control means of the bombsight to compensate for the effect of changing altitude.

2,410,098
CONNECTOR ASSEMBLY, THERMOCOUPLE LEAD
Carl W. Muller, Osborn, Ohio
Application April 1, 1943, Serial No. 481,491
2 Claims. (Cl. 173—328)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. An assembly of the character described comprising, in combination, an insulating body having a perforation therein and adapted to be secured to one side of a firewall or bulkhead having an opening, with the perforation and opening registering; a bushing or thimble secured to the insulating body within the perforation and having a longitudinal axial bore; a socket member made of conductive material and adapted to be loosely received in said axial bore, with one end thereof extending beyond the end of the bushing or thimble, so that said socket member end is exposed on the side of the firewall or bulkhead opposite to that on which said insulating body lies; said socket member having a central hole; a spring secured to said socket member and partially entering said hole; means secured to said socket member at the extreme end thereof and providing an abutment for the adjacent end of the bushing or thimble; a nut threaded on said bushing or thimble and engaging said means to secure the socket member immovably within the bushing or thimble; means to electrically connect a lead to the end of the socket member carrying said abutment-providing means; a conducting pin adapted to be manually insertable in the central hole in the socket member to make good electrical connection therewith, and then being frictionally engaged by said spring; and means to electrically connect a lead to said pin.



2,410,099
EXPANSION JOINT FOR CONCRETE ROADWAYS
Russell C. Olmsted, Harrington Park, N. J., and Arthur H. Harris, New Britain, Conn.; Hazel B. Olmsted, administratrix of said Russell C. Olmsted, deceased, assignor to said Harris
Application December 18, 1943, Serial No. 514,754
3 Claims. (Cl. 94—18)

1. An expansion joint structure comprising in combination, a filler strip adapted to close the

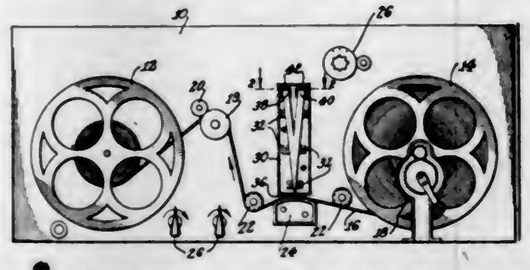
joint between adjacent ends of a pair of concrete slabs, said filler strip having a transverse passage therein, a dowel beam freely passing through said passage and having its ends disposed beyond opposite sides of said filler strip, a pair of metal frame structures having their respective inner ends fitting against opposite sides of the filler strip and slidably receiving the respective ends of the dowel beam, each of said frame structures including parallel top and bottom frame members of channel shape in cross section with the open sides thereof in confronting relation, legs carried by the outer ends of the frame structures for supporting the same in an elevated position above the subgrade of a roadway, and rupturable fastening means for securing the inner ends of the frame structures to opposite sides of the filler strip, said rupturable fastening means being adapted to break under expansion stresses of the connected slabs.

2,410,100
REMOTE-CONTROL FIRING MECHANISM FOR MACHINE GUNS
George R. Oscar, West Milton, and Wayne S. Boals, Dayton, Ohio
Application April 13, 1942, Serial No. 438,744
1 Claim. (Cl. 89—27)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

For use with a machine gun, a fire control device comprising a back plate, a buffer tube secured to said back plate, a trigger pivotally mounted on said back plate, a solenoid for electrically operating the gun, means for clamping said solenoid to said buffer tube, a plunger of extensible length within said solenoid aligned with said trigger so as to cause the gun to be fired when the solenoid is energized and permanently locked means secured to said solenoid and to said back plate for locating and holding said plunger in alignment with said trigger.

2,410,101
WAX-FREE PYRETHRIN SOLUTIONS
Joseph D. Park, Wilmington, Del., and William W. Rhodes, Westtown, Pa., assignors to Kinetic Chemicals, Inc., Wilmington, Del., a corporation of Delaware
No Drawing. Application January 6, 1944, Serial No. 517,260
3 Claims. (Cl. 167—24)

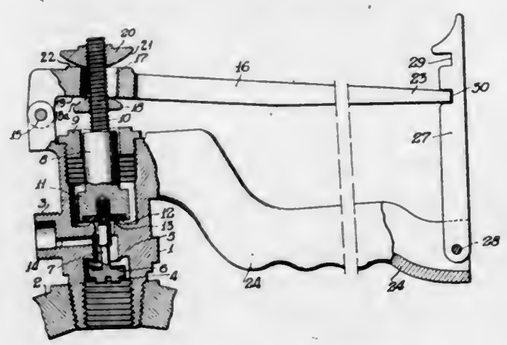
1. The process of stabilizing a propellant solution of pyrethrins in CCl_2F_2 which solution normally tends to precipitate waxes and fats in the presence of iron at temperatures above —20° C., which comprises the steps of chilling the solution to between about —10° C. and about —30° C. until wax precipitation has ceased and then separating the chilled solution from the precipitate.



2,410,102
PROCESS FOR HYDROBLEACHING GLYCERIDE OILS
William J. Paterson, Newton Highlands, Mass., assignor to Lever Brothers Company, Cambridge, Mass., a corporation of Maine
No Drawing. Application March 31, 1941, Serial No. 386,086
21 Claims. (Cl. 260—409)

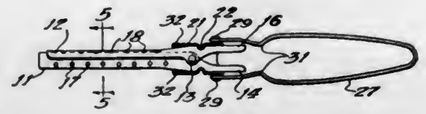
1. A process for hydrobleaching glyceride oils to form edible products having a minimum of unsaponifiable components and an improved color and stability comprising treating the oil at a temperature of from 130 to 250° C. with hydrogen under a relatively high pressure in the neighborhood of 100 atmospheres, for a period of time not substantially greater than 60 minutes and in the presence of not substantially more than 0.5% of at catalyst having the general formula X—Y—O, in which X represents at least one metal selected from the group consisting of copper and silver, and Y represents at least one metal selected from the group consisting of chromium, vanadium, tungsten and uranium.

2,410,103
METHOD OF CURING ACRYLATE POLYMERS AND RESULTING PRODUCT
Leo W. Rainard, Cochituate, Mass., assignor, by mesne assignments, to National Dairy Products Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application November 28, 1942, Serial No. 467,205
1 Claim. (Cl. 260—79)



A process for forming an elastic composition substantially free from plastic flow, which comprises dissolving polymeric methyl ester of acrylic acid in benzene, passing bromine into said solution, separating the treated polymer from the benzene, mixing it with sodium sulfide, molding the mixture to the desired shape and vulcanizing the same with heat.

2,410,104
LIGHT DIRECTING DEVICE
Paul M. Rainey, Martinsville, N. J., assignor to Federal Telephone & Radio Corporation, a corporation of Delaware
Application August 27, 1942, Serial No. 456,431
11 Claims. (Cl. 250—41.5)



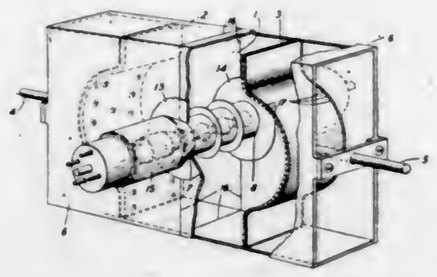
1. In combination, a substantially V-shaped light conducting device, a source of light positioned adjacent the end of one arm of said V-shaped device, a light sensitive element positioned adjacent the end of the other arm of the device, means for controlling the actuation of the light sensitive element by varying the amount of light reflected from the apex of the V through said other arm, said device having its lower apex portion formed with a small flattened scanning area and with opposite angular walls disposed for concentration of the light rays to said area.

2,410,105
VALVE
Valentin Remus, Brussels, Belgium; vested in the Alien Property Custodian
Application April 17, 1940, Serial No. 330,197
In Belgium April 29, 1939
1 Claim. (Cl. 251—32)

In a valve assembly, the combination of a body provided with a longitudinal bore; an annular valve seat in said bore; a valve member coacting with said seat; a second annular valve seat in said bore; a second valve member coacting with said second valve seat; a reciprocatory valve stem on which both members are mounted for unitary oscillation in said bore, the members being so related that when one member is seated the other member is unseated, and vice versa; a conduit communicating with said bore intermediate said seats; a lever pivoted on said body and connected with said stem for reciprocation thereof; locking means to prevent pivotal movement of said lever; a threaded extension on said stem; and the connection between the stem and lever including an adjustable stop threaded on said extension and co-acting with said lever when said lever is held immovable by said locking means, the adjustment of said stop determining the degree of sealing engagement of one of said valve members, when said valve member is seated.

2,410,106
HAIR CURLER
Frank D. Reynolds, Chicago, Ill., assignor to Gaylord Products, Incorporated, Chicago, Ill., a corporation of Delaware
Application January 26, 1945, Serial No. 574,742
5 Claims. (Cl. 132—34)

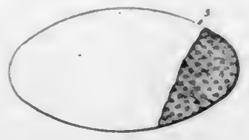
3. A hair curler comprising a curling member, a clamping jaw member pivotally connected to said curling member, said members having finger gripping portions extending rearwardly from their point of pivotal connection, a collar journaled on said members adjacent their connected portions, said collar having locking notches formed therein, a U-shaped wire bail having its ends pivotally connected to said collar and movable from the hair curling position to a hair locking position for yieldable interlocking engagement in said collar notches, said members being formed with grooves extending around the finger gripping portions thereof, said collar being formed with an annular bead for engagement in said grooves formed in said members for preventing axial displacement of said collar, the bead portion of said collar being formed with a plurality of annularly spaced recesses, and a protuberance disposed within the groove of one of said members for engagement in said recesses to provide yieldable step-by-step rotation of said collar.



2,410,107
ALKYLATION PROCESS
Alexander N. Sachanen and Arlie A. O'Kelly, Woodbury, N. J., and Claude G. Myers, Bryn Mawr, Pa., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
No Drawing. Application September 11, 1943, Serial No. 502,018
20 Claims. (Cl. 260—683.4)

1. The process of alkylating a paraffinic hydrocarbon with an olefinic hydrocarbon, which comprises contacting a paraffinic hydrocarbon with an olefinic hydrocarbon, in gaseous phase in a reaction zone under alkylating conditions including a temperature varying between about 590° F. and about 850° F. and a pressure in excess of about 500 pounds per square inch, with an alkylation catalyst consisting essentially of a halogenated hydrocarbon selected from the group consisting of chlorine derivatives of acyclic hydrocarbons and bromine derivatives of acyclic hydrocarbons, that forms with said paraffinic hydrocarbon and with said olefinic hydrocarbon, a single, homogeneous gaseous phase under said alkylating conditions, and maintaining the paraffinic hydrocarbon in excess over the olefinic hydrocarbon in said reaction zone so that alkylation is the principal reaction.

2,410,108
ALKYLATION
Alexander N. Sachanen and Arlie A. O'Kelly, Woodbury, N. J., and Claude G. Myers, Bryn Mawr, Pa., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
No Drawing. Application September 15, 1944, Serial No. 554,342
20 Claims. (Cl. 260—683.4)

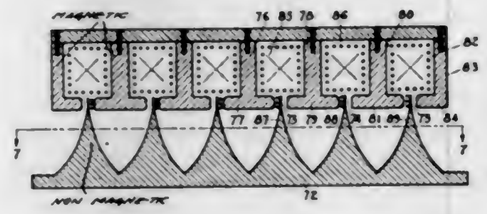


16. In a process of alkylating a paraffinic hydrocarbon with an olefinic hydrocarbon, which includes reacting a paraffinic hydrocarbon with an olefinic hydrocarbon in a reaction zone under alkylating conditions, in the presence of an alkylation catalyst; the improvement which comprises contacting said paraffinic nydrocarbon and said olefinic hydrocarbon in gaseous phase in a reaction zone under alkylating conditions including a temperature varying between about 590° F. and about 850° F. and a pressure in excess of 500 pounds per square inch, with an alkylation catalyst consisting essentially of material selected from the group consisting of acyclic organic halogen compounds, alicyclic organic halogen compounds, and aromatic organic halogen compounds, that forms with said paraffinic hydrocarbon and said olefinic hydrocarbon, a single, homogeneous gaseous phase under said alkylating conditions, and maintaining said paraffinic hydrocarbon in excess over said olefinic hydrocarbon in said reaction zone so that alkylation is the principal reaction.

2,410,109
VARIABLE CAVITY RESONATOR
John C. Schelleng, Interlaken, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application February 13, 1943, Serial No. 475,750
13 Claims. (Cl. 178—44)

1. A substantially closed electrically resonant cavity of which the resonant frequency is dependent upon its dimensions and which has a rigid portion of the cavity shell movable, plunger-like, back and forth in opposite directions to vary the dimensions and thereby the resonant frequency of the cavity, the resonant frequency being determined by the position of the movable shell portion and the contour of the inner surface of the shell portion being such that when that portion is moved from one extreme position to the other extreme position at least two of the three orthogonal principal dimensions of the cavity are effectively changed to cooperate in changing the resonant frequency thereof.

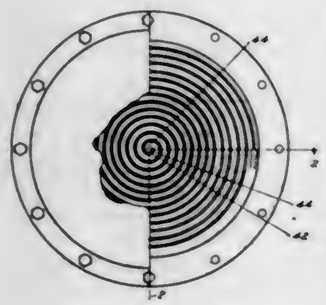
2,410,110
METHOD OF MAKING TABLETS
Harden F. Taylor, New York, N. Y., assignor, by mesne assignments, to Brewer & Company, Inc., Worcester, Mass., a corporation of Massachusetts
Application January 14, 1943, Serial No. 472,416
7 Claims. (Cl. 167—82)



1. A method which comprises tumbling compressed tablets having edges and a straight side to cause said tablets to abrade one another and continuing the tumbling until the tablets have acquired shapes approximating ellipsoids.

2,410,111
TREATMENT OF HYDROCARBONS
Charles L. Thomas and Vladimir Haensel, Chicago, Ill., assignors to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
No Drawing. Application February 20, 1939, Serial No. 257,464
6 Claims. (Cl. 260—671)

1. A process for producing alkylated aromatics which comprises reacting an aromatic with an olefin in the presence of an alkylating catalyst comprising silica and zirconia.

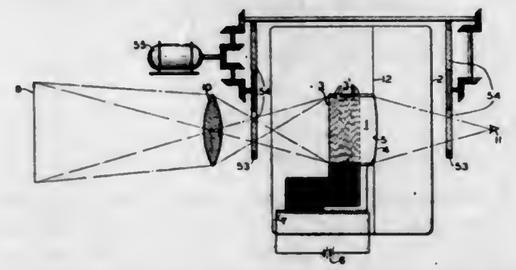


2. A process for producing alkylated aromatics which comprises reacting an aromatic with an olefin in the presence of an alkylating catalyst comprising silica, alumina and zirconia.

2,410,112
OSCILLATOR
Edwin E. Turner, Jr., West Roxbury, Mass., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware
Application May 8, 1936, Serial No. 78,719
6 Claims. (Cl. 177—386)

1. Means for producing compressional waves substantially near or above the audibility of sound to the human ear for producing a beam of compressional wave energy, said means comprising a radiating element composed of concentric bodies of revolution having longitudinal sections taken on the axis of revolution formed as exponential horns, means holding said radiating elements only at the edge thereof and means provided at the small end of said bodies for vibrating the same in a direction normal to the radiating surface.

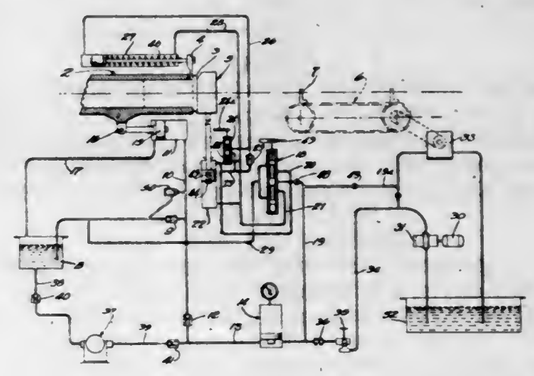
2,410,113
OSCILLATOR
Edwin E. Turner, Jr., West Roxbury, Mass., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware
Original application March 23, 1936, Serial No. 70,365. Divided and this application October 14, 1937, Serial No. 168,920
7 Claims. (Cl. 177—386)



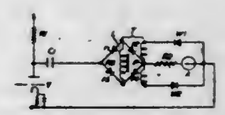
1. A device for producing a beam of supersonic compressional wave energy comprising a plate having a large diameter compared with the wave length of the wave to be produced, a magnetostrictive sheet formed in a spiral with one edge of the sheet fixed to said plate, the spiral forming with the plate a vibrational system of one-half wave length with the vibrational node in the spiral adjacent the plate, and a single copper turn following the spiral on one side from the outer end of the sheet to the center of the spiral, passing around the central end of the latter, and following the other side of the spiral to its outer end.

2,410,114
COUPLING ARRANGEMENT FOR USE IN WAVE TRANSMISSION SYSTEMS
Warren A. Tyrrell, Fairhaven, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Original application December 31, 1942, Serial No. 470,810. Divided and this application December 28, 1943, Serial No. 515,877
9 Claims. (Cl. 178—44)

1. An arrangement for coupling four wave transmission media in a wave transmission system comprising a closed transmission loop consisting of four coupled loop portions with lumped circuit constants equivalent to a section of transmission line of predetermined wavelength, means for electrically connecting said wave transmission media as branches to said loop at respectively different junctions of the four loop portions, at least one of said branches being connected electrically in series with said loop, the types of electrical connection of the other branches to said loop being selected and the characteristic impedances of the four branches with respect to that of said loop and the lumped circuit constants of the four coupled loop portions being proportioned so as to substantially prevent wave transmission at certain frequencies between the transmission branch connected to each loop junction and the transmission branch connected to the oppositely situated loop junction, and to enable efficient wave transmission at said certain frequencies between the transmission branch connected to each loop junction and the two transmission branches connected to the next adjacent loop junctions around the loop.



2,410,115
IMAGE INTENSIFIER
Russell H. Varian, Wantagh, N. Y., assignor to Sperry Gyroscope Company, Inc., Brooklyn, N. Y., a corporation of New York
Application September 2, 1942, Serial No. 457,097
10 Claims. (Cl. 250—153)



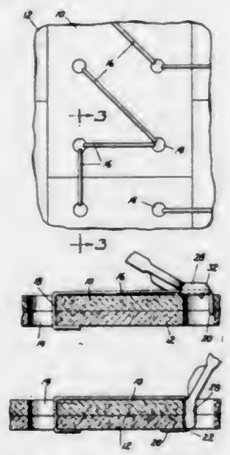
1. A light amplifier comprising means for producing an optical image of an object, a photoelectron emissive cathode for producing a primary electron stream forming an electron image from said optical image, electron permeable and secondary electron emissive surfaces for producing an intensified electron image from the primary electron image, said surfaces being separated only sufficiently to maintain electrical insulation therebetween whereby said electron stream is intensified with minimum loss of detail in said electron image caused by secondary electron emission velocities, a fluorescent screen, and means projecting said intensified electron image on said screen for producing an intensified optical image of said object.

2,410,116
BREECH ACTUATING AND CONTROL SYSTEM
Harry F. Vickers, Detroit, Mich., assignor, by mesne assignments, to Vickers, Incorporated, Detroit, Mich., a corporation of Michigan
Application December 12, 1935, Serial No. 54,026
9 Claims. (Cl. 89—4)

1. A gun breech actuating and control system comprising a hydraulic motor for actuating a rammer, hydraulic motors for respectively actuating a breech block and ejector, a hydraulic pressure accumulator connected to, and adapted to accumulate liquid under pressure for actuating said motors, a pump to be actuated by the recoil of the gun for charging the accumulator with liquid under pressure, a manually operated control valve interposed in hydraulic connection between said accumulator and breech block and ejector motors and adapted to direct liquid under pressure to said motors, and a control valve operated by the movement of said breech block to direct pressure to said ejector motor to cause the ejecting movement of said ejector.

2,410,117
VISUAL INDICATOR FOR RADIO BLIND APPROACH SYSTEMS
Jeffrey Dennis Weston, London, England, assignor to Standard Telephones and Cables Limited, London, England, a British company
Application May 4, 1943, Serial No. 485,614
In Great Britain May 11, 1942
8 Claims. (Cl. 177—352)

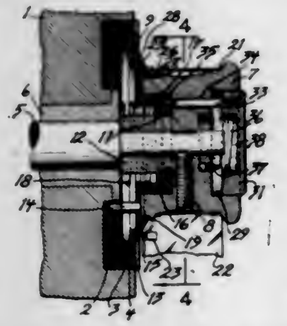
1. In an arrangement for distinguishing visually between two signals of the same rectangular curren: wave form but whose variations are of opposite signs which comprises means for developing from either signal a comparison signal current of constant sign, means for combining this comparison signal current with the original signal current to obtain a direct current signal whose sign depends upon the sign of the original signal variations, and means for deriving from this direct current signal an indication of its sign.



2,410,118
METHOD OF PRODUCING TRIALKYL PHOSPHATE ESTERS
Willard H. Woodstock, Flossmoor, and Paul E. Pelletier, Jr., Chicago Heights, Ill., assignors to Victor Chemical Works, a corporation of Illinois
No Drawing. Application April 5, 1944, Serial No. 529,680
2 Claims. (Cl. 260—461)

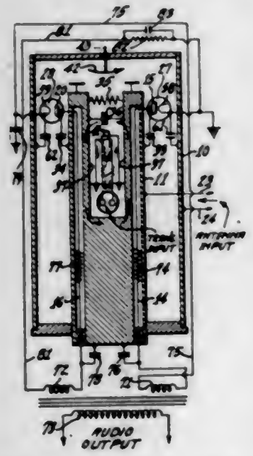
1. The method of producing trialkyl phosphate which comprises heating a mixture of from 2 to 6 moles of an acid dialkyl phosphate with 1 mole of caustic soda at a temperature of 100° to 300° C., and separating the trialkyl phosphate produced.

2,410,119
PRODUCTION OF TITANIUM COMPOUNDS
Ray Leroy McCleary, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application October 5, 1944, Serial No. 557,381
4 Claims. (Cl. 260—429)



1. A process for obtaining a water-soluble titanium oxygen compound comprising reacting a titanium halide with a tertiary alcohol.

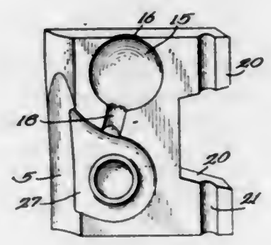
2,410,120
METHOD OF ATTACHING CLIPS
Lester V. McDonnell and Percy Satterlee, Detroit, Mich.
Application October 29, 1943, Serial No. 508,100
6 Claims. (Cl. 153—1)



1. That method of securing two juxtaposed sheets of material provided with spaced apart registering apertures securely in juxtaposition comprising providing a wire clip having a U-shaped hook at one end and having its opposite end bent at a right angle to the base of the clip, inserting the hook end of the clip through one pair of registering apertures of the two sheets and drawing said hook to a seat over said sheets binding the two sheets together, and drawing the base of the clip across one sheet with its opposite end over-hanging a spaced pair of registering apertures, gripping the base of the clip adjacent to such spaced end and over said pair of apertures and through a distance approximating the thickness of the two sheets through said apertures, and bending the gripped portion of the base of the clip angularly relative to the ungripped portion of the base forcing said gripped portion of the clip through said apertures thus forming a hooked end thereon for holding the two sheets together adjacent to said apertures.

2,410,121
SPROCKET DEVICE
Louis A. McNabb, Glenview, Ill., assignor to Bell & Howell Company, Chicago, Ill., a corporation of Illinois
Application June 8, 1945, Serial No. 598,385
14 Claims. (Cl. 74—243)

1. In a sprocket device, the combination with a support, of a revoluble sprocket carried therewith in projecting relation with the same and provided with sprocket teeth in the region of its inner end, a strip retaining guide disposed in the region of the inner end of said sprocket and provided with a guide surface facing radially of and toward the sprocket axis and engageable with the outer face of a perforated strip engaged on said sprocket, and said guide being mounted for movement axially of said sprocket into and out of strip guiding position.

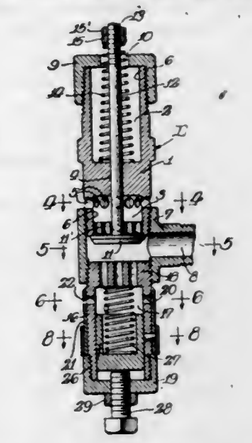


2,410,122
BALANCED DETECTOR FOR ALTIMETERS
William R. Mercer, Hightstown, and Ben R. Cole, Princeton, N. J., assignors to Radio Corporation of America, a corporation of Delaware
Application June 9, 1944, Serial No. 539,528
8 Claims. (Cl. 250—27)

1. A balanced detector comprising a tuned coaxial line having an outer conductor and an inner conductor, said inner conductor having an end section that is bifurcated and capacity terminated to form a tuned two-wire line section, a pair of rectifiers, one rectifier being connected between said outer conductor and one side of said bifurcated section, the other rectifier being connected between said outer conductor and the other side of said bifurcated section, means for applying signal to said coaxial line, said signal lying within the frequency range to which said coaxial line is tuned, means for simultaneously applying signal to said two-wire line section, said last signal lying within the frequency range to which said two-wire line section is tuned, and

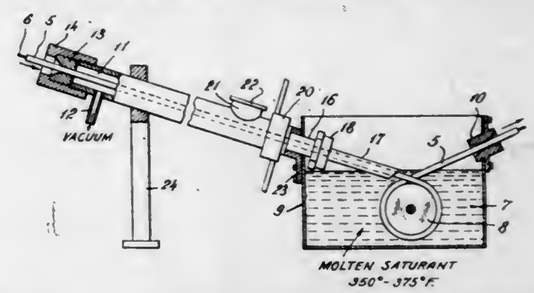
means for supplying from said diodes to a utilization circuit any beat frequency signal resulting from an instantaneous frequency difference of said signals.

2,410,123
METHOD AND APPARATUS FOR APPENDAGING POTTERY WARE
William J. Miller, Swissvale, and Ashley J. Reek, Carrick, Pa., assignors to Miller Pottery Engineering Company, Swissvale, Pa., a corporation of Pennsylvania
Application January 27, 1943, Serial No. 473,670
4 Claims. (Cl. 25—129)



1. A mold for casting an appendage on prefabricated potteryware comprising, a separable body having a ware engaging surface contoured to fit the exterior surface of the ware, a molding cavity in which the appendage is formed having an outlet through the ware engaging surface and a pouring passage through which casting slip is poured into the molding cavity formed for producing a waste piece joined to the appendage by an elongated neck that is substantially narrower than either the appendage or the waste piece and provides a rupture area having less resistance to breakage than either the appendage or the waste piece.

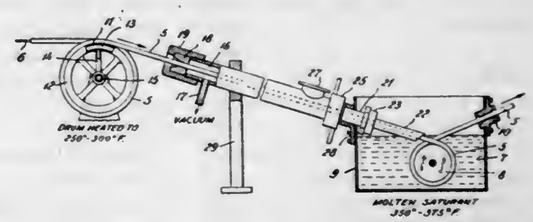
2,410,124
PRODUCTION OF PLASTICIZED PROLAMINE AND DERIVATIVE COMPOSITIONS
Willard L. Morgan, Columbus, Ohio, assignor of one-half to A. E. Staley Manufacturing Company, Decatur, Ill., a corporation of Delaware, and one-half to American-Maize Products Company, New York, N. Y., a corporation of Maine
No Drawing. Application November 24, 1944. Serial No. 565,065
18 Claims. (Cl. 106—153)



1. A plasticized "prolamine-base" composition of matter comprising alkyl branched-chain organic fatty acid in which the total number of carbon atoms in the molecule is in the range from 4 to 18 inclusive, and "prolamine-base" protein.

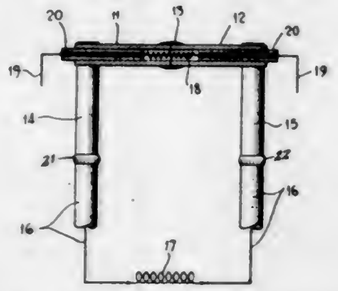
2,410,125
AUXILIARY AIR FURNISHING DEVICE
Philip C. Nilles and Joseph A. Steffen, Chicago, Ill.
Application June 25, 1946, Serial No. 679,254
2 Claims. (Cl. 277—60)

2. An auxiliary air furnishing device, comprising relatively opposed casings each having a way in the inner end thereof and each of said casings having air-inletting means in its respective wall beyond its said way, spring engaged valve means normally seated adjacent and over the way of one casing, a spring engaged cylindrical valve slidably received in the remaining casing normally arranged beyond the air-inletting openings in said remaining casing, and means engaging the adjacent ends of the opposed castings for communicably connecting the same to an intake manifold.



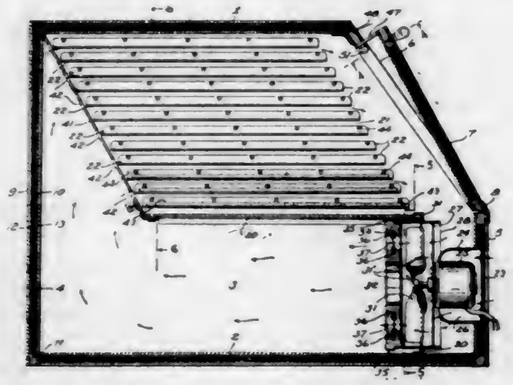
2,410,126
MACHINE FOR IMPREGNATING ELECTRIC INSULATION
John W. Olson, Hastings-on-Hudson, N. Y., assignor to Anaconda Wire and Cable Company, New York, N. Y., a corporation of Delaware
Application September 16, 1943, Serial No. 502,631
9 Claims. (Cl. 91—13)

1. The combination with means for holding a hot saturant bath for impregnating fibrous insulation surrounding an electric conductor, of an elongated vacuum chamber operatively communicating with said chamber and having a removable die at each end thereof for sealing the ends of the chamber when the conductor with its covering of fibrous insulation is drawn through the chamber and the saturant in a substantially continuous manner.



2,410,127
MACHINE FOR IMPREGNATING ELECTRIC INSULATION
John W. Olson, Hastings-on-Hudson, N. Y., and Charles W. Bechle, Sycamore, Ill., assignors to Anaconda Wire and Cable Company, New York, N. Y., a corporation of Delaware
Application September 16, 1943, Serial No. 502,632
4 Claims. (Cl. 91—13)

1. The combination with means for holding a saturant bath for impregnating fibrous insulation

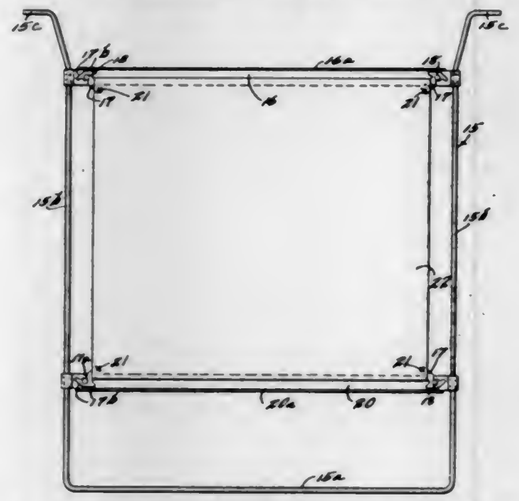


surrounding an electric conductor as the covered conductor is drawn through the bath of staturant in a substantially continuous manner, of means for heating the fibrous insulation in the course of its travel towards the bath of saturant until its moisture content is substantially negligible, and a vacuum chamber through which the dried covered conductor passes in its travel from said heating means to the bath of saturant.

2,410,128
THERMOELECTRIC GENERATING DEVICE
Eugene Paille, Los Angeles, Calif., assignor to General Controls Co., Glendale, Calif., a corporation of California
Application February 28, 1944, Serial No. 524,157
7 Claims. (Cl. 136—4)

2. A tubular thermoelectric generating device formed by a pair of tubular members of thermoelectrically dissimilar materials joined together at one of their respective ends to form a hot junction, and an electric heating element within said device adjacent said hot junction, the other of the ends of said members being so remote from said heating element that they are not substantially affected by the heat thereof.

2,410,129
DEHYDRATOR
George H. Phelps, Floral Park, N. Y., assignor to Metropolitan Device Corporation, Brooklyn, N. Y., a corporation of New York
Application March 11, 1943, Serial No. 478,755
2 Claims. (Cl. 34—193)

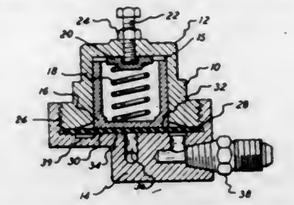


1. In a dehydrator especially suitable for dehydrating fruits and vegetables and comprising a cabinet having an air passage therein, means for causing air to pass through the air passage and a series of tray supports within the passage; a plurality of solid trays on the supports and extending from side wall to side wall of the air passage, each tray having a roughened surface which consists of irregular, closely related, minute projections, whereby fruits or vegetables placed thereon are supported by the projections and out of contact with the tray.

2,410,130
HAIR CLIP
Leona T. Plumtree, South San Francisco, Calif.
Application January 27, 1945, Serial No. 574,923
3 Claims. (Cl. 132—46)

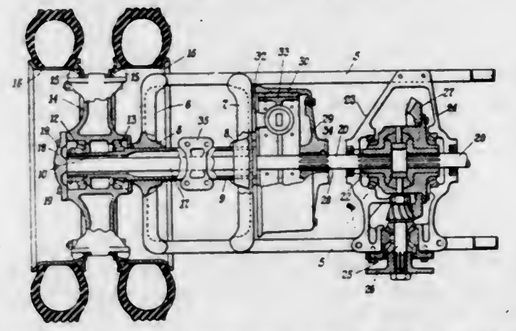
2. A hair clip for holding a curl of hair comprising a resilient wire turned back upon itself in a close U-shape, one end of the wire constituting a flat resilient substantially involute coil completely overlying the opposing free end of the wire and spaced from the turn in the wire.

2,410,131
FILM HOLDING DEVICE
Robert Sardeson and Edward H. Savela, Minneapolis, Minn., assignors to Pako Corporation, Minneapolis, Minn., a corporation of Delaware
Application July 22, 1942, Serial No. 451,940
6 Claims. (Cl. 95—100)



1. A film holding device having in combination, a frame comprising spaced parallel vertical guides, a top member extending between and secured thereto, arms pivoted to said member adjacent said guides swingable about horizontal axes, a bottom member extending between and vertically slidable on said guides, arms pivoted to said bottom member adjacent said guides and freely swingable about horizontal axes, film holding means carried by said arms adjacent the free ends thereof whereby a film can be supported on said means extending therebetween and is held under vertical tension by said bottom member and can expand laterally and be laterally tensioned by the swinging movement of said arms.

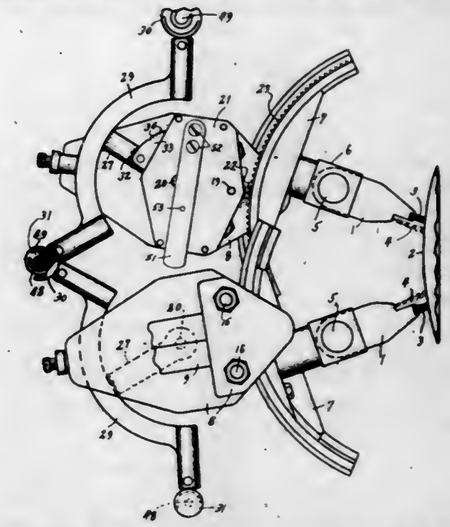
2,410,132
LINE PRESSURE VALVE
John Smisko, Washington, D. C., assignor, by mesne assignments, to The B. F. Goodrich Company, Akron, Ohio, a corporation of New York
Application April 20, 1944, Serial No. 531,899
2 Claims. (Cl. 188—152)



2. In combination with a hydraulic brake system having brake elements moved relative to each other on brake application and release, retracting means for providing clearance between said elements upon brake release, a fluid motor actuating one of said elements, a pressure source and a conduit for fluid flow in communication with said fluid motor and said pressure source, a pressure

valve in said conduit maintaining a pressure higher than atmospheric between said pressure valve and said fluid motor, said pressure valve having a movable part of relatively large area, a valve seat for said valve part, a port of relatively small area in said valve seat in communication with said fluid motor, said movable valve part

having a face complementary to said valve seat, means for stressing said valve part to said seat to maintain pressure in said fluid motor, a chamber circumscribing said seat in communication with said movable valve part, and a port in said circumscribing chamber communicating to said pressure source.



2,410,133
AXLE
George Spatta, Buchanan, Mich., assignor to Clark Equipment Company, Buchanan, Mich., a corporation of Michigan
Application June 19, 1944, Serial No. 540,921
4 Claims. (Cl. 180—75)

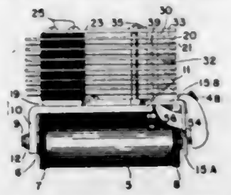
1. An axle construction comprising a pair of tubular spindles disposed in coaxial spaced relation, wheels rotatably mounted on the ends of said spindles, means interconnecting said spindles comprising a rigid rectangular frame having parallel end members receiving the inboard ends of said spindles and including parallel side members interconnecting said end members, a differential extending across said side members and supported at the center thereof, axle shafts leading from opposite sides of said differential through said spindles and bolted to said wheels for driving the same from said differential, said shafts being unenclosed between said spindles and said differential brake drum means on said shafts intermediate said differential and the inboard ends of said spindles, and brake drum engaging means supported on the inner face of said end members.

2,410,134
METHOD AND APPARATUS FOR FLAME HARDENING
Lawrence J. Stevenson, Torrance, and Lloyd L. Babcock, Compton, Calif., assignors to The National Supply Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application January 16, 1942, Serial No. 427,012
20 Claims. (Cl. 148—21.55)

1. The method of flame hardening a continuous surface, comprising the steps of directing two separate heating flames against a common position on said surface, traversing the flames simultaneously in opposite directions with respect to said surface, directing streams of quenching fluid against the surface immediately following application of the flames, changing the angle of

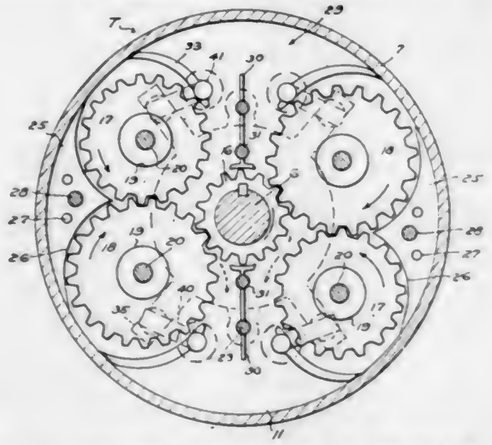
impingement of the flames during the traversing movement from a lagging direction to a leading direction, extinguishing both flames upon their meeting at a common location on the surface remote from the starting position, and continuing the application of quenching fluid until the entire heated portion has been quenched.

2,410,135
METHOD OF MAKING SLIDE FASTENER STRINGERS
Gideon Sundback, Meadville, Pa.
Application January 1, 1943, Serial No. 470,984
In Canada October 21, 1942
3 Claims. (Cl. 29—148)



1. The method of making stringers for slide fasteners which comprises casting interlocking elements from metal of low tensile strength and having a head and a pair of projecting legs forming a groove between the legs, inserting one edge of a tape in the groove and clamping the interlocking elements on the tape by compressing the metal of the elements sufficiently to bring the legs in contact with the tape while pressing on the legs to prevent tension stress in the legs incidental to such compression.

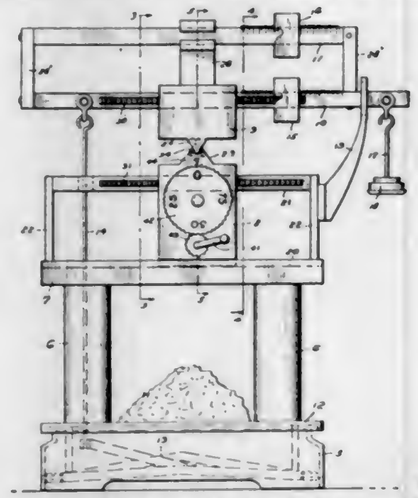
2,410,136
MULTICONTACT RELAY
Andrew W. Vincent, Rochester, N. Y., assignor to Stromberg-Carlson Company, Rochester, N. Y., a corporation of New York
Application February 23, 1945, Serial No. 579,335
4 Claims. (Cl. 200—104)



1. In a relay, a core provided with a coil, a frame for supporting said coil and said core and also providing spaced apart bearing portions, an angular armature having its inner corner engaging said bearing portions, whereby said armature can rock thereon with a first part of the armature movable toward and away from said core

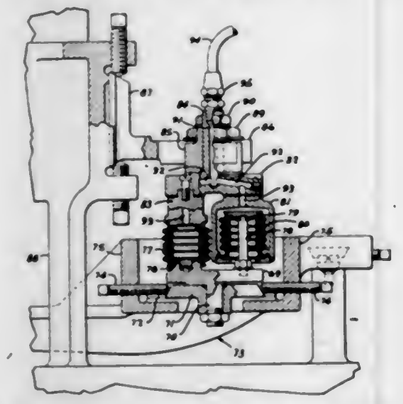
and with a second part of the armature movable toward and away from a part of the frame, contact springs mounted on said frame and arranged to be actuated in response to movement of the second part of said armature, a support extending along the longest margin of said first part of the armature to provide adjustability for and to

give rigidity to the armature, said support being provided with a plurality of fulcrum parts engaging spaced points on the outer bend of said armature, said support being also provided with spaced portions engaging the inner surface of the second part of the armature, and means for adjusting said support toward and away from the first part of the armature.



2,410,137
POWER TRANSMISSION APPARATUS
George Wallach, Chapman Camp, British Columbia, Canada
Application July 19, 1944, Serial No. 545,693
6 Claims. (Cl. 192—61)

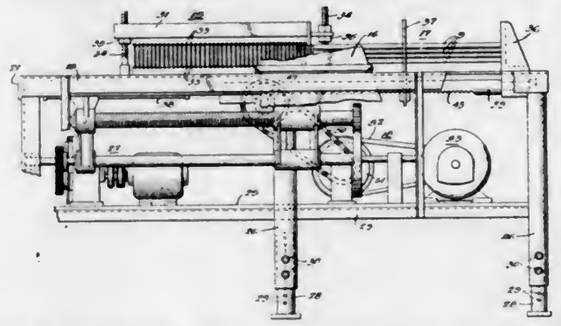
1. In a driving apparatus, a variable speed planetary type hydraulic transmission comprising, in combination with aligned driving and driven shafts, a housing having a pump chamber, means to secure said housing on the driving shaft for rotation with the latter, gear pumps arranged in said pump chamber at opposite sides of the housing and spaced apart to provide an oil space therebetween, each gear pump including intermeshing gears journaled for rotation relative to the housing upon axes parallel with the driving and driven shafts, a sun gear secured on the driven shaft and meshing with one gear of each pump, and swinging valve gates for controlling the flow of oil from said oil space to the respective pumps between both gears of each pump and the periphery of the housing, and manually operable means for operating said gates to regulate the opening or closing thereof.



2,410,138
BATCH SCALE
Francis V. Werner, Bridgeton, N. J.
Application August 17, 1945, Serial No. 611,007
5 Claims. (Cl. 265—53)

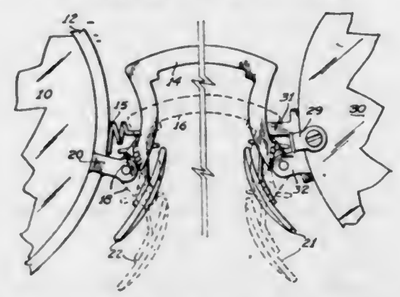
1. In a batch scale, a balance-beam, an element to receive the material to be weighed connected to one end of the balance beam, means to facilitate imposition of predetermined weights on the other end of said balance-beam, a base member, a lower fulcrum member on said base member, an upper fulcrum member carrying said balance-beam and tiltable on the lower fulcrum member, said fulcrum members being adjustable relative to the base and the balance-beam longitudinally of the latter, a weight ad-

justable longitudinally of the balance-beam, and manually operable means to simultaneously adjust the fulcrum members and the weight in the same direction and in either direction for any desired predetermined distance relative to the base and the balance-beam, said means causing a differential movement between the weight and the fulcrum members to keep the balance-beam balanced as the fulcrum members are adjusted.



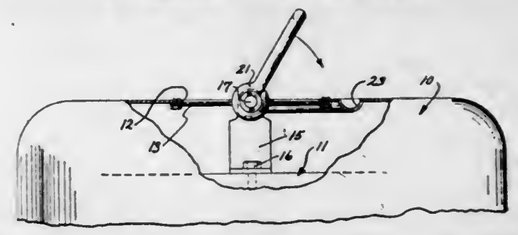
2,410,139
WEIGHING SCALE
Lawrence S. Williams, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a corporation of New Jersey
Application February 24, 1944, Serial No. 523,670
8 Claims. (Cl. 265—47)

1. In a weighing scale incorporating hydraulic force transmission elements, in combination, a plurality of capsules supporting a load receiver, the capsules being adapted to transform mechanical force into hydraulic pressure, a plurality of bellows, one for each capsule, adapted to transform hydraulic pressure into mechanical force, means for hydraulically connecting each capsule to its corresponding bellows, means for combining, counterbalancing, and indicating the mechanical force exerted by the bellows, some of said bellows being adapted to receive hydraulic pressure internally, the remainder of said bellows being enclosed in chambers and adapted to re-



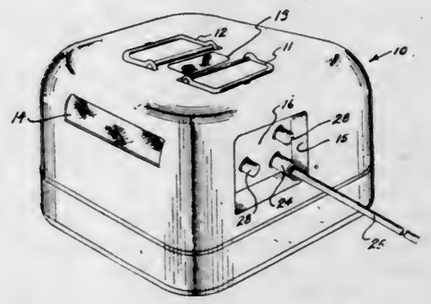
ceive hydraulic pressure externally, the capsules connected to the bellows receiving hydraulic pressure internally being arranged symmetrically with respect to the capsules connected to the other bellows, whereby loads supported by the capsules in combination will be correctly indicated.

2,410,140
TUBE ASSEMBLY MACHINE FOR HEAT-EXCHANGE CORES
Fred M. Young, Racine, Wis., assignor to Young Radiator Company, Racine, Wis., a corporation of Wisconsin
Application April 23, 1945, Serial No. 589,790
3 Claims. (Cl. 29—202)



1. A machine for assembling a plurality of slotted laminae on a plurality of transverse bonding elements comprising, a supporting frame, an assembly jig on said frame for supporting a plurality of slotted laminae with the slots therein in alined registration, a pusher mounted on said frame for movement transversely of the assembled laminae for pushing a plurality of bonding elements simultaneously through the registered laminae slots, driving means for advancing and retracting said pusher, and a bonding-element bracing-member reciprocatingly mounted intermediate said jig and pusher and movable between a retracted position abutting said jig to permit the insertion of the ends of the bonding elements into the registered slots in the directly adjacent assembled laminae and an extended position intermediate said jig and retracted pusher to brace the bonding elements during the initial movement of said pusher.

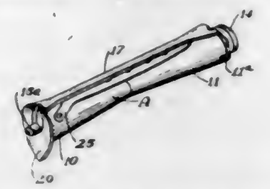
2,410,141
VERTICALLY ADJUSTABLE BIFOCAL SPECTACLES
Julius S. Zell, Portland, Oreg.
Application September 6, 1943, Serial No. 501,412
3 Claims. (Cl. 88—49)



1. A mounting for spectacles having bifocal lenses, said mounting comprising a pair of elements secured to said lenses respectively, a pair of bridge assemblies located between the nasal sides of said lenses, said bridge assemblies connected to said elements, one of said bridge assemblies carrying nose rests and including toggle joints in its connections with said elements, the axes of said toggle-joints being at right angles to the plane of said lenses and said toggle-joints adapted to enable said lenses to be adjusted to high or low positions with respect to said nose rests upon a slight movement of said lenses apart, a spring section included in the other bridge assembly, said spring section connected to one of said elements and adapted to allow sufficient movement apart of said lenses to permit the making of such adjustment while enabling said lenses to be held in either said high or low position as desired, the major portions of said bridge assemblies being of similar size and shape and said assemblies so arranged as to give the general impression of a single bridge assembly when said lenses are in low position.

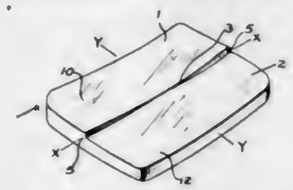
2,410,142
PORTABLE POWER UNIT—HANDLE COOLING
Peter Altman, Detroit, Mich., assignor to Continental Motors Corporation, Muskegon, Mich., a corporation of Virginia
Application June 4, 1945, Serial No. 597,537
5 Claims. (Cl. 123—198)

5. A portable internal combustion engine combination, comprising an engine block, a carrying handle, metallic brackets connecting ends of said handle to said block, and a covering shield for said engine having an air inlet opening positioned between and directly adjacent said brackets whereby inrushing air cools said handle and brackets rendering the handle comfortable during operation of said engine.



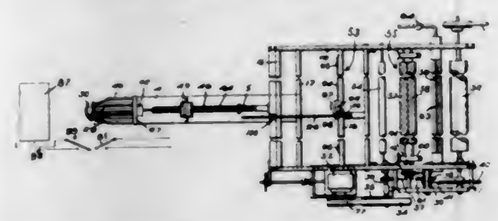
2,410,143
PORTABLE ENGINE
Peter Altman, Detroit, Mich., assignor to Continental Motors Corporation, Muskegon, Mich., a corporation of Virginia
Application June 4, 1945, Serial No. 597,538
5 Claims. (Cl. 123—195)

5. In a portable self-contained power unit, a plurality of simultaneously operating power spindles located with parallel axes and projecting an equal distance from an engine block on one side thereof, and a housing assembly surrounding the entire unit spaced on the spindle side of the engine a distance away from the block equal to the projections of said spindles, and a recessed portion in said spaced wall facing said



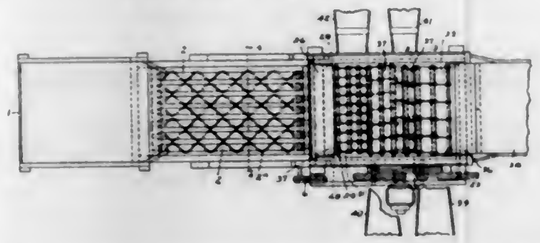
engine block and surrounding said power spindles, and independent removable means capping the unused power spindles and secured to said housing.

2,410,144
HAIR CURLER
Jack Ashford, Jackson Heights, N. Y.
Application March 9, 1945, Serial No. 581,786
2 Claims. (Cl. 132—42)



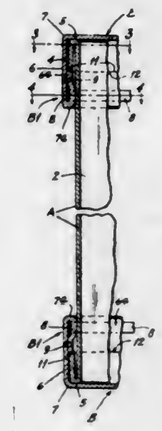
2. A hair curler of the character described, comprising an elongated body formed of two separate members adapted to be detachably connected together in axial relation, one of said members having an axial bore extending the entire length thereof, the other member having an elongated stem at one end thereof adapted to be telescoped through said bore of said one member when the members are assembled in operable relation with the terminal end of said stem projecting a short distance beyond the outer end of said one member, said stem and bore having cooperating features adapted to be engaged when said members are axially assembled for keying said members together for rotation as a unit, and an elongated strap of yieldable material connected at one end to the outer end of said other member and detachably connectible to said terminal end of said other member, when said members are operably connected together, for releasably maintaining said members in such connected relation.

2,410,145
LENS AND PROCESS OF MAKING THE SAME
Ralph F. Bardwell, Southbridge, and John H. Smith, Taunton, Mass., assignors to American Optical Company, Southbridge, Mass., a voluntary association of Massachusetts
Original application October 11, 1939, Serial No. 299,006. Divided and this application January 4, 1943, Serial No. 471,248
6 Claims. (Cl. 88—54)



1. A blank for a multi-focal lens comprising a single piece of lens medium having on one face thereof at least two lens surfaces constituting two focal fields, each of said surfaces having a spherical curvature throughout and extending laterally substantially the entire width of the blank and with a substantially straight line of division therebetween and extending the full width of the blank along said line, the radii of curvature of said surfaces being different from each other by an amount sufficient to give the desired difference in focal power between the two fields and the centers of the curvatures of said surfaces being positioned relative to each other so as to cause the said surfaces to meet in substantially flush relation with each other adjacent the central portion of and substantially along the line of division between the two fields with the remainder of said line of division on the opposed sides of said substantially flush portion being shouldered with the shoulders progressively increasing in height in the direction of the sides of the blank.

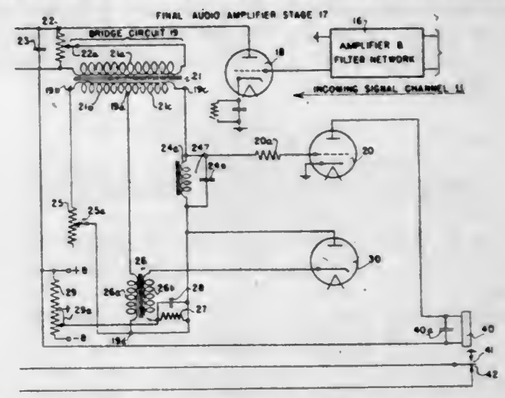
2,410,146
MACHINE FOR SPLITTING TUBULAR FABRIC, OPENING IT, AND EXTRACTING MOISTURE THEREFROM
Harold W. Birch, Belmont, Mass.
Application June 12, 1944, Serial No. 539,954
16 Claims. (Cl. 26—1)



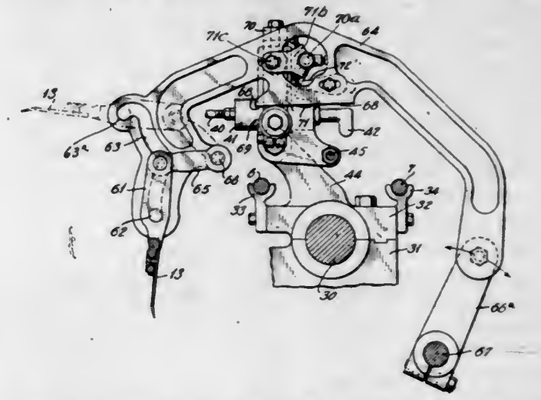
10. In an apparatus of the class described, the combination with a frame, of a fabric-supporting table mounted thereon, means mounted on the frame for feeding a tubular fabric over the table, a splitting knife to split the fabric as it is thus fed, means carried by the frame and situated between the feeding means and the knife to open the split fabric and smooth it transversely, means situated between the knife and the fabric-opening means by which the fabric may be shifted in either direction transversely to its length as necessary to maintain the fabric in central position as it is fed to the fabric-opening means, and means situated between the fabric-opening means and the feeding means for extracting moisture from the fabric.

2,410,147
APPARATUS FOR GRADING FRUITS, VEGETABLES, AND OTHER PRODUCTS ACCORDING TO SIZE
Gustave H. Bleeke, Fort Wayne, Ind.
Application August 12, 1943, Serial No. 498,287
5 Claims. (Cl. 209—85)

1. A grading machine comprising a main frame, a flexible grading belt mounted on the frame and having transverse rows of openings therein varying in size, the openings in each row being adapted to permit the passage of a selected maximum size of product, normally depending gates each having a planar upper surface pivotally mounted adjacent to the openings respectively, an endless carrier mounted below the belt and supporting a plurality of abutments, each of which is adapted to engage the belt and the transverse rows of gates successively and rock them into the belt openings adjacent thereto, said gates being adapted to substantially fill said openings, said travelling abutments also causing the belt to undulate longitudinally, means to drive the carrier, means to feed the products to be graded to the belt and means to conduct the graded products from the machine, said carrier and abutments being disposed to move past said belt parallel to the direction of feed of the products whereby the undulation of said belt will advance said products along the belt in the direction of feed.



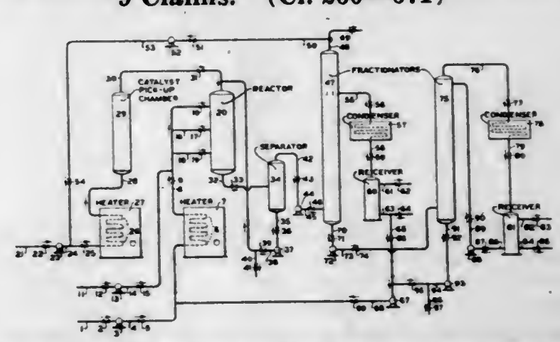
2,410,148
HEAVY-DUTY PAPER SHIPPING CARTON HAVING INTERLOCKING END CLOSURE
Frederick R. Buhrmaster, Webster Groves, Mo., assignor to Gaylord Container Corporation, St. Louis, Mo., a corporation of Maryland
Application July 13, 1944, Serial No. 544,685
10 Claims. (Cl. 229—47)



3. A carton comprising a tubular body and a closure for an open end thereof, said body having an external peripheral shoulder thereon adjacent to said end thereof, and said closure having a rim portion that surrounds said end of said body and has an internal shoulder disposed in abutting relation to the external shoulder thereof, said rim portion of said closure comprising a plurality of side marginal flaps on said closure bent into end to end rim forming relation and thence rebent on their inner sides to form said internal shoulder, a band infolded within said rebent portions of said closure flaps for holding them in such rim forming relation, and means for securing said rebent portions directly to said closure flaps and for retaining said band therein.

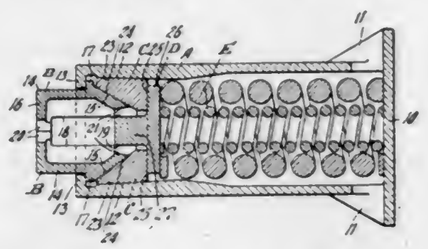
2,410,149
SIGNALING SYSTEM
Robert A. Clark, Jr., Chicago, Ill.
Application February 17, 1944, Serial No. 522,742
7 Claims. (Cl. 179—84)

1. In a signaling system which includes a signal channel over which may be non-concurrently transmitted a first signal having different frequencies within a frequency band or a second signal having a fixed frequency within said band, a four terminal bridge circuit coupled to said channel and balanced at said fixed frequency, said circuit including a parallel resonant circuit in one leg thereof, a biasing resistor, thermionic means, including input electrodes bridging said resonant circuit in series with said resistor to detect a second signal appearing on said channel, and means coupled to two opposed terminals of said bridge circuit and responsive to the voltage developed across said two terminals when said bridge circuit is unbalanced for developing a bias voltage across said resistor which serves to bias said thermionic means against signal detection when a first signal appears on said channel.



2,410,150
TOP COMB SYSTEM
Frank L. Crockett, Tenants Harbor, Maine, assignor to Whitin Machine Works, Whitinsville, Mass., a corporation of Massachusetts
Original application October 2, 1940, Serial No. 359,385, now Patent No. 2,353,812, dated July 18, 1944. Divided and this application August 13, 1942, Serial No. 454,749
11 Claims. (Cl. 19—116)

1. In a comber, a pair of top comb arms, a top comb subframe, links connecting it to said arms, stud-and-slot connections between said subframe and arms to guide the link-permitted movement of said subframe with respect to said arms, a top comb fixed to said subframe and means for oscillating said arms.



2,410,151
ALKYLATION OF HYDROCARBONS
Joseph D. Danforth, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application February 11, 1942, Serial No. 430,517
9 Claims. (Cl. 260—671)

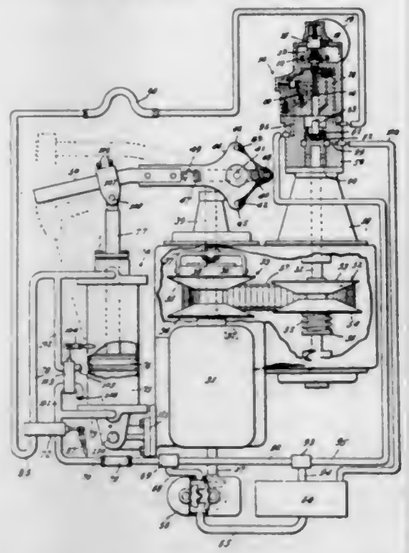
2. An alkylation process which comprises reacting an aromatic hydrocarbon with an olefin

in a reaction zone containing a solid packing material, introducing to said zone a carrier gas containing aluminum chloride vapors, and maintaining said zone at an alkylating temperature such as to condense aluminum chloride vapors on said packing material.

2,410,152
FRICTION SHOCK ABSORBING MECHANISM
George E. Dath, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a corporation of Delaware
Application June 25, 1943, Serial No. 492,258
10 Claims. (Cl. 213—34)

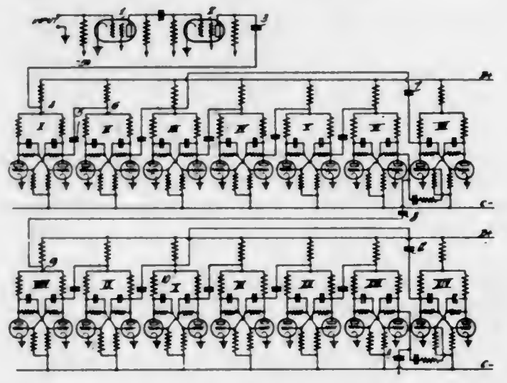
10. In a friction shock absorbing mechanism, the combination with a hexagonal friction casing having six interior, longitudinally extending, inwardly converging, interior friction surfaces, and inturned stop flanges at the outer ends of said friction surfaces; of three V-shaped friction shoes arranged symmetrically about the longitudinal axis of the mechanism, each of said shoes having sliding engagement with two adjacent friction surfaces of the casing; a two-piece lengthwise divided collapsible wedge block having wedging engagement with said shoes, the sections of said wedge block having laterally projecting flanges engageable in back of the flanges of the casing to limit outward movement of the wedge; a combined spring follower and spreading member comprising a spring follower section bearing on the inner ends of the shoes, and a forwardly projecting spreading plug formed on said spring follower section engaged between the two sections of the wedge to hold the wedge expanded with the flanges thereof in position to engage said flanges of the casing; and springs resisting inward movement of said combined spring follower and spreading member.

2,410,153
PUMP FORM
George H. De Long and Blair Dreisbach, Allentown, Pa.
Application March 22, 1945, Serial No. 584,102
3 Claims. (Cl. 12—128)



1. A device of the class described comprising a flexible band of sufficient length to embrace a pump forwardly of its heel, a pair of pressure members carried by and lying substantially transversely of the band in oppositely disposed relation, and means operable to secure the band snugly about the body of a pump with the pressure members engaging the opposite sides thereof between its vamp and heel to thereby exert oppositely inwardly directed pressure upon said sides.

2,410,154
SHOE CONDITIONER
George H. De Long and Blair Dreisbach, Allentown, Pa.
Application November 30, 1945, Serial No. 631,905
6 Claims. (Cl. 12—128)

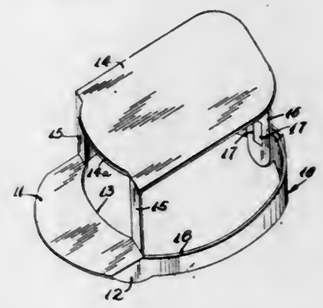


1. A device of the class described formed of resilient material and comprising a sole portion adapted to register with and span the sole of a shoe proximate the front face of its heel, wings rising from the ends of the sole portion having upwardly diverging and rearwardly curving edges whereby the extremities of the wings are wider than and located rearwardly of the rear edge of the sole portion, and means operable to hold said extremities in predetermined spaced relation.

2,410,155
PROPELLER GOVERNOR TESTER
Irvin V. Falk, Union, N. J., assignor to Reeves Pulley Company, Columbus, Ind., a corporation of Indiana
Application May 15, 1944, Serial No. 535,693
14 Claims. (Cl. 73—1)

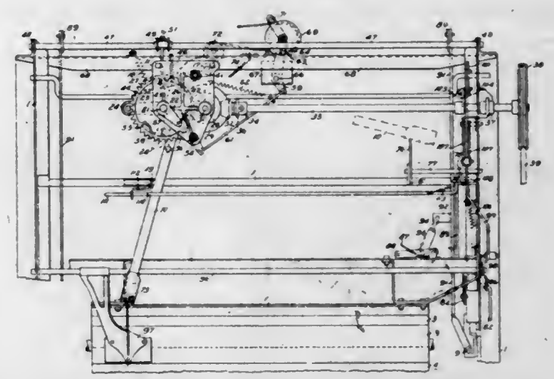
1. For use with a governor including a fluid pump, a rotor, means connected to drive said pump and said rotor, speed-responsive means operatively associated with said rotor and connected to shift a valve oppositely, in response to opposite variations in the speed of said rotor, between a high-speed position and a low-speed position through an intermediate position; testing apparatus comprising a source of fluid under constant pressure, a fluid motor including a cylinder and a piston reciprocable therein, conduit means connecting said fluid source with said cylinder on one side of said piston, conduit means connecting said cylinder on the other side of said piston with said valve, passages controlled by said valve for alternatively placing said last-named conduit means in communication with said pump or with exhaust, a shaft connected to drive said pump and said rotor, and means for driving said shaft at variable speeds, said last-named means including an element shiftable oppositely to vary oppositely the speed of said shaft, and said fluid motor being connected to shift said shiftable element.

2,410,156
ELECTRONIC TIMING DEVICE
Leslie E. Flory, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application November 26, 1942, Serial No. 467,032
7 Claims. (Cl. 58—26)



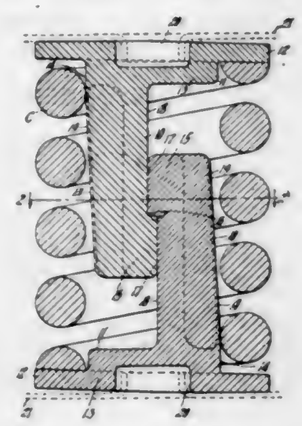
5. A timing device including a first group of six trigger circuit units provided with means connecting part of said units in a closed circuit to deliver a first output pulse in response to sixty input pulses, a second group of similar trigger circuit units for delivering a second output impulse in response to sixty of said first output pulses, a third group of sixty trigger circuit units interconnected to deliver a third output pulse in response to sixty of said second output pulses, and a fourth group of twelve trigger circuit units interconnected to indicate a fourth output impulse in response to twelve of said third output impulses, and means for indicating said second and said third output pulses.

2,410,157
LIQUID EXTRACT OF COFFEE AND THE PROCESS OF EXTRACTING AND PREPARING THE SAME
Walter S. Fredrickson, Fort Wayne, Ind.
No Drawing. Application October 13, 1943, Serial No. 506,068
18 Claims. (Cl. 99—71)



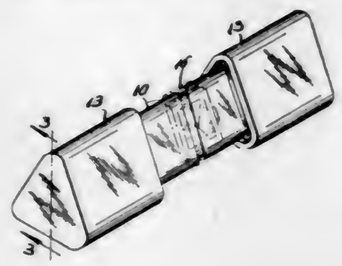
1. The method of preparing an extract of coffee which comprises mixing a quantity of cold water with a quantity of coffee grounds, varying the temperature of the mixture between the temperature of greatest density of water and a lower non-freezing temperature to expand and contract said mixture, then segregating the liquid extract from said coffee grounds; then at successive intervals mixing further quantities of water with said grounds and heating each of said mixtures, each of said mixtures being heated to a higher degree of temperature than the preceding mixture and the extract of each of said mixtures being separated from said grounds after heating before the succeeding quantity of water is added; mixing together all said extracts; and then removing the waxy substances of varying densities from said combined extract.

2,410,158
PAPER HAT
Irving Gardner, Brooklyn, N. Y.
Substitute for abandoned application Serial No. 563,835, November 17, 1944. This application August 8, 1945, Serial No. 609,542
8 Claims. (Cl. 2—195)



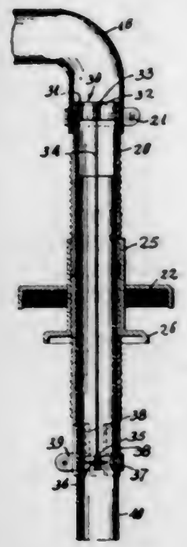
1. A paper hat formed entirely from a single blank of paper comprising a visor, a rim formed of two members, each integral at one end with said visor at one side thereof and free at the other end, a top, a bar connecting said top with said visor and integral with both said visor and top, and a support integral at one end with the rear of said top and having two spaced slots adjacent its other end, said free ends of said members both passing through both of said slots.

2,410,159
ROTARY BALER
Paul H. Harrer and Clayton H. Roth, La Porte, Ind., assignors to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware
Application March 4, 1944, Serial No. 525,008
14 Claims. (Cl. 100—1)



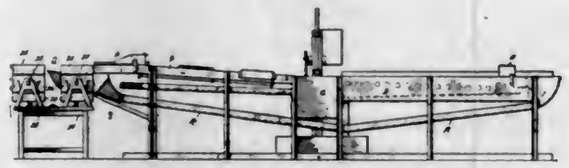
1. In a machine embodying means for rolling material delivered thereto into a formed cylindrical bale of predetermined diameter and means for positioning the twine to be wrapped around the bale while it is in the machine in proximity to a material conveying part of the bale forming means, a movably mounted member operative to so engage the twine with said part that the twine will be carried into the machine by such part and around the bale disposed therein, and means for operating said member and for maintaining same inoperative in a predetermined out-of-the-way position.

2,410,160
COMBINED SPRING AND FRICTION SHOCK ABSORBER
Stacy B. Haseltine, La Grange, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a corporation of Delaware
Application November 24, 1943, Serial No. 511,505
8 Claims. (Cl. 267—9)



1. In a friction shock absorber mechanism, the combination with an upper friction post having a base portion at the upper end thereof, said base portion having a vertical abutment surface on the outer side thereof at one side of the mechanism; of a lower friction post having a base portion at the lower end thereof, said base portion having a vertical abutment surface at the outer side thereof at the opposite side of the mechanism, said posts having lengthwise sliding engagement with each other; and a coil spring surrounding said posts and opposing relative longitudinal movement thereof, said coil spring having the inner sides of the coils at the top and bottom ends in bearing engagement respectively with the abutment surfaces of said base portions.

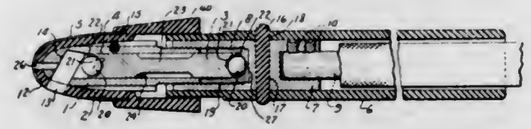
2,410,161
DISPLAY CASE FOR WRIST WATCHES AND THE LIKE
William Helbein, New York, N. Y.
Application October 6, 1944, Serial No. 557,496
12 Claims. (Cl. 206—75)



12. A display case for wrist watches, comprising a member about which a wrist watch and band may be mounted and having outwardly extending flanges at its end portions extending outwards of said wrist watch and band, and shell-like end covers slidably mounted on said flanges and when moved together encasing said watch and band and when moved apart exposing said watch and band, said member and end covers being of thermo-plastic material at least said end covers being transparent, and ribs or tracks projecting from said end covers and engaging complementary grooves in said member for facilitating the sliding of the end covers.

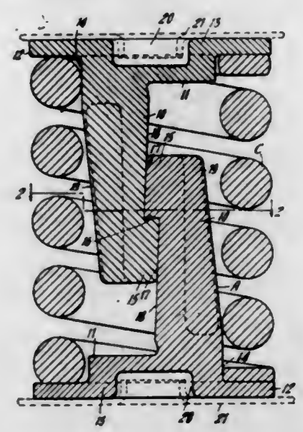
2,410,162
AGITATOR FOR LIQUID COOLING SYSTEMS
Joseph H. Horan, Bronx, N. Y.
Application July 13, 1944, Serial No. 544,750
1 Claim. (Cl. 285—2)

A coupling structure, for use with a radiator having a neck portion, comprising a tube fitting into said neck and having an internally threaded sleeve portion protruding from said neck, an elongated externally threaded bushing adjustably threaded into the sleeve and presenting an upper end to which a pipe may be detachably secured, a cap fitting over said sleeve for engagement with said neck, a sealing gasket in said cap, a hose closely fitting inside said tube terminating short of the outer end thereof and extending out of the inner end thereof, rings positioned in the outer end of the tube and in the hose at the inner end of said tube and arranged to resist clamping pressure applied to the tube externally thereof, the inner end of said tube being slotted in that portion in which one of said rings is positioned, and a connector for joining said rings in fixed spaced relation with each other.



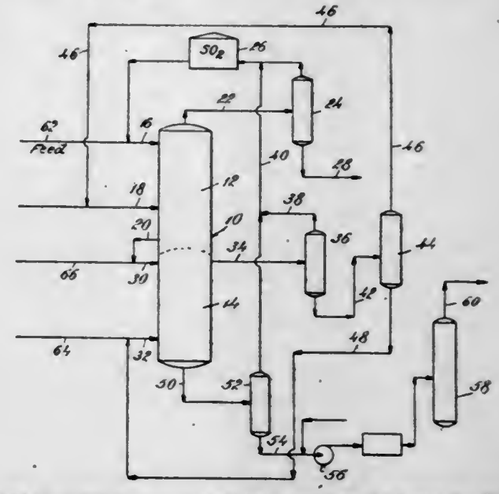
2,410,163
APPARATUS FOR DECRATING EGGS
Willis G. Howard, Indianapolis, Ind.
Application June 28, 1944, Serial No. 542,586
4 Claims. (Cl. 214—1.1)

1. Means for decrating eggs, comprising a vertical axis turn table, two parallel pairs of vertical plates journalled on said table on horizontal axes normal to and medially of said plates with the plates of each pair spaced apart a distance slightly greater than one horizontal dimension of a standard egg crate, each of said plates being provided with two L-shaped supplements with their vertical-arm extremities hinged to opposite edges of a plate and their horizontal arms directed toward a companion plate and also provided with a lip at one edge normal to the hinged axes and projecting toward a companion plate,



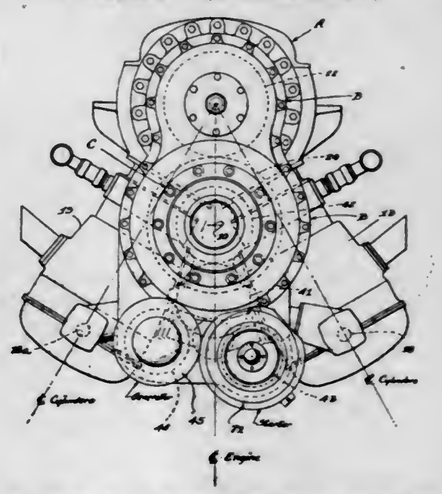
means obstructing outward movement of said supplements when in their lower positions, a follow-board having skirts depending from two opposite sides and so spaced and dimensioned that they may be inserted into an egg crate alongside egg groups packed therein, said follow-board being dimensioned to lie upon and extend between the horizontal arms of the L-supplements of a pair of said end plates and support the stacks of egg groups, and a bottom board dimensioned to lie upon and extend between said horizontal arms of the L-supplements and support the egg groups from which a crate has been withdrawn.

2,410,164
ELECTRODE HOLDER
Honel A. Jackson, Detroit, Mich.
Application February 4, 1944, Serial No. 521,005
5 Claims. (Cl. 219—8)



3. An electrode holder comprising in combination an electrically conducting head, an insulating cover surrounding said head, said head having a socket adapted to receive the end of an electrode, said insulating cover having an opening adjacent said socket through which the end of the electrode is passed into said socket, cooperating openings in said head and insulation, and a pin of insulating material passing through said openings for locking the insulating cover on said head.

2,410,165
FRICTION SHOCK ABSORBER
George A. Johnson, Chicago, and Stacy B. Haseltine, La Grange, Ill., assignors to W. H. Miner, Inc., Chicago, Ill., a corporation of Delaware
Application December 24, 1943, Serial No. 515,518
6 Claims. (Cl. 267—9)

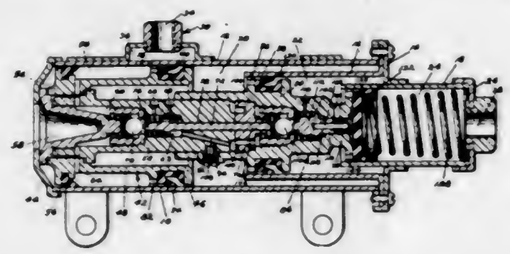


1. In a friction shock absorber mechanism, the combination with a pair of relatively lengthwise slidable friction posts at diametrically opposite sides of the mechanism having interengaging friction surfaces on their inner sides inclined to the longitudinal axis of the mechanism; of a coil spring extending lengthwise of the mechanism and surrounding said posts, said spring exerting lateral inward pressure on the posts and having shouldered engagement with the posts to oppose relative lengthwise movement thereof toward each other.

2,410,166
PROCESS OF SEPARATING TOLUENE
Thomas B. Kimball, Hammond, Ind., assignor to Sinclair Refining Company, New York, N. Y., a corporation of Maine
Application May 14, 1941, Serial No. 393,338
3 Claims. (Cl. 260—674)

1. The process of separating toluene from a mixture of toluene and paraffin hydrocarbons of similar boiling point which comprises intimately contacting said mixture with sulphur dioxide in an extracting treatment, separating the composite mixture into two component parts consisting of a raffinate phase and a primary extract phase, bringing said primary extract phase without removal of sulphur dioxide therefrom into intimate contact with a paraffin hydrocarbon having a boiling point substantially higher than that of toluene in a washing treatment, separating the products of said washing treatment into two component parts consisting of a washed extract component and a spent wash oil component, separating hydrocarbons having boiling points similar to toluene from said spent wash oil component by distillation, and recovering toluene from said washed extract component by distillation.

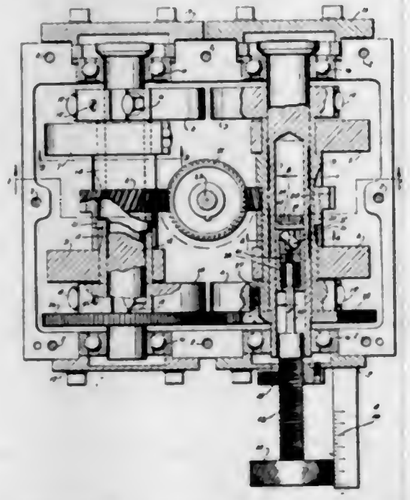
2,410,167
ACCESSORY MECHANISM AND DRIVE FOR AIRCRAFT ENGINES
James W. Kinnucan, Detroit, Mich., assignor to Continental Aviation and Engineering Corporation, Detroit, Mich., a corporation of Virginia
Application March 10, 1942, Serial No. 434,137
7 Claims. (Cl. 123—195)



7. In a power transmission assembly for an aircraft engine comprising an engine of the V-

type having a crankcase, a crankshaft and a plurality of aligned cylinders, a propeller shaft offset with respect to said crankshaft, a separate gear case secured to the forward end of said engine crankcase, a gear reduction assembly supported forwardly of said gear case and axially aligned with said propeller shaft, and gearing supported within said gear case comprising a crankshaft gear driven by said engine crankshaft, a propeller shaft driving gear drivingly connected with said crankshaft gear and supported by said gear case for rotation about an axis extending coaxial with respect to the center longitudinal axis of said engine, which axis is substantially equidistant from the outer extremities of the engine crankcase and cylinder heads, said propeller shaft driving gear support including a drive shaft operatively connected with and axially aligned with said gear reduction assembly, spaced bearing means carried by said gear case for supporting said drive shaft, and accessory drive means including a train of gears positioned in a common plane extending normal to the center longitudinal axis of the engine and intermediate said propeller shaft driving gear and one of said drive shaft bearings, said drive shaft having external splines extending longitudinally thereof substantially between said spaced bearings, said propeller shaft driving gear and one of the gears of said gear train both having a splined driving connection with said splined drive shaft.

2,410,168
HAND CLEANER
Werner E. Kleinicke, Manhasset, N. Y., assignor to The Johnson-March Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application November 16, 1944, Serial No. 563,799
4 Claims. (Cl. 252—173)

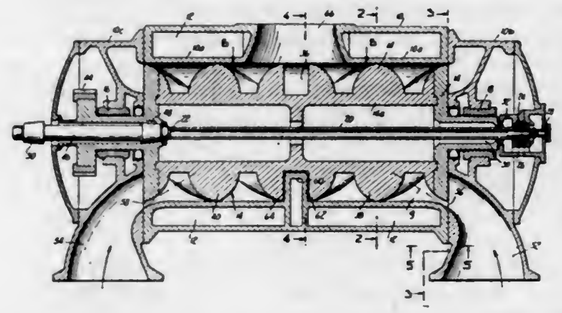


1. A hand cleaner comprising an emulsion of white mineral oil and stearic acid in an aqueous solution containing diethylene glycol stearate, diethylene glycol laurate and diethylene glycol.

2,410,169
FLUID PRESSURE PRODUCING DEVICE
Ludger E. La Brie, Detroit, Mich., assignor to Hydraulic Brake Company, Detroit, Mich., a corporation of California
Application July 21, 1943, Serial No. 495,638
6 Claims. (Cl. 60—54.6)

1. A fluid pressure producing device having a low pressure chamber, an intermediate pressure chamber and a high pressure chamber, a piston having heads movable in the respective chambers for creating pressure, and a loaded valve mechanism in the piston controlled by the differential of fluid pressure between the low and intermediate chambers for relieving the pressure in the intermediate pressure chamber to thereby transfer the load from the low and intermediate to the high pressure piston head.

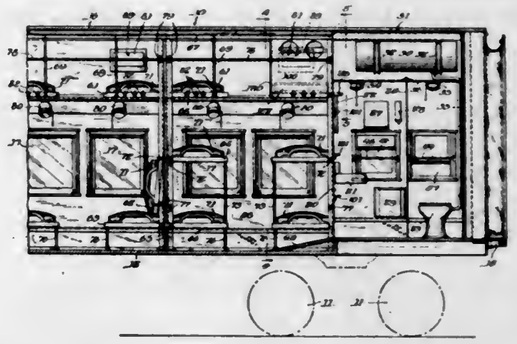
2,410,170
OSCILLATOR
Benjamin J. Lazan, Greenwich, Conn.
Application November 18, 1943, Serial No. 510,828
9 Claims. (Cl. 74—61)



1. An oscillator comprising, in combination, inner and outer concentric shafts, means for rotatably supporting the same, eccentric weights mounted on said shafts, grooves formed in each of the respective shafts in angular relation to each other, a device having two keys angularly offset with respect to each other so as to respectively fit in said grooves, and means for moving said device so that said keys move lengthwise of said grooves thereby to cause relative angular adjustment between said shafts and the eccentric weights thereon.

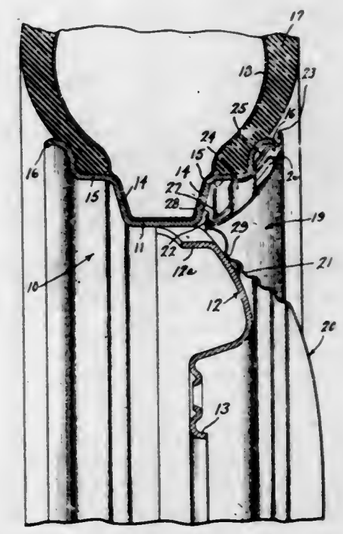
2,410,171
GLARE SHIELD
Lester R. Le Lande, Cincinnati, Ohio, assignor to The American Glare Shield Co., Inc., Cincinnati, Ohio, a corporation of Ohio
Substituted for abandoned application Serial No. 420,995, November 29, 1941. This application June 6, 1945, Serial No. 597,737
2 Claims. (Cl. 296—97)

2. In a glare shield, a shield member having opposite continuously smooth areas frictionally clamping against opposite areas of a shank member comprising a channel straddling an edge part of said shield member and having the two sides of the channel relatively movable for clamping said shield member, means for drawing said two sides toward each other for frictionally clamping against said opposite areas of said shield member, means interposed between said sides and the shield member of material which cushions the pressure of said sides on said shield member and also has a high degree of friction with the sides and shield member, and means for adjustably holding said shank member and therewith said shield member on a structure, constituting with said shank member the sole means for supporting said shield member on said structure, the shank member having a slit whereby the two sides of the channel are relatively movable as above mentioned, said shank member having also an arm, for pivotally mounting it on the adjustable means for holding the same, said means comprising a base, and a projecting arm to which the shank arm is pivotally secured, said projecting arm being projected downwardly at less than a right angle to the base, and a stop on the shank arm engaging said projecting arm to co-act to hold the shank in a position to bring the shield member into substantially parallel relation to a slanting wind shield on which the base is mounted, when moved to said stopped position.



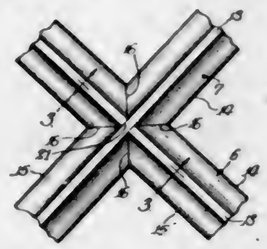
2,410,172
ROTARY SCREW WHEEL APPARATUS
Alf Lysholm, Stockholm, Sweden, assignor, by mesne assignments, to Jarvis C. Marble, Leslie M. Merrill, and Percy H. Batten, as trustees
Application May 31, 1941, Serial No. 396,030
10 Claims. (Cl. 230—143)

1. In a rotary screw wheel compressor of the kind having intermeshing spiral lobed and grooved rotors rotating in a casing structure between inlet and outlet casing end walls and in which working spaces open up from the inlet ends to the outlet ends of the grooves during the inlet phase of the cycle of operation, inlet port means in the inlet end wall for directing fluid into said grooves in generally axial direction during said inlet phase, whereby to create columns of said fluid flowing generally longitudinally of said grooves during said inlet phase and impacting the outlet end wall as the grooves open up to their maximum volume, the peripheral extent of said inlet port means causing the same to remain in direct axial communication with at least certain of said grooves for a substantial period after such grooves have come into full communication with said outlet end wall, whereby to create a ramming effect in such grooves due to said impacting.



2,410,173
AUXILIARY BERTH ARRANGEMENT
Lewis A. Lutherman and Earl L. Thompson, Chicago, Ill., assignors to Pullman-Standard Car Manufacturing Company, Chicago, Ill., a corporation of Delaware
Application July 24, 1944, Serial No. 546,296
15 Claims. (Cl. 105—315)

1. In a railway sleeping car having a passenger compartment containing a plurality of sleeping accommodations disposed transversely of the car and having a longitudinal side aisle, an end zone in the car, a bulkhead separating the end zone from said passenger compartment, an auxiliary sleeping berth between the passenger compartment and said end zone disposed in an upper

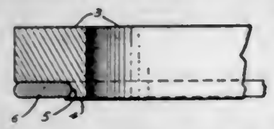


portion of the passenger compartment, and an entrance opening to the berth in said bulkhead, said berth being accessible only from the end zone of the car.

2,410,174
WHEEL STRUCTURE
George Albert Lyon, Allenhurst, N. J.
Application June 2, 1943, Serial No. 489,312
5 Claims. (Cl. 301—37)

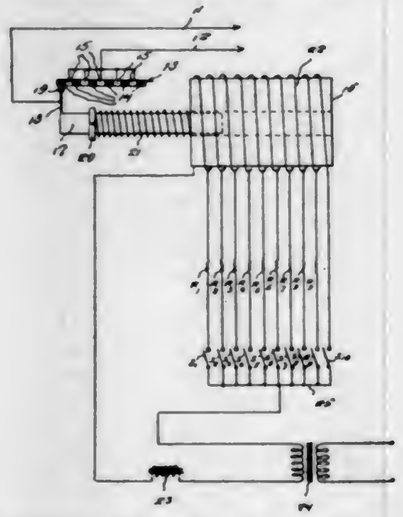
1. In a wheel structure having a tire rim portion and a central load bearing portion, said tire rim portion having a generally axially outwardly protruding intermediate portion, a cover assembly including a self-sustaining resilient readily flexible part adapted for sharp localized flexing without permanent deformation and arranged to be flexed away from the wheel structure when associated therewith to allow access to the outer side of the wheel and permit removal of said cover part, and a retaining member to secure the cover on the outer side of the wheel structure including an annular part having a plurality of sets of resilient fingers extending therefrom in substantially opposite radial directions, one of said sets of fingers resiliently retainingly receiving a portion of the cover and another of said sets resiliently engaging the wheel structure to secure the retaining means thereto, a portion of the retaining member intermediate said sets of fingers engaging said protruding portion of the tire rim.

2,410,175
JOINT
Hobart E. Machamer, Oak Park, Ill., assignor to Ceco Steel Products Corporation, Omaha, Nebr., a corporation of Nebraska
Application October 22, 1943, Serial No. 507,313
3 Claims. (Cl. 287—51)



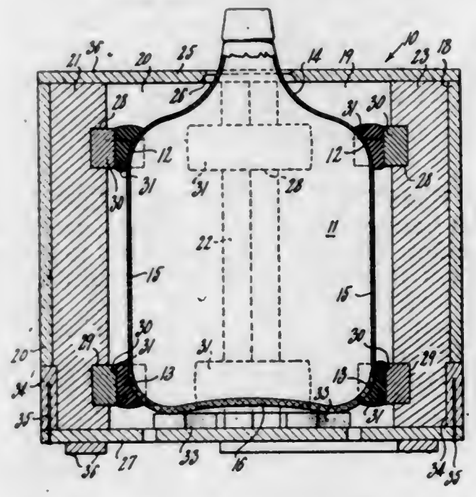
1. A joint consisting of a plurality of intersecting members each comprising a web portion and a flanged head portion, the flanges of said head portions being notched to effect interfitting engagement, one of said members being provided with a slot, a recess and an interposed locking bar, the other of said members being provided with a transverse slot, a longitudinal recess and an angular slot joining said transverse slot and said recess, the slots and recess outlining a locking lug disposed in alignment with the transverse slot, said locking bar of one member being disposed in the recess of the other member and the locking lug of the other member being disposed in the recess of the one member.

2,410,176
SHOCK ABSORBER
Gervase M. Magrum, Buffalo, N. Y., assignor to Houdaille-Hershey Corporation, Detroit, Mich., a corporation of Michigan
Application October 7, 1943, Serial No. 505,286
3 Claims. (Cl. 188—88)



1. A direct action shock absorber comprising a cylinder, a piston movable in the cylinder and having a rod extending therefrom to the exterior from one end of the cylinder, a housing part extending from the other end of the cylinder, said housing part defining a chamber for communication with said cylinder for the interflow of hydraulic fluid, compensating structure in said chamber defining a closed space containing air, part of said compensating structure being movable in response to the pressure of fluid flowing into said chamber from said cylinder when the piston rod moves into the cylinder whereby the confined air is compressed and by its expanding tendency against the movable part of said compensating structure exerts pressure against the hydraulic fluid to keep the cylinder filled during outward movement of the piston and withdrawal of the piston rod from the cylinder, valve means on said piston adapted to function to permit comparatively free flow from one side of the piston to the other during inward movement of the piston and the rod but to restrict the flow when the piston and rod move outwardly, and valve means interposed between said cylinder and said chamber to function to resist flow from the cylinder into said chamber when the piston and piston rod move inwardly but to permit freer flow from the chamber into the cylinder when the piston and rod move outwardly whereby said valve means interposed between the cylinder and the chamber will control the resistance to inward movement of the piston and the valve means on the piston will control the resistance to outward movement thereof.

2,410,177
COMBINATION COMPRESSION AND OIL SCRAPING RING
Ralph J. Marvin and August Wiebke, Los Angeles, Calif.
Application October 20, 1945, Serial No. 623,572
4 Claims. (Cl. 309—44)

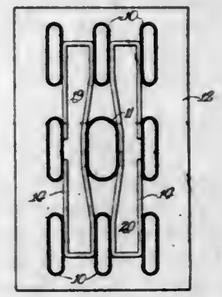


1. A combination compression and oil scraping ring including a ring body having its inner side extended downwardly beyond the normal depth of said body and forming a downwardly depending flange around the inner side of said ring body, said flange being cupped around its outer side, a flat steel ring fitted against the under side of said ring body and having its inner edge held in said cupped flange and its outer edge flush with the outer side of said ring body, the extended toe edge of said flange forming the inner wall of an oil catching space under said ring in front of said downwardly depending flange.

2,410,178
TELEPHONE LINE PULSING DEVICE
Aloysius G. Milasus, Roselle, N. J.
Application November 9, 1945, Serial No. 627,731
5 Claims. (Cl. 179—90)

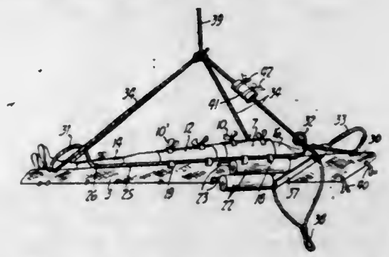
1. A telephone line pulsing device comprising a bar member having a plurality of linearly spaced contact portions, a solenoid arranged with its axis parallel with said bar member, a movable plunger axially positioned in said solenoid, the outer end of said plunger carrying an element in movable engagement with said bar member, a retarding inductor connected in the energizing circuit of said solenoid, a first line conductor connected to said contact portions, a second line conductor connected to said plunger-carried element, and means for momentarily moving said plunger inwardly of said solenoid a predetermined distance.

2,410,179
CARBOY AND METHOD OF ASSEMBLING
Joseph W. Nygren, Naugatuck, Conn., assignor to United States Rubber Company, New York, N. Y., a corporation New Jersey
Application March 8, 1944, Serial No. 525,502
5 Claims. (Cl. 217—53)



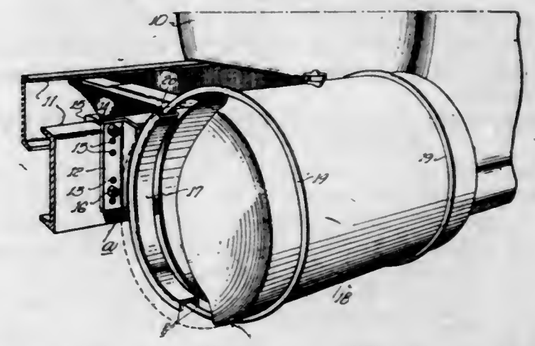
3. In a carboy construction, the combination of a bottle having upper and lower shoulders, a box structure encasing the bottle and including corner posts, said corner posts having transverse notches opposite to the upper and lower shoulders of the bottle, and resilient cushions affixed to carrying members set into said notches, the cushions overhanging and being in tight resilient engagement with the bottle around the shoulders thereof, whereby the bottle is supported on the corner posts when it is in an upright position.

5. The method of installing a bottle having upper and lower shoulders in a carboy box, which comprises assembling three sides and four corner posts of the box structure, the corner posts being provided with spaced notches located opposite the upper and lower shoulders of the bottle, inserting a member having cushioning elements anchored thereon in the upper and lower notches of the corner posts adjacent to the closed side of the box, locating the bottle in the structure to bring the shoulders opposite the cushions, inserting a member having resilient cushioning elements anchored thereon in each of the notches adjacent to the free ends of the sides by lengthwise movement of said member, and securing the fourth side to the box structure to apply pressure to the cushions laterally of the vertical axis of the bottle, whereby the cushions are deformed under pressure around the upper and lower shoulders of the bottle.



2,410,180
NONCONGEALING OIL COOLER CONSTRUCTION
Charles T. Perkins, Racine, Wis., assignor to Modine Manufacturing Company, Racine, Wis., a corporation of Wisconsin
Application October 1, 1942, Serial No. 460,334
4 Claims. (Cl. 257—130)

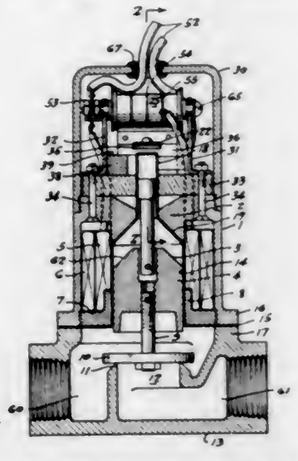
3. A heating conducting means in a core of a liquid cooler having tubes and fins, comprising a solid heat conducting member exposed to a cooling medium passing over said fins, said heat conducting member being of relatively large cross sectional area and relatively small surface area and carried between and bonded to certain tubes and secured contiguous with a fin, said member being of higher heat conductivity than said fin and providing a definite pathway for directed heat dissipation between tubes, said portion of



said fin immediately adjacent said heat conducting member also coacting with said member to increase said heat dissipation along the direction of said member.

2,410,181
STRETCHER
Malcolm R. Peters, San Mateo, Calif.
Application November 18, 1941, Serial No. 419,594
11 Claims. (Cl. 5—82)

10. An elongated stretcher having a head end and a foot end respectively at its opposite ends; a relatively slack length of rope extending along each of the longitudinal edges of said stretcher, means securing each of said lengths at their ends to the head and foot ends of said stretcher adjacent the ends of said longitudinal edges; said lengths between their said ends being slack and sufficiently long to enable swinging of the central portion of said lengths for engagement at a point substantially centrally over said stretcher for suspending the stretcher in a generally horizontal position by said lengths from said point; a section of rope connecting said lengths at the head end of the said stretcher for suspending said stretcher in a generally vertical position by said section.

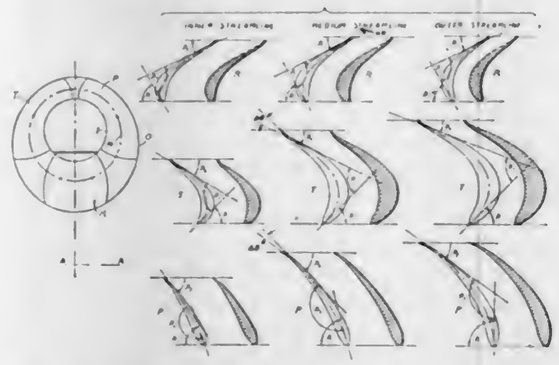


2,410,182
FUEL TANK MOUNTING
Fred Prior, Dallas, Tex.
Application October 20, 1944, Serial No. 559,494
2 Claims. (Cl. 280—5)

2. A fuel tank mounting including a bracket plate secured for vertical adjustment on a vehicle frame, an outwardly extending, arcuately re-

cessed flange on said plate, an arcuate brace secured in said recess in a vertical plane and of substantially U-shape in transverse section, a circular, tank embracing member having its ends secured to said brace and means for adjusting said member circumferentially to adapt the same to tanks of different diameters.

2,410,183
ELECTROMAGNETIC DEVICE
William A. Ray, Glendale, Calif., assignor to General Controls Co., a corporation
Application May 8, 1943, Serial No. 486,165
1 Claim. (Cl. 175—335)



In an electromagnet structure: a magnetic circuit including a magnetic member movable to an attracted position with respect to the remainder of the magnetic circuit; an attracting coil associated with said magnetic circuit for moving said member to its attracted position when the attracting coil is energized; a holding coil associated with said magnetic circuit, for maintaining said member in its attracted position when the holding coil is energized; a dry disc full-wave rectifier structure having an input side and an output side, said output side being connected to the holding coil; a contact arm operated by the operation of the electromagnet between two positions corresponding respectively to the unattracted position and the attracted position of the member; contacts engaged by said arm respectively in said two positions; and an alternating current circuit connected by aid of the arm when the member is in the unattracted position, to energize the attracting coil, and connected by aid of the arm when the member is in attracted position to the input side of said rectifier.

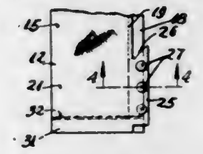
2,410,184
EYE PROTECTION DEVICE
George H. Schauweker, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a voluntary association of Massachusetts
Application August 21, 1944, Serial No. 550,399
5 Claims. (Cl. 2—14)

1. A device of the character described comprising a goggle eyecup having an opening in its side wall and connecting means adjacent the forward edge thereof, said wall, surrounding the opening, having an outwardly raised portion, a lens retaining ring having means for connection with said connecting means and a baffle plate carried by the eyecup overlying the opening in the side wall and spaced from said raised portion and having an entrance opening adjacent the forward edge thereof and located in the rear of the lens retaining ring when said ring is in position of use, the major portion of said entrance opening lying inwardly of the plane of the outer end surface of the raised portion.

2,410,185
ROTARY HYDRAULIC TORQUE CONVERTER
Heinrich Schneider, Hamilton, Ohio, and Adolf G. Schneider, Muncie, Ind., assignors to Schneider Brothers Company, a copartnership composed of Heinrich Schneider and Viva Schneider, Hamilton, Ohio, and Adolf G. Schneider and Erna Schneider, Muncie, Ind.
Application December 4, 1942, Serial No. 467,864
13 Claims. (Cl. 60—54)

1. A hydraulic torque converter, comprising three bladed wheels, namely, pump, turbine, and reaction member arranged to form a closed fluid circuit in which the pump blade exists and turbine blade entrances are at substantially the largest circuit radius and the reaction member is at substantially the smallest circuit radius, the blades having fish-shaped profiles and having along the middle streamline entrance angles for the pump between 60 and 90 degrees, for the turbine between 40 and 70 degrees, for the reaction member between 45 and 90 degrees, the exit angles of the blades in the pump being 30 and 60 degrees, and for the turbine and reaction member between 20 and 50 degrees, the exit angle on the inner streamline on the blades of at least one of said bladed wheels being greater than on the outer streamline and varying gradually therebetween.

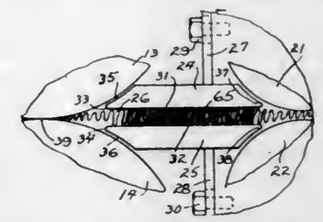
2,410,186
SLIPPER
Francis J. Shields, Bombay, N. Y.
Application March 2, 1944, Serial No. 524,683
1 Claim. (Cl. 36—11)



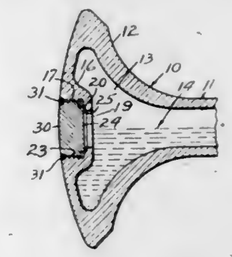
A slipper comprising a member forming the sole, front, sides, and back of the slipper, a plug stitched to the top front edges of said member, and said plug having free edges at the instep area, said plug and member along said free edges being provided with a series of eyelets, means for adjustably connecting said free edges together to control the diameter of the slipper at the instep area, said means comprising separate laces extending between the free edges and adapted to have their ends tied together in adjustable positions.

2,410,187
COATING COMPOSITION
Clifford Kanne Sloan, Thornton, Pa., and Gordon Derby Patterson, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application April 28, 1943, Serial No. 484,881
9 Claims. (Cl. 260—19)

1. A metal protective, pigmented coating composition comprising at least 10% by weight, based on the total pigment present, of calcium chromate and a vehicle therefor, said vehicle being selected from the group consisting of an alkyd resin and a phenol/formaldehyde resin, and having a water-impermeability value of at least 5 at a film thickness of 0.005 inch after 6 months' outdoor exposure.



2,410,188
BUTTON WING FOR GARMENT SLEEVES
Charles Solomon, New York, N. Y.
Application October 23, 1944, Serial No. 559,907
1 Claim. (Cl. 2—270)

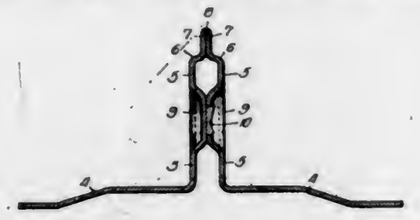


A garment comprising a body and sleeves, each of said sleeves being formed of a front strip of cloth and a rear strip of cloth, one of the seams therebetween being at the rear of the sleeve and the other of the seams being at the front of the sleeve spaced a short distance from the outer side thereof, and a secured reinforced button wing on the cuff of each of said sleeves extending from the front seam outwardly beyond said outer side, each of said button wings including an extension of said front strip and a folded extension of said rear strip forming three layers of cloth, and a row of buttons sewed through said three layers, said extensions each having a folded part projecting beyond said outer side, the insides of said folded parts located on each sleeve being connected by a seam, said seam firmly securing the position and form of said button wings.

2,410,189
CREPING MACHINE
Louis A. Straubel and James W. Straubel, Green Bay, Wis.; said Louis A. Straubel assignor to said James W. Straubel, as trustee
Application November 27, 1944, Serial No. 565,208
8 Claims. (Cl. 154—30)

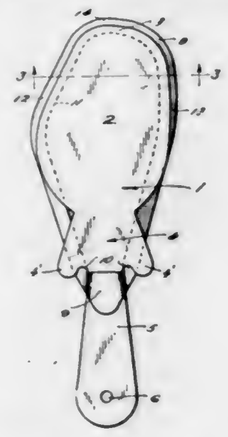
1. In a creping machine for paper and other web material, a pair of smooth surfaced rolls forming a bite therebetween into which said web is drawn, a pair of rigidly mounted creping plates providing a restricted passage therebetween and extending into the delivery side of said bite, said plates having blunt leading edges closely adjacent to but not in pressure scraping relationship with said roll surfaces, said blunt edges in cooperation with the walls of said restricted passage having the effect of backing said web up upon itself in said bite ahead of said leading edges to be there creped, and means for drawing said creped web through and out of said restricted passage at a rate of speed such as to cause said web to retain much of its crepe.

2,410,190
METHOD OF MAKING PLUG TYPE HOLLOW POPPET VALVES
Arthur Townhill, Cleveland, Ohio, assignor to Thompson Products, Inc., Cleveland, Ohio, a corporation of Ohio
Application February 4, 1944, Serial No. 521,115
1 Claim. (Cl. 29—156.7)



The method of sealing a coolant-filled hollow poppet valve body having an internally threaded plug-receiving filler aperture equipped with an annular axially tapered shoulder adjacent its inner end and so disposed as to block the advance of an externally threaded aperture-filling plug having a continuous annular skirt on the inner end disposed to engage the taper of the shoulder when the plug is advanced into initial shoulder-engaging position, which comprises screwing the plug into the aperture beyond the point where said skirt initially engages the shoulder to deflect the skirt by means of the taper of the shoulder as the skirt is rotated relative thereto and effect metal-to-metal contact with a substantial annular area of said shoulder and establishing a seal between the coacting skirt and shoulder surfaces throughout said annular area, and welding the plug to the valve body externally of said annular area and the hollow sealed by it.

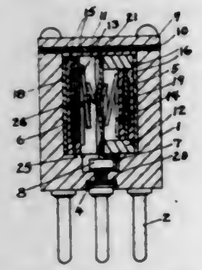
2,410,191
RAILWAY CAR ROOF
Victor E. West, Chicago, Ill., assignor to Standard Railway Equipment Manufacturing Company, Chicago, Ill., a corporation of Delaware
Application September 27, 1944, Serial No. 555,938
7 Claims. (Cl. 108—5.4)



7. A railway car roof sheet having a body portion and a marginal flange extending substantially normal thereto, a portion of said flange being bent outwardly and adapted to engage and be secured to an adjacent similarly formed roof sheet flange, the body portion of said flange being

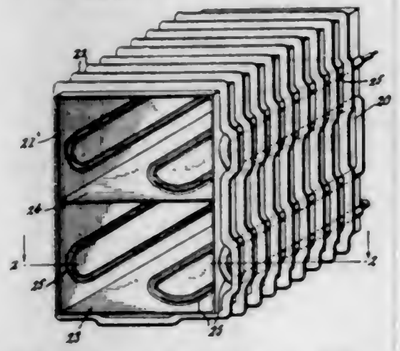
formed with integral outwardly projecting embossments adapted to engage and be secured to

similarly formed embossments of said adjacent flange.



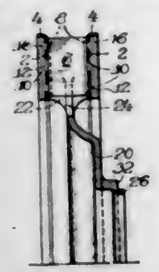
2,410,192
SCRAPER UTENSIL
Hattie B. Atha, Akron, Ohio
Application August 4, 1944, Serial No. 548,095
1 Claim. (Cl. 15—236)

A scraper utensil comprising a flat elongated member including a front section of substantially oval edge contour and provided with an edge groove therein, an intermediate fan-tail shaped section joined at its smaller end to the front section, a flat handle section joined at its front end to the wider end of the intermediate fan-tail section and centered relative to said wider end whereby the wider end of the intermediate fan-tail section provides a pair of ears upon opposite sides of the handle section, and a band of resilient flat material of greater width than the depth of said groove trained around said groove to the point where the front and intermediate fan-tail sections are joined and then passing across said ears on one side thereof and over the handle section on the opposite side thereof at the point where said handle section is joined to said intermediate fan tail section, said groove having straight and curved sections, respectively, at opposite side edges of the front section to shape the band into straight and curved scraping sections, respectively, for scraping flat and dished surfaces, said band being stretched around said groove and across said ears and over the handle whereby said band is held in place under tension.



2,410,193
CRYSTAL HOLDER
Henry M. Bach, Lawrence, N. Y., assignor to Premier Crystal Laboratories, Incorporated, New York, N. Y.
Application September 2, 1944, Serial No. 552,436
13 Claims. (Cl. 171—327)

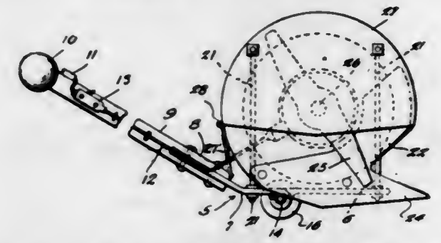
1. A holder for a piezo-electric crystal comprising a body member formed with a cavity for receiving a crystal and electrode assembly, spring means maintaining the crystal and electrode assembly in operative compressed relation, said spring means bearing between an electrode and



a contact plate, said contact plate being provided with corrugations, and means for supporting said contact plate at edge portions thereof to resist the pressure of the spring means.

2,410,194
DEFROSTER FOR ICE CUBE TRAYS
Robert H. Baker, Munster, Ind.
Application May 6, 1944, Serial No. 534,447
2 Claims. (Cl. 62—1)

1. A modified refrigerating evaporator for household refrigerators in which refrigerating coils surround a rectangular metallic frame having side walls, a bottom, a top and being without ends to admit slidable trays for ice cubes, the modification comprising pressed-out areas in the walls and bottom along definitive lines to produce grooves opening on the inner space of the unit, and heating coils lying in said grooves flush with the plane of the inner faces of the wall and upper face of the bottom.

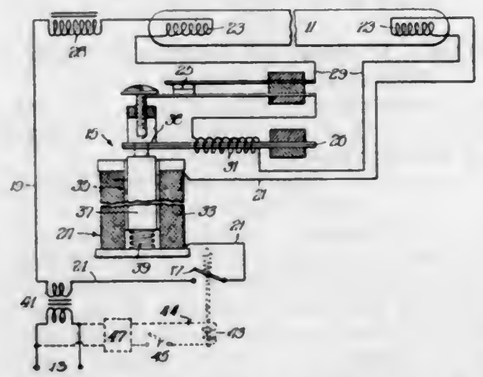


2,410,195
ROTOR AND METHOD OF MAKING
Walter H. Baselt, Tucson, Ariz., and Carl E. Tack, Chicago, Ill., assignors to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Application July 8, 1942, Serial No. 450,136
19 Claims. (Cl. 188—218)

1. The method of fabricating a rotor comprising the steps of welding a plurality of spaced radial blades at opposite edges thereof to a pair of spaced perforated annular backing members,

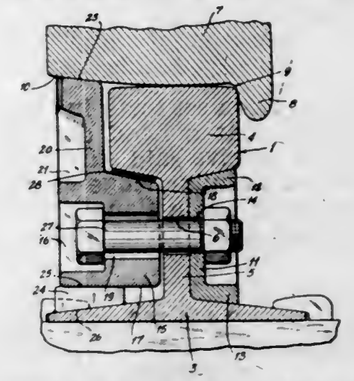
and then casting brake rings on the remote surfaces of said members and simultaneously casting a support hub with radial ribs extending between said members and into certain of the perforations therethrough.

2,410,196
LAWN EDGER
Frederick L. Benthall, Sr., Houston, Tex.
Application July 7, 1944, Serial No. 543,927
2 Claims. (Cl. 56—256)



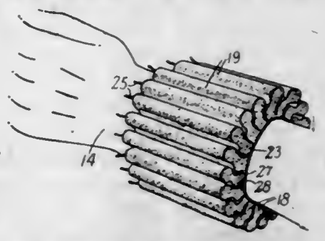
1. A lawn edger of the class described comprising a horizontally extending handle-equipped wheel-supported truck, a vertical adapter plate extending upwardly at one side of said truck, a motor on said plate extending inwardly therefrom over said truck, a guard on said plate extending outwardly therefrom, a stationary cutter blade on said plate extending horizontally outwardly of the lower portion of the plate and projecting forwardly from the front end of said truck, and a rotary cutter connected with the motor shaft and operating within the confines of said guard in cooperating relation to the stationary blade.

2,410,197
TETRAHYDROPYRROLE ALCOHOL ESTERS OF HALOGEN SUBSTITUTED CARBOXYLIC ACIDS
Joseph N. Borglin, Wilmington, Del., assignor to Hercules Powder Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application May 23, 1941,
Serial No. 394,880
4 Claims. (Cl. 260—313)



1. An ester of a halogen substituted carboxylic acid and a heterocyclic alcohol selected from the group consisting of tetrahydropyrrole alcohol and monomethyloltetrahydropyrrole.

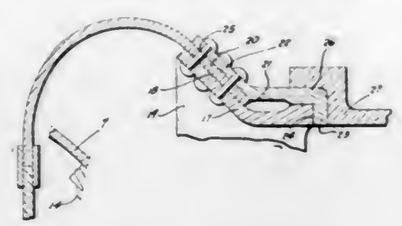
2,410,198
CONTROL SYSTEM
Arthur H. Buckley, Chicago, Ill.
Application November 9, 1942, Serial No. 465,009
6 Claims. (Cl. 175—335)



1. A control member comprising a coil, a movable armature magnetically associated with said coil whereby the armature is urged for movement in one direction from stand-by position when the coil is electrically energized, a bimetallic member operatively associated with said armature to yieldingly urge and hold the same against such movement, heating means operable to heat said bimetallic member when said coil is energized whereby, after a definite time interval, to disable said bimetallic member and allow armature movement to a shifted position, and means operable to disable the heating means in response to armature movement whereby to allow the bimetallic member to cool and reexert its urge on the armature, the urge of said bimetallic member, when cool, being insufficient to return the armature to stand-by position, against the contrary influence of the coil when energized.

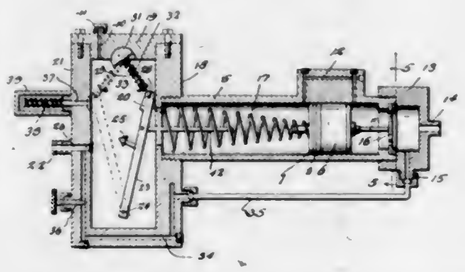
2,410,199
RAIL JOINT TREAD BRIDGE
William G. Buhrer, Jerseyville, Ill.
Application January 5, 1946, Serial No. 639,214
4 Claims. (Cl. 238—218)

1. For combination with adjacent ends of standard railway rails, a rail joint comprising an outer plate extending parallel with the outer rail surfaces and across the adjacent side face of the rails and having a base section dimensioned and formed to be fastened between the underface of the rail tread sections and spaced from the upper faces of the rail flange and an integral upper section having a top surface inclined upwardly from each end forming a central section that extends above the crown of the rail ends at the joint, wedge blocks inserted within the space between the bottom surface of said plate and the upper face of the rail flange whereby the elevation of said plate may be adjusted relative to the crown of the rail ends, an inner plate positioned between the undersurface of the rail tread sections and the upper face of the rail flanges, and means for clamping said plates and said rail ends together.



2,410,200
CIGARETTE CONTAINER
William E. Celestin, New York, N. Y.
Application June 29, 1944, Serial No. 542,674
6 Claims. (Cl. 224—28)

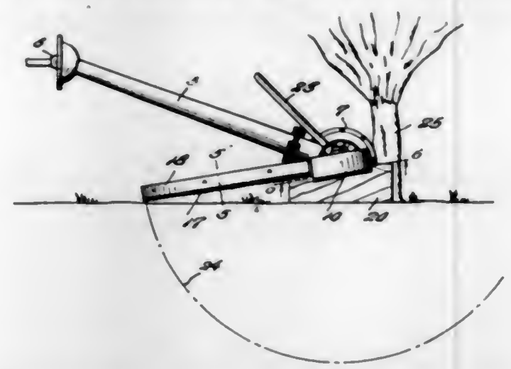
1. A cigarette container, comprising a bendable band conformable to a portion of the human



body, means for attaching the two ends of the band together, and waterproof pockets therein for holding cigarettes transversely of said band, said pockets being closed by end walls formed by marginal scallops bent up from said band.

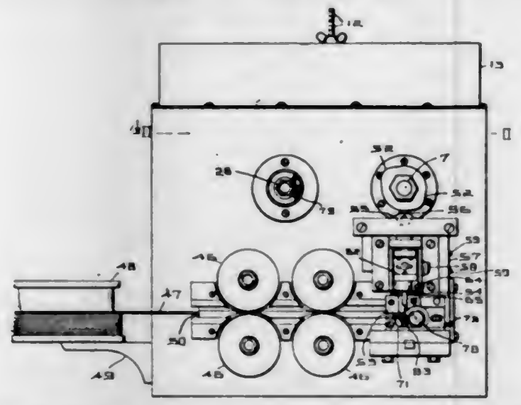
2,410,201
PLATE STEEL CASING JOINT FOR ROTARY HYDRAULIC MACHINES
Joseph F. Corby, Philadelphia, Pa., assignor to The Baldwin Locomotive Works, a corporation of Pennsylvania
Application April 26, 1944, Serial No. 532,899
2 Claims. (Cl. 253—122)

2. The combination set forth in claim 1 further characterized in that a head cover is provided with a recess to receive said stay vane ring, and said ring has an annular ledge at its innermost edge and the strap has a flanged portion seated in said recess and overlapping and engaging said edge.



2,410,202
SAFETY DEVICE FOR FLUID BRAKE SYSTEMS
Victor L. Crawford, Altamont, Ill.
Application July 19, 1945, Serial No. 605,927
4 Claims. (Cl. 303—84)

1. A safety device for hydraulic brake systems comprising a valve housing having one side connected in the brake line, a cylinder also connected at one end in the brake line and having its other end connected to the housing, an off-center spring-actuated toggle mechanism in the housing, a valve carried by said mechanism for closing the brake line and normally maintained in open position, and a piston working in the cylinder and responsive to variations in fluid pressure at opposite sides of the piston to move the piston into engagement with the toggle mechanism to close the valve.

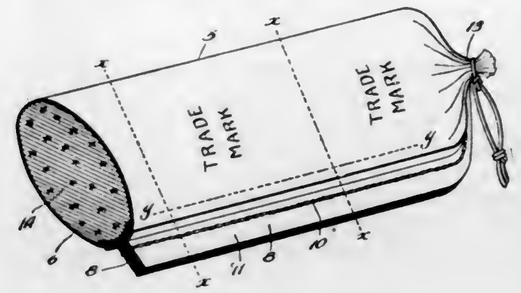


2,410,203
TREE TRANSPLANTING APPARATUS
Lewis L. Culley, Jackson, Miss.
Application August 22, 1945, Serial No. 612,083
4 Claims. (Cl. 37—2)

1. A tree transplanting device comprising an arcuate cutter, means for reciprocating the cutter, and means for moving the cutter through the earth under a standing tree to sever a portion of

the earth of semi-spherical form for removal with the tree.

2,410,204
SPLIT RING MANUFACTURE
Carl M. Cummins, Toledo, Ohio
Application December 6, 1943, Serial No. 513,068
5 Claims. (Cl. 10—73)

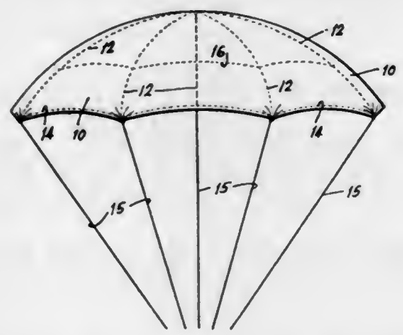


5. A strip stock handling machine, comprising a housing, a drive shaft and a driven shaft journaled in said housing, two intermittently acting grip devices to drive the driven shaft, independently adjustable means to actuate the grip devices from the drive shaft, a guide way for the strip stock, opposing pressure adjusted gripping rolls to feed the strip stock from a supply source thru said guide way, means to drive said feed rolls from said drive shaft, a receiver to engage the strip stock from the feed rolls, receiver opposing means including a plunger, and a cam on the drive shaft to actuate the plunger to engage the stock at the receiver.

2,410,205
LIGNEOUS RESINOUS COMPOSITION AND METHOD OF PRODUCING
Millard R. Dusenbury, Wilmington, Del., assignor to Hercules Powder Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application July 31, 1942, Serial No. 453,041
25 Claims. (Cl. 260—124)

1. The method of producing a resinous composition which comprises heating a ligneous wood, water, and a material selected from the group consisting of higher fatty acids, which contain a conjugated system of double bonds and their esters, at a temperature within the range of from about 240° C. to about 330° C. under superatmospheric pressure until the cellular structure of the wood has disappeared, the water being present in

sufficient amount to substantially completely cover the wood, then recovering a resin as the residue remaining after removal of the water solution.

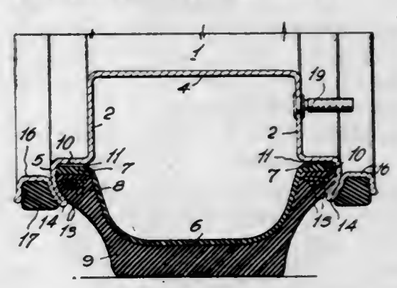


2,410,206
CASING
Alpheus J. Freeman, Chicago, Ill., assignor, by mesne assignments, to Glenn S. Noble, Chicago, Ill.
Application August 1, 1938, Serial No. 222,428
13 Claims. (Cl. 99—176)

1. A casing for food products, formed of a strip of parchmentized paper having its edges sewn together and having a longitudinal internal tubular welt which is flattened close to the inner wall of the casing for closing the joint formed by the seam the seam and stitching projecting longitudinally on the outside of the casing to form a rib which is useful in the ripping of the casing.

10. A tubular casing formed of a long strip of paper each edge of the strip being folded back upon itself with the outermost portion lying against the adjacent wall of the casing, the four thicknesses thus formed being fastened together by stitching close to the outer periphery of the casing and substantially tangential thereto when the casing is expanded, the edges extending beyond the stitching and forming a rib which is useful for removing the casing from any contents enclosed therein.

2,410,207
PARACHUTE
Leonard P. Frieder, New York, N. Y.
Application October 25, 1941, Serial No. 416,479
4 Claims. (Cl. 244—142)

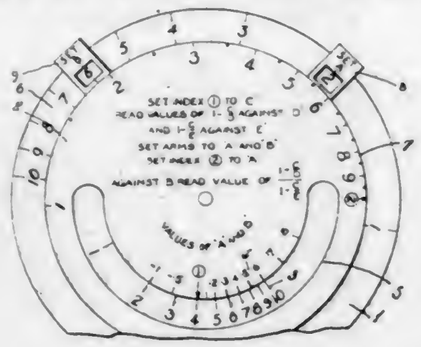


3. A parachute comprising a canopy or sail consisting of a substantially circular one-piece sheet of paper and reinforcing stitched seams extending radially of the sail, each of the said seams consisting of a substantially straight shuttle thread held in place by relatively loose loops in a needle thread extending through the paper and around the shuttle thread.

2,410,208
BUTTON PROTECTOR
Robert A. Gauldin, Enid, Okla., assignor of one-half to Truman H. Netherton, Enid, Okla.
Application August 17, 1944, Serial No. 549,929
1 Claim. (Cl. 68—235)

A shield adapted temporarily to be attached to a row of buttons on a garment during the laundering, dry cleaning or pressing of the garment which includes a bottom strip having a single row of closely spaced button holes adapted to receive the buttons on the garment, a cover strip permanently attached to the side edges of the bottom strip and adapted to overlie the buttons to protect them from injury or loss during the treatment of the garment, and an uncovered extension on the bottom strip having a button-hole therein whereby a second shield may be attached to the garment in alignment with the first shield to protect a series of buttons on the garment which might be left unprotected by the first shield.

2,410,209
COMBINED WHEEL RIM AND PNEUMATIC TIRE
H. Mitchell Godsey, Crockett, Tex.
Original application September 15, 1941, Serial No. 410,932. Divided and this application May 1, 1945, Serial No. 591,339
4 Claims. (Cl. 152—330)



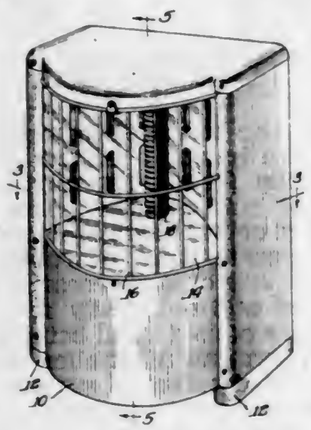
1. A vehicle tire structure comprising a drop center wheel rim having a bottom and two outwardly extending flanges forming a recess, the outer edges of said flanges being formed as grooves, said grooves having outwardly facing surfaces, a separate band of rubber extending across the open side of said recess and having its edges seated on said outwardly facing surfaces, the edge portions of said band being thicker than the center portion and of smaller circumference than said outwardly facing surfaces on which they are seated, so as to elastically press on said surfaces and aid in the sealing, and an outer casing covering said band.

2,410,210
COMPUTER OF THE SLIDE RULE TYPE
Paul Goudime-Levkovitsch, Wentworth, England, assignor to Simmonds Aerocessories Limited, London, England
Application July 7, 1943, Serial No. 493,774
In Great Britain July 29, 1942
2 Claims. (Cl. 235—84)

1. In a computer of the slide rule type for computing wind direction by the four point bearing

method, a member having a scale which is plotted in accordance with the expression $d'=K \log y'$, where d' is the linear distance from the origin of the scale of any given graduation y' and K is a

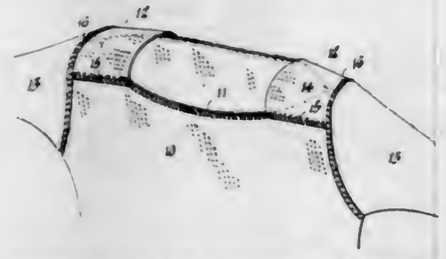
constant of proportionality, and a second relatively movable member having a scale which cooperates with the first-mentioned scale and which is plotted in accordance with the expression



$$d=K \log \left(\frac{10^n}{10^n-y}\right)$$

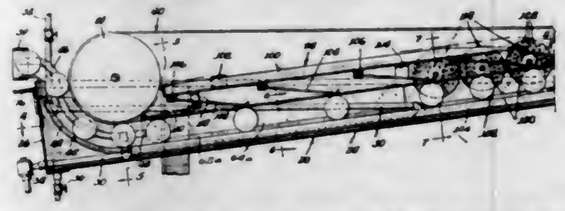
where d is the linear distance from the origin of the scale of any given graduation y, n is a whole number chosen according to the decade over which y is to be measured, such that the value of

$$K \log \left(\frac{10^n}{10^n-y}\right)$$



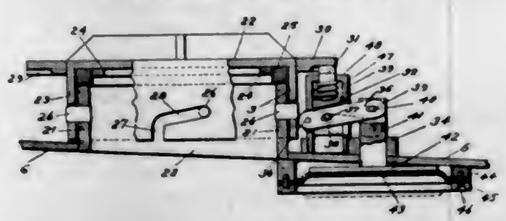
remains positive at the maximum value of y, and K is the same constant of proportionality as that used in plotting the first-mentioned scale.

2,410,211
PORTABLE ELECTRIC HEATER
James J. Gough, Chicago, Ill., assignor to Chicago Electric Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application July 8, 1944, Serial No. 544,034
6 Claims. (Cl. 219—34)



1. A portable electric room heater comprising a closed outer housing having an air inlet adjacent the bottom thereof, an electric heating element mounted within the upper portion of said housing, a cylindrical parabolic reflector positioned about said element in spaced relation to said housing, said reflector being provided with a plurality of generally longitudinal louver-like air passages for discharging air parallel to the direction of the reflected heat rays, and an electric fan mounted within said housing for producing a forced air circulation between said reflector and said housing.

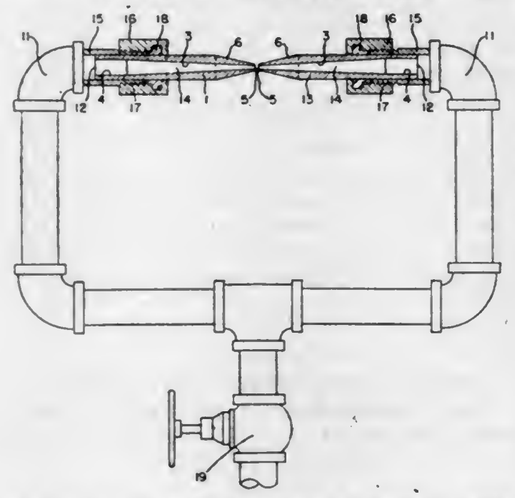
2,410,212
GARMENT
Harry S. Heilbronner, Perry, N. Y.
Application November 15, 1945, Serial No. 628,739
3 Claims. (Cl. 2—111)



1. A garment of the character described, comprising a body having a neck opening of a size to freely slip over the head of the wearer, and means forming shoulder and neck-engaging elements secured at their front, rear and outer side edges to said body with the inner portions thereof extending inwardly from and spanning the companion ends of the neck opening in substantially chordal fashion.

2,410,213
ELECTROLYTIC CAN CLEANER
Alexander C. Herro and Paul Smart, Oconomowoc, Wis., assignors to Carnation Company, Oconomowoc, Wis., a corporation of Delaware
Application November 6, 1939, Serial No. 302,942
4 Claims. (Cl. 204—141)

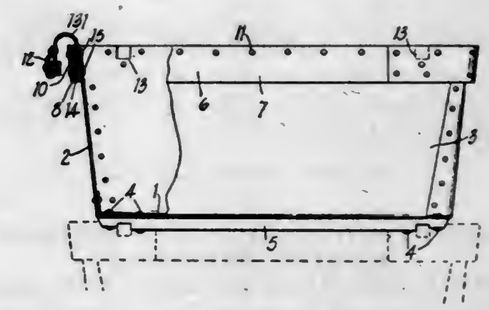
1. A device of the class described for cleaning the surfaces of a metallic tin plate container to remove external foreign matter, which comprises an electrolytic cleaning bath, means for immersing said container in said bath, means for connecting said container as an electrode during at least a portion of its period of immersion in said bath to effect said electrolytic cleaning, and brush means at least partially in said bath and movable relative to the container surfaces for separating electrolytically loosened surface material therefrom.



2,410,214
SAFETY MECHANISM FOR DYE KETTLES AND THE LIKE
Joseph H. Higginson and Homer C. Riggs, Andover, Mass., assignors to Riggs & Lombard, Inc., Lowell, Mass., a corporation of Massachusetts
Application January 7, 1944, Serial No. 517,460
3 Claims. (Cl. 220—40)

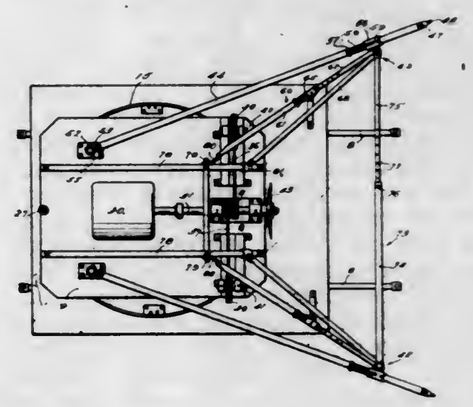
1. Safety closure mechanism for the sampling hole in a stock dye kettle or the like containing

fluid under pressure and having a cover plate provided with an outwardly extending cylindrical wall surrounding the sampling hole comprising a cover for said sampling hole having a flange telescopically and rotatably fitting said wall, cooperating means on said cover flange and wall operable upon rotation of the cover in one direction to clamp the cover on said wall and upon rotation in the opposite direction to release the cover therefrom, a peripheral rim on said cover provided with a series of recesses, a latch reciprocably mounted on the cover plate of said kettle in cooperative relation to the recess in said rim, and means operable by the fluid under pressure in said kettle to maintain the latch in engagement with a recess in said rim so long as fluid pressure in the kettle is maintained.



2,410,215
SPRAY NOZZLE
Henry G. Houghton, Wellesley Hills, Mass.
Application October 24, 1944, Serial No. 560,110
22 Claims. (Cl. 299—130)

13. A spray nozzle having a liquid discharge orifice, a liquid entrance aperture of diameter relatively large compared to the diameter of the orifice, and a longitudinally disposed interior passage uninterruptedly connecting the aperture and the orifice, the passage being conical of relatively small apex angle for a length in the region of the discharge orifice large compared to the maximum diameter of the conical passage, the dimensions of the nozzle and the length of the conical passage being such that the nozzle shall produce a laminar stream under a pressure substantially higher than 15 pounds per square inch.

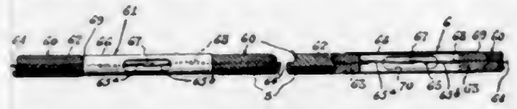


2,410,216
STACKING BOX
Edward T. Insoll, Chicago, Ill.
Application July 23, 1942, Serial No. 452,000
7 Claims. (Cl. 220—97)

3. A receptacle of the type described, comprising side and end wall panels, and top reinforcing rim members secured thereto, said rim members and panels being secured together in rigid distortion resistant relationship, stocking bars, flexible hinge-like means connecting said stacking bars to the ends of the box, said side top members having recesses in the top edges thereof for the reception of the stacking bars in operative stacking position thereof, and reinforcing elements on said top members at the corners of the box having portions extending in external covering relation to said recesses to prevent longitudinal displacement of said bars therein, said flexible hinge-like means being positioned to be moved across the ends of the recep-

tacle when said stacking bars are moved from an inoperative position outside said receptacle to an operative position in said recesses.

2,410,217
SUPPORT FOR SHEEPSHEARING APPARATUS
Ralph R. Just, Salem, Oreg.
Application March 31, 1944, Serial No. 529,021
3 Claims. (Cl. 248—2)



1. In apparatus of the class described, a horizontal support, and shearer cable hanger means comprising a pair of elongated hanger bars inclining upwardly from said support adjacent opposite sides thereof and having lower ends pivoted on said support whereby said bars are adjustable laterally and vertically into different set positions, and means to adjust said hanger bars comprising a pair of horizontal raised bars fixed on said support intermediate said pair of hanger bars, a pair of extensible sustaining bars hingedly connected to said hanger bars adjacent the upper ends thereof and also hinged to said parallel bars, a pair of brace bars pivoted to the hinged connection of the sustaining bars and also slidably connected to said parallel bars, and bridging means extending between said hinged connections.

2,410,218
THERMOPILE FOR FIRE ALARM SYSTEMS
Frederick G. Kelly, West Orange, N. J., assignor to Thomas A. Edison, Incorporated, West Orange, N. J., a corporation of New Jersey
Application May 13, 1942, Serial No. 442,759
5 Claims. (Cl. 136—4)

4. A thermopile comprising a cable serially including at intervals a plurality of thermocouples, flexible metal sheathing covering the cable between adjacent thermocouples, and rigid metal

housings for the thermocouples secured to said metal sheathing, each of said housings having an

opening therein at the hot junction of the respective thermocouple.

2,410,219

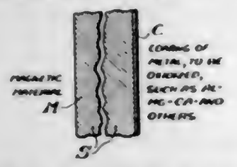
PIGMENT OR DYESTUFF AND METHOD OF MAKING THE SAME

Theodore A. Langstroth, Montclair, N. J., assignor to Sun Chemical Corporation, a corporation of Delaware

No Drawing. Application December 22, 1942, Serial No. 469,824
14 Claims. (Cl. 106—289)

1. The method of coupling an azo compound with a methylenic coupling component to provide a pigment of clean color and high tinctorial strength, which comprises preparing a high concentration solution of the azo and a high concentration solution of the coupling component in relatively controlled molecular proportions, preparing an aqueous reaction bath having an acid pH into which said coupling components are to be added and having such constituency as to remain of substantially constant acid pH below about 5.0 throughout the reaction period, and introducing said components at a controlled rate and in equivalent reacting proportions into said reaction bath and maintaining the concentration of the components in the reaction bath below about 2% and causing intimate reacting admixture of said components as introduced, and continuing such controlled introduction of the components until substantially complete inter-reaction of both components is effected.

9. The method of preparing a pigment dyestuff of high tinctorial strength and capable of maintaining said strength substantially undiminished under adverse conditions equivalent to heating to 65° C. for two weeks or storage for periods as long as six months, which comprises preparing solutions of an azo component and of a methylenic developer component of relatively controlled reacting proportions, preparing a reaction bath in volume controlled according to the amount of components to be added thereto and comprising an aqueous acid solution buffered to maintain a pH below about 5.0 throughout the coupling reactions, simultaneously introducing azo solution and developer solution into said reaction bath, and effecting and maintaining intimate reacting relationship of the reactants to cause substantially complete reaction of the components, thereafter raising the temperature of the reaction bath to approximately 60–65° C., thereafter raising the pH in the bath with its contained coupled material to about 6.5, adding a resin solution and a precipitant component reactive with the resin to effect resination of the pigment particles in the bath, and thereafter recovering the resinated particles of pigment dye.



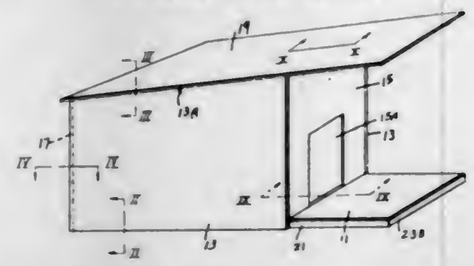
2,410,220

CORE LAMINATION AND METHOD OF PRODUCTION THEREOF

William P. Langworthy, Philadelphia, Pa.

Application December 9, 1943, Serial No. 513,604
9 Claims. (Cl. 148—6)

1. A method of producing ferro-magnetic core laminations having increased permeability resulting from high temperatre treatment in hydrogen which comprises applying to at least one face of a sheet of ferro-magnetic core material a discontinuous coat of a substance selected from the group consisting of aluminum, magnesium and calcium whereby a perforate coated sheet is formed permitting access to ferro-magnetic material in exposed porous areas and in the uncoated edges, forming laminations from the perforate coated sheet with uncoated edges, and subjecting the perforate coated laminations with porous areas and uncoated edges to a high temperature treatment in the presence of an oxygenated atmosphere containing hydrogen and at a temperature of at least 2000° F. to cause reduc-



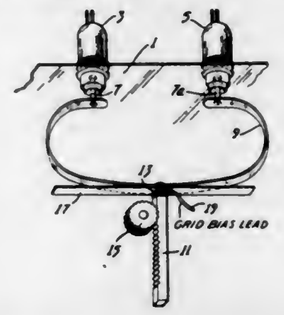
tion of material in porous areas and uncoated edges of said ferro-magnetic material while at the same time oxidizing said substance of said discontinuous coating whereby the permeability of the ferro-magnetic material is increased and the said substance is oxidized to form a self-adherent discontinuous coating preventing the sticking of one lamination with a neighboring one during the aforesaid high temperature operation and preventing electric conduction from one lamination to a neighboring one, preventing core losses and preventing magnetic fluxes from straying when said laminations are subsequently used in core structures subjected to alternating currents.

2,410,221

PREFABRICATED DOG HOUSE

John Joseph Latura, Memphis, Tenn.

Application April 20, 1945, Serial No. 589,305
1 Claim. (Cl. 20—2)



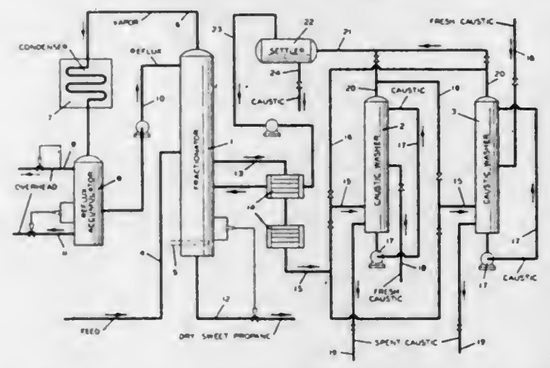
A structure including a prefabricated floor unit, a pair of side wall units, a front wall unit, a back end wall unit and a roof unit; said floor unit comprising a pair of longitudinal frame members, a plurality of transverse frame members and a floor sheet secured to said frame members; said side wall units each comprising a side wall sheet, an upper member and a lower member, said side wall sheet being secured to said upper and lower members, said lower members being each spaced above the lower edge of the said wall sheet secured thereto, each said lower member carrying a longitudinal tongue; said floor unit being of a length substantially greater than the length of said side wall units, said floor sheet being cut away along each side above said longitudinal frame members for the length of said side wall units to form shoulders; a channel along the upwardly disposed surface of each of said longitudinal frame members, said channels terminating at said shoulders, said tongue members slidably engaging said channels to join said wall units to said floor unit, said shoulders limiting forward movement of said side wall units along said floor unit; slidably engaged interlocking means joining said end wall units to said side wall units, cooperative means carried by said floor sheet and said end wall units, locking said side wall units against backward movement along said floor unit, slidably engaged interlocking means securing said roof unit to said side wall units, said roof unit overlying said side wall units and said end walls to prevent disengagement of said end walls, and means securing said roof against longitudinal displacement relatively to said wall.

2,410,222

TUNING MEANS

Howard C. Lawrence, Jr., Haddonfield, N. J., assignor to Radio Corporation of America, a corporation of Delaware

Application February 17, 1944, Serial No. 522,726
9 Claims. (Cl. 250—40)



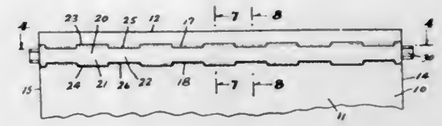
1. In combination, an electrically resonant circuit wherein the capacitance is fixed and the inductance comprises a flexible conductive loop of less than one full turn, and means for deforming said loop to vary the area embraced by and hence the effective inductance of said loop.

2,410,223

TREATMENT OF HYDROCARBONS

Harold R. Legatski, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware

Application March 2, 1942, Serial No. 433,063
8 Claims. (Cl. 196—5)



1. In a fractionation process for the removal of moisture and hydrogen sulfide from a low boiling fraction of impure hydrocarbons the steps comprising introducing the impure hydrocarbons into a fractionating column intermediate the ends thereof, removing overhead by fractionation moisture and a portion of the hydrogen sulfide, withdrawing at least a portion of the partially purified low boiling fraction from the fractionator at a point slightly below the impure hydrocarbon introduction point, caustic treating said withdrawn partially purified low boiling fraction for removal of the hydrogen sulfide, substantially separating said low boiling fraction from the caustic, reintroducing the caustic treated portion of the low boiling fraction into the fractionator at a point immediately below its withdrawal point and a substantial distance from the bottom of the fractionator, and completing removal of the hydrogen sulfide and moisture by continued fractionation, and removing the hydrogen sulfide free and dehydrated low boiling hydrocarbon fraction from the bottom portion of the fractionator.

2,410,224

PLEATING CURTAIN CONSTRUCTION

Edward Lepow, New York, N. Y., assignor to Home Curtain Corporation, Far Rockaway, N. Y., a corporation of New York

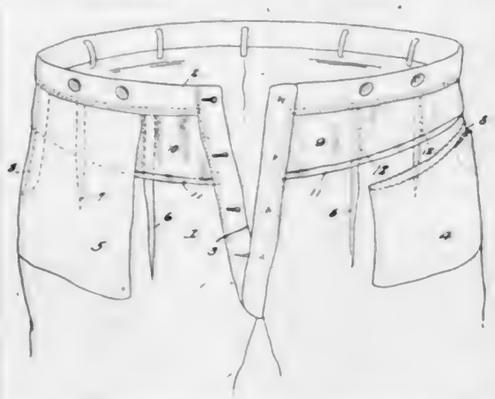
Application July 23, 1945, Serial No. 606,625
5 Claims. (Cl. 160—348)

4. Curtain construction comprising: a panel; a tape element secured to said panel along the longitudinal edges of the tape; said tape element having a pair of openings adjacent said tape element edges; whereby the portion of the tape element lying between said openings is substantially free of connection with the panel, and may buckle away from the panel when the panel and tape element are constricted laterally of the panel.

2,410,225

COATING BY FLAME-SPRAYING METHOD

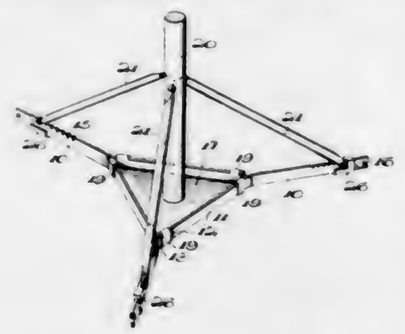
Maurice L. Macht, Jersey City, and Malcolm M. Renfrew, Arlington, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware



No Drawing. Application June 17, 1942, Serial No. 447,452
4 Claims. (Cl. 117—104)

1. Process of providing a surface with a dense, homogeneous resin coating which comprises feeding into a flame-spraying device along with a fuel gas and oxygen, an organic thermoplastic material in the form of particles passing a 50-mesh screen and substantially all retained on a 200-mesh screen, said thermoplastic material essentially comprising a polymer selected from the group consisting of polyvinyl butyral resins of the following composition, by weight:

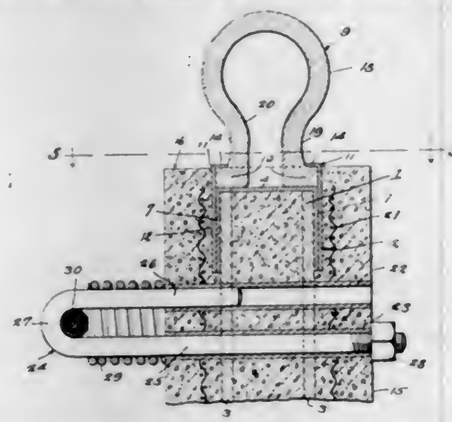
	Per cent
Polyvinyl acetate	0.0 to 1.0
Polyvinyl alcohol	10 to 20
Polyvinyl butyral	79 to 90



fusible ethylene polymers having a molecular weight of at least about 10,000 and containing from 0% to 80%, by weight thereof, of cyclorubber, and methyl methacrylate polymers substantially free of material soluble in ethyl alcohol, and said fuel gas, oxygen, and thermoplastic material being so proportioned to insure complete combustion of said fuel gas and to give a smokeless spray of said thermoplastic material in the form of completely fused, molten droplets, and directing said spray upon said surface with said flame-spraying device held sufficiently close to said surface so that the droplets of thermoplastic material impinge thereon while still in molten condition.

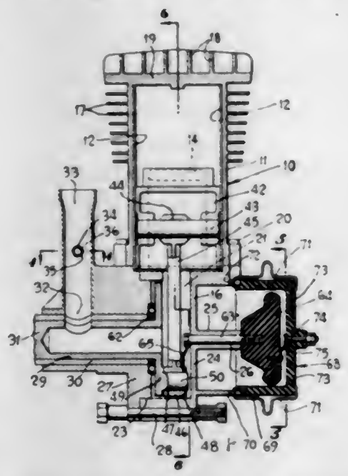
2,410,226
TROUSERS CONSTRUCTION
Earle Martin, Hutchinson, Kans.
Application October 2, 1945, Serial No. 619,839
2 Claims. (Cl. 2—227)

1. The combination with trousers having a waistband and pleats extending downwardly from the waistband, of fabric supporting elements secured throughout their lengths to the inner surface of the trousers, at the lower edge of the waistband, one of the ends of each fabric supporting element being secured to the main portion of the trousers at a point adjacent to the fly of the trousers, the opposite ends of the fabric supporting elements being secured to the main portion of the trousers adjacent to the pockets thereof, there being rows of stitches for attaching the supporting elements to the pleats, whereby said pleats are maintained closed.



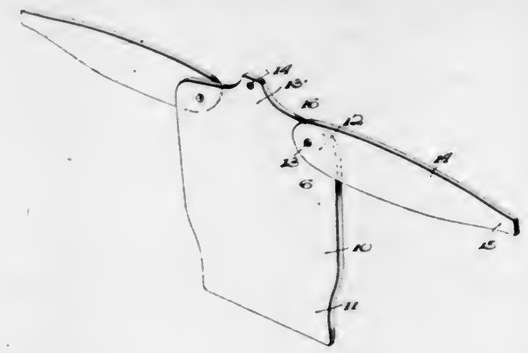
2,410,227
CHRISTMAS TREE HOLDER
Carlton T. Matthews, Green Bay, Wis.
Application June 7, 1946, Serial No. 675,168
8 Claims. (Cl. 248—48)

1. A tree holder including companion base bars having angularly disposed inner end portions adapted to mate and form a frame, a pan fitting in said frame and having resilient means thereon slidably engaged with the inner end portions of said bars and clamping the bars in assembled relation with the pan, said pan being adapted to receive the lower end of the trunk of a tree, and means extending between the tree trunk and the outer end portions of said bars bracing the tree in upright position.



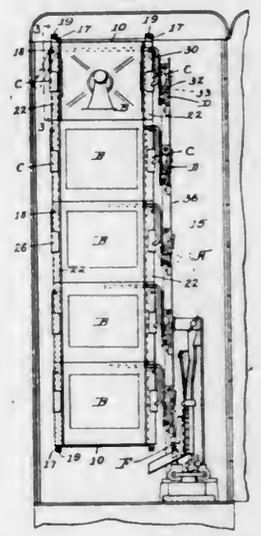
2,410,228
HIGHWAY TRAFFIC POST
Robert E. Lee Maxey, Akron, Ohio
Application April 17, 1944, Serial No. 531,465
2 Claims. (Cl. 256—13.1)

1. A highway guard including a supporting post having a pair of upper and lower transverse tubes extending therethrough, a hook bolt comprising a long arm and a short arm, and a curved portion connecting the long arm and short arm, said arms being slidably mounted within the transverse tubes, one end of the hook being extended beyond the side of the post, a coiled spring positioned



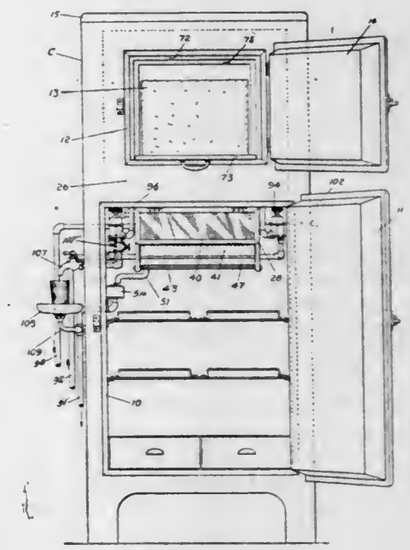
over the extended end of the hook and adapted to frictionally engage a cable held in the hook forcing the cable outwardly into engagement with the curved portion of the hook, whereby said hook and cable move against the tension of said spring, and means for securing the hook to the post.

2,410,229
MINIATURE GASOLINE ENGINE
Daniel Miller, Montebello, Calif.
Application October 4, 1944, Serial No. 557,133
15 Claims. (Cl. 123—59)



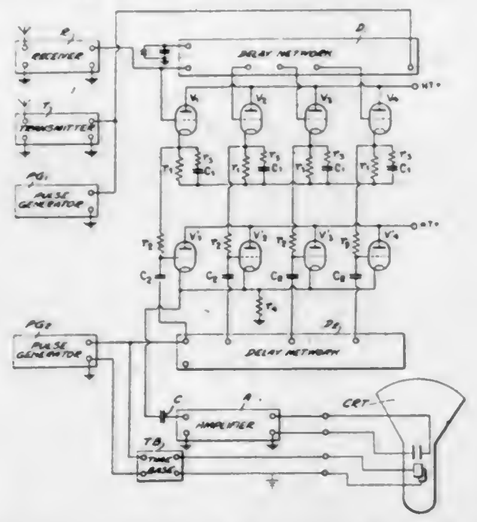
1. In an internal combustion engine, the combination of: first and second body members in side by side relation, each consisting of a cylinder and a crank case; a piston in each of said cylinders and a connecting rod extending from each piston into the cooperating crank case; an interconnecting crank shaft member extending from one of said crank cases to the other, said crank shaft member having a shaft portion with a first crank arm at one end thereof in the crank case of said first body and a crank member at the other end thereof in the crank case of said second body member; interconnecting means to connect said crank cases together having a shaft opening to receive said shaft portion, said means having a removable part to expose said shaft opening to one side so that said shaft portion may be placed in said shaft opening from the side of said interconnecting means; an output shaft extending into the crank case of said first body member in alignment with said shaft portion, said output shaft having a second crank arm spaced from said first crank arm; crank pin means connecting said first and second crank arms, said crank pin means engaging one of said connecting rods and being disengageable from one of said crank arms; and crank pin means on said crank member engaging the connecting rod in the crank case of said second body member.

2,410,230
CLOTHES DRYING, BLOCKING, OR STRETCHING DEVICE
Alvin Scott Parker, Jr., High Point, N. C.
Application July 24, 1945, Serial No. 606,814
4 Claims. (Cl. 223—69)



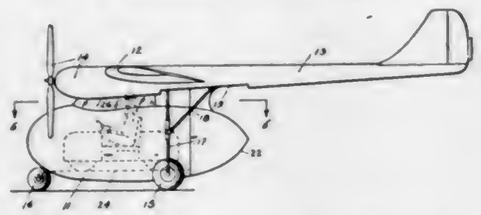
1. A device for drying, stretching or blocking a garment, such as a sweater or the like, comprising a body portion, arms arranged upon the opposite faces of the body portion, means permanently pivotally connecting the arms with the body portion, the arms being longer than the width of the body portion adjacent to the pivot means, the arrangement being such that the arms may be swung outwardly to a long-arm position, or across the body portion to a short-arm position.

2,410,231
VENDING MACHINE
Charles F. Pease, Long Beach, Calif.
Application May 24, 1943, Serial No. 488,131
5 Claims. (Cl. 312—146)



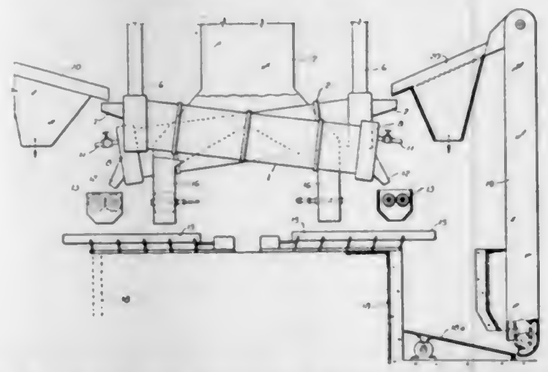
1. In a machine of the class set forth, a cabinet section having an opening in one of its walls, a series of dispensing units superimposed in said opening, a support having its ends bent forwardly and secured upon, and its intermediate portion spaced away from, the inner surface of said wall along each side portion of said opening, said dispensing units having side wings overlying said supports, and clasps hinged upon said supports and having jaw members adapted to separably engage and hold the supports and overlying wings of the dispensing units together, said cabinet section being open at its rear to give access to said clasps, whereby the dispensing units are readily interchangeable in the opening in said cabinet.

2,410,232
REFRIGERATING APPARATUS
Arthur J. Pedigo, Cookeville, Tenn.
Application March 11, 1944, Serial No. 526,021
16 Claims. (Cl. 62—89)



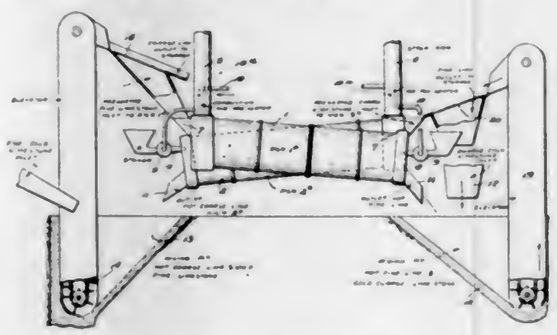
1. A refrigeration apparatus comprising, in combination with a casing, a horizontally disposed frame, hangers for suspending said frame in the casing, vertical spaced parallel walls mounted upon said frame and formed to connect between front and rear walls of the casing, the casing having a door controlled opening leading through the front wall into the space between the vertical walls, said vertical walls being spaced from the adjacent side walls of the casing to form vertical side air flues and being spaced from the top wall of the casing to form a horizontal air space, transverse walls connecting between said side walls and spaced from the front and rear walls of the casing to form vertical front and rear air flues, a top wall connecting the top edges of said spaced vertical walls and said transverse walls and forming therewith an ice chamber, a door controlled opening for the ice chamber through the said transverse wall adjacent to the first mentioned opening, means forming an ice supporting grid in the lower part of the ice chamber, said grid including a transverse water conducting pipe, water coils disposed in the first mentioned air flues and in the said horizontal air space and connected in series with the water pipes forming a part of said grid, means for connecting a source of water supply to said pipes and coils for circulation therethrough, a mechanical heat absorption unit in said front and rear air flues, and a mechanical heat absorption unit within the ice chamber.

2,410,233
METHOD AND APPARATUS FOR REDUCING THE EFFECT OF INTERFERENCE
William Spencer Percival, Ealing, London W. 5, England, assignor to Electric & Musical Industries Limited, Hayes, Middlesex, England, a company of Great Britain
Application June 13, 1942, Serial No. 446,975
In Great Britain November 30, 1939
10 Claims. (Cl. 250—20)



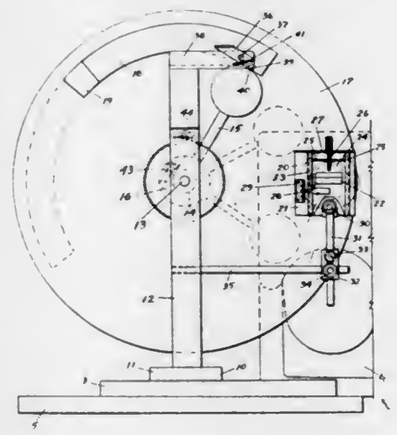
10. In the method of observing desired signals having predetermined time relationship in a train of signals including undesired random signals, the amplitude of said desired signals being comparable with or less than the amplitude of said undesired signals, the steps which comprise, in the order enumerated, selecting signals from said train during recurrently spaced time intervals, at least some of said intervals coinciding with corresponding recurrent parts of a plurality of said desired signals, integrating said selected signals, and deriving modified signals from said integrated selected signals, whereby the minimum value of the ratio of the amplitudes of said desired and said undesired signals is increased and the observation of said desired signals is rendered less difficult.

2,410,234
COMBINATION AERIAL AND LAND VEHICLE
Robert C. Read, Wilton, Conn., and Ernest W. Schlieben, Scarsdale, N. Y., assignors to York Research Corporation, New York, N. Y.
Application November 9, 1943, Serial No. 509,570
6 Claims. (Cl. 244—2)



1. Means for transportation comprising in combination: an aircraft having a fuselage, a compartment in said fuselage, a motor car equipped with two front seats in said compartment, said motor car being secured to said compartment in a predetermined position and having control means for its operation which are in conventional way operable from one of said front seats, further control means arranged in said compartment for the operation of said aircraft, said further control means being operable from the other one of said front seats and comprising foot pedals, an opening at the front part of said motor car close to the last mentioned front seat at the level of said foot pedals, means for opening and closing said opening, said opening being dimensioned for the passage of said foot pedals into said motor car when said motor car is placed into its predetermined position so that said foot pedals can be readily operated by the pilot seated on the last mentioned of said front seats.

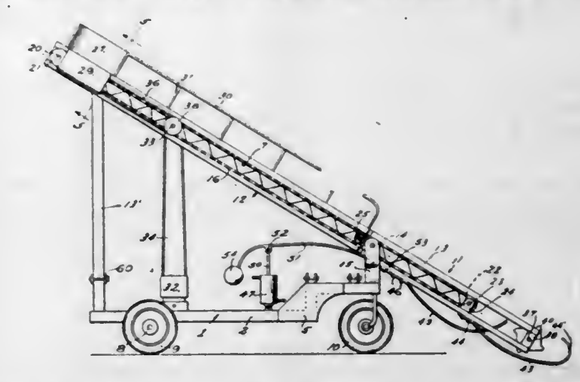
2,410,235
METHOD AND APPARATUS FOR HEAT-TREATING CALCAREOUS MATERIALS
Warford A. Reaney, Delaware, Ohio
Application June 23, 1943, Serial No. 491,962
7 Claims. (Cl. 263—53)



3. A plant for burning limestone comprising a pair of rotary cylindrical kilns arranged in side by side order with their material-receiving and discharging ends reversed, crushing means for receiving heated materials discharged from said kilns to reduce the particle or lump size thereof, a receiver for unheated limestone of relatively coarse particle or lump size, conveying apparatus arranged for the reception and intermingling of the unheated coarse materials discharged from said receiver and the relatively highly heated fine materials discharged from said crushing means, and screening means cooperative with said conveying apparatus for separating the heated fine materials and delivering the segregated and preheated coarser size materials to the inlet ends of said kilns.

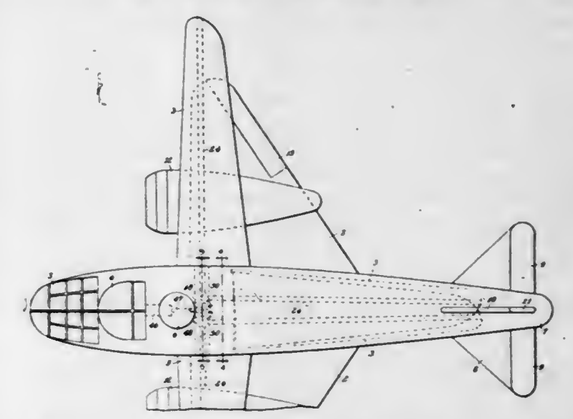
2,410,236
METHOD AND APPARATUS FOR HEAT-TREATING LOOSE BULK MATERIALS
Warford A. Reaney, Delaware, Ohio
Application June 27, 1945, Serial No. 601,763
8 Claims. (Cl. 263—22)

5. Process for heat-treating loose bulk materials, which comprises advancing a stream of such materials composed of particles relatively coarse in size through a confined heating zone, simultaneously therewith advancing a second stream of such materials composed of particles of finer size through a separate heating zone, admixing with the hot coarse materials immediately upon their discharge from the first-named heating zone quantities of unheated material of fine particle size, the latter constituting the charging material for the second heating zone, following heat exchange between said admixed materials screening the same to separate the heat treated materials of coarse particle size from the preheated finer materials and delivering the latter to said second-named heating zone, admixing with hot materials of fine particle size immediately upon their discharge from the said second-named heating zone quantities of unheated coarse material to preheat the latter material, prior to its delivery to the inlet side of the first-named heating zone, and screening said last-named admixture to remove therefrom the heated material of fine particle size and delivering the preheated material of coarse particle size to the first-named heating zone.



2,410,237
TACHISTOSCOPIC APPARATUS
Samuel Renshaw, Columbus, Ohio
Application April 6, 1944, Serial No. 529,789
5 Claims. (Cl. 88—20)

1. In a tachistoscope, a base frame, a rotatable shutter on said frame having a peripherally located light-transmitting region adapted for registration with a light sheaf projected from an associated light source, a member on said frame rotatable axially with said shutter, means for rotating said shutter at variable rates of speed embodying a pair of pendulum arms having their inner ends arranged in longitudinally aligned order on said rotatable member, and means for adjustably securing the inner ends of said arms to the rotatable member to vary arcuately the spacing thereof.

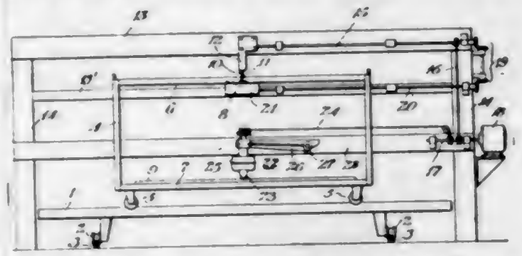


2,410,238
HAY LOADING APPARATUS
Joseph Elan Ringrose, Redmond, Oreg.
Application December 14, 1943, Serial No. 514,269
1 Claim. (Cl. 198—9)

Apparatus for loading bales of hay in a field onto a truck comprising a wheel-supported chassis frame, elevator structure surmounting said frame and inclining upwardly and rearwardly over the same, said structure comprising a vertically swingable front section, a transversely extending pick-up roller at the front end of said section, an endless conveyor extending into said section and having a front end terminating adjacent said roller, ground-engaging means on said section for maintaining the front end thereof and said roller off the ground comprising a pair of downwardly bowed bar-like side shoes having upwardly and rearwardly curved front ends in advance of said roller, and a guard plate on said section extending forwardly beneath the front

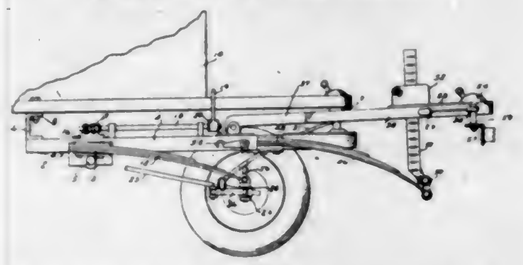
end of the conveyor and upwardly between said end and said pick-up roller to protect the front end of the conveyor against rocks on the ground, said front section being full floating vertically and having a range of swinging movement at its front end well below and above the ground line of the chassis supporting wheels.

2,410,239
AIRPLANE
Carl Roe, Mineola, N. Y.
Application November 20, 1942, Serial No. 466,267
10 Claims. (Cl. 244—49)



1. In an airplane, the combination of a fuselage having a roof portion and opening extending longitudinally of the fuselage on each side of said roof, a wing storage compartment under said roof, roof supporting members extending up through said wing storage compartment, and wings foldable into stored position in said compartment and having transverse slots to receive said roof supporting members.

2,410,240
FEEDING MECHANISM FOR QUILTING MACHINES AND THE LIKE
Theodore F. Schlicksupp, Long Island City, N. Y.
Application April 30, 1946, Serial No. 666,161
5 Claims. (Cl. 112—203)

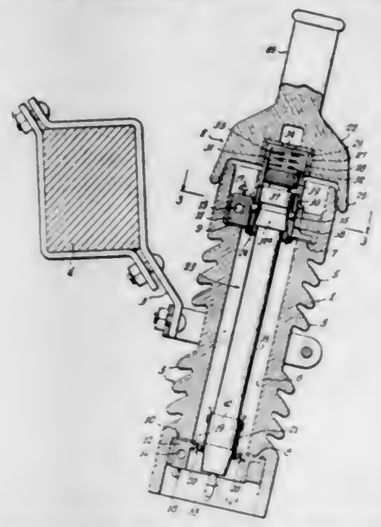


1. A feed device adapted to cooperate with a template to produce relative movement between a work-piece and a work-performing instrumentality along an irregular path, said feed device having a pair of traction wheels adapted to engage two side walls of the template, and power

transmitting means for driving said traction wheels, said means including differential gearing adapted to allow one traction wheel to be driven

faster than the other when the traction wheels are operating on curved portions of the template walls.

2,410,241
RIDING DOLLY
Arthur G. Schramm, Phoenix, Ariz.
Application June 15, 1945, Serial No. 599,675
4 Claims. (Cl. 280—33.44)



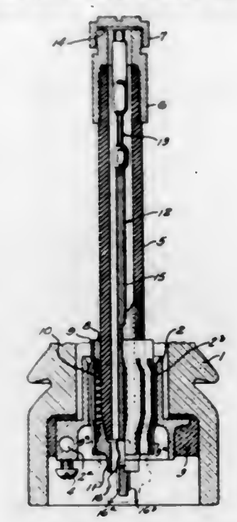
1. A riding dolly for trailers comprising a dolly frame, a pair of wheels supporting said frame, forwardly and downwardly extending quarter springs, mounted on said frame at their rear and to said wheels at their front, mounts for said springs on said frame adapted to rotate whereby the downward angle of said springs relative to said frame is increased, a hitch frame hinged to and extending forwardly above said dolly frame having a hitch socket at its front end, resilient adjustable means for maintaining said hitch frame downward relative to said dolly frame.

2,410,242
ELECTROCHEMICAL PROCESS OF TREATING CHROMITE ORE
Joseph Schulein, Corvallis, Oreg.
No Drawing. Application March 8, 1941, Serial No. 382,343
13 Claims. (Cl. 204—89)

1. A method of treating chromite ore to facilitate the recovery of chromium therefrom which comprises placing the ore in finely divided form adjacent the anode of an electrolytic cell having an aqueous alkaline solution of an alkali metal halate and passing a direct current of electricity through the cell to transform the ore adjacent the anode into chromium compounds which are soluble in the solution and non-chromium compounds which are insoluble in the solution.

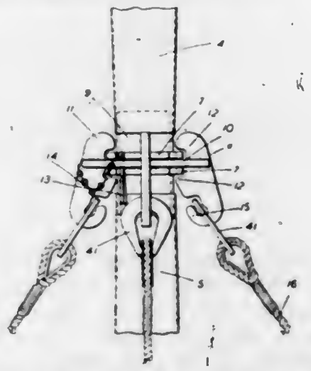
2,410,243
BRAKE AND LOCK MECHANISM
William O. Schultz, South Milwaukee, Wis., assignor to Line Material Company, Milwaukee, Wis., a corporation of Delaware
Application November 27, 1942, Serial No. 467,121
10 Claims. (Cl. 188—67)

1. In combination, a pair of members comprising a first member and a second member, said members being movable, both relatively to each other and conjointly, along a prescribed path in two opposite directions alternately, spring means continuously biasing said members oppositely lengthwise of said path, a third member adjacent said path and relatively stationary with reference to said pair of members, said second member being interposed between said first and third members and having means co-operative with said first member for limiting relative movement lengthwise of said path between said first and second members, said first member having a surface which is acutely angular to the trend of said path, and a rollable member disposed between said first and third members and traversing said second member and located thereby in predetermined relation to said members length-



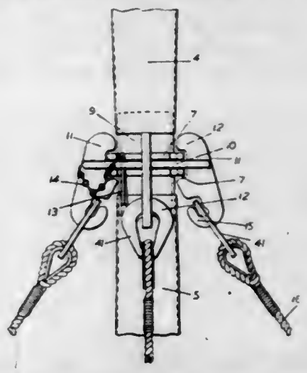
wise of said path, said rollable member normally having a limited free movement laterally of said path and actuable by said acutely angular surface into braking engagement with said first and third members in response to a movement of said first member relatively to said second member against the bias of said spring means and along said path in one only of said directions, said rollable member, conjointly with said third member, being effective, when actuated, to restrain said first member against further movement in said one direction, except movement in said one direction imparted to said first member by said second member.

2,410,244
FUSE
William O. Schultz, South Milwaukee, Wis., assignor to Line Material Company, Milwaukee, Wis., a corporation of Delaware
Application June 25, 1943, Serial No. 492,291
5 Claims. (Cl. 200—117)



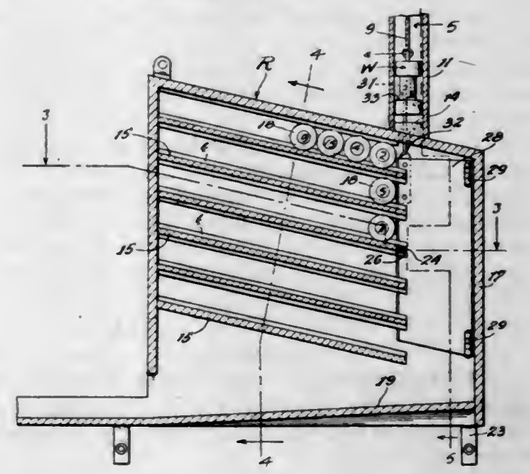
3. In combination, a fuse cartridge, a fuse link of the standard type within said cartridge having a terminal anchored at the upper end of said cartridge, the other end of said cartridge being open, said fuse link having as its other terminal a flexible conductive leader projecting out of the open end of the cartridge, a spring encircling said cartridge at its lower end and having one end anchored thereto, a terminal member carried by the other end of said spring at a point adjacent the open end of said cartridge, said terminal member having a passageway co-terminous with said open end of the cartridge and generally coaxial therewith, a metal clip attached to said flexible leader and having a plurality of pliable fingers which initially extend generally parallel to said leader so as to enable said clip to pass through the bores of said cartridge and terminal member, said fingers being bent after passing through the bores of said cartridge and

terminal member to form ears projecting radially from said leader and engaging said terminal member whereby said spring is maintained under compression and said fuse link is tensioned,



and a resilient contact carried by said cartridge frictionally engaging said terminal member to provide a counteracting force which in part nullifies the expansive force of said spring.

2,410,245
UNION FOR MASTS, POLES, AND THE LIKE
William Charles Scrivener and Alfred George Brewer, Sutton Coldfield, England, assignors to Masts Limited, Birmingham, England, a British company
Original application April 17, 1943, Serial No. 483,508. Divided and this application October 3, 1944, Serial No. 556,976. In Great Britain June 22, 1942
7 Claims. (Cl. 287—2)

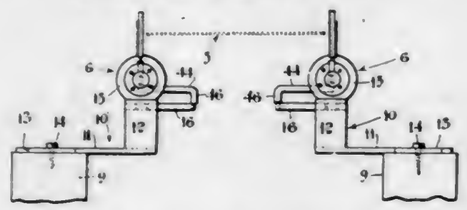


1. A union for effecting connection between the abutting ends of alined sections of sectional masts, poles and the like, comprising like radially-extending flanges on at least one end of each section having spaced, radially-extending peripheral slots therein with unslotted portions between said slots; a plate positioned between said flanges when said sections are arranged in axial alinement with their flanged ends in close proximity; and lugs associated with said plate and extending on opposite sides thereof, each lug having on its inner face a notch extending above and below said plate and defining opposed, overhanging shoulders spaced a distance equal to at least the combined thicknesses of said flanges and said intermediate plate, the spacing of said lugs with respect to said plate corresponding to the spacing of the slots in said flanges, whereby the sections may be placed in axial alinement with the plate between the flanges and with the lugs disposed within the slots therein and may be rotated about their axes to a limited extent with respect to said plate and lugs to cause the opposed shoulders of said lugs to overhang the unslotted portions of said flanges to thus secure said sections together in substantial axial alinement.

2,410,246
MAST, POLE, AND THE LIKE
William Charles Scrivener and Alfred George Brewer, Sutton Coldfield, England, assignors to Masts Limited, Birmingham, England, a British company
Original application April 17, 1943, Serial No. 483,508. Divided and this application October 3, 1944, Serial No. 556,978. In Great Britain June 22, 1942
4 Claims. (Cl. 189—26)

1. In a resilient mast, pole or the like, the combination of a plurality of rigid sections arranged in axial alinement, each of said sections having a flange at opposite ends thereof; a plate positioned between the flanged ends of each of said sections when said plurality of sections are arranged in axial alinement; lugs associated with each of the plates and extending on opposite sides thereof, said lugs cooperating with the adjacent flanges of adjacent sections to secure said sections together; and guys attached to the lugs and extending between said lugs and the ground or base on which said mast, pole or the like is mounted.

2,410,247
RACKING APPARATUS
John G. Smith, Brunswick, Ga.
Application January 5, 1944, Serial No. 517,121
6 Claims. (Cl. 211—15)

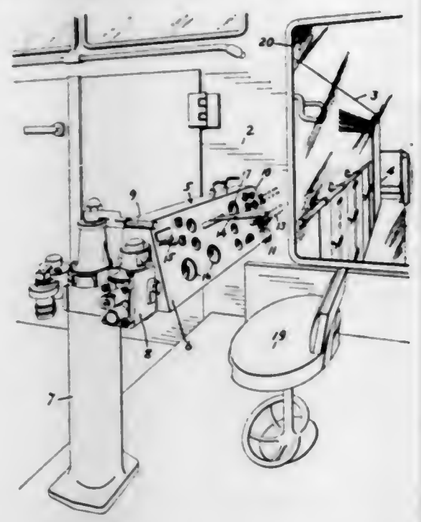


1. A bell racking apparatus comprising a sorting rack including vertically spaced tracks disposed on downward inclines, a vertically ar-

ranged door-like member in advance of and closely adjacent to the low ends of the tracks, means hingedly mounting that vertical margin of the member which is remote from the tracks to permit the member to swing on a vertical axis in a direction transversely of the tracks, means for constantly urging the member to swing to a position to dispose that vertical margin which is nearest the tracks in position across the low ends of the tracks to hold the balls on the tracks from dropping therefrom, said member when swung in the opposite direction moving into a position to allow the balls to drop, and means for moving the member into said second position.

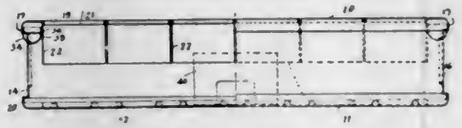
2,410,248
TREATMENT OF FIBERS OR FIBROUS MATERIALS CONTAINING KERATIN
John Bamber Speakman, Far Headingley, Leeds, England, assignor to Perm Ltd., Dover, Del.
No Drawing. Application January 25, 1944, Serial No. 519,665. In Great Britain April 23, 1935
5 Claims. (Cl. 167—87.1)

1. Method of imparting a permanent set to hair, which comprises treating the hair with a sulphite solution at about pH6 and a temperature of from 50° to 70° C. while maintaining the hair in the form which it is desired to render permanent.



2,410,249
WARNING ALARM SIGNAL FOR PAPER MACHINES
Harry Story Spencer, Beauharnois, Quebec, Canada, assignor to Howard Smith Paper Mills Limited, Montreal, Quebec, Canada
Application October 20, 1943, Serial No. 507,036
1 Claim. (Cl. 200—152)

A switch mechanism comprising a switch housing, a shaft extending through and rotatably journalled in one wall of said housing, a mercury switch mounted on said shaft within said housing, a member fitted on an end of the shaft located outside of said housing and provided with a transversely extending opening, an L-shaped arm having one arm thereof extending through said opening to provide a switch closing member, the other arm of said L-shaped member extending laterally to one side of said shaft and serving as a counterweight for biasing the shaft to a switch opening position, and a bracket carried by said housing and arranged to provide a supporting stop engageable with the last mentioned arm of the L-shaped member to limit rotation of said shaft in a switch opening direction.

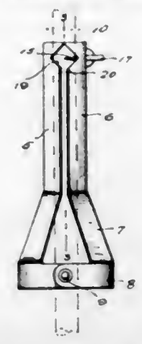


2,410,250
LOCOMOTIVE CONTROL PANEL
Dana R. Staples, Ridley Park, Pa., assignor to The Baldwin Locomotive Works, a corporation of Pennsylvania
Application March 22, 1944, Serial No. 527,590
5 Claims. (Cl. 105—35)

1. The combination in a locomotive having a cab with a floor and a transverse cab wall and a window therein from which an operator looks forwardly from a normal operating position, a control panel comprising a substantially longitudinally extending panel structure with one end in juxtaposition to said wall so as to extend out-

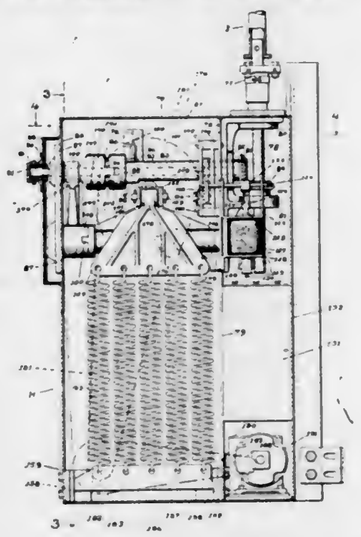
wardly therefrom in a direction substantially longitudinally of the locomotive along one side of the operator's position, and means for supporting said panel in vertically spaced relation from the cab floor.

2,410,251
BOTTLE CRATE
Alphonso Taurman, Birmingham, Ala.
Application December 11, 1944, Serial No. 567,615
8 Claims. (Cl. 220—21)



7. In a metal bottle crate having sides and ends, a handle member extending across the ends, abutting cylindrical bottle holders joined together and disposed in regular longitudinal and transverse rows with the side rows joined to the sides of the crate and the end rows joined to the handle members, and a top having a downturned flange fitting about the sides and ends of the crate and joined thereto, and also having downwardly flanged holes therein with the flanges fitting within and joined to the cylindrical holders.

2,410,252
CABLE STRIPPING TOOL
Edmond G. Torrence, Port Arthur, Tex.
Application October 18, 1944, Serial No. 559,195
4 Claims. (Cl. 81—9.5)

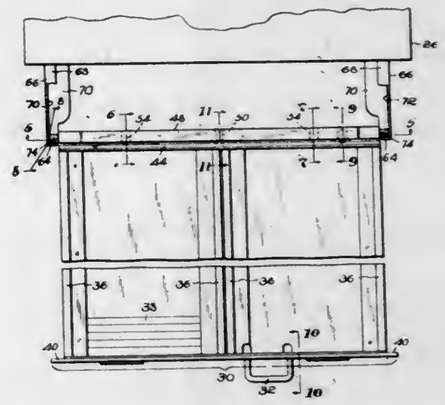


1. A cable stripping tool comprising a tubular member composed of a pair of longitudinally split sheet metal sections hingedly connected to each other at one end for opening movement of the free ends of the sections, the material of said sections at their free ends being thickened to provide rigid jaws, said sections being closed by a hand-gripping action, a transverse opening in the jaws at the split edges of the sections, said member being adapted for receiving a cable to be drawn longitudinally therethrough and said opening being adapted to receive a cable disposed transversely of the member for

rotary movement therein, and a cutter mounted in one of the jaws and projecting inwardly of the member in the path of the cable when posi-

tioned either transversely or longitudinally of the member for cutting into the surface of the cable during its movement therein.

2,410,253
OPERATING MECHANISM FOR ELECTRICAL SWITCHES
Arthur M. Trogner, East Stroudsburg, Pa., assignor to Line Material Company, Milwaukee, Wis., a corporation of Delaware
Application August 2, 1940, Serial No. 350,036
16 Claims. (Cl. 185—40)

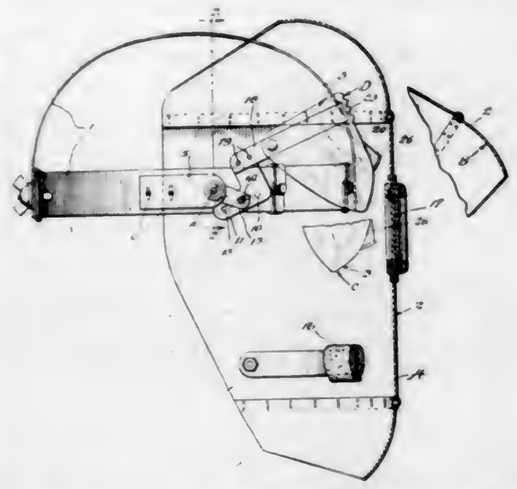


1. In a device of the class described, the combination with a rotatable shaft, of a latch preventing rotation of said shaft in one direction and permitting rotation thereof in the opposite direction, releasable catch means normally preventing rotation of said shaft in said opposite direction and automatically effective after release for stopping said opposite rotation of said shaft a predetermined distance in said opposite direction, and operating mechanism for effecting rotation of said shaft upon release of said catch means.

2,410,254
PROCESS FOR THE PRODUCTION OF VITAMIN D
James Waddell, Metuchen, N. J., and Warren W. Woessner, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application November 21, 1942, Serial No. 466,497
6 Claims. (Cl. 204—159)

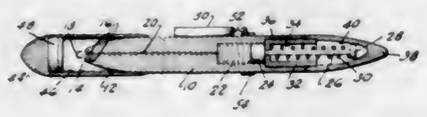
6. In the process for producing vitamin D by antirachitically activating a mixture of sterols, at least thirty per cent by weight of which is provitamin D and at least twenty per cent by weight of which is an inactivatable sterol, thereafter removing the so-produced vitamin D from the mixture and subjecting the so-treated mixture to further antirachitic activation, the step which comprises adding sufficient provitamin D from mussels to said treated mixture to bring it within the aforesaid range before subjecting it to further antirachitic activation.

2,410,255
FILING CABINET
Roy E. Wells, Jamestown, N. Y., assignor to Art Metal Construction Company, Jamestown, N. Y., a corporation of Massachusetts
Application October 19, 1944, Serial No. 559,349
11 Claims. (Cl. 40—102)



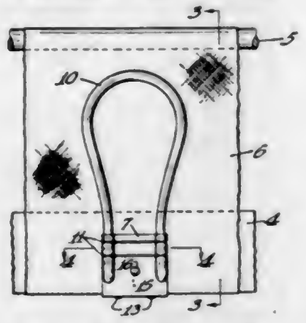
1. In a filing cabinet, the combination of a housing open at the front and having two vertical side walls, a horizontal drawer panel within said housing and between said side walls, a horizontal panel support within said housing and between said walls, a swivel connection between the rear end of said panel and said support and having its axis lengthwise of the lateral edges of said panel, panel and support guiding means supported by said side walls and having provision for projection of said panel and said swivel connection in a horizontal plane beyond the front of said housing, and cooperating means on the rear of said panel and the front of said support normally to prevent turning of said panel about said axis.

2,410,256
WELDERS' HELMET
Marshall N. Anderson and Melvin H. Sellstrom, Chicago, Ill., assignors to Sellstrom Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application July 26, 1943, Serial No. 496,106
3 Claims. (Cl. 2—8)



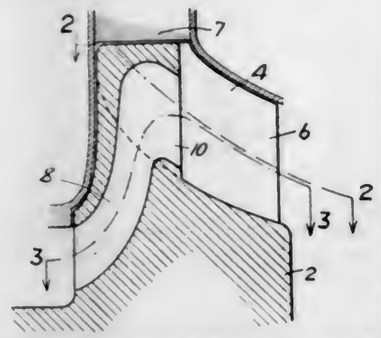
1. A head protector comprising a headband, a face mask pivotally carried thereby and movable from face shielding position to a position above the face, an eye shield pivotally carried by said headband and movable from eye shielding position to a position above the eyes, transmission means between said mask and eye shield whereby motion of the mask to nonshielding position moves the eye shield to shielding position and whereby motion of the mask to shielding position moves the eye shield to nonshielding position, said transmission comprising a first crank arm movable with the face mask and a second crank arm actuated by said first crank arm and movable with the eye shield, and means

for securing said first crank arm in a plurality of different positions of rotary adjustment with



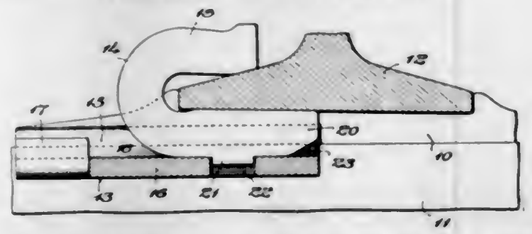
respect to said mask, said crank arms having a sliding pin-and-slot connection with each other.

2,410,257
MECHANISM FOR REMOVING FOREIGN PARTICLES FROM THE EYE
Clara Andrzejewski, Chicago, Ill., assignor to Joseph Belzowski, Robert L. Squire and Frank Z. Roder, Chicago, Ill.
Application December 5, 1945, Serial No. 632,936
8 Claims. (Cl. 128—1)



1. In an instrument of the character described, the combination of a barrel having a reservoir therein, a passageway from said reservoir leading to one end of said barrel, a plunger in said reservoir and a flexible U-shaped loop positioned in the end of said barrel having its legs secured upon opposite sides of said passageway.

2,410,258
HANDLE FOR BOX SPRINGS AND THE LIKE
Michael Bechik and William F. Caster, St. Paul, Minn.
Application January 31, 1945, Serial No. 575,488
2 Claims. (Cl. 16—125)

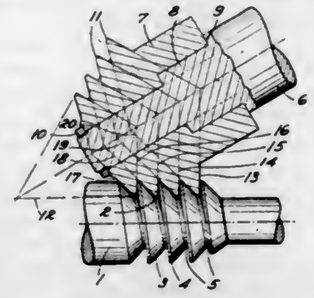


1. In a handle structure for box springs and the like, an attaching plate having relatively rigid angularly disposed flange portions for embracing respective base and wall portions of said box spring, and a looped bundle of flexible material fixedly attached to one of said flange portions to normally extend in the plane thereof adjacent the box spring wall.

2,410,259
ELASTIC FLUID MECHANISM
Rudolph Birmann, Newtown, Pa., assignor, by mesne assignments, to Federal Reserve Bank of Philadelphia, a corporation of the United States of America
Application December 13, 1941, Serial No. 422,837
6 Claims. (Cl. 60—43)

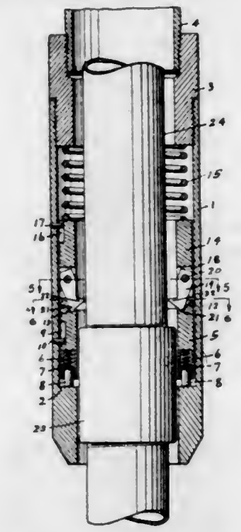
1. An elastic fluid mechanism including a rotor mounted for rotation about an axis and provided with turbine passages, means for directing hot driving fluid into the turbine passages, and passages for elastic cooling fluid adjacent to said turbine passages, each of said elastic cooling fluid passages opening, through a nozzle constructed and arranged to expand the cooling fluid and impart to it a high velocity at least of the order of magnitude of the velocity of the driving fluid through the turbine passages, adjacent to the trailing wall of a turbine passage to discharge the cooling fluid at such high velocity along said wall in the direction of flow of driving fluid.

2,410,260
TIE PLATE AND RAIL ANCHOR ASSEMBLY
Edward J. Boland, Freeport, Ill., assignor, by mesne assignments, to Poor & Company, Chicago, Ill., a corporation of Delaware
Application August 23, 1944, Serial No. 550,759
6 Claims. (Cl. 238—315)



1. A tie plate having a lip extending from a side thereof for disposition at a side of a tie upon which the tie plate is to be seated, said lip being directed first downwardly and then outwardly and then upwardly from the side of the tie plate to provide therein an upwardly opening channel extending longitudinally relative to the tie plate to accommodate the lower portion of a C-shaped rail anchor to hold the rail anchor against sidewise movement relative to the tie plate.

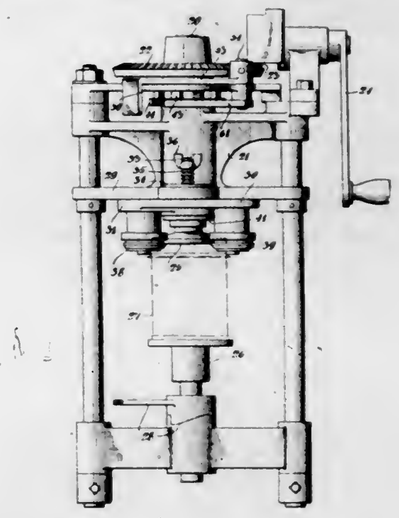
2,410,261
THREAD PRODUCTION
John A. Bradner, Cleveland Heights, Ohio, assignor to The Lees-Bradner Company, Cleveland, Ohio, a corporation of Ohio
Application April 19, 1943, Serial No. 483,580
5 Claims. (Cl. 90—11.42)



1. The method of cutting threads having helico-radial surfaces which comprises rotating a work piece about its axis, rotating a tool about an axis intersecting the axis of the work piece and

translating the tool and work relatively in the direction of the axis of the latter in synchronism with the rotation of the work, the tool having a

cutting edge arranged oblique to the tool axis and when brought into the plane defined by the tool and work axes being perpendicular to the latter.

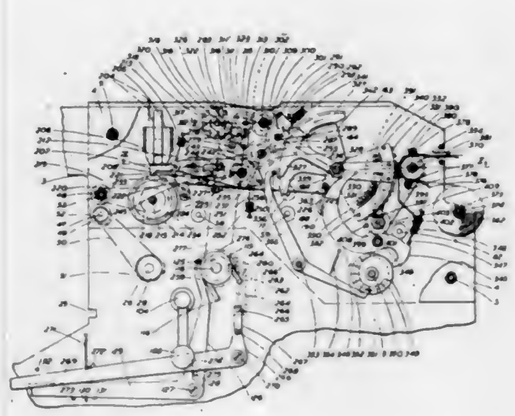


2,410,262
OVERSHOT
Neil T. Breaux, Houston, Tex.
Application August 20, 1945, Serial No. 611,487
8 Claims. (Cl. 294—86)

1. An overshot comprising, a tubular body adapted to telescope over a pipe in a well, an actuator yieldingly mounted in the body but keyed against rotation therein, a tubular carrier in the body, a yieldable seat above the carrier in the body against which the carrier is seated, dogs pivoted to and depending from the carrier, said actuator and dogs having co-operating parts effective to move the dogs inwardly into engagement underneath an external projection on the pipe upon downward movement of the carrier relative to the actuator.

2,410,263
CAN END SEAMING MECHANISM
Julius Brenzinger, Fairfield, Conn., assignor to The Max Ams Machine Company, Bridgeport, Conn., a corporation of New York
Application October 12, 1945, Serial No. 621,930
1 Claim. (Cl. 113—23)

In a seaming-mechanism having a rotatable shaft provided with means to engage and rotate the work-piece to be acted upon, and having a seamer-head provided with a plurality of seaming-rollers, said seamer-head mounted to have a bodily shifting movement to sequentially bring the seaming-rollers thereof into and out of seaming position with respect to said work-piece, and in which seaming-mechanism said bodily shifting movement of said seamer-head is effected by means of an eccentric bushing fixed to a sleeve that is mounted loosely on said shaft: the combination with said rotatable shaft and with said sleeve that is mounted loosely thereon, of a feeding-ratchet and a stop-ratchet, both mounted on, and to turn with, said sleeve, said feeding-ratchet constructed and arranged to be engaged intermittently by a feeding-dog, when the latter occupies its operative position, to turn said feeding-ratchet, and thereby said sleeve, one step constitutes a part of a revolution, and said stop-ratchet constructed and arranged to be engaged at the end of each step of said sleeve by an indexing-pawl, and to be engaged once to each revolution of said sleeve by a latch-pawl; a carrying-member, mounted on and rotatable with said shaft, constructed and arranged to support a pivotally mounted feeding-dog to engage said feeding-ratchet intermittently when the feeding-dog occupies its operative position, and to support a trip-cam to engage said indexing-pawl intermittently; a feeding-dog, pivotally mounted on said carrying-member, having means tending to urge it into operative position to engage said feeding-ratchet, and provided with a cam-roll

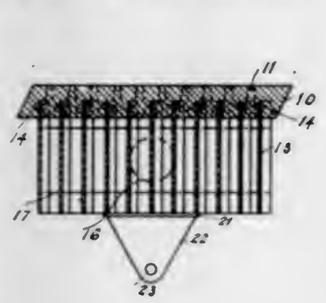


to engage a stationary circular cam to keep said feeding-dog in an inoperative position to prevent it from engaging said feeding-ratchet; a stationary circular cam to be engaged by the cam-roll carried by said feeding-dog that is mounted on said carrying-member to keep said feeding-dog in an inoperative position to prevent it from engagement with said feeding-ratchet, said circular cam having a gap and a manually movable wall-section to close or expose said gap, said gap when exposed releasing said feeding-dog and rendering it operative to engage said feeding-ratchet to advance said sleeve one step once to each revolution of said carrying-member; an indexing-pawl constructed and arranged to engage said stop-ratchet at the end of each step of said sleeve, and to be disengaged, by a trip-cam mounted on said carrying-member, from said stop-ratchet at the time when said feeding-dog engages said feeding-ratchet to turn said sleeve one step; a trip-cam mounted on said carrying-member constructed and arranged to move said indexing-pawl out of engagement with said stop-ratchet once to each revolution of said carrying-member to permit said sleeve to turn one step when said feeding-ratchet is engaged by said feeding-pawl; a manually releasable latch-pawl constructed and arranged to engage, at the end of one revolution of said sleeve after being man-

ually released, said stop-ratchet to latch said sleeve against motion; and connecting means between said latch-pawl and said wall-section of said stationary cam, whereby the engagement of said latch-pawl with said stop-ratchet moves said wall-section to close the gap in said stationary cam and whereby the manual release of said latch-pawl moves said wall-section to expose the gap in said stationary cam.

2,410,264
METHOD OF MAKING STARCH CONVERSION SYRUP
Frank H. Brock and Clifford E. Smith, Decatur, Ill., assignors to A. E. Staley Manufacturing Co., Decatur, Ill., a corporation of Delaware
No Drawing. Application January 28, 1944, Serial No. 520,137
3 Claims. (Cl. 127—40)

1. In the process of manufacturing a starch conversion syrup which consists in subjecting an aqueous starch suspension to hydrolysis to provide a starch conversion liquor having a dextrose equivalent of between 45–55 per cent, the improvement which comprises subjecting said liquor to dialysis against water through a semi-permeable membrane, and recovering a dialyzate having a dextrose equivalent greater than 55 per cent.

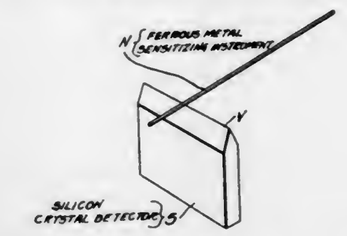


2,410,265
TABULATOR CONTROLLED BY SINGLE-LINE RECORDS
Daniel Broido, Cockfosters, near Barnet, England
Application May 19, 1942, Serial No. 443,653
In Great Britain September 24, 1941
6 Claims. (Cl. 235—61.7)

1. In a statistical machine controlled by records carrying information represented by differentially marked index areas arranged in a single line in denominational groups, a single stationary analysing device, means for feeding the records through the analysing device, a plurality of totalizing elements each associated with one of said groups of index areas, a plurality of counting elements for counting the number of records analysed by said analysing device, driving means for said totalizing and counting elements, a coupling operatively disposed between each of said elements and said driving means, a plurality of coupling actuators controlled by said analysing device, each actuator being associated with one group of said index areas and being controlled to render the respective coupling operative to drive the respective totalizing element when the analysing device is actuated by a mark in an index area of the respective group, locking means working in synchronism with said record feeding means to release each coupling actuator for operation by said analysing device only when the respective denominational group of index areas passes the analysing device, each actuator being operated by said locking means to render the respective coupling inoperative after the last index area of the respective group has passed the analysing device, means operatively associated with one of said actuators to render the coupling of the units counting element operative when this actuator is actuated by the analysing device, and escapement means for limiting the drive of said units counting element to one step at a time.

3. A statistical machine according to claim 1, wherein the said locking means comprise cams driven in synchronism with the record feeding means, each cam being operatively associated with one of said coupling actuators and being shaped so as to render its respective actuator free, if actuated by the analysing device, to render its respective coupling operative at any time during the passage of the index areas of the respective group through the analysing device, to cause the actuator to render the coupling inoperative and thus to stop the respective totalizing element shortly after the last index area of this group has passed the analysing device, and to render the actuator inoperative by the analysing device for the remainder of the operating cycle.

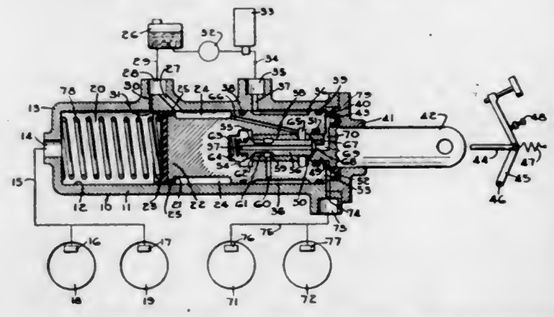
2,410,266
GRATE
Ellis W. Bullock, Birmingham, Ala., assignor to Fly Ash Arrestor Corporation, a corporation of Alabama
Application February 5, 1943, Serial No. 474,795
7 Claims. (Cl. 126—163)



1. A cast iron furnace grate comprising a body portion having a plurality of sheet metal fins spaced throughout their lengths from adjacent fins embedded therein on the under side thereof and extending from end to end of the grate, and supporting trunnions welded on to the fins at the ends of the grates.

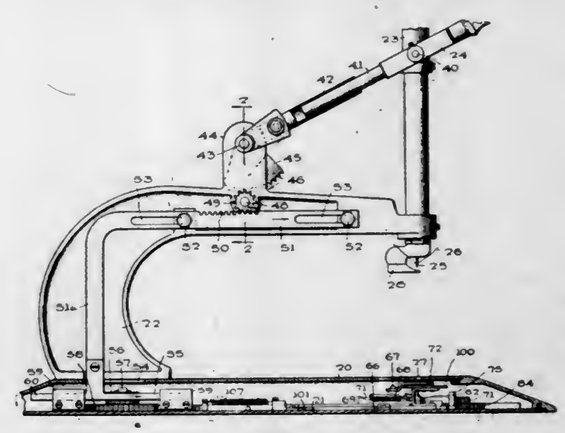
2,410,267
CARBOTHERMIC MAGNESIA
Alva C. Byrns, Los Altos, Calif., assignor to The Permanente Metals Corporation, Oakland, Calif., a corporation of Delaware
No Drawing. Application November 27, 1944, Serial No. 565,423
8 Claims. (Cl. 106—306)

3. A process for the removal of nitrogen from carbothermic magnesia including magnesium nitride as impurity, said magnesia being obtained in the carbothermic process for making magnesium metal wherein nitrogen gas is present and available for reaction with the condensing magnesium, which comprises treating said carbothermic magnesia with water until the magnesium nitride contained therein is substantially completely hydrolyzed to produce ammonia, drying and driving off ammonia, and calcining the so-treated material.



8. As a new composition of matter, carbothermic magnesia, said magnesia having been obtained in the carbothermic process for making magnesium metal wherein nitrogen gas is present and available for reaction with the condensing magnesium to form magnesium nitride, which has been treated to substantially completely hydrolyze the magnesium nitride contained therein to produce ammonia, dried to drive off ammonia, and calcined, said dried and calcined magnesia having a surface-protective coating of saturated fatty acid.

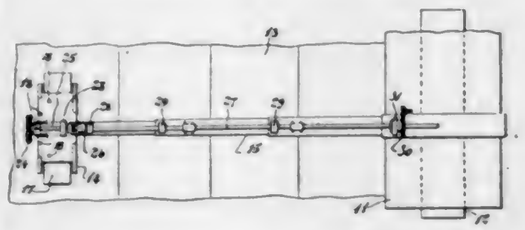
2,410,268
CRYSTAL DETECTOR
Wendell L. Carlson, Haddonfield, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application February 26, 1942, Serial No. 432,381
12 Claims. (Cl. 250—31)



2. Method of increasing the sensitivity of a silicon element to oscillations of radio frequency, said method comprising forming a sub-microscopic ferrous deposit on a surface of said silicon element.

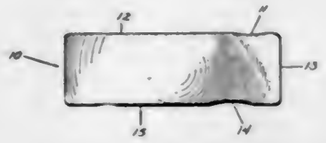
2,410,269
LIQUID PRESSURE SERVOMOTOR DEVICE
Leslie Cyril Choulngs, Leamington Spa, England, assignor to Automotive Products Company Limited, Leamington Spa, England
Application June 9, 1945, Serial No. 598,481
In Great Britain April 28, 1944
3 Claims. (Cl. 60—54.6)

1. A liquid pressure servo-motor comprising a cylinder, a plunger movable in the cylinder and normally urged toward one end thereof and dividing the same into two working spaces one at each end of the cylinder, said plunger having a valve chamber therein, a valve device disposed in the valve chamber, an inlet port having a connection to said valve chamber which is normally closed to the inlet port by said valve device, an exhaust port having a passageway communicating with the working space in one end of the cylinder, a passage communicating said valve chamber with the working space in said one end of the cylinder, said valve device including a valve member constituted to be hydraulically balanced at all times with respect to inlet pressure acting upon it and constructed and arranged to be moved in a direction to open said normally closed connection to said valve chamber to admit inlet pressure thereto and to said one end of the cylinder to move the plunger toward the other end of the cylinder, a thrust member having one end projecting into the working space in said one end of the cylinder and movable axially relative to the plunger and constructed and arranged to engage said valve member to move the same to open the valve chamber to inlet pressure and to close said exhaust port passageway to cut off communication between said one end of the cylinder and said exhaust port, said thrust member and plunger constructed and arranged to have areas exposed to the working space in said one end of the cylinder in such relationship that the total pressure acting on the effective area of the thrust member tending to move it in one direction is only a fraction of but proportional to the total pressure acting on the effective area of the plunger tending to move it in the opposite direction toward said other end of the cylinder, said plunger comprising a piston integral therewith and arranged to put liquid under pressure in the working space in said other end of the cylinder, the plunger being formed with a circumferential groove providing an annular chamber having a permanent connection with the exhaust port, and means for bypassing fluid from the annular chamber to the working space in said other end of the cylinder during movement of the piston to said one end of the cylinder, said annular chamber serving as a liquid supply chamber for maintaining the working space in said other end of the cylinder fully charged with liquid during movement of the plunger toward the aforesaid one end of the cylinder.



2,410,270
THREAD MARKER MECHANISM
Robert L. Dashew, Baltimore, Md.; Ruth L. Dashew administratrix of said Robert L. Dashew, deceased
Application April 13, 1944, Serial No. 530,888
17 Claims. (Cl. 112—2)

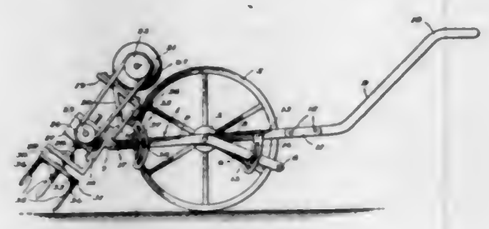
1. In a thread marking machine, a cloth supporting surface, a thread carrying needle normally positioned above said surface, means for depressing said needle to carry said thread to a point below said surface, means below said surface for engaging and retaining a loop of said thread below said surface as the needle returns to its normal position and withdraws the ends



of said loop above said surface, and means for forming a knot in said looped portion of the thread while the ends of the loop are located above said surface.

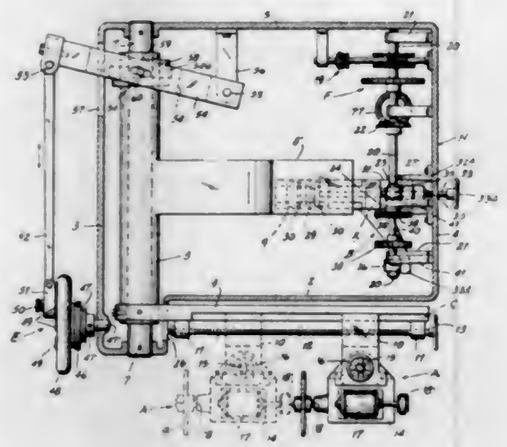
2,410,271
VARIABLE TREAD VEHICLE
Trevor O. Davidson, Milwaukee, Wis., and Lawrence B. Schauer, Los Angeles, Calif., assignors to Bucyrus-Erie Company, South Milwaukee, Wis., a corporation of Delaware
Application February 1, 1945, Serial No. 575,660
6 Claims. (Cl. 180—9.1)

1. In a variable tread vehicle, the combination of: a main frame; a traction support therefor; an outrigger frame; a traction support therefor; means for driving the main traction; a telescoping beam connecting the two frames, the beam's means of connection to the outrigger frame comprising: a substantially vertical pivot offset from the center-line of the traction support of the outrigger frame; and a series of selective locking means spaced radially from the vertical pivot and spaced from each other angularly with respect to the pivot as a center, whereby the outrigger frame may be locked in various selective angular relations with respect to the beam, to permit the outrigger frame to be steered by unlocking the outrigger frame, then driving the main frame, and then locking the outrigger frame in its new angular position, the outrigger frame thus locked in new angular position serving to expand or contract the telescoping beam as the vehicle progresses.



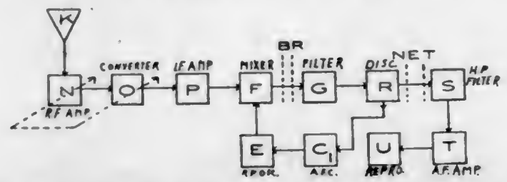
2,410,272
POCKET READING GLASS
George V. de Lery, New York, N. Y.
Application April 5, 1944, Serial No. 529,878
4 Claims. (Cl. 88—39)

1. A rectangular reading glass of the character described having a finger notch on each of the long sides adjacent one short side, said glass being double convex with like opposed curvatures, the faces being convex both longitudinally and transversely.



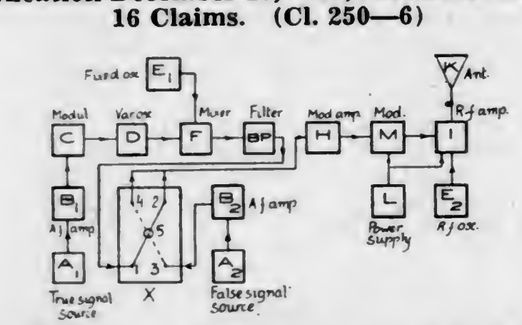
2,410,273
POWER-DRIVEN ROTARY GARDEN CULTIVATOR
George Otto Deubner, Lafayette, Calif.
Application May 22, 1944, Serial No. 536,775
2 Claims. (Cl. 97—43)

1. A cultivator comprising a main frame, a wheel rotatably mounted in said frame intermediate its ends and having an axle carried by the frame, bars pivoted to the axle and extending rearwardly at opposite sides of the wheel, a handle carried by said bars and extending rearwardly therefrom, members pivoted to said bars and extending downwardly across the rear portion of the frame at opposite sides thereof and formed with arcuate slots, bolts carried by side portions of the frame and passing through the



slots to hold the handle in a set position after vertical angular adjustment thereof, an auxiliary frame tiltably mounted on the forward end of said frame, a motor mounted on said auxiliary frame, and digging mechanism driven by said motor carried by said auxiliary frame at the lower end thereof for operating upon the ground in advance of the frame as the cultivator is intermittently moved rearwardly and swung up and down with the wheel serving as a fulcrum by an operator holding the handle.

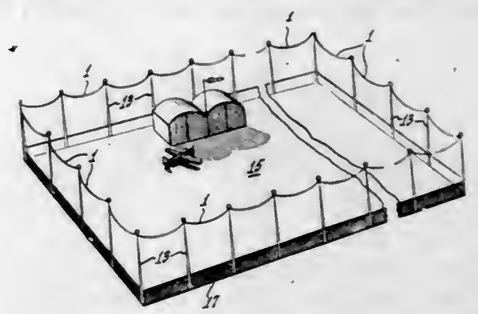
2,410,274
MACHINE FOR SHARPENING CIRCULAR SAWS, MILLING-CUTTERS, AND THE LIKE
Claud E. Drake, Brentwood, Mo.
Application August 2, 1943, Serial No. 496,995
6 Claims. (Cl. 76—40)



5. A machine for sharpening saws comprising an arbor for supporting the saw to be sharpened, an arm-like frame pivoted for rocking movement about an axis parallel to and spaced from the arbor, grinding means shiftably mounted on the frame for movement toward and away from the axis thereof, driving means for rotating the arbor, a cam operably connected to the frame and driven in timed relation to the driving means whereby to generatively grind a saw tooth having a predetermined contour depending upon the shape of the cam, and means for reciprocating the grinder longitudinally with respect to said axis during its tooth generating movement.

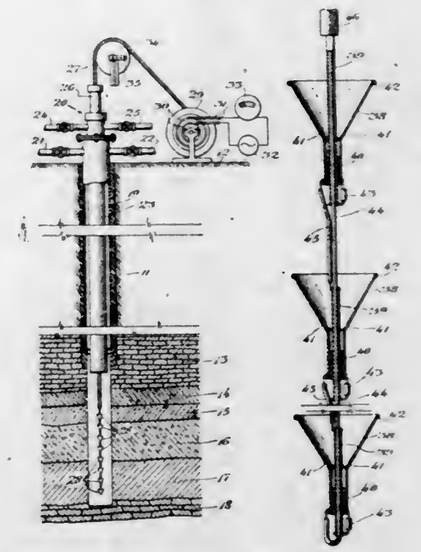
2,410,275
SIGNALING BY SUBMODULATION
Stanley D. Eilenberger, Kenosha, Wis., assignor, by mesne assignments, of sixty-five percent to S. E. Steen, Kenosha, Wis., seventeen and one-half percent to L. G. Voorhees, Macedonia, Ohio, and seventeen and one-half percent to Howard W. Taft, Balboa Heights, C. Z.
Application December 13, 1941, Serial No. 422,915
22 Claims. (Cl. 250—6)

22. The method of signaling, which comprises the steps of frequency modulating at a modulation index smaller than unity, a high frequency carrier with a signal containing the intelligence to be transmitted, transmitting said frequency modulated high frequency carrier to a receiving point, beating the received frequency modulated carrier to produce a frequency modulated beat frequency, the mean frequency of which shall be lower than the lowest signal frequency, to act as an audio frequency frequency-modulated subcarrier, and demodulating said audio frequency frequency-modulated subcarrier to recover the original signal.



2,410,276
SECRET COMMUNICATION SYSTEM
Stanley D. Eilenberger, Kenosha, Wis., assignor, by mesne assignments, of sixty-five percent to S. E. Steen, Kenosha, Wis., seventeen and one-half percent to L. G. Voorhees, Macedonia, Ohio, and seventeen and one-half percent to Howard W. Taft, Balboa Heights, C. Z.
Application December 17, 1941, Serial No. 423,384
16 Claims. (Cl. 250—6)

1. The method of secret communication, which comprises the steps of producing an ultra-sonic carrier wave, frequency modulating said ultra-sonic carrier by a true signal containing the intelligence to be transmitted to an authorized receiver at a modulation index smaller than unity, producing a signal containing any arbitrary intelligence, and alternately amplitude modulating a high frequency carrier wave by the frequency modulated ultra-sonic carrier wave and by the false signal containing any arbitrary intelligence at an ultra-sonic rate of alternation.

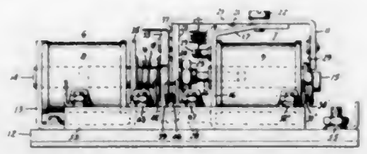


2,410,277
LUMINOUS MARKER FOR AIRPORTS
Emil M. Farris, Wayne, Pa.
Application February 7, 1945, Serial No. 576,537
5 Claims. (Cl. 250—71)

1. The combination with an airport skirted by a plurality of towers of a flexible marker connected between said towers, said marker comprising a flexible core constituting a first part, a transparent, flexible sheathing surrounding said

core and constituting a second part, and a luminescent material carried by one of said parts and visible through said sheathing.

2,410,278
WATER LOCATING SYSTEM
Riley Floyd Farris and Joseph B. Clark, Tulsa, Okla., assignors to Stanolind Oil and Gas Company, Tulsa, Okla., a corporation of Delaware
Application October 30, 1941, Serial No. 417,184
19 Claims. (Cl. 175—182)



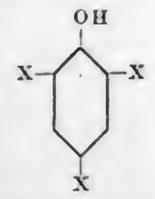
12. A method of locating a zone of ingress of conducting fluid to a well producing both conducting and nonconducting fluids comprising the steps of conditioning said well to remove conducting liquid therefrom, thereafter permitting fluids to enter said well, entrapping for an appreciable period of time a portion of said fluids within at least one constricted zone, accumulating conducting fluids in a lower portion of said zone and producing a change in a signal when the amount of said accumulated conducting fluid exceeds a predetermined minimum quantity.

2,410,279
ELECTROMAGNETIC RELAY DEVICE
John A. Favre, Drexel Hill, Pa., assignor to General Electric Company, a corporation of New York
Application March 22, 1943, Serial No. 480,024
9 Claims. (Cl. 175—337)

1. An electromagnetic device comprising a hinged armature and a plunger armature, each

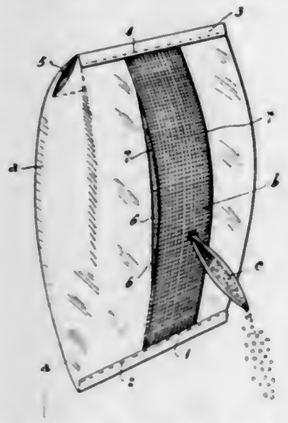
armature having a blocking and a blocked position, means for mechanically interlocking said armatures to prevent movement of either armature from its blocked position to its blocking position when the other armature is in its block-

ing position, means for moving an armature from its blocking position to its blocked position, and means for moving an armature from its blocked position to its blocking position when the other armature is moved to its blocked position.



2,410,280
TRACTOR COUPLING DEVICE
Rector C. Fergason, La Porte, Ind., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware
Application July 2, 1942, Serial No. 449,407
12 Claims. (Cl. 280—33.44)

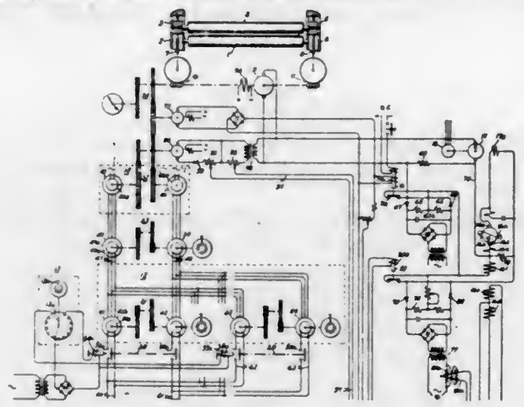
10. A device for detachably coupling a trailing element to a tractor or the like, comprising a draft member for the tractor, a draft member for the trailing element, one of said draft members being provided with an aperture, the other of said draft members being provided with a coupling element passing through the aperture in said first draft member to effect coupling of said draft elements, said coupling element being of greater overall front to rear dimension than said aperture and including a portion constituting a normal draft transmitting medium between the coupled parts, and a second portion extending from said first portion in either a forward or rearward direction therefrom, said extending portion providing an abutment cooperatively engageable at one forward or rearward side thereof with the adjacent edge portion of the wall of said aperture to prevent accidental uncoupling of said draft elements during the application of both pulling and backing force to said trailing element and engageable at the opposite forward or rearward side with the adjacent edge portion of the wall of said aperture to prevent complete insertion of said coupling element to normal draft transmitting position in said aperture without accompanying fore or aft relative movement between said draft elements after partial reception of said coupling element within said aperture.



2,410,281
PARASITICIDAL COMPOSITIONS
Fred W. Fletcher and Eugene E. Kenaga, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Michigan
No Drawing. Application February 25, 1943, Serial No. 477,136
6 Claims. (Cl. 167—31)

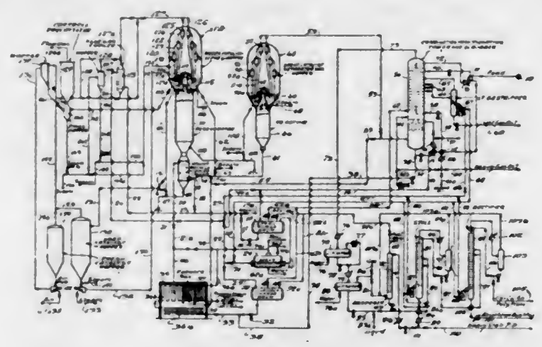
1. An ovicidal composition for application to living trees including a dormant spray oil and as an active toxicant a compound having the formula

wherein one X represents a nitro radical, another X represents chlorine, and the third X is selected from the group consisting of chlorine, alkyl, cyclohexyl, and hydrogen.



2,410,282
PAPER BAG HAVING A BURLAP SAMPLING ZONE
Pedro Amadeo Frixione, Buenos Aires, Argentina
Application December 7, 1944, Serial No. 567,018
4 Claims. (Cl. 229—55)

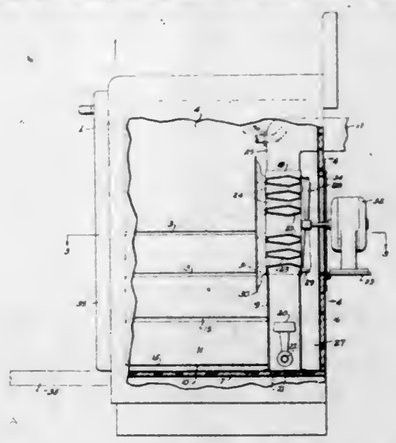
4. In combination with a bag having walls made of laminations of paper and provided along its top and bottom edges with reinforcements, a strip of burlap extending on the outside of the bag from the reinforcement at the top edge to the reinforcement at the bottom edge, said strip being secured with its ends to said two reinforcements respectively and having its longitudinal edges secured to the paper wall of the bag, a longitudinal plaiting being provided in said strip between the edges thereof so that the central zone of the strip rests loosely without tension on the paper wall of the bag.



2,410,283
SCREW-DOWN CONTROL SYSTEM
Donald E. Garr, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application April 24, 1945, Serial No. 589,972
14 Claims. (Cl. 80—56)

14. A control system for a mill having a pair of rolls and a movable supporting means for one of the rolls comprising a motor for driving the supporting means to vary the pass opening between the rolls, means for controlling the supply of voltage to said motor comprising electric valve apparatus provided with a control grid, a pass opening selector device, means responsive to positional disagreement of said selector device and supporting means for supplying a control voltage to said grid to cause said motor to drive said supporting means toward correspondence with said selector device, a nonlinear resistance device included in circuit with said grid to provide a narrow dead zone, stabilizing means for controlling said valve means to prevent said supporting means from overshooting said position of correspondence, and means for rendering said stabilizing means ineffective for one direction of ro-

tation to permit overshooting said position of correspondence so that said supporting means is always moved in the same direction to rest in said position of correspondence.

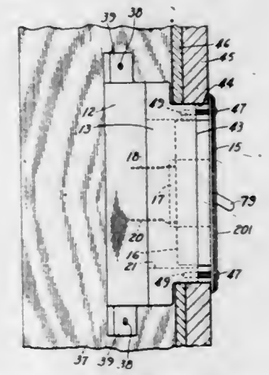


2,410,284
CATALYTIC CRACKING SYSTEM
Robert C. Gunness, Chicago, Ill., and Joseph W. Jewell, Summit, N. J., assignors of one-half to Standard Oil Company, a corporation of Indiana, and one-half to The M. W. Kellogg Company, a corporation of Delaware
Application April 24, 1941, Serial No. 390,204
6 Claims. (Cl. 196—52)

3. A fluid-type catalytic cracking system which comprises a gas oil surge drum, a regeneration system containing a heat exchanger, a fractionation system containing a heat exchanger, a steam generation system, means for passing gas oil from said surge drum to the heat exchanger in the regeneration system, means for passing hot gas oil from the regeneration system heat exchanger to the fractionation system heat exchanger, means for passing gas oil from said regeneration system heat exchanger to said steam generator, and means for passing gas oil from said fractionation system heat exchanger and steam generator respectively back to said gas oil surge drum.

2,410,285
GAS RANGE OVEN
George Herbster, Cleveland, Ohio, assignor to John H. Leonard, Cleveland, Ohio, as trustee
Application April 18, 1941, Serial No. 389,214
8 Claims. (Cl. 126—39)

6. In combination, a domestic cooking range oven having a door, a heating means, a blower means operable for recirculating air through the oven and into heat exchanging relationship to said heating means, and means operable to admit air inside the oven to the inlet side of the blower and means closely adjacent the inlet side of the



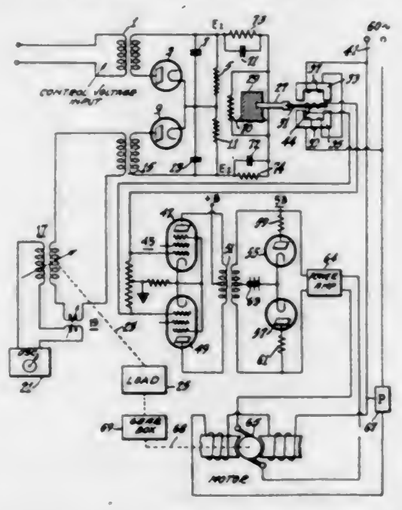
blower and operable selectively to admit and block passage of air from outside the oven to the inlet side of the blower.

2,410,286
GLASS HAVING LOW-POWER FACTOR
Harrison P. Hood, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a corporation of New York
No Drawing. Application November 12, 1943, Serial No. 510,033
6 Claims. (Cl. 106—54)

1. The method of reducing the power factor of a borosilicate glass consisting of about 70% SiO_2, 26% to 27.5% B_2O_3, 2.5% to 4% alkali metal oxide and fluorine, which includes the step of introducing the boron content of the glass as crystalline boric oxide.

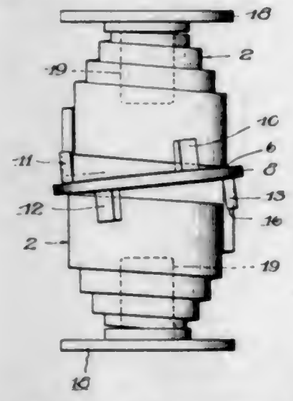
2,410,287
ELECTRICAL EQUIPMENT
Howard A. Jaberg, Cincinnati, Ohio
Application December 15, 1943, Serial No. 514,329
6 Claims. (Cl. 174—53)

1. In a device of the class described, the combination of a dielectric base block adapted for fixation relative to a support, fixed electrical contact means on the dielectric base block including means for attachment of electric conductors thereto, cover means for said base block, and electricity control means associated with said cover means, including conductor members to abut the fixed contact means of the base block, a deep open frame member of dielectric material detachably fixed to the base block and including peripheral walls forming a well through which the contact means of the base block are exposed, an elongated apertured plug on the back of the cover means surrounding the electricity control means,



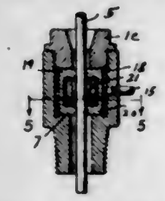
said plug being telescopically engageable with the well for guiding said conductor members of the control means into electricity conducting contact with the fixed contact means of the base block, as the cover means is applied, said telescopic engagement serving to seal off arcs and flame originating in the device, and being of sufficient range to maintain the seal at various degrees of spacing between the base block and the cover means occasioned by varying thicknesses of an interposed wall material.

2,410,288
INSTRUMENT BALANCE WEIGHT
Paul S. Johnson, Wakefield, and Joseph W. Dodds, Lynnfield, Mass., assignors to General Electric Company, a corporation of New York
Application July 29, 1944, Serial No. 547,252
5 Claims. (Cl. 116—136.5)



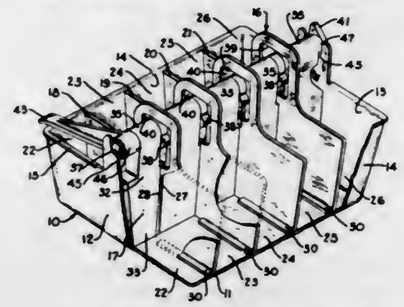
1. A weight for instrument crossarms and the like, comprising a double helix made of spring wire formed by first winding the wire on a round arbor to form a closely wound first helix, and winding the first helix on a round arbor of approximately the same diameter as the first arbor to form the double helix.

2,410,289
ELECTRICAL SERVO SYSTEM
Edward W. Kellogg, Indianapolis, Ind., assignor to Radio Corporation of America, a corporation of Delaware
Application December 17, 1943, Serial No. 514,705
7 Claims. (Cl. 172—239)



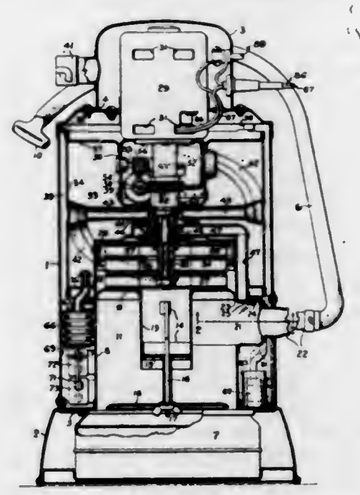
1. A servo system for controlling the position of a mechanical load device in accordance with a variable magnitude control voltage, including means for producing an auxiliary voltage bearing a predetermined magnitude relationship to the position of said load device, piezoelectric crystal means connected to respond by physical distortion to the difference between said control voltage and said auxiliary voltage, means providing balanced magnetic fields, magnetic armature means coupled to said crystal and supported thereby normally in neutral relationship to said balanced fields, a pick-up winding surrounding said armature, amplifier means connected to said pick-up winding, and an electric motor connected to said amplifier and coupled to said load device.

2,410,290
SPRING ASSEMBLY
Harold C. Keysor, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Application August 2, 1943, Serial No. 497,031
24 Claims. (Cl. 267—62)



1. In a volute spring assembly, spaced volute springs each being formed of a flat bar comprising a plurality of telescoping coils, the portion of said bar forming the largest and outermost coil being of substantially uniform width and being of at least equal pitch to that of the other coils thereof, said springs being arranged with their large ends adjacent each other and their small ends remote from each other, and an equalizer between said springs and affording seats therefor, the adjacent end of the bar forming one of said springs being disposed at one side of said equalizer and the corresponding end of the bar forming the other of said springs being disposed at the opposite side of said equalizer, whereby said equalizer is disposed in a plane diagonal with respect to the axis of said assembly and said equalizer moves to a plane perpendicular with respect to said axis as load is applied to said assembly, and positioning means comprising a plurality of spaced lugs on said equalizer cooperating with each of said springs, certain of said lugs affording seats for the adjacent ends of respective bars to prevent relative turning movement between said springs and said equalizer.

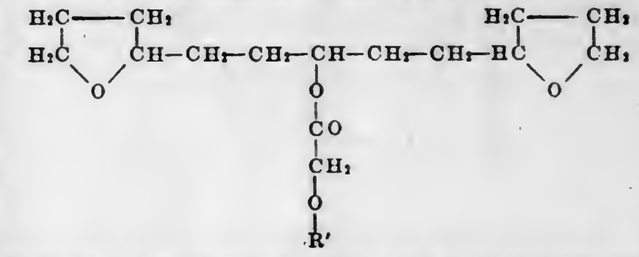
2,410,291
STUFFING BOX
Robert B. Kinzbach, Houston, Tex.
Application January 10, 1944, Serial No. 517,739
2 Claims. (Cl. 286—38)



1. A stuffing box comprising, a housing having a rod passageway and an internal chamber, a rod sealing assembly in the chamber including an internal rigid cage having upper and lower rod-bearings and also having an internal chamber, sealing means filling both chambers and forming a seal around the rod through the stuffing box, the ends of the cage sealing said rod passageway, around the rod, at the top and bottom of the housing chamber, said assembly being laterally movable, with the rod in the housing.

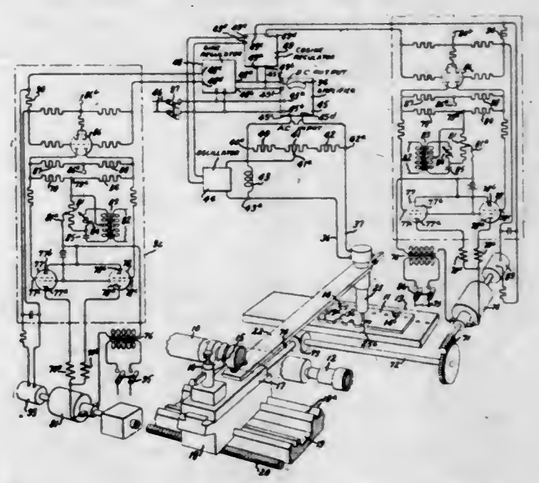
2,410,292
REFRIGERATION
William H. Kitto, Canton, Ohio, assignor to The Hoover Company, North Canton, Ohio, a corporation of Ohio
Application February 26, 1938, Serial No. 192,723
12 Claims. (Cl. 62—108.5)

1. A removable grid for forming ice cubes in an ice tray including a partition and a plurality of transverse plates movable with respect to said partition, said transverse plates having cam engaging surfaces lying in successively higher planes, a cam associated with each of said cam surfaces, and means operable to bring said cams into engagement with said cam surfaces for moving said transverse plates with respect to said partition.



2,410,293
SUCTION CLEANER
William H. Kitto, Greentown, Ohio, assignor to The Hoover Company, North Canton, Ohio
Application August 7, 1943, Serial No. 497,753
8 Claims. (Cl. 183—57)

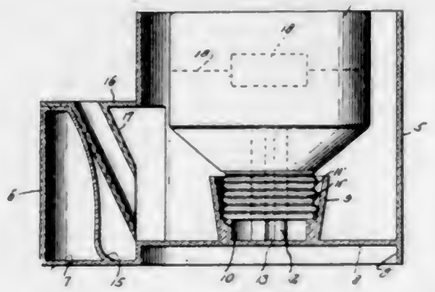
1. In a suction cleaner of the type having a main cleaning nozzle, an initial dirt separator connected to said nozzle, suction-creating means to draw dirt-laden air through said nozzle into said initial separator and nearly clean air therefrom, a relatively high speed motor to drive said suction-creating means, and a final dirt separator of the type in which the back pressure increases with the accumulation of dirt and into which air from said suction-creating means passes; a movable separator cleaning suction nozzle to remove foreign material from said final separator, permanent means connecting said separator cleaning nozzle to a point of low pressure in said initial separator and providing an air conduit therebetween at all times, a relatively slow speed driving motor to actuate said separator cleaning nozzle, and means to energize said slow speed motor upon a predetermined increase in the resistance to the flow of air through said final separator in the operation of the cleaner and with dirt-laden air entering said initial separator.



2,410,294
SOFTENING AGENT
Ernst Korten, Frankfort-on-the-Main-Fechenheim, Germany; vested in the Alien Property Custodian
No Drawing. Application February 6, 1941, Serial No. 377,711. In Germany February 8, 1940
3 Claims. (Cl. 260—345)

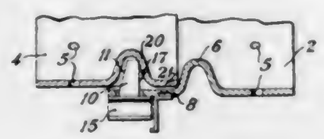
3. Softening agents of the general formula

wherein, R′ is selected from the group consisting of alkyl and aryl.



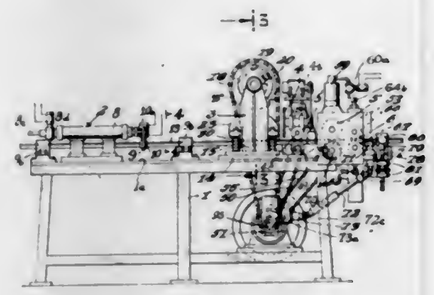
2,410,295
AUTOMATIC PATTERN CONTROLLED MACHINE TOOL
Hans P. Kuehni and Norman G. Branson, Schenectady, N. Y., assignors to General Electric Company, a corporation of New York
Application January 19, 1943, Serial No. 472,840
8 Claims. (Cl. 172—239)

1. A control system comprising in combination, a movable element having an initial position, a pair of members, a separate driving means for each of said members and means responsive to a continuously increasing displacement of said element from said initial position for producing a linearly varying voltage, means for deriving from said voltage two inversely varying control voltages, means responsive to one of said inversely varying voltages for energizing one of said driving means to effect a component of rela-



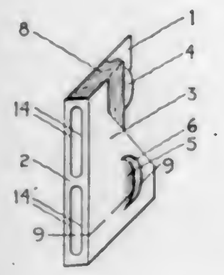
tive movement of said members with a velocity that varies continuously from a maximum value in one direction to a maximum value in the reverse direction and means responsive to the other of said inversely varying voltages for energizing the other of said driving means to effect an angularly displaced component of relative movement of said members with a velocity that varies continuously from a minimum value to a maximum value and from said maximum value to a minimum value.

2,410,296
INK FOUNTAIN
George Arthur MacDonald, Los Angeles, Calif.
Application July 5, 1944, Serial No. 543,548
2 Claims. (Cl. 120—59)



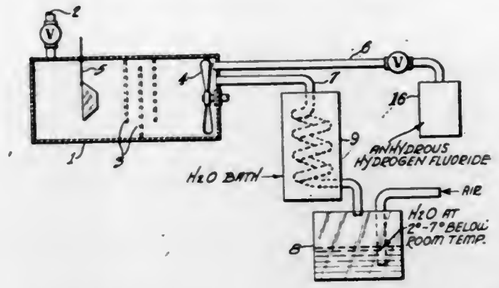
1. An ink fountain comprising a container having a bottom, a downwardly tapering cup on said bottom for receiving the neck of an inverted ink bottle therein, a shoulder in said cup above said bottom forming a seat for said neck spacing the neck above the bottom of the container, and an outlet port in one side of said cup between the bottom of the container and said shoulder for establishing the level of ink in the container.

2,410,297
COUPLING COMBINATION
Elroy F. Mahlberg, Fairfield, Conn., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application August 17, 1943, Serial No. 498,918
5 Claims. (Cl. 285—174)



1. In a coupling device comprising a pair of tubular rings, one of said rings being an inner ring, a circumferential keeper channel in the inner ring and a tubular cylindrical spacing portion extending from the channel to the edge of said ring the wall of said inner ring being of uniform thickness throughout, an outer tubular ring formed with a cylindrical portion at one end for sliding over the inner ring, latches on the outer ring equally spaced from the outer edge thereof, said latches projecting inwardly from the inner surface of the ring and extending through openings in the ring, an inwardly extending circumferential rib on the outer ring spaced from said latches so as to provide a stop having sliding engagement with the outer end of the inner ring when the latches are seated in said channel and springs secured on said keeper latches and on the outer ring to retain the latches in seated position.

2,410,298
METALWORKING MACHINE
Arthur G. Mirel, New York, N. Y., assignor to Structural Planeparts, Inc., New York, N. Y., a corporation of New York
Application December 26, 1942, Serial No. 470,133
35 Claims. (Cl. 153—2)

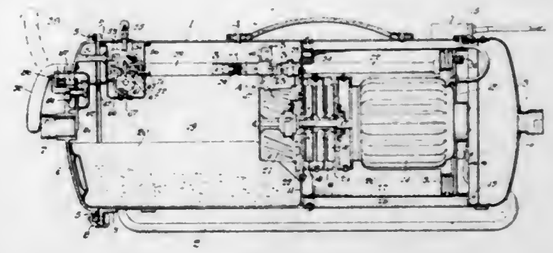


1. A machine of the class described comprising in combination, means for feeding angle bar stock in predetermined increments, a press for working upon said stock, adjustably positioned upper and lower cooperating joggling dies in said press, means for reciprocating the press to joggle the stock between said dies, means operative when the press is raised to elevate the stock to permit the joggled portion of the stock to pass by the lower die, means for cutting the press-worked portion of stock into lengths equal to the fed increments, means for advancing said lengths, and electrically controlled means including a switch for effectuating the operation of said feeding-advancing means and said cutting means sequentially.

2,410,299
SCREW OR THREADED ROD MOUNTING
Gilbert Murtagh, Port Washington, N. Y.
Application August 3, 1943, Serial No. 497,176
2 Claims. (Cl. 72—105)

1. A screw fastening unit comprising a metallic channel-shaped body having two side faces and a front face, one side face having its front edge offset from a plane perpendicular to the other side face and passing through the front edge of the second side face, the front face connecting the two front edges of the side faces to form said channel body, said front face being slotted, providing grip edges which are parallel to the front edges and are offset in the same sense as the front edges for engaging the opposite sides of the core of a screw inserted therebetween, said side faces having ears struck therefrom and projecting rearwardly into the space between the side faces, and a filler member confined in the channel body between the front face, the side faces and the ears for engaging and holding a screw.

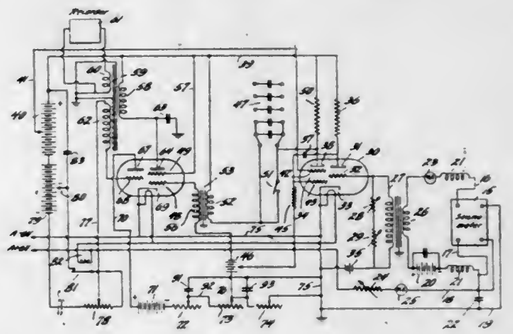
2,410,300
NONREFLECTIVE FILM
Frederick H. Nicoll, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application July 21, 1943, Serial No. 495,612
3 Claims. (Cl. 41—42)



1. In an apparatus for producing a reflective element having a low reflection surface comprising a layer altered by the action of a vapor emanated from an acid solution, the combination of a treating chamber, means for supporting said element within said chamber, means for introducing acid vapor into said chamber at a temperature above the liquifying temperature of said acid, air supply means, means for saturating the supplied air with water at a temperature below said acid liquifying temperature, means for raising the temperature of said water saturated air to a temperature above said acid liquifying temperature and introducing it into said chamber, and means for producing a homogenous distribution of said acid vapor and water saturated air throughout said chamber.

2,410,301
MANUFACTURE OF COPPER PHTHALOCYANINE DYESTUFFS
Grady M. O'Neal, Chicago, Ill., assignor to The Sherwin-Williams Company, Cleveland, Ohio, a corporation of Ohio
No Drawing. Application September 15, 1943, Serial No. 502,506
24 Claims. (Cl. 260—314.5)

1. The method of making a copper phthalocyanine dyestuff which comprises reacting together at a temperature in the range from 135° to 300° C. and in proportions sufficient to produce copper phthalocyanine, biuret, an ortho compound having the formula: $R(COONH_4)_2$, minus xH_2O, minus yNH_3, and a copper-yielding compound, in the presence of a catalyst for the reaction, said formula being such that x is an integer varying from 0 through 3, y is an integer varying from 0 through 2, both while $x+y$ is not more than 3, and R is a benzene nucleus selected from the group consisting of the unsubstituted benzene nucleus and substituted benzene nuclei.

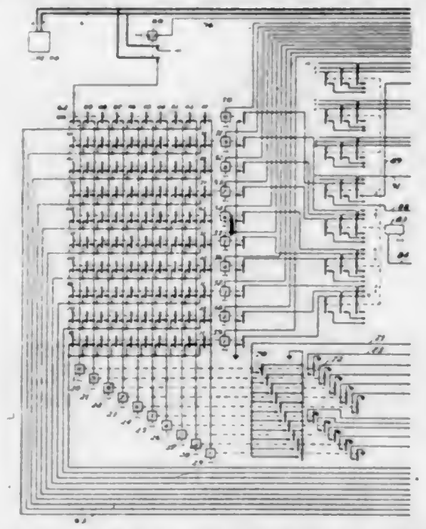


2,410,302
SUCTION CLEANER
Carl O. Penn, Canton, Ohio, assignor to The Hoover Company, North Canton, Ohio, a corporation of Ohio
Application November 11, 1943, Serial No. 509,875
9 Claims. (Cl. 183—57)

1. In a suction cleaner, suction-creating means, a dirt separator, a dirt receptacle, a casing enclosing said parts and including a removable cover the removal of which gives access to said dirt receptacle, latching means retaining said cover in place on said casing, a program release mechanism positioning said latching means, means to actuate said mechanism to position said latching means to release said cover including a

manually operable handle, and means to clean said dirt separator concomitantly with the operation of said mechanism and actuated by said handle.

2,410,303
SEISMIC SURVEYING
Olive S. Petty, San Antonio, Tex.
Continuation of application Serial No. 290,928, August 18, 1939. This application May 27, 1943, Serial No. 488,764
4 Claims. (Cl. 177—352)

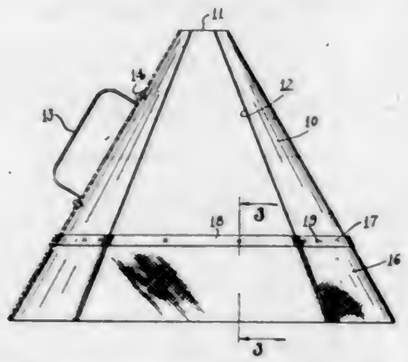


4. In apparatus for use in seismic surveying, the combination with a seismometer for converting incoming seismic energy into electrical waveform signals, and means for amplifying and recording such signals, of means operable in response to increase in signal energy above a predetermined ampliutde for decreasing the gain of said amplifying means, said last named means including a device for initiating operation of said means to decrease the gain, said device affording filtering action favoring the higher frequencies within the usable range, whereby the gain at all frequencies is decreased in greater degree by signals of large amplitude and predominantly high frequency than by signals of comparable amplitude and predominantly low frequency.

2,410,304
AUTOMATIC TELEPHONE SYSTEM
Winfred T. Powell, Rochester, N. Y., assignor to Stromberg-Carlson Company, Rochester, N. Y., a corporation of New York
Application March 20, 1944, Serial No. 527,298
5 Claims. (Cl. 179—18)

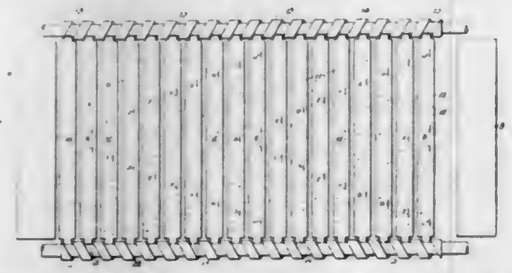
1. In a telephone system, a plurality of telephone lines, primary relays and secondary relays common to said telephone lines and less in number than the numbers of said lines, means responsive to the extension of a call over a certain telephone line for operating in combination a given primary relay and a given secondary relay, said combination being individual to said certain telephone line, and finder switching

means controlled by the operation of said given primary relay and by the operation of said given



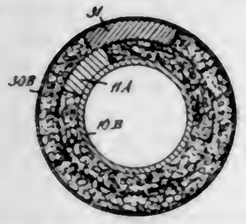
secondary relay for seizing said certain telephone line.

2,410,305
POLYMERIZED ESTERS OF CARBOXYLIC ACIDS AND PREPARATION OF SAME
Henry J. Richter and Henry S. Rothrock, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application March 13, 1940, Serial No. 323,722
10 Claims. (Cl. 260—78)



7. A resinous composition of matter comprising a polymer of an ester of an organic acid from the group consisting of carbonic acid and orthocarboxylic acids in which ester at least two acid groups of the organic acid are esterified with a monohydric unsaturated alcohol containing at least three carbon atoms and having an aliphatically unsaturated carbon-to-carbon linkage in the alpha, beta position with respect to the carbinol carbon atom therein.

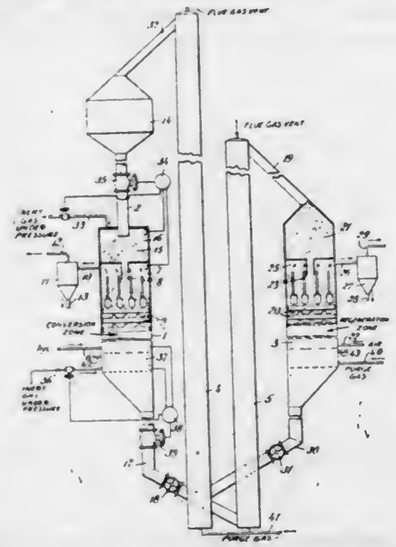
2,410,306
WELDING SHIELD OR THE LIKE
Raymond A. Romberg, Orange, Conn.
Application October 18, 1944, Serial No. 559,145
1 Claim. (Cl. 189—2)



A portable welding shield comprising a hood having a rigid one-piece body portion of substantially frusto-conical form with openings at the top and bottom, said top opening being of circular shape and of relatively small diameter to closely embrace a pipe or like object, there being an opening in the wall of the body portion communicating with said top and bottom openings, the width of said opening being progressively greater from top to bottom of the shield, a flexible skirt secured to and projecting downwardly from the lower edge of the body portion, and a handle secured to the rigid body portion whereby the shield may be held by the operator during use.

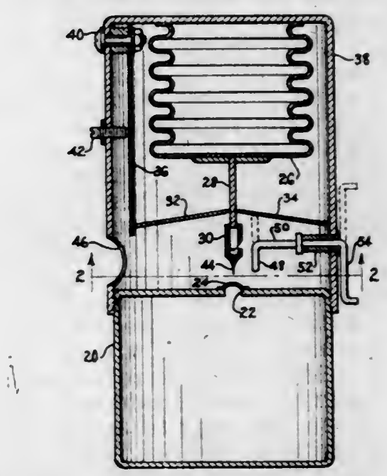
2,410,307
APPARATUS FOR CONVERTING TOW TO TOP
Joseph B. Rumsey, Westwood, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application March 18, 1943, Serial No. 479,551
3 Claims. (Cl. 19—1)

1. An apparatus for directly converting tow to top while maintaining the substantial parallelism of the fibers and the continuity of the tow and sliver, which comprises a gill drafting frame having a plurality of gill bars, each of said gill bars being provided with a plurality of gill pins, a plurality of knife holders removably disposed on said gill pins in accordance with a predetermined pattern, and a knife positioned in and carried by each of said knife holders.



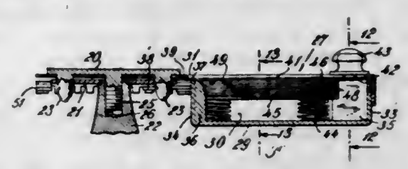
2,410,308
SELF-INSULATED CONDUIT
Clemens G. Scharwath, Long Branch, N. J.
Application September 11, 1943, Serial No. 501,931
2 Claims. (Cl. 138—64)

2. A self-insulated conduit comprising an inner conduit adapted to conduct a fluid, staggered lugs projecting outwardly therefrom, an outer shell, lugs projecting inwardly therefrom onto the lugs projecting from the inner conduit, and insulation between the inner conduit and the outer shell.



2,410,309
CONTINUOUS CATALYTIC SYSTEM
Thomas P. Simpson, John W. Payne, and John A. Crowley, Jr., Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application May 1, 1942, Serial No. 441,316
18 Claims. (Cl. 196—52)

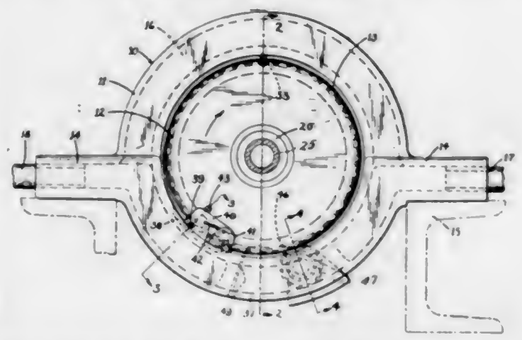
1. In a process of continuously catalytically cracking heavier petroleum hydrocarbons in the presence of particle-form solid catalyst material wherein the catalyst is moved downwardly through a conversion zone operating under pressure as a substantially compact column of particles and vapors of said heavier hydrocarbons are passed under cracking conditions through said column of catalyst and wherein active catalyst particles are introduced to said zone near the top thereof and spent particles are withdrawn near the bottom thereof so as to maintain a column of active catalyst while preventing the escape of a substantial amount of gaseous hydrocarbons through the catalyst-introducing and catalyst-withdrawing systems, the improvement which comprises establishing a compact upwardly extending stream of catalyst particles above said column of catalyst which forms a continuous body of catalyst with said column and which is long enough to have a substantially greater resistance to the flow of gas therethrough than through said column of catalyst and maintaining said stream of catalyst at sufficient height that the head of catalyst created thereby is greater than the pressure in said conversion zone so that catalyst feeds by gravity from the catalyst stream to said column of catalyst without passing through any vapor-sealing catalyst valve, and withdrawing spent catalyst from said column of catalyst in the form of a downwardly extending compact elongated stream of catalyst which is of such length and restricted cross-sectional area as to prevent substantial leakage of gaseous hydrocarbons therethrough without the use of a vapor-sealing catalyst valve.



2. A continuous catalytic apparatus for converting hydrocarbons in gaseous form in the presence of solid catalyst particles which comprises a conversion chamber adapted to hold a substantially compact column of catalyst particles and having baffling structure disposed therein which is constructed so as to assist flow of gases upwardly through such a column of catalyst, said chamber also being provided at one end with a hydrocarbon charge stock inlet and at the opposite end with a converted product outlet and also with an inlet for catalyst in solid particle form at its upper end and an outlet for such catalyst at its lower end, said charge stock inlet and outlet being in free vapor communication with said baffling structure, a catalyst feed leg of less cross section than said chamber extending above said chamber and connected to said catalyst inlet for delivery of catalyst thereto by gravity, said catalyst feed leg being of sufficient height that a greater head of catalyst may be created therein than the operating pressure in said chamber, a catalyst withdrawal leg connected to said catalyst outlet and extending below said chamber for withdrawal of spent catalyst by gravity, said catalyst withdrawal leg being of less cross section than said chamber and terminating in the lower end of a spent catalyst elevator, flow throttling means associated with the lower section of said catalyst withdrawal leg, a catalyst regeneration chamber provided at its lower end with an air inlet and with a regenerated catalyst outlet and also provided at its upper end with a flue gas outlet and with a spent catalyst inlet, means to pass spent catalyst from the upper portion of said spent catalyst elevator to said spent catalyst inlet in said regeneration chamber, means to pass regenerated catalyst from said regenerated catalyst outlet to the lower portion of a regenerated catalyst elevator, and means to pass regenerated catalyst from the upper portion of said regenerated catalyst elevator to said catalyst feed leg of said conversion chamber.

2,410,310
REFRIGERATING APPARATUS
Jasper A. Smith, Oakwood, Ohio, assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware
Application October 14, 1944, Serial No. 558,722
1 Claim. (Cl. 116—103)

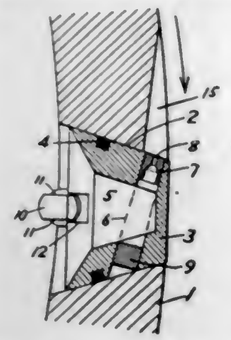
A self-powered warning device for frozen food storage comprising a container containing a pleasant tasting and smelling odiferous fluid and a non-toxic volatile propellent normally a gas at atmospheric pressure maintained in liquid form therein under pressure, means responsive to a predetermined high temperature below 32° F. for releasing the fluid and propellent from the container whereby the existence of an abnormal temperature in the food storage device is indicated.



2,410,311
SAFETY RAZOR AND BLADE MAGAZINE THEREFOR
Warner Steinbach, Maplewood, N. J.
Application January 4, 1945, Serial No. 571,260
3 Claims. (Cl. 30—40)

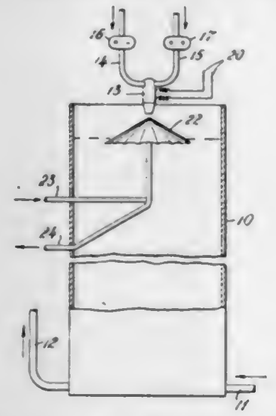
1. A magazine for holding a stack of blades each having an open-ended longitudinal slot and having a blade discharge passage between its top and forward wall, means at the discharge end of the magazine for mounting it on the guard

plate of a safety razor, a projection forming part of a lock extending from the magazine at its discharge end, and means for discharging blades one by one.



2,410,312
MOLDING APPARATUS
Harold A. Storch, Fairview Village, Ohio
Application July 15, 1944, Serial No. 545,114
5 Claims. (Cl. 18—9)

1. In apparatus for molding from plastic material elongated articles of revolution of the kind having a body which includes stem and shoulder portions, a ring member having a circumferential groove therein, a drum member rotatable in said ring member and also having a circumferential groove therein, the grooves of said ring and drum members cooperating to define a circumferentially extending mold chamber having a cross-sectional shape which is elongated transversely of the groove and corresponds substantially with the profile of the article to be produced, and said grooves having connected coextending portions of different depths spaced transversely of the grooves for forming the stem and shoulder portions of the articles means for rotating said drum member for rolling a body of said material in said chamber to shape the body to article form, said ring member having a feed opening disposed laterally of its groove and extending in the direction of the axis of the drum and communicating with said chamber at one point thereof for introducing said material in strip form and said ring also having a discharge opening communicating with said chamber at another point thereof for the delivery of the molded articles, a cutter pivotally mounted on said ring member for strip-cutting movement transversely of said feed opening, means on said drum member and engageable with said cutter for producing said strip-cutting movement, and a trimming means rotatably mounted on said ring member adjacent said discharge opening and having a cutting portion engaging said drum member for trimming the molded articles as they approach the discharge opening.

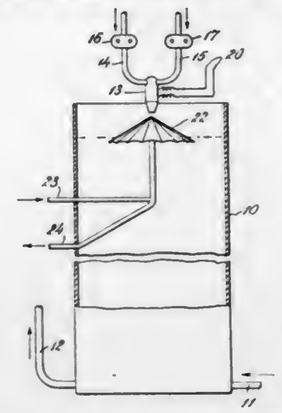


2,410,313
CENTRIFUGAL SEPARATING BOWL
George J. Strezynski, Chicago, Ill., assignor to The De Laval Separator Company, New York, N. Y., a corporation of New Jersey
Application April 19, 1944, Serial No. 531,789
11 Claims. (Cl. 233—47)

1. A centrifugal bowl the shell of which has an opening therethrough the upper wall of which slopes downward in an outward direction and affording a seat for a nozzle body, a nozzle body of a shape complementary to that of the hole and having a closed outer wall which, when positioned in the hole, is substantially flush with the outer wall of the bowl shell, the side wall of said body having through its outer part a discharge orifice extending in a direction approximating parallelism with a line tangential to the outer wall of the bowl shell, the latter being recessed adjacent to

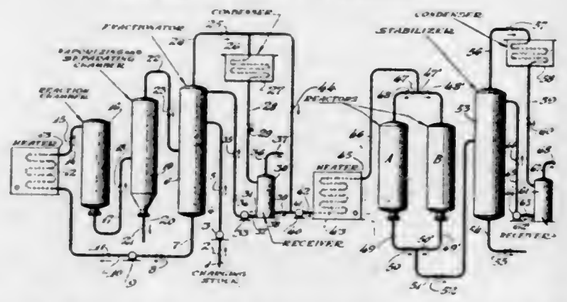
said discharge to allow free and unobstructed escape of material ejected therethrough when the bowl is rotated in a direction opposite to the direction of discharge through said orifice.

2,410,314
APPARATUS FOR PREPARING FORMED GELS
Elbert O. Sowerwine, Jr., Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application May 20, 1943, Serial No. 487,714
3 Claims. (Cl. 252—359)



3. In an apparatus for forming and dividing a stream of a gelable sol into a plurality of smaller streams, a mixing nozzle comprising wall means defining a vertical longitudinal chamber open at the lower end, means to admit fluids to the upper end of said chamber and electrical heating means to heat said wall means, and in combination with said nozzle a divider comprising means defining a conical surface with its apex below the open lower end of said chamber, said conical surface being coated with a layer of ice.

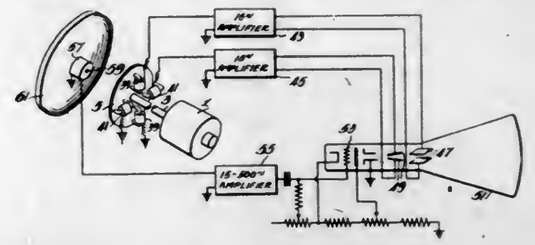
2,410,315
APPARATUS FOR PREPARING FORMED GELS
Elbert O. Sowerwine, Jr., Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application May 20, 1943, Serial No. 487,715
2 Claims. (Cl. 252—359)



2. In a device for dividing a stream of a gelable sol into a plurality of smaller streams, a divider of generally conical shape, means to maintain said divider in position with the apex thereof directed upwardly, the outer surface of said divider having a plurality of grooves extending

down the surface thereof from about the apex, said grooves being coated with a layer of ice, means to conduct a heat transfer fluid in indirect

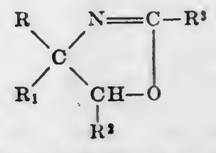
heat exchange relationship with said surface, and means to discharge a stream of gelable sol onto the apex of said divider.



2,410,316
PRODUCTION OF MOTOR FUEL
Charles L. Thomas, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application August 11, 1941, Serial No. 406,286
6 Claims. (Cl. 196—52)

1. A process for the production of a high octane motor fuel which comprises subjecting a hydrocarbon oil boiling above the range of gasoline to thermal cracking at a temperature within the approximate limits of 900 to 975° F. and a pressure within the approximate limits of 15 to 150 pounds per square inch gage, fractionating the products to separate a gasoline and intermediate conversion products and subjecting said gasoline to the action of an olefin isomerizing catalyst at an isomerizing temperature within the approximate limits of 800 to 1100° F. and a pressure of from substantially atmospheric to mildly superatmospheric and for a time of contact such that cracking liquid volume loss is maintained below 5% and olefin isomerization is the principal reaction, and separating from the products of said olefin isomerizing step the reformed gasoline as a product of the process.

2,410,317
HEAT RESPONSIVE DEVICE
William A. Tolson, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application May 1, 1943, Serial No. 485,315
9 Claims. (Cl. 178—6.8)



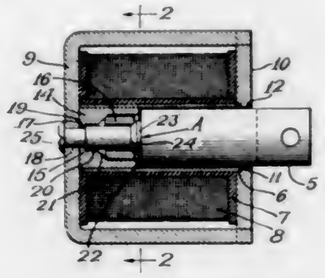
1. A heat responsive device including means for establishing an image of a scene including heat radiating objects, means for scanning said image whereby said image is subdivided into elements, a heat detector for converting said applied image elements into electric currents, and an indicator including elements responsive to scanning voltages and elements responsive to applied currents, said current responsive elements being connected

to said heat detector for indicating said electric currents and said elements responsive to scanning voltages being energized in synchronism with the operation of said scanning means thereby to form a visible image of said scene.

2,410,318
PROCESS FOR THE PRODUCTION OF ACYLATED AMINO HYDROXY COMPOUNDS BY THE ACTION OF ACID ANHYDRIDES ON 2-OXAZOLINES
Philip F. Tryon, Terre Haute, Ind., assignor to Commercial Solvents Corporation, Terre Haute, Ind., a corporation of Maryland
No Drawing. Application April 12, 1943, Serial No. 482,761
5 Claims. (Cl. 260—561)

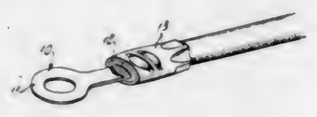
1. A method for the production of O-acylated amides which comprises reacting a fatty acid anhydride with an oxazoline of the following formula:

where R is selected from the group consisting of hydrogen, phenyl, alkyl, and acyloxyalkyl; R^1 is selected from the group consisting of alkyl and acyloxyalkyl; R^2 is hydrogen; and R^3 is alkyl, and then treating the resultant mixture with water.



2,410,319
METHOD OF PRODUCING NITRO-CELLULOSE
Henry Von Kohorn, New York, N. Y.
No Drawing. Application May 22, 1941, Serial No. 394,619
5 Claims. (Cl. 260—222)

1. Process for the manufacture of nitro-cellulose having a high and stable nitrogen content, which comprises dissolving cellulose or cellulose containing materials according to the viscose method and then precipitating the said viscose in a bath containing by weight approximately two thirds sulphuric acid and one fifth nitric acid, the balance being water.

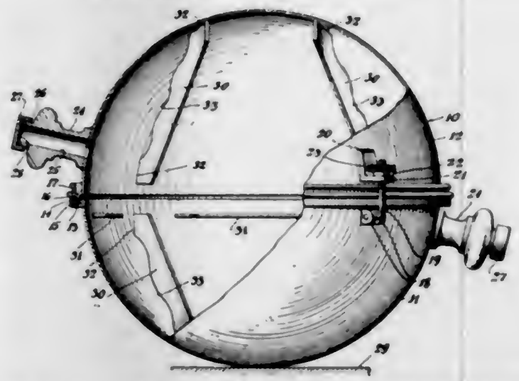


2,410,320
SHADED POLE CONSTRUCTION FOR SOLENOIDS
Henry G. Wasserlein, Park Ridge, Ill., assignor to Phillips Control Corporation, Chicago, Ill., a corporation of Illinois
Application June 28, 1945, Serial No. 602,095
5 Claims. (Cl. 175—338)

1. In a solenoid a frame, a plunger, a guide sleeve for said plunger and a plunger stop secured

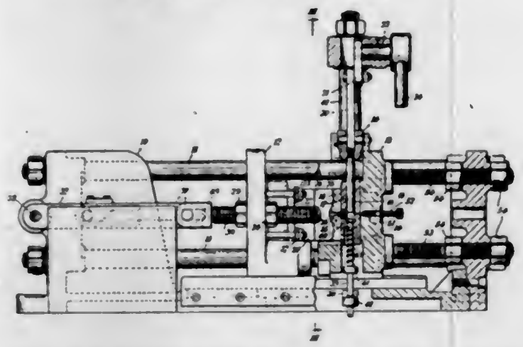
to the frame comprising a shell having a seat therein, a core having a shoulder engaging said seat, the shell having an enlarged bore, with a tapered wall adjacent the shoulder, the core having a head thereon with a tapered surface opposite the tapered wall, and a shading ring wedged between said tapered surface and said tapered wall.

2,410,321
ELECTRICAL CONNECTOR
William S. Watts, Detroit, Mich., assignor to Aircraft-Marine Products, Inc., Elizabeth, N. J., a corporation of New Jersey
Application December 14, 1943, Serial No. 514,216
4 Claims. (Cl. 173—269)



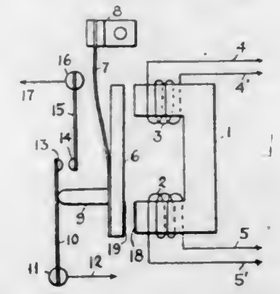
1. An electrical connector of the type intended to be crimped onto a wire and including a soft metal ferrule and a normally rigid tube of tough and stiffly-flexible insulating plastic tightly embracing said ferrule and covering the outer surface thereof, said tube having a resistance to cold plastic flow not significantly less than that of the metal of said ferrule, whereby said tube can transmit sufficient crimping pressure to the ferrule from a crimping tool to crimp the ferrule against a conductor by plastic flow in the metal thereof without cracking the tube or otherwise interfering with its mechanical and electrical effectiveness.

2,410,322
TREATMENT OF MANGANESE STEEL
Carl W. Weesner, Warren, Ohio, and Wallace B. Leffingwell, Sharon, Pa., assignors to Sharon Steel Corporation, Sharon, Pa., a corporation of Pennsylvania
No Drawing. Application September 28, 1943, Serial No. 504,146
7 Claims. (Cl. 134—3)



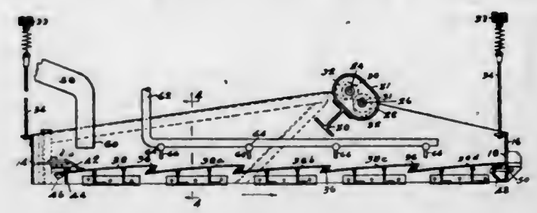
1. The method of removing brittle decarburized surface metal layers from austenitized, high manganese, high carbon strip steel, including the steps of treating the strip in a dilute aqueous solution of up to 5% nitric acid by weight in water maintained at a temperature of from 180° to 210° F. for from 1 to 5 minutes, then treating the strip in a dilute aqueous solution of an alkali metal hydroxide of about 10% by weight in water maintained at a temperature of from 160° to 180° F. for from 15 to 45 seconds, and then treating the strip in a dilute aqueous solution of about 2% hydrochloric acid by weight in water maintained at a temperature of 140° to 180° F. for a few seconds.

2,410,323
CLOTHES CLEANING DEVICE
Katharine Wellman, New York, N. Y., assignor to Bacwell Enterprises Incorporated, New York, N. Y., a corporation of New York
Application March 14, 1945, Serial No. 582,753
3 Claims. (Cl. 68—213)



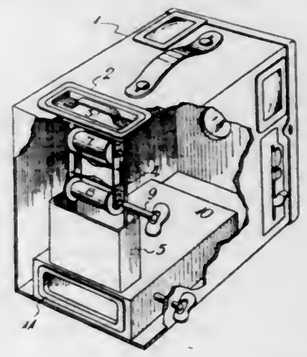
1. A manually operable clothes cleaning device comprising a substantially spherical clothes-and-cleaning liquid tumbling container formed of two substantially hemispherical sections detachably secured together in a liquid-tight manner in the vicinity of a medial plane, each of said sections having a relatively smooth curvilinear outer surface to permit ready manual rocking thereof on a relatively flat supporting base surface about any of a plurality of angularly related axes, and a pair of substantially diametrically opposed outwardly projecting hand grasps with one secured to one of said sections and the other secured to the other section relatively close to the medial plane leaving the major portions of the outer surfaces of said sections free for rocking contact.

2,410,324
MACHINE FOR MOLDING THERMOSETTING MATERIALS
Reginald Henry Windsor and Emeric Gaspar, London, England; said Gaspar assignor to said Windsor
Application February 7, 1945, Serial No. 576,656
In Great Britain December 8, 1943
8 Claims. (Cl. 18—30)



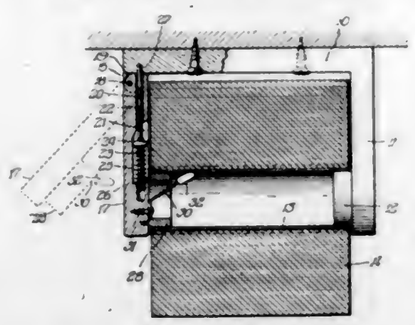
6. In a machine for molding thermosetting materials, the combination comprising stationary tie bars, an adjustable stationary platen affixed to said tie bars, a movable platen slidably mounted on said tie bars, means for removably securing a mold to each of said platens, whereby either a set of molds for end sprue molding or a set of molds for split center sprue molding may be mounted on said platens, means for moving said movable platen in relation to said fixed platen to open and close the molds, a cylinder block carried by said stationary platen, and having a bore extending transversely of the direction of movement of said movable platen and a passage transversely of said bore establishing communication between said bore and the mold cavity of one of the end sprue molds, a reciprocable injection plunger in registry with said bore and operable in a fixed path transverse to the direction of movement of the movable platen, and means for adjusting the stationary platen on said tie bars from a position in which said plunger operates at one end of the mold cavity defined by one set of molds for end sprue molding, to a position in which said plunger operates in the parting plane of the molds of the other set for split center sprue molding.

2,410,325
DELAYED ACTION RELAY
Michel N. Yardeny, New York, N. Y.
Original application September 20, 1940, Serial No. 357,660. Divided and this application September 11, 1943, Serial No. 502,055
2 Claims. (Cl. 175—372)



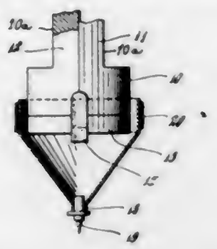
1. A delayed action relay comprising a stationary member and a movable member, one of the members being arranged to be energized for causing mutual attraction between the members while one of the members is energized, a portion of each member being arranged to contact a corresponding portion of the other member in response to one of the members being energized, and a layer of an adhesive viscous substance applied to one of the contacting portions for retarding separation of the movable member from the stationary member in response to deenergizing the energized member.

2,410,326
COMBINED VIBRATORY SCRUBBER, STRATIFIER, AND SCREEN FOR MINERALS
William L. Zeigler, Wallace, and Claude Y. Garber, Kellogg, Idaho, assignors to The Sink & Float Corporation, New York, N. Y., a corporation
Application November 12, 1943, Serial No. 509,982
3 Claims. (Cl. 209—44)



1. A vibratory separator, comprising: a serrated deck formed of inclined plates having risers between adjacent plates, each said plate being perforate adjacent its apex and imperforate adjacent the root, said plates being characterized by being smooth from the root across the imperforate and perforate portions to the apex, and means for vibrating said deck longitudinally thereof, whereby particle bearing fluid has the particles therein scrubbed and stratified and portions thereof intermittently decanted for the removal of a portion of the fluid and of particles of a size to pass through said screen.

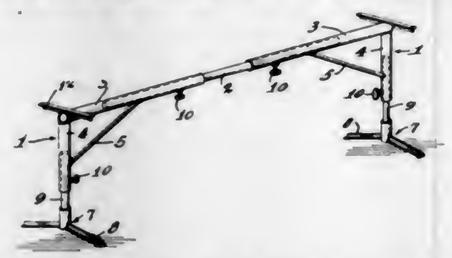
2,410,327
MINIATURE CAMERA
Clifton V. Berry, West Haven, Conn.
Application March 24, 1943, Serial No. 480,291
5 Claims. (Cl. 95—13)



1. In a camera, a box formed with an opening through the rear portion of its top wall, a removable cover for said opening having a depending flange fitting tightly in the opening, strips extending downwardly from said cover, upper and lower pintles carried by said strips for rotatably mounting film-spools between the strips, the pintles of one strip being rotatably mounted, a key rotatably mounted through a side wall of the box and engageable with the lower one of the rotatable pintles for rotating the lower spool to wind film thereon from the upper spool, a handle, rods extending downwardly from ends of said handle through said cover and of appreciably greater length than said strips, a cup-shaped shield rigidly secured to lower ends of said rods and disposed about the lower portions of the rods and located below said strips when the handle is disposed against the cover, said shield when shifted upwardly by a pull upon the handle being disposed about the strips in enclosing relation to the strips and spools of film between the strips and having its upper end overlapped by the flange and tightly gripped thereby to provide a tight closure for the open upper end of the shield and prevent entrance of light into the shield when the cover is removed from the box and the shield drawn outwardly through the opening, a developing tank in said box mounted upon the bottom of the box and having an open rear end exposed through the rear wall of the box, a removable closure for closing the rear end of the tank, the open rear end of the tank being of dimensions adapting the shield to be thrust into the tank through the open rear end thereof and the cover fitted tightly into the rear end of the tank and the handle forced towards the cover to shift the shield to its extended position beyond the free ends of the strips and expose the film to action of developing fluid in the tank, and a key mounted through the said side wall of the box for engaging the upper pintle and rotating the upper spool to rewind film upon the upper spool and move the film through developing fluid in the tank.

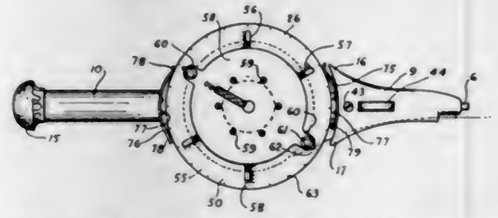
2,410,328
TOILET ROLL DISPENSER
Edward Agamaite, Jr., Green Bay, Wis., assignor to Fort Howard Paper Company, Green Bay, Wis., a corporation of Wisconsin
Application April 9, 1945, Serial No. 587,323
4 Claims. (Cl. 242—55.2)

1. A roll supporting fixture comprising a base, an arm fixed to the base, said fixed arm carrying a roll support member, a swinging arm pivoted to the base and carrying a second roll support member, and a latch pin carried by the swinging arm and adapted to engage the base to latch the arm in supporting position, the latch pin having an actuating member, said member being normally covered by a roll supported by the fixture.



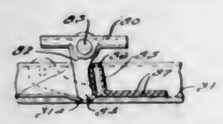
2,410,329
ELECTRICAL APPARATUS
Robert B. Albright, Philadelphia, Pa., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application September 8, 1944, Serial No. 553,155
7 Claims. (Cl. 179—100.41)

1. In a phonograph pickup for varying the tuning of a resonant circuit, in combination a coil, a stylus, means for transmitting movement of said stylus to said coil, and a core within said coil, said core being formed partly of a high permeability magnetic material and partly of a high conductivity non-magnetic material, whereby movement of said coil with respect to said core will vary the inductance of said coil linearly about a normal value and the resonant frequency of the tuned circuit which may embody said coil will be accordingly varied.



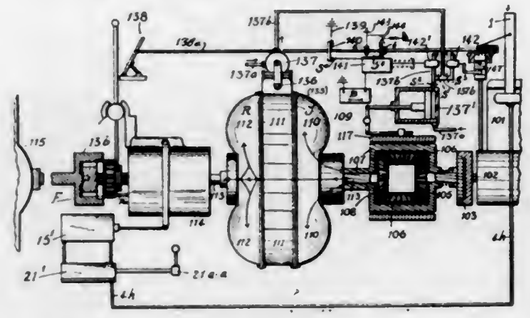
2,410,330
SCAFFOLD HORSE
William Ashenfelter, Swanton, Ohio
Application February 6, 1946, Serial No. 645,874
5 Claims. (Cl. 304—6)

1. A scaffold horse comprising a pair of frame members each having a long arm and a short arm rigidly connected together in right angular form and reversible in use so that either the long or the short arms of the frames may be horizontally disposed with the other arm vertically disposed to provide a supporting leg, and means for rigidly connecting either the long or short arms



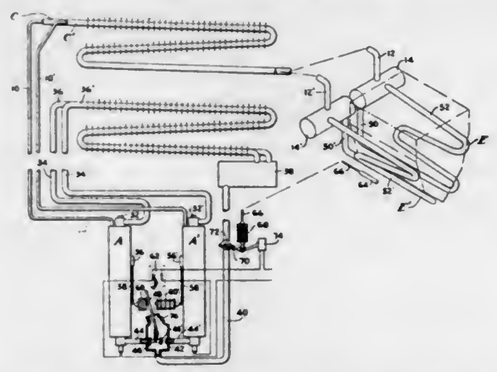
together in longitudinally aligned horizontal position.

2,410,331
FISHING ROD AND REEL
Ovila J. Aubertin, Matachewan, Ontario, Canada
Application January 27, 1945, Serial No. 574,874
5 Claims. (Cl. 43—20)



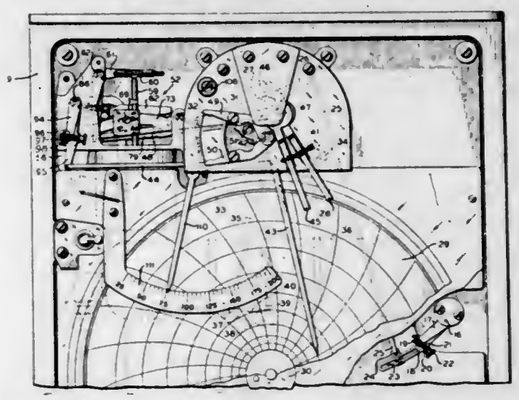
1. For a fishing rod and reel, a reel-carrying handle part consisting of front and rear hand grips and an intermediate offset reel nest, a reel rotatable in said offset nest, arcuate leaf springs on the confronting ends of said hand grips engaging the periphery of said reel and a relatively wide channel passage through the underside of the front hand grip, leading to said reel; the lower end of the leaf spring on the front hand grip being shorter and with a sharper bend.

2,410,332
VEHICLE BODY
Albert P. Ball, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a corporation of Michigan
Original application July 17, 1939, Serial No. 284,855. Divided and this application August 2, 1943, Serial No. 496,983
3 Claims. (Cl. 296—137)



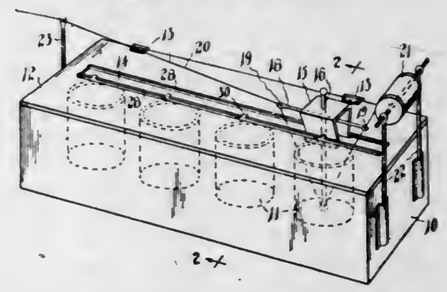
1. In a vehicle body, a fixed roof panel having a skylight opening, a drain panel extending beneath and spaced from said roof panel, transversely spaced longitudinal guides carried by said drain panel, a sliding panel movable longitudinally into and out of position to close said opening and having guide devices adjacent opposite side edges thereof engaging said guides for guiding said sliding panel, a pair of swinging members hinged to the trailing edge portion of said sliding panel adjacent opposite corners thereof and depending from the underside thereof, a pair of fixed stops extending upwardly from said drain panel into the path of said members, said swinging members movable automatically into position at the end of the closing movement of the sliding panel to engage said stops and by continued closing movement adapted to be swung in a direction opposite to the direction of closing movement of the sliding panel thereby to impart an upward movement to the trailing edge of the latter and effect sealing engagement thereof with the adjacent edge of said skylight opening.

2,410,333
HYDRAULIC MECHANISM
Jean A. H. Barkeij, Altadena, Calif.
Application April 29, 1940, Serial No. 332,522
35 Claims. (Cl. 74—189.5)



2. A prime mover, having an accelerator connected to a differential mechanism, including a housing, a fluid drive including an impeller and runner, one gear of said mechanism connected to the engine, and another gear thereof connected to the runner of the fluid drive, said gears geared to gears rotatably arranged on a differential housing, connected to the impeller of said fluid drive, said runner connected to a gearbox, a freewheel behind said gearbox, a brake operable on said differential housing to stop said housing and to effect operation of said freewheel, said brake being power operated and controlled by the accelerator of said prime mover.

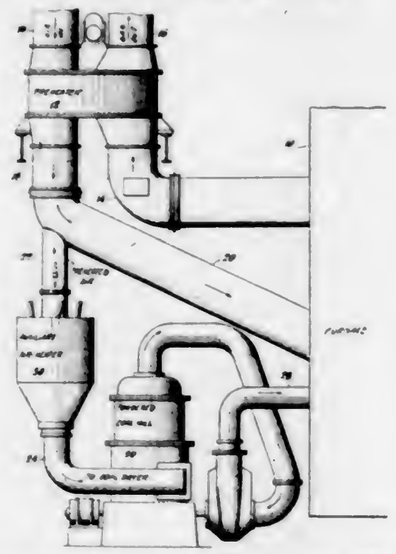
2,410,334
REFRIGERATION
George A. Brace, Washington, D. C., assignor to The Hoover Company, North Canton, Ohio, a corporation of Ohio
Application November 21, 1941, Serial No. 419,815
13 Claims. (Cl. 62—5)



1. An absorption refrigerating apparatus comprising, a cabinet, two intermittently operating absorption refrigerating units assembled with said cabinet; each unit comprising a generator-absorber, a condenser and an evaporator connected by conduits to form a closed system; said evaporators being positioned on the interior of said cabinet; and an open combined ice freezer, temperature and humidity stabilizing water tank in thermal contact with the evaporator of one of said units; said tank being of large capacity, in open communication with the interior of said cabinet and exposed to air circulating within said cabinet; the arrangement being such that ice is frozen to the walls of said tank below the water level therein by the evaporation of refrigerant during the absorption-evaporation period of operation of said one unit and melted loose therefrom to float to the surface of the water in said tank by warm liquid refrigerant introduced into said evaporator during the generation-condensation period of operation of said one unit.

2,410,335
CONTROL MECHANISM
Edwin C. Burdick, Philadelphia, Pa., assignor to The Brown Instrument Company, Philadelphia, Pa., a corporation of Pennsylvania
Application October 22, 1942, Serial No. 462,950
4 Claims. (Cl. 137—164)

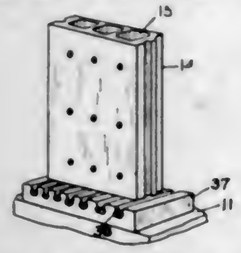
1. In a control system, means to measure the value of a first condition, means to measure and control the value of a second condition, mechanism operated by the means to measure the value of the first condition to adjust said second means and vary the value at which the second means will control the value of the second condition to maintain the value of the second condition at a fixed ratio to the value of the first condition, means responsive to the value of a third condition, and means operated by said last mentioned means to adjust said mechanism to vary the ratio said mechanism will keep between said first condition and said second condition.



2,410,336
DYEING MACHINE
Frederick Carter and Donald C. Taylor, Westhill, Ontario, Canada
Application October 21, 1944, Serial No. 559,825
1 Claim. (Cl. 68—175)

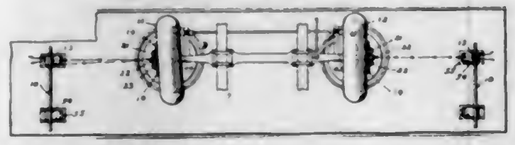
In a dyeing machine of the class described, comprising a case for containing a row of vats and having a hinged cover including material guide means projecting through an elongated slot in said cover for movement from one to another of said vats, the improvement including slide means for supporting said material guide means, said slide means including a substantially U-shaped member of springy material having converging legs flanged at their distal ends for

interfitting engagement with side edges of said slot under outward tension, said material guide means being attached to the bight portion of said U-shaped member and having a material guiding element extending between said legs and protruding therefrom for projecting into one or another of said vats according to the position of the slide means, and an indexing device for said slide means comprising nodules on said cover of the case spaced at intervals along one edge of the slot therein for engaging in a locating aperture provided in the adjacent leg of said U-shaped member.



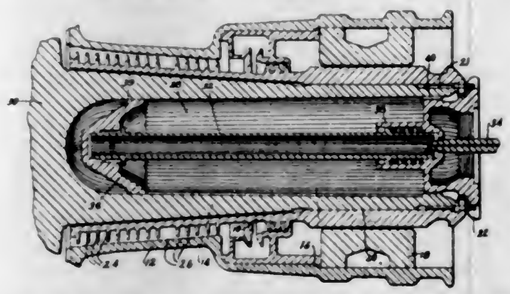
2,410,337
AIR PREHEATER FOR PULVERIZING MILLS
Roland S. Cooper, River Forest, Ill., and Sven Holm, Wellsville, N. Y., assignors to The Air Preheater Corporation, New York, N. Y.
Original application October 22, 1942, Serial No. 462,942. Divided and this application April 21, 1944, Serial No. 532,124
2 Claims. (Cl. 263—19)

1. A furnace for heating gaseous fluids comprising; means forming an elongated cylindrical furnace chamber closed at one end; a gas discharge duct connected centrally into the opposite end of said chamber; burners disposed for introducing fuel to be burned to said chamber through its wall near said one end and arranged in a circle to direct the fuel streams toward and tangentially to an imaginary circle centered on the longitudinal axis of said chamber and located in a plane transverse thereof; an air tube projecting through said one end wall within said burner circle and having an open end located at a point short of the opposite end wall, said tube being of smaller diameter than the cross sectional area of said chamber to provide an annular combustion space and being formed in its side wall with orifices inclined with respect to the axis of said chamber so as to direct air into said annular combustion space in directions opposite to those of the streams of fuel from said burners.



2,410,338
SILO
Zur W. Craine, Norwich, N. Y., assignor to Craine, Inc., Norwich, N. Y., a corporation of New York
Application October 27, 1942, Serial No. 463,501
2 Claims. (Cl. 72—6)

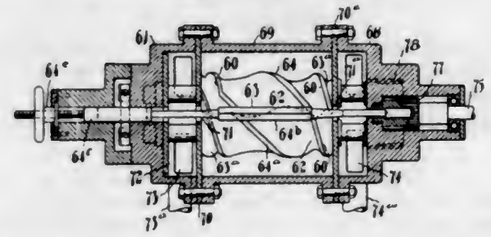
2. A tower silo comprising a founation having a grooved surface at least at the periphery of the foundation to form liquid outlet means to the exterior of the silo wall, a body erected in the form of a wall upon the grooved surface of the foundation and forming an enclosure for silage thereabove, and the wall being narrower than



the grooved surface and located with respect to the grooves so that the ends thereof are exposed at the inner and outer faces of the wall thereby forming a plurality of liquid drainage outlets communicating with the interior of the wall of said enclosure.

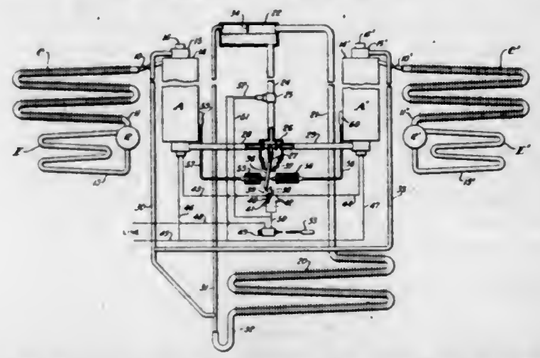
2,410,339
WHEEL ALIGNMENT GAUGE
John L. Creagmile, Oakland, Calif.
Application February 15, 1943, Serial No. 475,945
4 Claims. (Cl. 88—74)

1. In apparatus for gauging an alignment relation of a dirigible wheel disposed for its swinging in place about an upright axis, an optical indicating means comprising a fixed source of light emitting a light beam directed horizontally in a line toward said axis of swinging for the wheel, a reflector mounted on the wheel for its disposal to intercept said light beam for the reflection thereof and having its reflecting face parallel to the plane of the wheel, and a fixed scale disposed to intercept the reflected beam at a point in a vertical zero line of the scale intersecting the beam line when a horizontal line of said reflecting face intersected by the beam line is perpendicular to the beam line.



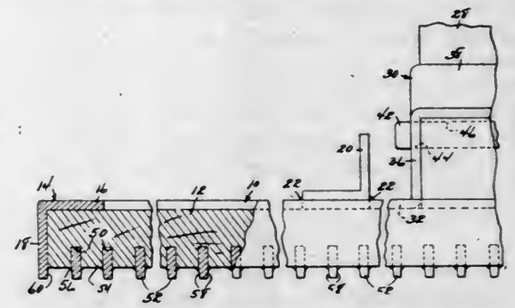
2,410,340
TURBINE SEAL
Val Cronstedt, Marlboro, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application May 11, 1943, Serial No. 486,618
2 Claims. (Cl. 308—36.1)

1. In a turbine, a rotor having a power section and a projecting shaft at one end, a recess in said shaft through which a coolant is directed, a casing in which said shaft is journaled and a sleeve mounted at its outer end only on the portion of the shaft in which the recess is located,



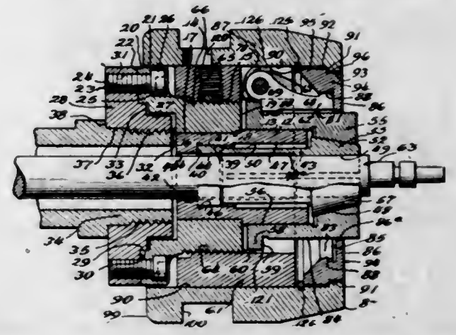
said sleeve adjacent to the inner end, and the casing having cooperating sealing elements defining a labyrinth seal, a part of the outer surface of said sleeve forming a bearing surface for the rotor.

2,410,341
DISPLACEMENT APPARATUS
Rudolf D. Delamere, Toronto, Ontario, Canada
Application March 2, 1942, Serial No. 432,972
6 Claims. (Cl. 230—143)



1. Apparatus of the class described comprising at least three rotatable elements, each element being provided with a plurality of helical ribs, each rib having a short pitch at each end and a comparatively long pitch intermediate the short pitched portions, the elements being meshed with one another and rotatable in the same direction to form a succession of pockets which change in size as they travel from one end of the ribs to the other during the rotation of the elements; means for admitting or exhausting gas into or from the pocket at one end of the elements; means for exhausting or admitting gas from or into the pocket at the other end of the elements; means to rotate or be rotated by the rotatable elements; and means for controlling the operation of a large pocket and either one of the small pockets or a portion thereof to permit the elements to be driven in either direction of rotation by the gas or to permit the elements to drive the gas in either direction through the pockets and to vary the compression and expansion ratio of the gas entering and leaving the pockets.

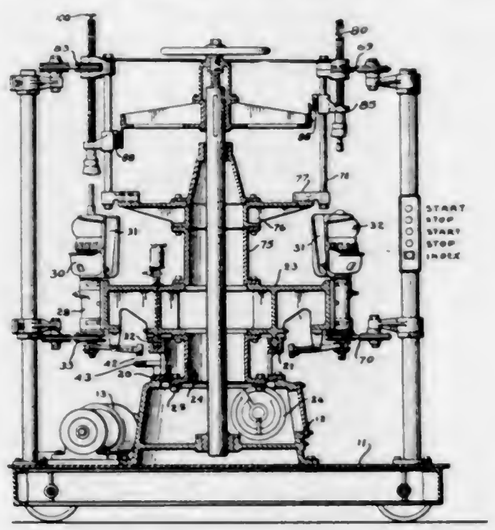
2,410,342
REFRIGERATION
Alfred G. Gross, Wilmette, Ill., assignor to The Hoover Company, North Canton, Ohio, a corporation of Ohio
Application November 16, 1942, Serial No. 465,686
8 Claims. (Cl. 62—5)



1. Refrigerating apparatus including a pair of intermittent refrigerating systems each including an absorber-generator, a condenser and an evaporator connected in circuit, said condensers and said evaporators being arranged with respect to each other and to said absorber-generators to prevent gravity flow of liquid refrigerant into said absorber-generators, a cooling system for said absorber-generators including a heat rejecting part, a heat absorbing part in heat exchange with each absorber-generator, a gas and liquid separating chamber, means for conveying condensate from said separating chamber to each absorber-generator, a vapor lift pump for conveying condensate from said heat rejecting part to said separating chamber, means for conveying vapor from said separating chamber to said heat rejecting part, means for conveying vapor from each of said heat absorbing parts to said vapor lift pump, means for heating said absorber-generators, and control means arranged to govern said heating means and said cooling system to apply heat to one absorber-generator to cool the other absorber-generator.

2,410,343
CONCRETE FLOAT
William S. Haivala, Kennewick, Wash.
Application January 29, 1944, Serial No. 520,308
2 Claims. (Cl. 72—136)

1. A concrete float comprising a body composed of a rectangular metal frame having an open lower face, a wooden block in said frame with its lower face above a plane with the lower edge of the frame, said block having transverse grooves in its lower face, blades arranged in said grooves with their lower edges flush with the lower edges of the frame and their ends welded to the inner vertical walls of the frame, and a handle carried by the body.

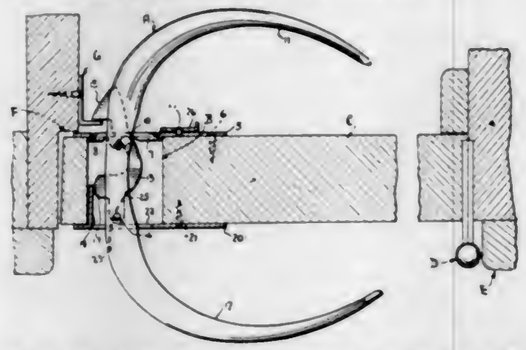


2,410,344
COLLET CHUCK
Rufus E. Hines, Chicago, Ill.
Application August 7, 1944, Serial No. 548,325
2 Claims. (Cl. 279—50)

1. In an actuating mechanism for a collet chuck incorporating a collet provided with an axial bore, a locating surface at one end and a tapered peripheral surface at the other end, a supporting body having an axial bore for receiving the collet and including a shoulder for locating the collet axially thereof, a collet closing member slidably mounted for axial movement on said supporting member and having a tapered inner end surface coacting with said tapered peripheral surface of the collet to urge the locat-

ing surface of the collet against said shoulder of the supporting body and to effect closing action of the collet, and said collet closing member having a thrust surface opposed to the tapered inner and surface thereof, the combination comprising, a plurality of axially projecting fingers pivotally mounted in circumferentially spaced relationship on the supporting body and having shoulders engaging said thrust surface of the collet closing member, a chuck actuating member mounted for axial sliding movement on the supporting body, said chuck actuating member having an integral internal radial shoulder in opposed relationship to the collet locating shoulder of said supporting member, and a floating camming member of substantially less diameter than the chuck actuating member adjacent said shoulder carried by said chuck actuating member and having an internal camming surface in position for coaction with the ends of said projecting fingers during axial movement of the chuck actuating member to effect axial movement of the collet closing member, said camming member being axially located relative to the chuck actuating member by said radial shoulder and against which it is movable radially relative to the actuating member so that substantially equal force is applied radially to each of said fingers, whereby to balance the forces applied to said collet closing member.

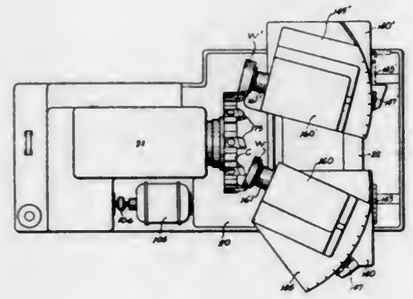
2,410,345
PERFORATING AND TUBULATING APPARATUS
Ray A. Hinkley, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a corporation of New York
Application August 4, 1942, Serial No. 453,583
3 Claims. (Cl. 49—1)



1. In a glass working apparatus, a chuck adapted to hold a glass article, means adjacent said chuck for heating to plasticity a restricted wall area of a glass article held by said chuck, a suction gathering unit adjacent said chuck, means operatively connected to said unit for moving it from a discharge position into juxtaposed relation to the plasticized wall area of the article and back to its discharge position, means adjacent said chuck for applying pressure to the plasticized wall area of the article in a direction towards said unit while said unit is moving toward the article, means operatively connected to said unit for establishing communication between it and a vacuum line and for maintaining the same during movement of said unit from such juxtaposed relation toward its discharge position to seize and draw plasticized glass away from the article proper, thermal means adjacent said chuck for severing the major portion of the seized glass from the article proper, and means operatively associated with said unit for ejecting the seized glass therefrom upon its arrival at the discharge position.

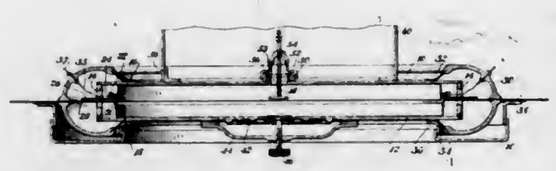
2,410,346
LUBRICANT
James Franklin Hyde, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a corporation of New York
No Drawing. Application December 5, 1945, Serial No. 633,043
8 Claims. (Cl. 252—49.6)

1. The method of lubricating relatively moving metallic bodies which comprises maintaining between their bearing surfaces a lubricant film comprising a liquid polymeric organo-siloxane whose organic substituents consist essentially of lower alkyl and phenyl radicals attached to silicon through carbon-silicon linkages, said siloxane containing at least 40 mol. per cent of the recurring structural unit corresponding to the formula $(C_6H_5)RSiO$ where R is a lower alkyl radical.



2,410,347
DOOR LATCH
Justus C. Irwin, Minneapolis, Minn., assignor to Wright Products, Inc., St. Paul Park, Minn., a corporation of Minnesota
Application January 29, 1944, Serial No. 520,235
15 Claims. (Cl. 292—126)

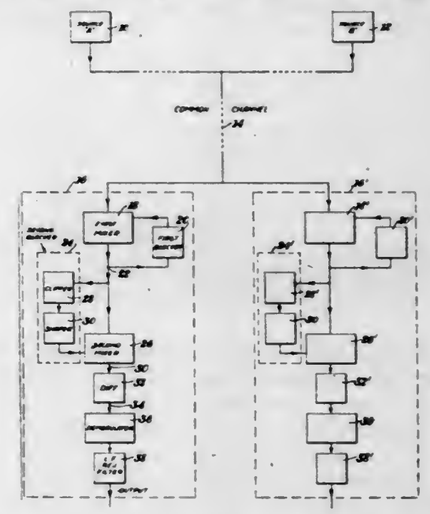
1. A latch for operation in a hole bored in a door at a point spaced from the edge thereof, comprising a handle member extending through the hole and pivotally mounted for swinging movement about an axis disposed adjacent to the inner surface of the door, a latch dog pivotally secured to a swingable part of the handle member at a point spaced substantially outwardly with respect to said first pivot axis and having a hook end extending inwardly and to a point beyond the inner surface of the door for engagement with a keeper.



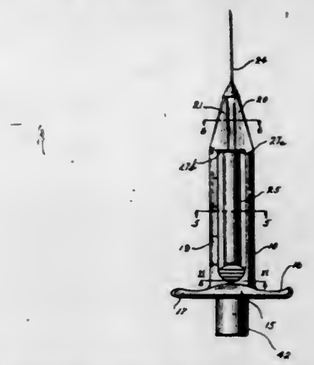
2,410,348
METHOD AND MACHINE FOR RELIEVING GEAR CUTTERS
Magnus H. Johanson, Rochester, and Ernest Wildhaber, Brighton, N. Y., assignors to Gleason Works, Rochester, N. Y., a corporation of New York
Application December 23, 1943, Serial No. 515,366
13 Claims. (Cl. 51—95)

2. The method of relieving side surfaces of blades of a face-mill gear cutter which comprises adjusting two grinding wheels, which are adapted to grind opposite side surfaces of the blades, respectively, into engagement with opposite side surfaces of blades of the cutter so that the line of contact between each wheel and a blade profile

lies in the same plane as the cutter axis, and grinding each side surface of the blades by rotating the corresponding wheel in engagement with the blades while effecting a relative helical motion between the wheel and cutter about the cutter axis.



2,410,349
VACUUM TUBE
Emile Labin, New York, N. Y., assignor to Federal Telephone and Radio Corporation, Newark, N. J., a corporation of Delaware
Application December 15, 1942, Serial No. 469,055
16 Claims. (Cl. 250—27.5)

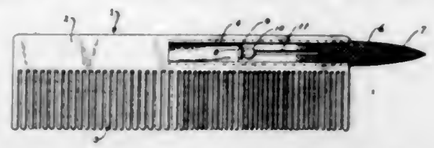


1. A cavity resonator electron tube including a pair of spaced-apart metal plates, each point on one plate being at substantially the same distance from the corresponding point on the other plate, as measured along a line normal to the surface at these points, an anode electrode electrically connected to and positioned about the periphery of one of said plates, a second electrode connected to and positioned about the periphery of the other plate and spaced from the anode, said electrodes and said plates forming the perimeter of a cavity resonator, and sealing means enclosing said electrodes, closing the space between the two plates.

2,410,350
METHOD AND MEANS OF COMMUNICATION
Emile Labin, New York, and Donald D. Grieg, Forest Hills, N. Y., assignors to Federal Telephone and Radio Corporation, Newark, N. J., a corporation of Delaware
Application February 6, 1943, Serial No. 474,960
9 Claims. (Cl. 179—15)

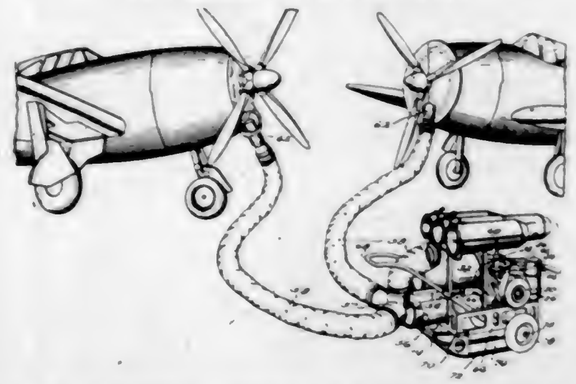
1. The method of selecting a desired modulated pulse train from among a plurality of modulated pulse trains having a slight frequency difference relatively to the desired pulse train, which includes the steps of blocking out the undesired pulses whenever they do not overlap the desired pulses, and blocking out at least the pulse portions of those desired pulses which are overlapped by the undesired pulses.

2,410,351
HYPODERMIC SYRINGE
Marshall L. Lockhart, Detroit, Mich., assignor of one-half to Margaret L. Lockhart, Detroit, Mich.
Application February 10, 1944, Serial No. 522,188
4 Claims. (Cl. 128—215)



1. A hypodermic syringe including a body comprising a base, a pair of legs fixedly connected adjacent their inner ends to said base, said legs extending from said base in spaced relationship to define an ampule-receiving chamber between them and having free outer ends, said body being formed of material such that the outer ends yieldingly resist separation, needle-gripping portions adjacent the outer ends of said legs and disposed beyond the end of said chamber, said portions providing between them a needle-gripping structure such that, by flexing said legs to separate the gripping portions, a needle may be moved laterally into position therebetween, and said base being formed with an opening in line with the space defined between said legs whereby an ampule may be projected therethrough into such chamber.

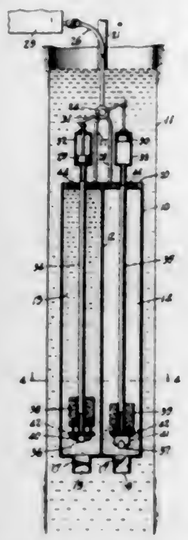
2,410,352
TOILET IMPLEMENT
Carl U. Maenpa, Rome, Ohio
Application November 10, 1944, Serial No. 562,803
1 Claim. (Cl. 132—76.2)



A toilet implement comprising a holder having a back and a longitudinal slideway in one side of said back extending along said side from one end

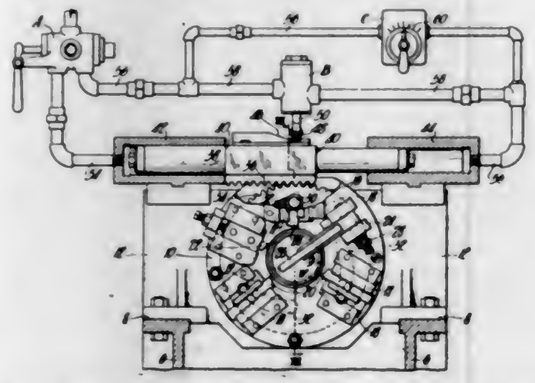
of the holder, a finger nail file in said slideway having sides interfitting with the sides of said slideway and slidable therein whereby said file is adapted to be projected out of the slideway and retracted into the same, and a lateral lug on said file forming a finger grip extending out of the slideway for use in projecting and retracting said file, said file being provided with a longitudinal slot therein, and said back having a stud thereon

extending through said slot for limiting projection of said file, said file in the limit of projection thereof having a substantial filing portion disposed in said slideway and accessible for use through said slideway while being backed by said holder to render said portion rigid while in use, said slideway being open to said end of the holder to expose the entire length of the file for use even when said file is retracted.



2,410,353
HEATER
Henry J. De N. McCollum, Chicago, Ill.; Thelma McCollum, executrix of said Henry J. De N. McCollum, deceased
Application April 17, 1942, Serial No. 439,342
16 Claims. (Cl. 126—116)

1. In a heating system for airplanes and the like, the combination of an internal combustion heater burning a combustible mixture of fuel and air, an internal combustion engine, a source of fuel, a carburetor receiving fuel from said source, a pump driven by said engine to withdraw and compress a combustible mixture of vaporized and atomized fuel and air from said carburetor, means including a passage conveying said mixture to said engine for combustion therein, means including a passage conveying said mixture to said heater for combustion therein, and means including a blower driven by said engine to pass air in heating relation through said heater.



2,410,354
FLUID PRESSURE PUMP
Joseph B. Meyer, Kenosha, Wis.
Application February 17, 1945, Serial No. 578,442
1 Claim. (Cl. 103—246)

In a pump of the character described the combination of a narrow elongated container divided to form two separate gravity filled chambers, discharge means for said chambers extending upwardly through said container, valve means operable to admit fluid pressure to said chambers alternatively, a removable closure member for the top of each chamber, a fluid pressure conductor extending into each of said chambers and supported by said closure member thereof, a float controlled valve carried by the lower end of each of said conductors, and

means actuated through said conductors for actuating said first named valve means, each of said conductors and associated float controlled valve being removable, as a unit, from a chamber upon removal of its supporting closure member.

2,410,355
SEVERING TOOL
Andrew B. Nesbitt and Samuel Webb, Pittsburgh, Pa., assignors to National Tube Company, a corporation of New Jersey
Application January 29, 1945, Serial No. 575,104
5 Claims. (Cl. 164—36)

1. A machine tool for severing elongated bar or pipe stock, comprising means for rotating the stock on its longitudinal axis, a tool support having an opening therethrough adapted to encompass said stock while held by said rotating means, a plurality of cutting tools slidably mounted on said support for movement transversely and radially of the longitudinal axis of said stock, rotatable cam means for moving said cutting tools transversely and radially of said stock, means to rotate said cam means, said means comprising at least an hydraulic cylinder, means for admitting fluid under pressure thereto to rotate said cam and move said tools inwardly of said support, means for controlling the rate of exhaust therefrom to control the speed of advance of said tools, said means comprising a variable control valve and a shunt, a shut-off valve in said shunt and means operable to close said shut-off valve when said tools are moved adjacent said stock whereby said tools may be moved rapidly inwardly until they approach said stock and are thereafter moved inwardly at a rate controlled by said variable control valve.

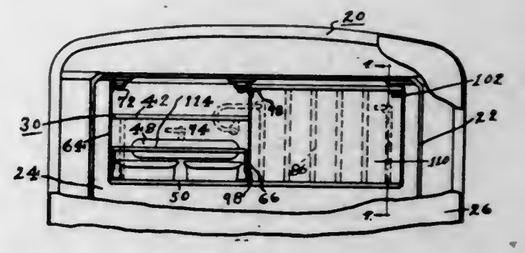
2,410,356
PURIFICATION OF TETRAETHYL LEAD
Alfred Edwin Parmelee, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application May 29, 1943, Serial No. 489,067
7 Claims. (Cl. 260—437)

1. The method of purifying steam distilled tetraethyl lead, containing sludge-forming impurities, which comprises washing the tetraethyl lead with at least ⅓ volume of an aqueous solution of hydrogen peroxide containing from about 0.35 to about 5% of hydrogen peroxide.

2,410,357
PAPER SIZING
Donald K. Pattilloch, Springfield, Mass., assignor of one-half to Chemical Development, Inc., Chicago, Ill., a corporation of Illinois, and one-half to George B. Fowler, Springfield, Mass.
No Drawing. Application June 20, 1942, Serial No. 447,774
9 Claims. (Cl. 106—79)

1. A precipitable sizing material comprising a mixture of substantial quantities each of a protein-containing cereal flour, rosin and an alkali silicate from the group consisting of metasilicate and sesquisilicate.

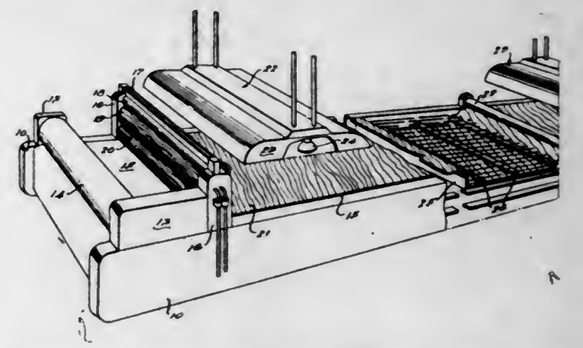
2,410,358
PROCESS FOR PREPARING ANTIMONY PENTAFLUORIDE
Melvin A. Perkins and Carl F. Irwin, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application October 7, 1943, Serial No. 505,414
3 Claims. (Cl. 23—98)



2. The process which comprises reacting $SbCl_5$ with HF to produce SbF_5 in an aluminum apparatus.

2,410,359
BONDED REFRACTORY FOR FURNACE LININGS
John Samuel Clifford Perry and Alan Theodore Prince, Kilmar, Quebec, Canada, assignors to Canadian Refractories Limited, Montreal, Quebec, Canada
No Drawing. Application November 24, 1944, Serial No. 565,063. In Canada December 2, 1943
10 Claims. (Cl. 106—58)

1. In the production of refractory furnace linings and brick therefor the method which comprises mixing with a mass of magnesia-containing particles dilute sulphuric acid as gauging liquid and a substantially water-insoluble sulphate and moulding and pressing the mixture into form.

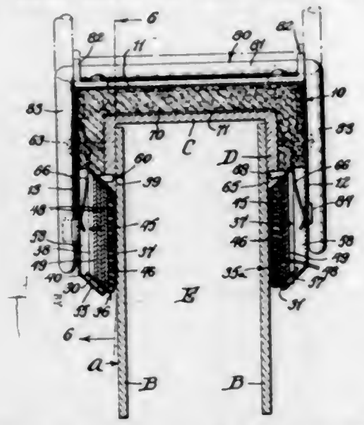


2,410,360
REFRIGERATING APPARATUS
Lawrence A. Philipp, Detroit, Mich., assignor to Nash-Kelvinator Corporation, Detroit, Mich., a corporation of Maryland
Application January 25, 1945, Serial No. 574,479
8 Claims. (Cl. 62—126)

1. A refrigerant evaporating unit comprising a C-shaped section having a single refrigerant flow passage and a second C-shaped section having a plurality of parallel passages and a single refrigerant flow passage communicating at one end with

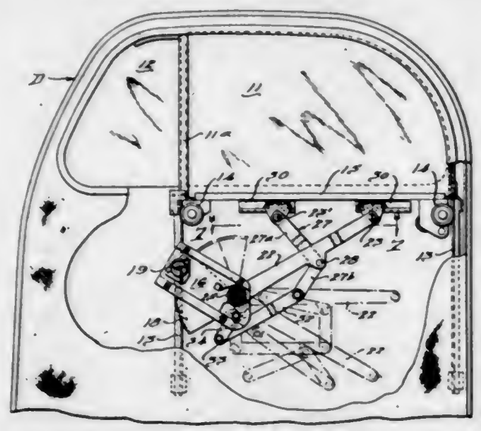
said parallel passages and at the other end with said first mentioned single refrigerant flow passage.

2,410,361
METHOD FOR MAKING PLASTIC ARTICLES
Alvin W. Prance, Royal Oak, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a corporation of Michigan
Application December 6, 1943, Serial No. 513,080
12 Claims. (Cl. 18—47.5)



1. In the method of making plastic articles the steps of applying an inked design or pattern to the surface of a cellulosic sheet, drying the ink of said pattern, treating said sheet with a thermo-setting resin in an intermediate stage of polymerization to leave a film of said resin as a coating over said pattern, drying the sheet, preforming said sheet in a press to approximately the shape of the final article, removing the sheet from the press, heating the sheet, and finally forming the sheet in a second press by the simultaneous action of heat and pressure.

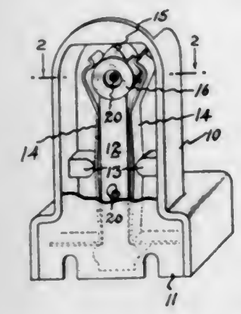
2,410,362
ELECTRICAL CONTACT HEATER
Alfred A. Reiser, Buffalo, N. Y., assignor, by mesne assignments, to H. & A. Manufacturing Co., Binghamton, N. Y., a partnership composed of Maurice Harowitch, Clarence H. Ackley, and Harold Horowitz
Application September 26, 1942, Serial No. 459,793
14 Claims. (Cl. 219—19)



11. A heating apparatus comprising in combination a plurality of heating pads arranged in thermal contact with two sides of the part to be heated, a flexible channel-shaped casing embracing said two sides of the part to be heated and said heating pads in spaced relation thereto and bodily movable with respect thereto, spring means interposed between each of said heating pads and the adjacent part of said casing, and a rigid U-shaped holder embracing said casing and engaging the exterior thereof in compressive relation thereto and in position to transfer

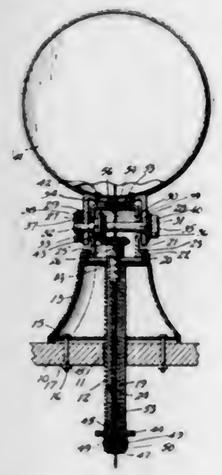
the resultant of the forces of said spring means on one of said sides of said part to be heated

to said spring means on the other of said sides of said part to be heated.



2,410,363
WINDOW REGULATOR
John H. Roethel, Detroit, Mich., assignor to Roethel Engineering Corporation, Detroit, Mich., a corporation of Michigan
Application January 29, 1943, Serial No. 473,915
17 Claims. (Cl. 268—126)

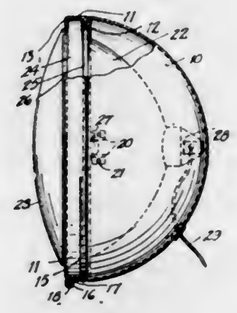
1. A window regulator for raising and lowering a window panel, comprising a swinging driving arm, a balance arm pivoted intermediate its ends to the driving arm at a point intermediate the ends of the latter, said arms when raised extending in diverging relation and swingable in opposite directions past each other during operation and having means for connection at corresponding ends to the lower edge of the window panel, means for swinging the driving arm, said balance arm having an angular extension, a shiftable link connected to said angular extension at a point spaced from the driving arm, and means operatively connecting said link and second named means and cooperating with said extension to maintain said link and driving arm in vertically spaced substantially parallel relation in all operative positions of the regulator.



2,410,364
ELECTRICAL JUMPER FOR SHORT-CIRCUITING THE CONTACTS OF FLUORESCENT LAMP SOCKETS
Harry Rosenthal, Belle Harbor, N. Y.
Application April 19, 1944, Serial No. 531,731
1 Claim. (Cl. 173—328)

A fluorescent lamp socket comprising an insulating housing having lamp prong openings in the front wall thereof, an integral rib within said housing having an enlarged end extending between said openings, a pair of spring contact fingers lying along the sides of said rib and shaped to receive lamp contact pins between them and

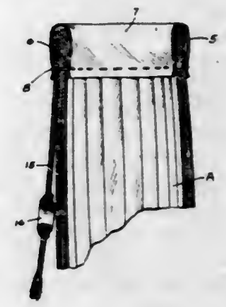
said enlarged end, and a cup shaped contact mounted on said enlarged end and having notches in which said rib lies, said contact serving to short circuit the lamp prongs when engaged by said spring contact fingers.



2,410,365
DIRIGIBLE SEARCHLIGHT
Henry J. Sauer, Fairfield, Conn., assignor to The Kilborn-Sauer Company, Fairfield, Conn., a corporation of Connecticut
Application February 21, 1944, Serial No. 523,201
2 Claims. (Cl. 240—61.13)

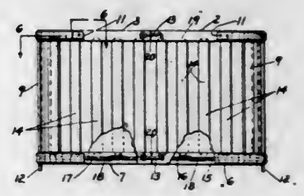
1. In a dirigible search-light, a mounting element adapted to be fixed to a supporting structure, a rotatable vertical sleeve member having bearing in said mounting element, a gear housing member secured to the upper end of said sleeve member and rotatable therewith, and having a conductor wire slot in its upper side in vertical line with the vertical axis of rotation of said sleeve and housing and extending forwardly and rearwardly of said axis, a rotatable vertical tubular shaft engaged in said rotatable sleeve member, a bevel gear secured to the upper end of said shaft within said housing member, a horizontal shaft journaled in said housing member, a bevel gear secured to said horizontal shaft and meshing with said first mentioned bevel gear, a lamp supporting yoke member having side legs disposed at each side of said housing member and rigidly connected to the ends of said horizontal shaft, and having a conductor wire opening in the upper side in the same vertical plane with said slot in register therewith and adapted through swinging movement of said yoke member

to traverse said slot, a lamp connected to said yoke member, a conductor wire extending from said lamp through said conductor wire opening and slot to said housing and from said housing through said vertical tubular shaft, and actuating means for said vertical sleeve and vertical shaft connected to said shaft to rotate it independently and connectable to said sleeve to rotate said sleeve and shaft as a unit.



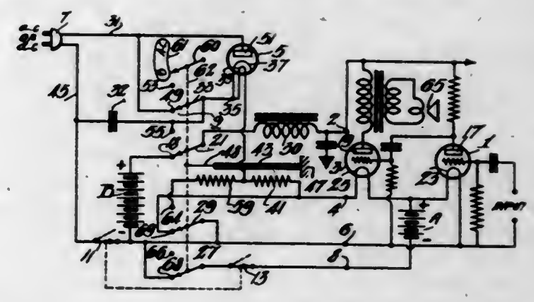
2,410,366
LAMP
Henry J. Sauer, Fairfield, Conn., assignor to The Kilborn-Sauer Company, Fairfield, Conn., a corporation of Connecticut
Application April 17, 1944, Serial No. 531,342
6 Claims. (Cl. 240—41.5)

1. In a lamp, a casing comprising a body part and a circumferential rim part permanently connected together, inwardly projecting abutment means permanently connected to said casing at a point within said casing between said body part and said rim part, a retaining flange at the forward edge of said rim part, said rim part including a flexibly movable portion extending partially about its circumference defined by a circumferential cut between said abutment means and said retaining flange, there being a transverse split extending forwardly from said circumferential cut through said retaining flange, and fastening means connected between the opposed edges of said transverse split adapted to contract said flexible rim portion with respect to its normal open relation relatively to said rim part and whereby a lens inserted within said rim portion in opposed relation to said abutment means is retained therein through contraction of said flexibly movable rim portion.



2,410,367
DOUCHE RECEPTACLE
Jacob Shapiro, Brooklyn, N. Y.
Application August 17, 1945, Serial No. 610,905
2 Claims. (Cl. 128—227)

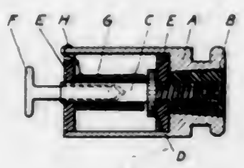
1. A receptacle for an irrigating douche, comprising a sheet of flexible water-proof material shaped to bag form by gathering together into pleats the marginal portion of the sheet and secured in pleated condition by stitching to constitute the mouth of the bag, a flap juxtaposed to the outer side of the pleated mouth forming portion of the bag having a portion with the edge flush with the edge of the pleated portion extending about the mouth for more than one-half the circumference thereof and attached thereto by the stitching securing the mouth forming pleats, said flap arranged with an eyelet and adapted to be moved laterally from the body of the bag and folded upon itself to project outwardly from the mouth of the bag and the eyelet engage a support to suspend the bag therefrom,



and a flexible tube connecting nipple secured in an opening in the bottom of the bag.

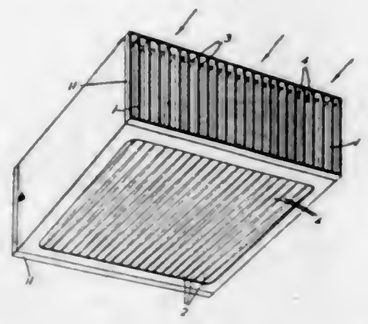
2,410,368
BABY PLAY PEN
Milroy G. Stackhouse, Homewood, Ala.
Application February 21, 1945, Serial No. 578,988
1 Claim. (Cl. 5—93)

A baby play pen comprising a top rail in a plurality of sections with posts and panel slots therein, a bottom rail in a plurality of sections with posts and panel slots therein, each corner portion of said sections being substantially shaped as a quarter circle and made up of segments held together by a piece of flexible material attached to their outer faces; posts with tongue ends adapted to fit into said rail slots, panels with tongue ends adapted to fit into slots in said rail-sections, said posts and panels serving as means to hold said top and bottom rail-sections in parallel position together; dowel joints and hooks adapted to hold the abutting ends of said rail-sections together; a floor having a plurality of boards hinged together, said floor supported by cross members positioned within the bottom assembled rail.



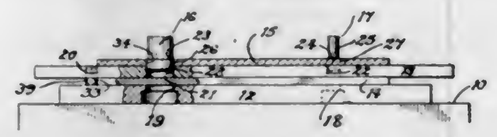
2,410,369
POWER SUPPLY CIRCUITS
George C. Sziklai, Bloomington, Ind., assignor to Radio Corporation of America, a corporation of Delaware
Application September 1, 1942, Serial No. 456,865
18 Claims. (Cl. 315—96)

12. In thermionic apparatus, an amplifier including an anode and a filamentary cathode, a



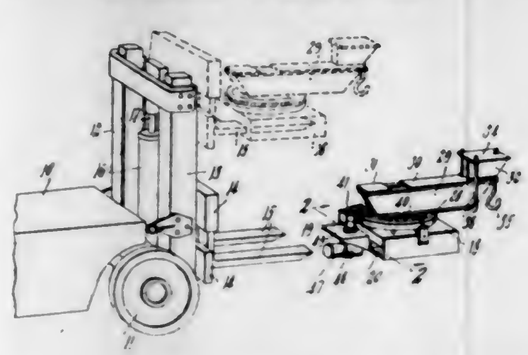
rectifier tube having an anode and a cathode with a heating element, a power supply circuit including said rectifier tube for energizing said amplifier from an alternating or direct current power mains, said rectifier anode being connected to one side of said mains and said rectifier cathode being connected in direct current relation with said amplifier anode for supplying high voltage operating potential thereto, said heating element having one terminal connected to said rectifier cathode and another terminal connected to one terminal of said amplifier cathode in series relation therewith for supplying low voltage rectified current thereto, the other terminal of said amplifier cathode being connected to the other side of said mains.

2,410,370
THERMAL CIRCUIT INTERRUPTER
Ernst Martin Thielers, Stockholm, and Walter Otto Wilhelm Broberg, Nynashamn, Sweden, assignors to Telefonaktiebolaget L. M. Ericsson, Stockholm, Sweden, a company of Sweden
Application September 20, 1943, Serial No. 503,118
In Sweden October 20, 1942
8 Claims. (Cl. 200—123)



1. In a device of the character described, an electrically conductive cover, an electrically conductive tube arranged within the cover, insulating means supporting said tube in said cover, a pin soldered in said tube, a heating coil wound on said tube for fusing the pin solder, the pin and cover being engageable with fastening springs and the heat capacity of the heating coil and parts heated by said coil and heat losses of said insulating means and fastening springs being so reduced that the interruption point for all excess currents over the limiting current attains its fusing temperature at least as early as the leading coil attains a temperature injurious thereto.

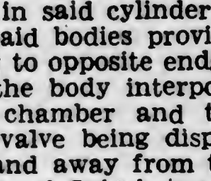
2,410,371
FILTER
Cecil Gordon Vokes, London, England
Application March 15, 1944, Serial No. 526,574
In Great Britain February 8, 1943
6 Claims. (Cl. 183—71)



1. A filter element formed of filtering material folded to include alternating top and bottom sections of shape roughly triangular or wedge shaped, the top sections tapering in one direction and the bottom sections tapering in the opposite direction, and side wall sections lying between the top and bottom sections and having their edges joined in the front and back at the apexes of the triangular top and bottom sections.

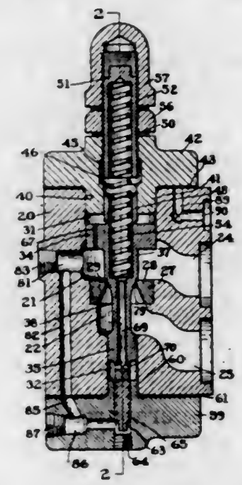
2,410,372
METHOD OF AND APPARATUS FOR PUNCHING BY TRANSFER MEANS
George F. Wales, Kenmore, N. Y.
Application December 18, 1944, Serial No. 568,637
34 Claims. (Cl. 164—94)

1. A method of manufacture consisting in transferring a plurality of punch mediums by pressure from their lodging places in one of two work-pieces, to guide means located between said work-pieces, thence into lodging places which they form in the other of the work-pieces.



2,410,373
REVOLVING CRANE ACCESSORY FOR FORK TRUCKS
John R. Westervelt, Jr., Duxbury, Mass., assignor to National Fireworks, Inc., West Hanover, Mass., a corporation of Massachusetts
Application April 7, 1944, Serial No. 529,924
14 Claims. (Cl. 214—112)

1. The combination with a truck having an elevator and a fork carried by the elevator, of a crane comprising a base separably engaged with and supported by said fork, a disk-form turntable mounted rotatably on top of said base and supported by the upper surface thereof and a carrier arm or boom secured rigidly to the turntable and projecting beyond the periphery thereof.



2,410,374
INFANT'S GARMENT
Caroline Wiese and Harold E. Wiese, Cleveland, Ohio
Application November 8, 1943, Serial No. 509,364
1 Claim. (Cl. 128—284)

A diaper embodying two outer layers of fabric and two inner layers of gauze disposed in superimposed relationship, the fabric and gauze being substantially the same length, but the gauze being narrower than the fabric and being spaced centrally thereof, whereby the fabric has substantially equal longitudinally extending marginal portions projecting beyond the gauze on each side thereof, a line of stitching extending across the gauze and fabric at one end thereof and connecting all together, other lines of stitching connecting together the longitudinal edges of the fabric beyond the longitudinal edges of the

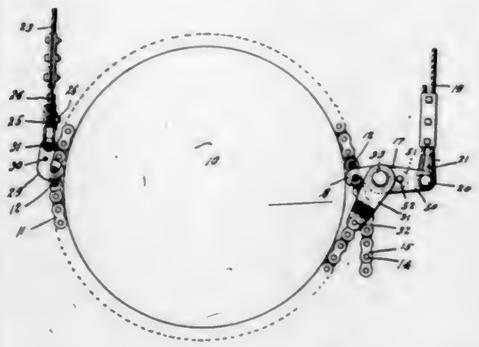
gauze, said diaper having buttonholes extending along opposite ends thereof, some of said buttonholes extending through the gauze and fabric, and some of said buttonholes extending only through the layers of fabric.

2,410,375
HYDRAULIC APPARATUS
Fred J. Wright, Columbus, Ohio, assignor to The Denison Engineering Company, Columbus, Ohio, a corporation of Ohio
Application June 19, 1943, Serial No. 491,499
12 Claims. (Cl. 137—153)

1. A fluid pressure operated valve comprising, in combination, a valve body having a passage therethrough including high and low pressure chambers, one of said chambers forming a cylinder; a movable body in said passage including a piston slidable in said cylinder and including a valve, one of said bodies providing a restricted passage leading to opposite ends of the piston; a valve seat in the body interposed between the high pressure chamber and the low pressure chamber, said valve being disposed so as to be movable onto and away from the seat for controlling the flow of fluid between the chambers, said valve body forming a second cylinder communicating with one of said chambers, said movable body including a piston slidable in the second mentioned cylinder, said valve body forming a third cylinder extending outwardly from the first mentioned cylinder, said movable body including a piston extending outwardly from the first mentioned piston and slidable in the third mentioned cylinder, said movable body including a stem connecting the first and second mentioned pistons and extending through the valve seat and through one of said chambers, said valve body forming a fourth cylinder, a fourth piston operatively associated with the movable body, said fourth cylinder being connected with one of said chambers, one of said bodies forming a passage connecting the second and third mentioned cylinders.

2,410,376
BENEFICIATION OF IRON ORES
Robert Ben Booth, Springdale, and Earl Conrad Herkenhoff, Stamford, Conn., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application April 5, 1943, Serial No. 481,906
8 Claims. (Cl. 209—166)

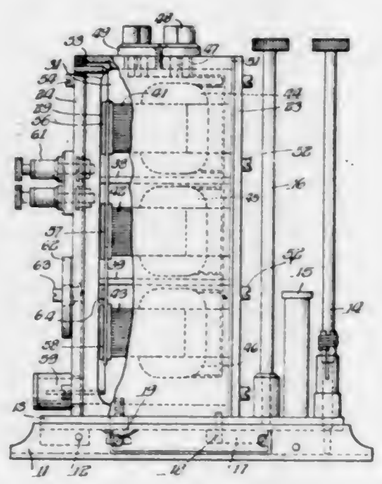
1. A method of beneficiating oxidized iron ores by froth flotation of the ore in the form of an aqueous pulp, which comprises conditioning the ore with an inorganic acid substance, the anion of which is a constituent of an inorganic acid having a dissociation constant of at least 10^{-7}, the amount of said acid substance being such that on dilution to froth flotation density and floating, the rougher tailing in the absence of added alkali shows a pH in the range of 2 to 6, and subjecting the aqueous pulp of said treated ore to froth flotation in the presence of a collector for oxidized iron minerals, the major constituent of which is an oil soluble petroleum sulfonate obtained in the refining of petroleum lubricating oils and removing a concentrate relatively rich in iron and a tailing relatively poor in iron.



2,410,377
BENEFICIATION OF IRON ORES
Robert B. Booth, Springdale, and Earl C. Herkenhoff, Stamford, Conn., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application June 18, 1943, Serial No. 491,384
6 Claims. (Cl. 209—166)

1. A method of beneficiating oxidized iron ores by froth flotation which comprises conditioning the ore at high solids with an acid substance, the anion of which is a constituent of an acid having a dissociation constant not less than 10^{-7}, and which does not adversely affect flotation, an unsulfonated oil, and a collector for oxidized iron minerals containing as its major active constituent water soluble petroleum sulfonates of the green acid type obtained in the refining of petroleum lubricating oils, diluting the thus conditioned pulp to froth flotation density, subjecting it to froth flotation to produce a concentrate relatively rich in iron and a tailing relatively poor in iron, the amount of the acid substance being sufficient so that, in the absence of added alkali, the pH of the rougher tailing is in the range of 2 to 6.

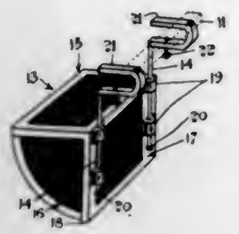
2,410,378
GRIP FOR HOISTS
Oliver H. Gallamore, Indianapolis, Ind., assignor to Diamond Chain and Manufacturing Company, Indianapolis, Ind., a corporation of Indiana
Application January 1, 1944, Serial No. 516,625
3 Claims. (Cl. 294—74)



1. A hoisting device, comprising a flexible chain having a series of longitudinally spaced transverse elements, a lever, one end of said chain being connected to said lever, said lever being provided with a hook engageable with any of said transverse elements to retain the chain in position embracing an object to be hoisted with the lever projecting generally radially from such object, a hoisting member connected to said lever near the outer end thereof, said hook and the points of connection of said lever to said chain-end and hoisting member being so arranged that lifting effort applied to the hoisting member will

tend to rotate the lever and tighten the chain on the object it embraces, a second hoisting mem-

ber and a hook on said second member, said last named hook engaging said chain at a point approximately opposite said lever.



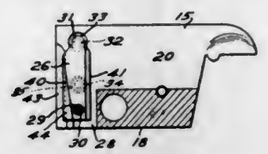
2,410,379
GALVANOMETER
Claude M. Hathaway, Denver, Colo., assignor to Hathaway Instrument Company, a corporation of Colorado
Application September 25, 1944, Serial No. 555,686
6 Claims. (Cl. 171—95)

1. A cell for a galvanometer comprising a block of metal formed of two similar pieces so that when assembled said block has a recess extending from the back of said block to a plane adjacent the front of said block, said recess having stepped sides to form a plurality of shelves for supporting core members, a rear panel for said block for closing one end of said recess, a front panel for closing the other end of said recess, and means mounted on said front panel for supporting moving coil members.

2,410,380
LABEL SCRAPING ATTACHMENT FOR BOTTLE WASHING MACHINES
Marcel Jamieson and Laurent Tremblay, Chicoutimi, Quebec, Canada, assignors to Liquid Carbonic Canadian Corporation Limited, Montreal, Quebec, Canada
Application December 21, 1944, Serial No. 569,186
3 Claims. (Cl. 134—104)

1. A label scraping attachment of the character described comprising a scraper provided with vertically disposed guide brackets, vertically disposed guide rods extending slidably through said brackets and equipped, at their low-

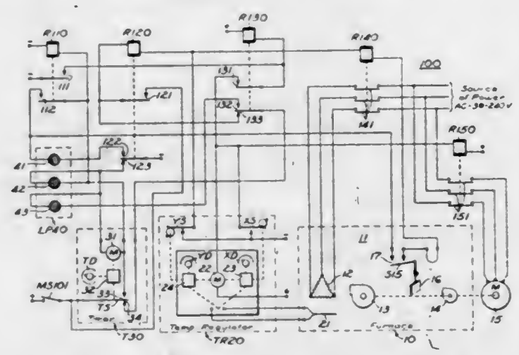
er ends, with stops engageable with certain of said brackets, and means at the upper ends of said rods for attaching them to a part of the bottle carrier of a bottle washing machine.



2,410,381
LUBRICATING OIL COMPOSITION
Vance N. Jenkins, Palos Verdes Estates, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a corporation of California
No Drawing. Application September 22, 1943, Serial No. 503,449
2 Claims. (Cl. 252—59)

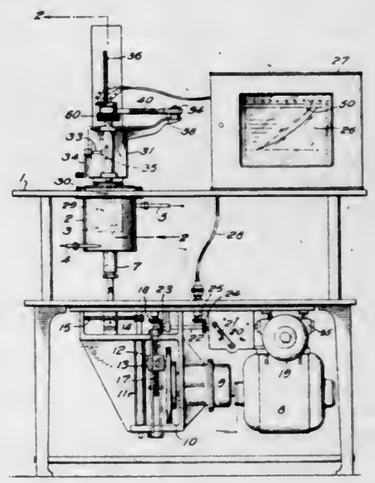
2. A lubricating oil composition comprising about 25% to about 99% by weight of a mineral lubricating oil and about 1% to about 75% by weight of a synthetic lubricating oil blending agent having a viscosity above about 10,000 seconds Saybolt Universal at 210° F., said lubricating oil blending agent being produced by chlorinating paraffin wax, dechlorinating said chlorinated paraffin wax at temperatures between about 400° F. and 600° F. to cause dechlorination without effecting substantial polymerization thereby producing wax olefins, distilling the wax olefins to remove therefrom polymerized material formed during the dechlorination step, catalytically polymerizing the polymer-free wax olefins and subsequently extracting said polymerization product with a normally gaseous hydrocarbon solvent having more than two and less than five carbon atoms per molecule and having a high solvent power for paraffin wax and wax olefins and a low solvent power for said lubricating oil blending agent at the temperature of extraction to separate a solution of paraffin wax and wax olefins in said solvent from said lubricating oil blending agent.

2,410,382
MANUFACTURE
Saul Kaplan, Rutherford, N. J., assignor to Onyx Oil & Chemical Company, a corporation of Delaware
No Drawing. Application September 12, 1942, Serial No. 458,172
5 Claims. (Cl. 106—135)



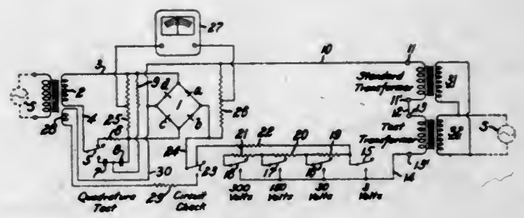
1. An oil-in-water emulsion having, as the disperse phase, a mono-ester of a glycol having from 2 to 3 carbon atoms with a higher fatty acid having 10 to 14 carbon atoms, and a continuous phase comprising an aqueous solution of a film-forming protective colloid, and a water-soluble organic carboxylic compound selected from the group consisting of carboxylic acids and their acidic reacting salts.

2,410,383
LOOM SHUTTLE
John J. Kaufmann, Jr., Greenville, S. C., assignor to Steel Heddle Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania
Application January 11, 1945, Serial No. 572,358
7 Claims. (Cl. 139—217)



1. In a loom shuttle of the automatic threading type a tension device comprising a pair of spring pressed tension members between which the filling yarn passes, said tension members having flat coacting faces tapered from the top toward the bottom.

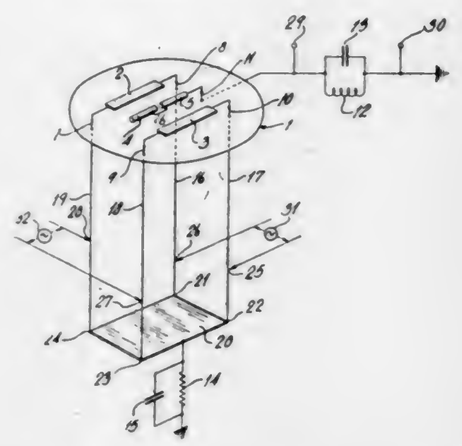
2,410,384
FURNACE CONTROL SYSTEM
Harold W. Lindsay, Oakland, Calif., assignor to the Government of the United States as represented by the Director of the Office of Scientific Research and Development, Office for Emergency Management
Application February 3, 1945, Serial No. 576,125
4 Claims. (Cl. 219—20)



1. A heating system comprising a furnace, a heating element associated with said furnace and operative to supply heat thereto, first and second signals associated with said furnace, a temperature regulator adapted to be set selectively within a given range to a desired furnace temperature, a timer adapted to be set selectively within a given range to a desired timing operation, start means for initiating operation of said heating element and for initiating operation of said first signal, whereby the temperature of said furnace is increased from an ambient temperature toward said desired furnace temperature, means controlled by said temperature regulator in response to the temperature of said furnace reaching said desired furnace temperature for arresting operation of said first signal and for initiating operation of said second signal and for initiating said desired timing operation of said timer, means governed by said temperature regulator after the temperature of said furnace reaches said desired furnace temperature for selectively controlling the operation of said heating element, thereby to maintain the temperature of said furnace substantially at said desired furnace temperature, and stop means controlled by said timer in response to the completion of said desired timing operation thereof for arresting operation of said second signal and for arresting operation of said heating element.

2,410,385
PLASTOMETER
Serge A. Loukomsky, Bound Brook, N. J., and Charles R. Stock, Greenwich, Conn., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
Application April 5, 1945, Serial No. 586,782
6 Claims. (Cl. 73—59)

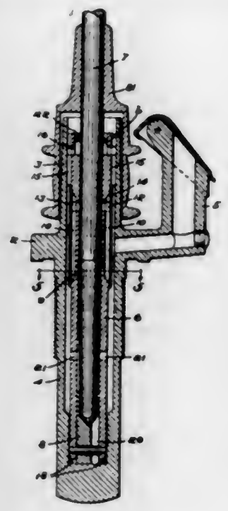
1. An improved viscosimeter of the spinning cup type comprising in combination a vertical shaft, a cup mounted thereon, a second vertical shaft extending into the center of the cup, a cylindrical element mounted vertically on said second vertical shaft at the end extending into the cup, said latter shaft being rotatably mounted and being provided with a torque measuring device, driving means, a continuously variable drive interconnecting said driving means to the cup shaft, means for varying the ratio of the drive from a predetermined minimum cup speed to a predetermined maximum through a predetermined time interval, automatic reversing means actuated when the speed of the cup reaches the predetermined maximum, said automatic means actuating means which vary the drive ratio so that the cup speed decreases from the maximum to the minimum through a predetermined time interval.



2,410,386
ELECTRICAL TESTING APPARATUS
John H. Miller, Short Hills, N. J., assignor to Weston Electrical Instrument Corporation, Newark, N. J., a corporation of New Jersey
Application March 13, 1942, Serial No. 434,577
5 Claims. (Cl. 175—183)

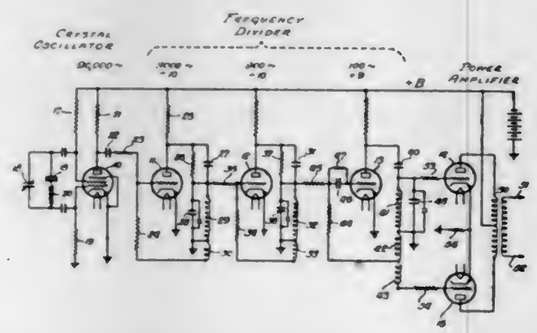
1. In a portable apparatus for measuring the in-phase and quadrature voltage components of a test source of alternating current with respect to a reference voltage, a modulator bridge having rectifier elements arranged in the same sense in the respective side arms thereof, a transformer having a primary winding for connection to the

source of reference voltage and a secondary winding for developing a voltage sufficient to saturate the modulator bridge, an energizing circuit connected across one set of opposed junctions of said bridge and comprising said secondary winding in series with a phase-shifting network, said phase-shifting network including a resistive and a capacitive impedance with a switch for completing said energizing circuit through the resistive or alternatively the capacitive impedance, an actuating circuit connected to the other set of opposed junctions of said bridge and including terminals for receiving connections from the test source of alternating current, a center-tapped resistor connected across each set of opposed bridge junctions, and a direct current measuring instrument connected between the center taps of said resistors.



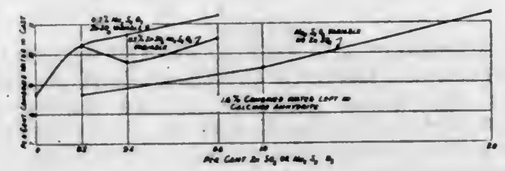
2,410,387
HIGH-FREQUENCY WAVE SIGNALING SYSTEM
William P. Mueller, Emporium, Pa., assignor to Sylvania Electric Products Inc., a corporation of Massachusetts
Application February 14, 1942, Serial No. 430,863
17 Claims. (Cl. 250—20)

1. A high frequency wave converting system, comprising a double diode tube having the cathodes connected together with a common single lead-in, a tuned tank circuit connected between said lead-in and ground, a pair of tuned double transmission lines, one line being connected in push-pull relation to corresponding points of respective diode plates, the other line being connected in push-pull relation to other corresponding points of said plates, means to connect high frequency signals across the first line, means to connect a source of local oscillations across said other line, and means to lead off a resultant intermediate frequency from across said tank circuit.



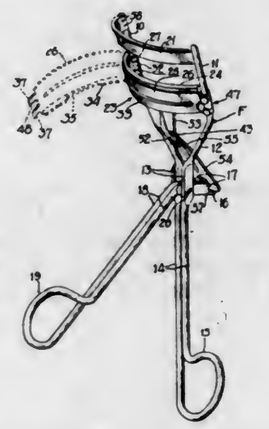
2,410,388
OIL CIRCULATING SPINDLE
Charles M. Neal, Biddeford, Maine, assignor to Saco-Lowell Shops, Boston, Mass., a corporation of Maine
Application September 28, 1943, Serial No. 504,087
6 Claims. (Cl. 308—169)

1. In a spindle structure for spinning and twister frames, the combination of a spindle base having an oil well therein, an upright spindle blade mounted in said well, a bolster in said base supporting said blade in its operative position, said bolster having an outlet for the oil at a point at which a relatively high pressure is created in the oil between the blade and the bolster bearing surface due to the rotation of the blade, said bolster being provided with an internal channel



for conducting the oil from said outlet along a path outside the internal bearing surface of the bolster to a point above the gravity level of the oil in said well but spaced widely from the top of the bolster and there delivering it to said surface.

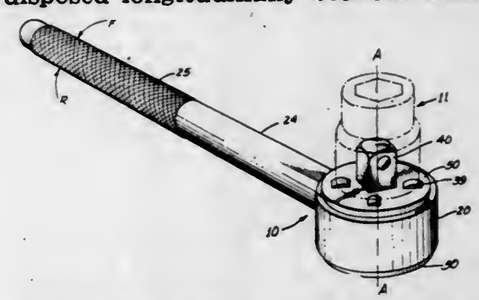
2,410,389
FREQUENCY DIVIDER
Ernst Norrman, Delavan, Wis., assignor to George W. Borg Corporation, Chicago, Ill., a corporation of Delaware
Application February 26, 1943, Serial No. 477,237
10 Claims. (Cl. 250—36)



7. In a frequency divider, an oscillator comprising a space discharge device, a tuned circuit coupled to the plate of said device, a grid circuit for said device coupled to said tuned circuit, whereby current changes in said tuned circuit produce grid voltages in said grid circuit, a high resistance in said grid circuit, a control circuit extending to the grid of said device, a high resistance in said control circuit, said resistances being connected together at said grid and means for transmitting control voltages over said control circuit to control said oscillator at a frequency which is a sub-multiple of the frequency of said control voltages, the values of said resistances being so proportioned that the control voltage impressed on said grid by said control circuit is not more than 30% of the voltage impressed on said grid by said grid circuit.

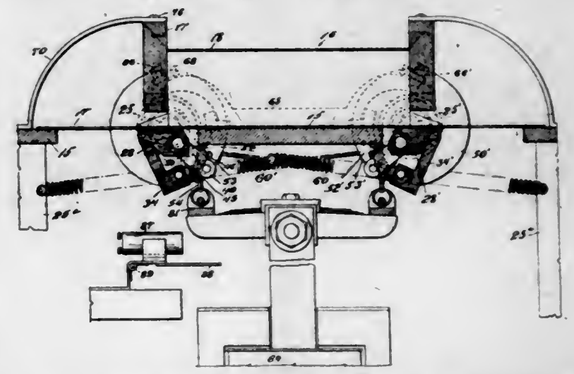
2,410,390
QUICK-SETTING ANHYDRITE AND ITS MANUFACTURE
Lewis A. Paley, Glen Ellyn, Ill., assignor to United States Gypsum Company, Chicago, Ill., a corporation of Illinois
Application July 5, 1941, Serial No. 401,212
1 Claim. (Cl. 106—109)

A plastic mixture suitable for molding purposes, comprising calcined anhydrite, zinc sulfate, sodium thiosulfate, glue and water.



2,410,391
EYELASH CURLER
Charles M. Palmer, Washington, D. C.
Application May 10, 1944, Serial No. 534,845
28 Claims. (Cl. 132—32)

14. In an eyelash curler, a casing having a rear wall having a forwardly extending flange, a resilient pad removably seated on said flange and disposed against said wall, spaced and alined sockets extending from said wall, said casing having a swingable door having a bearing interposed between said sockets, spaced and alined ears extending from said wall, a pair of spaced posts for slidably guiding said sockets and ears, said bearing being mounted on one of said posts and rotatable and slidable thereon; a latch rotatably mounted on the other post of said pair and guided between said ears, keeper means extending from said door for removably interlocking with said latch to hold said door closed to sustain said pad against said wall, a bar secured to said posts, a link connected to said flange, and pivoted means for driving said link to displace said casing towards or away from said bar.

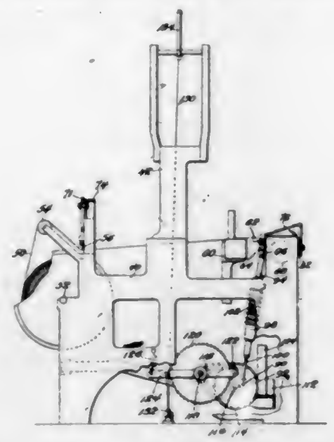


2,410,392
WRENCH
Clayton L. Rich, Los Angeles, Calif.
Application February 26, 1945, Serial No. 579,698
4 Claims. (Cl. 192—44)

1. A wrench comprising: a housing element provided with a longitudinally-directed, circular bore therethrough defining a peripheral wall; an end plate adjacent each end of said housing element adapted to enclose said bore, each of said end plates having a centrally-located, polygonal hole therethrough; a restraining member adjacent each side of said polygonal hole disposed longitudinally within said bore, each end of each restraining member being attached to one of said end plates; a drive member of a polygonal cross section complementary to said polygonal holes, said drive member being longitudinally slidable through said polygonal holes and said bore and extending longitudinally from said bore; and a roller disposed longitudinally between each face

of said polygonal drive member and said peripheral wall adjacent one of said restraining members, said rollers being adapted to engage said faces and said peripheral wall to prevent relative motion thereof during forward rotation of said housing element, and being adapted to engage said restraining members during rearward rotation of said housing element to prevent engagement of said rollers with said faces and said peripheral wall simultaneously whereby relative motion thereof is permitted.

2,410,393
BOX END FOLDING MACHINE
Albert H. Rines, Amesbury, and John Hardy and Daniel J. O'Keefe, Newburyport, Mass., assignors to Hytron Corporation, a corporation of Massachusetts
Application March 16, 1944, Serial No. 526,742
10 Claims. (Cl. 93—49)



1. In a box end folding machine, a support for the box, box end engaging means comprising a pair of movable members, means for initially moving said members together for movement of the box end and subsequently stopping one of said members while the other member continues to move the box end into final position.

2,410,394
MANUFACTURE OF TEXTILES
Lawrence Alexander Savage, Pelzer, S. C., assignor to The Kendall Company, Boston, Mass., a corporation of Massachusetts
Application April 28, 1944, Serial No. 533,156
16 Claims. (Cl. 139—35)

1. The method of weaving which comprises inserting filling picks in a warp, and while weav-

ing is taking place moving the yarns of the warp in relation to the path of insertion of the filling picks while maintaining the same tension on the warp yarns across the warp in accordance with

a predetermined pattern of change to produce a fabric in which the angular relation of following filling picks to the perpendicular to a line extending in the direction of the warp changes in accordance with the dictation of said pattern.

2,410,395

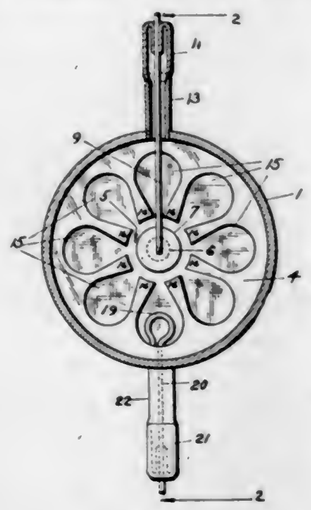
ACID-CURING SYNTHETIC RESIN COMBINED WITH OLEFINE-SULFUR DIOXIDE POLYMER

Leonard Smidth, New York, N. Y., assignor to Sylvania Industrial Corporation, Fredericksburg, Va., a corporation of Virginia

No Drawing. Application August 4, 1942, Serial No. 453,552

7 Claims. (Cl. 260—42)

1. A composition comprising an incompletely-reacted acid-curing synthetic resin combined with a latent curing catalyst comprising an olefin-sulfur dioxide polymer.



2,410,396

HIGH EFFICIENCY MAGNETRON

Percy L. Spencer, West Newton, Mass., assignor to Raytheon Manufacturing Company, West Newton, Mass., a corporation of Delaware

Application January 25, 1943, Serial No. 473,557

2 Claims. (Cl. 250—27.5)

2. An electron-discharge device comprising: a cathode; and an anode structure, spaced from said cathode, and including a plurality of anode members; each pair of adjacent anode members, together with that portion of said anode structure lying therebetween, defining a cavity resonator; each anode member having substantially straight side walls which converge for an appreciable distance between the inner and outer ends thereof.

2,410,397

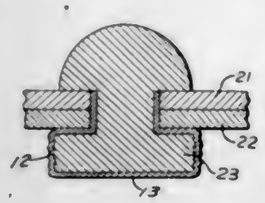
PREPARATION OF ARYLIDES OF AROMATIC ORTHO-HYDROXY CARBOXYLIC ACIDS

Robert H. Weiss, Plainfield, and Andrews C. Wintringham, Glen Ridge, N. J., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine

No Drawing. Application May 26, 1943, Serial No. 488,591

20 Claims. (Cl. 260—559)

1. In a method of isolating an arylide of an aromatic orthohydroxy carboxylic acid from a reaction mixture resulting from the reaction of the hydroxy acid with an aromatic amine in the presence of a condensing agent, the improvement which comprises neutralizing any acid present and effecting filtration in the presence of an inert organic solvent for tarry impurities selected from the group consisting of liquid hydrocarbons of the benzene series and liquid chlorinated hydrocarbons, the amount of the solvent being from 25 to 200% by weight of the arylide.



2,410,398

RIVET

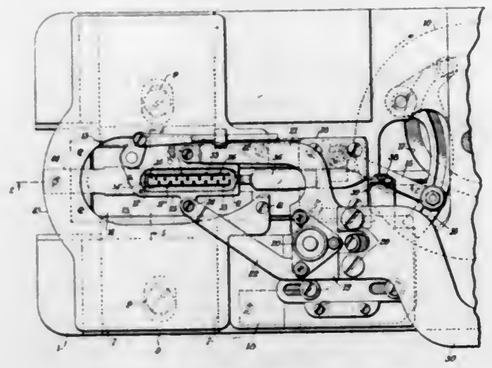
Lewis E. Williams, Jr., and Paul L. Smith, Los Angeles, Calif., assignors to Douglas Aircraft Company, Inc., Santa Monica, Calif.

Application August 24, 1945, Serial No. 612,424

8 Claims. (Cl. 85—37)

1. A rivet comprising: a shank; a head formed at one end of said shank; and means surrounding and snugly engaging the shank and at least a portion of the end face thereof, said means being formed of a relatively soft material easily deformed during the rivet-upsetting operation, whereby the material thereof flows into and seals the joint held by the rivet when the latter is upset.

2,410,399



WORK CLAMP FOR SEWING MACHINES

Alfred R. Wood, Bridgeport, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey

Application May 23, 1945, Serial No. 595,269

17 Claims. (Cl. 112—114)

1. In a sewing machine, in combination, stitch-forming mechanism including a reciprocatory needle, a work-clamp provided with a needle-clearance opening, means for relatively moving said needle and work-clamp lengthwise of the work-clamp opening, a work-presser disposed within said opening of the work-clamp and provided with a needle-clearance slot, and supporting means providing for relative movement of said

work-clamp and work-presser lengthwise of said needle-clearance opening of the work-clamp.

PREPARATION OF A THIOPHENE

Donald Drake Coffman, Lindamere, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application October 22, 1942, Serial No. 462,992

12 Claims. (Cl. 260—329)

2. A process for the preparation of a thiophene which comprises reacting a conjugated diene hydrocarbon in the gaseous state with sulfur vapor by contacting the hydrocarbon with the sulfur vapor at a temperature between 445° C. and the thermal decomposition temperature of the conjugated diene.

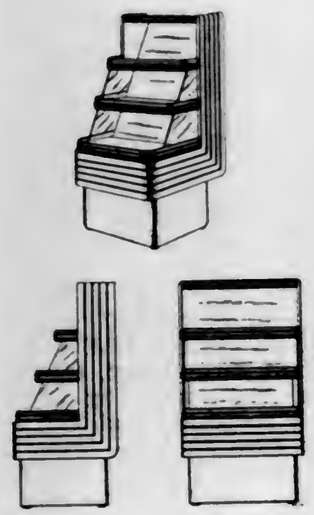
DESIGNS

OCTOBER 29, 1946

145,830
DESIGN FOR A LADLE
Roberta H. Abel, Jeffersontown, Ky.
Application December 22, 1945, Serial No. 124,958
Term of patent 7 years
(Cl. D44—29)

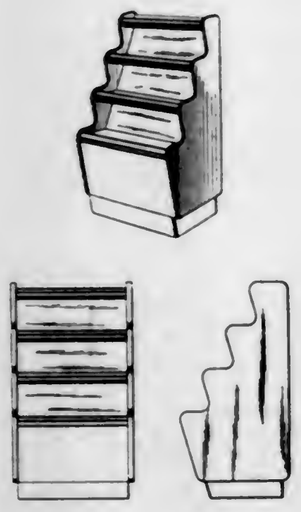
The ornamental design for a ladle, as shown.

145,831
DESIGN FOR A COMBINED WRIST WATCH AND HOLDER STRAP THEREFOR
Claude Arpels, New York, N. Y.
Application August 2, 1946, Serial No. 132,227
Term of patent 3½ years
(Cl. D42—8)



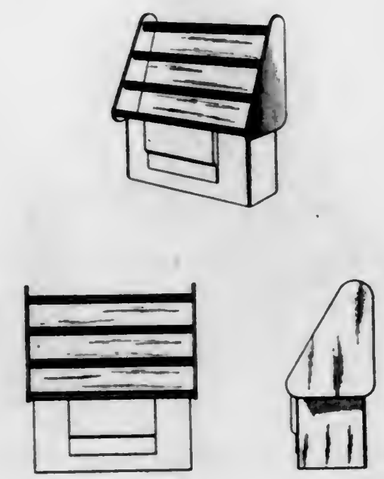
The ornamental design for a combined wrist watch and holder strap therefor, substantially as shown.

145,832
DESIGN FOR A MAIL BOX OR SIMILAR ARTICLE
Ralph E. Burt, Longmeadow, Mass.
Application June 20, 1946, Serial No. 130,890
Term of patent 7 years
(Cl. D74—9)



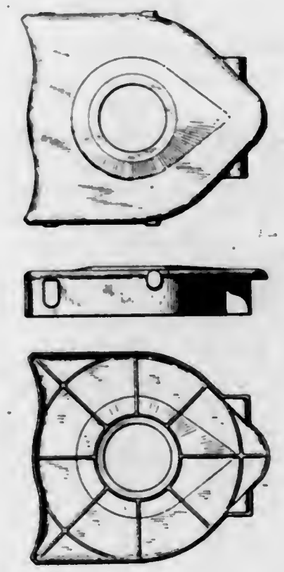
The ornamental design for a mail box or similar article, as shown.

145,833
DESIGN FOR A SHOWCASE
Henry C. Chase, Chicago, Ill.
Application December 15, 1945, Serial No. 124,758
Term of patent 14 years
(Cl. D80—11)



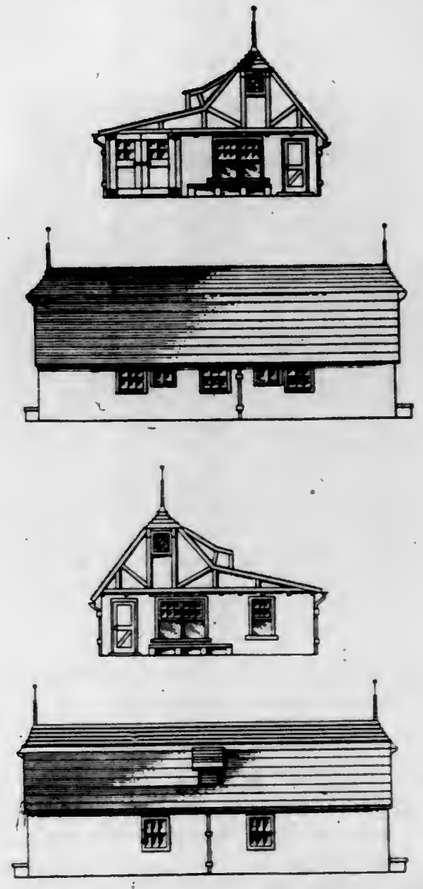
The ornamental design for a showcase, substantially as shown.

145,834
DESIGN FOR A SHOWCASE
Henry C. Chase, Chicago, Ill.
Application December 15, 1945, Serial No. 124,759
Term of patent 14 years
(Cl. D80—11)



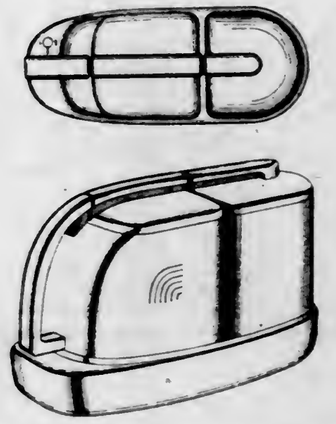
The ornamental design for a showcase, substantially as shown.

145,835
DESIGN FOR A SHOWCASE
Henry C. Chase, Chicago, Ill.
Application December 15, 1945, Serial No. 124,760
Term of patent 14 years
(Cl. D80—11)



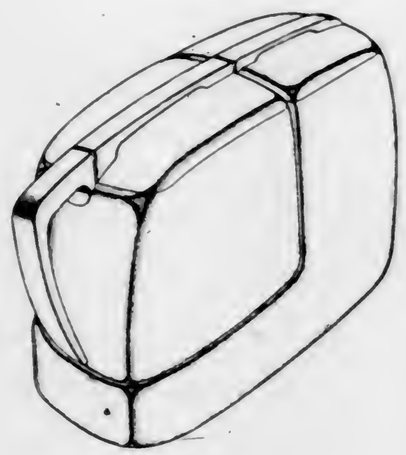
The ornamental design for a showcase, substantially as shown.

145,836
DESIGN FOR A ROTARY MOWER HOUSING
Joel G. Doyle, Kansas City, Mo.
Application December 22, 1945, Serial No. 124,967
Term of patent 14 years
(Cl. D40—1)



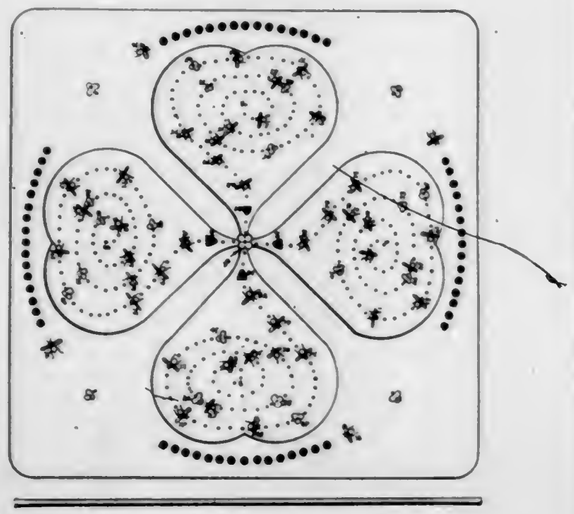
The ornamental design for a rotary mower housing, substantially as shown.

145,837
DESIGN FOR A BUILDING
William A. Fennell, Huntington Park, Calif., assignor to Little Castles, Incorporated, a corporation of Delaware
Application October 8, 1945, Serial No. 122,666
Term of patent 14 years
(Cl. D13—1)



The ornamental design for a building, as shown.

145,838
DESIGN FOR AN ELECTRIC COFFEE MAKER
Gordon W. Florian, Bridgeport, Conn., assignor to Reeves-Ely Laboratories, Inc., New York, N. Y.
Application June 27, 1945, Serial No. 120,361
Term of patent 14 years
(Cl. D44—26)



The ornamental design for an electric coffee maker, substantially as shown and described.

145,839
DESIGN FOR A COFFEE MAKER
Gordon W. Florian, Trumbull, Conn., assignor to General Electric Company, a corporation of New York
Application October 15, 1945, Serial No. 122,830
Term of patent 14 years
(Cl. D44—26)

The ornamental design for a coffee maker, substantially as shown and described.

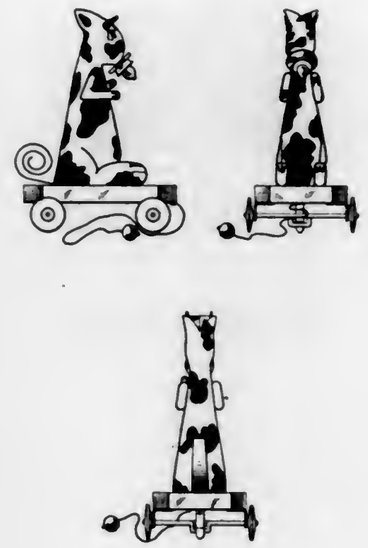
145,840
DESIGN FOR A GAME BOARD
Dan Fillson and David Bud Crollard, Fairbanks, Territory of Alaska
Application December 22, 1945, Serial No. 124,954
Term of patent 14 years
(Cl. D34—5)

The ornamental design for a game board, as shown.

145,841
DESIGN FOR A STATUETTE
Frederic J. Frechette, Sr., and Frederic J. Frechette, Jr., Charleston, S. C.
Application January 12, 1946, Serial No. 125,495
Term of patent 14 years
(Cl. D29—23)

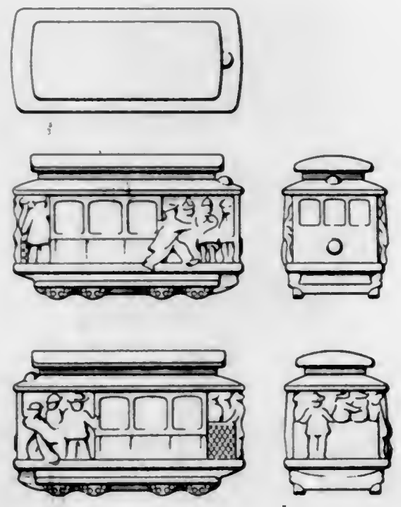
The ornamental design for a statuette, as shown and described.

145,842
DESIGN FOR A BROOCH
Frank J. Gargano, Providence, R. I.
Application February 12, 1946, Serial No. 126,494
Term of patent 3½ years
(Cl. D45—19)



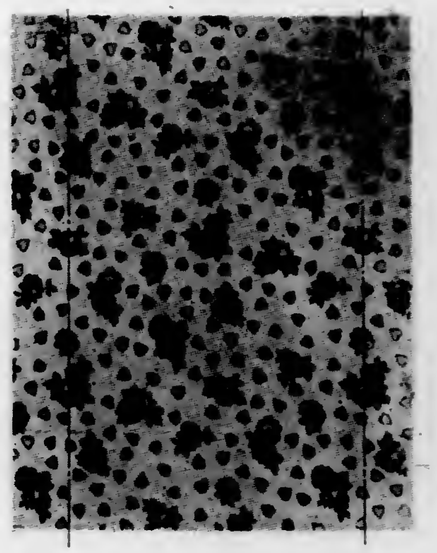
The ornamental design for a brooch, as shown.

145,843
DESIGN FOR A DRESS
David M. Goodstein, New York, N. Y.
Application July 23, 1946, Serial No. 131,828
Term of patent 3½ years
(Cl. D3—26)



The ornamental design for a dress, substantially as shown.

145,844
DESIGN FOR A PULL TOY OR SIMILAR ARTICLE
Jane F. Griffith, New York, N. Y.
Application April 4, 1946, Serial No. 128,280
Term of patent 3½ years
(Cl. D34—15)

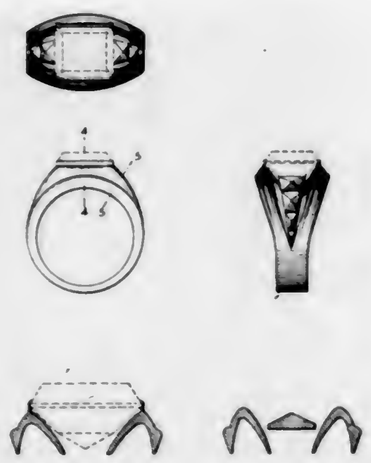


The ornamental design for a pull toy or similar article, substantially as shown.

145,845
DESIGN FOR A CONTAINER FOR CANDY, PERFUME, FLOWERS, AND THE LIKE
King Harrington, San Francisco, Calif.
Application December 5, 1945, Serial No. 124,371
Term of patent 14 years
(Cl. D58—11)

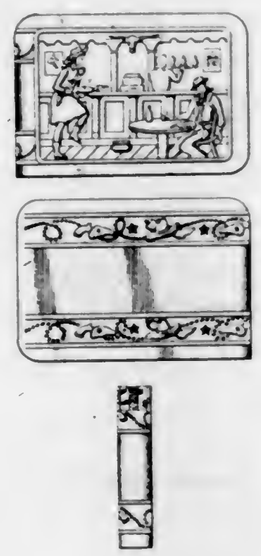
The ornamental design for a container for candy, perfume, flowers and the like, as shown.

145,846
DESIGN FOR A PRINTED FABRIC
Ethel S. Kales, Los Angeles, Calif.
Application May 3, 1946, Serial No. 129,237
Term of patent 3½ years
(Cl. D92—1)



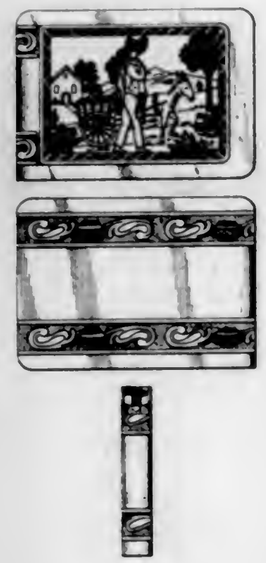
The ornamental design for a printed fabric, as shown and described.

145,847
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 23, 1946, Serial No. 126,843
Term of patent 7 years
(Cl. D45—19)



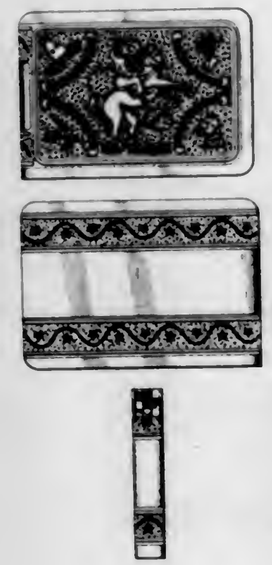
The ornamental design for a brooch or similar article, substantially as shown.

145,848
DESIGN FOR A FINGER RING OR SIMILAR ARTICLE
Albert Nalick, Los Angeles, Calif.
Application March 16, 1946, Serial No. 127,576
Term of patent 7 years
(Cl. D45—10)



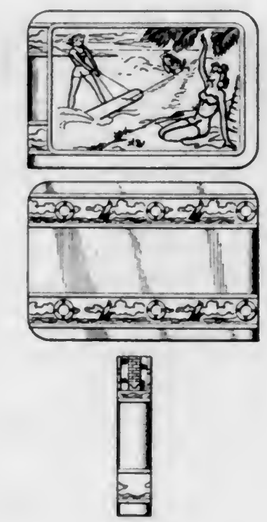
The ornamental design for a finger ring or similar article, substantially as shown.

145,849
DESIGN FOR A WALLET
Charles Panzer, New York, N. Y.
Application November 13, 1945, Serial No. 123,691
Term of patent 3½ years
(Cl. D87—3)



The ornamental design for a wallet, as shown.

145,850
DESIGN FOR A WALLET
Charles Panzer, New York, N. Y.
Application December 3, 1945, Serial No. 124,283
Term of patent 3½ years
(Cl. D87—3)

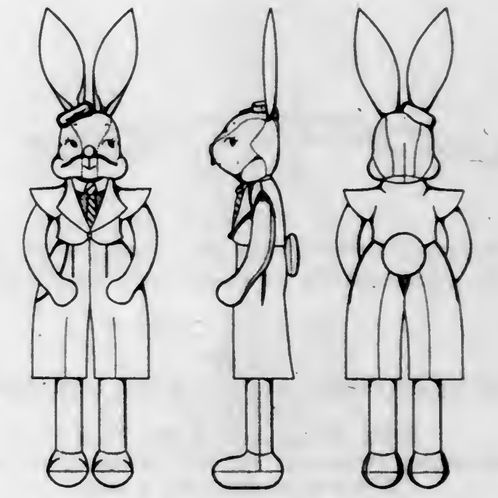


The ornamental design for a wallet, as shown.

145,851
DESIGN FOR A WALLET
Charles Panzer, New York, N. Y.
Application December 3, 1945, Serial No. 124,284
Term of patent 3½ years
(Cl. D87—3)

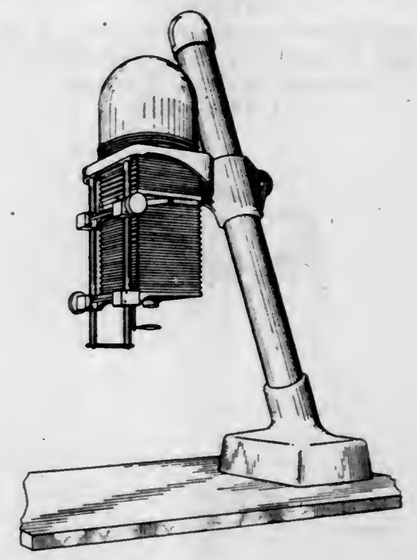
The ornamental design for a wallet, as shown.

145,852
DESIGN FOR A WALLET
Charles Panzer, New York, N. Y.
Application December 15, 1945, Serial No. 124,781
Term of patent 3½ years
(Cl. D87—3)



The ornamental design for a wallet, as shown.

145,853
DESIGN FOR A WALLET
Charles Panzer, New York, N. Y.
Application December 15, 1945, Serial No. 124,782
Term of patent 3½ years
(Cl. D87—3)

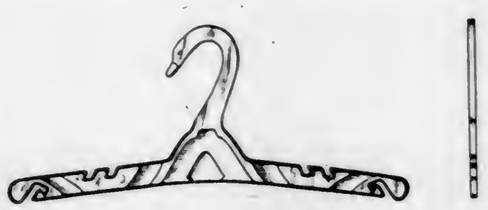


The ornamental design for a wallet, as shown.

145,854
DESIGN FOR A TOY ANIMAL FIGURE OR SIMILAR ARTICLE
Mary Lu Quinby, Los Angeles, Calif.
Application July 11, 1946, Serial No. 131,510
Term of patent 14 years
(Cl. D34—2)

The ornamental design for a toy animal figure or similar article, substantially as shown.

145,855
DESIGN FOR A PHOTOGRAPHIC ENLARGER
Karl Racine, Houston, and Vernon P. Shelton, San Antonio, Tex., assignors to National Instrument Corporation, Houston, Tex., a corporation of Texas
Application January 3, 1946, Serial No. 125,254
Term of patent 14 years
(Cl. D61—1)



The ornamental design for a photographic enlarger, substantially as shown and described.

145,856
DESIGN FOR A HANGER OR SIMILAR ARTICLE
Julia Read, New York, N. Y.
Application February 9, 1946, Serial No. 126,416
Term of patent 3½ years
(Cl. D80—8)

The ornamental design for a hanger or similar article, substantially as shown and described.

145,857
DESIGN FOR A HANGER OR SIMILAR ARTICLE
Julia Read, New York, N. Y.
Application February 9, 1946, Serial No. 126,417
Term of patent 3½ years
(Cl. D80—8)

The ornamental design for a hanger or similar article, substantially as shown and described.

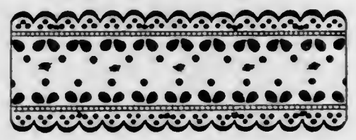
145,858
DESIGN FOR A TOY TABLE OR SIMILAR ARTICLE
Irving Rosenbloom, New York, N. Y.
Application January 9, 1946, Serial No. 125,392
Term of patent 7 years
(Cl. D34—15)

The ornamental design for a toy table or similar article, substantially as shown.

145,859
DESIGN FOR A DRESS
Katheryn Rost, New York, N. Y.
Application March 8, 1946, Serial No. 127,255
Term of patent 3½ years
(Cl. D3—26)

The ornamental design for a dress, substantially as shown.

145,860
DESIGN FOR A PLAQUE OR SIMILAR ARTICLE
Joseph Russo, New York, N. Y.
Application June 22, 1945, Serial No. 120,242
Term of patent 14 years
(Cl. D29—23)



The ornamental design for a plaque or similar article, as shown.

145,861
DESIGN FOR AN EMBROIDERED TRIMMING OR SIMILAR ARTICLE
Hans Tobler, Teaneck, N. J.
Application July 6, 1946, Serial No. 131,344
Term of patent 3½ years
(Cl. D92—1)

The ornamental design for an embroidered trimming or similar article, substantially as shown.

145,862
DESIGN FOR AN EMBROIDERED TRIMMING OR SIMILAR ARTICLE
Hans Tobler, Teaneck, N. J.
Application July 16, 1946, Serial No. 131,606
Term of patent 3½ years
(Cl. D92—1)

The ornamental design for an embroidered trimming or similar article, substantially as shown.

145,863
DESIGN FOR A CIGARETTE SERVER
Fred Zimbalist, Cleveland Heights, Ohio
Application December 22, 1945, Serial No. 125,018
Term of patent 7 years
(Cl. D85—2)

The ornamental design for a cigarette server, substantially as shown.

Oils and greases, Certain named. Standard Oil Company (New Jersey). 219,157; renewed Oct. 12, 1946. O. G. Oct. 29.
Oils and greases, Certain named. Standard Oil Company (New Jersey). 219,763; renewed Oct. 26, 1946. O. G. Oct. 29.
Oils, greases, and other products made from petroleum, Refined, semirefined, and unrefined. Imperial Oil Ltd. 217,266; renewed Aug. 31, 1946. O. G. Oct. 29.

CLASS 16

Lacquers. Patek Brothers, Inc. 221,265; renewed Nov. 23, 1946. O. G. Oct. 29.
Paint, Plastic oil. Patek Brothers, Inc. 221,185; renewed Nov. 23, 1946. O. G. Oct. 29.
Paint, Ready-mixed. Bradley & Vrooman Company. 219,837; renewed Oct. 26, 1946. O. G. Oct. 29.
Paint, Semipaste. Patek Brothers, Inc. 221,180; renewed Nov. 23, 1946. O. G. Oct. 29.
Paints and painters' materials, Certain. Titanine, Inc. 221,217; renewed Nov. 23, 1946. O. G. Oct. 29.
Paints and varnishes, Dry, paste, and ready-mixed. Hoffman Wall Paper Co., Inc. 221,254; renewed Nov. 23, 1946. O. G. Oct. 29.
Paints in paste or semi-paste form. Sewall Paint & Varnish Company. 425,029; Oct. 29.
Polish and floor wax, Furniture. R. E. Shields. 425,084; Oct. 29.
Varnish. Patek Brothers, Inc. 221,262; renewed Nov. 23, 1946. O. G. Oct. 29.

CLASS 17

Cigars. Cuesta, Rey & Company. 218,946; renewed Oct. 5, 1946. O. G. Oct. 29.
Cigars. N. R. Renze. 209,803; renewed Mar. 2, 1946. O. G. Oct. 29.
Cigars, cigarettes, pipe and chewing tobacco. Revoc, Inc. 424,906; Oct. 29; Serial No. 488,371; published Aug. 13, 1946.
Tobacco, cigarettes and cigars, Pipe and cigarette. Piezo Manufacturing Corporation. 424,949; Oct. 29; Serial No. 493,212; published Aug. 6, 1946.

CLASS 19

Automobiles, Passenger-carrying. Willys-Overland Company. 219,790; renewed Oct. 26, 1946. O. G. Oct. 29.

CLASS 21

Cables, flashlights, automobile fuses, etc., Battery. Phillips Petroleum Company. 424,841; Oct. 29; Serial No. 468,730; published July 23, 1946.
Capacitors, Electrical. Pyramid Electric Company. 424,940; Oct. 29; Serial No. 491,773; published July 23, 1946.
Cords, Extensible electrical. Kellogg Switchboard and Supply Company. 425,001; Oct. 29; Serial No. 496,313; published July 23, 1946.
Cords, Extensible electrical. Kellogg Switchboard and supply Company. 425,002; Oct. 29; Serial No. 496,316; published July 23, 1946.
Electric cooking ranges and deep well cookers. Gibson Refrigerator Company. 424,919; Oct. 29; Serial No. 489,734; published Aug. 13, 1946.

Electric-lamps and fittings, Incandescent. Edison and Swan United Electric Light Company Limited. 52,320; re-renewed May 8, 1946. O. G. Oct. 29.
Electric speaker units. Baron Hartsough. 424,909; Oct. 29; Serial No. 488,691; published Aug. 6, 1946.
Electric tools. Oakes & Company. 424,866; Oct. 29; Serial No. 480,614; published Aug. 6, 1946.
Electrical appliances and parts thereof. Follsain Metals Ltd. 424,857; Oct. 29; Serial No. 477,604; published Aug. 6, 1946.
Electrical fire alarm apparatus. H. P. Riodan. 424,943; Oct. 29; Serial No. 492,955; published Aug. 13, 1946.
Electrical lug connectors. Dossert Mfg. Corp. 424,971; Oct. 29; Serial No. 494,662; published Aug. 6, 1946.
Furnaces, Electric arc. Whiting Corporation. 424,875; Oct. 29; Serial No. 482,828; published July 23, 1946.
Generators and apparatus, Electric ozone. Automatic Pump & Softener Corporation. 424,903; Oct. 29; Serial No. 487,758; published July 23, 1946.
Ignition and other electrical parts, Certain named. Machined Parts Corporation. 219,910; renewed Oct. 26, 1946. O. G. Oct. 29.
Irons and electric combination steaming and pressing irons, Electric pressing. Silex Company. 424,994; Oct. 29; Serial No. 496,169; published July 23, 1946.
Radio equipment. Erco Radio Laboratories, Inc. 424,863; Oct. 29; Serial No. 480,283; published July 23, 1946.
Radio receiving sets. Rice-Stix Dry Goods Company. 424,999; Oct. 29; Serial No. 496,274; published Aug. 6, 1946.
Radio telephone units and parts thereof, Marine. Hudson American Corporation. 424,958–60; Oct. 29; Serial No. 493,963–5; published Aug. 13, 1946.
Relays, Electric. P. Henry. 424,863; Oct. 29; Serial No. 479,874; published Aug. 6, 1946.
Tape, Yellow varnished cambric. Irvington Varnish & Insulator Co. 424,948; Oct. 29; Serial No. 493,193; published July 23, 1946.
Telephones, switchboards, telephone field sets. Kellogg Switchboard and Supply Company. 425,058; Oct. 29.
Timers, starters and voltage limiters, etc. Picker X-Ray Corporation. Waite Manufacturing Division, Inc. 424,902; Oct. 29; Serial No. 487,522; published Aug. 6, 1946.
Tubes, High vacuum electronic. Brown, Boveri & Cie. 424,963–4; Oct. 29; Serial Nos. 494,209–10; published July 23, 1946.

CLASS 22

Blocks, Plastic. Airtronics Development Corporation. 425,067; Oct. 29.
Golf balls, golf bags, and wrist band grips. A. J. Wyman. 424,847; Oct. 29; Serial No. 470,325; published Aug. 13, 1946.
Fish bait, Canned. J. G. Manning. 424,915; Oct. 29; Serial No. 489,228; published Aug. 13, 1946.
Fishing lines. Rain-Beau Products Company. 424,955; Oct. 29; Serial No. 493,822; published Aug. 6, 1946.
Foot devices, Springmounted. J. R. Crissman. 424,931; Oct. 29; Serial No. 490,932; published Aug. 13, 1946.
Tennis rackets. Sport Products Inc. 424,932; Oct. 29; Serial No. 491,033; published Aug. 6, 1946.
Toy furniture sets and toy houses, Miniature. Paula Products. 425,009; Oct. 29; Serial No. 497,737; published Aug. 13, 1946.
Toy kites. Northwestern Kite Co. 425,010; Oct. 29; Serial No. 498,022; published Aug. 13, 1946.
Toy pistols. Statler Manufacturing Company. 425,023; Oct. 29; Serial No. 500,634; published Aug. 13, 1946.
Toys. Hobby Hill. 424,887; Oct. 29; Serial No. 484,025; published Aug. 6, 1946.
Toys having a plurality of removable colored pegs, Pull. Hobby Hill. 424,885; Oct. 29; Serial No. 484,022; published Aug. 13, 1946.
Toys in the form of animals. Hobby Hill. 424,886; Oct. 29; Serial No. 484,024; published Aug. 13, 1946.

CLASS 23

Bearings, Journal. National Lead Company. 424,913; Oct. 29; Serial No. 489,139; published July 23, 1946.
Can making machines. Continental Can Company, Inc. 424,864; Oct. 29; Serial No. 480,164; published Aug. 13, 1946.
Carpet-sweepers. Bissell Carpet Sweeper Company. 28,616; re-renewed July 14, 1946. O. G. Oct. 29.
Clamps, Work holding. Grand Specialties Company. 424,982; Oct. 29; Serial No. 495,377; published Aug. 6, 1946.
Converters and fluid couplings, Combination hydraulic torque. Fuller Manufacturing Co. 424,860; Oct. 29; Serial No. 478,811; published July 23, 1946.
Conveying apparatus, Portable power driven belt. Coaltoter Conveyer Co. 424,912; Oct. 29; Serial No. 489,102; published Aug. 6, 1946.
Conveyor doughnut coolers, Power driven, endless chain. Joe Lowe Corporation. 424,918; Oct. 29; Serial No. 489,670; published Aug. 13, 1946.
Crushers, screeners, conveyors, etc. Universal Engineering Corporation. 424,848; Oct. 29; Serial No. 470,360; published Aug. 6, 1946.
Cutlery. Utica Cutlery Company. 425,070; Oct. 29.
Cutlery and parts thereof, Kitchen, table and household. Gailstyn Company. 424,981; Oct. 29; Serial No. 495,372; published Aug. 6, 1946.
Cutters, Milling. Wesson Company. 424,990; Oct. 29; Serial No. 495,924; published Aug. 6, 1946.
Depressors, Valve spring. Paxton Diesel Engineering Company. 425,061; Oct. 29.
Diaphragm compressors. Defiance Alloyed Products Co. 424,840; Oct. 29; Serial No. 466,324; published Aug. 13, 1946.
Dies, molding dies, cutting tools, etc., Metal working and forming. DoALL Company. 424,899; Oct. 29; Serial No. 487,178; published Aug. 13, 1946.
Dishwashing machines. E. P. O'Halloran. 424,895; Oct. 29; Serial No. 485,791; published July 23, 1946.
Dust collectors, Portable. J. S. Clark Company. 424,884; Oct. 29; Serial No. 483,960; published Aug. 6, 1946.
Fire detecting and extinguishing apparatus, Fixed. Walter Kidde & Company, Inc. 424,894; Oct. 29; Serial No. 485,298; published July 23, 1946.
Heads for deep well pumps, Air balanced actuating. Lacy Oil Tool Company. 424,972; Oct. 29; Serial No. 494,753; published Aug. 13, 1946.
Internal combustion engines, miniature fuel tanks, miniature carburetors, Miniature model. Melcraft. 424,977; Oct. 29; Serial No. 495,082; published Aug. 6, 1946.
Knives. Kutlery for Kits. 425,066; Oct. 29.
Lathes, milling-machines, boring-mills, etc. Gisholt Machine Company. 56,496; re-renewed Oct. 2, 1946. O. G. Oct. 29.
Lawn mowers. American Chain & Cable Company, Inc. 424,787; Oct. 29; Serial No. 482,965; published July 23, 1946.
Lawn mowers. American Chain & Cable Company, Inc. 424,877; Oct. 29; Serial No. 482,962; published July 23, 1946.
Machinery and parts thereof, Metal working. Aircraft Machinery Corporation. 424,870; Oct. 29; Serial No. 482,191; published July 23, 1946.
Plows, cultivators, harrows, handles for agricultural instruments, etc. Empire Plow Company. 213,086; renewed June 1, 1946. O. G. Oct. 29.
Pulsators for milking machines. Rite-Way Products Company. 424,892; Oct. 29; Serial No. 484,703; published Aug. 13, 1946.
Pumping units, Engine driven oil. Power Machinery Company. 425,038–9; Oct. 29.
Presses, Baling. Precision Parts Company. 424,979; Oct. 29; Serial No. 495,152; published July 23, 1946.
Razor blades. American Safety Razor Corporation. 424,986; Oct. 29; Serial No. 495,783; published July 23, 1946.
Road-grading machines, rock crushers, elevators, etc. American Road Machinery Company, Inc. 215,404; renewed July 20, 1946. O. G. Oct. 29.
Saws. Henry Disston & Sons, Incorporated. 53,699; renewed June 12, 1946. O. G. Oct. 29.
Saws. Henry Disston & Sons, Incorporated. 53,702; renewed June 12, 1946. O. G. Oct. 29.
Saws. Henry Disston & Sons, Incorporated. 53,752; renewed June 12, 1946. O. G. Oct. 29.
Saws. Henry Disston & Sons, Incorporated. 54,244; renewed June 26, 1946. O. G. Oct. 29.
Sewing machines, Electric. Free Sewing Machine Company. 212,636; renewed May 11, 1946. O. G. Oct. 29.
Sewing machines, their parts and attachments, etc., Family and manufacturing. Singer Manufacturig Company. 424,852; Oct. 29; Serial No. 473,547; published Aug. 6, 1946.
Slicing machinery. American Slicing Machine Company. 220,685; renewed Nov. 16, 1946. O. G. Aug. 29.
Tool holders and parts, Screw machines and turret lathe. M. J. Schlitters. 425,005; Oct. 29; Serial No. 496,521; published Aug. 6, 1946.
Unitary apparatus. Buckeye Laboratories Corporation. 424,856; Oct. 29; Serial No. 476,658; published July 23, 1946.
Vending machine, Electric high frequency induction. Radio Chef, Inc. 424,962; Oct. 29; Serial No. 494,121; published July 23, 1946.
Wrenches and pliers. Barcalo Manufacturing Company. 424,879; Oct. 29; Serial No. 482,969; published Jan. 15, 1946.
Wrenches, box wrenches, open end wrenches, etc., Socket. Blackhawk Mfg. Co. 424,871; Oct. 29; Serial No. 482,457; published July 23, 1946.

CLASS 26

Films, Motion picture travel. H. F. Jenkins. 425,081; Oct. 29.

CLASS 29

Mops and handles therefor. Stover Manufacturing & Engine Co. 213,642; renewed June 1, 1946. O. G. Oct. 29.
Mops and handles therefor. Stover Manufacturing & Engine Co. 216,198; renewed Aug. 3, 1946. O. G. Oct. 29.

CLASS 30

Dishes, China. Golden Rule, Incorporated. 216,392; renewed Aug. 10, 1946. O. G. Oct. 29.
Earthenware, Table. Johnson Brothers, (Hanley) Limited. 207,950; renewed Jan. 12, 1946. O. G. Oct. 29.

CLASS 31

Filtermass. Cellulo Company. 424,951; Oct. 29; Serial No. 498,395; published Aug. 6, 1946.

CLASS 32

Bed bolsters. M. Lipps. 424,936; Oct. 29; Serial No. 491,165; published Aug. 6, 1946.
Display-racks. J. H. Best. 53,161; re-renewed May 29, 1946. O. G. Oct. 29.
Divans, Sectional. Furniture Developments Co. 424,934; Oct. 29; Serial No. 491,084; published Aug. 13, 1946.
Furniture, Living room, dining room and bedroom. Leonardo Furniture Co. Incorporated. 424,896; Oct. 29; Serial No. 485,916; published Aug. 13, 1946.
Mattresses. S. G. Crupka Co. Inc. 220,773; renewed Nov. 16, 1946. O. G. Oct. 29.
Mattresses and mattress spring units. Spring-Air Company. 424,939; Oct. 29; Serial No. 491,592; published Aug. 13, 1946.

CLASS 33

Glass globes, reflectors, and plates, Prismatic. Holophane Glass Company, Inc. 217,786; renewed Sept. 7, 1946. O. G. Oct. 29.

CLASS 34

Apparatus for conditioning air. Peirson-Moore Co. 425,090; Oct. 29.
Dampers and spindles therefor, Stove. Stover Manufacturing & Engine Co. 214,464; renewed June 22, 1946. O. G. Oct. 29.
Dampers and spindles therefor, Stove. Stover Manufacturing & Engine Co. 217,139; renewed Aug. 24, 1946. O. G. Oct. 29.
Duct sections, Prefabricated. Arrowhead Rubber Company. 424,941; Oct. 29; Serial No. 491,794; published Aug. 13, 1946.
Fireplace fixture or front. Merryweather Products Company. 424,917; Oct. 29; Serial No. 489,339; published Aug. 6, 1946.
Gasoline-engine-driven blower units, etc. Homelite Corporation. 424,967; Oct. 29; Serial No. 494,324; published Aug. 6, 1946.
Glass, plastics, combinations of glass and metal, etc. Holophane Company, Inc. 424,908; Oct. 29; Serial No. 488,525; published Aug. 6, 1946.
Lighters, Cigar and cigarette. Oxford-Pyke, Inc. 425,071; Oct. 29.
Lighters, Liquid fuel burning. Haase Manufacturing Co. 424,984; Oct. 29; Serial No. 495,736; published Aug. 6, 1946.
Lighters of the catalytic type and parts etc., Cigar, cigarette, and pipe. Lektrolite Corporation. 424,961; Oct. 29; Serial No. 494,086; published Aug. 6, 1946.
Oil-burning equipment. Cleveland Universal Parts Company. 220,687; renewed Nov. 16, 1946. O. G. Oct. 29.
Stoves and ranges, Wood and coal. Eagle Stove Works. 217,574; renewed Sept. 7, 1946. O. G. Oct. 29.
Ventilating units, Diffuser type. Anemostat Corporation of America. 424,882–3; Oct. 29; Serial Nos. 483,886–7; published Aug. 13, 1946.
Ventilators, Window. W. H. Shortlidge. 425,017; Oct. 29; Serial No. 498,718; published Aug. 6, 1946.

CLASS 35

Belts, Power transmission and conveyor. Dayton Rubber Manufacturing Company. 424,888; Oct. 29; Serial No. 484,120; published Aug. 13, 1946.
Repair materials, Tire. B. F. Goodrich Company. 424,925; Oct. 29; Serial No. 490,241; published Aug. 13, 1946.
Rubber material, Synthetic. United States Rubber Company. 424,926; Oct. 29; Serial No. 490,345; published Aug. 13, 1946.

CLASS 36

Machines of the record type. Brunswick-Balke-Collender Company. 220,771; renewed Nov. 16, 1946. O. G. Oct. 29.

CLASS 37

Duplicating supplies. American Stencil Mfg. Co. 424,927; Oct. 29; Serial No. 490,620; published Aug. 13, 1946.
Paper and envelops, Writing. Z. & W. M. Crane. 29,024; re-renewed Oct. 20, 1946. O. G. Oct. 29.
Paper, Bond. West Virginia Pulp and Paper Company. 424,889; Oct. 29; Serial No. 484,286; published Aug. 13, 1946.
Paper, Bond and ledger. Crocker-McElwain Company. 220,536; renewed Nov. 9, 1946. O. G. Oct. 29.
Paper, wax lunch rolls, dry and waxed shredded paper, etc., Wax. Bennington Wax Paper Company. 218,610–13; renewed Sept. 28, 1946. O. G. Oct. 29.
Stationery. J. M. Katz. 424,914; Oct. 29; Serial No. 489,179; published Aug. 13, 1946.
Stationery. J. M. Katz. 425,049; Oct. 29.

CLASS 38

Magazine, Monthly. Associated Pennsylvania Constructors. 214,275; renewed June 15, 1946. O. G. Oct. 29.
Magazine, Semi-monthly. Metronome Publishing Co. Inc. 214,874; renewed July 6, 1946. O. G. Oct. 29.
Publication of which there are three separate editions, Monthly. Alfred M. Best Company, Inc. 220,151; renewed Nov. 2, 1946. O. G. Oct. 29.

CLASS 39

Apparel, Wearing. Phillips Petroleum Company. 424,842; Oct. 29; Serial No. 468,732; published Aug. 13, 1946.
Boots and shoes. C. H. Hyer & Sons. 425,057; Oct. 29.
Boots and shoes, Leather. Old Colony Shoe Company. 220,048; renewed Nov. 2, 1946. O. G. Oct. 29.
Boots and shoes of leather, fabric, and/or combinations thereof. International Shoe Company. 424,853; Oct. 29; Serial No. 474,853; published Aug. 6, 1946.
Boots and shoes, Women's and misses'. British West Indies Co. 425,056; Oct. 29.
Brassières. J. Bonomo. 424,924; Oct. 29; Serial No. 490,227; published July 16, 1946.
Clothing. Levinsohn Bros. Co. Inc. 424,869; Oct. 29; Serial No. 482,168; published Aug. 13, 1946.
Clothing, Certain articles of. David H. Posner, Inc. 219,660; renewed Oct. 19, 1946. O. G. Oct. 29.
Clothing, Certain named. Palace Clothing Company. 220,649; renewed Nov. 16, 1946. O. G. Oct. 29.
Clothing, Men's and boys'. Jacob Siegel Company. 425,085; Oct. 29.
Coats and coat ensembles, Girls' and misses'. Marianna Girl Coat Co. 425,065; Oct. 29.

Racine, Karl, Houston, and V. P. Shelton, San Antonio, assignors to National Instrument Corporation, Houston, Tex. Photographic enlarger. 145,855; Oct. 29.

Read, Julia, New York, N. Y. Hanger or similar article. 145,856; Oct. 29.

Read, Julia, New York, N. Y. Hanger or similar article. 145,857; Oct. 29.

Reeves-Ely Laboratories, Inc., assignee: *See*—
Florian, Gordon W.

Rosenbloom, Irving, New York, N. Y. Toy table or similar article. 145,858; Oct. 29.

Rost, Katheryn, New York, N. Y. Dress. 145,859; Oct. 29.

Russo, Joseph, New York, N. Y. Plaque or similar article. 145,860; Oct. 29.

Shelton, Vernon P.: *See*—
Racine, Karl, and Shelton.

Tobler, Hans, Teaneck, N. J. Embroidered trimming or similar article. 145,861; Oct. 29.

Tobler, Hans, Teaneck, N. J. Embroidered trimming or similar article. 145,862; Oct. 29.

Zimballst, Fred, Cleveland Heights, Ohio. Cigarette server. 145,863; Oct. 29.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 29TH DAY OF OCTOBER, 1946

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abbott, Gail C., assignor to Grip Nut Company, South Whitley, Ind. Article rejecting mechanism. 2,410,037; Oct. 29.

Agamaite, Edward, Jr., assignor to Fort Howard Paper Company, Green Bay, Wis. Toilet roll dispenser. 2,410,328; Oct. 29.

Aircraft-Marine Products, Inc., assignee: *See*—
Watts, William S.

Air Preheater Corporation, The, assignee: *See*—
Cooper, Roland S., and Holm.

Albright, Robert B., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa. Electrical apparatus. 2,410,329; Oct. 29.

Alien Property Custodian: *See*—
Bach, Adolf.
Korten, Ernst.
Remus, Valentin.

Allis-Chalmers Manufacturing Company, assignee: *See*—
Fergason, Rector C.
Harer, Paul H., and Roth.

Altman, Peter, Detroit, assignor to Continental Motors Corporation, Muskegon, Mich. Portable power unit-handle cooling. 2,410,142; Oct. 29.

Altman, Peter, Detroit, assignor to Continental Motors Corporation, Muskegon, Mich. Portable engine. 2,410,143; Oct. 29.

American Cyanamid Company, assignee: *See*—
Booth, Robert B., and Herkenhoff.
Loukomsky, Serge A., and Stock.
Weiss, Robert H., and Wintringham.

American Glare Shield Co., Inc., The, assignee: *See*—
Le Laude, Lester R.

American-Maize Products Company, assignee: *See*—
Morgan, Willard L.

American Optical Company, assignee: *See*—
Bardwell, Ralph F., and Smith.
Schauweker, George H.

American Steel Foundries, assignee: *See*—
Baselt, Walter H., and Tack.
Keysor, Harold C.

Ams, Max, Machine Company, The, assignee: *See*—
Brenzinger, Julius.

Anaconda Wire and Cable Company, assignee: *See*—
Olson, John W.
Olson, John W., and Bechle.

Anderson, Earl L., Manhasset, N. Y., assignor to Radio Corporation of America. Pulse selectivity system. 2,410,000; Oct. 29.

Anderson, Marshall N., and M. H. Sellstrom, assignors to Sellstrom Manufacturing Company, Chicago, Ill. Welders' helmet. 2,410,256; Oct. 29.

Andrzejewski, Clara, assignor to J. Belzowski, R. L. Squire and F. Z. Roder, Chicago, Ill. Mechanism for removing foreign particles from the eye. 2,410,257; Oct. 29.

Anglo-Iranian Oil Company Limited, assignee: *See*—
Fawcett, Eric W. M., and Beynon.

Arms, Merton H., and L. J. Barnard, assignors to Bryant Chucking Grinder Company, Springfield, Vt. Grinding machine. 2,410,038; Oct. 29.

Art Metal Construction Company, assignee: *See*—
Wells, Roy E.

Ashbaugh, Bernard D., Mount Gilead, Ohio, assignor to H-P-M Development Corporation, Wilmington, Del. Booster ram construction. 2,410,001; Oct. 29.

Ashenfelter, William, Swanton, Ohio. Scaffold horse. 2,410,330; Oct. 29.

Ashford, Jack, Jackson Heights, N. Y. Hair curler. 2,410,144; Oct. 29.

Atha, Hattie B., Akron, Ohio. Scraper utensil. 2,410,192; Oct. 29.

Aubertin, Ovila J., Matachewan, Ontario, Canada. Fishing rod and reel. 2,410,331; Oct. 29.

Automotive Products Company Limited, assignee: *See*—
Chouings, Leslie C.

Babcock, Lloyd L.: *See*—
Bishop, James O., and Babcock.
Stevenson, Lawrence J., and Babcock.

Bach, Adolf, Berlin-Spandau, Germany; vested in the Alien Property Custodian. Gyroscope. 2,410,002; Oct. 29.

Bach, Henry M., Lawrence, assignor to Premier Crystal Laboratories, Incorporated, New York, N. Y. Crystal holder. 2,410,193; Oct. 29.

Bacwell Enterprises Incorporated, assignee: *See*—
Wellman, Katharine.

Bagan, John P., Portland, assignor of one-third to A. R. Waneczek, Marshfield, Oreg. Spiral cutter for rotary plows. 2,410,003; Oct. 29.

Baker, Robert H., Munster, Ind. Defroster for ice cube trays. 2,410,194; Oct. 29.

Baldwin Locomotive Works, The, assignee: *See*—
Corby, Joseph F.
Staples, Dana R.

Ball, Albert P., assignor to Briggs Manufacturing Company, Detroit, Mich. Vehicle body. 2,410,332; Oct. 29.

Bardwell, Ralph F., Southbridge, and J. H. Smith, Taunton, assignors to American Optical Company, Southbridge, Mass. Lens and making the same. 2,410,145; Oct. 29.

Barkeij, Jean A. H., Altadena, Calif. Hydraulic mechanism. 2,410,333; Oct. 29.

Barnard, Leon J., assignee: *See*—
Arms, Merton H., and Barnard.

Baselt, Walter H., Tucson, Ariz., and C. E. Tack, assignors to American Steel Foundries, Chicago, Ill. Rotor and making. 2,410,195; Oct. 29.

Batten, Percy H., assignee, et al., trustee: *See*—
Lysholm, Alf.

Beach, Lennox F., Merrick, N. Y., assignor to The Purves Corporation, Springfield, Mass. Magnetic field responsive device. 2,410,039; Oct. 29.

Bechik, Michael, and W. F. Caster, St. Paul, Minn. Handle for box springs and the like. 2,410,258; Oct. 29.

Bechle, Charles W.: *See*—
Olson, John W., and Bechle.

Bell & Howell Company, assignee: *See*—
McNabb, Louis A.

Bell Telephone Laboratories, Incorporated, assignee: *See*—
Howard, John B.
Johnson, Kenneth S.
Kellogg, William M.
Schelleng, John C.
Tyrrell, Warren A.

Belzowski, Joseph, assignee, et al.,: *See*—
Andrzejewski, Clara.

Bendix Aviation Corporation, assignee: *See*—
Dewey, Clarence L.

Benthall, Frederick L., Sr., Houston, Tex. Lawn edger. 2,410,196; Oct. 29.

Berry, Clifton V., West Haven, Conn. Miniature camera. 2,410,327; Oct. 29.

Bertrand, Frederic E., Lynn, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Insole machine. 2,410,004; Oct. 29.

Beynon, John H.: *See*—
Fawcett, Eric W. M., and Beynon.

Birch, Harold W., Belmont, Mass. Machine for splitting tubular fabric, opening it and extracting moisture therefrom. 2,410,146; Oct. 29.

Birma Manufacturing Company, Inc., assignee: *See*—
Cook, James A.

Birmann, Rudolph, Newtown, Pa., assignor, by mesne assignments, to Federal Reserve Bank of Philadelphia. Elastic fluid mechanism. 2,410,259; Oct. 29.

Bishop, James O., Torrance, and L. L. Babcock, Compton, Calif., assignors to The National Supply Company, Pittsburgh, Pa. Flame heating apparatus. 2,410,005; Oct. 29.

Blecke, Gustave H., Fort Wayne, Ind. Apparatus for grading fruits, vegetables, and other products according to size. 2,410,147; Oct. 29.

Blicke, Frederick F., Washtenaw County, assignor to Regents of the University of Michigan, Ann Arbor, Mich. Basic alkyl esters and their salts. 2,410,040; Oct. 29.

Blitz, Daniel, Princeton, N. J., assignor to Radio Corporation of America. Balanced detector for altimeters. 2,410,006; Oct. 29.

Bludworth, Joseph E., and D. P. Easter, Cumberland, Md., assignors to Celanese Corporation of America. 1-methylolcyclohexyl-cyclohexyl-carbinol. 2,410,007; Oct. 29.

Bludworth, Joseph E., and D. P. Easter, Cumberland, Md., assignors to Celanese Corporation of America. Chemical compounds. 2,410,008; Oct. 29.

Blumm, Stanley W., Marathon, N. Y. Roller skate structure. 2,410,009; Oct. 29.

Boals, Wayne S.: *See*—
Oscar, George R., and Boals.

Bokovoy, Samuel A., Verona, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y. Piezoelectric crystal cabinet. 2,410,041; Oct. 29.

Boland, Edward J., Freeport, assignor, by mesne assignments, to Poor & Company, Chicago, Ill. Tie plate and rail anchor assembly. 2,410,260; Oct. 29.

Bond, George R., Jr., Paulsboro, N. J., assignor to Houdry Process Corporation, Wilmington, Del. Purification of styrene and its homologues. 2,410,042; Oct. 29.

Booth, Robert B., Springdale, and E. C. Herkenhoff, Stamford, Conn., assignors to American Cyanamid Company, New York, N. Y. Beneficiation of iron ores. 2,410,376; Oct. 29.

Booth, Robert B., Springdale, and E. C. Herkenhoff, Stamford, Conn., assignors to American Cyanamid Company, New York, N. Y. Beneficiation of iron ores 2,410,377; Oct. 29.

Borg, George W., Corporation, assignee: *See*—
Norrman, Ernst.

Borglin, Joseph N., assignor to Hercules Powder Company, Wilmington, Del. Tetrahydropyrrole alcohol esters of halogen substituted carboxylic acids. 2,410,197; Oct. 29.

Brace, George A., Washington, D. C., assignor to The Hoover Company, North Canton, Ohio. Refrigeration. 2,410,334; Oct. 29.

Bradner, John A., assignor to The Lees-Bradner Company, Cleveland, Ohio. Thread production. 2,410,261; Oct. 29.

Branson, Norman G.: *See*—
Kuehni, Hans P., and Branson.

Brant, David O., Beverly Hills, Calif. Milk strainer. 2,410,010; Oct. 29.

Breaux, Neil T., Houston, Tex. Overshot. 2,410,262; Oct. 29.

Brenzinger, Julius, Fairfield, assignor to The Max Ams Machine Company, Bridgeport, Conn. Can end seaming mechanism. 2,410,263; Oct. 29.

Breton, Ernest J., Arlington, and W. H. Waggaman, Alexandria, Va., assignors to the United States of America, as represented by the Secretary of the Interior. Manufacturing calcium fluoride. 2,410,043; Oct. 29.

Brewer, Alfred G.: *See*—
Scrivener, William C., and Brewer.

Brewer & Company, Inc., assignee: *See*—
Taylor, Harden F.

Briggs Manufacturing Company, assignee: *See*—
Ball, Albert P.
Prance, Alvin W.

Broberg, Walter O. W.: *See*—
Thielers, Ernst M., and Broberg.

Brock, Frank H., and C. E. Smith, assignors to A. E. Staley Manufacturing Co., Decatur, Ill. Making starch conversion syrup. 2,410,264; Oct. 29.

Broido, Daniel, Cockfosters, near Barnet, England. Tabulator controlled by single-line records. 2,410,265; Oct. 29.

Brooks, John W.: *See*—
Horton, Aaron W., Brooks, and O'Kelly.

Brown Instrument Company, The, assignee: *See*—
Burdick, Edwin C.

Bryant Chucking Grinder Company, assignee: *See*—
Arms, Merton H., and Barnard.

Buckley, Arthur H., Chicago, Ill. Control system. 2,410,198; Oct. 29.

Bucyrus-Erie Company, assignee: *See*—
Davidson, Trevor O., and Schauer.

Buhrer, William G., Jerseyville, Ill. Rail joint tread bridge. 2,410,199; Oct. 29.

Buhrmaster, Frederick R., Webster Groves, assignor to Gaylord Container Corporation, St. Louis, Mo. Heavy duty paper shipping carton having interlocking end closure. 2,410,148; Oct. 29.

Bullock, Ellis W., Birmingham, Ala., assignor to Fly Ash Arrestor Corporation. Grate. 2,410,266; Oct. 29.

Burdick, Edwin C., assignor to The Brown Instrument Company, Philadelphia, Pa. Control mechanism. 2,410,335; Oct. 29.

Burk, Robert E., and E. C. Hughes, Cleveland Heights, assignors to The Standard Oil Company, Cleveland, Ohio. Hydrocarbon catalyzing process. 2,410,044; Oct. 29.

Burk, Robert E., Cleveland Heights, and T. J. Walsh, assignors to The Standard Oil Company, Cleveland, Ohio. Laboratory fractionating column head. 2,410,045; Oct. 29.

Burns, Jake D., Richmond, Calif. Tail gate operating mechanism for dump trucks. 2,410,046; Oct. 29.

Burrows, Lawton A., Woodbury, N. J., and W. E. Lawson, Westover Hills, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Explosively blasting joints. 2,410,047; Oct. 29.

Burrows, Robert J., and A. O. Williams, Battle Creek, assignors to Clark Equipment Company, Buchanan, Mich. Rail truck. 2,410,011; Oct. 29.

Byrns, Alva C., Los Altos, assignor to The Permanente Metals Corporation, Oakland, Calif. Carbothermic magnesia. 2,410,267; Oct. 29.

Campbell, Donald L., Short Hills, N. J., assignor to Standard Oil Development Company. Chemical process. 2,410,048; Oct. 29.

Canadian Refractories Limited, assignee: *See*—
Perry, John S. C., and Prince.

Carlson, Wendell L., Haddonfield, N. J., assignor to Radio Corporation of America. Crystal detector. 2,410,268; Oct. 29.

Carnation Company, assignee: *See*—
Herro, Alexander C., and Smart.

Carter, Frederick, and D. C. Taylor, Westhill, Ontario, Canada. Dyeing machine. 2,410,336; Oct. 29.

Caster, William F., assignee: *See*—
Bechik, Michael.

Ceco Steel Products Corporation, assignee: *See*—
Machamer, Hobart E.

Celanese Corporation of America, assignee: *See*—
Bludworth, Joseph E., and Easter.

Celestin, William E., New York, N. Y. Cigarette container. 2,410,200; Oct. 29.

Chemical Development Company, assignee, et al.: *See*—
Pattilloch, Donald K.

Chemical Developments Corporation, assignee: *See*—
Luaces, Enrique L.

Chicago Electric Manufacturing Company, assignee: *See*—
Gough, James J.

Chouings, Leslie C., assignor to Automotive Products Company Limited, Leamington Spa, England. Liquid pressure servo-motor device. 2,410,269; Oct. 29.

Chromogen, Incorporated, assignee: *See*—
Gáspár, Béla.

Churchman, John A., Guymon, Tex. Portable grain elevator. 2,410,012; Oct. 29.

Citizens and Manufacturers National Bank of Waterbury, The, Administrator: *See*—
Lusher, Albert C.

Clark, Earl K., Mansfield, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Heating apparatus. 2,410,013; Oct. 29.

Clark, Earl K., Mansfield, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Heating apparatus. 2,410,014; Oct. 29.

Clark Equipment Company, assignee: *See*—
Burrows, Robert J., and Williams.
Spatta, George.

Clark, Joseph B.: *See*—
Farris, Riley F., and Clark.

Clark, Robert A., Jr., Chicago, Ill. Signaling system. 2,410,149; Oct. 29.

Coffman, Donald D., Lindamere, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparation of a thiophene. 2,410,401; Oct. 29.

Cole, Ben R., assignee: *See*—
Mercer, William R., and Cole.

Commercial Solvents Corporation, assignee: *See*—
Tryon, Philip F.

Continental Aviation and Engineering Corporation, assignee: *See*—
Kinnucan, James W.

Continental Motors Corporation, assignee: *See*—
Altman, Peter.

Cook, James A., assignor to Birma Manufacturing Company, Inc., Buffalo, N. Y. Apparatus for filling life preservers and the like. 2,410,015; Oct. 29.

Cooper, Roland S., River Forest, Ill., and S. Holm, Wellsville, assignors to The Air Preheater Corporation, New York, N. Y. Air preheater for pulverizing mills. 2,410,337; Oct. 29.

Corby, Joseph F., Philadelphia, Pa., assignor to The Baldwin Locomotive Works. Plate steel casing joint for rotary hydraulic machines. 2,410,201; Oct. 29.

Corning Glass Works, assignee: *See*—
Hinkley, Ray A.
Hood, Harrison P.
Hyde, James F.

Craine, Inc., assignee: *See*—
Craine, Zur W.

Craine, Zur W., Norwich, N. Y., assignor to Craine, Inc. Silo. 2,410,338; Oct. 29.

Crawford, Victor L., Altamont, Ill. Safety device for fluid brake systems. 2,410,202; Oct. 29.

Creagmile, John L., Oakland, Calif. Wheel alignment gauge. 2,410,339; Oct. 29.

Crockett, Frank L., Tenants' Harbor, Maine, assignor to Whitin Machine Works, Whitinsville, Mass. Top comb system. 2,410,150; Oct. 29.

Cronstedt, Val, Marlboro, assignor to United Aircraft Corporation, East Hartford, Conn. Turbine seal. 2,410,340; Oct. 29.

Crooke, Raymond E., New York, assignor to Ford Instrument Company, Inc., Long Island City, N. Y. Method of and apparatus for gunfire control. 2,410,016; Oct. 29.

Crowley, John A., Jr., assignee: *See*—
Simpson, Thomas P., Payne, and Crowley.

Culley, Lewis L., Jackson, Miss. Tree transplanting apparatus. 2,410,203; Oct. 29.

Cummins, Carl M., Toledo, Ohio. Split ring manufacture. 2,410,204; Oct. 29.

Dalin, David, Sodertalje, Sweden. Fluid cooled damper. 2,410,017; Oct. 29.

Danforth, Joseph D., assignor to Universal Oil Products Company, Chicago, Ill. Alkylation of hydrocarbons. 2,410,151; Oct. 29.

D'Arcy, James M., Brooklyn, N. Y. Crochet ball holder. 2,410,018; Oct. 29.

Dashew, Robert L., deceased, Baltimore, Md.; Ruth L. Dashew, administratrix. Thread marker mechanism. 2,410,270; Oct. 29.

Dashew, Ruth L., administratrix: *See*—
Dashew, Robert L.

Dath, George E., assignor to W. H. Miner, Inc., Chicago, Ill. Friction shock absorbing mechanism. 2,410,152; Oct. 29.

Davidson, Trevor O., Milwaukee, Wis., and L. B. Schauer, Los Angeles, Calif., assignors to Bucyrus-Erie Company, South Milwaukee, Wis. Variable tread vehicle. 2,410,271; Oct. 29.

Davis, Francis W., Belmont, Mass. Power steering apparatus. 2,410,049; Oct. 29.

Davis, John H., Los Angeles, Calif. Shoe sole and heel construction. 2,410,019; Oct. 29.

Deakin, Gerald, assignor to International Standard Electric Corporation, New York, N. Y. Telecommunication switching system. 2,410,050; Oct. 29.

Deakin, Gerald, assignor to International Standard Electric Corporation, New York, N. Y. Conveyer system control. 2,410,051; Oct. 29.

Delamere, Rudolf D., Toronto, Ontario, Canada. Displacement apparatus. 2,410,341; Oct. 29.

De Lathauwer, Rene J., Hawthorne, N. J. Manufacture of worsted roving. 2,410,020; Oct. 29.

De Laval Separator Company, The, assignee: *See*—
Strezynski, George J.

De Lery, George V., New York, N. Y. Pocket reading glass. 2,410,272; Oct. 29.

De Long, George H., and B. Dreisbach, Allentown, Pa. Pump form. 2,410,153; Oct. 29.

De Long, George H., and B. Dreisbach, Allentown, Pa. Shoe conditioner. 2,410,154; Oct. 29.

Denison Engineering Company, The, assignee: *See*—
Wright, Fred J.

Deubner, George O., Lafayette, Calif. Power-driven rotary garden cultivator. 2,410,273; Oct. 29.

De Vaney, Fred D., assignor to Erie Mining Company, Hibbing, Minn. Flotation process. 2,410,021; Oct. 29.

Dewey, Clarence L., Elkhart, assignor to Bendix Aviation Corporation, South Bend, Ind. Tube reducing machine. 2,410,052; Oct. 29.

Diamond Chain and Manufacturing Company, assignee: *See*—
Gallamore, Oliver H.

Dodds, Joseph W.: *See*—
Johnson, Paul S., and Dodds.

Douglas Aircraft Company, Inc., assignee: *See*—
Williams, Lewis E., Jr., and Smith.

Dow Chemical Company, The, assignee: *See*—
Fletcher, Fred W., and Kenaga.

Drake, Claud E., Brentwood, Mo. Machine for sharpening circular saws, milling-cutters, and the like. 2,410,274; Oct. 29.

Dreisbach, Blair: *See*—
De Long, George H., and Dreisbach.

Drew, Richard G., assignor to Minnesota Mining & Manufacturing Company, St. Paul, Minn. Adhesive and adhesive sheet. 2,410,053; Oct. 29.

Dumais, Charles J., Woonsocket, R. I. Armor. 2,410,022; Oct. 29.

Du Pont, E. I., de Nemours & Company, assignee: *See*—
Burrows, Lawton A., and Lawson.
Coffman, Donald D.
Macht, Maurice L., and Renfrew.
Mahlberg, Elroy F.
McCleary, Ray L.
Parmelee, Alfred E.
Perkins, Melvin A., and Irwin.
Richter, Henry J., and Rothrock.
Rumsey, Joseph B.
Sloan, Clifford K., and Patterson.
Waddell, James, and Woessner.

Dusenbury, Millard R., assignor to Hercules Powder Company, Wilmington, Del. Ligneous resinous composition and producing. 2,410,205; Oct. 29.

Easter, Donald P.: *See*—
Bludworth, Joseph E., and Easter.

Edison, Thomas A., Incorporated, assignee: *See*—
Kelly, Frederick G.

Ellenberger, Stanley D., assignor, by mesne assignments, of sixty-five per cent to S. E. Steen, Kenosha, Wis., seventeen and one-half per cent to L. G. Voorhees, Macedonia, Ohio, and seventeen and one-half per cent to H. W. Taft, Balboa Heights, C. Z. Signaling by submodulation. 2,410,275; Oct. 29.

Ellenberger, Stanley D., assignor, by mesne assignments, of sixty-five per cent to S. E. Steen, Kenosha, Wis., seventeen and one-half per cent to L. G. Voorhees, Macedonia, Ohio, and seventeen and one-half per cent to H. W. Taft, Balboa Heights, C. Z. Secret communication system. 2,410,276; Oct. 29.

Electric & Musical Industries Limited, assignee: *See*—
Percival, William S.

Erie Mining Company, assignee: *See*—
De Vaney, Fred D.

Evans, David W. T., Sutton Coldfield, assignor to T. I. (Group Services) Limited, Birmingham, England. Apparatus for dipping tubes, bars, and the like. 2,410,023; Oct. 29.

Faik, Irvin V., Union, N. J., assignor to Reeves Pulley Company, Columbus, Ohio. Propeller governor tester. 2,410,155; Oct. 29.

Farris, Emil M., Wayne, Pa. Luminous marker for airports. 2,410,277; Oct. 29.

Farris, Riley F., and J. B. Clark, assignors to Stanolind Oil and Gas Company, Tulsa, Oklahoma. Water locating system. 2,410,278; Oct. 29.

Favre, John A., Drexel Hill, Pa., assignor to General Electric Company. Electromagnetic relay device. 2,410,279; Oct. 29.

Fawcett, Eric W. M., and J. H. B., Sunbury-on-Thames, assignors to Anglo-Iranian Oil Company Limited, London, England. Production of isobutane and the like hydrocarbons. 2,410,024; Oct. 29.

Federal Reserve Bank of Philadelphia, assignee: *See*—
Birmann, Rudolph.

Federal Telephone and Radio Corporation, assignee: *See*—
Bokovoy, Samuel A.
Goodale, Lynn C.
Haigh, Leslie B., and Stearn.
Labin, Emile.
Labin, Emile, and Grieg.
Rainey, Paul M.

Fergason, Rector C., La Porte, Ind., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Tractor coupling device. 2,410,280; Oct. 29.

Finken, Walter S.: *See*—
Frieder, Leonard P., and Finken.

Fletcher, Fred W., and E. E. Kenaga, assignors to The Dow Chemical Company, Midland, Mich. Parasiticidal compositions. 2,410,281; Oct. 29.

Flory, Leslie E., Princeton, N. J., assignor to Radio Corporation of America. Electronic timing device. 2,410,156; Oct. 29.

Fly Ash Arrestor Corporation, assignee: *See*—
Bullock, Ellis W.

Ford Instrument Company, Inc., assignee: *See*—
Crooke, Raymond E.

Fort Howard Paper Company, assignee: *See*—
Agamaite, Edward, Jr.

Fowler, George B., assignee, et al.: *See*—
Pattilloch, Donald K.

Fredrickson, Walter S., Fort Wayne, Ind. Liquid extract of coffee and extracting and preparing the same. 2,410,157; Oct. 29.

Freeman, Alpheus J., assignor, by mesne assignments, to G. S. Noble, Chicago, Ill. Casing. 2,410,206; Oct. 29.

Fremlin, John H., and R. N. Hall, London W. C. 2, assignors to Standard Telephones and Cables Limited, London, England. Electron discharge apparatus. 2,410,054; Oct. 29.

Frerer, Paul G., assignor to Perfex Corporation, Milwaukee, Wis. Snap switch. 2,410,055; Oct. 29.

Fresco, Jacque, Hollywood, Calif. Variable camber wing. 2,410,056; Oct. 29.

Frieder, Leonard P., New York, N. Y. Parachute. 2,410,207; Oct. 29.

Frieder, Leonard P., Rockville Centre, and W. S. Finken, Brooklyn, N. Y.; said Finken assignor to said Frieder. Parachute. 2,410,057; Oct. 29.

Frische, Carl A., Leonia, and G. N. Hanson, Allendale, N. J., assignors to Sperry Gyroscope Company, Inc., Brooklyn, N. Y. Automatic climb and glide control for aircraft. 2,410,058; Oct. 29.

Frixione, Pedro A., Buenos Aires, Argentina. Paper bag having a burlap sampling zone. 2,410,282; Oct. 29.

Gallamore, Oliver H., assignor to Diamond Chain and Manufacturing Company, Indianapolis, Ind. Grip for hoists. 2,410,378; Oct. 29.

Garber, Claude Y.: *See*—
Zeigler, William L., and Garber.

Gardner, Irving, Brooklyn, N. Y. Paper hat. 2,410,158; Oct. 29.

Garr, Donald E., Schenectady, N. Y., assignor to General Electric Company. Screwdown control system. 2,410,283; Oct. 29.

Garrison, Kenneth C., Norwalk, Calif. Folding newspapers and the like. 2,410,059; Oct. 29.

Garwood, John S.: *See*—
Morgenthaler, Frederick W., and Garwood.

Gáspár, Béla, Hollywood, Calif., assignor to Chromogen, Incorporated. Production of colored photographic pictures. 2,410,025; Oct. 29.

Gaspar, Emeric: *See*—
Windsor, Reginald H., and Gaspar.

Gauldin, Robert A., assignor of one-half to T. H. Netherton, Enid, Okla. Button protector. 2,410,208; Oct. 29.

Gaylord Container Corporation, assignee: *See*—
Buhrmaster, Frederick R.

Gaylord Products, Incorporated, assignee: *See*—
Reynolds, Frank D.

General Controls Co., assignee: *See*—
Paille, Eugene.
Ray, William A.

General Electric Company, assignee: *See*—
Favre, John A.
Garr, Donald E.
Johnson, Paul S., and Dodds.
Kuehni, Hans P., and Branson.

General Motors Corporation, assignee: *See*—
Smith, Jasper A.

Gleason Works, assignee: *See*—
Johanson, Magnus H., and Wildhaber.

Godsey, H. Mitchell, Crockett, Tex. Combined wheel rim and pneumatic tire. 2,410,209; Oct. 29.

Goodale, Lynn C., assignor to Federal Telephone and Radio Corporation, Newark, N. J. Producing vacuum tube electrodes. 2,410,060; Oct. 29.

Goodale, Lynn C., assignor to Federal Telephone and Radio Corporation, Newark, N. J. Sealing lead-in conductors. 2,410,061; Oct. 29.

Goodrich, B. F., Company, The, assignee: *See*—
Hollerith, Charles.
Smisko, John.

Goudime-Levkovitsch, Paul, Wentworth, assignor to Simmonds Aerocessories Limited, London, England. Computer of the slide rule type. 2,410,210; Oct. 29.

Gough, James J., assignor to Chicago Electric Manufacturing Company, Chicago, Ill. Portable electric heater. 2,410,211; Oct. 29.

Grieg, Donald D.: *See*—
Labin, Emile, and Grieg.

Grip Nut Company, assignee: *See*—
Abbott, Gail C.

Groene, William F., Cincinnati, and H. C. Kemper, Goshen Township, Clermont County, assignors to The R. K. Le Blond Machine Tool Company, Cincinnati, Ohio. Automatic lathe. 2,410,026; Oct. 29.

Gross, Alfred G., Wilmette, Ill., assignor to The Hoover Company, North Canton, Ohio. Refrigeration. 2,410,342; Oct. 29.

Guildford, Joseph R., Buffalo, N. Y. Nonslip joint split ring union device. 2,410,027; Oct. 29.

Gunness, Robert C., Chicago, Ill., and J. W. Jewell, Summit, N. J., assignors of one-half to Standard Oil Company and one-half to The M. W. Kellogg Company. Catalytic cracking system. 2,410,284; Oct. 29.

H. & A. Manufacturing Co., assignee: *See*—
Reiser, Alfred A.

H-P-M Development Corporation, assignee: *See*—
Ashbaugh, Bernard D.

Haensel, Vladimir: *See*—
Thomas, Charles L., and Haensel.

Haigh, Leslie B., West Orange, and F. A. Stearn, Westfield, N. J., assignors to Federal Telephone and Radio Corporation, New York, N. Y. Telephone key. 2,410,062; Oct. 29.

Haivala, William S., Kennewick, Wash. Concrete float. 2,410,343; Oct. 29.

Hall, Roger N.: *See*—
Fremlin, John H., and Hall.

Hansen, William W., Garden City, R. H. Varian, Wantagh, and S. F. Varian, Garden City, N. Y., assignors to The Board of Trustees of the Leland Stanford Junior University, Stanford University, Calif. High-frequency tube structure and apparatus. 2,410,063; Oct. 29.

Hanson, Gerald N.: *See*—
Frische, Carl A., and Hanson.

Hardesty, George K. C., Seat Pleasant, Md. Illuminated dial and pointer. 2,410,064; Oct. 29.

Hardy, John: *See*—
Rines, Albert H., Hardy, and O'Keefe.

Harrer, Paul H., and C. H. Roth, La Porte, Ind., assignors to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Rotary baler. 2,410,159; Oct. 29.

Harris, Arthur H.: *See*—
Olmsted, Russell C., and Harris.

Harrison, Bertram M., Newton, assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Electrical circuit. 2,410,065; Oct. 29.

Harrison, Bertram M., Newton Highlands, assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Submarine signaling. 2,410,066; Oct. 29.

Harrison, Bertram M., Newton Highlands, assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Submarine signaling. 2,410,067; Oct. 29.

Haseltine, Stacy B.: *See*—
Johnson, George A., and Haseltine.

Haseltine, Stacy B., La Grange, assignor to W. H. Miner, Inc., Chicago, Ill. Combined spring and friction shock absorber. 2,410,160; Oct. 29.

Hathaway, Claude M., Denver, Colo., assignor to Hathaway Instrument Company. Galvanometer. 2,410,379; Oct. 29.

Hathaway Instrument Company, assignee: *See*—
Hathaway, Claude M.

Heilbronner, Harry S., Perry, N. Y. Garment. 2,410,212; Oct. 29.

Helbein, William, New York, N. Y. Display case for wrist watches and the like. 2,410,161; Oct. 29.

Hendley, James A., assignor to The Russell Manufacturing Company, Middletown, Conn. Textile webbing. 2,410,028; Oct. 29.

Herbster, George, assignor to John H. Leonard, Cleveland, Ohio, as trustee. Gas range oven. 2,410,285; Oct. 29.

Hercules Powder Company, assignee: *See*—
Borglin, Joseph N.
Dusenbury, Millard R.

Herkenhoff, Earl C.: *See*—
Booth, Robert B., and Herkenhoff.

Herro, Alexander C., and P. Smart, assignors to Carnation Company, Oconomowoc, Wis. Electrolytic can cleaner. 2,410,213; Oct. 29.

Hickman, Albert F., assignor to Hickman Pneumatic Seat Co. Inc., Eden, N. Y. Spring suspension for railroad cars. 2,410,068; Oct. 29.

Hickman Pneumatic Seat Co. Inc., assignee: *See*—
Hickman, Albert F.

Higginson, Joseph H., and H. C. Riggs, Andover, Mass., assignors to Riggs & Lombard, Inc., Lowell, Mass. Safety mechanism for dye kettles and the like. 2,410,214; Oct. 29.

Hines, Rufus E., Chicago, Ill. Collet chuck. 2,410,344; Oct. 29.

Hinkley, Ray A., assignor to Corning Glass Works, Corning, N. Y. Perforating and tabulating apparatus. 2,410,345; Oct. 29.

Hollerith, Charles, Jackson, Mich., assignor, by mesne assignments, to The B. F. Goodrich Company, Akron, Ohio. Brake block guard. 2,410,029; Oct. 29.

Holm, Sven: *See*—
Cooper, Roland S., and Holm.

Holman, Arthur J., East Orange, N. J. Objective for projection, photography, television, and for telescope. 2,410,069; Oct. 29.

Home Curtain Corporation, assignee: *See*—
Lepow, Edward.

Hood, Harrison P., assignor to Corning Glass Works, Corning, N. Y. Glass having low power factor. 2,410,286; Oct. 29.

Hoover Company, The, assignee: *See*—
Brace, George A.
Gross, Alfred G.
Kitto, William H.
Penn, Carl O.

Horan, Joseph H., Bronx, N. Y. Agitator for liquid cooling systems. 2,410,162; Oct. 29.

Horni, Paul P., Newark, N. J. Vehicle mounted fruit picker. 2,410,030; Oct. 29.

Horton, Aaron W., Detroit, Mich., assignor to Socony-Vacuum Oil Company, Incorporated. Catalytic alkylation process. 2,410,070; Oct. 29.

Horton, Aaron W., Detroit, Mich., and J. W. Brooks, Wenonah, and A. A. O'Kelly, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Catalytic alkylation process. 2,410,071; Oct. 29.

Horton, Aaron W., Detroit, Mich., and J. W. Brooks, Wenonah, and A. A. O'Kelly, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Alkylation of isobutane with propylene. 2,410,072; Oct. 29.

Houdaille-Hershey Corporation, assignee: *See*—
Magrum, Gervase M.

Houdry Process Corporation, assignee: *See*—
Bond, George R., Jr.

Houghton, Henry G., Wellesley Hills, Mass. Spray nozzle. 2,410,215; Oct. 29.

Howard, John B., Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated. Manufacture of polyesters. 2,410,073; Oct. 29.

Howard, Willis G., Indianapolis, Ind. Apparatus for decrating eggs. 2,410,163; Oct. 29.

Hoyer, Arnold Z., Conshohocken, Pa., assignor, by mesne assignments, to Kimble Glass Company, Vineland, N. J. Thermohydrometer. 2,410,031; Oct. 29.

Hughes By-Product Coke Oven Corporation, assignee: *See*—
Hughes, Charles H.

Hughes, Charles H., Glen Ridge, N. J., assignor to Hughes By-Product Coke Oven Corporation. Apparatus for pyrolytically treating hydrocarbons. 2,410,074; Oct. 29.

Hughes, Everett C.: *See*—
Burk, Robert E.

Hutchins, James F., and W. K. White, Jr., San Antonio, Tex. Rapid frequency change radio receiver. 2,410,075; Oct. 29.

Hyde, James F., assignor to Corning Glass Works, Corning, N. Y. Lubricant. 2,410,346; Oct. 29.

Hydraulic Brake Company, assignee: *See*—
LaBrie, Ludger E.

Hytron Corporation, assignee: *See*—
Rines, Albert H., Hardy, and O'Keefe.

Insoll, Edward T., Chicago, Ill. Stacking box. 2,410,216; Oct. 29.

Interior, United States of America, as represented by the Secretary of, assignee: *See*—
Breton, Ernest J., and Waggaman.

International Standard Electric Corporation, assignee: *See*—
Deakin, Gerald.
Litton, Charles V.

Irwin, Carl F.: *See*—
Perkins, Melvin A., and Irwin.

Irwin, Justus C., Minneapolis, assignor to Wright Products, Inc., St. Paul Park, Minn. Door latch. 2,410,347; Oct. 29.

Jaberg, Howard A., Cincinnati, Ohio. Electrical equipment. 2,410,287; Oct. 29.

Jackson, Honel A., Detroit, Mich. Electrode holder. 2,410,164; Oct. 29.

Jamieson, Marcel, and L. Tremblay, Chicoutimi, assignors to Liquid Carbonic Canadian Corporation Limited, Montreal, Quebec, Canada. Label scraping attachment for bottle washing machines. 2,410,380; Oct. 29.

Jenkins, Vance N., Palos Verdes Estates, assignor to Union Oil Company of California, Los Angeles, Calif. Lubricating oil composition. 2,410,381; Oct. 29.

Jewell, Joseph W.: *See*—
Gunness, Robert C., and Jewell.

Johanson, Magnus H., Rochester, and E. Wildhaber, Brighton, assignors to Gleason Works, Rochester, N. Y. Method and machine for relieving gear cutters. 2,410,348; Oct. 29.

Johnson, George A., Chicago, and S. B. Haseltine, La Grange, assignors to W. H. Miner, Inc., Chicago, Ill. Friction shock absorber. 2,410,165; Oct. 29.

Johnson, Kenneth S., South Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated. Negative impedance circuit. 2,410,076; Oct. 29.

Johnson-March Corporation, The, assignee: *See*—
Kleinicke, Werner E.

Johnson, Paul S., Wakefield, and J. W. Dodds, Lynnfield, Mass., assignors to General Electric Company. Instrument balance weight. 2,410,288; Oct. 29.

Just, Ralph R., Salem, Oreg. Support for sheep shearing apparatus. 2,410,217; Oct. 29.

Kaplan, Saul, Rutherford, N. J., assignor to Onyx Oil & Chemical Company. Manufacture. 2,410,382; Oct. 29.

Kaufmann, John J., Jr., Greenville, S. C., assignor to Steel Heddle Manufacturing Company, Philadelphia, Pa. Loom shuttle. 2,410,383; Oct. 29.

Keese, Beverly W., Oshkosh, Wis., assignor to The Timken-Detroit Axle Company, Detroit, Mich. Power take-off unit. 2,410,077; Oct. 29.

Kellgren, Waldo: *See*—
Lundquist, William E., and Kellgren.

Kellgren, Waldo, assignor to Minnesota Mining & Manufacturing Company, St. Paul, Minn. Unified fibrous fabric. 2,410,078; Oct. 29.

Kellgren, Waldo, assignor to Minnesota Mining & Manufacturing Company, St. Paul, Minn. Pressure-sensitive adhesive. 2,410,079; Oct. 29.

Kellogg, Edward W., Indianapolis, Ind., assignor to Radio Corporation of America. Electrical servo system. 2,410,289; Oct. 29.

Kellogg, M. W., Company, The, assignee, et al.: *See*—
Gunness, Robert C., and Jewell.

Kellogg, William M., Morristown, N. J., assignor to Bell Telephone Laboratories, Incorporated. High frequency apparatus. 2,410,080; Oct. 29.

Kelly, Frederick G., assignor to Thomas A. Edison, Incorporated, West Orange, N. J. Thermopile for fire alarm systems. 2,410,218; Oct. 29.

Kemper, Harry C.: *See*—
Groene, William F., and Kemper.

Kenaga, Eugene E.: *See*—
Fletcher, Fred W., and Kenaga.

Kendall Company, The, assignee: *See*—
Savage, Lawrence A.

Kenyon, David E., Smithtown, N. Y., assignor to Sperry Gyroscope Company, Inc. Electric circuit. 2,410,081; Oct. 29.

Keysor, Harold C., Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill. Truck. 2,410,032; Oct. 29.

Keysor, Harold C., assignor to American Steel Foundries, Chicago, Ill. Spring assembly. 2,410,290; Oct. 29.

Kilborn-Sauer Company, The, assignee: *See*—
Sauer, Henry J.

Kimball, Thomas B., Hammond, Ind., assignor to Sinclair Refining Company, New York, N. Y. Separating toluene. 2,410,166; Oct. 29.

Kimble Glass Company, assignee: *See*—
Hoyer, Arnold Z.

Kinetic Chemicals, Inc., assignee: *See*—
Park, Joseph D., and Rhodes.

King, Ernest J., New York, N. Y. Hat construction. 2,410,033; Oct. 29.

Kinnucan, James W., assignor to Continental Aviation and Engineering Corporation, Detroit, Mich. Accessory mechanism and drive for aircraft engines. 2,410,167; Oct. 29.

Kinzbach, Robert B., Houston, Tex. Stuffing box. 2,410,291; Oct. 29.

Kispert, Joseph J., Branford, Conn. Ventilated corset. 2,410,082; Oct. 29.

Kispert, Joseph J., Branford, Conn. Corset. 2,410,083; Oct. 29.

Kitto, William H., Canton, assignor to The Hoover Company, North Canton, Ohio. Refrigeration. 2,410,292; Oct. 29.

Kitto, William H., Greentown, assignor to The Hoover Company, North Canton, Ohio. Suction cleaner. 2,410,293; Oct. 29.

Kleinicke, Werner E., Manhasset, assignor to The Johnson-March Corporation, New York, N. Y. Hand cleaner. 2,410,168; Oct. 29.

Korten, Ernst, Frankfort-on-the-Main-Fechenheim, Germany; vested in the Alien Property Custodian. Softening agent. 2,410,294; Oct. 29.

Kuehni, Hans P., and N. G. Branson, Schenectady, N. Y., assignors to General Electric Company. Automatic pattern controlled machine tool. 2,410,295; Oct. 29.

Kuizenga, Marvin H., assignor to The Upjohn Company, Kalamazoo, Mich. Recovery of heparin. 2,410,084; Oct. 29.

Labin, Emile, New York, N. Y., assignor to Federal Telephone and Radio Corporation, Newark, N. J. Vacuum tube. 2,410,349; Oct. 29.

Labin, Emile, New York, and D. D. Grieg, Forest Hills, N. Y., assignors to Federal Telephone and Radio Corporation, Newark, N. J. Communication. 2,410,350; Oct. 29.

LaBrie, Ludger E., assignor to Hydraulic Brake Company, Detroit, Mich. Fluid pressure producing device. 2,410,169; Oct. 29.

Lambert, Harry L., Enfield, assignor, by mesne assignments, to W. J. Pickering, New York, N. Y. Circuit controller. 2,410,085; Oct. 29.

Langstroth, Theodore A., Montclair, N. J., assignor to Sun Chemical Corporation. Pigment or dyestuff and making the same. 2,410,219; Oct. 29.

Langworthy, William P., Philadelphia, Pa. Core lamination and production thereof. 2,410,220; Oct. 29.

Latura, John J., Memphis, Tenn. Prefabricated dog house. 2,410,221; Oct. 29.

Lawrence, Howard C., Jr., Haddonfield, N. J., assignor to Radio Corporation of America. Tuning means. 2,410,222; Oct. 29.

Lawson, Walter E.: *See*—
Burrows, Lawton A., and Lawson.

Lazan, Benjamin J., Greenwich, Conn. Oscillator. 2,410,170; Oct. 29.

Le Blond Machine Tool Company, assignee: *See*—
Groene, William F., and Kemper.

Lees-Bradner Company, The, assignee: *See*—
Bradner, John A.

Leffingwell, Wallace B.: *See*—
Weesner, Carl W., and Leffingwell.

Legatski, Harold R., Bartlesville, Okla., assignor to Phillips Petroleum Company. Treatment of hydrocarbons. 2,410,223; Oct. 29.

Leland Stanford Junior University, Board of trustees, assignee: *See*—
Hansen, William W., and Varian, R. H. and S. F.

Le Lande, Lester R., assignor to The American Glare Shield Co., Inc., Cincinnati, Ohio. Glare shield. 2,410,171; Oct. 29.

Leonard, John H., assignee, trustee: *See*—
Herbster, George.

Lepow, Edward, New York, assignor to Home Curtain Corporation, Far Rockaway, N. Y. Pleating curtain construction. 2,410,224; Oct. 29.

Lever Brothers Company, assignee: *See*—
Paterson, William J.

Lewis, Charles, New York, N. Y. Comb. 2,410,086; Oct. 29.

Lindsay, Harold W., Oakland, Calif., assignor to the Government of the United States as represented by the Director of the Office of Scientific Research and Development, Office for Emergency Management. Furnace control system. 2,410,384; Oct. 29.

Line Material Company, assignee: *See*—
Schultz, William O.
Trogner, Arthur M.

Liquid Carbonic Canadian Corporation Limited, assignee: *See*—
Jamieson, Marcel, and Tremblay.

Litton, Charles V., Redwood City, Calif., assignor to International Standard Electric Corporation, New York, N. Y. Wave impulse generator. 2,410,087; Oct. 29.

Lockhart, Margaret L., assignee: *See*—
Lockhart, Marshall L.

Lockhart, Marshall L., assignor of one-half to M. L. Lockhart, Detroit, Mich. Hypodermic syringe. 2,410,351; Oct. 29.

Loukomsky, Serge A., Bound Brook, N. J., and C. R. Stock, Greenwich, Conn., assignors to American Cyanamid Company, New York, N. Y. Plastometer. 2,410,385; Oct. 29.

Luaces, Enrique L., assignor to Chemical Developments Corporation, Dayton, Ohio. Method of reclaiming soiled solvent by distillation and adsorption. 2,410,034; Oct. 29.

Luaces, Enrique L., assignor to Chemical Developments Corporation, Dayton, Ohio. Extrusion apparatus. 2,410,035; Oct. 29.

Lundquist, Carl E. E., Stockholm, Sweden. Adjustable chair, bedstead, stretcher, or the like. 2,410,088; Oct. 29.

Lundquist, William E., and W. Kellgren, assignor to Minnesota Mining & Manufacturing Company, St. Paul, Minn. Pressure-sensitive adhesive tape. 2,410,089; Oct. 29.

Lusher, Albert C., deceased, by the Citizens and Manufacturers National Bank of Waterbury, administrator, Waterbury, Conn. Self-locking nut. 2,410,090; Oct. 29.

Lutherman, Lewis A., and E. L. Thompson, assignors to Pullman-Standard Car Manufacturing Company, Chicago, Ill. Auxiliary berth arrangement. 2,410,173; Oct. 29.

Lynch, Edward J., Detroit, Mich. Feed head for rotary tools. 2,410,091; Oct. 29.

Lyon, George A., Allenhurst, N. J. Wheel structure. 2,410,174; Oct. 29.

Lysholm, Alf, Stockholm, Sweden, assignor, by mesne assignments, to J. C. Marble, L. M. Merrill, and P. H. Batten, as trustees. Rotary screw wheel apparatus. 2,410,172; Oct. 29.

MacDonald, George A., Los Angeles, Calif. Ink fountain. 2,410,296; Oct. 29.

Machamer, Hobart E., Oak Park, Ill., assignor to Ceco Steel Products Corporation, Omaha, Nebr. Joint. 2,410,175; Oct. 29.

Macht, Maurice L., Jersey City, and M. M. Renfrew, Arlington, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Coating by flame-spraying method. 2,410,225; Oct. 29.

Maenpa, Carl U., Rome, Ohio. Toilet implements. 2,410,352; Oct. 29.

Magrum, Gervase M., Buffalo, N. Y., assignor to Houdaille-Hershey Corporation, Detroit, Mich. Shock absorber. 2,410,176; Oct. 29.

Mahlberg, Elroy F., Fairfield, Conn., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Coupling combination. 2,410,297; Oct. 29.

Marble, Jarvis C., assignee, et al., trustee: *See*—
Lysholm, Alf.

Markey, Roscoe I., East Orange, assignor to Pollak Manufacturing Company, Arlington, N. J. Bomb releasing shackle. 2,410,036; Oct. 29.

Martin, Charles C., Savannah, Ga. Sanitary field latrine. 2,410,092; Oct. 29.

Martin, Earle, Hutchinson, Kans. Trousers construction. 2,410,226; Oct. 29.

Martinec, Eugene F., Cleveland, Ohio. Gauging device. 2,410,093; Oct. 29.

Martinec, Eugene F., Cleveland, Ohio. Gauging device. 2,410,094; Oct. 29.

Marvin, Ralph J., and A. Wiebke, Los Angeles, Calif. Combination compression and oil scraping ring. 2,410,177; Oct. 29.

Masts Limited, assignee: *See*—
Scrivener, William C., and Brewer.

Matthews, Carlton T., Green Bay, Wis. Christmas tree holder. 2,410,227; Oct. 29.

Maxey, Robert E. L., Akron, Ohio. Highway traffic post. 2,410,228; Oct. 29.

McCleary, Ray L., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Production of titanium compounds. 2,410,119; Oct. 29.

McCollum, Henry J. De N., deceased, Chicago, Ill.; Thelma McCollum, executrix. Heater. 2,410,353; Oct. 29.

McCollum, Thelma, executrix: *See*—
McCollum, Henry J. De N.

McDonnell, Lester V., and P. Satterlee, Detroit, Mich. Attaching clips. 2,410,120; Oct. 29.

McInturff, William H., Warrington, Fla. Internal-combustion engine. 2,410,095; Oct. 29.

McNabb, Louis A., Glenview, assignor to Bell & Howell Company, Chicago, Ill. Sprocket device. 2,410,121; Oct. 29.

Mercer, William R., Hightstown, and B. R. Cole, Princeton, N. J., assignor to Radio Corporation of America. Balanced detector for altimeters. 2,410,122; Oct. 29.

Merrill, Leslie M., assignee, et al., trustee: *See*—
Lysholm, Alf.

Metropolitan Device Corporation, assignee: *See*—
Phelps, George H.

Meyer, Joseph B., Kenosha, Wis. Fluid pressure pump. 2,410,354; Oct. 29.

Meyer, Ronald E., and F. P. Otto, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Preparing high molecular weight aliphatic ketones. 2,410,096; Oct. 29.

Milasus, Aloysius G., Roselle, N. J. Telephone line pulsing device. 2,410,178; Oct. 29.

Miller, Daniel, Montebello, Calif. Miniature gasoline engine. 2,410,229; Oct. 29.

Miller, John H., Short Hills, N. J., assignor to Weston Electrical Instrument Corporation, Newark, N. J. Electrical testing apparatus. 2,410,386; Oct. 29.

Miller Pottery Engineering Company, assignee: *See*—
Miller, William J.
Miller, William J., and Reek.

Miller, William J., Pittsburgh, assignor to Miller Pottery Engineering Company, Swissvale, Pa. Apparatus for producing potteryware. 2,409,999; Oct. 29.

Miller, William J., Swissvale, and A. J. Reek, Carrick, assignors to Miller Pottery Engineering Company, Swissvale, Pa. Method and apparatus for appendaging potteryware. 2,410,123; Oct. 29.

Miner, W. H., Inc., assignee: *See*—
Dath, George E.
Haseltine, Stacy B.
Johnson, George A., and Haseltine.

Minnesota Mining & Manufacturing Company, assignee: *See*—
Drew, Richard G.
Kellgren, Waldo.
Lundquist, William E., and Kellgren.

Mirel, Arthur G., assignor to Structural Planeparts, Inc., New York, N. Y. Metalworking machine. 2,410,298; Oct. 29.

Modine Manufacturing Company, assignee: *See*—
Perkins, Charles T.

Morgan, Willard L., Columbus, Ohio, assignor of one-half to A. E. Staley Manufacturing Company, Decatur, Ill., and one-half to American-Maize Products Company, New York, N. Y. Production of plasticized prolamine and derivative compositions. 2,410,124; Oct. 29.

Morgenthaler, Frederick W., Brooklyn, and J. S. Garwood, New York, assignors to Sperry Gyroscope Company, Inc., Brooklyn, N. Y. Glide attachment for bomb sights. 2,410,097; Oct. 29.

Mueller, William P., Emporium, Pa., assignor to Sylvania Electric Products Inc. High-frequency wave signaling system. 2,410,387; Oct. 29.

Muller, Carl W., Osborn, Ohio. Connector assembly, thermocouple lead. 2,410,098; Oct. 29.

Murtagh, Gilbert, Port Washington, N. Y. Screw or threaded rod mounting. 2,410,299; Oct. 29.

Myers, Claude G.: *See*—
Sachanen, Alexander N., O'Kelly, and Myers.

Nash-Kelvinator Corporation, assignee: *See*—
Philipp, Lawrence A.

National Dairy Products Corporation, assignee: *See*—
Rainard, Leo W.

National Fireworks, Inc., assignee: *See*—
Westervelt, John R., Jr.

National Supply Company, The, assignee: *See*—
Bishop, James O., and Babcock.
Stevenson, Lawrence J., and Babcock.

National Tube Company, assignee: *See*—
Nesbitt, Andrew B., and Webb.

Neal, Charles M., Biddeford, Maine, assignor to Saco-Lowell Shops, Boston, Mass. Oil circulating spindle. 2,410,388; Oct. 29.

Nesbitt, Andrew B., and S. Webb, Pittsburh, Pa., assignors to National Tube Company. Severing tool. 2,410,355; Oct. 29.

Netherton, Truman H., assignee: *See*—
Gauldin, Robert A.

Nicoll, Frederick H., Princeton, N. J., assignor to Radio Corporation of America. Nonreflective film. 2,410,300; Oct. 29.

Nilles, Philip C., and J. A. Steffen, Chicago, Ill. Auxiliary air furnishing device. 2,410,125; Oct. 29.

Noble, Glenn S., assignee: *See*—
Freeman, Alpheus J.

Norrman, Ernst, Delavan, Wis., assignor to George W. Borg Corporation, Chicago, Ill. Frequency divider. 2,410,389; Oct. 29.

Nygren, Joseph W., Naugatuck, Conn., assignor to United States Rubber Company, New York, N. Y. Carboy and assembling. 2,410,179; Oct. 29.

O'Keefe, Daniel J.: *See*—
Rines, Albert H., Hardy, and O'Keefe.

O'Kelly, Arlie A.: *See*—
Horton, Aaron W., Brooks, and O'Kelly.
Sachanen, Alexander N., O'Kelly, and Myers.

Olmsted, Hazel B., administratrix: *See*—
Olmsted, Russell C., and Harris.

Olmsted, Russell C., Harrington Park, N. J., and A. H. Harris, New Britain, Conn., H. B. Olmsted, administratrix of said R. C. Olmsted, deceased, assignor to said Harris. Expansion joint for concrete roadway. 2,410,099; Oct. 29.

Olson, John W., Hastings-on-Hudson, assignor to Anaconda Wire and Cable Company, New York, N. Y. Machine for impregnating electric insulation. 2,410,126; Oct. 29.

Olson, John W., Hastings-on-Hudson, N. Y., and C. W. Bechle, Sycamore, Ill., assignors to Anaconda Wire and Cable Company, New York, N. Y. Machine for impregnating electric insulation. 2,410,127; Oct. 29.

O'Neal, Grady M., Chicago, Ill., assignor to The Sherwin-Williams Company, Cleveland, Ohio. Manufacture of copper phthalocyanine dyestuffs. 2,410,301; Oct. 29.

Onyx Oil & Chemical Company, assignee: *See*—
Kaplan, Saul.

Oscar, George R., West Milton, and W. S. Boals, Dayton, Ohio. Remote control firing mechanism for machine guns. 2,410,100; Oct. 29.

Otto, Ferdinand P.: *See*—
Meyer, Ronald E., and Otto.

Paille, Eugene, Los Angeles, assignor to General Controls Co., Glendale, Calif. Thermoelectric generating device. 2,410,128; Oct. 29.

Pako Corporation, assignee: *See*—
Sardeson, Robert, and Savela.

Paley, Lewis A., Glen Ellyn, Ill., assignor to United States Gypsum Company, Chicago, Ill. Quick setting anhydrite and its manufacture. 2,410,390; Oct. 29.

Palmer, Charles M., Washington, D. C. Eyelash curler. 2,410,391; Oct. 29.

Park, Joseph D., Wilmington, Del., and W. W. Rhodes, Westtown, Pa., assignors to Kinetic Chemicals, Inc., Wilmington, Del. Wax free pyrethrin solutions. 2,410,101; Oct. 29.

Parker, Alvin S., Jr., High Point, N. C. Clothes drying, blocking, or stretching device. 2,410,230; Oct. 29.

Parmelee, Alfred E., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Purification of tetraethyl lead. 2,410,356; Oct. 29.

Paterson, William J., Newton Highlands, assignor to Lever Brothers Company, Cambridge, Mass. Hydrobleaching glyceride oils. 2,410,102; Oct. 29.

Patterson, Gordon D.: *See*—
Sloan, Clifford K., and Patterson.

Pattilloch, Donald K., Springfield, Mass., assignor of one-half to Chemical Development Company, Chicago, Ill., and one-half to G. B. Fowler, Springfield, Mass. Paper sizing. 2,410,357; Oct. 29.

Payne, John W., assignee: *See*—
Simpson, Thomas P., Payne, and Crowley.

Pease, Charles F., Long Beach, Calif. Vending machine. 2,410,231; Oct. 29.

Pedigo, Arthur J., Cookeville, Tenn. Refrigerating apparatus. 2,410,232; Oct. 29.

Pelletier, Paul E., Jr.: *See*—
Woodstock, Willard H., and Pelletier.

Penn, Carl O., Canton, assignor to The Hoover Company, North Canton, Ohio. Suction cleaner. 2,410,302; Oct. 29.

Percival, William S., Ealing, London, W. 5, assignor to Electric & Musical Industries Limited, Hayes, Middlesex, England. Method and apparatus for reducing the effect of interference. 2,410,233; Oct. 29.

Perfex Corporation, assignee: *See*—
Frerer, Paul G.

Perkins, Charles T., assignor to Modine Manufacturing Company, Racine, Wis. Noncongealing oil cooler construction. 2,410,180; Oct. 29.

Perkins, Melvin A., and C. F. Irwin, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparing antimony pentafluoride. 2,410,358; Oct. 29.

Perm Ltd., assignee: *See*—
Speakman, John B.

Permanente Metals Corporation, The, assignee: *See*—
Byrns, Alva C.

Perry, John S. C., and A. T. Prince, Kilmar, Quebec, assignors to Canadian Refractories, Limited, Montreal, Quebec, Canada. Bonded refractory for furnace linings. 2,410,359; Oct. 29.

Peters, Malcolm R., San Mateo, Calif. Stretcher. 2,410,181; Oct. 29.

Petty, Olive S., San Antonio, Tex. Seismic surveying. 2,410,303; Oct. 29.

Phelps, George H., Floral Park, assignor to Metropolitan Device Corporation, Brooklyn, N. Y. Dehydrator. 2,410,129; Oct. 29.

Philco Corporation, assignee: *See*—
Albright, Robert B.

Philipp, Lawrence A., assignor to Nash-Kelvinator Corporation, Detroit, Mich. Refrigerating apparatus. 2,410,360; Oct. 29.

Phillips Control Corporation, assignee: *See*—
Wasserlein, Henry G.

Phillips Petroleum Company, assignee: *See*—
Legatski, Harold R.

Pickering, Walter J., assignee: *See*—
Lambert, Harry L.

Plumtree, Leona T., South San Francisco, Calif. Hair clip. 2,410,130; Oct. 29.

Pollak Manufacturing Company, assignee: *See*—
Markey Roscoe I.

Poor & Company, assignee: *See*—
Boland, Edward J.

Powell, Winfred T., assignor to Stromberg-Carlson Company, Rochester, N. Y. Automatic telephone system. 2,410,304; Oct. 29.

Prance, Alvin W., Royal Oak, assignor to Briggs Manufacturing Company, Detroit, Mich. Making plastic articles. 2,410,361; Oct. 29.

Premier Crystal Laboratories, Incorporated, assignee: *See*—
Bach, Henry M.

Prince, Alan T.: *See*—
Perry, John S. C., and Prince.

Prior, Fred, Dallas, Tex. Fuel tank mounting. 2,410,182; Oct. 29.

Pullman-Standard Car Manufacturing Company, assignee: *See*—
Lutherman, Lewis A., and Thompson.

Purves Corporation, The, assignee: *See*—
Beach, Lennox F.

Radio Corporation of America, assignee: *See*—
Anderson, Earl I.
Blitz, Daniel.
Carlson, Wendell L.
Flory, Leslie E.
Kellogg, Edward W.
Lawrence, Howard C., Jr.
Mercer, William R., and Cole.
Nicoll, Frederick H.
Sziklai, George C.
Tolson, William A.

Rainard, Leo W., Cochituate, Mass., assignor, by mesne assignments, to National Dairy Products Corporation, New York, N. Y. Curing acrylate polymers and resulting product. 2,410,103; Oct. 29.

Rainey, Paul M., Martinsville, N. J., assignor to Federal Telephone & Radio Corporation. Light directing device. 2,410,104; Oct. 29.

Ray, William A., Glendale, Calif., assignor to General Controls Co. Electromagnetic device. 2,410,183; Oct. 29.

Raytheon Manufacturing Company, assignee: *See*—
Spencer, Percy L.

Read, Robert C., Wilton, Conn., and E. W. Schlieben, Scarsdale, assignors to York Research Corporation, New York, N. Y. Combination aerial and land vehicle. 2,410,234; Oct. 29.

Reaney, Warford A., Delaware, Ohio. Method and apparatus for heat treating calcareous materials. 2,410,235; Oct. 29.

Reaney, Warford A., Delaware, Ohio. Method and apparatus for heat treating loose bulk materials. 2,410,236; Oct. 29.

Reek, Ashley J.: *See*—
Miller, William J., and Reek.

Reeves Pulley Company, assignee: *See*—
Falk, Irvin V.

Regents of the University of Michigan, assignee: *See*—
Blicke, Frederick F.

Reiser, Alfred A., Buffalo, assignor, by mesne assignments, to H. & A. Manufacturing Co., Binghamton, N. Y. Electrical contact heater. 2,410,362; Oct. 29.

Remus, Valentin; vested in the Alien Property Custodian. Valve. 2,410,105; Oct. 29.

Renfrew, Malcolm M.: *See*—
Macht, Maurice L., and Renfrew.

Renshaw, Samuel, Columbus, Ohio. Tachistosopic apparatus. 2,410,237; Oct. 29.

Reynolds, Frank D., assignor to Gaylord Products, Incorporated, Chicago, Ill. Hair curler. 2,410,106; Oct. 29.

Rhodes, William W.: *See*—
Park, Joseph D., and Rhodes.

Rich, Clayton L., Los Angeles, Calif. Wrench. 2,410,392; Oct. 29.

Richter, Henry J., and H. S. Rothrock, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Polymerized esters of carboxylic acids and preparation of same. 2,410,305; Oct. 29.

Riggs, Homer C.: *See*—
Higginson, Joseph H., and Riggs.

Riggs & Lombard, Inc., assignee: *See*—
Higginson, Joseph H., and Riggs.

Rines, Albert H., Amesbury, and J. Hardy, and D. J. O'Keefe, Newburyport, Mass., assignors to Hytron Corporation. Box end folding machine. 2,410,393; Oct. 29.

Ringrose, Joseph E., Redmond, Oreg. Hay loading apparatus. 2,410,238; Oct. 29.

Roder, Frank Z., assignee, et al.: *See*—
Andrzejewski, Clara.

Roe, Carl, Mineola, N. Y. Airplane. 2,410,239; Oct. 29.

Roethel Engineering Corporation, assignee: *See*—
Roethel, John H.

Roethel, John H., assignor to Roethel Engineering Corporation, Detroit, Mich. Window regulator. 2,410,363; Oct. 29.

Romberg, Raymond A., Orange, Conn. Welding shield or the like. 2,410,306; Oct. 29.

Rosenthal, Harry, Belle Harbor, N. Y. Electrical jumper for short circuiting the contacts of fluorescent lamp sockets. 2,410,364; Oct. 29.

Roth, Clayton H.: *See*—
Harrer, Paul H., and Roth.

Rothrock, Henry S.: *See*—
Richter, Henry J.

Rumsey, Joseph B., Westwood, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Apparatus for converting tow to top. 2,410,307; Oct. 29.

Russell Manufacturing Company, The, assignee: *See*—
Hendley, James A.

Sachanen, Alexander N., and A. A. O'Kelly, Woodbury, N. J., and C. G. Myers, Bryn Mawr, Pa., assignors to Socony-Vacuum Oil Company, Incorporated. Alkylation process. 2,410,107; Oct. 29.

Sachanen, Alexander N., and A. A. O'Kelly, Woodbury, N. J., and C. G. Myers, Bryn Mawr, Pa., assignors to Socony-Vacuum Oil Company, Incorporated. Alkylation. 2,410,108; Oct. 29.

Saco-Lowell Shops, assignee: *See*—
Neal, Charles M.

Sardeson, Robert, and E. H. Savela, assignors to Pako Corporation, Minneapolis, Minn. Film holding device. 2,410,131; Oct. 29.

Satterlee, Percy: *See*—
McDonnell, Lester V., and Satterlee.

Sauer, Henry J., assignor to The Kilborn-Sauer Company, Fairfield, Conn. Dirigible searchlight. 2,410,365; Oct. 29.

Sauer, Henry J., assignor to The Kilborn-Sauer Company, Fairfield, Conn. Lamp. 2,410,366; Oct. 29.

Savage, Lawrence A., Pelzer, S. C., assignor to The Kendall Company, Boston, Mass. Manufacture of textiles. 2,410,394; Oct. 29.

Savela, Edward H.: *See*—
Sardeson, Robert, and Savela.

Scharwath, Clemens G., Long Branch, N. J. Self-insulated conduit. 2,410,308; Oct. 29.

Schauer, Lawrence B.: *See*—
Davidson, Trevor O., and Schauer.

Schauweker, George H., assignor to American Optical Company, Southbridge, Mass. Eye protection device. 2,410,184; Oct. 29.

Schelleng, John C., Interlaken, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Variable cavity resonator. 2,410,109; Oct. 29.

Schlicksupp, Theodore F., Long Island City, N. Y. Feeding mechanism for quilting machines and the like. 2,410,240; Oct. 29.

Schlieben, Ernest W.: *See*—
Read, Robert C., and Schlieben.

Schneider, Adolf G.: *See*—
Schneider, Heinrich and A. G.

Schneider Brothers Company, assignee: *See*—
Schneider, Heinrich and A. G.

Schneider, Heinrich, Hamilton, Ohio, and A. G. Schneider, Muncie, Ind., assignors to Schneider Brothers Company. Rotary hydraulic torque converter. 2,410,185; Oct. 29.

Schramm, Arthur G., Phoenix, Ariz. Riding dolly. 2,410,241; Oct. 29.

Schulein, Joseph, Corvallis, Oreg. Electrochemical process of treating chromite ore. 2,410,242; Oct. 29.

Schultz, William O., South Milwaukee, assignor to Line Material Company, Milwaukee, Wis. Brake and lock mechanism. 2,410,243; Oct. 29.

Schultz, William O., South Milwaukee, assignor to Line Material Company, Milwaukee, Wis. Fuse. 2,410,244; Oct. 29.

Scientific Research and Development, Office for Emergency Management, Government of the United States, as represented by the Director of the Office of, assignee: *See*—
Lindsay, Harold W.

Scrivener, William C., and A. G. Brewer, Sutton Coldfield, assignors to Masts Limited, Birmingham, England. Union for masts, poles, and the like. 2,410,245; Oct. 29.

Scrivener, William C., and A. G. Brewer, Sutton Coldfield, assignors to Masts Limited, Birmingham, England. Mast, pole, and the like. 2,410,246; Oct. 29.

Sellstrom Manufacturing Company, assignee: *See*—
Anderson, Marshall N., and Sellstrom.

Sellstrom, Melvin H., assignee: *See*—
Anderson, Marshall N., and Sellstrom.

Shapiro, Jacob, Brooklyn, N. Y. Douche receptacle. 2,410,367; Oct. 29.

Sharon Steel Corporation, assignee: *See*—
Weesner, Carl W., and Leffingwell.

Sherwin-Williams Company, The, assignee: *See*—
O'Neal, Grady M.

Shields, Francis J., Bombay, N. Y. Slipper. 2,410,186; Oct. 29.

Simmonds Aerocessories Limited, assignee: *See*—
Goudime-Levkovitsch, Paul.

Simpson, Thomas P., J. W. Payne, and J. A. Crowley, Jr., Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Continuous catalytic system. 2,410,309; Oct. 29.

Sinclair Refining Company, assignee: *See*—
Kimball, Thomas B.

Singer Manufacturing Company, The, assignee: *See*—
Wood, Alfred R.

Sink & Float Corporation, The, assignee: *See*—
Zeigler, William L., and Garber.

Sloan, Clifford K., Thornton, Pa., and G. D. Patterson, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Coating composition. 2,410,187; Oct. 29.

Smart, Paul: *See*—
Herro, Alexander C., and Smart.

Smidth, Leonard, New York, N. Y., assignor to Sylvania Industrial Corporation, Fredericksburg, Va. Acid-curing synthetic resin combined with olefin-sulfur dioxide polymer. 2,410,395; Oct. 29.

Smisko, John, Washington, D. C., assignor, by mesne assignments, to The B. F. Goodrich Company, Akron, Ohio. Line pressure valve. 2,410,132; Oct. 29.

Smith, Clifford E., assignee: *See*—
Brock, Frank H., and Smith,

Smith, Howard, Paper Mills Limited, assignee: *See*—
Spencer, Harry S.

Smith, Jasper A., Oakwood, assignor to General Motors Corporation, Dayton, Ohio. Refrigerating apparatus. 2,410,310; Oct. 29.

Smith, John G., Brunswick, Ga. Racking apparatus. 2,410,247; Oct. 29.

Smith, John H., assignee: *See*—
Bardwell, Ralph F., and Smith.

Smith, Paul L.: *See*—
William, Lewis E., Jr., and Smith.

Socony-Vacuum Oil Company, Incorporated, assignee: *See*—
Horton, Aaron W.
Horton, Aaron W., Brooks, and O'Kelly.
Meyer, Ronald E., and Otto.
Sachanen, Alexander N., O'Kelly, and Myers.
Simpson, Thomas P., Payne, and Crowley.
Sowerwine, Elbert O., Jr.

Solomon, Charles, New York, N. Y. Button wing for garment sleeves. 2,410,188; Oct. 29.

Sowerwine, Elbert O., Jr., Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated. Apparatus for preparing formed gels. 2,410,314; Oct. 29.

Sowerwine, Elbert O., Jr., Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated. Apparatus for preparing formed gels. 2,410,315; Oct. 29.

Spatta, George, assignor to Clark Equipment Company, Buchanan, Mich. Axle. 2,410,133; Oct. 29.

Speakman, John B., Far Headingley, Leeds, England, assignor to Perm Ltd., Dover Del. Treatment of fibers or fibrous materials containing keratin. 2,410,248; Oct. 29.

Spencer, Harry S., Beauharnois, assignor to Howard Smith Paper Mills Limited, Montreal, Quebec, Canada. Warning alarm signal for paper machines. 2,410,249; Oct. 29.

Spencer, Percy L., assignor to Raytheon Manufacturing Company, West Newton, Mass. High efficiency magnetron. 2,410,396; Oct. 29.

Sperry Gyroscope Company, Inc., assignee: *See*—
Frische, Carl A., and Hanson.
Kenyon, David E.
Morgenthaler, Frederick W., and Garwood.
Varian, Russell H.

Squire, Robert L., assignee, et al.: *See*—
Andrzejewski, Clara.

Stackhouse, Milroy G., Homewood, Ala. Baby play pen. 2,410,368; Oct. 29.

Staley, A. E., Manufacturing Co., assignee: *See*—
Brock, Frank H., and Smith.
Morgan, Willard L.

Standard Oil Company, assignee, et al.: *See*—
Gunness, Robert C., and Jewell.

Standard Oil Company, The, assignee: *See*—
Burk, Robert E., and Hughes.

Standard Oil Development Company, assignee: *See*—
Campbell, Donald L.

Standard Railway Equipment Manufacturing Company, assignee: *See*—
West, Victor E.

Standard Telephones and Cables Limited, assignee: *See*—
Fremlin, John H., and Hall.
Weston, Jeffrey D.

Standolind Oil and Gas Company, assignee: *See*—
Farris, Riley F., and Clark.

Staples, Dana R., Ridley Park, Pa., assignor to The Baldwin Locomotive Works. Locomotive control panel. 2,410,250; Oct. 29.

Stearn, Franklin A.: *See*—
Haigh, Leslie B., and Stearn.

Steel Heddle Manufacturing Company, assignee: *See*—
Kaufmann, John J., Jr.

Steen, S. E., assignee: *See*—
Eilenberger, Stanley D.

Steffen, Joseph A.: *See*—
Nilles, Philip C., and Steffen.

Steinbach, Warner, Maplewood, N. J. Safety razor and blade magazine therefor. 2,410,311; Oct. 29.

Stevenson, Lawrence J., Torrance, and L. L. Babcock, Compton, Calif., assignors to The National Supply Company, Pittsburgh, Pa. Method and apparatus for flame hardening. 2,410,134; Oct. 29.

Stock, Charles R.: *See*—
Loukomsky, Serge A., and Stock.

Storch, Harold A., Fairview Village, Ohio. Molding apparatus. 2,410,312; Oct. 29.

Straubel, James W., assignee, trustee: *See*—
Straubel, Louis A. and J. W.

Straubel, Louis A. and J. W.; said L. A. Straubel assignor to J. W. Straubel, trustee, Green Bay, Wis. Creping machine. 2,410,189; Oct. 29.

Strezynski, George J., Chicago, Ill., assignor to The De Laval Separator Company, New York, N. Y. Centrifugal separating bowl. 2,410,313; Oct. 29.

Stromberg-Carlson Company, assignee: *See*—
Powell, Winfred T.
Vincent, Andrew W.

Structural Planeparts, Inc., assignee: *See*—
Mirel, Arthur G.

Submarine Signal Company, assignee: *See*—
Harrison, Bertram M.
Turner, Edwin E., Jr.

Sun Chemical Corporation, assignee: *See*—
Langstroth, Theodore A.

Sundback, Gideon, Meadville, Pa. Making slide fastener stringers. 2,410,135; Oct. 29.

Sylvania Electric Products Inc., assignee: *See*—
Mueller, William P.

Sylvania Industrial Corporation, assignee: *See*—
Smidth, Leonard.

Sziklai, George C., Bloomington, Ind., assignor to Radio Corporation of America. Power supply circuits. 2,410,369; Oct. 29.

T. I. (Group Services) Limited, assignee: *See*—
Evans, David W. T.

Tack, Carl E.: *See*—
Baselt, Walter H., and Tack.

Taft, Howard W., assignee, et al.: *See*—
Eilenberger, Stanley D.

Taurman, Alphonso, Birmingham, Ala. Bottle crate. 2,410,251; Oct. 29.

Taylor, Donald C.: *See*—
Carter, Frederick, and Taylor.
Taylor, Harden F., New York, N. Y., assignor, by mesne assignments, to Brewer & Company, Inc., Worcester, Mass. Making tablets. 2,410,110; Oct. 29.
Telefonaktiebolaget L. M. Ericsson, assignee: *See*—
Thielers, Ernst M., and Broberg.
Thielers, Ernst M., Stockholm, and W. O. W. Broberg, Nynashamn, assignors to Telefonaktiebolaget L. M. Ericsson, Stockholm, Sweden. Thermal circuit interrupter. 2,410,370; Oct. 29.
Thomas, Charles L., assignor to Universal Oil Products Company, Chicago, Ill. Production of motor fuel. 2,410,316; Oct. 29.
Thomas, Charles L., and V. Haensel, assignors to Universal Oil Products Company, Chicago, Ill. Treatment of hydrocarbons. 2,410,111; Oct. 29.
Thompson, Earl L.: *See*—
Lutherman, Lewis A., and Thompson.
Thompson Products, Inc., assignee: *See*—
Townhill, Arthur.
Timken-Detroit Axle Company, The, assignee: *See*—
Keese, Beverly W.
Toledo Scale Company, assignee: *See*—
Williams, Lawrence S.
Tolson, William A., Princeton, N. J., assignor to Radio Corporation of America. Heat responsive device. 2,410,317; Oct. 29.
Torrence, Edmond G., Port Arthur, Tex. Cable stripping tool. 2,410,252; Oct. 29.
Townhill, Arthur, assignor to Thompson Products, Inc., Cleveland, Ohio. Making plug type hollow poppet valves. 2,410,190; Oct. 29.
Tremblay, Laurent: *See*—
Jamieson, Marcel, and Tremblay.
Trogner, Arthur M., East Stroudsburg, Pa., assignor to Line Material Company, Milwaukee, Wis. Operating mechanism for electrical switches. 2,410,253; Oct. 29.
Turner, Edwin E., Jr., West Roxbury, assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Oscillator. 2,410,112; Oct. 29.
Turner, Edwin E., Jr., West Roxbury, assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Oscillator. 2,410,113; Oct. 29.
Tyron, Philip F., assignor to Commercial Solvents Corporation, Terre Haute, Ind. Production of acylated amino hydroxy compounds by the action of acid anhydrides on 2-oxazolines. 2,410,318; Oct. 29.
Tyrrell, Warren A., Fairhaven, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Coupling arrangement for use in wave transmission systems. 2,410,114; Oct. 29.
Union Oil Company of California, assignee: *See*—
Jenkins, Vance N.
United Aircraft Corporation, assignee: *See*—
Cronstedt, Val.
United Shoe Machinery Corporation, assignee: *See*—
Bertrand, Frederic E.
United States Gypsum Company, assignee: *See*—
Paley, Lewis A.
United States Rubber Company, assignee: *See*—
Nygren, Joseph W.
Universal Oil Products Company, assignee: *See*—
Danforth, Joseph D.
Thomas, Charles L.
Thomas, Charles L., and Haensel.
Upjohn Company, The, assignee: *See*—
Kuizenga, Marvin H.
Varian, Russell H.: *See*—
Hansen, William W., Varian, R. H. and S. F.
Varian, Russell H., Wantagh, assignor to Sperry Gyroscope Company, Inc., Brooklyn, N. Y. Image intensifier. 2,410,115; Oct. 29.
Varian, Sigurd F.: *See*—
Hansen, William W., and Varian, R. H. and S. F.
Vickers, Harry F., assignor, by mesne assignments, to Vickers, Incorporated, Detroit, Mich. Breech actuating and control system. 2,410,116; Oct. 29.
Vickers, Incorporated, assignee: *See*—
Vickers, Harry F.
Victor Chemical Works, assignee: *See*—
Woodstock, Willard H., and Pelletier.
Vincent, Andrew W., assignor to Stromberg-Carlson Company, Rochester, N. Y. Multicontact relay. 2,410,136; Oct. 29.
Vokes, Cecil G., London, England. Filter. 2,410,371; Oct. 29.
Von Kohorn, Henry, New York, N. Y. Producing nitrocellulose. 2,410,319; Oct. 29.
Voorhees, L. G., assignee: *See*—
Eilenberger, Stanley D.
Waddell, James, Metuchen, N. J., and W. W. Woessner, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Production of vitamin D. 2,410,254; Oct. 29.
Waggaman, William H.: *See*—
Breton, Ernest J., and Waggaman.
Wales, George F., Kenmore, N. Y. Method of and apparatus for punching by transfer means. 2,410,372; Oct. 29.
Wallach, George, Chapman Camp, British Columbia, Canada. Power transmission apparatus. 2,410,137; Oct. 29.
Walsh, Thomas J.: *See*—
Burk, Robert E., and Walsh.
Wanezek, Anthony R., assignee: *See*—
Bagan, John P.
Wasserlein, Henry G., Park Ridge, assignor to Phillips Control Corporation, Chicago, Ill. Shaded pole construction for solenoids. 2,410,320; Oct. 29.
Watts, William S., Detroit, Mich., assignor to Aircraft-Marine Products, Inc., Elizabeth, N. J. Electrical connector. 2,410,321; Oct. 29.
Webb, Samuel: *See*—
Nesbitt, Andrew B., and Webb.
Weesner, Carl W., Warren, Ohio, and W. B. Leffingwell, assignors to Sharon Steel Corporation, Sharon, Pa. Treatment of manganese steel. 2,410,322; Oct. 29.
Weiss, Robert H., Plainfield, and A. C. Wintringham, Glen Ridge, N. J., assignors to American Cyanamid Company, New York, N. Y. Preparation of arylides of aromatic ortho-hydroxy carboxylic acids. 2,410,397; Oct. 29.
Wellman, Katherine, assignor to Bacwell Enterprises Incorporated, New York, N. Y. Clothes cleaning device. 2,410,323; Oct. 29.
Wells, Roy E., assignor to Art Metal Construction Company, Jamestown, N. Y. Filing cabinet. 2,410,255; Oct. 29.
Werner, Francis V., Bridgeton, N. J. Batch scale. 2,410,138; Oct. 29.
West, Victor E., assignor to Standard Railway Equipment Manufacturing Company, Chicago, Ill. Railway car roof. 2,410,191; Oct. 29.
Westervelt, John R., Jr., Duxbury, assignor to National Fireworks, Inc., West Hanover, Mass. Revolving crane accessory for fork trucks. 2,410,373; Oct. 29.
Westinghouse Electric Corporation, assignee: *See*—
Clark, Earl K.
Weston Electrical Instrument Corporation, assignee: *See*—
Miller, John H.
Weston, Jeffrey D., assignor to Standard Telephones and Cables Limited, London, England. Visual indicator for radio blind approach systems. 2,410,117; Oct. 29.
White, William K., Jr.: *See*—
Hutchins, James F., and White.
Whitin Machine Works, assignee: *See*—
Crockett, Frank L.
Wiebke, August: *See*—
Marvin, Ralph J., and Wiebke.
Wiese, Caroline and H. E., Cleveland, Ohio. Infants' garment. 2,410,374; Oct. 29.
Wiese, Harold E.: *See*—
Wiese, Caroline and H. E.
Wildhaber, Ernest: *See*—
Johanson, Magnus H., and Wildhaber.
Williams, Alfred O.: *See*—
Burrows, Robert J., and Williams.
Williams, Lawrence S., assignor to Toledo Scale Company, Toledo, Ohio. Weighing scale. 2,410,139; Oct. 29.
Williams, Lewis E., Jr., and P. L. Smith, Los Angeles, assignors to Douglas Aircraft Company, Inc., Santa Monica, Calif. Rivet. 2,410,398; Oct. 29.
Windsor, Reginald H., and E. Gaspar, London, England; said Gaspar assignor to said Windsor. Machine for molding thermosetting materials. 2,410,324; Oct. 29.
Wintringham, Andrews C.: *See*—
Weiss, Robert H., and Wintringham.
Woessner, Warren W.: *See*—
Waddell, James, and Woessner.
Wood, Alfred R., Bridgeport, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J. Work clamp for sewing machines. 2,410,399; Oct. 29.
Wood, Alfred R., Bridgeport, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J. Thread controlling device. 2,410,400; Oct. 29.
Woodstock, Willard H., Flossmoor, and P. E. Pelletier, Jr., Chicago Heights, Ill., assignor to Victor Chemical Works. Producing trialkyl phosphate esters. 2,410,118; Oct. 29.
Wright, Fred J., assignor to The Denison Engineering Company, Columbus, Ohio. Hydraulic apparatus. 2,410,375; Oct. 29.
Wright Products, Inc., assignee: *See*—
Irwin, Justus C.
Yardeny, Michel N., New York, N. Y. Delayed action relay. 2,410,325; Oct. 29.
York Research Corporation, assignee: *See*—
Read, Robert C., and Schlieben.
Young, Fred M., assignor to Young Radiator Company, Racine, Wis. Tube assembly machine for heat-exchange cores. 2,410,140; Oct. 29.
Young Radiator Company, assignee: *See*—
Young, Fred M.
Zeigler, William L., Wallace, and C. Y. Garber, Kellogg, Idaho, assignors to The Sink & Float Corporation, New York, N. Y. Combined vibratory scrubber, stratifier, and screen for minerals. 2,410,326; Oct. 29.
Zell, Julius S., Portland, Oreg. Vertically adjustable bifocal spectacles. 2,410,141; Oct. 29.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 29TH DAY OF OCTOBER, 1946

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Flexible mattress handle. M. Bechik. Re. 22,807; Oct. 29.

LIST OF PLANT INVENTIONS

Chrysanthemum plant. E. Prushek. 714; Oct. 29.

LIST OF DESIGN INVENTIONS

Box or similar article, Mail. R. E. Burt. 145,832; Oct. 29.
Brooch. F. J. Gargano. 145,842; Oct. 29.
Brooch or similar article. A. Katz. 145,847; Oct. 29.
Building. W. A. Fennell. 145,837; Oct. 29.
Coffee maker, Electric. G. W. Florian. 145,838–9; Oct. 29.
Container for candy, perfume, flowers, and the like. K. Harrington. 145,845; Oct. 29.
Dress. D. M. Goodstein. 145,843; Oct. 29.
Dress. K. Rost. 145,859; Oct. 29.
Enlarger, Photographic. K. Racine and V. P. Shelton. 145,855; Oct. 29.
Fabric, Printed. E. S. Kales. 145,846; Oct. 29.
Game board. D. Fillson and D. B. Crollard. 145,840; Oct 29.
Hanger or similar article. J. Read. 145,856–7; Oct. 29.
Housing, Rotary mower. J. G. Doyle. 145,836; Oct. 29.
Ladle. R. H. Abel. 145,830; Oct. 29
Plaque or similar article. J. Russo. 145,860; Oct. 29.
Ring or similar article, Finger. A. Nalick. 145,848; Oct. 29.
Server, Cigarette. F. Zimbalist. 145,863; Oct. 29.
Showcase. H. C. Chase. 145,833–5; Oct. 29.
Statuette. F. J. Frechette, Sr., and F. J. Frechette, Jr. 145,841; Oct. 29.
Toy animal figure or similar article. M. L. Quinby. 145,854; Oct. 29.
Toy or similar article, Pull. J. F. Griffith. 145,844; Oct. 29.
Toy table or similar article. I. Rosenbloom. 145,858; Oct. 29.
Trimming or similar article, Embroidered. H. Tobler. 145,861–2; Oct. 29.
Wallet. C. Panzer. 145,849–53; Oct. 29.
Watch and holder strap therefor, Combined wrist. C. Arpels. 145,831; Oct. 29.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 29TH DAY OF OCTOBER, 1946

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Accessory mechanism and drive for aircraft engines. J. W. Kinnucan. 2,410,167; Oct. 29.
Acid-curing synthetic resin combined with olefin-sulfur dioxide polymer. L. Smidth. 2,410,395; Oct. 29.
Acids and preparation of same, Polymerized esters of carboxylic. H. J. Richter and H. S. Rothrock. 2,410,305; Oct. 29.
Actuating and control system, Breech. H. F. Vickers. 2,410,116; Oct. 29.
Acylated amino hydroxy compounds by the action of acid anhydrides on 2-oxazolines, Production of. P. F. Tryon. 2,410,318; Oct. 29.
Adhesive and adhesive sheet. R. G. Drew. 2,410,053; Oct. 29.
Adhesive, Pressure-sensitive. W. Kellgren. 2,410,079; Oct. 29.
Agitator for liquid cooling systems. J. H. Horan. 2,410,162; Oct. 29.
Air furnishing device, Auxiliary. P. C. Nilles and J. A. Steffen. 2,410,125; Oct. 29.
Airplane. C. Roe. 2,410,239; Oct. 29.
Alarm signal for paper machines, Warning. H. S. Spencer. 2,410,249; Oct. 29.
Alkyl esters and their salts, Basic. F. F. Blicke. 2,410,040; Oct. 29.
Alkylation. A. N. Sachanen, A. A. O'Kelly, and C. G. Myers. 2,410,108; Oct. 29.
Alkylation of isobutane with propylene. A. W. Horton, J. W. Brooks, and A. A. O'Kelly. 2,410,072; Oct. 29.
Alkylation process. A. N. Sachanen, A. A. O'Kelly, and C. G. Myers. 2,410,107; Oct. 29.
Anhydrate and its manufacture, Quick setting. L. A. Paley. 2,410,390; Oct. 29.
Antimony pentafluoride, Preparing. M. A. Perkins and C. F. Irwin. 2,410,358; Oct. 29.
Apparatus for converting tow to top. J. B. Rumsey. 2,410,307; Oct. 29.
Apparatus for decrating eggs. W. G. Howard. 2,410,163; Oct. 29.
Apparatus for dipping tubes, bars, and the like. D. W. T. Evans. 2,410,023; Oct. 29.
Apparatus for filling life preservers and the like. J. A. Cook. 2,410,015; Oct. 29.
Apparatus for grading fruits, vegetables, and other products according to size. G. H. Bleeke. 2,410,147; Oct. 29.
Apparatus for preparing formed gels. E. O. Sowerwine. 2,410,314–15; Oct. 29.
Apparatus for producing potteryware. W. J. Miller. 2,409,999; Oct. 29.
Apparatus for pyrolytically treating hydrocarbons. C. H. Hughes. 2,410,074; Oct. 29.
Armor. C. J. Dumais. 2,410,022; Oct. 29.
Arylides of aromatic ortho-hydroxy carboxylic acids, Preparation of. R. H. Weiss and A. C. Wintringham. 2,410,397; Oct. 29.
Automatic pattern controlled machine tool. H. P. Kuehni and N. G. Branson. 2,410,295; Oct. 29.
Axle. G. Spatta. 2,410,133; Oct. 29.
Bag having a burlap sampling zone, Paper. P. A. Frixione. 2,410,282; Oct. 29.
Baler, Rotary. P. H. Harrer and C. H. Roth. 2,410,159; Oct. 29.
Berth arrangement, Auxillary. L. A. Lutherman and E. L. Thompson. 2,410,173; Oct. 29.
Bifocal spectacles, Vertically adjustable. J. S. Zell. 2,410,141; Oct. 29.
Bomb releasing shackle. R. I. Markey. 2,410,036; Oct. 29.
Bowl, Centrifugal separating. G. J. Strezynski. 2,410,313; Oct. 29.
Box: *See*—
  Stacking box. Stuffing box.
Brake and lock mechanism. W. O. Schultz. 2,410,243; Oct. 29.
Bridge, Rail joint tread. W. G. Buhrer. 2,410,199; Oct. 29.
Button protector. R. A. Gauldin. 2,410,208; Oct. 29.
Cable stripping tool. E. G. Torrence. 2,410,252; Oct. 29.
Cabinet: *See*—
  Filing cabinet.
  Piezoelectric crystal cabinet.
Calcareous materials, Method and apparatus for heat treating. W. A. Reaney. 2,410,235; Oct. 29.
Calcium fluoride, Manufacturing of. E. J. Breton and W. H. Waggaman. 2,410,043; Oct. 29.
Camera, Miniature. C. V. Berry. 2,410,327; Oct. 29.
Car roof, Railway. V. E. West. 2,410,191; Oct. 29.
Carbothermic magnesia. A. C. Byrns. 2,410,267; Oct. 29.
Carboy and assembling. J. W. Nygren. 2,410,179; Oct. 29.
Case for wrist watches and the like, Display. W. Helbein. 2,410,161; Oct. 29.
Casing. A. J. Freeman. 2,410,206; Oct. 29.
Catalytic alkylation process. A. W. Horton. 2,410,070; Oct. 29.
Catalytic alkylation process. A. W. Horton, J. W. Brooks, and A. A. O'Kelly. 2,410,071; Oct. 29.
Catalytic cracking system. R. C. Gunness and J. W. Jewell. 2,410,284; Oct. 29.
Catalytic system, Continuous. T. P. Simpson, J. W. Payne, and J. A. Crowley, Jr. 2,410,309; Oct. 29.
Chair, bedstead, stretcher, or the like, Adjustable. C. E. E. Lundquist. 2,410,088; Oct. 29.
Chemical compounds. J. E. Bludworth and D. P. Easter. 2,410,008; Oct. 29.
Chemical process. D. L. Campbell. 2,410,048; Oct. 29.
Christmas tree holder. C. T. Matthews. 2,410,227; Oct. 29.
Cigarette container. W. E. Celestin. 2,410,200; Oct. 29.
Circuit: *See*—
  Electric circuit. Negative impedance electrical circuit.
  Electrical circuit. circuit.
Circuit interrupter, Thermal. E. M. Thielers and W. O. W. Broberg. 2,410,370; Oct. 29.
Circuits. Power supply. G. C. Szikiai. 2,410,369; Oct. 29.
Clamp for sewing machines, Work. A. R. Wood. 2,410,399; Oct. 29.
Cleaner: *See*—
  Electrolytic can cleaner. Suction cleaner.
  Hand cleaner.
Cleaning device, Clothes. K. Wellman. 2,410,323; Oct. 29.
Climb and guide control for aircraft, Automatic. C. A. Frische and G. N. Hanson. 2,410,058; Oct. 29.
Clip: *See*—
  Hair clip.
Clips, Attaching. L. V. McDonnell and P. Satterlee. 2,410,120; Oct. 29.
Coating by flame-spraying method. M. L. Macht and M. M. Renfrew. 2,410,225; Oct. 29.
Coating composition. C. K. Sloan and G. D. Patterson. 2,410,187; Oct. 29.
Collet chuck. R. E. Hines. 2,410,344; Oct. 29.
Colored photographic pictures, Production of. B. Gàspàr. 2,410,025; Oct. 29.
Comb. C. Lewis. 2,410,086; Oct. 29.
Comb system, Top. F. L. Crockett. 2,410,150; Oct. 29.
Combination aerial and land vehicle. R. C. Read and E. W. Schlieben. 2,410,234; Oct. 29.
Communication. E. Labin and D. D. Grieg. 2,410,350; Oct. 29.
Compression and oil scraping ring, Combination. R. J. Marvin and A. Wiebke. 2,410,177; Oct. 29.
Computer of the slide rule type. P. Goudime-Levkovitsch. 2,410,210; Oct. 29.
Conductors, Sealing lead-in. L. C. Goodale. 2,410,061; Oct. 29.
Conduit, Self-insulated. C. G. Scharwath. 2,410,308; Oct. 29.
Connector: *See*—
  Electrical connector.
Connector assembly, thermocouple lead. C. W. Muller. 2,410,098; Oct. 29.
Construction for solenoids, Shade pole. H. G. Wasserlein. 2,410,320; Oct. 29.
Container: *See*—
  Cigarette container.
Control mechanism. E. C. Burdick. 2,410,335; Oct. 29.
Control system. A. H. Buckley. 2,410,198; Oct. 29.
Control system, Furnace. H. W. Lindsay. 2,410,384; Oct. 29.
Controller, Circuit. H. L. Lambert. 2,410,085; Oct. 29.
Controlling device. Thread. A. R. Wood. 2,410,400; Oct. 29.
Conveyor system control. G. Deakin. 2,410,051; Oct. 29.
Cooler construction, Noncongealing oil. C. T. Perkins. 2,410,180; Oct. 10.
Copper phthalocyanine dyestuffs, Manufacture of. G. M. O'Neal. 2,410,301; Oct. 29.
Core lamination and production thereof. W. P. Langworthy. 2,410,220; Oct. 29.
Corset. J. J. Kispert. 2,410,083; Oct. 29.
Corset, Ventilated. J. J. Kispert. 2,410,082; Oct. 29.
Coupling arrangement for use in wave transmission systems. W. A. Tyrrell. 2,410,114; Oct. 29.
Coupling combination. E. F. Mahlberg. 2,410,297; Oct. 29.

Coupling device, Tractor. R. C. Fergason. 2,410,280; Oct. 29.
Crane accessory for fork trucks, Revolving. J. R. Westervelt, Jr. 2,410,373; Oct. 29.
Crate, Bottle. A. Taurman. 2,410,251; Oct. 29.
Creping machine. L. A. and J. W. Straubel. 2,410,189; Oct. 29.
Crochet ball holder. J. M. D'Arcy. 2,410,018; Oct. 29.
Crystal holder. H. M. Bach. 2,410,193; Oct. 29.
Cultivator, Power-driven rotary garden. G. O. Deubner. 2,410,273; Oct. 29.
Curing acrylate polymers and resulting product. L. W. Rainard. 2,410,103; Oct. 29.
Curler, Eyelash. C. M. Palmer. 2,410,391; Oct. 29.
Curler, Hair. F. D. Reynolds. 2,410,106; Oct. 29.
Curtain construction, Pleating. E. Lepow. 2,410,224; Oct. 29.
Cutter for rotary plows, Spiral. J. P. Bagan. 2,410,003; Oct. 29.
Damper, Fluid cooled, D. Dalin. 2,410,017; Oct. 29.
Defroster for ice cube trays. R. H. Baker. 2,410,194; Oct. 29.
Dehydrator. G. H. Phelps. 2,410,129; Oct. 29.
Detector crystal. W. L. Carlson. 2,410,268; Oct. 29.
Detector for altimeters, Balanced. D. Blitz. 2,410,006; Oct. 29.
Detector for altimeters, Balanced. W. R. Mercer and B. R. Cole. 2,410,122; Oct. 29.
Dial and pointer, Illuminated. G. K. C. Hardesty. 2,410,064; Oct. 29.
Dispenser: *See*—
  Toilet roll dispenser.
Displacement apparatus. R. D. Delamere. 2,410,341; Oct. 29.
Divider, Frequency. E. Norrman. 2,410,389; Oct. 29.
Dog house, Prefabricated. J. J. Latura. 2,410,221; Oct. 29.
Dolly, Riding. A. G. Schramm. 2,410,241; Oct. 29.
Door latch. J. C. Irwin. 2,410,347; Oct. 29.
Douche receptacle. J. Shapiro. 2,410,367; Oct. 29.
Drying, blocking, or stretching device, Clothes. A. S. Parker, Jr. 2,410,230; Oct. 29.
Dyeing machine. F. Carter and D. C. Taylor. 2,410,336; Oct. 29.
Edger, Lawn. F. L. Benthall, Sr. 2,410,196; Oct. 29.
Electric circuit. D. E. Kenyon. 2,410,081; Oct. 29.
Electrical apparatus. R. B. Allbright. 2,410,329; Oct. 29.
Electrical circuit. B. M. Harrison. 2,410,065; Oct. 29.
Electrical connector. W. S. Watts. 2,410,321; Oct. 29.
Electrical contact heater. A. A. Reiser. 2,410,362; Oct. 29.
Electrical equipment. H. A. Jaberg. 2,410,287; Oct. 29.
Electrochemical treating chromite ore. J. Schulein. 2,410,242; Oct. 29.
Electrode holder. H. A. Jackson. 2,410,164; Oct. 29.
Electrolytic can cleaner. A. C. Herro and P. Smart. 2,410,213; Oct. 29.
Electromagnetic device. W. A. Ray. 2,410,183; Oct. 29.
Electron discharge apparatus. J. H. Fremlin and R. N. Hall. 2,410,054; Oct. 29.
End seaming mechanism, Can. J. Brenzinger. 2,410,263; Oct. 29.
Engine: *See*—
  Internal-combustion engine. Portable engine.
  Miniature gasoline engine.
Explosively blasting joints. L. A. Burrows and W. E. Lawson. 2,410,047; Oct. 29.
Extract of coffee and the extracting and preparing the same, Liquid. W. S. Fredrickson. 2,410,157; Oct. 29.
Extrusion apparatus. E. L. Lukes. 2,410,035; Oct. 29.
Eye protection device. G. H. Schauweker. 2,410,184; Oct. 29.
Fabric, Unified fibrous. W. Kellgren. 2,410,078; Oct. 29.
Feed head for rotary tools. E. J. Lynch. 2,410,091; Oct. 29.
Feeding mechanism for quilting machine and the like. T. F. Schlicksupp. 2,410,240; Oct. 29.
Fibers or fibrous material containing keratin, Treatment of. J. B. Speakman. 2,410,248; Oct. 29.
Field responsive device, Magnetic. L. F. Beach. 2,410,039; Oct. 29.
Filing cabinet. R. E. Wells. 2,410,255; Oct. 29.
Film, Nonreflective. F. H. Nicoll. 2,410,300; Oct. 29.
Filter. C. G. Vokes. 2,410,371; Oct. 29.
Fishing rod and reel. O. J. Aubertin. 2,410,331; Oct. 29.
Flame hardening, Method and apparatus for. L. J. Stevenson and L. L. Babcock. 2,410,134; Oct. 29.
Float, Concrete. W. S. Haivala. 2,410,343; Oct. 29.
Flotation process. F. D. De Vaney. 2,410,021; Oct. 29.
Fluid mechanism, Elastic. R. Birmann. 2,410,259; Oct. 29.
Fluid pressure pump. J. B. Meyer. 2,410,354; Oct. 29.
Folding machine, Box end. A. H. Rines, J. Hardy, and D. J. O'Keefe. 2,410,393; Oct. 29.
Foreign particles from the eye, Mechanism for removing. C. Andrzejewski. 2,410,257; Oct. 29.
Fountain, Ink. G. A. MacDonald. 2,410,296; Oct. 29.
Friction shock absorber. G. A. Johnson and S. B. Haseltine. 2,410,165; Oct. 29.
Friction shock absorbing mechanism. G. E. Dath. 2,410,152; Oct. 29.
Fruit picker, Vehicle mounted. P. P. Horni. 2,410,030; Oct. 29.
Fuel, Production of motor. C. L. Thomas. 2,410,316; Oct. 29.
Fuel tank mounting. F. Prior. 2,410,182; Oct. 29.
Fuse. W. O. Schultz. 2,410,244; Oct. 29.
Galvanometer. C. M. Hathaway. 2,410,379; Oct. 29.
Garment. H. S. Heilbronner. 2,410,212; Oct. 29.
Garment, Infant's. C. and H. E. Wiese. 2,410,374; Oct. 29.
Gauge: *See*—
  Wheel alignment gauge.
Gauging device. E. F. Martinec. 2,410,093–4; Oct. 29.
Gear cutters, Method and machine for relieving. M. H. Johanson and E. Wildhaber. 2,410,348; Oct. 29.
Generator: *See*—
  Wave impulse generator.
Glass having low power factor. H. P. Hood. 2,410,286; Oct. 29.
Glass, Pocket reading. G. V. de Lery. 2,410,272; Oct. 29.
Glide attachment for bomb-sights. F. W. Morgenthaler and J. S. Garwood. 2,410,097; Oct. 29.
Grain elevator, Portable. J. A. Churchman. 2,410,012; Oct. 29.
Grate. E. W. Bullock. 2,410,266; Oct. 29.
Grinding machine. M. H. Arms and L. J. Barnard. 2,410,038; Oct. 29.
Grip for hoists. O. H. Gallamore. 2,410,378; Oct. 29.
Guard, Brake block. C. Hollerith. 2,410,029; Oct. 29.
Gunfire control, Method of and apparatus for. R. E. Crooke. 2,410,016; Oct. 29.
Gyroscope. A. Bach. 2,410,002; Oct. 29.
Hair clip. L. T. Plumtree. 2,410,130; Oct. 29.
Hair curler. J. Ashford. 2,410,144; Oct. 29.
Hand cleaner. W. E. Kleinicke. 2,410,168; Oct. 29.
Handle: *See*—
  Flexible mattress handle.
Handle for box springs and the like. M. Bechik and W. F. Caster. 2,410,258; Oct. 29.
Hat construction. E. J. King. 2,410,033; Oct. 29.
Hat, Paper. I. Gardner. 2,410,158; Oct. 29.
Heat responsive device. W. A. Tolson. 2,410,317; Oct. 29.
Heater: *See*—
  Electrical contact heater. Portable electric heater.
Heater. H. J. De N. McCollum. 2,410,353; Oct. 29.
Heating apparatus. E. K. Clark. 2,410,013–14; Oct. 29.
Heating apparatus, Flame. J. O. Bishop and L. L. Babcock. 2,410,005; Oct. 29
Helmet, Welders'. M. N. Anderson and M. H. Sellstrom. 2,410,256; Oct. 29.
Heparin, Recovery of. M. H. Kuizenga. 2,410,084; Oct. 29.
High-frequency apparatus. W. M. Kellogg. 2,410,080; Oct. 29.
High-frequency tube structure and apparatus. W. W. Hanse and R. H. and S. Varian. 2,410,063; Oct. 29.
High-frequency wave signaling system. W. P. Mueller. 2,410,387; Oct. 29.
High, molecular weight oliphatic ketones, Preparing. R. E. Meyer and F. P. Otto. 2,410,096; Oct. 29.
Holder: *See*—
  Christmas tree holder. Crystal holder.
  Crochet ball holder. Electrode holder.
Holding device, Film. R. Sardeson and E. H. Savela. 2,410,131; Oct. 29.
Hollow poppet valves, Making plug type. A. Townhill. 2,410,190; Oct. 29.
Horse, Scaffold. W. Ashenfelter. 2,410,330; Oct. 29.
Hydraulic apparatus. F. J. Wright. 2,410,375; Oct. 29.
Hydraulic mechanism. J. A. H. Barkeij. 2,410,333; Oct. 29.
Hydraulic torque device, Rotary. H. and A. G. Schneider. 2,410,185; Oct. 29.
Hydrocarbon catalyzing process. R. E. Burk and E. C. Hughes. 2,410,044; Oct. 29.
Hydrocarbons, Alkylation of. J. D. Danforth. 2,410,151; Oct. 29.
Hydrocarbons, Treatment of. H. R. Legatski. 2,410,223; Oct. 29.
Hydrocarbons, Treatment of. C. L. Thomas and V. Haensel. 2,410,111; Oct. 29.
Image intensifier. R. H. Varian. 2,410,115; Oct. 29.
Indicator for radio blind approach systems, Visual. J. D. Weston. 2,410,117; Oct. 29.
Insole machine. F. E. Bertrand. 2,410,004; Oct. 29.
Instrument balance weight. P. S. Johnson and J. W. Dodds. 2,410,288; Oct. 29.
Internal-combustion engine. W. H. McInturff. 2,410,095; Oct. 29.
Isobutane and the like hydrocarbons, Production of. E. W. M. Fawcett and J. H. Beynon. 2,410,024; Oct. 29.
Joint. H. E. Machamer. 2,410,175; Oct. 29.
Joint for concrete roadway, Expansion. R. C. Olmsted and A. H. Harris. 2,410,099; Oct. 29.

Joint for rotary hydraulic machines, Plate steel casing. J. F. Corby. 2,410,201; Oct. 29.
Joint split ring union device, Nonslip. J. R. Guildford. 2,410,027; Oct. 29.
Jumper for short-circuiting the contacts of fluorescent lamp sockets, Electrical. H. Rosenthal. 2,410,364; Oct. 29.
Key, Telephone. L. B. Haigh and F. A. Stearn. 2,410,062; Oct. 29.
Laboratory fractionating column head. R. E. Burk and T. J. Walsh. 2,410,045; Oct. 29.
Lamp. H. J. Sauer. 2,410,366; Oct. 29.
Latch: *See*—
Door latch.
Lathe, Automatic. W. F. Groene and H. C. Kemper. 2,410,026; Oct. 29.
Latrine, Sanitary field. C. G. Martin. 2,410,092; Oct. 29.
Lenses and making the same. R. F. Bardwell and J. H. Smith. 2,410,145; Oct. 29.
Light directing device. P. M. Rainey. 2,410,104; Oct. 29.
Ligneous resinous composition and producing. M. R. Dusenbury. 2,410,205; Oct. 29.
Line pressure valve. J. Smisko. 2,410,132; Oct. 29.
Loading apparatus, Hay. J. E. Ringrose. 2,410,238; Oct. 29.
Locating system, Water. R. F. Farris and J. B. Clark. 2,410,278; Oct. 29.
Loose bulk materials, Method and apparatus for heat treating. W. A. Reaney. 2,410,236; Oct. 29.
Lubricant. J. F. Hyde. 2,410,346; Oct. 29.
Machine for impregnating electric insulation. J. W. Olson. 2,410,126; Oct. 29.
Machine for impregnating electric insulation. J. W. Olson and C. W. Bechle. 2,410,127; Oct. 29.
Machine for molding thermo setting materials. R. H. Windsor and E. Gaspar. 2,410,324; Oct. 29.
Machine for sharpening circular saws, milling-cutters and the like. C. E. Drake. 2,410,274; Oct. 29.
Machine for splitting tubular fabric, opening it and extracting moisture therefrom. H. W. Birch. 2,410,146; Oct. 29.
Magnetron, High efficiency. P. L. Spencer. 2,410,396; Oct. 29.
Manufacture. S. Kaplan. 2,410,382; Oct. 29.
Marker for airports, Luminous. E. M. Farris. 2,410,277; Oct. 29.
Marker mechanism, Thread. R. L. Dashew. 2,410,270; Oct. 29.
Mast, pole, and the like. W. C. Scrivener and A. G. Brewer. 2,410,246; Oct. 29.
Metalworking machine. A. G. Mirel. 2,410,298; Oct. 29.
Miniature gasoline engine. D. Miller. 2,410,229; Oct. 29.
Molding apparatus. H. A. Storch. 2,410,312; Oct. 29.
Mounting: *See*—
Fuel tank mounting.
Screw or threaded rod mounting.
Multicontact relay. A. W. Vincent. 2,410,136; Oct. 29.
Negative impedance circuit. K. S. Johnson. 2,410,076; Oct. 29.
Newspapers and the like, Folding. K. C. Garrison. 2,410,059; Oct. 29.
Nitro-cellulose, Producing. H. Von Kohorn. 2,410,319; Oct. 29.
Nozzle, Spray. H. G. Houghton. 2,410,215; Oct. 29.
Nut, Self-locking. A. C. Lusher. 2,410,090; Oct. 29.
Objective for projection, photography television, and for telescope. A. J. Holman. 2,410,069; Oct. 29.
Oil composition, Lubricating. V. N. Jenkins. 2,410,381; Oct. 29.
Oils, Hydrobleaching glyceride. W. J. Paterson. 2,410,102; Oct. 29.
1-methylolcyclohexyl-cyclohexyl-carbinol. J. E. Bludworth and D. P. Easter. 2,410,007; Oct. 29.
Operating mechanism for dump trucks, Tail gate. J. D. Burns. 2,410,046; Oct. 29.
Operating mechanism for electrical switches. A. M. Trogner. 2,410,253; Oct. 29.
Ores, Beneficiation of iron. R. B. Booth and E. C. Herkenhoff. 2,410,376–7; Oct. 29.
Oscillator. B. J. Lazan. 2,410,170; Oct. 29.
Oscillator. E. E. Turner, Jr. 2,410,112–13; Oct. 29.
Oven, Gas range. G. Herbster. 2,410,285; Oct. 29.
Overshot. N. T. Breaux. 2,410,262; Oct. 29.
Panel, Locomotive control. D. R. Staples. 2,410,250; Oct. 29.
Paper shipping carton having interlocking end closure, Heavy-duty. F. R. Buhrmaster. 2,410,148; Oct. 29.
Parachute. L. P. Frieder. 2,410,207; Oct. 29.
Parachute. L. P. Frieder and W. S. Finken. 2,410,057; Oct. 29.
Parasiticidal compositions. F. W. Fletcher and E. E. Kenaga. 2,410,281; Oct. 29.
Pen, Baby play. M. G. Stackhouse. 2,410,368; Oct. 29.
Perforating and tubulating apparatus. R. A. Hinkley. 2,410,345; Oct. 29.
Piezoelectric crystal cabinet. S. A. Bokovoy. 2,410,041; Oct. 29.
Pigment or dyestuff and making the same. T. A. Langstroth. 2,410,219; Oct. 29.
Plastic articles, Making. A. W. Prance. 2,410,361; Oct. 29.
Plasticized prolamine and derivative compositions, Production of. W. L. Morgan. 2,410,124; Oct. 29.
Plastometer. S. A. Loukomsky and C. R. Stock. 2,410,385; Oct. 29.
Polyesters, Manufacture of. J. B. Howard. 2,410,073; Oct. 29.
Portable electric heater. J. J. Gough. 2,410,211; Oct. 29.
Portable engine. P. Altman. 2,410,143; Oct. 29.
Post, Highway traffic. R. E. L. Maxey. 2,410,228; Oct. 29.
Potteryware, Method and apparatus for appendaging. W. J. Miller and A. J. Reek. 2,410,123; Oct. 29.
Power take-off unit. B. W. Keese. 2,410,077; Oct. 29.
Power transmission apparatus. G. Wallach. 2,410,137; Oct. 29.
Power unit-handle cooling, Portable. P. Altman. 2,410,142; Oct. 29.
Preheater for pulverizing mills, Air. R. S. Cooper and S. Holm. 2,410,337; Oct. 29.
Pressure producing device, Fluid. L. E. LaBrie. 2,410,169; Oct. 29.
Protector: *See*—
Button protector.
Pulse selectivity system. E. I. Anderson. 2,410,000; Oct. 29.
Pump: *See*—
Fluid pressure pump.
Pump form. G. H. De Long and B. Dreisbach. 2,410,153; Oct. 29.
Punching by transfer means, Method of and apparatus for. G. F. Wales. 2,410,372; Oct. 29.
Racking apparatus. J. G. Smith. 2,410,247; Oct. 29.
Ram construction, Booster. B. D. Ashbaugh. 2,410,001; Oct. 29.
Rapid frequency change radio receiver. J. F. Hutchins and W. K. White, Jr. 2,410,075; Oct. 29.
Razor and blade magazine therefor, Safety. W. Steinbach. 2,410,311; Oct. 29.
Receptable: *See*—
Douche receptacle.
Reducing machine, Tube. C. L. Dewey. 2,410,052; Oct. 29.
Reducing the effect of interference, Method and apparatus for. W. S. Percival. 2,410,233; Oct. 29.
Reel: *See*—
Fishing rod and reel.
Refractory for furnace linings, Bonded. J. S. C. Perry and A. T. Prince. 2,410,359; Oct. 29.
Refrigerating apparatus. A. J. Pedigo. 2,410,232; Oct. 29.
Refrigerating apparatus. L. A. Philipp. 2,410,360; Oct. 29.
Refrigerating apparatus. J. A. Smith. 2,410,310; Oct. 29.
Refrigeration. G. A. Brace. 2,410,334; Oct. 29.
Refrigeration. A. G. Gross. 2,410,342; Oct. 29.
Refrigeration. W. H. Kitto. 2,410,292; Oct. 29.
Regulator: *See*—
Window regulator.
Rejecting mechanism, Article. G. C. Abbott. 2,410,037; Oct. 29.
Relay, Delayed action. M. N. Yardeny. 2,410,325; Oct. 29.
Relay device, Electromagnetic. J. A. Favre. 2,410,279; Oct. 29.
Remote-control firing mechanism for machine guns. G. R. Oscar and W. S. Boals. 2,410,100; Oct. 29.
Resonator, Variable cavity. J. C. Schelleng. 2,410,109; Oct. 29.
Ring manufacture, Split. C. M. Cummins. 2,410,204; Oct. 29.
Rivet. L. E. Williams, Jr., and P. L. Smith. 2,410,398; Oct. 29.
Roller skate structure. S. W. Blumm. 2,410,009; Oct. 29.
Rotor and making. W. H. Baselt and C. E. Tack. 2,410,195; Oct. 29.
Safety device for fluid brake systems. V. L. Crawford. 2,410,202; Oct. 29.
Safety mechanism for dye kettles and the like. J. H. Higginson and H. C. Riggs. 2,410,214; Oct. 29.
Scale, Batch. F. V. Werner. 2,410,138; Oct. 29.
Scale, Weighing. L. S. Williams. 2,410,139; Oct. 29.
Scratching attachment for bottle washing machines, Label. M. Jamieson and L. Tremblay. 2,410,380; Oct. 29.
Screw-down control system. D. E. Garr. 2,410,283; Oct. 29.
Screw or threaded rod mounting. G. Murtagh. 2,410,299; Oct. 29.
Screw wheel apparatus, Rotary. A. Lysholm. 2,410,172; Oct. 29.
Scrubber, stratifier, and screen for minerals, Combined vibratory. W. L. Zeigler and C. Y. Garber. 2,410,326; Oct. 29.
Seal, Turbine. V. Cronstedt. 2,410,340; Oct. 29.
Searchlight, Dirigible. H. J. Sauer. 2,410,365; Oct. 29.
Secret communication system. S. D. Ellenberger. 2,410,276; Oct. 29.
Servo-motor device, Liquid pressure. L. C. Choulngs. 2,410,269; Oct. 29.
Servo system, Electrical. E. W. Kellogg. 2,410,289; Oct. 29.

Severing tool. A. B. Nesbitt and S. Webb. 2,410,355; Oct. 29.
Shield, Glare. L. R. Le Lande. 2,410,171; Oct. 29.
Shield or the like, Welding. R. A. Romberg. 2,410,306; Oct. 29.
Shock absorber. G. M. Magrum. 2,410,176; Oct. 29.
Shoe conditioner. G. H. De Long and B. Breisbach. 2,410,154; Oct. 29.
Shuttle, Loom. J. J. Kaufmann, Jr. 2,410,383; Oct. 29.
Signaling by submodulation. S. D. Ellenberger. 2,410,275; Oct. 29.
Signaling, Submarine. B. M. Harrison. 2,410,066–7; Oct. 29.
Signaling system. R. A. Clark, Jr. 2,410,149; Oct. 29.
Silo. Z. W. Craine. 2,410,338; Oct. 29.
Sizing, Paper. D. K. Pattiloch. 2,410,357; Oct. 29.
Slide fastened stringers, Making. G. Sundback. 2,410,135; Oct. 29.
Slipper. F. J. Shields. 2,410,186; Oct. 29.
Snap switch. P. G. Frerer. 2,410,055; Oct. 29.
Softening agent. E. Korten. 2,410,294; Oct. 29.
Sole and heel construction, Shoe. J. H. Davis. 2,410,019; Oct. 29.
Solvent by distillation and adsorption, Reclaiming soiled. E. L. Luaces. 2,410,034; Oct. 29.
Spindle, Oil circulating. C. M. Neal. 2,410,388; Oct. 29.
Spring and friction shock absorber, Combined. S. B. Haseltine. 2,410,160; Oct. 29.
Spring assembly. H. C. Keysor. 2,410,290; Oct. 29.
Sprocket device. L. A. McNabb. 2,410,121; Oct. 29.
Stacking box. E. T. Insoll. 2,410,216; Oct. 29.
Starch conversion syrup, Making. F. H. Brock and C. E. Smith. 2,410,264; Oct. 29.
Steel, Treatment of manganese. C. W. Weesner and W. B. Leflingwell. 2,410,322; Oct. 29.
Steering apparatus, Power. F. W. Davis. 2,410,049; Oct. 29.
Strainer, Milk. D. O. Brant. 2,410,010; Oct. 29.
Stretcher. M. R. Peters. 2,410,181; Oct. 29.
Stuffing box. R. B. Kinzbach. 2,410,291; Oct. 29.
Styrene and its homologues, Purification of. G. R. Bond, Jr. 2,410,042; Oct. 29.
Suction cleaner. W. H. Kitto. 2,410,293; Oct. 29.
Suction cleaner. C. O. Penn. 2,410,302; Oct. 29.
Support for sheep shearing apparatus. R. R. Just. 2,410,217; Oct. 29.
Surveying, Seismic. O. S. Petty. 2,410,303; Oct. 29.
Suspension for railroad cars, Spring. A. F. Hickman. 2,410,068; Oct. 29.
Switch: *See*—
Snap switch.
Syringe, Hypodermic. M. L. Lockhart. 2,410,351; Oct. 29.
Tablets, Making. H. F. Taylor. 2,410,110; Oct. 29.
Tabulator controlled by single-line records. D. Broido. 2,410,265; Oct. 29.
Tachistoscopic apparatus. S. Renshaw. 2,410,237; Oct. 29.
Tape, Pressure-sensitive adhesive. W. E. Lundquist and W. Kellgren. 2,410,089; Oct. 29.
Telecommunication switching system. G. Deakin. 2,410,050; Oct. 29.
Telephone line pulsing device. A. G. Milasus. 2,410,178; Oct. 29.
Telephone system, Automatic. W. T. Powell. 2,410,304; Oct. 29.
Tester, Propeller governor. I. V. Falk. 2,410,155; Oct. 29.
Testing apparatus, Electrical. J. H. Miller. 2,410,386; Oct. 29.
Tetra ethyl lead, Purification of. A. E. Parmelee. 2,410,356; Oct. 29.
Tetrahydropyrrole alcohol esters of halogen substituted carboxylic acids. J. N. Borglin. 2,410,197; Oct. 29.
Textile webbing. J. A. Hendley. 2,410,028; Oct. 29.
Textiles, Manufacture of. L. A. Savage. 2,410,394; Oct. 29.
Thermoelectric generating device. E. Paille. 2,410,128; Oct. 29.
Thermohydrometer. A. Z. Hoyer. 2,410,031; Oct. 29.
Thermopile for fire alarm systems. F. G. Kelly. 2,410,218; Oct. 29.
Thiophene, Preparation of. D. D. Coffman. 2,410,401; Oct. 29.
Thread production. J. A. Bradner. 2,410,261; Oct. 29.
Tie plate and rail anchor assembly. E. J. Boland. 2,410,260; Oct. 29.
Timing device, Electronic. L. E. Flory. 2,410,156; Oct. 29.
Titanium compounds, Production of. R. L. McCleary. 2,410,119; Oct. 29.
Toilet implements. C. U. Maenpa. 2,410,352; Oct. 29.
Toilet roll dispenser. E. Agamaite, Jr. 2,410,328; Oct. 29.
Toluene, Separating. T. B. Kimball. 2,410,166; Oct. 29.
Tool: *See*—
Automatic pattern controlled machine tool.
Cable stripping tool.
Severing tool.
Transplanting apparatus, Tree. L. L. Culley. 2,410,203; Oct. 29.
Trialkyl phosphate esters, Producing. W. H. Woodstock and P. E. Pelletier, Jr. 2,410,118; Oct. 29.
Trousers construction. E. Martin. 2,410,226; Oct. 29.
Truck. H. C. Keysor. 2,410,032; Oct. 29.
Truck, Rail. R. J. Burrows and A. O. Williams. 2,410,011; Oct. 29.
Tube: *See*—
Vacuum tube.
Tube assembly machine for heat-exchange cores. F. M. Young. 2,410,140; Oct. 29.
Tuning means. H. C. Lawrence, Jr. 2,410,222; Oct. 29.
Union for masts, poles, and the like. W. C. Scrivener and A. G. Brewer. 2,410,245; Oct. 29.
Utensil, Scraper. H. B. Atha. 2,410,192; Oct. 29.
Vacuum tube. E. Labin. 2,410,349; Oct. 29.
Vacuum tube electrodes, Producing. L. C. Goodale. 2,410,060; Oct. 29.
Valve: *See*—
Line pressure valve.
Valve. V. Remus. 2,410,105; Oct. 29.
Variable tread vehicle. T. O. Davidson and L. B. Schauer. 2,410,271; Oct 29.
Vehicle: *See*—
Combination aerial and land vehicle.
Variable tread vehicle.
Vehicle body. A. P. Ball. 2,410,332; Oct. 29.
Vending machine. C. F. Pease. 2,410,231; Oct. 29.
Vitamin D, Production of. J. Waddell and W. W. Woessner. 2,410,254; Oct. 29.
Wave impulse generator. C. V. Litton. 2,410,087; Oct. 29.
Wax-free pyrethrin solutions. J. D. Park and W. W. Rhodes. 2,410,101; Oct. 29.
Wheel alignment gauge. J. L. Creagmile. 2,410,330; Oct. 29.
Wheel rim and pneumatic tire, Combined. H. M. Godsey. 2,410,209; Oct. 29.
Wheel structure. G. A. Lyon. 2,410,174; Oct. 29.
Window regulator. J. H. Roethel. 2,410,363; Oct. 29.
Wing for garment sleeves, Button. C. Solomon. 2,410,188; Oct. 29.
Wing, Variable camber. J. Fresco. 2,410,056; Oct. 29.
Worsted roving, Manufacture of. R. J. de Lathauwer. 2,410,020; Oct. 29.
Wrench. C. L. Rich. 2,410,392; Oct. 29.

CLASSIFICATION OF PATENTS

ISSUED OCTOBER 29, 1946

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number=class, second number=subclass, third number=patent number

2— 8: 2,410,256
14: 2,410,184
27: 2,410,082
